NUMISMATICS: The study of Jewish coinage, strictly speaking, begins with the Maccabean period. Some information, however, concerning the use of money, or substitutes for money, among the Jews previous to the creation of a coinage of their own may be here given. The invention of coined money, ascribed to the kings of Lydia, is not earlier by more than a century (if so much) than the fall of the kingdom of Judah (587 B.C.). In the interim the new invention had not spread even to Phenicia, much less to the interior of Asia. No credence whatever can therefore be placed in late Jewish stories mentioning coins of Abraham, Joshua, or David, or even Mordecai (Ber. R. xxxix.; B. Ḳ. 97a). Such passages in Scripture as seem to point to the use of coined money during that period are either interpolated or late. A notable instance of anachronism occurs in I Chron. xxix. 7, where among the offerings of the chiefs of Israel in the time of King David are mentioned 10,000 gold "adarkonim" or darics, coins which were not struck before the time of King Darius I., *i.e.*, more than 400 years after David.

No Coins Before Maccabeans.

When, after the conquest of Canaan, the Hebrews had settled down as an agricultural people, they readily adopted those mediums of exchange which they had found in use among the conquered races of the Holy Land, namely, gold, silver, and brass. The fact that these metals were used in ancient times for this purpose in Palestine is proved beyond doubt by the tribute lists of Thothmes III. at Thebes and by the official correspondence between the King of Egypt and his Syrian vassals found at Tell el-Amarna.

Payments by Weight.

Of the three precious metals, silver seems to have been by far the most commonly employed; to such an extent indeed that its name "kesef" was used for money generally (Ex. xxi. 11). It was told by weight; therefore, the use of the balance and stone weights was inevitable in all important transactions. Under what shape the precious metal circulated—whether in bars or ingots as in Babylonia, or in rings as in Egypt—is a matter of doubt. The system of weights, if not the weights themselves, was at any rate of Babylonian origin. It was the sexagesimal system, which the pre-Hebraic Canaanites had borrowed from Babylon along with the Babylonic script. The three units of this system were the "kikkar" or talent, the "maneh" or mina, and the shekel or "siclus." A talent was worth 60 minas; a mina, 60 shekels; therefore the talent equaled 3,600 shekels. It is to be noted that "mina" occurs rarely, if ever, in the pre-exilic writings, the only passage in which it appears being I Kings x. 17, which mentions (under Solomon) gold shields of 3 minas apiece. On the other hand, sums expressed in shekels, especially in multiples of 10 shekels (20, 50, 600, etc.), are extremely common; and even the word "shekel" is often omitted; that is to say, it must be understood from the context. The inference is that there circulated large quantities of ingots or rings of silver, weighing either 1 shekel, or a round number of shekels, or a fraction of a shekel (I Sam. ix. 8); but it is to be feared that in several passages of this kind the original reading has been tampered with in a period when the coin which was known as the shekel was in common use.

As to the exact weight of the shekel, mina, and talent in pre-exilic times, and whether or not different standards were used for gold and for silver—these and similar questions are dealt with in the article WEIGHTS AND MEASURES. Here it seems sufficient to note that the heaviest stone weights found in Nineveh point to a trade or heavy kikkar of about 60 kilograms, and, hence, a mina of 1 kilogram and a shekel of about 16.80 grams (260 grains). There was also a series of weights having exactly half the value of these, the existence of which can be traced up to the time of King Gudea (about 2500 B.C.). But the Phenician standard, known from later coins, coincided with neither of these, giving a shekel of 224 grains, or 14.51 grams; and it is an open question whether the Hebrew system of weights before the Exile conformed to the Babylonian or to the Phenician scale.

Weight of Shekel.

After the Babylonian captivity the scale of weights was slightly modified in accordance with a new system, which perhaps had originated in Babylonia, but at any rate was in common use among various nations (Greeks, Persians, Phenicians). This system is a combination of the older purely sexagesimal (Babylonian) and the purely decimal (Egyptian) systems. It is prescribed in Ezek. xlv. 12 (Greek text), and implied by Ex. xxxviii. 25–26, that the talent shall be reckoned as formerly at 60 minas, but the mina at 50 shekels only; therefore, 3,000 shekels, not 3,600, equaled a talent. The shekel itself was divided into halves ("beḳa'"; Gen. xxiv. 22; Ex. xxxviii. 26), quarters, and twentieths (Ezek. *l.c.*), called "gerahs" or grains ("obols" as the Greek version renders the word);

this last division was seemingly a new one. In order to insure uniformity throughout the community, a set of standard weights was deposited in the Temple at Jerusalem, a practise of frequent occurrence in classical times. This is the so-called "holy shekel," which is repeatedly mentioned in the Priestly Code, and was used for weighing not only gold and silver, but also copper and spices (Ex. xxx. 23).

One-Third Shekels.

What the weight of the post-exilic shekel was before Greek times is uncertain. The division of the shekel into three parts presupposed by the law of Neh. x. 32 (each citizen to pay yearly one-third of a shekel to the Temple) is not only unusual in monetary systems for silver (elsewhere it is only found at Corinth), but is strangely at variance with the division of the holy shekel into halves, fourths, and twentieths enacted by the Priestly Code. It may be, therefore, that Nehemiah did not know of the holy shekel, and that he reckoned by the Babylonian shekel of 16.80 grams, for which a division into three parts is not out of the question.

By the time of Ezra and Nehemiah the use of coined money, now widely spread in western Asia, was no longer quite unknown in Judea. To be sure, the Jewish community was neither rich nor independent enough to be allowed by the Persian government to have a coinage of its own; but foreign coins began to circulate in the country, and to supersede little by little the older and more troublesome system of weighing gold and silver. The foreign money consisted in royal Persian and autonomous Phenician coins.

Persian Coins.

The chief Persian coin was the golden stater or daric (*δαρεικὸς στατήρ*), first struck by King Darius I., Hystaspes (522-485 B.C.). See plate, Fig. 1. It was $\frac{1}{3000}$ of a light talent of rather more than 25 kilograms, its normal weight being 8.40 grams (130 grains), or precisely the half of a Babylonian shekel.

The Persian government issued also a silver coin, called by the Greeks *σίγλος μηδικός*, although its weight (5.60 grams, or 87 grains, *i.e.*, $\frac{1}{6000}$ of a talent of 33.60 kilograms) shows it to have been rather a half-shekel than a shekel. Under the then prevailing ratio of 13⅓ to 1 between gold and silver, 20 *σίγλοι* were worth exactly 1 gold daric, as 20 shillings are worth a sovereign. See plate, Fig. 2. The silver coins issued from about 440 B.C. by the large trading cities of the Phenician and Philistine coast (Tyre, Aradus, Gaza) were staters or shekels based on a heavy talent of about 43 kilograms. Their average weight was 14.40 grams, or 222 grains (about 3 shillings).

The Persian government seems also to have struck in this district, for the pay of the sailors, double shekels of Phenician standard: these are the large silver coins commonly, but without sufficient proof, attributed to the mint of Sidon. See plate, Fig. 3.

Of the three species of coins mentioned above, gold darics are certainly mentioned in the Jewish writings of the time, under the name "adarkonim" (Ezra viii. 27; comp. I Chron. xxix. 7) or "darkemonim" (Ezra ii. 69 = Neh. vii. 70 *et seq.*), in connection with royal gifts or with contributions of the nobles to the Temple treasury. The names seem to be synonymous, although this has been disputed, as well as the identity of either with the *δαρεικός*. However, two similar forms occur together in a Phenician inscription of the beginning of the first century B.C. (Lidzbarski, "Handbuch der Nordsemitischen Epigraphik," p. 425), where the context seems to prove they are synonymous (for a contrary view see E. Meyer, "Entstehung des Judenthums," p. 196). That one or both of these forms should represent the Greek *δραχμή* (half-stater = 100th part of a mina) seems incredible.

A more difficult problem is whether the silver coins used by the Jews in the fifth (latter part) and fourth centuries B.C., especially the shekel in which payment of the Temple tax was to be made, were the Phenician shekel or the Persian *σίγλος*. In favor of the first opinion it has been alleged that, according to the Talmud (Bek. viii. 7; Tosef., Ket. xii.), all sacred taxes were to be paid in Tyrian currency; but there is no evidence as to the age of this decision, and it may as well date from the second as from the fourth century B.C. On the other hand, some time after Nehemiah and before the redaction of Chronicles a text was introduced in the Law (Ex. xxx. 13; a passage alluded to in II Chron. xxiv. 9), calling for a Temple tax of a half-shekel per head instead of the third of a shekel decreed by Nehemiah. If this half-shekel be regarded as the Persian *σίγλος* of 5.60 grams, this weight is precisely equivalent to the third of a Babylonian shekel of 16.80 grams, which there is some reason to believe was the rate of the tax levied under Nehemiah. On this hypothesis, the new text would have contained simply a new expression of the terms of the old tax, and therefore would have been unobjectionable. On the contrary, if the shekel intended in Exodus is a Phenician stater (14.40 grams), the new tax (7.20 grams) would have been notably heavier than the Nehemian one (5.60 grams). The possibility of such an increase of taxation might be accepted for the time after Alexander, when the Jews grew richer and silver became more abundant, but not for the precarious condition of the Jewish community about 400 or 350 B.C. However, "sub judice lis est."

Be this as it may, some time or other before the second century B.C. it is certain that the Phenician money standard prevailed among the Jews. This is proved, not so much by the loose equivalents of Josephus, who variously identifies the half-shekel with a didrachm ("Ant." xviii. 9, § 1; "B. J." vii. 6, § 6), the shekel with 4 Attic drachmas ("Ant." iii. 8, § 10), and the mina with 2½ Roman libræ (*i.e.*, 817 grams; *ib.* xiv. 7, § 1), as by the Gospel text (Matt. xvii. 24) in which two persons pay the tax with "a stater," by the above-mentioned passages of the Talmud, and last but not least by the extant specimens of Jewish silver coins. The Temple tax had therefore certainly been raised by this time to the amount of a Phenician half-shekel. The Septuagint, however, almost constantly (for some unknown reason) wrongly translates the Hebrew shekel by *δίδραχμον* instead of by *τετράδραχμον*, which occurs only in Job xlii. 11.

In 332 B.C. the Persian empire collapsed, and

Under the Seleucidæ.

Judea became a Macedonian province. The issue of gold and silver darics, as well as of Phenician autonomous silver, then came to an end. Henceforth the coins circulating in Syria were regal Macedonian coins, in gold and silver. At first, under Alexander and his early successors, they were struck according to the Attic system of weights (silver tetradrachm of about 17 grams, and a gold stater of 8.60 grams); but in consequence of the trading supremacy of the Phenicians the various nations had become so well accustomed to the Phenician standard that, from the beginning of the third century, the Ptolemies, then masters of southern Syria, wisely adopted for their Syrian possessions (and perhaps for Egypt too) a tetradrachm of Phenician standard, identical in weight with the old staters of the Phenician townships (14.40 grams). See plate, Fig. 4. These coins were struck in the royal mints of Phenicia (Tyre, Sidon, Ptolemais) and of Philistia (Gaza, Joppa). When, about 200 B.C., southern Syria passed from the Ptolemies to the Seleucidæ, the latter reintroduced the Attic standard, which they had constantly employed in their remaining possessions. Nevertheless, toward the middle of the second century they also were compelled to return to the policy of the Ptolemies and recommenced striking, for the use of their subjects of southern Syria, tetradrachms of Phenician weights, even reviving the well-known Ptolemaic badge, the eagle (in the same way as the Italian government in the nineteenth century struck "thalers" of the Maria Theresa type for the use of its Ethiopian subjects).

It is not likely that during the two periods in which the Attic standard prevailed (330–300; 200–150) the Temple tax was raised to the value of an Attic didrachma. Therefore if the taxpayer could not manage to procure an old Phenician or Ptolemaic coin, he had to take change for his money; and this may have been the first occasion in which money-changers set up their booths in the precincts of the Temple.

Minting a Regal Prerogative.

The Seleucidæ, as well as the Ptolemies, had been very jealous of the prerogative of striking money, which, except in Asia Minor, they reserved exclusively to themselves. Gold and silver were an absolute monopoly; but even the right to coin municipal copper, which was of little importance in the eyes of the ancients, was not readily granted. The few towns of Phenicia which, under Antiochus Epiphanes, obtained the privilege of issuing copper coins bearing their names were compelled to place upon them the effigy of the king.

The Hasmoneans.

Matters, however, changed toward the middle of the second century B.C., when the structure of the Seleucid realm began to totter on all sides, under the united pressure of exterior foes (Parthians, Egyptians, Arabs, Romans) and the ever-renewed internal strife between conflicting pretenders to the throne. The result was the gradual weakening of royal authority, and the more or less full emancipation of the cities and petty rulers, hitherto curbed under the Seleucid rule. One of the earliest (if not the first) communities to vindicate its autonomy was the small Jewish priest-state. The Hasmoneans, who had kept the field as freebooters, ably took advantage of the strife among Demetrius I., Alexander Balas, and Demetrius II. to traffic with their military cooperation: in this way Jonathan obtained first the high-priesthood of Jerusalem (153), then the governorship of Judea with the title of *στρατηγὸς καὶ μεριδάρχης* (150), and, lastly (145), three districts of Samaria, and exemption from annual tribute (though not from the "crown" tax). This was equivalent to semiautonomy, the only remains of Seleucid suzerainty being the presence of a Syrian garrison in the Acra at Jerusalem, the obligation of military assistance in case of war, and, lastly, the prohibition of a separate coinage.

To convert this semiautonomy into complete independence very little was needed. This was the task of Simon, Jonathan's brother and his successor to the high-priesthood (143 or 142). He first obtained of Demetrius II. the total abolition of all taxes levied by the Seleucidæ, including even the crown tax—a grant of such importance that the Jews (at least according to I Macc. xiii. 42) considered it as the definitive shaking off of the infidel yoke—and deeds were henceforth dated from the year of the high-priesthood of Simon. However, the document xiv. 27 *et seq.* shows that concurrently with the year of this high-priesthood the Jews continued to mention the Seleucid year. There is no question of a new "era."

First Grant of Coinage Rights.

Afterward came the withdrawal of the Syrian garrison (May, 142), then the vote of the people conferring on Simon a hereditary title (Sept., 141), and lastly, in 139–138, the final step—the grant of an autonomous coinage. This came about as follows: Antiochus Sidetes, during the captivity of his brother Demetrius II. (a prisoner of the Parthians), decided to take arms against the usurper Tryphon. Even before setting out on the conquest of Syria, Antiochus, then residing in Rhodes, sent a letter to make friends with Simon. In this letter, the text (or summary) of which has been preserved in I Macc. xv. 1–9, the Seleucid prince (1) confirmed all privileges granted to the Jews, and (2) expressly added the authorization of coinage with their own stamps. The memorable words are: *νῦν οὖν ἵστημί* [I confirm] *σοι πάντα τὰ ἀφαιρέματα* [exemptions from taxes] *ἃ ἀφῆκάν σοι οἱ πρὸ ἐμοῦ βασιλεῖς, καὶ ὅσα ἄλλα δόματα ἀφῆκάν σοι* [crown tax], *καὶ ἐπέτρεψά σοι ποιῆσαι κόμμα ἴδιον νόμισμα τῇ χώρᾳ σου, Ἱερουσαλὴμ δὲ καὶ τὰ ἅγια* [the holy precinct, the Temple] *εἶναι ἐλεύθερα.*

It is reasonable to suppose that this important concession was not quite spontaneous and had long been petitioned for by the Jews. Nor is it difficult to guess why. Independently of the political prestige which a national coinage would confer on their community, it was a practical necessity for the Jews to have at their disposal silver coins of a half- (Phenician) shekel and one shekel for the easy payment of the Temple poll-tax, fixed "ne varietur" at that rate. Such coins, after the Seleucid occupation of southern Syria, were no longer struck anywhere; the older coins of that value were becoming rapidly obsolete, and the new Seleucid stater of that weight was yet to come. A further inference is that, so soon as granted, the authorization was acted upon. Therefore there need be no hesitation in attributing to this period (with the majority of numismatists since Eckhel) the famous Jewish silver shekels and half-shekels, many specimens of which have come down, chiefly from two hoards, one at Jerusalem, the other at Jericho. The description of the shekel is as follows:

Obverse: שקל ישראל, in Old Hebrew (vulgo, "Samaritan") characters. A jeweled chalice (vulgo, a pot of manna). See plate, Fig. 5. Above the cup the date, expressed for year 1 by the simple letter א; from year 2 to 5 by the legend ש (*i.e.*, שנת) ב (or ג, ד, ה), year 2 (3, 4, 5). Of year 4 specimens are rare; and of year 5 only one or two are known. *Reverse:* ירושלים הקדושה ("Yerushalem ha-Ḳedoshah" = "Jerusalem the Holy"; on shekels of the year 1 the legend is simply "Yerushalem Ḳedoshah"); a flowering lily (vulgo, Aaron's rod). The weight was that of the Phenician shekel. The half-shekel differs from the shekel only in the legend of the obverse, which reads, חצי השקל (ḥaẓi ha-sheḳel = "the half-shekel"). Weight: about 7.20 grams. There are no half-shekels of the year 5. A few shekels of the years 3 and 4 are in bronze, but most likely these have been plated. The fabric is rather thick and archaic, in contradistinction to the flattened regal coins of the age; the workmanship is heavy but not rude. See plate, Fig. 6.

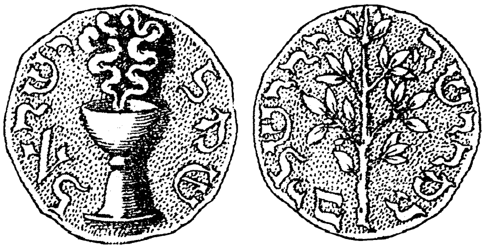
These remarkable coins have been variously attributed to the time of Ezra, of Alexander the Great (by De Saulcy), of Gabinius (by Unger), and of the first revolt against the Romans (66–70 C.E.). This last opinion, first advocated by Ewald ("Gött. Nachrichten," 1855, p. 109) and Schürer, was revived in 1887 by T. Reinach, and thereupon adopted by several numismatists (Imhoof, Babelon, Kennedy). But the arguments in favor of this late date, although specious, are not convincing, and the theory fails in the chronology; for the revolt lasted scarcely four years, and there are shekels of the year 5. Therefore the older and more probable ascription must be retained.

Date of Coins.

As to the precise date of the shekels, *i.e.*, to which year B.C. their "year א" corresponds, and as to the exact meaning of the inscribed dates—whether years of Simon's priesthood or years counted from an era—much doubt is entertained. For the identification of "year 1" three dates have been proposed: (1) 143–142 B.C., the year of Simon's accession, when this manner of dating was inaugurated, according to I Macc. xiii. 42; (2) 141–140, when his power was declared hereditary (Merzbacher's view); (3) 139–138, when the grant of coinage was made by Antiochus Sidetes. The first of these opinions is indefensible, as it involves an absurdity, namely, that Simon not only began coining while he was still forbidden to do so, but left off as soon as the privilege to coin was granted him. Of the two other views preference must be given to the latter. That the concession of coinage suggested a new era is not improbable, and it satisfactorily explains the interruption of the coinage after the year 5 (135–134), when John Hyrcanus was besieged in Jerusalem.

Counterfeit Shekels.

Before leaving the subject of shekels a warning must here be issued against forged specimens of this coin. These are very numerous, and have been so since the Renaissance. Most of them are, however, easy to detect, by the clumsiness of the design (which transforms the chalice into a censer), by the absence of date, and by the use of square Hebrew characters, quite unknown not in that period alone, but in the whole range of Jewish numismatics. The counterfeits are also of a larger module than the real ones, and are cast, not struck. Specimens of false shekels were known to Villalpandus (1604) and perhaps even to Melanchthon (1552) (see G. Hill in the "Reliquary and Illustrated Archæologist," Oct., 1902).



Counterfeit Shekel.
(From an old print.)

After Antiochus Sidetes had recovered his father's realm he quarreled with the Jews, who refused to pay tribute for the districts they had seized beyond the limits of Judea proper. He did not attack them seriously before the death of Simon (Feb., 135 B.C.), who was succeeded by his son John Hyrcanus. The war which then ensued terminated with the capitulation of Jerusalem, most likely in 134 or 133. Already before the siege, Antiochus had annulled all his concessions to the Jews (I Macc. xv. 27); therefore, inter alia, the right of coining silver. Of course, this decree was not revoked after the surrender of Hyrcanus; and so there was an end of Jewish silver coinage. That the Jews did not resume it under Alexander Jannæus, when the Seleucid suzerainty had practically disappeared, can be accounted for by the fact that the Seleucidæ now struck for their Syrian possessions coins of Phenician weights, and, moreover, that from 126 onward the city of Tyre, having obtained its autonomy from one of the contending Seleucidæ, began to coin a new series of staters (see plate, Fig. 8) of the same Phenician weights, well suited for the use of the sanctuary. See plate, Fig. 7. These are undoubtedly the "Tyrian coins" recommended by the Talmud for the payment of the sacred tax. However, if the Jewish high priests (who soon assumed the title of kings) were no longer allowed to coin silver, they received the much less significant right to coin brass—a right which they availed themselves of until the end of the Hasmonean dynasty.

Brass Coins of Hasmoneans.

These Hasmonean brass coins are usually of small size, of types borrowed from the contemporaneous coinages of Syria or Egypt; but they strictly conform to the Jewish law (*i.e.*, they exclude all animal representations). They were issued in the name of the reigning prince and sometimes also of the Jewish community ("ḥeber"). Others interpret this word as denoting the senate or the people. The legends are at first purely Hebrew, then bilingual (Hebrew and Greek), as was the dynasty itself. The following is a short nomenclature of the chief types of these not very interesting coins:

John Hyrcanus (135-105 B.C.).

Obverse: יהוחנן הכהן הגדול וחבר היהודים ("Yehoḥanan ha-Kohen ha-Gadol we-Ḥeber [or sometimes Rosh Ḥeber] ha-Yehudim" = "John the high priest and ["head of"] the community of the Jews"), within a wreath of olive-leaves. *Reverse:* A double cornucopia with a poppy-head in the center (the badge of Alexander Zebina). See plate, Fig. 9.

Aristobulus I. (105-104).

Same legend, but with יהודה ("Yehudah") instead of "Yehoḥanan." (This confirms the statement of Josephus, in "Ant." xx. 10, that the Hebrew name of this prince was Juda.) Types as above. .See plate, Fig. 10.

Alexander Jannæus (104-76).

1st species: Same types as above and same legend, but with the name יהונתן ("Jonathan"), of which "Jannæus" is an abridged form. See plate, Fig. 11. 2d species: *Obverse:* יהונתן המלך ("Yehonatan ha-Melek" = "Jonathan the king"). Flower (or star). *Reverse:* ΒΑΣΙΛΕΩΣ ΑΛΕΞΑΝΔΡΟΥ. An anchor with two cross-timbers within a circle. See plate, Fig. 12.

Queen Alexandra (76-67).

Obverse: ΒΑΣΙΛΙΣ(σης) ΑΛΕΞΑΝΔ(ρας) round an anchor. *Reverse:* Star with eight rays. Trace of Hebrew legend. Hebrew legend illegible.

Aristobulus II. (67-63).

No certain coins.

John Hyrcanus II. (63-40).

No certain coins.

Antigonus (40-37). (Larger Module.)

Obverse: ΒΑΣΙΛΕΩΣ ΑΝΤΙΓΟΝΟΥ. Two cornucopiæ (sometimes one). *Reverse:* מהתיה הכהן הגדל ("Mattattiah ha-Kohen ha-Gadol" = "Mattathias the high priest") (sometimes followed by "we-ḥeber ha-Yehudim"). Several coins have a regnal year שא (year 1) or שב (year 2). These coins give the Hebrew name (otherwise unknown) of the last Hasmonean king, who was beheaded at Antioch 37 B.C.

After the year 63 B.C., when Pompey took Jerusalem by storm and stripped the Jews of almost all their conquests, Rome's influence, or rather domination, became supreme in Judea, as in the whole of Syria. Once more (40 B.C.) a scion of the Hasmonean family, Antigonus, son of Aristobulus II., succeeded, with the help of the Parthians, in seizing Jerusalem, but only to be defeated, captured, and beheaded a few years later (37). Of these two great wars there are Roman numismatic memorials which may be mentioned here: (1) the denarius of Aulus Plautius ("curule ædile" in 54 B.C.; see plate, Fig. 13) with types copied from the somewhat older denarii of Scaurus ("Rex Aretas") and with the unexplained legend "Bacchius Judæus"; (2) the brass coin struck at Zacynthus by "C. Sosius imp[erator]," the conqueror of Antigonus, with the portrait of Mark Antony and the group, afterward often imitated, of vanquished Judea, "Iudæa capta" and a Jewish captive (see plate, Fig. 14), seated at the foot of a trophy.

Under the high-priesthood of the feeble Hyrcanus II. an Idumean nobleman, Antipater, had been practically prime minister at Jerusalem. His son Herod became, by favor of the Romans, king of the Jews, nominally at the end of 41 B.C., and actually in 37; and he reigned undisturbedly for thirty-three years (till 4 B.C.). Although the kingdom of Herod was large, and his wealth recalled the palmy days of David and Solomon, he was not allowed (as some other petty kings of his time) to strike silver coins, but, like the Hasmoneans, had to be content with a copper currency. His brass coins are of variable size and bear uniformly the Greek legend ΒΑΣΙΛΕΩΣ ΗΡΩΔΟΥ. Some of them have a regnal date (LΓ, that is, "year 3"; see plate, Fig. 15) and a monogram ⳨ expressing their value, *τρίχαλκον* (whether the *χαλκοῦς* was, as elsewhere, the eighth part of an obol is doubtful). The types conform to the Jewish law: palm, wreath, cornucopiæ as under the preceding dynasty; further, tripod, helmet, acrostolion, caduceus. The opinion that small bronze coins bearing the type of an eagle and a much-defaced legend belong to Herod is open to doubt.

Coins of the Herodians.

After the death of Herod his dominion was divided between his sons. Judea proper fell to the lot of Herod Archelaus, who was content with the title of ethnarch. His brass coins are as varied as those of his father, and the types are similar. The legend reads: ΗΡΩΔΟΥ ΕΘΝΑΡΧΟΥ. See plate, Fig. 16. In the year 6 C.E. he was deposed and exiled to Vienne in Gaul, Judea being thenceforth governed directly by Roman procurators, under the supervision of the legate of Syria. To this régime there was, however, a short exception, from 40 or 41 to 44 C.E., when the emperor Claudius conferred Judea upon Herod Agrippa I., a grandson of the great Herod. This Agrippa had already been invested by Caligula with the two tetrarchies (capitals: Tiberias and Panias) which had been respectively assigned after Herod's death to his other two living sons (Antipas and Philip), and which were now vacant. He therefore united once more under his scepter almost all the dominions of his grandfather, and was allowed to assume the title of king. His Jewish coins—brass, of course—bear the types of an umbrella (a royal emblem in the East) and three ears of corn; their style is ΒΑCΙΛΕΩC ΑΓΡΙΠΑ; and the date, year 6, is reckoned from 37 C.E. See plate, Fig. 17. Of the many varieties of bronze coins struck by Agrippa for his non-Jewish possessions, of the coins of his uncles Antipas and Philip, and of those struck later (till about the year 95) by his son Agrippa II., who inherited their tetrarchies, detailed mention need not be made here. It will suffice to present a specimen of this series and to observe that a great many of these provincial coins do not conform to the Jewish prohibition against representations of living creatures, but present portraits of the prince himself or of the reigning emperor. See plate, Fig. 18.

Roman Coinage.

From 6 to 40 C.E. and again from 40 to 66 Judea, as has been seen, was governed by Roman procurators. During this period — which witnessed the birth of Christianity—the silver currency in Palestine consisted chiefly in (1) Tyrian staters (shekel or sela), which ceased, however, to be struck in 56; (2) debased Attic tetradrachms (about 220 grains) with Greek legends, struck by the Roman government at Antioch for the use of the Syrian Greek-speaking provinces; (3) similar debased drachmas struck at Cæsarea in Cappadocia; (4) Roman denarii, considered as equivalent to the (debased) At-

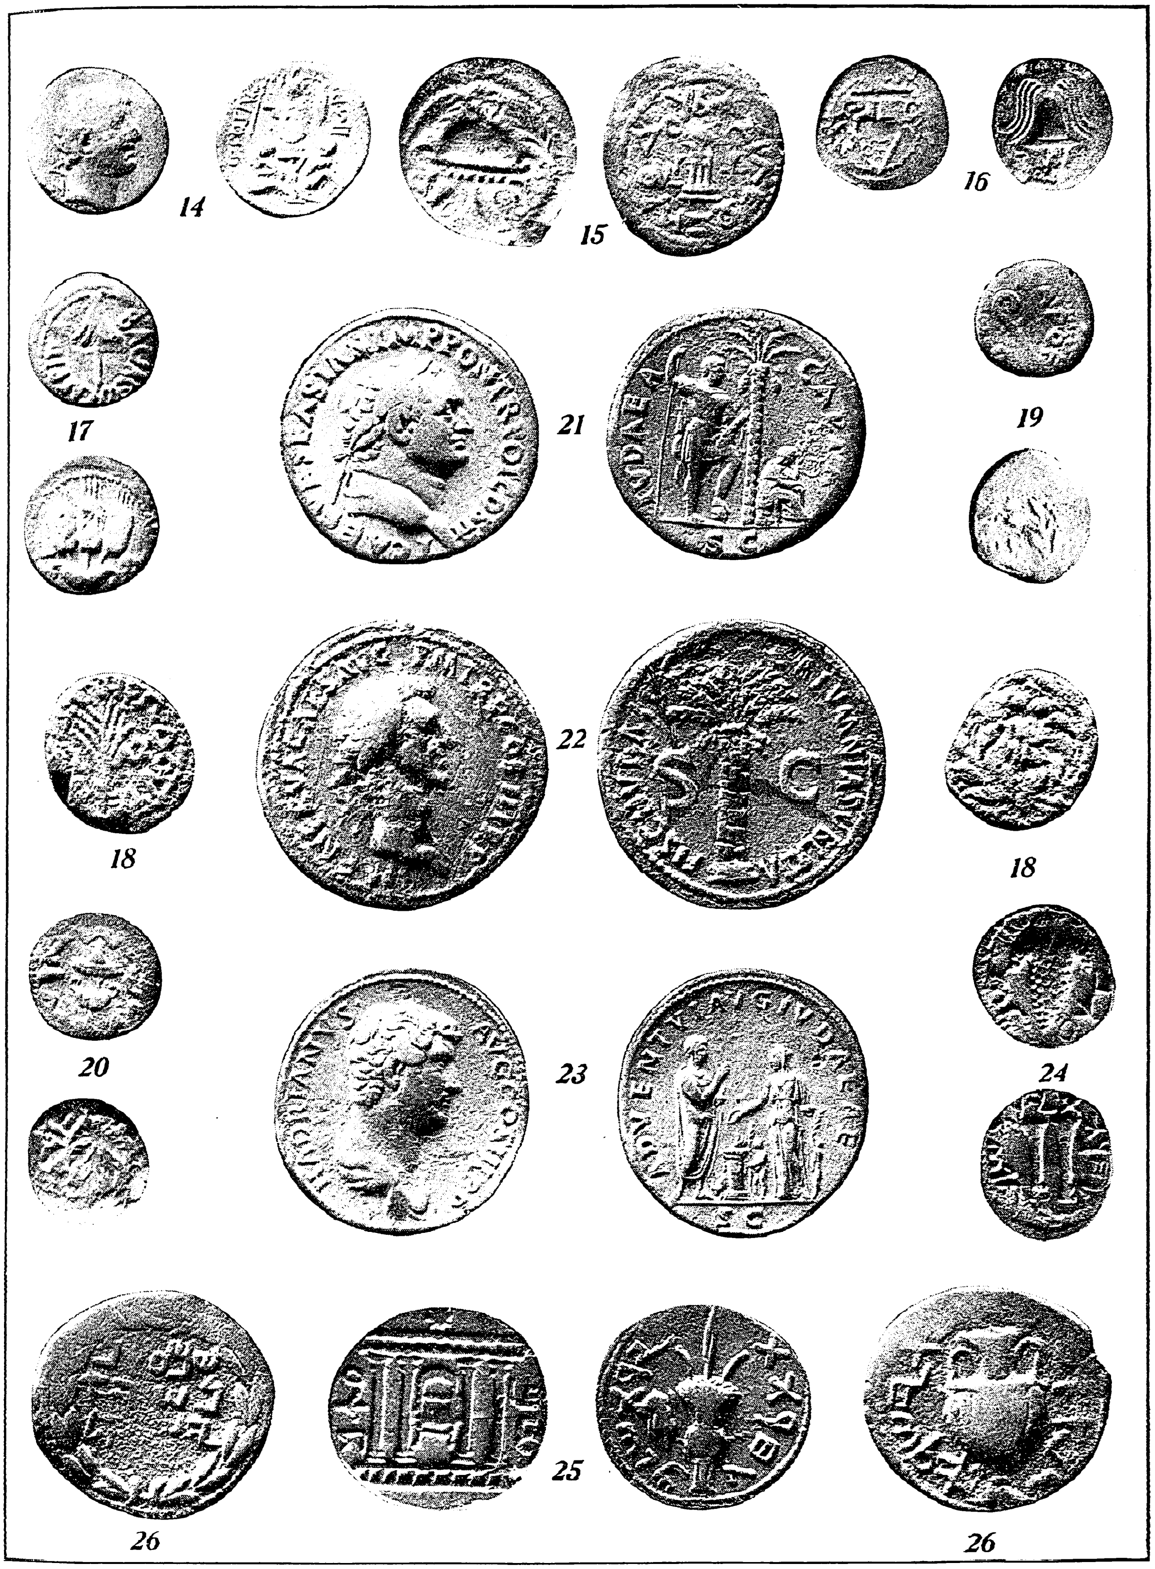
NUMISMATICS

COINS CURRENT IN PALESTINE (c. B.C. 500-C.E. 135)

1. Persian gold daric. 2. Medic siglos. 3. Double shekel of Phenician standard. 4. Phenician tetradrachm of Ptolemy I. 5. Shekel of year 1. 6. Half-shekel of year 2. 7. Seleucid tetradrachm of Phenician weight. 8. Tyrian stater (new series). 9. Bronze coin of John Hyrcanus. 10. Bronze coin of Aristobulus I. 11. Bronze coin of Alexander Jannæus. 12. Bilingual bronze coin of Alexander Jannæus. 13. Denarius of Aulus Plautius with inscription of "Bacchius Iudæus."



From originals in the British Museum.

NUMISMATICS

COINS CURRENT IN PALESTINE (c. B.C. 500-C.E. 135)

14. Brass coin of Sosius. 15. Bronze coin of Herod the Great. 16. Bronze coin of Herod Archelaus. 17. Bronze coin of Agrippa I. 18. Bronze coin of Herod Antipas. 19. Bronze coin of Pontius Pilate. 20. Brass coin of First Revolt. 21. Coin of Vespasian with inscription of "Iudæa Capta." 22. Coin of Nerva with inscription of "Fisci Iudaici Calumnia Sublata." 23. Coin of Hadrian with inscription of "Adventui Aug(usti) Iudææ." 24. Coin of Bar Kokba, restruck on denarius of Trajan. 25. Shekel of Bar Kokba, restruck on tetradrachm of Antioch. 26. Brass coin of Bar Kokba.

tic drachmas (about 20 cents). Of gold coins, only the Roman aureus is of importance. Its legal value was 25 denarii, and its intrinsic value almost exactly a sovereign (five dollars).

For local use the procurators issued small bronze coins, similar in style to those of the Hasmonean and Idumean dynasties. In fact, it seems that in Judea, as in Egypt, the emperors wished to be considered simply as successors of the former kings, and therefore continued the local coinage as a matter of course, avoiding anything which could give offense to the national feeling and to the religious prejudices of Jewish workmen. The brass coins in question have the name of the reigning emperor (sometimes of another member of the imperial family) and a regnal year; but they have neither an imperial effigy nor figures of living creatures. The usual symbols are found: ear of corn, palm-tree or branch, cornucopiæ, "diota," covered vase, "lituus" (curved trumpet), wreath, etc. The coin of which an illustration is given on plate (see Fig. 19) was struck under the authority of Pontius Pilate in the eighteenth year of Tiberius (35 C.E.). These coins were probably reckoned as quadrantes ($\frac{1}{4}$ of a Roman as; consequently $\frac{1}{64}$ of a denarius). Other denominations of copper coins in use at this period were: (1) the "lepton," worth half a quadrans (Mark xii. 42) and therefore identical with the "peruṭah" of the Mishnah (Ḳid. i. 1 *et seq.*); (2) the "assarion" ("issar"), which, according to the Mishnah, was worth $\frac{1}{24}$ of a denarius (or drachma), and therefore identical with the old "dichalcus," but different from the Roman as ("issar iṭalḳi"), which was worth $\frac{1}{16}$ of a denarius.

Coins of the Revolt.

In Sept., 66, the Jews, exasperated by the misgovernment of the Roman procurators, took up arms. The great rebellion lasted, as is well known, four years; it was crushed under the ruins of the Temple of Jerusalem in Aug., 70. Has it left any numismatical records? No coins struck during the first Jewish insurrection are mentioned either in heathen or in Talmudic texts, and, as has been shown, there is good reason for abandoning the view which assigns to that period the silver "shekels" (and half-shekels) "of Israel." Of brass coins, however, the following may with some likelihood be attributed to the Zealots, during the protracted siege of Jerusalem:

(1) Numerous small coins with Jewish types. *Obverse:* Vine- or fig-leaf. *Reverse:* A two-handled vase. Legend: חרות ציון ("Ḥerut Ẓiyyon" = "liberty of Zion"). שנת [or שלוש] שתים ("Shenat [or "Shalosh"] Shetayim," "year 2" [or 3]). Year 1 is not represented. The new era most likely began Oct., 66. See plate, Fig. 20.

(2) Larger coins with types referring to the Feast of Tabernacles or Booths: *Obverse:* Etrog (lemon) between two lulabs (bundles of twigs). *Reverse:* Palm-tree or cup between two baskets (or on some specimens a cup). Legend: ל-גאלת ציון ("Li-Ge'ullat Ẓiyyon" = "deliverance of Zion"). שנת ארבע ("Shenat Arba" = "year 4"). The cup variety has no further inscription; but on the palm-tree specimens is found a mark of value, חצי ("Ḥaẓi" = "half") on the larger size, רביע ("Rebia'" = "quarter") on the smaller. The word to be understood is most likely "shekel." These coins were therefore meant to stand for halves, quarters (and perhaps sixths or eighths?) of shekels. They were tokens or siege money issued during the last convulsions of besieged Jerusalem.

Of these two categories the first has been assigned to the Vespasianic period by De Saulcy; the second, to the same period by Garrucci. This opinion, although not unanimously accepted by numismatists (especially as concerns the second class), seems to prevail more and more; and the present writer sees no reason for dissenting from it.

Roman Commemorative Coins.

The triumph of Rome over the Jews was commemorated in Roman numismatics by numerous coins of Vespasian, Titus, and Domitian, of which the commonest types show a female captive (Judea) seated or standing at the foot of a palm-tree or trophy (see plate, Fig. 21). In another series Victory inscribes the name of the emperor on a shield, which she supports against a palm-tree. The legend is "Judæa Capta" or "Devicta." Another coin deserving notice is the large brass one of Nerva with the inscription "Fisci Iudaici Calumnia Sublata" (see plate, Fig. 22); it shows that after the destruction of the Temple the Jewish poll-tax (didrachma) was claimed for the treasury of Jupiter Capitolinus in Rome. This vexatious imposition was accompanied with many investigations and calumnies, the suppression of which (though not of the tax itself) is here commemorated. Lastly, there is the brass coin of Hadrian (struck in 130) to celebrate his visit to Judea: "Adventui Aug[usti] Iudææ." See plate, Fig. 23.

Coins of Bar Kokba.

In 133 the Jews of Palestine made a supreme effort to regain their independence, or at any rate their right to the free exercise of their religion. This second and last revolt lasted three years, and was quenched with great difficulty in floods of blood, the fortress of Bethar being the last to yield (135). The chief of the insurgents, BAR KOKBA, is called in heathen documents "Barco Chebas" (= "son of the star"); in Jewish, "Bar Kozeba." Both give only the patronymic of this bold adventurer, leaving one to guess his proper name. In contradiction to the first revolt, the second revolt is expressly stated by the Talmud to have left monetary records. Say the Rabbis: "The second tithe can not be paid in a coinage which is not current, like the coins of Kozeba or of Jerusalem [the old shekels?] or that of the former kings [the Seleucidæ?]" (Tosef., Ma'as. Sheni, i. 5; comp. Yer. Ma'as. Sheni i. 2; B. Ḳ. 97b). Coins of Bar Kokba are still extant in large quantities; a large number of them was discovered near Hebron. They may be divided into the following classes:

(1) *Silver coins* (twenty-four varieties, according to Hamburger). These are invariably restruck on Roman denarii, Græco-Roman drachmas of Cæsarea (Cappadocia), or Attic tetradrachms of Antioch. The original types and inscriptions are still sometimes discernible under the new orthodox dies; the original coins bore the figures of emperors from Galba to Hadrian. On the smaller coins (denarii, drachmas) the types are of the usual sort (see plate. Fig. 24). *Obverse:* Wreath, bunch of grapes. *Reverse:* Flagon, palm-branch, lyre, pair of trumpets. The legend on the obverse reads: "Simon" (usually spelled שמעון); on the reverse, שב לחרות ישראל ("Shenat Shetayim le-Ḥerut Yisrael" = "year 2 of the liberty of Israel") or simply "Le-Ḥerut Yerushalayim" (= "liberty of Jerusalem"). A single coin of this class (belonging to the Marquis de Vogüé) bears the date "year 1" ("Shenat Aḥat li-Ge'ullat Yisrael"; On the obverse the name here is not "Simon," but "Eleazar ha-Kohen" (= "Eleazar the priest").

There are also a few hybrid specimens, combining by mistake a die of Simon with one of Eleazar. There can be no reasonable doubt that Simon is the proper name of Bar Kokba or Kozeba, who (at least from the second year of the revolt) was the undisputed chief of the Jews, with almost kingly powers. Indeed, he announced himself as the Messiah, and was recognized as such by Rabbi Akiba. Who "Eleazar the priest" was is quite unknown; identifications like Eleazar of Modeïn (Bar Kokba's uncle), Eleazar ben Azariah, Eleazar ben Harsom, etc., are mere guesses. On the larger silver coins (restruck on tetradrachms of Antioch) the obverse type is a conventional image of the Temple of Jerusalem (see plate, Fig. 25), usually surmounted by a star; on the reverse is a type (etrog and lulab) already known from the time of the first revolt. Some of these coins bear a date: year 1 ("Shenat Aḥat li-Ge'ullat Yisrael"), or year 2 ("Shenat bet le-Ḥerut Yisrael"); others, the simple inscription "Le-Ḥerut Yerushalayim." Dated coins of the first year have on the obverse the name "Jerusalem"; dated coins of the second, "Simon" or (very seldom) "Jerusalem"; undated coins have always the name "Simon."

Coins Restruck.

(2) *Brass coins.* These are of many sizes. They exhibit types of the usual species (palm-tree, bunch of grapes, wreath, diota, vine-leaf, lyre). They also seem to have been all restruck on Greek or Roman brass. Among the coins dating from year 1 ("Shenat Aḥat li-Ge'ullat Yisrael") some are struck in the name of Eleazar (Eleazar ha-Kohen) like the silver denarius of the Marquis de Vogüé; the remainder (some of which are of large size) bear the legend "Simon Nasi Israel" (שמעון נשיא ישראל; see plate, Fig. 26); they were struck probably by Bar Kokba, and they indicate that he had assumed the title of "nasi" (prince), then used in a profane sense. The brass coin of year 2 ("Shenat Shetayim le-Ḥerut Yisrael") or undated ("Le-Ḥerut Yerushalayim") exhibits on the obverse only the name "Simon," or (more rarely) "Jerusalem."

To sum up: Omitting the distinction of types, and denoting by *ꝶ* 4 small silver coins, and by Æ 8 large silver, the following list shows the authorities in whose names the coins of the second revolt were issued:

Year 1.	Eleazar	ꝶ 4, Æ.
	Jerusalem	ꝶ 8.
	Simon Nasi	Æ.
Year 2 and Undated.	Simon	ꝶ 4, ꝶ 8, Æ.
	Jerusalem	ꝶ 8, Æ.

With these coins Jewish numismatics comes to an end. The Roman colonial coins of Ælia Capitolina, the pagan town built on the site of Jerusalem, do not belong to the subject, nor do medals with Hebrew legends struck on divers occasions after the Renaissance.

J. T. R.

NUN: Fourteenth letter of the Hebrew alphabet. The name signifies "fish," and perhaps indicates the original shape of the letter (see Alphabet). The "nun" has two forms, one (נ) for the beginning or middle of a word and one (ן) for the end. It is a liquid lingual letter, but its pronunciation is greatly helped by the nose, and therefore in certain cases it is now pronounced with the nasal sound of the French "n." It interchanges with the other liquids ל and ר. It is one of the servile letters, being used as a prefix to form the first person plural of the imperfect in all conjugations, and to form the "nif'al." When followed by "shewa" it is, if initial and radical, regularly dropped (so in the imperative and infinitive of many verbs); if at the end of a syllable, it is generally assimilated to the following consonant. Its numerical value is fifty. On the "inverted" nuns see Jew. Encyc. viii. 368.

NUNES, HENRIQUE (ENRIQUE): Judæo-Portuguese convert to Christianity; born in Borba, Portugal; died July, 1524. After being baptized in Castile, he entered the service of the inquisitor Lucero. His hatred toward his former coreligionists was so well known that King John III. of Portugal called him from the Canary Islands in order that his advice might be had in connection with the introduction of the Inquisition. At Santarem the king ordered him to insinuate himself among Neo-Christian families as a Jew in order that he might gather evidence as to their religious convictions. After having acted as spy among the unsuspecting Neo-Christians at Lisbon, Santarem, and other places, he reported to the king, advised him as to the most effective way to combat Judaism among the Maranos, and supplied him with a list of those who, under the seal of secrecy, had admitted their attachment to Judaism. He denounced even his own brother, and told the king that he had called the latter to Castile in order that he might be educated as a good Catholic, but that the young man had returned to Lisbon to live there as a Jew.

As soon as the Maranos discovered that Nunes was a spy they plotted to get rid of him. At Valverde, near Badajoz (or, according to other sources, on his return from Spain, whither he had been sent by the king on a mission to Charles V.), he was stabbed by two Maranos disguised as monks—Diogo Vas of Olivença and Andreas Dias of Viana. These two were tortured in order to extract information from them as to their accomplices, and were then executed. Nunes, who had received the appellation of "Firme Fé," was revered as a saint, and people ascribed marvelous healing powers to his tomb.

NUNES, ROBERT: Jamaican magistrate; born in Montego Bay, Jamaica, Dec. 12, 1820; died at Falmouth, Jamaica, Jan. 31, 1889. Originally destined for the medical profession, he studied under Doctors Spence and Gordon for three years. He then spent some time in England completing his education, and finally, on returning to his native island, embarked on a commercial career. Nunes entered vigorously into the political life of Jamaica, and took a very active part in the cause of retrenchment. In 1850 he started a paper called the "Political Eagle," which subsequently became known as the "County Union." Soon afterward Nunes left Montego Bay for Falmouth, where he became partner in the firm of D. N. Wetzlar & Co., agents of the Colonial Bank. In 1863 he was elected representative of the parish of Trelawny in the House of Assembly, and in 1864 was appointed custos of the parish. In 1876 he resigned the custosship, and in 1885, having declined reappointment to that office, became senior resident magistrate of the parishes of Trelawny and Hanover, which position he retained till his death.

Nunes filled several other appointments in his parish, *e.g.*, those of consular agent of the United States, vice-consul for Spain, and vice-consul for Norway and Sweden.

NUNES DA ALMEYDA, MANUELA: Spanish poetess; born in London; mother of Mordecai Nunes Almeyda, the patron of the Spanish poet Daniel Israel Lopez Laguna. Together with her two gifted daughters, Benvenida Cohen Belmonte and Sara de Fonseca Pina y Pimentel, wife of Manuel Fonseca Pina, she wrote Spanish verses on Laguna's work.

NUÑES-TORRES, DAVID: Ḥakam and editor; born probably at Amsterdam; died in 1728 at The Hague. He was preacher of the societies Abi Yetomim and Keter Shem-Ṭob of Amsterdam until called to The Hague as ḥakam of the Spanish-Portuguese community there. He is lauded as Talmudist and preacher. He had a large library, which was sold at public auction Aug., 1728, soon after his death, and the catalogue of which, frequently cited by Wolf in his "Bibliotheca Hebræa," was printed at The Hague in the same year. He published six sermons in Portuguese ("Sermoẽs," Amsterdam, 1690); the Hebrew Bible, with and without commentary (*ib.* 1700); and, with Solomon Judah Leon, new editions of the Shulḥan 'Aruk (1697–98) and the Yad ha-Ḥazaḳah (1702).

S. M. K.

NUÑEZ: Marano family, of which the following members are known:

Beatriz Nuñez: Burned, at the age of sixty, at the auto da fé held in Madrid July 4, 1632.

Clara Nuñez: Martyred at Seville together with Francisco Lopez, son of the physician Joseph Lopez, who was himself burned a few years later. Daniel Levi de Barrios wrote an elegy in memory of her.

Isabel Alvarez Nuñez. See Alvarez, Isabel Nuñez.

Violante Nuñez and **Helena Nuñez** (of Gradis): Sentenced by the Inquisition to imprisonment and the galleys for life on July 4, 1632, at Madrid.

J. M. K.

NUÑEZ, MARIA: Daughter of the Portuguese Marano Gaspar Lopez Homem and Mayor Rodriguez; lived in the sixteenth and seventeenth centuries. In order to escape the Inquisition, Maria, with her brother Manuel Lopez and her uncle Miguel Lopez, determined to emigrate (about 1590–1593). They accordingly sailed for Holland, but their vessel was captured by an English ship, the captain of which, an English nobleman, was so enamored of Maria's beauty that he proposed marriage.

In London the comment upon her unusual beauty excited the curiosity even of Queen Elizabeth, who summoned Maria to her presence and drove with her through the streets of the capital.

Maria persistently rejected all proposals of marriage, even from persons of rank, and asked only that she and her companions be allowed to continue their journey to Holland. Finally she arrived safely in Amsterdam, where she was soon joined by her mother, and by her brother and sister, Antonio and Justa. Maria and her sister married their cousins Manuel Lopez Homem and Francisco Nuñez Pereyra; the latter (d. Feb. 14, 1625, in Amsterdam) afterward adopted the name of David Abendana. Their mother, Mayor Rodriguez, otherwise known as Sara Abendana, died Sept. 16, 1624.

D. M. K.

NUÑEZ (RIBIERO), SAMUEL: Marano physician of the eighteenth century; born in Lisbon. He belonged to a distinguished family in that city, and was a physician of great eminence. Although a court physician he was ultimately denounced to the Inquisition; and he and his family were arrested as heretics and thrown into prison. Subsequently, his medical services being needed, the prisoners were liberated on the condition that two of the officers of the Inquisition should reside with the family, to guard against their relapsing into Judaism. The physician had a very elegant mansion on the banks of the Tagus; and he constantly entertained some of the first families in Lisbon. Under romantic circumstances, while one day giving a dinner to invited guests, he arranged with the captain of an English brigantine for himself and family to be conveyed to England. The plan was successful. The party arrived in London, and soon afterward Nuñez and his family set sail for Georgia, a place much talked of about that time. He proceeded with others to Savannah, arriving there one month after the settlement of the place, in 1733 (see Georgia). The arrival of this Jewish colony was not viewed with favor by the trustees; and although Oglethorpe, the governor, invited their attention to the valuable offices of Nuñez, they, while directing the governor to offer the physician a gratuity for his professional services, insisted that all grants of land should be withheld from the Israelites. Nuñez had brought considerable funds with him to the colony; and when he heard of the uncivil reply of the trustees he promptly left Savannah. His absence must, however, have been of short duration; for his name frequently appears in the records of the trustees, and it is furthermore known that six farms were allotted to him.

Nuñez became the ancestor of Mordecai Manuel Noah of New York.

NUÑEZ-VAES, ISAAC JOSEPH: Rabbi at Leghorn, Italy; died before 1788. A follower of the Cabala, he was highly respected by his contemporaries for his knowledge and his piety. He published "Siaḥ Yiẓḥaḳ" (Leghorn, 1766), novellæ to the treatise Yoma, with comments and emendations to the "Tosefot Yeshanim" to Yoma. The second part of this work, containing novellæ to the treatise Ḥagigah, together with a treatise on the prayers, especially on the "Shemoneh 'Esreh," was taken from his manuscript work "Bet Yiẓḥaḳ," which discussed a portion of the legal code "Oraḥ Ḥayyim," and was printed posthumously by his son Jacob, with the latter's additions, under the title "Ḥedwat Ya'aḳob" (*ib.* 1788).

NUÑEZ-VAES, JACOB: Editor and rabbi of Leghorn, Italy; died there about 1815; son of Isaac Joseph Nuñez-Vaes, and pupil of Isaac Nuñez Belmonte. David b. Raphael Meldola wrote an elegy in his memory (Leghorn, 1815). Nuñez-Vaes, besides publishing the second part of his father's "Siaḥ Yiẓḥaḳ," edited a double commentary on the Pentateuch by the tosafists and by Judah b. Eliezer, under the title "Da'at Zeḳenim" (*ib.* 1783; reprinted at Ofen, 1831, by Aaron Kutna, rabbi of Totis, Hungary), as well as the "Sefer ha-Makria'" of Isaiah di Trani the Elder (*ib.* 1779) and various other works.

NUREMBERG: Most important commercial city of Bavaria. According to Wagenseil ("De Civitate Norimburgiæ," p. 71), Jews were living in Nuremberg as early as the beginning of the twelfth century. A tombstone bearing the name of Elijah b. Simon and dated Oct. 12, 1129, is said to be still in existence (comp. Zunz, "Z. G." p. 405, and note D). The next earliest tombstones still existing bear the dates 1273 and 1308. Legend declares that the Jews betrayed Nuremberg to Henry V. in 1106, but the historical fact is that he merely took the castle (comp. Aronius, "Regesten," p. 97). They are said to have purchased the favor of Emperor Lothar by the payment of large sums of money and to have sought refuge from persecution in the imperial castle in 1136.

At the end of the twelfth century the Jews were accused of having desecrated the host. The local memor-book refers to the persecutions under Rindfleisch. Moses ben Eleazar ha-Kohen calls the tragedy of Aug. 1, 1298, when 698 Jews were slain, the final act of the fifth millennium ("Maḥzor Saloniki," ḳinah 48, reprinted in Salfeld, "Martyrologium," pp. 343-345). Entire families perished, including R. Jehiel b. Menahem ha-Kohen with his wife Hannah and three children. It is recorded that a certain Jeremiah b. Isaac survived thirteen relatives, slain there, for twenty years. In the same year the emperor Albert issued an edict permitting the Jews to place themselves under imperial protection by payment of a certain tax.

Restrictions by Emperor Henry VII.

Emperor Henry VII. issued an edict in 1310, forbidding the Jews, on pain of expulsion from the city, to sell meat to Christians in the Christian slaughter-houses. Jews and Christians were not allowed to bathe together. Jews were not permitted to purchase eggs or live animals before nine o'clock in the morning; they were not permitted to engage in any trade, and their commerce was greatly restricted. In Nuremberg, as elsewhere, the Jews were driven to engage in usury, but they were not permitted to take more than two heller in the pound a week from citizens, or three heller from strangers.

Worse befell them under Ludwig the Bavarian. The citizens wished to enlarge the city, but were prevented from doing so by the ghetto; they therefore petitioned the emperor, who decreed, in 1315, that any Jewish houses that were an obstacle to the extension of the city might be forthwith demolished. The ground on which the houses stood was taken from the Jews without compensation. In 1322 their taxes were pledged to the burgrave Frederick IV., who protected them to some extent. About 2,000 Jews, including 212 Jewish citizens, were at that time living in the city. They had come from forty-five different places in Germany, but chiefly from Neustadt, Ansbach, Freystadt, and Baireuth. A foreign Jew was not allowed to remain in the city longer than from one to four weeks (with the exception of a student), under penalty of a fine of one gulden per day. A Jew living in the city and desiring to become a citizen was required to take an oath of loyalty to the justice and the council of Nuremberg. Quarrels among Jewish citizens were adjudged according to Christian and municipal laws. Purely Jewish affairs were adjudicated before the "Judenmeister" and the council appointed by him. A Jewish citizen who wished to surrender his citizenship was forbidden to go outside the limits of the city on pain of a fine of 1,000 gulden, was required to pay the tax for the following year, and was not permitted to take any more pledges in the city; if he still retained a pledge or owned real estate he had to transfer it to a reputable Jew. In 1347 Charles IV. imposed a tax of 200 pounds heller upon the Jews of Nuremberg, payable in the city, to be devoted to furnishing wood for the castle in case of the emperor's presence there.

Legal Status.

The Synagogue Demolished.

In the same year an edict was issued ordering the demolition of the synagogue and of some Jewish houses to make room for the Marienkirche. The Jewish citizens of Nuremberg had to pay 1,600 gulden to the burgrave, to the Bishop of Bamberg, and to Arnold of Seckendorf, receiving in return a plot outside the city that had been the scene of a conflagration. Images of saints were affixed to the houses erected on the site of the Synagogue and Jewish homes in order to wipe out all memories connected with the Jews. On the outbreak of the war between Charles IV. and Günther of Schwarzburg, in 1349, the Jews sided with the patricians, and, on Charles IV. proving victorious, were punished by being expelled from the city (though their expulsion lasted only for three years, 1349–52); a number perished at the stake (Dec. 5, 1349; a list of them is given in Salfeld, "Martyrologium," pp. 219–230).

In the Fourteenth Century.

On May 2, 1352, Vischlein the son of Masten, Semelin the son of Nathan of Grefenberg, and Jacob the son-in-law of Liebetraut appeared before the council requesting to be received again as citizens, declaring that, in return, they would remit all debts the citizens owed them and would sell all houses held in pawn; they agreed to settle only where the citizens permitted, and asked merely to be protected against the nobility. The council being satisfied with these conditions, an imperial edict was received, on May 26, 1352, permitting the Jews to settle in the city, while the emperor agreed henceforth not to pledge the taxes and imports of the Jews. But after a short time he pledged the Jews' tax to Berthold Haller for 1,500 gulden, to Paulus von Pensenstein for 2,000 gulden, and to Peter von Wartenberg for 300 gulden. Eight years later one-third of the Jews' tax was pledged to the city, which agreed in return to protect the Jews for fifteen years. In 1371 this agreement was extended for twenty years, the entire Jewish tax being pledged to the city, which in return was to pay 400 gulden a year into the imperial treasury.

OLD NUREMBERG SYNAGOGUE.
(From Andreas Würfel, "Historische Nachrichten von der Judengemeinde zu Nürnberg," 1775.)

The Jews fared much worse under the short, oppressive reign of Wenzel. In 1385 all of them were imprisoned without cause, and were released only on paying a ransom of 80,986 gulden. The emperor then took the Jews' tax away from the city, giving it to Berthold Pfinzing for 3,000 florins. Jews were forbidden to sell their property in any manner, and on the death of a Jewish citizen one-half of his estate went to the imperial treasury and the other half to the city.

Papal Decree of 1451.

In 1451 a synod convened at Bamberg, in the presence of the papal legate Cardinal Nicholas, and decided, among other things, that the Jews of Nuremberg should no longer be allowed to engage in commerce, but might take up trades again on condition of wearing a yellow ring fastened to their outer garment, and a red peaked hat, which could be exchanged for a red cap, while the women were obliged to face their veils with blue material. A foreign Jew staying temporarily in the city had to wear the "gugel," a hood with ends that hung down his back. This time, apparently, the council sided with the Jews, for it sent two embassies to speak for them, one to the pope and one to the burgrave Frederick VI. The envoys explained to the pope that usury would be taken up by the Christians; to the burgrave that the Jews were entirely impoverished, and were unfitted by hunger and illness to engage in any trade. The burgrave promised to intercede, and when he went to Rome, a little later, he succeeded in inducing the pope to recall some of the decrees issued against the Jews of Nuremberg. They were then permitted to engage again in the money-brokerage business, but only for a certain time.

Apart from the sums which were taken from them without cause, the Jews were obliged to pay every tenth pfennig of their income into the imperial treasury, one-half on Walpurgis day and the other half at Michaelmas. Each Jew, also, had to pay a coro-

Taxation.

nation tax on the day of coronation of a new ruler. Every Jewish citizen, furthermore, had to pay the Opferpfennig—one gulden a year per head (at Nuremberg amounting to 3,000 or 4,000 gulden a year)—and the so-called "canonem" (fief shilling) on the "Oberst" day and on Michaelmas, which every Jew paid into the imperial treasury in token of complete submission. Apart from the wood-tax, mentioned above, the Jews also furnished straw mattresses, feather-beds, bolsters, covers, cloths, and dishes when the emperor was present at the castle.

Costumes of Nuremberg Jews.

(From Andreas Würfel, "Historische Nachrichten von der Judengemeinde zu Nürnberg," 1775.)

The Old Synagogue.

The synagogue, which was torn down to make room for the Marienkirche, consisted of two one-story buildings, surrounded by a wall—one structure serving as a dwelling for the rabbi; when this wall was torn down corridors and buildings are said to have been found under it, which formerly were filled with goods. The second synagogue is said to have been at Wunderburggasse, No. 6. A Talmud Torah and a so-called "gymnasium" were connected with it. An office was in the court; in a cabinet in this building there was a board with a Hebrew inscription stating that a Jew was once beheaded there. Below this office was the tomb of a rabbi who was said to have been killed by a steer. When the congregation had outgrown this synagogue the community sought permission, in 1406, to build another, but was forbidden, though even foreign Jews were permitted to erect within the city limits tabernacles for the festival days. The rabbi officiated as principal of the school, and even scholars passing through the city were permitted to teach; Jacob Weil received such permission, as did also Jacob Levi (MaHaRIL; responsum No. 151); a certain R. Israel and R. Koppelmann taught side by side. But controversies frequently broke out among the teachers, as in 1383, between the rabbis of Nuremberg and R. Mende of

Rothenburg, the former even going so far as to forbid children to study under R. Mende, on pain of a fine of 100 gulden for every child and loss of citizenship. Another quarrel may be mentioned—between R. Simelin of Ulm and the rabbis Seligmann, Lasen, and Gershom, which was decided by Jacob Weil. When it was planned to introduce the ritual of Nuremberg into the synagogue of Ulm, R. Simelin signed the agreement, but he refused to carry it out afterward, whereupon Jacob Weil sentenced him to entreat the public pardon from the almemar at morning prayer, first at Nuremberg and then at Constance. When a quarrel broke out between the rabbis of Nuremberg, Weil refused to listen to the suit, and the council was obliged to appoint Gottschall Ganz and two assistants to hear it.

Disputes of Rabbis.

Rabbis and Teachers.

The following rabbis of Nuremberg are mentioned: Jehiel ben Menahem ha-Kohen (d. 1298); Abraham ha-Kohen of Frankfort (d. 1298); Mordecai ben Hillel (d. 1298); Meïr b. Uri (d. 1345); Süssmann and Gershom (at the time of the Black Death); Jacob Levi, teacher of Jacob Weil (1425–56); R. Israel, R. Koppelmann, David Sprintz (15th cent.); Jacob Pollak (from 1470). The following are mentioned as "Lehrmeister": Haimann (son of Kaufmann of Bamberg), who was allowed only twelve pupils (1381); Jacob Meister Meïr of Frankfort (1383; also cantor); Isaac of Salzen (1395); Isaac of Wörth (1435; teacher of children). The following cantors are mentioned, in addition to Jacob Meister: Michael von Weye (1396–1402); Wolfel Vorsinger (1425); Moses Sangmeister (1461).

Internal Organization.

The rabbi presided at the communal council, which was elected every year after Whitsuntide. This council consisted of five members, who pledged themselves, on entering upon their office, not to reveal any of the matters discussed. The council fixed the tax-rate, which, however, could not exceed ten gulden a year. The meetings were held in the office of the council, and the documents were signed by the rabbi and two "parnassim," while the remaining two members acted as treasurers. The council had general jurisdiction over the internal affairs of the community, including questions of marriage and inheritance; it kept account of the prescribed 100 cakes of salt which every Jew was required to have in his possession, on pain of a fine of ten pfennig for each cake lacking. Money matters were adjudged before the district court. In criminal cases the Jews were under the general laws of the state. Several of these cases are mentioned, together with the punishment inflicted. In 1363 a certain Joseph was hanged, but to the outside of the gallows, to indicate that the criminal was not a Christian. Similar sentences are mentioned—in 1420, 1430, 1436, and 1440. In 1436 several Jews were hanged for procuring and lechery. In 1440 the "Schulklopfer" was accused of being a dangerous alchemist, and sentenced to imprisonment and branding on the forehead. In 1467 eighteen Jews were burned on the Judenbühl, on the charge of having murdered four Christian children.

In especially difficult cases an oath was required. This ceremony always took place in the synagogue; the person taking the oath stood with his face toward the east and his right hand up to the wrist in the roll of the Pentateuch; then God was invoked, and the curse of fire, with all the other curses in the Bible, were called down upon his head if the oath were a false one. This oath, which was generally taken in a suit with a Christian, was composed in 1478 and printed for the first time in 1484 (quoted verbatim in Barbeck, "Gesch. der Juden in Nürnberg," pp. 24-26). See Oath.

Communal Buildings.

The slaughter-house was regarded as the property of the community; after the return of the Jews to Nuremberg in 1352 it was situated in the present Judengasse formerly South, No. 1107, S. The communal bath was used by Christians as well as Jews. In the beginning of the fourteenth century the cemetery was situated outside the city, but the enlargement of the latter between 1350 and 1427 brought the cemetery within the corporate limits. It covered so much ground (a consequence of the diseases which ravaged the city in the years 1367, 1407, and 1437) that it blocked the way of the Christians to their gardens.

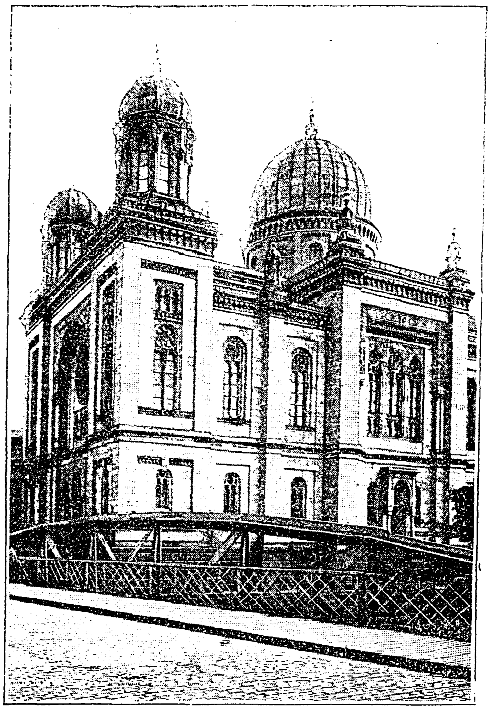
The Preaching Friars.

Expulsion, 1499.

In the second half of the fifteenth century an increasing number of attempts were made to convert the Jews. John of Capistrano preached at Nuremberg, and the Jews were compelled to attend his sermons. They were forced also to listen to the Dominican friar Schwarz, who undertook to convince them by proofs from their own writings. In consequence the relations between the citizens and the Jews of Nuremberg grew more strained. The wealthy citizen Antonius Koburger had the anti-Jewish work "Fortalitium Fidei" (Nuremberg, 1494) printed at his own expense in order to arouse hatred among the educated against the Jews. The council, which numbered among its members at that time the famous humanist Willibald Pirkheimer, decided to send a petition to the emperor requesting permission to expel the Jews. Emperor Maximilian, who was at that time at Freiburg, issued a decree (June 21, 1498) permitting the citizens of Nuremberg to expel the Jews, because (1) their numbers had greatly increased through immigration, (2) they had engaged in much usury, (3) they had entered the dwellings of other people, and (4) had aided suspicious persons, leading to thieving and crime. In the same decree the emperor transferred the property of the Jews to the city, or rather to the imperial bailiff Wolfgang von Parsberg. The houses of the Jews were sold to the city for 8,000 gulden, and the synagogue and the dance-hall for 350 gulden. The buildings in the cemetery were either burned or torn down; a street was laid out across the cemetery, and most of the tombstones were used as foundation for a road 65 feet wide by 279 feet long. The day of the exodus was first set for Nov. 6, 1498, then for Candlemas, Feb. 2, 1499, and finally for Lætare Sunday, 1499. The exiles were accompanied by an armed escort on account of the insecurity of the roads. Most of them settled at Neustadt, the residence of the widowed Margravine Anna of Brandenburg; others went to Frankfort-on-the-Main, and a few to Prague. Among Jewish writers this expulsion is mentioned only once, by Naphtali Herz Treves.

Intermittent Visits.

The municipal council of Nuremberg, not satisfied with having expelled the Jews from the city, endeavored to make their sojourn in the vicinity impossible. It protested when a Jew was made a citizen of Fürth. The citizens of Nuremberg were not allowed to buy meat from the Jews of Fürth, and trade with Jews was finally forbidden altogether (1533). Six years later, July 30, 1539, Nuremberg citizens were even forbidden to borrow money from the Jews, under penalty of a fine of ten gulden. These severe measures seem to have been relaxed after a time, however, for the Jews resorted to the gardens outside the city to make purchases and sales. Under Maximilian II. they were permitted to buy all their food supplies at the public fairs near Nuremberg, though this permission was rescinded on June 17, 1693. They were permitted soon after to deal in the city itself on condition of reporting to the guard on entering the city, whereupon the guard detailed a musketeer to accompany each Jew during the day. The attendance of this escort was called a "lebendiges Geleite"; after a time an old woman was substituted in place of the musketeer. On the Jews' departure from the city the guard levied a toll upon the goods purchased. No Jew was permitted to appear in the market between eleven and one o'clock in the day. The various edicts intended to regulate the behavior of the Jews during their stay in the city were issued in the years 1721, 1723, 1732, 1774, 1777, 1780, 1787, and 1791. The desire is apparent in all these to admit the Jews to the city, although under the most severe conditions; for evident reasons, since the "lebendiges Geleite" system alone brought in an average revenue of 3,589 gulden a year.



New Synagogue at Nuremberg.
(From a photograph.)

Resettlement.

The first Jew permitted to settle in Nuremberg after the expulsion in 1499 was the lottery agent Simon Wolfkehle, at the beginning of the nineteenth century. In 1824 a Jewish girl named Caroline Levi was permitted to stay in the city to learn fancy-work. In 1839 Joseph Wassermann, who was a veteran soldier and was employed in the postal service as driver, was permitted to live in the city. The year 1852 saw the first divine services, held on the occasion of the great festivals, permission having been given only on the condition of their being observed without noise. In 1857 the Jews of Nuremberg formed themselves into an independent community of six members. The first rabbi was elected fifteen years later, when M. Levin of Zurich was called to Nuremberg as the first preacher; he organized the community and its school affairs. The temple was dedicated on Sept. 8, 1874, in the presence of the burgomaster Stromer, one of whose ancestors had persecuted the Jews while burgomaster of Nuremberg in the fourteenth century.

The community at present (1904) numbers 6,500 members in a total population of 261,083; its rabbi (since 1882) is Dr. B. Ziemlich. Among its institutions may be mentioned the Unterstützungs- und Armenverein, the Israelitische Männer-Wohltätigkeitsverein, the Lazarus und Bertha Schwarzsche Altersversorgungsanstalt, etc.

J. S. O.

NUSBAUM, HILARIUS: Polish historian and communal worker; born in Warsaw 1820; died there 1895. He was educated in the Warsaw rabbinical seminary, and began social work early. For some time he was in charge of a school for Jewish boys, founded by himself. Active in the affairs of the Warsaw community, Nusbaum was instrumental in the building of a synagogue about 1850. Assuming the management of the home for children, built by the philanthropist Mathias Rosen, he devoted his energies to the instruction of the inmates both in the usual subjects and in handicrafts. In 1867 Nusbaum was appointed a member of the committee of charities for the kingdom of Poland. For a number of years he was also an active member of the society of Lomede Torah and a help and inspiration to young men who were devoting themselves to Jewish learning.

Outside of his native city Nusbaum was better known for his literary labors. His writings include the following: "Z Teki Weterana Warszawskiej Gminy Starozakonnych," 1880; "Szkice Historyczne z Życia Żydów w Warszawie, od Pierwszych Śladòw Pobytu Ich w Tem Miescie do Chwili Obecnej," 1881; "Leon and Lob, a Social-Religious Study," 1883; "Jacob Israelevich, a Sketch from Jewish Life," 1886; "A Guide for Judaism: A Course in Literature and Religion"; "Historja Żydów od Samego Ich Początku do Obecnej Epoki," 5 vols., 1888–90, the most important of his literary productions; and "Przewodnik Judaistyczny, Obejmujący Kurs Literatury i Religji," Warsaw, 1893. The last volume of this work, treating of the history of the Jews in Poland, is particularly valuable. He also left in manuscript a treatise on education entitled "Our Emil," and for many years he was a contributor to the Warsaw "Izraelita."

Nusbaum's books are valuable as material for future historians of the Jews of Poland.

NUSSBAUM, MYER: American lawyer; born in Albany, N. Y.; son of Simon and Clara Nussbaum, who went to America from Neustadt-on-the-Saale, Bavaria. He received his early education in the public schools of his native city, and afterward entered the law-offices of Newcomb & Bailey. In 1884 he was appointed police justice of Albany; in 1893 he was elected a member of the state assembly to represent that city; and in 1895 he was elected to the state senate as the representative of the county of Albany. He is a member of the State and Albany County Bar associations and of the Republican Club of New York, in which latter city his practise largely lies.

Nussbaum has always taken great interest in all Jewish charitable societies, having been for fifteen years a trustee of the Jewish Home in Albany.
A. G. H. C.

NUT: The rendering in the English versions of the two Hebrew words "egoz" and "boṭnim."

1. "Egoz." This is mentioned once only, in Cant. vi. 11, where a nut-grove is referred to. According to the common tradition, the word designates the walnut (*Juglans regia*), both the designation and the fruit having been brought into Palestine from Persia. The Greeks and Romans also considered that country as the home of the fruit, which they called "Persian nut" (*Κάρυον Περσικόν*). Josephus speaks of the numerous nut-trees in the plain around the Sea of Gennesaret, and says ("Vita," § 3) that Jewish prisoners at Rome lived on figs and nuts exclusively, so as not to become unclean by eating heathen food. This indicates that nuts and figs were common food. In the Talmud and Mishnah (B. M. iv. 12; Ket. xvii. 15) nuts are considered a delicacy. Oil was prepared from the green nuts (Shab. ii. 2; Löw, "Aramäische Pflanzennamen," pp. 3, 84). Many nut-trees are to be found in Gilead, in the Lebanon, especially around Damascus, and in Judea, where they have been planted. They grow even on the mountains at altitudes too cold for the olive.

2. "Boṭnim." This word, the plural of "boṭen," is commonly taken to mean pistachio-nuts, the fruit of *Pistacia vera*, which is native in Palestine and Syria as far as Mesopotamia. These nuts are mentioned in one passage only, Gen. xliii. 11, among the special products of Canaan that Israel proposed should be sent as gifts to Joseph in Egypt (Löw, "Aramäische Pflanzennamen," p. 68). The pistachio is now seldom cultivated in Palestine, but may frequently be found in Syria around Beirut and Damascus. The fruit is eaten raw or roasted, and is considered a delicacy throughout the East.
E. G. H. I. Be.

——**In Jewish Life and Lore**: In Talmudic times nuts were used for making oil by means of a press similar to that used for olives; but the Rabbis disagreed as to whether nut-oil might be used on the Sabbath eve (Shab. ii. 2 [24b]). Nutshells yielded a kind of dye, and therefore they were considered of value and subject to the law of the Sabbatical year (Sheb. vii. 3). Nuts were much liked by little children, who were easily lured by means of them (Bek. 30a). The Rabbis held that nuts caused discharges from the nose and expectoration, and they therefore recommended abstention from them on Rosh ha-Shanah in order to prevent interruption of the prayers (Isserles, quoting Mölln, in Shulḥan 'Aruk, Oraḥ Ḥayyim, 583, 2).

Symbolic Applications.

The nut is often used by the Rabbis symbolically. It is the symbol of the scholar and the Torah; for, just as the kernel remains clean even when the nut is dropped in the dirt, so when the scholar sins the Torah, which he has studied, is not soiled. The nut is the symbol of the Jews for various reasons: it has four sections in which the kernel is hidden; so the Israelites in the wilderness were divided into four sections, each under its banner, with the Shekinah in the midst of them. There are three kinds of nuts, hard, medium, and soft; and so there are three classes of Israelites: (1) those who perform charitable acts voluntarily; (2) those who must be urged to do good deeds; (3) those who, in spite of earnest solicitations, decline to aid the needy. The roots of the nut-tree, unlike those of other trees, will revive after exposure, even though they may have begun to wither, and so the Jews, unlike the heathen, are forgiven if they confess their sins (Pesiḳ. R. 11 [ed. Friedmann, p. 42]; Ḥag. 15b; Cant. R. vi. 11). It seems that the symbolic application of the nut was current in the Alexandrian school; for Philo (*Περὶ Βίου Μωύσεως*, iii., § 22, ed. Mangey, ii. 162), explaining at some length the symbol of the nuts (*κάρυα*) which Aaron's rod yielded (Num. xvii. 23 [A. V. xvii. 8]), says: "The nut differs from all the other fruit in that its eatable part and seed are the same; therefore it is the symbol of perfect virtue. For just as in a nut the beginning (seed) and the end (fruit) are the same, so is every virtue at the same time both beginning and end. Besides, the eatable part of the nut is enclosed in a twofold case, the outer part of which is bitter and the inner part is very hard; the same is the case with the soul, which must undergo bitter trials before it attains perfection."

The nut occupies an important place in cabalistic symbolism; for besides the fact that its shell ("ḳelifah") has been adopted to designate dross, the nut as a whole symbolizes the adherence of the fourth

In Cabalistic Symbolism.

"ḳelifah," called "nogah," to the brain (Ḥayyim Vital, "'Eẓ Ḥayyim," hekal vii., gate 9, ch. ii.). For other symbolic applications of the nut by the cabalists see Eleazar of Worms, "Sha'are ha-Sod weha-Yiḥud weha-Emunah" ("Sha'ar ha-Kabod"). The Romans considered nuts as an emblem of fertility in both man and beast; and therefore they used to strew nuts before the bridegroom and bride. This custom was adopted by the Jews in the time of the Talmudists (Ber. 50b), and in Polish towns it continues up to the present time. On the Sabbath which precedes the wedding, when the bridegroom is called up to recite a part of the weekly lesson in the synagogue the women from their gallery throw down nuts, which are picked up by the children. It was also the custom to distribute nuts among the children on the eve of the Feast of the Passover, in order that they might not fall asleep and to arouse in them a desire to question (Pes. 109a). This custom has developed into the general one of playing games with nuts, even among grown persons, during the whole feast. As the nut symbolizes the children of Israel, it is one of the ingredients of the "ḥaroset" (Isserles, in Shulḥan 'Aruk, Oraḥ Ḥayyim, 473, 5).

A. M. Sel.

NYÁRI, ALEXANDER: Hungarian art critic; born Aug. 28, 1861, at Zala-Egersczeg; educated at Vienna under Hansen, receiving his diploma as architect in 1884. In the following year he went to Paris and thence to Berlin, where he studied philosophy and the history of art. He received his degree of Ph.D. from the University of Leipsic in 1891.

In 1889 Nyári was commissioned by his government to travel through Hungary in search of specimens of the art of the Italian Renaissance dating from the time of King Matthias. Two years later he was appointed assistant in the archeological division of the National Museum and docent in the history of art in the School of Technology at Budapest. Commissioned by Count Csáky, minister of public worship and instruction, to search for monuments of art relating to Hungary, he traveled through Poland and Saxony (1892), Germany (1893), Italy and France (1894), and England, Holland, Servia, and Rumania (1895). In the course of these investigations he discovered a number of unknown works of the famous Hungarian painter Karl Brocky, who had been court painter to Queen Victoria. In 1894 Nyári was appointed custodian of the National Gallery of Paintings.

Nyári's two chief works, aside from numerous smaller contributions to the history of art, are: "Der Portraitmaler Johann Kupetzky, Sein Leben und Seine Werke" (Leipsic, 1889) and "A Kassai Székesegyház" (Budapest, 1896; in German also), on the Cathedral of Kaschau. Nyári is a convert to Christianity.

NYONS: Town in the ancient province of Dauphiné, France. A Jewish community must have existed there before the fourteenth century; for a document in Latin of the year 1322 speaks of the "old Jews" and of "the newly arrived Hebrews." The last-mentioned were Jews who had sought refuge in Nyons when expelled from the Comtat-Venaissin by Pope John XXII. Two of them, David de Hyères and David de Moras, had great influence with the dauphin Humbert II. in 1338 and 1346 (Prudhomme, "Les Juifs en Dauphiné," pp. 18, 25).

Between 1270 and 1343 there lived in Nyons R. Isaac ben Mordecai, called "Maestro Petit," author of the "Azharot," enumerations in verse of the six hundred and thirteen Mosaic laws, which are recited in the congregations of the Comtat at the Feast of Weeks (Shabu'ot). Isaac wrote also commentaries on the Talmud, and corresponded with the most celebrated rabbis of the south of France (Gross, "Gallia Judaica," p. 387). Together with Petit is mentioned another scholar of Nyons, R. Ḥayyim of Vienne, a rabbinical authority (Gross, *l.c.* p. 194).

Bibliography: Gross and Prudhomme as above.

O

OAK AND TEREBINTH: The Hebrew terms calling for consideration here are: "elah" (Gen. xxxv. 4; Judges vi. 11, 19, and elsewhere); "el" (only in the plural form "elim"; Isa. i. 29, lvii. 5, A. V. "idols," R. V. "oaks"; lxi. 3, A. V. "trees"); "elon" (Gen. xii. 6, A. V. "plain," R. V. "oak"; xiii. 18); "allah" (Josh. xxiv. 26, E. V. "oak"); and "allon" (Gen. xxxv. 8; Isa. ii. 13, xliv. 14, and often E. V. "oak"). All these terms may have originally denoted large, strong trees in general (comp. the Latin *robur*), comprising both the oak and the terebinth, which are similar in outward appearance. But "elah" (which in Isa. vi. 13 and Hos. iv. 13 is distinguished from "allon") and its cognates "elon" and "elim" are assumed to mean the terebinth, while "allon" (which is repeatedly connected with Bashan [Isa. ii. 13; Ezek. xxvii. 6; Zech. xi. 2], a district famous for its oaks) and "allah" are assumed to denote the oak.

Both the oak and the terebinth offered favorite resorts for religious practises (Isa. i. 29, lvii. 5; Ezek. vi. 13; Hos. iv. 13), and were associated with theophanies (Judges vi. 11; comp. Gen. xii. 6; Judges ix. 37). By reason of their striking appearance and their longevity they served also as topographical landmarks (Gen. xxxv. 8; Judges iv. 11, vi. 11, ix. 6; I Sam. x. 3, xvii. 2). The custom of burial beneath these trees is mentioned (Gen. xxxv.

8; I Chron. x. 12). Oak timber was used for the manufacture of idols (Isa. xliv. 14) and for shipbuilding (Ezek. xxvii. 6). The oak and the terebinth are employed as emblems of strength and durability (Amos ii. 9; Isa. lxi. 3).

According to Tristram, the following three species of oak are at present common in Palestine: (1) the prickly evergreen oak (*Quercus pseudo-coccifera*), abundant in Gilead; the most famous exemplar of this species is the so-called "Abraham's oak" near Hebron, measuring 23 feet in girth with a diameter of foliage of about 90 feet (see ABRAHAM'S OAK); (2) the Valona oak (*Q. Ægilops*), common in the north and supposed to represent the "oaks of Bashan"; (3) the Oriental gall-oak (*Q. infectoria*), on Carmel.

The terebinth (*Pistacia Terebinthus*) is abundant in the south and southeast. See FOREST.

E. G. H. I. M. C.

OATH: The Hebrew terms for "oath," "alah" and "shebu'ah," are used interchangeably in the Old Testament (comp. Gen. xxiv. 8 and 41; see also Shebu. 36a). According to the ancient Jewish principle of jurisprudence the judicial oath was employed in civil cases only, never in criminal cases, and only in litigations concerning private property, never in those over sacerdotal property; and over movable but not over immovable property. Later rabbinical law, however, imposes the oath even in the case of sacerdotal and immovable property (Shebu. 42b; Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 95, 1). Moreover, the oath was administered only in case no evidence, or only insufficient evidence, was forthcoming on either side (Shebu. 45a, 48b). But if there was ample evidence, documentary or oral, *i.e.*, that of witnesses (Weiss, "Dor," i. 202), in support of the statements of the litigants, or if claim and disclaimer were not positive, no oath could be imposed, according to Biblical law. The character of the oath was, then, in the nature of a rebuttal of the claim of the plaintiff and was imposed upon the defendant as a purgative measure; or God was called upon as a witness, there being no other. Adelung, indeed (in Saalschütz, "Archäologie," p. 277), derives the German "eid" (oath) from the Hebrew "'ed" (="witness"); see also Delitzsch (on Gen. xxi. 30), Trumbull ("Blood Covenant," p. 266), Tyler ("Oaths," p. 87), and Paley ("Principles of Moral and Political Philosophy," book iii., ch. 16, p. 1).

Function of Oath.

Though the oath was not considered as full legal evidence (Frankel, "Der Gerichtliche Beweis," p. 305), it was accepted in lieu of something better. However, the oath was not meant to be an ordeal, a means of frightening the contestant into telling the truth, except in the case of the oath of purgation administered to a woman suspected of adultery (Num. v. 21; Michaelis, "Das Mosaische Recht," section 301, p. 341). The perjurer, however, was not liable to the court, but to God Himself (see PERJURY); furthermore, to such as were suspected of a disposition not to speak the truth the oath was not administered (Shebu. vii. 1). The Biblical oath was imposed only upon the defendant (Shebu. vii. 1; Ḥoshen Mishpaṭ, 89, 1; "Yad," Ṭo'en, i. 2). The reason for this is in the dictum, "Possession is nine-tenths of the law"; or, as the Talmud (B. Ḳ. 46a) states it, "Whosoever would oust a possessor must bring evidence to establish his claim; his positive assertion alone is not sufficient, for the possessor may take the oath in support of his equally positive denial of plaintiff's claim."

Taken Always by Defendant.

Biblical Oaths.

The codifiers classify the Biblical oaths under the following three divisions: (1), "Oaths of keepers or custodians": A leaves certain objects in the care of B; B admits having received them, but claims that they have been stolen or lost; he takes the oath in support of his assertion and is acquitted from responsibility (Shebu. viii. 1; B. M. 93a; B. Ḳ. 107b; "Yad," She'elah, iv. 1, vi. 3; Ḥoshen Mishpaṭ, 87, 7). (2) "Part admittance": A claims to have lent B 100 shekels; B admits the claim as regards only 50, and after taking the oath is acquitted; but if B repudiates the claim in its entirety he is acquitted without oath. (3) But if A has one witness in proof of his claim, B must take the oath in either case (Shebu. vi. 1; B. M. 3a; Ḥoshen Mishpaṭ, *l.c.*). The admissions of B in cases 1 and 2, and the statement of the one witness in case 3, are considered as half-evidence (Frankel, *l.c.*) in support of A, but not as sufficient to warrant a judgment in his favor. B, therefore, takes the oath, which is equal to half-evidence, and thereby invalidates the claim of A.

Mishnaic Oaths of Satisfaction.

Though Biblical legislation imposed the oath only upon the defendant, changed times and conditions rendered it necessary for the teachers of Mishnah to impose the oath at times even upon the plaintiff, in cases where the defendant is not competent to take the oath, or where the claim of plaintiff has evidently a greater probability of truth than the disclaimer of defendant. These oaths are known as "mishnaic" oaths; and while the Biblical oaths are of a purgative nature, the mishnaic oaths are "oaths of satisfaction" ("nishba'in we-noṭelin"—"they swear, and their claim is satisfied"; Shebu. vii. 1). The following cases fall within this category: (1) The defendant should take the Biblical oath, but he is suspected of a disposition to swear falsely; the court can not, therefore, administer the oath to him, and imposes the mishnaic oath upon the plaintiff instead. (2) It is imposed further in the case of a laborer claiming wages; (3) of a storekeeper claiming settlement for goods ordered; (4) of one who claims compensation for robbery; and (5) of one who claims compensation for battery, certain indications supporting the claim. In all these cases, the claims being based upon positive charges, while the disclaimer is not quite positive, the plaintiff takes the oath and secures judgment (Shebu. vii. 1; Ḥoshen Mishpaṭ, 89, 1; 90, 1; 91, 1; 92, 1). In some cases the mishnaic oath is imposed when the claim is not positive, as in the cases of partners, renters (paying part of the crop for rent), guardians (appointed by the court), and stewards. All these must take the mishnaic oath of purgation if accused of unscrupulous conduct, even though the claim is based only on a vague suspicion (Shebu. 45a, 48b; "Yad," Shutfin, ix. 1; Ḥoshen Mishpaṭ, 93, 1).

Rabbinical Oath.

Later Talmudical practise has imposed the oath in cases where according to Biblical and mishnaic law no oath was imposed, as, for instance, where a claim is repudiated in its entirety. The originator of this form of oath, known as the "imposed oath" (שבועת היסת; see Rashi to B. M. 5a), was the Babylonian Naḥman ben Jacob (235–324 C.E.; Shebu. 40b; B. M. 5a; Ḥoshen Mishpaṭ, 87, 7).

There is still another form of oath—the "oath of adherence" ("gilgul shebu'ah"; see Frankel, *l.c.*; Mendelssohn, however ["Jahrb. für Preussische Gesetzgebung," cxvi. 414], calls it "Neben-eid"). If one of the litigants is compelled to take the oath and his opponent seizes the opportunity to confront him with a second claim, upon which, had it been made separately, no oath would have been taken, the second claim is "adhered" to the first claim, and the defendant must take the oath in connection with both claims (Ḳid. 28a; Shebu. 48b). The only exception to this rule is made in favor of the laborer claiming his wages. To his oath no other claim can be attached; "it should rather be made as easy as possible for him" (Ḥoshen Mishpaṭ, 89, 6). In any other case there is no difference; whatever the oath, a second claim may always be "adhered" to it (Shebu. 48b; Ḥoshen Mishpaṭ, 94, 1). In other respects, however, there are far-reaching differences among the Biblical, the mishnaic, and the rabbinical oaths, both in practise and in principle.

Biblical, Mishnaic, and Rabbinical Oaths.

(1) If the Biblical oath is required and the defendant will not take it, judgment is rendered against him, and his property is levied upon; if the mishnaic oath is required and the defendant will not take it, judgment is rendered against him, but his property can not be attached, and only a thirty days' ban is issued against him; or, if this be of no avail, slight corporal punishment is inflicted upon him by the court; but if it is the rabbinical oath that he refuses to take, not even judgment can be rendered against him; instead he is acquitted (Shebu. 41a; Ḥoshen Mishpaṭ, 87, 9; B. B. 33a).

(2) If the Biblical oath is required but it can not be administered to the defendant on account of his immoral character or because it is suspected that he would swear falsely, the plaintiff takes the oath and secures judgment; if the mishnaic oath is required but the defendant is not admitted thereto for the reasons stated, he is acquitted without oath ("Yad," Ṭo'en, iii. 4; Ḥoshen Mishpaṭ, 87, 13). He must, however, according to later rabbinical practise, take the rabbinical oath (B. B. 33a; Ḥoshen Mishpaṭ, 92, 9), if the claim against him is based upon a positive statement; but if it is the rabbinical oath that is required and he is not permitted to take it for the reasons given, the defendant is acquitted without any oath (Ḥoshen Mishpaṭ, 92, 10).

(3) The Biblical or mishnaic oath, whether of satisfaction or of purgation, when required of the defendant can not be imposed instead upon the plaintiff if he is not willing to take it; but the rabbinical oath may be so imposed (Shebu. 41a; Ḥoshen Mishpaṭ, 87, 11).

(4) The Biblical oath is imposed only if claim and disclaimer are positive; the mishnaic or the rabbinical oath, even if they be vague and uncertain (Shebu. vii. 1).

(5) The Biblical oath is imposed only when the object in litigation is private and movable property, and not if it is sacerdotal or immovable property; the rabbinical oath is imposed even in cases involving sacerdotal or immovable property (Shebu. vii. 1; Ḥoshen Mishpaṭ, 95, 1).

(6) If the Biblical or the mishnaic oath is imposed, the juror must swear by the name of YHWH and must hold a Bible or a sacred object in his hands, and the judge must admonish the juror and impress upon him the sacredness and the importance of the oath. The judge must also warn him against any mental reservation or ambiguity; but if he takes the rabbinical oath he may not mention the name of YHWH: he says merely, "I swear——." He need not hold in his hands a sacred object, and it is not necessary for the judge to admonish or warn him (Shebu. 36a; Ḥoshen Mishpaṭ, 87, 13, 20, 21; see Frankel, "Die Eidesleistung," p. 31; Mendelssohn, in "Jahrb. für Preussische Gesetzgebung," cxvi. 414, in reference to gradation of oath).

No Oaths in Criminal Cases.

No Oaths for Witnesses.

The Geonim have extended the oath even to cases where the Talmud does not impose it, as when minors are concerned, if the oath is in their favor (Ḥoshen Mishpaṭ, 89, 2); and sometimes they have put even witnesses under oath, though legally the latter are not called upon to swear (Ḥoshen Mishpaṭ, 28, 2; Frankel, *l.c.* p. 212). The Bible, however, mentions only the following cases in which a judicial oath was required: a keeper suspected of careless watching or of taking a piece of property entrusted to him for safe-keeping (Ex. xxii. 7–10), and a woman suspected by her husband of adultery (Num. v. 22); and enlarged and amplified as was the scope of the oath in post-Biblical times, it was still restricted to civil courts. In criminal cases no oath was employed, as, according to Jewish principles of jurisprudence, no one charged with a criminal act could be believed even upon oath. Assault and battery and embezzlement were considered only from their civil side, in regard to liability for damages. Nor was a witness, even in civil matters, put under oath, for "if we can not believe him without an oath we can not believe him at all" (Tos. Ḳid. 43b). The adjuration of a witness mentioned in Lev. v. 1 refers to a private adjuration for one to appear and testify as to what he knows about the case, but not to judicial adjuration (see commentaries of Keil and Delitzsch *ad loc.*; comp. Shebu. 35a). The court may adjure the witness if it sees fit, and such, indeed, was the practise in geonic times, but it is not obliged to do so (Frankel, *l.c.* p. 212), as the character of the witness is assumed to be one of probity and above suspicion or reproach (B. Ḳ. 72b; Sanh. 25a; Ḥoshen Mishpaṭ, 34, 1; Josephus, "Ant." iv. 8, § 15). In short, the oath was not the only means by which a statement could be supported; on the contrary, it was employed only for want of better evidence. But if there were witnesses, their statements were accepted as full legal evidence, and they were not subjected to an oath; for to swear falsely is not more sinful than to utter an ordinary lie. It is one's duty to speak the truth whether without or with an oath.

Neither were there any oaths for rulers or for subjects or citizens as such. The "oath of fidelity" that Herod required from the people ("Ant." xv. 10, § 4) was adopted from Roman custom. Nor were there priestly oaths. Yoma i. 5 refers not to an oath taken upon entering office, but to the oath of service, introduced as a check upon Sadduceeism. There were no official oaths of any kind, for officials were supposed to do their duty without the oath. "The multiplication of oaths," says Michaelis (*l.c.* section 301, p. 342), "tends rather to the corruption of morals." Paley (*l.c.* p. 144) also deplores the fact that "a pound of tea can not travel regularly from the ship to the consumer without costing at the least a half-dozen of oaths." The Jewish law, then, knew only judicial oaths.

Extra-judicial Oaths.

But while legally recognized oaths were limited to judicial proceedings, extrajudicial oaths were employed freely in private life. The nature of the oaths mentioned in Num. xxx. 2 places them in the category of vows; they were employed merely "as props to a weak will," and "were taken in order the better to uphold the Law" (Ḥag. 10a). These extrajudicial oaths were: oaths of agreement—*e.g.*, between Abraham and Abimelech (Gen. xxi. 23), Isaac and Abimelech (*ib.* xxvi. 31), Jacob and Esau (*ib.* xxv. 33), Jacob and Laban (*ib.* xxxi. 53), Joshua and the Gibeonites (Josh. ix. 16), Zedekiah and Nebuchadnezzar (II Kings xxiv. 20; II Chron. xxxvi. 13); oaths of promise—*e.g.*, between Abraham and Melchizedek (Gen. xiv. 22), Abraham and Eliezer (*ib.* xxiv. 3), Jacob and Joseph (*ib.* xlvii. 31), Joseph and his brothers (*ib.* l. 25), Rahab and the spies (Josh. ii. 12), David and Jonathan (I Sam. xx. 3, 13), Saul and the woman of Endor (*ib.* xxviii. 10), David and Shimei (II Sam. xix. 23); oaths of adjuration—*e.g.*, those of Deut. xxvii. 15, Josh. vi. 26, and I Sam. xiv. 24. Though strictly speaking these were not oaths in a judicial sense, they were, nevertheless, recognized as morally binding and as necessary to national security (II Sam. v. 3; Esth. x. 5; Josephus, "Ant." xv. 10, § 4), and even to international security (II Chron. xxxvi. 13; II Kings xxiv. 20; see Ned. 65a and Manasseh ben Israel in Mendelssohn's "Werke," iii. 248). Even if fraudulently obtained (Josh. ix. 16) or erroneously made (I Sam. xiv. 24; Judges xi. 35; Josephus, "Vita," § 53) the oath was considered inviolable. Even the silent determination of the heart was considered as the spoken word which must not be changed (Mak. 24a; B. M. 44a). The general principle was, "Let thy 'yea' be 'yea' and thy 'nay,' 'nay'" (B. M. 49a; comp. Matt. v. 37; James v. 12). The Law had already placed a careful restriction upon the practise of oath-taking in the case of a member of a family other than the head (Num. xxx.), and in post-exilic times people seem indeed to have been more careful in regard to taking oaths (Eccl. ix. 2); the prophet Zephaniah conceived the possibility of avoiding the oath altogether (iii. 13). The Essenes also avoided swearing, which they esteemed worse than perjury; "he that can not be believed without an oath is already condemned" (Josephus, "B. J." ii. 8, § 6). Philo says, "The bare word of a virtuous man should be like an oath, steadfast, inviolable, and true. Should necessity absolutely require an oath let a man swear by his father and mother . . . instead of by the name of the highest and first Essence." Even in judicial oaths, swearing by the name of YHWH was abolished altogether during the age of the Geonim (Rashi to Shebu. 38b; Ḥoshen Mishpaṭ, 87, 19). See COVENANT; EVIDENCE; PERJURY; SWEARING; VOWS.

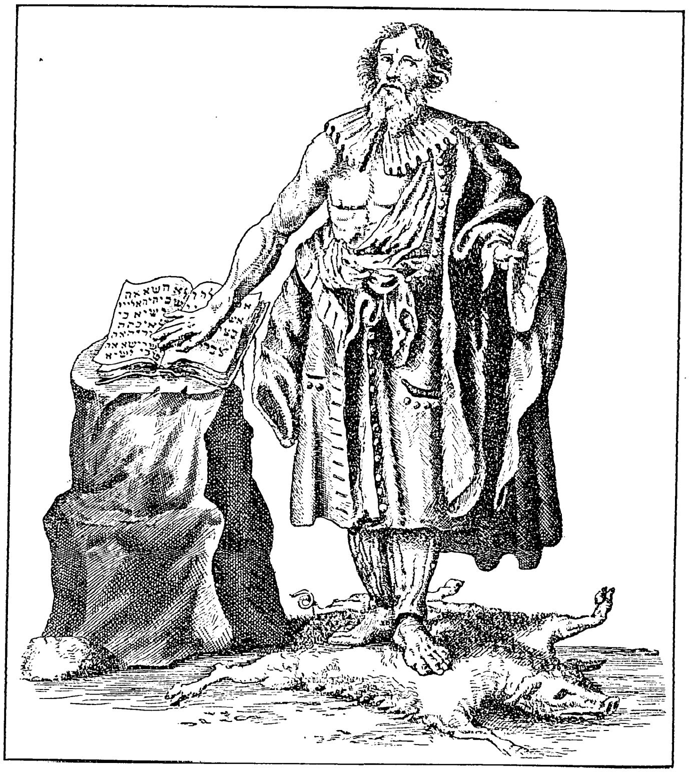
OATH MORE JUDAICO: Special form of oath, accompanied by certain ceremonies, which Jews were required to take in courts of law.

Historical Development.

The disability of a Jew in a contention with a Christian dates back to the Byzantine emperor Justinian, who declared that neither Jews nor heretics should be admitted as witnesses against Christians ("Corpus Juris," c. 21, C. 1, 5; Novellæ, 45, c. 1; Grätz, "Gesch." 2d ed., vi. 18; Stobbe, "Die Juden in Deutschland," pp. 148 *et seq.*). Secular courts, however, did not recognize it. Thus in the safe-conducts issued by the Carlovingian kings in the ninth century (JEW. ENCYC. v. 446, *s.v.* FRANCE; vii. 669, *s.v.* LEIBZOLL) Jews and Christians are treated as equals, and consequently the testimony of the former, whether given under oath or not, is equal in value to that of the latter (Stobbe, *l.c.* p. 151). This is distinctly stated in the charter granted by Henry IV. to the Jews of Speyer in 1090. The law of Duke Frederick II. of Austria (1244), which has served as a model for much other legislation on the Jews (see JEW. ENCYC. ii. 322, *s.v.* AUSTRIA), merely requires that a Jew shall swear "super Rodal" (by the Torah; Scherer, "Die Rechtsverhältnisse der Juden," p. 182). Similar laws existed in England, Portugal, and Hungary; in the last-named country in a trivial case a Jew was not required even to swear by the Torah (Scherer, *l.c.* pp. 295–298).

There are, however, some older laws which prescribe certain practises intended to humiliate the Jew. A Byzantine law, dating from the tenth century and somewhat modified by Constantine V., demands that a Jew when swearing shall have a girdle of thorns around his loins, stand in water, and swear by "Barase Baraa" (Bereshit Bara), so that if he speaks untruth the earth may swallow him as it did Dathan and Abiram (Frankel, "Eidesleistung," p. 69). A law of Arles demands (*c.* 1150) that a wreath of thorns shall encircle the swearer's neck, that others shall be around his knees, and that a thorn-branch five ells in length shall be pulled "between his loins" while he is swearing and calling down upon himself all the curses of the Torah (Pertz, "Archiv," vii. 789; Frankel, *l.c.* pp. 70–72; Stobbe, *l.c.* p. 155). The "Schwabenspiegel" (i. 263), a collection of laws dating from the thirteenth century, demands that when swearing the Jew shall stand on a sow's hide; other laws, that he stand barefooted or that he stand on a bloody lamb's hide; the laws of Silesia (1422) require him to stand on a three-legged stool, pay a fine each time he falls, and lose his case if he falls four times. In Dortmund he was fined each time he halted in repeating the oath. In Verbo, Hungary (1517), he was required to stand barefooted and swear with his face turned to the east, holding the Pentateuch in his hand (Depping, "Les Juifs dans le Moyen Age," p. 327; Frankel, *l.c.* pp. 70–76; Stobbe, *l.c.* p. 155; Scherer, *l.c.* p. 297). A law of Breslau (*c.* 1455) demanded that a Jew should stand bareheaded when swearing, and pronounce the name of YHWH ("Terumat ha-Deshen," p. 203).



Jew of Breslau Taking the Oath More Judaico.
(From a seventeenth-century print.)

The Oath as a Jewish Disability.

A decided change took place when, in 1555, the German federal-court procedure (Reichskammergerichtsordnung) prescribed a form of oath which, with some alterations, served as a model for subsequent legislation (Frankel, *l.c.* pp. 76 *et seq.*). Horrible were the terms in which the swearer called down upon himself all the curses of Leviticus and Deuteronomy, the plagues of Egypt, the leprosy of Naaman and Gehazi, the fate of Dathan and Abiram, etc. As to the changes introduced in the procedure by the Prussian government, acting upon the advice of Moses Mendelssohn, see the latter's "Gesammelte Schriften" and M. Kayserling's "Moses Mendelssohn" (p. 281). The small German states gradually surrendered the most objectionable features of the oath: Hesse-Cassel, in 1828; Oldenburg, 1829; Württemberg, 1832; Saxony, 1839 (on which occasion Zecharias FRANKEL published his famous "Die Eidesleistung"); Schaumburg-Lippe and Anhalt-Bernburg, 1842; Hesse-Homburg, 1865. Prussia retained the obnoxious formula until March 15, 1869; Holland modified the oath in 1818, Russia in 1838 and 1860. Isaac Adolphe Crémieux became celebrated by effecting the abolition of the oath through a case brought before the court of Nîmes in 1827. Lazard ISIDOR, as rabbi of Pfalzburg, refused (1839) to open the synagogue for such an oath; prosecuted for contempt of court, he was defended by Crémieux and acquitted. The French supreme court finally declared the oath unconstitutional (March 3, 1846).

In Rumania the courts have rendered conflicting decisions. The court of Jassy yielded to the protest of Rabbi Nacht against the oath ("Jew. Chron." June 6, 1902); while the court of Botuschany decided that the formula promulgated in 1844 was still valid (Nov. 1, 1902; see the "Bulletin Mensuel de l'Alliance Israélite Universelle," 1903, pp. 8 *et seq.*, 263 *et seq.*).

The question with regard to the trustworthiness of the Jewish oath was intimately connected with the exact meaning of the "Kol Nidre" prayer, and it is accordingly intimately bound up with the discussion of that prayer (see KOL NIDRE). The whole of the legislation regarding the oath was characteristic of the attitude of medieval states toward their Jewish subjects. The identification of Church and State seemed to render it necessary to have a different formula for those outside the state church.

D.

OBADIAH (עבדיה, עבדיהו): The name of thirteen different persons mentioned in the Bible. As vocalized in the Masoretic text, it means "worshiper of Yhwh." **1.** Head steward to King Ahab of Israel. At the time of the persecution of the prophets of Yhwh by Jezebel, Obadiah succeeded in concealing one hundred of them in caves (I Kings xviii. 4-6). During the great famine he was sent by Ahab to search for food. He met the prophet Elijah, and brought Ahab the message that the famine was at an end (*ib.* 6 *et seq.*). **2.** A descendant of Jeduthun (I Chron. ix. 16). **3.** One of the grandchildren of the last king, Jeconiah (*ib.* iii. 21). **4.** A descendant of the tribe of Issachar, and one of David's heroes (*ib.* vii. 3). **5.** A descendant of Saul (*ib.* viii. 38, ix. 44). **6.** A Gadite, the second in the list of David's heroes who joined him in the desert before the capture of Ziklag (*ib.* xii. 9). **7.** Father of Ishmaiah, who was appointed representative of the tribe of Zebulun, under David (*ib.* xxvii. 19). **8.** One of the officers sent by Jehoshaphat to teach in the different towns of Judea (II Chron. xvii. 7). **9.** A Levite, who, during the reign of Josiah, was placed over the workmen repairing the Temple (*ib.* xxxiv. 12). **10.** Son of Jehiel; chief of 218 men who returned with Ezra to Palestine (Ezra viii. 9). **11.** One of those who signed, with Nehemiah, the covenant to live according to the doctrines of the law of Moses (Neh. x. 6). **12.** One of the porters of the gates in the porticoes of the new Temple (*ib.* xii. 25). **13.** A prophet who lived probably about 587 B.C. (Ob. 1).

E. G. H. S. O.

——**In Rabbinical Literature**: Obadiah was a proselyte of Edomite origin (Sanh. 39b), and is said to have been a descendant of Eliphaz, the friend of Job (Yalk. ii. 549). He is identified with the Obadiah who prophesied against Edom (Ob. 1). It is said that he was chosen to prophesy against Edom because he was himself an Edomite. Moreover, having lived with two such godless persons as Ahab and Jezebel without learning to act as they did, he seemed the most suitable person to prophesy against Esau (Edom), who, having been brought up by two pious persons, Isaac and Rebekah, had not learned to imitate their good deeds.

Obadiah is supposed to have received the gift of prophecy for having hidden the hundred prophets from the persecution of Jezebel. He hid the prophets in two caves, so that if those in one cave should be discovered those in the other might yet escape (Sanh. *l.c.*).

Obadiah was very rich, but all his wealth was expended in feeding the poor prophets, until, in order to be able to continue to support them, finally he had to borrow money at interest from Ahab's son Jehoram (Ex. R. xxxi. 3). Obadiah's fear of God was one degree higher than that of Abraham; and if the house of Ahab had been capable of being blessed, it would have been blessed for Obadiah's sake (Sanh. *l.c.*).

E. C. J. Z. L.

OBADIAH, BOOK OF.—Biblical Data: This book, which bears the title "The Vision of Obadiah," consists of but twenty-one verses, which are devoted to a prophecy against Edom. The prophecy is usually divided into two parts: verses 1-9 and 10-21. In the first section Edom is pictured as sore pressed by foes. She has become "small among the nations," and Yhwh is to bring her down from "the clefts of the rock" where she dwells. Edom is further said to be overrun with thieves; and her own allies are destroying her.

In the second part it is declared that because of violence done by Edom to his brother Jacob, and especially because of the part taken by Edom on the day when "foreigners entered into his gates, and cast lots upon Jerusalem" (verse 11), "the house of Jacob shall be a fire, and the house of Joseph a flame, and the house of Esau for stubble, and they shall burn among [A. V. "kindle in"] them, and devour them" (verse 18). The prophecy concludes with the declaration that Israelitish captives shall return from Sepharad and possess the cities of the South (Negeb), that saviors shall return to Mount Zion to judge Esau, and the kingdom shall be Yhwh's.

It should be noted that verses 1 to 6 closely resemble a number of verses in Jeremiah (xlix. 7-22), which also consist of a prophecy against Edom.

——**Critical View**: The resemblance to Jeremiah, referred to above, may mean that Jeremiah borrowed from Obadiah, or that the latter borrowed from the former, or that both borrowed from a still earlier prophet.

Arguments of much force have been presented for the priority of Obadiah. In Obadiah the opening of the prophecy seems to be in a more fitting place, the language is terser and more forcible than in Jeremiah; and parallels to the language of these passages appear in other parts of Obadiah, while they do not appear in Jeremiah. For these reasons most scholars, except Hitzig and Vatke, believe that the passage appears in Obadiah in its more original form. As the passage in Jeremiah dates from the fourth year of the reign of Jehoiakim (604 B.C.), and as Ob. 11-14 seems clearly to refer to the destruction of Jerusalem by Nebuchadnezzar (586 B.C.), it is evident that the Book of Obadiah did not lie before Jeremiah in its present form. This appears also from the fact that in Ob. 10-21 there is much material which Jeremiah does not quote, and which, had he known it, would have suited his purpose admirably. It is true that Wellhausen finds no difficulty in the date, believing with Stade, Smend, and Schwally that Jer. xlvi.-li. is not the work of Jeremiah. Nowack holds with Giesebrecht that these chapters of Jeremiah contain many interpolations, one of which is xlix. 7-22. These scholars are, therefore, able to hold that the Jeremiah passage is dependent upon Obadiah, and also to hold that Obadiah is post-exilic. On the whole the view of Ewald, G. A. Smith, and Selbie, that both Jeremiah and the present Obadiah have quoted an older oracle, and that Obadiah has quoted it with least change, seems the most probable.

Relation to Jeremiah.

As verse 7 is not quoted in Jeremiah, and as it seems difficult to refer it to any time prior to the Exile, G. A. Smith with much probability makes the post-exilic portion begin with verse 7.

Most critics hold that verses 11-14 refer to the destruction of Jerusalem by Nebuchadnezzar. As the Assyrians and Babylonians are not referred to, it is probable that the "nations" who were plundering Edom were Arabic tribes. Winckler (in "Altorientalische Forschungen," ii. 455, and in Schrader, "K. A. T." 3d ed., pp. 294 *et seq.*) places the episode in the reign of Darius. Wellhausen is probably right in believing that reference is made in verses 1–15 to the same epoch of Edom's history as that referred to in Mal. i. 2–5, and that the inroads of these "nations" were the beginning of the northern movement of the Nabatæans. If this be correct, this part of the prophecy comes from the early post-exilic period.

Cheyne ("Encyc. Bibl.") holds that the references to the Negeb in the concluding verses of the prophecy indicate for the latter part of the book a date considerably later than the Exile, after the Edomites had been pushed out into the Negeb and southern Judah. This view, which had been previously expressed by Nowack and has since been adopted independently by Marti, is confirmed by the eschatological character of the contents of verses 16–21. Marti is probably right in regarding these verses as a later appendix to the prophecy. The position of the Edomites would indicate that the verses date from the Greek period; and the approaching conquest of the Idumean Negeb points to a Hasmonean date.

Three Parts to the Prophecy.

There thus appear to be three parts to this short prophecy: (1) a pre-exilic portion, verses 1–6, quoted by Jeremiah and also readapted, with (2) additions, by another Obadiah in the early post-exilic days; and (3) an appendix, which probably dates from Maccabean times. As to the exact date of the pre-exilic portion, it is difficult to speak. Some have dated it as early as the reign of Jehoshaphat; others, in the reign of Joram of Judah. The circumstances appear to be too little known now to enable one to fix a date. Arabs have surged up from central Arabia from time immemorial. The Nabatæan invasion of Edom was probably not the first time that Edom had been overrun with plunderers from that direction. Verses 1–6 probably refer to an earlier experience of a similar character, the circumstances of which can not now be traced.

Sepharad.

The captivity in Sepharad (verse 20) has occasioned much discussion. In ancient times "Sepharad" was believed to be a name for Spain. The Targum of Onkelos renders it אספמיא, *i.e.*, Hispania. Schrader (*l.c.* 2d ed., p. 445) identifies it with Saparda, a town in Media mentioned in the inscriptions of Sargon. If there was a Jewish colony of captives here, however, nothing is otherwise known of it; nor are any circumstances evident which would render probable the existence at this point of a colony of sufficient importance to be referred to in the terms used by Obadiah.

W. R. Smith and many recent writers have identified it with the Saparda which Darius in his inscriptions mentions between Cappadocia and Ionia as though it were, like them, a province. It is mentioned again in an inscription of the thirty-seventh year of the kings Antiochus and Seleucus, *i.e.*, 275 B.C. This region was somewhere in the neighborhood of Phrygia, Galatia, or Bithynia. When it is remembered that Joel (Joel iii. 6) had complained that Hebrews were being sold to Greeks, it does not seem improbable that the late writer who added the appendix to Obadiah predicted the return of these captives and foretold the Israelitish conquest of Idumea which John Hyrcanus (*c.* 130 B.C.) accomplished. Cheyne's view that "Sepharad" is dittography for צרפת, another name of Jerahmeel, is hardly convincing.

OBADIAH ("HERALD OF THE MESSIAH"). See ISḤAḲ BEN YA'ḲUB OBADIAH.

OBADIAH DI BERTINORO. See BERTINORO, OBADIAH BEN ABRAHAM.

OBADIAH BEN DAVID B. OBADIAH: Commentator; born in 1325, according to Azulai ("Shem ha-Gedolim," i. 76); in 1341, according to Steinschneider ("Cat. Bodl." col. 2075, No. 6687). He wrote a commentary on Maïmonides' "Yad," Ḳiddush ha-Ḥodesh, in which he gives a detailed treatise on the Jewish calendar and on astronomy. This commentary was published for the first time in the Amsterdam, 1702, edition of the "Yad."

OBADIAH BEN JACOB SFORNO. See SFORNO, OBADIAH BEN JACOB.

OBED (עובד): 1. Son of Boaz by Ruth, the daughter of Naomi. He was named, curiously enough, by Naomi's neighbors, and not after his own kindred. Obed was the father of Jesse and the grandfather of David (Ruth iv. 17, 21, 22; I Chron. ii. 12). **2.** Son of Ephlal and descendant of Sheshan, who had married his daughter to an Egyptian slave named Jarha (I Chron. ii. 37). **3.** One of the thirty captains of David (*ib.* xi. 47). **4.** One of the sons of Shemaiah and grandsons of Obed-edom, of the Korahites, whom, on account of their exceptional bravery, David appointed to guard the Temple (*ib.* xxvi. 7). **5.** Father of Azariah; a captain whom the high priest Jehoiada induced to conspire to kill Queen Athaliah so that Joash, though still a minor, might ascend the throne of David (II Chron. xxiii. 1).

E. C. S. O.

OBED-EDOM (עבד אדום).—1. Biblical Data: A Gittite to whose house the Ark was taken when removed from that of Abinadab in Gibeah. It remained with Obed-edom three months before it was carried to the City of David; and God "blessed Obed-edom and all his household" (II Sam. vi. 10–11).

——In Rabbinical Literature: From I Chron. xxvi. 4–8, where Obed-edom is mentioned together with the Levites, it is concluded that he was himself a Levite. His name is interpreted thus: "Obed" = "the servant who honors God in the right way"; "Edom" (lit. "red") = "one who causes to blush." He made David blush for shame because the latter was at first afraid to receive the Ark, whereas Obed-edom took it into his house without hesitation (Num. R. iv. 21). During the time that the Ark was with him Obed-edom used to light a candle before it twice daily, early in the morning and again at evening (*ib.*).

The blessing with which God blessed Obed-edom consisted in children. His wife and eight daughters-in-law bore children twice every month during the three months that the Ark remained with him (*ib.*). According to another version, each of them bore six children at once (Ber. 63b). J. Z. L.

2. Korahite; one of the guards appointed to march before the Ark of the Covenant when it was taken from the house of Obed-edom the Gittite to Jerusalem. He was commissioned also, with five of his companions, to play on the harp of eight strings (I Chron. xv. 18, 21, 24). During the regency of Solomon, in David's old age, Obed-edom belonged to the second division of the guard in the provisional Temple; and the sixty-two male members of his family, including his eight sons, were all detailed for duty at the Temple and kept guard on its southern side (I Chron. xxvi. 4, 8, 15).

3. Son of Jeduthun, and, like Hosah, a porter at the Temple in the reign of David (I Chron. xvi. 38).

4. Temple guard; flourished during the reign of Amaziah, King of Judah; under his care were all the gold, silver, and vessels which were carried off by Jehoash to Samaria.

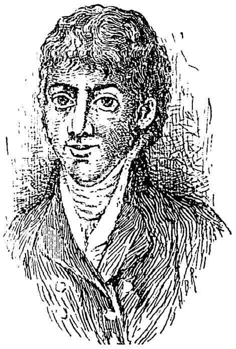
OBORNIK (OBERNIK), MEÏR: Biurist and one of the Me'assefim; born in 1764; died at Vienna Nov. 6, 1805. Obornik contributed to the "Measseff" a great number of fables and was one of the most active of the Biurists. He translated into German the Books of Joshua and Judges, adding a short commentary ("bi'ur"), and (with Samuel Detmold) the Book of Samuel. The translation of the whole Bible, with the bi'ur, was edited by Obornik under the title of "Minḥah Ḥadashah" (Vienna, 1792–1806).



Meïr Obornik.

OCAÑA: Town of Castile which had a Jewish community at an early date. When the Jews, who had previously enjoyed full privileges, began to be oppressed and curtailed in their liberties by the Christian population of the city, D. Fernando IV. ordered the municipal council of Ocaña to leave them undisturbed in the enjoyment of the rights granted them by the preceding kings. Here, as in other places, the Jews were accused of ritual murder. A Christian killed the three-year-old son of a woman with whom he was at enmity, and, to divert suspicion from himself to the Jews, threw the body into the house of a Jewish neighbor; his stratagem, however, miscarried. During the great persecution of 1391 many Jews were killed at Ocaña, while others were forcibly baptized. Abraham Naḥmias b. Joseph, the translator of Thomas Aquinas' "Commentarii in Metaphysicam," was living at Ocaña shortly before the general expulsion of the Jews from Spain.

OCCIDENT AND AMERICAN JEWISH ADVOCATE, THE: Periodical published in Philadelphia by Isaac LEESER. It appeared first in April, 1843, and was continued as a monthly until March, 1859, inclusive, making sixteen volumes in that form. In April, 1859, it appeared as a weekly, continuing as such until March, 1861. In April, 1861, it returned to the monthly form; it continued so until 1869, when it ceased to exist. Twenty-six volumes in all were published. Isaac Leeser died Feb. 1, 1868; and the last volume appeared under the editorship of Mayer Sulzberger. In its day it was the leading Jewish publication in the United States with world-wide standing. Much of Leeser's work was first printed in "The Occident."

Among the noteworthy publications which first appeared in "The Occident" were the translation of De Rossi's "Dictionary of Hebrew Authors," by Mayer Sulzberger, and a series of twenty-eight letters, on the "Evidences of Christianity," by Benjamin Dias Fernandes, later published under the title of "The Dias Letters." "The Occident" also gave some attention to American Jewish history, publishing a notable series of articles on the Jews of Georgia and Ohio. Among its contributors were: Mordecai M. Noah, S. M. Isaacs, Jacob de la Motta, D. W. Marks (of London, England), Abraham Rice (of Baltimore), Max Lilienthal, Morris J. Raphall, J. K. Gutheim, Isaac M. Wise, Warder Cresson, Henry S. Jacobs, H. Hochheimer, Sabato Morais, Dr. B. Illowy, Isidore Busch, I. Kalisch, David Einhorn, Liebman Adler, Henry Vidaver, A. B. Arnold, Moses A. Dropsie, Grace Aguilar, Mrs. Rebecca Hyneman, and Cecelia and Marion Moss. Throughout its existence "The Occident" stood firmly for historical and traditional Judaism, and protested energetically against any but the most minor changes in the ritual and liturgy.

A. D. SU.

OCCUPATIONS: The ancient Hebrews were farmers, fishermen, artisans, etc., very seldom merchants. Solomon's endeavors to stimulate commerce among them bore no lasting fruit. Outside of their country they were not always allowed to acquire real estate and had to give way to the native inhabitants in working the soil, and they were thus gradually alienated from agriculture, although Jewish farmers are met with in all colonies, except perhaps in Alexandria, down to the twelfth century, especially in Persia, Asia Minor, Syria, and the East generally. In Germany, until the Crusades and the rise of the Italian republics and the German bourgeoisie, the Jew was the merchant par excellence; and special privileges were granted him by the emperors. Rich Jewish merchants were to be found in Ratisbon, whither Oriental merchandise was carried up the Danube from Constantinople, and whence the goods were distributed. In eastern Germany the Jews were still the chief factors in commerce as late as the fifteenth and sixteenth centuries. Two-thirds of the traders between Poland and Silesia were Jews, who monopolized the trade in coffee, tobacco, and sugar. They carried sugar-cane from Madeira to Brazil as early as 1548, and from Candia they brought to Vienna cane-sugar, which could be used at Passover. They imported also spices from what was a great distance in that day; and for Sukkot they brought myrtle from France and lemons from the Mediterranean countries.

In Sicily.

In the twelfth century in Mediterranean countries, such as Italy, Sicily, Greece, and Palestine, large numbers of Jewish dyers existed; in Salonica, artisans and silk-manufacturers; in Antiochia, glass-workers; in New Tyre, ship-owners. In Sicily Jews were engaged as architects, miners, clerks, smiths, locksmiths, weavers, and silversmiths. In that island and in Calabria they monopolized for years the manufacture of silk, paying highly for their privileges, until they were driven from the markets by Christian merchants of Lucca and Genoa. A Jew is mentioned as the inventor of the clepsydra (for the lightning-rod and telescope, as well as artificial and filled teeth among the ancient Jews, see "Jüdisches Litteratur-Blatt," vi. 166). Jews are mentioned also as card-painters, sword-smiths, sculptors, and bookbinders. Illuminating they learned from the monks. They showed much skill as silversmiths and goldsmiths (in 1466 there was a Jewish silver-manufactory at Trevona). In Holland there were many Jewish diamond-cutters and glass-workers (*e.g.*, Spinoza). (On the Jews of Prague see Prague.) Printing, as a "sacred art" ("meleket ha-ḳodesh"), was practised enthusiastically, often at the risk of life. Some of the first typesetters in Italy were German Jews; thence Jewish printing was carried to Spain and Turkey.

Jewish Tailors.

In Spain the Jews directed the commerce in dry-goods and wool, especially in imports from England. In England before the expulsion in 1290 they dealt in grain and wool. The Jews did not deal in other textiles at that time because they were not permitted to engage in dyeing, and that branch of industry was furthermore distasteful to them from Talmudic times; fine goods had been imported into Palestine from an early date. However, Jews are everywhere found engaged as tailors; eight-ninths of the Jews of Rome as well as those of the East End of London being occupied in that trade. The Jews required tailors, bakers, and wine-merchants for their own religious needs (comp. Lev. xix. 19; Deut. xxii. 11). They became important in Asia and in southern Europe as wine-merchants and millers, and as the former in France and Germany also. They traded also in horses and poultry, especially geese. In Persia the oil-presses were mostly worked by Jews, and Jewish gardeners and seal-cutters were much in demand. In India their native names indicated that they were oil-pressers (see Beni Israel). Metal-factories flourished in Sicily. A Jew of Prague, Gans or Gaunse, imported into England in the time of Elizabeth new methods of copper-welding and of manufacturing vitriol. The trades, which were always assiduously followed by the Jews (comp. Ned. 49b: B. Ḳ. 47b), were monopolized by them to such an extent in Sicily that when the Jews were expelled from the dominions of Spain in 1492, the Sicilian state officials themselves interceded in their behalf with Ferdinand.

Professions.

Strictly speaking, there were no Jewish scholars by profession. Rabbis received no salary until the fourteenth century, and even until the end of the eighteenth they had other occupations. "Better a coin earned by the work of one's hands than the wealth of the resh galuta, who lives by the gifts of others," it was said. They were at the same time physicians (*e.g.*, Maimonides, and among the members of the Paris Sanhedrin in 1806 Graziado Nepi), merchants, writers, artists, financiers, statesmen, and marriage-brokers.

The Jews took part in the discoveries of the Portuguese as financiers, nautical theorists, pilots (a Jewish pilot was the first European to see America), and sailors; they are otherwise mentioned as seamen, pirates, and makers of nautical instruments. Jews aided Columbus, Vasco da Gama, and Albuquerque. In 1601 a Jew was the right-hand man of Capt. James Lancaster on the first expedition of the East India Company. Like Julius Cæsar, Oliver Cromwell employed Jews as despatch messengers. Jews fought in Spain under the Cross as well as under the Crescent, and served at the courts of kings as lion-tamers. In Germany they made gunpowder and were employed as foragers, and in the Danish army acted as sutlers, their knowledge of the country sometimes making them useful spies (see Intelligencers).

Physicians.

The Jewish physicians were especially important. Although they also, like the people in general, occasionally employed amulets instead of remedies, as in northern France and Germany, and had merely the surgical skill of barbers, yet their medical knowledge was above the average of the time. This was due to their acquaintance with the Arabic sources and to their observations at circumcisions and slaughterings, the Jewish physicians often acting also as "shoḥeṭim" (Ulrich, "Juden in der Schweiz," p. 118). In Spain and Italy their only competitors were the Moors. Jews taught in Salerno and Montpellier. The medical faculty of Paris prescribed in 1270 a course of study for the Jew Isaac. Jewish women physicians, especially oculists, practised at an early date in Germany. In Spain and Portugal the Jewish physicians to the kings not seldom rose to the rank of minister. The majority of princes, ecclesiastics, and even some of the popes (*e.g.*, Clement XIII.) had Jewish physicians. From the seventeenth century they were graduated from the universities, first in Italy and Holland. In 1786 a certain Euchel of Königsberg in Prussia applied, though unsuccessfully, for permission to lecture. In 1517 a Jew drew attention to a medicinal spring at Baarburg near Zug in Switzerland (*ib.* p. 182). The physicians were frequently retained when the other Jews were expelled from a place (*ib.* p. 118); they were exempted from wearing the badge, and were given certain privileges, as in Hamburg. Neither the "Jus Canonicum," ch. xiii., "Christiani a Judæis non possunt recipere medicinam," nor the "Statuta Synodalia Basiliensia," nor even the decrees of Gregory (1581) and Paul IV. that Christians who were treated by Jews should receive neither sacrament nor burial, were heeded (see MEDICINE).

Usury.

Usury, which became to the Jews of the Middle Ages at once their salvation and their bane, was not original with them. The Talmud (B. B. 90; B. Ḳ. 84) classes the usurer with the murderer, neither of them being able to atone for his crime. It even forbids the acceptance of interest (Weiss, "Gesch. der Jüdischen Tradition," iii. 314), and in the Middle Ages even the small interest of the pawn-shops was considered as usury. Not only were the Jews forced to take interest because they were excluded from all other businesses, but they were even compelled to do so by the authorities, inasmuch as the Christians were forbidden by the Church up to the sixteenth century to engage in money-lending (see USURY).

Slave-Dealers.

The Church up to the thirteenth century considered slavery legal, while the Jewish law not only forbade entirely the keeping of slaves, but also enjoined the redemption of Jewish prisoners in order to keep them from slavery, which injunction entailed a heavy burden upon the communities. The employment of Christian slaves or servants was difficult for the Jews because their ritual forbade them to accept many services, such as the handing of wine, etc. It must be noted the Church in forbidding the Jews to keep slaves referred to Christian slaves only. Gregory the Great says: "Quid enim sunt Christiani omnes nisi membra Christi? atque ideo petimus quod fideles illius ab inimicis eius absolvitis." Gelasius permitted the Jews to import pagan slaves from Gaul, as did also Charlemagne. Especially in Bohemia the Jews conducted the sale of Slavonic slaves for body-guards to the califs of Andalusia.

BIBLIOGRAPHY: I. Abrahams, *Jewish Life in the Middle Ages*, xi. 211-229.

J. M. GR.

The means by which Jews earn their livelihoods are still largely determined by the restrictions which until very recently were placed upon them. Owing to the monopoly of the handicrafts by the gilds, the normal number of artisans was not found among medieval Jews, while the restrictions as to the holding of land limited the number of agriculturists among them. As regards the callings themselves, the adoption of certain handicrafts by Jews is often determined by religious considerations; thus, butchers are required for kasher meat, and printers for prayer-books. Generally speaking, those trades are most favored by Jews which afford them opportunity to arrange their own hours of work, thus leaving them free for their religious duties. The tobacco and fruit trades fulfil these requirements. Piece work rather than time-work, domestic industries rather than factory labor, are for the same reason especially favored.

In Eastern countries there is not very much variety of occupation among Jews, as can be seen from the following list compiled from Andree, "Volkskunde der Juden," pp. 191, 192:

Algeria	Money-changers, jewelers, linen-drapers, pawnbrokers, speculative builders.
Arabia	Armorers, silversmiths, masons, butchers.
Asia Minor	Servants, porters, merchants.
Bagdad	Merchants, shopkeepers, money-changers, goldsmiths, pedlers, weavers, bootmakers.
Bosnia	Handicraftsmen, pedlers, usurers, interpreters, cashiers.
Bulgaria	Corn-dealers, hide- and silk-merchants.
Caucasus	Leathermakers, dealers, tobacco- and wine-merchants.
Constantinople	Merchants, hawkers, gold-changers, physicians, apothecaries, dentists.
Damascus	Bankers, merchants, shopkeepers, pedlers, bakers, painters, butchers.
Egypt	Money-changers, bankers, jewelers, merchants, hawkers.
Hungary	Merchants, hawkers, physicians, journalists, pedlers, innkeepers, photographers, musicians, packers, handicraftsmen.
India	Agriculturists, oil-manufacturers, soldiers (Beni-Israel).
Kurdistan	Petty traders, shepherds.
Morocco	Dealers, brokers, laborers, interpreters, carpenters, tinsmiths, tailors, bootmakers.
Persia	Silk-spinners, glass-grinders, goldsmiths, jewelers, hawkers, clothesmen.
Russia	Butchers, carriers, capmakers, shoemakers, tailors, a few smiths, locksmiths, glaziers, carpenters, musicians, agents.
Turkestan	Silk-merchants, painters, brandy-distillers, commissionnaires.

Of European countries the fullest account of occupations has been made for Prussia, the statistical office of which has devoted special attention to this class of statistics. The following table gives the numbers and percentages of able-bodied Jewish workers engaged in the various occupations for the years 1849 and 1861:

Nature of Occupation.	1849.		1861.	
	No.	Per cent.	No.	Per cent.
Commerce:				
Bankers and Money-Changers	314	.01	550	.01
Wholesale Merchants	1,002	.02	2,785	.04
Retail Merchants	6,528	.11	9,736	.14
Agents, Pawnbrokers	1,444	.02	2,035	.03
Victualers and Hucksters	2,887	.05	3,003	.04
Pedlers	1,054	.02	1,209	.02
Dealers	5,233	.09	4,814	.07
Wandering Dealers	3,664	.06	4,699	.07
Assistants	5,582	.09	9,852	.14
Cattle-Traders	805	.01	938	.01
Total Commerce	28,513	.48	39,621	.57
Physicians and Teachers	1,610	.02	2,086	.03
Mechanics and Handicraftsmen	12,054	.20	11,445	.07
Farmers	582	.01	643	.01
Gardeners, etc	35	.00	26	.00
Brewers	323	.01	303	.00
Lower Communal Officials	536	.01	949	.01
Hired Laborers	2,588	.04	2,106	.03
Servants	6,000	.10	4,814	.07
Living on Income	1,677	.03	2,992	.04
Paupers	5,763	.10	4,921	.07
Grand total	59,681	1.00	69,906	1.00

It may perhaps be worth while to mention that the total number of adult Jews and Jewesses treated in the foregoing table was 129,587.

More recent investigations have not dealt with the subject on exactly the same plan; but the following table for the year 1895, contained in "Statistik des Deutschen Reichs," 1895, iii. 173, gives, under the headings of the three chief religions, the proportion in 1,000 of those engaged in various branches of industry, etc.:

Occupation.	Protestants.	Catholics.	Jews.
Agriculture	565.6	431.7	0.4
Forestry and Fishery	664.2	334.5	0.5
Mining	446.7	550.5	0.3
Industry of Stones and Earths	603.2	394.1	1.2
Metals	686.4	306.6	2.0
Machinery	717.9	273.7	3.8
Chemical Industry	636.5	351.0	9.3
Supplementary Products of Forestry	686.5	302.0	8.4
Textile Industries	662.9	330.4	2.7
Paper	701.4	288.2	6.9
Leather	684.8	302.9	8.1
Wood	662.3	331.2	2.3
Food	652.3	330.7	14.8
Clothing	654.6	329.8	11.9
Building	643.3	353.1	1.3
Polygraphic	745.1	238.9	9.4
Art and Fancy Ware	689.1	294.2	8.9
Unspecified	571.4	420.5	5.4
Commerce	640.8	249.5	105.5
Insurance	776.7	185.0	31.4
Transportation	691.5	305.6	1.3
Victualers	651.5	337.5	9.7
Proportion of Workers	612.6	374.8	9.7

This list may be compared with a somewhat shorter list for 1861, giving the percentage of adult workers among the Jews of Prussia according to their different means of livelihood:

Occupation.	Jews.	Others.	Occupation.	Jews.	Others.
Agriculture	2.18	43.53	Professions	3.55	2.15
Industry	18.97	39.41	Independent	4.18	2.30
Commerce	57.93	5.17	Paupers	6.46	4.19
Service	6.73	3.25			

A similar list is given for Italy by Servi ("Gli Israeliti d'Europa, 1872," p. 304):

Occupation.	Percentage of Workers, etc.		Percentage of Adult Workers Alone.	
	Jews.	Others.	Jews.	Others.
Agriculture	0.1	35.6	0.3	58.0
Industry	4.0	14.0	12.5	22.3
Commerce	17.7	2.8	55.3	4.8
Service	1.6	2.7	5.0	4.5
Professions	2.8	2.4	8.7	3.7
Independent	5.6	2.7	17.3	4.5
Paupers	0.3	1.4	0.9	2.2
Army	1.4	1.1	....	....
Religion	0.3	0.7	....	....
Administration	1.2	0.6	....	....
Without Occupation	65.0	36.0	....	....

Besides these lists for whole countries certain details are given for Berlin in 1871 by Schwabe, "Die Hauptstadt Berlin, 1871," and for Vienna in 1869 by Jeiteles, "Die Cultusgemeinde der Israeliten zu Wien":

Occupation.	Berlin, 1871.		Vienna, 1869.	
	Jews.	All.	Jews.	All.
Agriculture	0.2	0.8	....	....
Industry	21.4	57.2	16.27	41.23

With this may be compared the statistics of occupation of 21,071 adult Jews in Budapest in 1870 (Körösi, "Die Königliche Freistadt Pest im Jahre 1871"):

Occupation.	Percentage of Jews.	Occupation.	Percentage of Jews.
Agriculture	0.6	Education	0.6
Industry	22.9	Art and Literature	0.5
Commerce	22.3	Independent	1.0
Service	9.3	Paupers	21.2
Officials	0.7	Scholars	11.0
Medicine	0.7		

The details for Budapest are not sufficiently well arranged to admit of easy comparison with other creeds, but the general result shows that while every fourth Jew is engaged in commerce, only one twenty-fifth of the general population is engaged in business, and service attracts one-twelfth of Jews as compared with one-eighth of the remaining creeds. One-thirteenth of the Jews are tailors; one-eighteenth, day-laborers. Jews have a higher proportion than those of other creeds in commerce of all kinds, and among goldsmiths, tailors, upholsterers, accountants, insurance agents, medical men, students, and beggars (*ib.* p. 120).

From a comparison of all these tables it will be seen that Jews as a rule are engaged in commerce to a degree much above that of their neighbors, though this is due in large measure to their residence in towns; but even here there are from three to four times as many among Jews devoting themselves to trade as among the rest of the population (see COMMERCE). Judging from the Prussian returns of 1895, insurance seems to have engaged their attention very largely; and next to this come the food and clothing trades. In the chemical industries, fancy ware, and leather trades they appear to have their due proportion; but in almost all other occupations they number below the normal. It is especially in agriculture that they show to the least advantage, both in the towns and generally. On the other hand, in art and literature they at any rate hold their own with the rest of the population of the towns; and in the professions generally they are above the average in number. In recent years there has been an increased tendency toward handicrafts (see ARTISANS).

OCHLAH WE-OCHLAH. See Oklah we-Oklah.

OCHS, ADOLPH SIMON: American journalist and newspaper publisher and proprietor; born March 12, 1858, at Cincinnati; educated at the common schools of Knoxville, Tenn. From 1869 to 1873 he was employed as carrier-boy and "devil" in the office of the Knoxville "Daily Chronicle"; he then became a practical printer, and in 1875 removed to Louisville, Ky., where he obtained employment in the job-office of the "Courier-Journal." Here he remained for a year, and then returned to Knoxville, where he entered the composing-room of the "Daily Tribune." In 1877 he removed to Chattanooga, where he accepted a position on the then newly established "Daily Dispatch." In that city he laid the foundation of his success by publishing a city directory, and in July, 1878, arranged to purchase a half-interest in the Chattanooga "Daily Times," which, when it passed into his control, was practically valueless. Two years later he acquired the second half. In 1879 he founded "The Tradesman," a trade publication of which he is still chief owner.

Ochs was the principal factor in the formation of the Southern Associated Press; and was an organizer and incorporator of the Associated Press, becoming its treasurer and a member of its first board of directors.

In 1896 Ochs acquired the principal ownership and controlling interest of "The New York Times," and became its publisher; in 1901 he purchased "The Philadelphia Times"; in July, 1902, he became the proprietor and publisher of "The Philadelphia Public Ledger," and in the following month he consolidated those two Philadelphia newspapers.

Ochs was for a time a member of the school committee of Temple Emanu-El, New York. To perpetuate the memory of his father, who was for many years the voluntary minister of the Jewish congregation in Chattanooga, there is now (1904) being erected a temple in that town.

A. F. H. V.

OCHS, GEORGE WASHINGTON: American journalist; born in Cincinnati Oct. 20, 1861; brother of Adolph S. Ochs; educated at the University of Tennessee. Ochs began his journalistic career as a reporter on the Chattanooga "Daily Times," of which he became general manager in 1896. In 1900, when "The New York Times" decided to issue a daily edition at the Paris Exposition, Ochs was placed in charge of the enterprise; and his work met with such favor that he was decorated by the President of the French Republic with the cross of the Legion of Honor. In 1901, when "The Philadelphia Times" was acquired by his brother, Ochs became vice-president and general manager of the new company, and conducted the paper until its amalgamation with "The Philadelphia Public Ledger," when he became general manager of the consolidated publications.

Ochs has been prominent in the public life of Tennessee. Elected delegate, he attended the National Democratic Convention held in Chicago in 1892, seconding on behalf of his state the nomination of Grover Cleveland; and in 1896 he was appointed delegate-at-large from Tennessee to the Palmer-Buckner Gold Democratic Convention held at Indianapolis in that year. In 1894 Ochs was elected mayor of Chattanooga, was reelected in 1896, and received a unanimous renomination in 1898, but declined it. He was elected vice-president and member of the executive board of the National Municipal League; for six years he held the presidency of the Chattanooga Library Association; for two years that of the Southern Associated Press; for three years that of the Chattanooga Board of Education; and for one year that of the Chattanooga Chamber of Commerce.

A. F. H. V.

OCHS, SIEGFRIED: German conductor and composer; born at Frankfort-on-the-Main April 19, 1858. He first studied medicine and chemistry at the Polytechnikum of Darmstadt and at Heidelberg University, but later devoted himself entirely to music, studying at the Königliche Hochschule für Musik, Berlin, under Schultze and Rudorff, and later privately under Kiel and Urban. Ochs is the founder and leader of the Philharmonic Choral Society of Berlin. At first an obscure organization, it became prominent through numerous performances given by Von Bülow, an intimate friend of Ochs. It is now (1904) the greatest choral society in Berlin, and is distinguished for its helpful patronage of young musicians, whose compositions are here frequently performed for the first time. Ochs is a talented composer, with a marked turn for humorous compositions. He wrote both the libretto and music of the three-act comic opera "Im Namen des Gesetzes" (Hamburg, 1888); two operettas; duets for soprano and alto; male choruses; vocal canons; and several books of songs.

ODEKA (אודך): Initial word of Ps. cxviii. 21 (see Hallel), marking the point where the antiphony of alternate verses between two choirs comes to a conclusion (comp. Grätz, "Kritischer Commentar zu den Psalmen," pp. 74, 608, Breslau, 1882; Suk. 38a and Rashi *ad loc.*), and accordingly, since at least the third century (Suk. 39a), marking the point from which the remaining verses of the psalm are twice repeated. The manner in which this is done varies (comp. Shulḥan 'Aruk, Oraḥ Ḥayyim, 422, 3). In the Polish rite every worshiper himself doubles the verses, so that each hemistich of verse 25 ("Anna") is actually repeated four times. The traditional melodies for this verse are given in the articles Haḳḳafot and Hallel.

The importance laid upon the initial verses as well as the concluding passage of the psalm has attracted the traditional melodies to them rather than to the remaining verses; so that even such chants as have come down from the past are not so generally known as might be expected. The Sephardic chant, first transcribed by Naumbourg, is reminiscent of the ancient melody for the Song of Moses (Ashi-

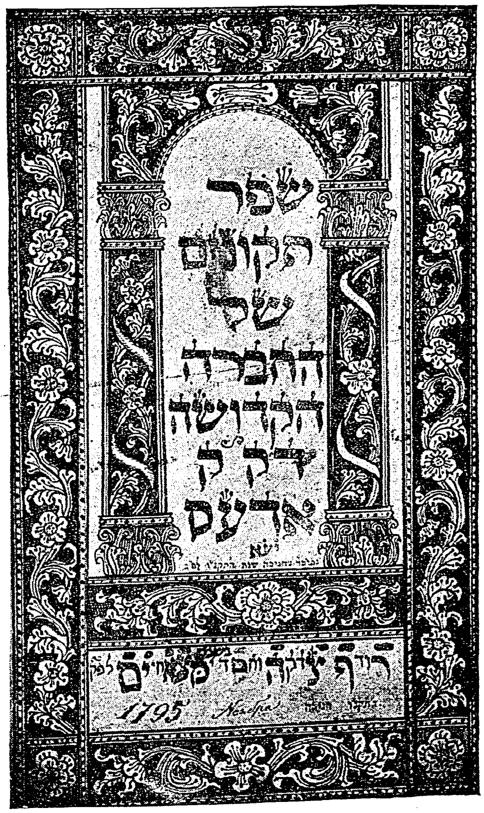
ODENATHUS. See ZENOBIA.

Beginnings of the Community.

ODESSA: City on the northwestern shore of the Black Sea, forming with the adjoining region a separate district. It has been an important factor in the cultural life of the Jews of Russia. It is believed that when the Russians took possession in 1789 of the Turkish fortress of Khadzhi-Bei—named Odessa in 1794—Jews were already living in the place. From a certain gravestone, there is reason to suppose that Jews lived there in the middle of the eighteenth century; but no authentic information on this point occurs earlier than 1793, the date of the founding of the old Jewish cemetery according to the inscription on its oldest tombstone. According to official data, five Jews established themselves in Odessa soon after the Russians took possession of it; and in 1795 the Jewish population had increased to 240 persons of both sexes. Most of them came from Volhynia, Podolia, and Lithuania. Later on Jews arrived from Galicia and Germany. These Jews, who in their native countries had adopted the European culture of the Mendelssohnian era, soon organized charitable and other useful institutions. The PINKES, which is still preserved and which dates back to 1795, contains the by-laws of the Society of True Philanthropy, whose object was the care of the sick and the burial of the dead. The Talmud Torah was probably founded in the same year. A KAHAL was formed in 1798; and two years later a Jewish hospital with six beds was established.

The Galician and German Jews were styled "Broder" Jews, after the city of Brody. They established important commercial houses and took a prominent part in the trade in breadstuffs. As early as 1826 the Brody Jews built in Odessa the first Russo-Jewish school—a departure so radical at that time as to arouse almost the entire Orthodox Russian Jewry. The broad curriculum of the school was of a character hitherto unknown in the Jewish schools; and this new feature produced favorable results for Jewish education throughout Russia. The name Odessa became synonymous with religious freedom, which term the Orthodox Jews regarded as having the same import as "dissipation." The school, which brought culture to the pioneers in southern Russia, was especially prosperous under the directorship of B. Stern. It always received the support of the local authorities, and even gained the favorable notice of Emperor Nicholas I.

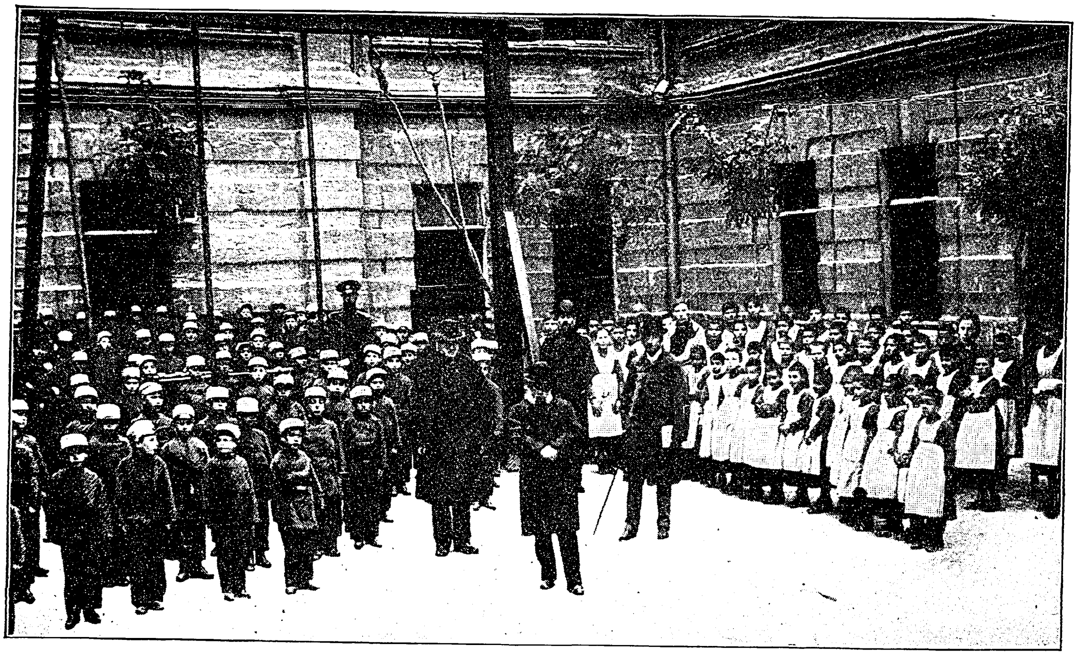
In 1835 the first Jewish school for girls was established. In 1852 there existed 59 Jewish schools, 11 private boarding-schools, and 4 day-schools. Furthermore, the Jews of Odessa showed a strong tendency to enter the general educational institutions, contributing a greater proportion of students than did the communities of other creeds. Thus in 1835 there were 8 Jews in the Richelieu Lyceum, and in 1853 there were 52 Jews in the second gymnasium. In the gymnasia of other towns there were about the same time considerably smaller numbers of Jews; even in the gymnasium of the cultured city of Mitau there were only 24. In 1863 the number of Jews in the Odessa gymnasium was 128. Odessa acquired a particular educational importance for all the Jews of Russia with the publication there of the earliest Jewish journals in Russian, "Razsvyet" (1860–61), "Zion" (1861–62), and "Den" (1869–71), and the first Hebrew paper, "Ha-Meliẓ" (1860).



Cover of the Taḳḳanot (Rules) of the Ḥebra Ḳaddisha of Odessa, 1795.

The "Broder Shool."

In 1840 the first Russian synagogue with a choir was established in Odessa. It was called "Broder Shool"; and N. Blumenthal, noted for his musical ability, was appointed cantor. Though this innovation was regarded with marked hostility by the Orthodox Jewish population, the number of worshipers continued to increase to such an extent that in 1847 the congregation removed to a larger building. This occasion was utilized by the well-known Jewish writer Osip Rabinovich to defend synagogal choirs; and he published an article on the subject in "Odesski Vyestnik." In 1860 Dr. Schwabacher, noted for his eloquence, was invited from Germany to occupy the rabbinate. He, however, was suited to a more cultured society. A stranger to the life of the Russo-Jewish masses, he did not understand the people, and therefore could not be their real leader. Schwabacher delivered his sermons in German. That language was for years, and still is in certain strata of society, the predominating conversational language of the Jews of Odessa; but in the sixties, when the reforms introduced by Emperor Alexander II. had awakened the hope of a bright future in the hearts of his Jewish subjects, those of Odessa were the first to introduce the Russian language into their homes, cooperating in this manner in the Russification of the city, which at that time, owing to the predominance of foreigners disinclined to assimilate themselves with the native population, was known as an "un-Russian" city.



Pupils of the Jewish Technical School, Odessa.

(From a photograph.)

In the course of time the Jewish charitable and educational institutions of Odessa increased. Prominent among them was the Trud Society (founded in 1864), whose purpose was to diffuse technical knowledge among the Jews. It has become a model for similar institutions. An orphan asylum was founded in 1868, largely with means contributed by the philanthropist Abraham Brodski. In 1867 an independent branch of the Society for the Promotion of Culture Among the Jews of Russia was organized in Odessa.

The community did not escape the horrors of the pogrom. Indeed, the very first pogrom in Russia occurred in Odessa in the year 1859. This was in reality not a Russian but a Greek pogrom; for the leaders and almost all of the participants were Greek sailors from ships in the harbor, and local Greeks who joined them. The pogrom occurred on a Christian Easter; and the local press, in no wise unfriendly to the Jews, attempted to transform it into an accidental fight, the Greek colony at that time being dominant in the administration as well as in the commerce of Odessa. Further pogroms occurred in 1871, 1881, and 1886.

Favorable Attitude of Local Authorities.

The gravitation to Odessa of a considerable number of educated Jews is largely ascribed to the fact that the higher local authorities have been favorably disposed toward the Jewish population. Especially was this the case with the governors-general Prince Vorontzov (1823–44) and Count Stroganov (1855–63); and there is no doubt that the Jewish community of Odessa enjoyed on the whole a better civic position than the Jews of other places, having, for instance, always taken an active part in the municipal administration, and its members being elected to commercial courts, etc. When in 1861 a commission was formed to frame a new city charter for Odessa, Osip Rabinovich, the author, was appointed a member of it. This attitude of the city toward the Jews of Odessa was reflected not only in the career of the latter, but also in the fortunes of the Russian Jews generally; for local authorities elsewhere repeatedly appealed to the government to augment the rights of the Jews and to improve their civic conditions.

At the present time the influence of the Jewish element in Odessa is quite significant. Two of the three leading political dailies are owned by Jews. The contributors and reporters, also, with insignificant exceptions, are Jews. Among Jewish journalists are to be found many who enjoy a wide popularity in southern Russia, *e.g.*, Sack, Shabotinski (the expert on economic conditions in southern Russia), Lazarovich, Lando, and Kheifetz. In science, also, Jewish names are frequently encountered. It is interesting to note that, in spite of the severe prohibitions of the Russian government, three Jews have been appointed to chairs in the University of Odessa: namely, Hochman, author of mathematical works; Bardach, the bacteriologist, a pupil of Pasteur; and Kahan, the mathematician. All the medical men of any renown in the city are Jews; and it may be said generally that in the medical profession the Jews take first rank quantitatively as well as qualitatively. Pharmacists and their assistants, who in Russia are entitled to a degree only on graduation after a special course at the university, are in the great majority of cases Jews. Notwithstanding the severe restrictions, there are many Jews in the legal profession, among them M. G. Morgulis and Blumenfeld. It was at Odessa that Passover, the luminary of the Russian bar, began his activity. He was recently retained by the British government to represent its interests in the controversy between it and Russia regarding the Red Sea captures in the course of the Russo-Japanese war.

In Literature, Science, and Art.

The Jews of Odessa have been extremely active in literature. Aside from the literary names of the past enumerated above, mention should be made of those of Ilya Orshanski, the analyst of the legal status of the Jews in Russia; of the Pinskers, father and son, the former the historian of the Karaites, and the latter the author of the epoch-making pamphlet "Auto-Emancipation," which laid the foundation of Zionism in Russia; and of A. Zederbaum, editor of "Ha-Meliẓ." In Odessa lived and labored up to 1903 the well-known Russo-Jewish historian S. Dubnow; and here, too, resides the man of letters Ben-Ami (I. M. Rabinovich). Of the younger generation are Julius Hessen and Pen, who are engaged in the study of the history of the Jews. Of writers in Hebrew Odessa has among its residents Solomon Jacob Abramowitsch ("Mendele Mocher Seforim"), who was also the "father" of Yiddish literature; "Aḥad ha-'Am" (Asher Ginzberg); the poet Bialik; the pioneer of the Zionist movement, M. L. Lilienblum; and the men of letters Ben Zion and Tschernovitch. Other Hebrew writers who worked in Odessa were the late P. Smolenskin, Gottlober, and Mandelkern; and among those of the younger generation, Berdyczewski, Brainin, Klausner, the poet Tschernachovski, and the Yiddish writer "Scholem Alechem." From the list of distinguished Jewish writers of fiction in Russian may be mentioned Juschkevitch and Khotimski, who chose for their subjects types from Jewish life.

In the field of art, also, the Jews of Odessa are not backward. At the annual exhibitions of South-Russian artists are to be seen the works of the Kishinef painters of Jewish life, Bershadsky, Goldstein, and others. Other prominent artists are: L. O. Pasternak, whose genre and plein air pictures are to be found in the museum of the Luxembourg, Paris, in the Tretyakov gallery at Moscow, and in the museum of Alexander III. at St. Petersburg; O. Brasa, a young artist who has already obtained a certain recognition, and whose career has just begun; Askenasi; Marinest; and Hirschfeld.

In the sphere of public life the activity of the Jews of Odessa is restricted, for the right to vote in the election of municipal officers has been taken from them. Up to the year 1892 the Jews constituted the most influential element in the management of the municipal affairs of the city. The period of activity of the Jewish members of the municipal council—A. M. Brodski, Soloweichik, and P. L. Khari—marks the golden era of the local administration, which, according to the uniform admission of the press, has retrograded since the introduction of the reforms denying to the Jews the right of participation, either active or passive, in municipal elections. In the management of public affairs of purely Jewish character, the first place is occupied by M. G. Morgulis; then follow M. Rabinowitch and O. Chais. As generous contributors to charities are to be mentioned L. G. Askenasi, Wainstein, Mendelewitch, M. and J. Rabinowitz, and others.

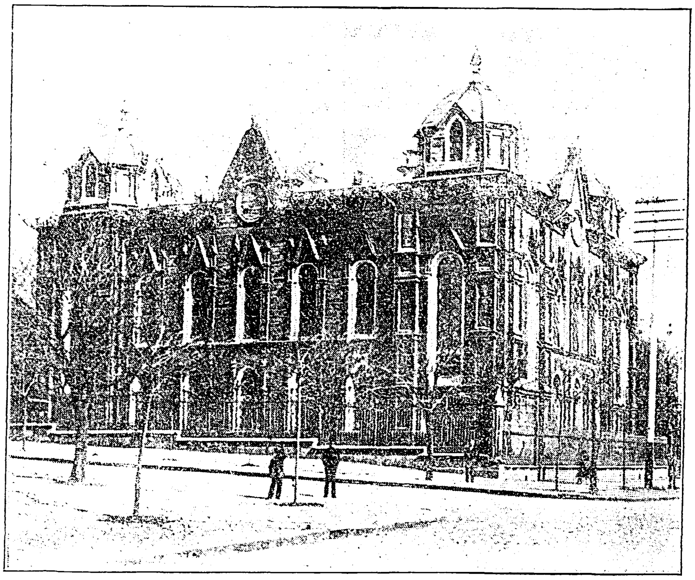
Among the Jewesses of Odessa who have devoted themselves to acts of charity and benevolence, the recently deceased Maria Saker must be mentioned. She made her appearance as the pioneer of the emancipation of women, and worked hard to raise the intellectual standard of her fellow Jewesses. She was besides no stranger to literature.

The economic importance of the Jews for Odessa and for the whole territory of New Russia has long been acknowledged. Even the anti-Semites themselves have admitted the beneficial influence of the Jews upon the commerce and industry of that territory. As proof of the danger of Jewish predominance the former found it necessary to emphasize the fact that the Russian element in Odessa was being pushed to the rear, and that until recently the native Russians had occupied only a secondary place. The history of South-Russian commerce has to record the name of the Rabinowitsch firm, which was the first to engage in direct commercial intercourse with the Far East in general and with China in particular, and the names of the Jewish mercantile firms which were the first to find a steamship route connecting the Black Sea with the Baltic.

Jews in Commercial Life.

The export of grain, which recently became the staple trade of Odessa, contributes very largely to the employment of Jewish capital and labor. Of late this trade has suffered, owing to the competition of neighboring ports, and Odessa has had to engage in industrial pursuits. But even here the Jews of Odessa compare favorably with their neighbors. Detailed information with regard to occupations is difficult to obtain in Odessa, where, as in the Russian empire generally, the science of statistics is still in its infancy; but certain figures are available from documents of the Board of Commerce granting permission to the respective licensees, upon payment of certain fees, to engage in commerce and industry. Of 1,660 licenses granted to merchants by the Board of Commerce, 820, or nearly one-half, were issued to Jews. There are under the control of Jews 15 important banking-houses, 105 large manufacturing establishments, and 560 large commercial houses, and 140 Jewish firms are engaged in the exportation of grain to foreign countries. These figures give only a vague idea of the participation of Jews in vast commercial enterprises. There are also numbers of Jewish shareholders in incorporated banks; and many of them are directors of such corporations. The Second Mutual Credit Company is entirely controlled by Jews. In many industrial joint-stock companies, as in the sugar industry and in distilleries, the participation of Jews is very extensive. Trade and industry on a small scale are almost entirely carried on by Jews.

If, however, the inference should be drawn from the above data that the Jewish inhabitants constitute the wealthiest class in Odessa, such an inference would be extremely erroneous. The bulk of the wealth is in the hands of the Greeks, Italians, and Orthodox Russians. In this respect the Jews take fifth or sixth place, the number of individual large fortunes being very limited. It is noteworthy that of the 14,633 real-estate parcels in the city only 2,857, or one-fifth, are owned by Jews, although the latter form about one-third of the total population.



Brody Synagogue, Odessa.
(From a photograph.)

The general material condition of the Jews is best illustrated by the report of the committee for rendering aid to the Jews for the Passover holy days. It appears that, in spite of the apparent reluctance of many Jews to accept charitable aid, the number of those registered on the books of the committee is about 50,000, that is, one-third of the Jewish population, thus showing that an equal proportion is suffering from actual want. The number of the poor, those who, being scarcely able to make both ends meet, are always liable to fall into the category of the class suffering from actual want, may be estimated at 35,000. The rest of the community may be divided into the following classes: (1) the middle class, consisting of artisans, clerks, and small tradesmen who can not accumulate any savings; (2) the well-to-do class, the members of which are able to save; (3) the wealthy, such as owners of real estate; and (4), finally, 18 Jews possessing enormous fortunes.

According to the census of 1892, there were 35,505 Jews engaged in the various branches of the city's manufactures and commerce (this number included the representatives of the large manufacturing as well as of the less important commercial concerns). Of these, 15,543 were owners or managers of the different concerns, 14,572 were workmen (assistants), and 1,758 were apprentices. There were 3,632 independent workmen.

According to the statistics of the city and gild administrations for 1898, there were 8,458 Jewish artisans, including 3,948 master-workmen, 3,053 assistants, and 1,457 apprentices. All these figures do not, however, correspond with the facts, the actual number of artisans being considerably higher for many of the classes (especially assistants and apprentices who are not registered in the gilds).

The prevailing trades among Jews are those of ladies' tailors, shoemakers, merchant tailors, locksmiths, cabinetmakers, etc. It is difficult to estimate the number of laborers, owing to the absence of registration; but from the fact that of those who applied to the committee for charitable aid for the Passover holy days 2,115 were married laborers, it may be estimated that there are not less than 6,000 Jews in Odessa who belong to this class.

There are in Odessa eight large synagogues and forty-five houses of prayer.

Synagogues.

The oldest among the synagogues is the Main Synagogue, which was founded soon after the establishment of Odessa, on a lot given to the Jewish community by the city (it was rebuilt in the fifties). Other old synagogues are the Artisans' Synagogue, the Warm Synagogue, the Newmarket Synagogue, and the synagogue on the street Balkowskaya. Later on there was founded the Brody Synagogue (on the street Pushkinskaya), transformed in the "forties," as noted above, into the Choral Synagogue. Subsequently this congregation removed to a building which it owns. In 1887 there was founded the New Synagogue (on the street Yekaterininskaya) and in 1898 the Nachlass Eliezer (on the Peresyp).

Of the houses of prayer, eighteen were in existence before 1835, as, for instance, those of the kasher-butchers, the flour-dealers, the pedlers, the porters, and the expressmen. In 1859 the clerks', and in 1865 the cabmen's, houses of prayer were established. Between 1866 and 1879 there were organized fifteen new houses of prayer—among them those of the furniture-workers and the bakers—and between 1875 and 1888 five additional, among them that of the painters.

In the last decade the commerce of Odessa passed through severe crises, which undermined the prosperity of the Jewish community. Moreover, the Jewish populations forcibly expelled from their old domiciles (as, for instance, from Moscow) became a heavy burden on the Odessa community; and there were recorded recently more than 40,000 needy Jews. Nevertheless the community is being enriched by new educational and charitable institutions, while supporting the old ones. While private charity is extensive, the community also, as a definite financial administrative unit, is bearing heavy burdens. The table on page 384 illustrates the condition of the various charitable educational institutions.

Indeed, the Jewish community of Odessa is justly famed for its charitable institutions. The hospital has grown to such dimensions that it occupies to-day four city blocks. It contains several departments: the general hospital; children's hospital; a splendid operating department, the gift of the well-known philanthropist Mrs. L. G. Askenasi, the cost of which amounts to not less than 100,000 rubles; an ambulance department; and several others. The hospital has a branch on the Liman, a health-resort whose salt-lake water is efficacious in cases of rheumatism and in children's diseases. The contingent of patients is mainly recruited from the Jewish population, but there are also many Gentiles (30 to 35 per cent). The annual expenditure amounts to 125,000 rubles, covered partly by the income from the meat-tax, and partly by donations.

Charitable Organizations.

The Jewish Orphan Asylum of Odessa has its own commodious building in the best section of the city, and accommodates 250 orphans of both sexes. A school, with separate departments for boys and girls, is annexed thereto, as is also a trade-school where bookbinding and shoemaking are taught. The Hebrew Agricultural School, an adjunct of the orphan asylum, is located in the suburbs of the city. Boys are trained there for agricultural pursuits, and girls in the management of dairies. As a result of the ukase prohibiting Jews from owning or leasing agricultural land, and even from residing in country towns and villages, the graduates of the school had to remove to other places where their knowledge may be applied, as Palestine or Argentina. Many of them have to abandon altogether the calling to acquire a knowledge of which they devoted the best years of their lives. The budget of the orphan asylum, including the agricultural school, amounts to 55,000 rubles annually.

The Home for the Aged and Infirm of Odessa shelters 250 inmates, and its annual budget amounts to 25,200 rubles. The Cheap Kitchen of Odessa distributes 250,000 meals, partly free and partly at very low prices. Its annual budget amounts to 28,000 rubles. The Day-Asylum of the Society for the Care of the Homeless, maintained by voluntary subscriptions, provides shelter for the children of laboring people, who would otherwise remain without care while their parents or guardians are at work. The children receive food and clothing, are instructed in reading and writing, and are generally cared for.

Not long ago a House of Industry was established in Odessa on a moderate scale, where poor laboring girls may always find employment at sewing. Those who can not sew may here learn the trade, receiving during their apprenticeship a small salary as partial compensation for their work.

Educational Institutions.

The Jewish schools may be divided into the following classes: religious, government, public, private and public, professional, Sabbath, and evening schools. To the first group belong three Talmud Torahs, public yeshibot, and private yeshibot. The First Talmud Torah is, as stated above, the oldest Hebrew school in Odessa, its age being, in all probability, the same as that of the city itself. In the first half of the eighteenth century it was managed, like all others of its type in the Pale of Settlement, without any organized system. In 1857 it was reorganized into a model school, winning the commendation of the most distinguished pedagogues and scholars, among them Pirogov. At the present time the school is directed by S. Abramowitsch ("Mendele Mocher Seforim"). There are 400 pupils, of the poorest class, who are furnished gratuitously with text-books, clothing, and foot-wear. A committee of charitable ladies supplies the pupils with dinners. The annual budget of the school, including that of the ladies' committee, amounts to 20,000 rubles. The Second and Third Talmud Torahs were opened in the suburbs last year, the pupils in the two schools numbering 400.

The yeshibah, existing since the year 1886, was founded with the object of giving to Jewish youth instruction in the Talmud and the Bible in conjunction with tuition in popular subjects. Unfortunately the school has retrograded in efficiency, and can now be considered as nothing more than an elementary school. About 100 pupils receive instruction, and the annual budget amounts to 6,000 rubles. On the initiative of Rabbi Tschernovitsch and A. Lubarski and through the financial aid of R. Gotz, a private yeshibah has been established, the aim of which is to furnish theological instruction to students preparing for a rabbinical career.

The government schools are such only in name. They were established on the initiative of the government, but are maintained from sources specifically Jewish, as the income from the meat- and candle-taxes. Of such schools there are three: two for boys, and one for girls. Each of the boys' schools consists of six consecutive classes covering the course of elementary schools, with the addition of instruction in foreign languages and bookkeeping. In each school about 300 pupils receive instruction; and the budget is fixed at 15,000 rubles. The girls' school consists of five "original" and five "parallel" classes, with 600 pupils; budget, 22,000 rubles. The school is located in a building which was donated for the purpose by L. A. Brodski of Kiev and the cost of which was 80,000 rubles.

All the above-enumerated schools belong to the class of public schools. To this category belongs also the Ellman school, so named from the donor of a large sum of money for its establishment and maintenance. It is located in the suburbs, and affords elementary instruction to 200 boys and 100 girls; budget, 8,000 rubles annually. A permanent synagogue is annexed to the school.

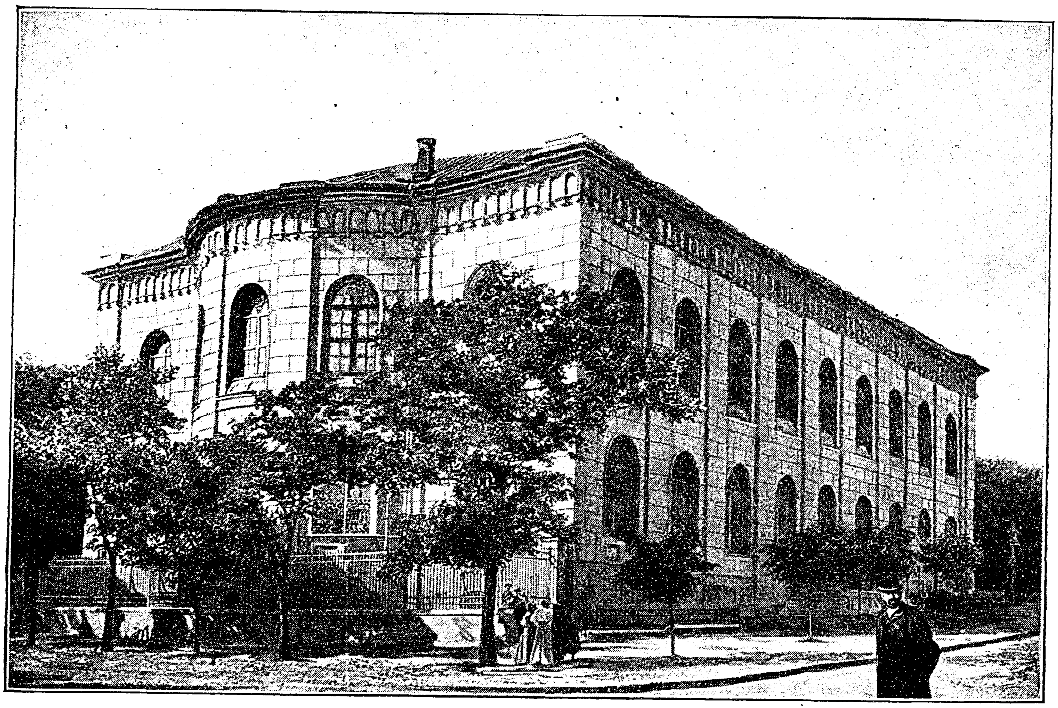
There are fourteen private and public schools, which give free instruction in elementary subjects to not less than 2,000 children of the poor. Almost every such school is aided by a committee which provides the children with clothing, foot-wear, and hot meals.

In the category of professional schools the first place belongs to the school of the Trud Society, which has existed for the last forty years. This school, the pride of southern Russia, and which attracts pupils from the most distant parts of the country, contains five "original" and five "parallel" classes, in which about 450 students receive instruction. There is also a postgraduate course, besides a model workshop for mechanics, including cabinet-makers, a profitable iron-foundry which provides Odessa and the neighborhood with model work, and an electro-technical workshop. Many of the graduates of the school go abroad for supplementary technical education, and it is no rare thing to meet an engineer who has received his elementary education in the Trud. The budget of the school amounts to 61,000 rubles. Extremely poor pupils receive clothing, foot-wear, and board free. The professional schools for girls number five, the instruction given being mostly in sewing. The foremost of them is the school built through the liberality of A. M. Brodski. Among the professional schools may also be included the Hebrew Public School of Commerce, established in 1904. It has a handsome building of its own, the cost of which was about 100,000 rubles; and its pupils, including those of the preparatory school, number at least 200.

The Trud School.

Of private schools there are thirty-eight. In this number are included the Hochman School of Commerce and the Iglitzki Classical College, each having a normal course corresponding to that of the American high school, and five schools for girls.

A very interesting educational phenomenon is presented in the establishment of evening-schools. The development of these is greatly hampered by the interference of the officials of the education department; but they nevertheless number fourteen, for adults of both sexes. Aside from elementary courses, lectures are given on physics and on other scientific subjects of general interest. Some of the schools are nearly similar to the "Universités Populaires" of Paris and the "People's Palaces" of England and America. The evening-schools of Odessa stand, as it were, midway between these two classes of institutions, resembling in some respects the one and in some the other. They are established and maintained by an extra educational committee of the Society for the Promotion of Culture. There is also a graduate course leading to the teacher's diploma.

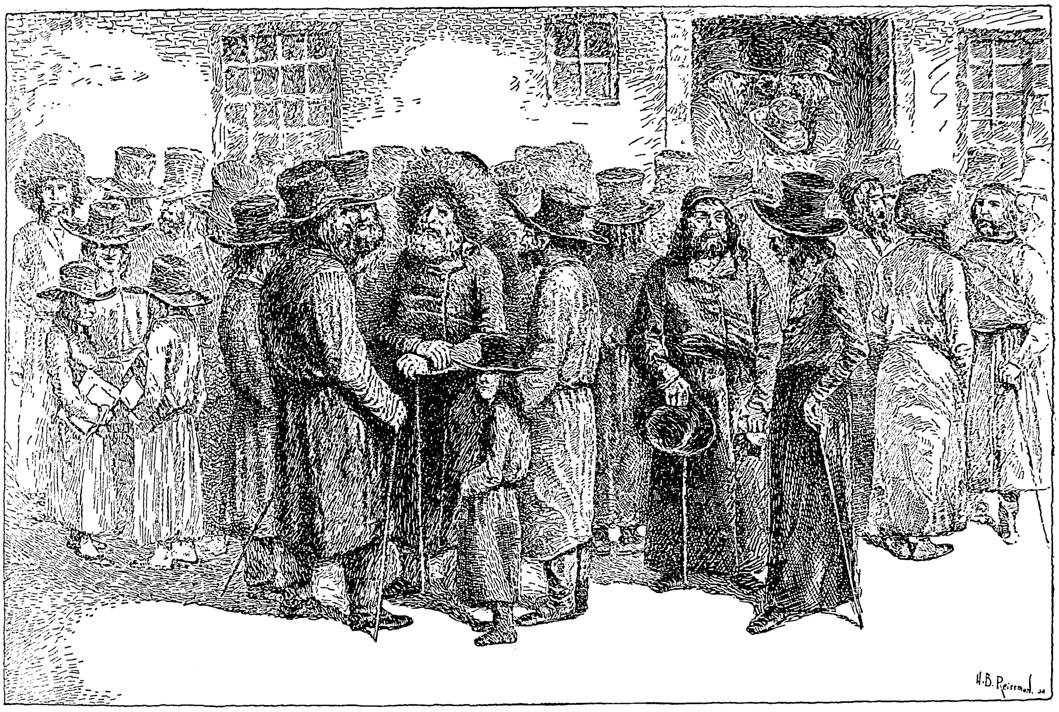


Synagogue in Richelyevskaya Street, Odessa.
(From a photograph.)

There are two Sabbath-schools, accommodating 400 pupils recruited from the laboring classes, which on work-days can not devote even an hour's time to instruction in reading and writing.

The Ḥadarim.

The ḥadarim of Odessa have all the shortcomings of the traditional ḥeder, including insanitary equipments and pseudo-pedagogic methods. On the initiative of the Zionistic societies, however, a movement has recently been set on foot to open model ḥadarim, in which shall be applied the correct method of teaching the ancient Hebrew language by means of that language itself. Unfortunately, there are only three of such ḥadarim. There are in all 198 officially registered ḥadarim, with a quota of 3,815 pupils, and about 200 unofficial ḥadarim, having at least an equal number in attendance.



Jewish Merchants at Odessa.
(From Artamof, "La Russie Historique," 1862.)

According to the report of the inspector of the education department, 162 official Hebrew schools, exclusive of ḥadarim, are registered in Odessa, having 276 male and 204 female teachers, with 3,686 male and 3,190 female pupils, and a budget of 27,000 rubles; but these figures are certainly too low. It is very interesting to observe that, including the ḥadarim, the number of Jewish elementary schools providing elementary education to the children of one-third of the total population of the city far exceeds the number of schools, called "general" schools, for the children of the rest of the inhabitants. Of the former there are 360; of the latter, 152; although in the general schools, notwithstanding the restrictions imposed, not less than 3,708 children are being instructed. Nevertheless, the number of Jews who are of necessity refused admission to Hebrew and general schools is very great, so intense is the thirst of the Jews for education.

As regards the city schools (excluding the elementary), there were 781 (7.9 per cent) Jews in the Odessa public schools in 1902. In the two girls' gymnasia there were 125 Jewish pupils; and in the city Sunday-schools there were 199, in a total of 427 pupils. In the city school of Efrussi, established by the Jews of Russia, there were 328 Jews, or 65 per cent of the total. In 1897 there were in all 10,332 Jewish pupils in the different educational institutions.

The foregoing data relate to elementary education. As regards middle and higher education, the number of Jewish students is very limited, owing to the restrictions imposed by the government, as stated at the beginning of this article, the admission of only 5 and 10 per cent of Jews to the colleges being allowed, while the opening of higher educational institutions by private individuals is prohibited.

The number of female teachers is not less than one-half of the whole; and it must be added that the zeal displayed by them in their work is highly valued in every school.

Since the birth of Neo-Zionism of the Herzl type in recent years a party war has made itself felt in the Russian Jewry. The Zionists and Nationalists demand the nationalization of the schools, *i.e.*, an increase in the number of Hebrew lessons, the protectorate of the model ḥeder, etc., while the radical element insists, on the contrary, upon the abolition of everything national. To the latter belong the bourgeoisie.

The Odessa branch of the Society for the Promotion of Culture Among the Jews of Russia contributes to the support of several educational institutions; distributes, though rarely, prizes for essays; publishes, still more rarely, some books; pays the tuition fees of some students of the universities; and maintains an excellent library of Judaica and a reading-room. Of the various committees cooperating with this society, such as the Historical Culture, the Provincial, the Ḥeder, etc., one is doing very good work, namely, the Evening School committee, which has for its object the education of adults.

Various Associations. The Society for the Mutual Aid of Hebrew Clerks is an important feature of commercial Odessa. In addition to its special object, the rendering of financial assistance to needy clerks, the association maintains a library and reading-room, which has the largest and finest collection of Judaica and Hebraica in Russia. This society has lately erected a building of its own, containing a spacious room in which the members meet for prayer. It was the first to introduce an organ and a female choir into the religious services. The choir has recently been discharged on account of the strong opposition to the innovation from certain sections of the society.

The Association of Jewish Teachers of the New-Russian Territory and Bessarabia comprises the members of the teaching profession in Odessa alone, and not those of the whole territory under its jurisdiction. Up to the present day the operations of the society have been limited to making loans and rendering financial aid on a small scale to its members; but a movement is now on foot to awaken the society to the necessity of active work in the sphere of higher education.

The Society for the Aid of Hebrew Agriculturists in Syria and Palestine, having its seat in Odessa, is a branch of the Russo-Hebrew society Chovevei Zion, the activity of which is well known throughout the world.

In all the non-sectarian societies also, from the sporting fraternities to the charitable societies of all phases, the Jewish element is everywhere noticeable.

It has recently been computed that for the purchase of the usual ham, bread, and eggs for distribution to the Greek-Orthodox Russians for their Easter, the Jews contribute more than one-half of the money required.

The annual expenditure by all the Hebrew charitable organizations in Odessa amounts to 800,000 rubles, of which the sum of 300,000 rubles is derived from the income of the meat-tax, and the remainder is provided by voluntary contributions.

The annual net increase of the Jewish population is estimated at about 5 per cent.

Rabbis. The condition of the rabbinate in Odessa has been deplorable for the last fifteen years. In 1888 Rabbi Schwabacher was succeeded by Rabbi Gurland. Since the death of the latter in 1890, no rabbi has been elected, but, contrary to law, the occupants of the office have been appointed by the local authorities. Eichenwald and Pomeranz, former assistants of Schwabacher, were appointed not because they enjoyed the respect of the community, but because they succeeded in gaining the favor of the inferior local authorities. Now, however, the Odessa community has protested against this procedure. Nevertheless the candidates elected by the community have not been confirmed; and the post of rabbi is occupied—although presumably only temporarily—by Dr. Kreps, who received at the election the least number of votes.

Vital Statistics.

According to the census of 1892, the Jews numbered about 112,000, or 32.9 per cent of the total population, which was estimated at about 341,000. In 1902 the births among the Jews were: males, 2,789; females, 2,418; total, 5,207 (5,164 in the city and 43 in the suburbs), or 34.6 per cent of the total births in the city. Illegitimate births among the Jews amounted to 0.1 per cent as compared with 11.9 per cent among the Greek Orthodox. In 1902 about 2,840 Jews died (according to the burial society, 3,224), or 30.19 per cent of the total number of births. The death-rate among the Jewish children for 1902 was 28.5 per cent; among the Greek Orthodox 34.5 per cent; while among other nationalities the percentage was less than among the Jews. In 1904 the Jews of Odessa numbered about 160,000 in a total population of 500,000. The natural increase of the Jewish population for 1902 was 14.7 per thousand; among the Greek Orthodox, 7.6 per thousand. If that increase continues on the same scale, Odessa will become the center of Jewish population in Russia. For the last fifteen years a transmigration of Jewish settlements has taken place in the direction of Odessa and toward the New-Russian territory, where the conditions of life are better than in southwestern Russia. In the latter the struggle for life has become very intense.

H. R. *—S. Pe.

OEDENBURG (Sopron): Hungarian city, capital of the district of the same name. Its Jewish community, according to a document of 1526, dates from the tenth century and is one of the oldest in Hungary. The town was destroyed by fire in 1317. Charles Robert invited Jewish colonists into the town in 1324; they lived there in peace until 1354, when they were expelled by Louis the Great. Most of them went to Austria and settled in Wiener-Neustadt. A few years afterward they were allowed to return, and in 1379 the Jewish population in Oedenburg amounted to 80, reaching 400 toward the end of the fifteenth century. Recognizing that the Jews constituted a valuable fiscal asset, Frederick III., to whom Elizabeth had mortgaged Oedenburg, took energetic measures to protect the Jews there against the aggression of their Christian fellow citizens and prevent their expulsion (1441). In 1490 the citizens of Oedenburg seized upon the Jews and cast them into prison with the declared intention of keeping them there until they consented to cancel the obligations of their Christian debtors; John Corvinus and Beatrix, however, took them under their protection.

Expulsion in 1526.

Beginning with the sixteenth century the lot of the Jews in Oedenburg grew constantly worse, and they were often assailed by the people in spite of the "protection" of the feeble King Louis II. In 1526, after the battle of Mohacs, they were expelled, their houses were broken into and plundered, and the so-called "Jews' account-book," in which the legally certified debts of the Christians were entered, was destroyed. Even the cemetery and the synagogue were wrecked. Some of the volumes now in the municipal archives of Oedenburg are covered with parchment that once constituted parts of books destroyed on this occasion. All these raids occurred with the consent of the mayor and the city council. The expelled Jews fled principally to Eisenstadt, Mattersdorf, and Kobersdorf, where they instituted suits for damages against the city of Oedenburg. The litigation lasted for eight years and was decided partially in their favor, though their demand to be readmitted was rejected, Ferdinand I., on Sept. 12, 1534, authorizing Oedenburg to refuse to readmit them. They were, however, allowed to visit the fairs and to peddle in the city. In 1615 peddling also was forbidden. Some time afterward it happened that they gained the favor of Prince Paul Esterhazy, who was at this time prefect of the county of Oedenburg; he brought his influence to bear upon the city council in behalf of the Jews, with the result that in 1665 they were permitted to enter the city on Tuesdays and Wednesdays on presentation of a ticket, for which they had to pay eight pfennig; but only one Jew was allowed to enter the city at a time.

Conditional Readmission.

In 1740, at the instance of Counts Esterhazy, Battyányi, and Draskovits, the city granted permission to all Jews of the counties of Oedenburg and Eisenstadt to enter the city. By 1766 they were allowed to remain in the town from Monday to Friday continuously, and carry on business. The city of its own accord granted them permission to secure a separate lodging-house and a cook-shop; but for this privilege they paid at first 270 gulden, and later 1,071 gulden (1804). They were not permitted, however, to set up permanent households. Even as late as 1813 it was the law that whoever rented a dwelling-house or a storeroom to a Jew for an extended term would be fined 100 gulden; a second offense of the same nature entailed loss of the privileges of citizenship. But in spite of such severe measures the citizens continued to rent houses to Jews; in 1818 the latter even possessed a place of prayer.

The number of Jews—the so-called "tolerated" Jews—there in 1830 was 37. It was only, however, after the promulgation of the law of 1840, granting Jews unrestricted entrance into the free cities, that the Jewish population of Oedenburg began to increase steadily. Most of the immigrants came from the very places to which the Jews had previously fled, as Eisenstadt, Lakenbach, Kobersdorf, Heiligen-Kreuz, and Mattersdorf. There were 180 Jews in Oedenburg in 1855; 854 in 1869; 1,152 in 1881; 1,632 in 1891; and 2,400 in 1900 out of a total population of 33,478. It is singular that, while, according to the statistics for 1891, the general population showed a proportion of 1,172 females to 1,000 males, in the case of the Jews the numbers were 843 males and 789 females.

The first Jewish cemetery was laid out in 1869, and the first to be buried there was Hermann Seidler, whose son, a convert to Christianity, was raised to the Austrian baronetcy; in 1902 the cemetery was considerably enlarged. The first synagogue (Reform) was built in 1876, the second (Orthodox) in 1891. The ḥebra ḳaddisha, which was established in 1869, is supported by the two congregations jointly; so also is the Jewish grammar-school, which in 1902 was attended by 230 Jewish children. Among the other Jewish institutions are the Maskil el Dal Society; Women's Association; Deák Aid Society; Noble Hearts' Society; Penny Society; and the Niḥum Abelim Society. Among the rabbis of Oedenburg have been the following: R. Meïr (toward end of 14th cent.; often referred to by Jacob Mölln); R. Kalman; R. Gedl (about middle of 15th cent.); R. Judah (toward end of 15th cent.; mentioned by Gedaliah ibn Yaḥya as among the great Ashkenazic rabbis); R. Jacob (son of R. Isaac of Prague; officiated in 1490); R. Merhell ("Rabbi Yud"; 1503); Lazar Alt (1868-72); Max Elias (1872-1894); Dr. Max Pollák, the present incumbent, who was elected in 1894. The diplomatist and poet Baron Louis Dóczy (Dux) was born there (Nov. 5, 1845).

OELS. See Silesia.

ŒNOMAUS OF GADARA: Pagan philosopher; lived during the reign of the emperor Hadrian (117-138); he belonged to the school of the younger Cynics. In his book entitled "The Detection of Witches," from which Eusebius ("Præparatio Evangelica," §§ 19-36) has given fragments, he combats the pagan system of oracles with great violence, and apparently with success, for Julian ("Orations," vii. 209) upbraided him for having destroyed reverence for the gods. Grätz, therefore, is justified in assuming, in the second edition of his "Geschichte," that Abnimos ha-Gardi, who is frequently mentioned in the Talmud and Midrash, is none else but Œnomaus of Gadara. The friendship cherished for him by the tanna Meïr (whose education was Greek), the discourses the latter carried on with him, and other things reported of him in the rabbinical sources, favor this identification, whereas other suppositions (in Blumenthal, "Rabbi Meïr," pp. 137 *et seq.*) are without sufficient foundation.

"There were among the pagans no philosophers like Bileam and Œnomaus of Gadara. The pagans came to him [Œnomaus] and asked, 'How can we get at this nation [the Jews]?' He answered, 'Go and visit the synagogues and lecture-rooms; when the children chirp [are busy with the Doctrine] you will not be able to get at them'" (Gen. R. lxv. 1 *et al.*). He put a cosmogonic question to the scholars: 'How was the earth first created?' They maintained that they were not versed in such matters and referred him to the architect Joseph, who satisfied him with a solution that corresponded to the views of the period" (Ex. R. xiii. 1). When his father and mother died R. Meïr visited him to condole with him. At the death of the mother he found him and the members of his household sitting in mourning, whereas they attended to their occupations at the death of his father. To the exclamation of Meïr, "You loved your mother better!" he answered, with Ruth i. 8, "Go, return each to her mother's house" (Ruth R. *ad loc.*). Once he asked Meïr, "Does all wool rise that is placed in the dyeing-pot?" to which Meïr answered, "What was clean upon the body of the mother rises; what was unclean upon the body of the mother rises not" (Ḥag. 15b, at bottom).

Even the form of the dialogue bears witness to its genuine character, for this enigmatical mode of expression, which was called "speech of wisdom," was well liked in Greco-Jewish circles. The meaning is that the intercourse of R. Meïr with his teacher Elisha ben Abuyah, who was at variance with Judaism and with the scribes, did him no harm. Many pagans were familiar with the Bible; hence the popularity of Œnomaus in rabbinical circles is to be ascribed to his conduct toward Jews and Judaism, which is implied in the first quotation; for the reference to the "great" philosopher of the pagans is to his greatness not in philosophy, but in conduct. Libowitz ("Doreshe Reshumot ha-Agada," New York, 1897) and Epstein ("Magazine of Knowledge," 1894, vol. i., p. 17) believe Œnomaus was a Christian.

OESTERREICHISCHE WOCHENSCHRIFT, Central-Organ für die Gesammten Interessen des Judentums: Austrian weekly, founded by Deputy Dr. Josef S. Bloch to combat Austrian anti-Semitism; published at Vienna every Friday since Oct. 15, 1884. In its pages appeared the chief attacks upon Professor Rohling and Pastor Deckert, and it also brought about the unmasking and conviction of Aaron Brimanus (Justus) and Paulus Meyer. Engaged in continual warfare against the Austrian leaders of anti-Semitism, the paper has become a noteworthy champion of Jewish movements of the day. Among its contributors have been Chief Rabbi Güdemann of Vienna, David Kaufmann of Budapest, B. Rippner of Glogau, Marcus Landau of Vienna, and Councilor Sigmund Mayer of Vienna. Theodor Herzl published his first Zionistic articles in its columns.

Bibliography: *Oesterreichische Wochenschrift*, vols. i.-xvii., Index, together with an appendix containing the index for 1901, Vienna, 1902.

OESTERREICHISCH-ISRAELITISCHE UNION: Austrian political society for the protection of Jewish interests, founded in 1884 on account of the victory of the anti-Semites in the election of that year in Vienna and Lower Austria. Its purposes were "To promote a love for Jewish learning among the Jews of Austria and to further their interests, to oppose and dispel the wide-spread errors in regard to the Jews and the prejudice against them, and to combat the efforts instituted to increase the severity of the religious and racial opposition to them."

The realization of these aims was begun in the most active and efficacious way by the board of directors, which included Josef S. Bloch and Chief Rabbi Güdemann, besides university professors, lawyers, and prominent merchants. Effective influence was gained in all political elections as well as in those of the Jewish congregation of Vienna. Under the auspices of the society free public lectures are given every winter by leading scholars and by men distinguished in public life, for the strengthening of the Jewish consciousness and sense of political freedom. Its propaganda for the establishment of a Jewish theological seminary in Vienna, as well as its movement for the promotion of Hebrew studies in the religious schools, was crowned with signal success.

In 1895 the Union gave the impulse to the creation of a central body for protection and defense, composed of representatives of the larger Austro-Jewish congregations. This Allgemeiner Israelitischer Gemeindebund did not receive the sanction of the government until it had changed its constitution; and it has not yet accomplished very much.

The anti-Semitic riots and the charges of ritual murder which arose in 1896 throughout Austria, especially in Bohemia, in connection with the reactionary tendency in government circles found the Union well prepared for defense. It kept the government and the press constantly informed of the state of affairs and appealed to them for help. It organized its own "Rechtschutz-Bureau," which gives gratuitous legal aid to all Jews whose rights have been infringed or who have been unjustly persecuted for their religion; it repels false accusations against the whole body of Jews, and wards off illegal attacks. In the year 1898 the Union, moved by the terrible sufferings of the Jews in Galicia, instituted a thorough investigation of the condition of their coreligionists there. One result of this action of the society, combined with that of other allied bodies, was the foundation of the Galizischer Hilfsverein, which aims at raising the moral and material standard of the Jewish population of that province.

The society has published since 1888 a monthly magazine, under the title "Mittheilungen der Oesterreichisch-Israelitischen Union," for the propagation of its ideas. Since 1892 it has published also the "Kalender für Israeliten," which ranks among the best Jewish year-books now issued, especially on account of its literary department and its exhaustive list of the Jewish congregations of Austria and their officers.

Bibliography: *Kalender für Israeliten*, passim; *Oesterreichische Wochenschrift*, passim.

OFAN (OFANNIM): Name by which is known that part of the morning prayer in which the praise of the Lord by the heavenly host is described. This passage begins with the words "The ofannim [wheels] and the holy living creatures with great uproar raise themselves up; facing the Seraphim they say, 'Praised be the glory of the Lord from his place.'" The idea of the passage is based on Ezekiel's vision (ch. i.). The piyyuṭ inserted in this passage expatiates on the theme of the heavenly host praising the Lord.

OFEN. See Budapest.

OFFENBACH: Town in the province of Starkenburg in the grand duchy of Hesse. When Fettmilch caused the expulsion of the Jews from Frankfort-on-the-Main on Aug. 22, 1614, they proceeded up the river with an armed escort; but, although they were met with hostile demonstrations at the various bridges, Offenbach was the only place which opened fire upon them, with what results is not known. The town appears in Jewish history for the second time at the end of the eighteenth century and at the beginning of the nineteenth in connection with the settlement there in 1786 of Jacob Frank. He succeeded in buying the castle from the reigning prince Wolfgang Ernst of Homburg-Birstein, who was overwhelmed by debt. In this palace, which was surrounded by a strong wall, Frank, assuming the title of "Baron of Offenbach," kept his court; and here he died (Dec. 10, 1791), being buried in the cemetery of Offenbach with great pomp. For sixteen years Offenbach maintained its importance for the Polish Jews; for from it Frank's children, Joseph Roch and Eve, sent the "red letters" to various communities, while Frank's palace and grave formed objects of pilgrimage for wealthy and influential Jews from the East.

After Frank's death and when the influx of money had ceased, the city itself suffered; for it was found that not only those citizens who had contributed money directly to Frank, but also the workmen who had performed the necessary services about his "court," had been obliged to profess themselves adherents of his doctrine. Only a public announcement on the part of his relatives that they would shortly pay his debts succeeded in pacifying the city. When, however, new complaints arose in 1817, Archduke Charles was obliged to announce that he would go in person to Offenbach to make a thorough investigation, whereupon Eve, Frank's daughter, either was spirited away or died suddenly. This episode brought great distress upon the city, since the Frankists had left debts behind them everywhere. In his later years Wolf Breidenbach (1751–1829) was a citizen of Offenbach. He was the first to induce the Duke of Isenburg-Birstein to abolish the Jewish "Leibzoll."

The present (1904) community of Offenbach, whose rabbi is Dr. J. Goldschmidt, contains 1,212 Jews out of a population approximating 60,000. It possesses, in addition to the synagogue, a ladies' club, a fraternity, a Jewish hospital, and a ḥebra ḳaddisha.

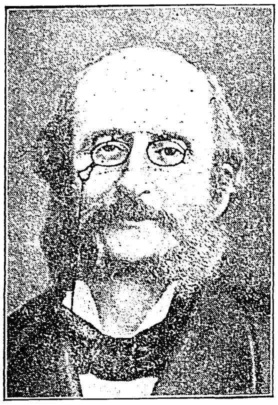
J. S. O.

OFFENBACH, JACQUES: Creator of French burlesque opera; born at Cologne June 21, 1819; died at Paris Oct. 5, 1880. He was a son of Judah Offenbach, cantor of the Jewish congregation at Cologne. Offenbach went to Paris at the age of thirteen, and in Nov., 1833, entered the Conservatoire, where he studied violoncello under Vaslin; shortly afterward he became a member of the orchestra of the Opéra Comique. In 1841 he gave a series of concerts consisting mainly of his own compositions and of chansonettes to parodies of La Fontaine, written for the vaudeville stage. As a soloist, however, he was successful neither in France nor in

Germany, whither he went in 1848; so that after two years of touring he decided to return to Paris, where he succeeded in obtaining the position of leader at the Théâtre Français.



Jacques Offenbach.

Offenbach now began to devote himself to operatic composition, and achieved his first success with his "Chanson de Fortunio" (in Alfred de Musset's "Le Chandelier") in 1848. On Oct. 28, 1853, his first operetta, "Pepito," was produced at the Opéra Comique, but with slight success, and it was not until "Les Deux Aveugles" and "Le Violoneux" appeared that Offenbach's peculiar talent met with unequivocal recognition. In 1855 he opened a theater of his own, the Bouffes Parisiennes (formerly the Théâtre Comte, in the Passage Choiseul), which he conducted until 1866, and in which many of his most popular works appeared. In 1872 Offenbach undertook the management of the Théâtre de la Gaîté, which, however, he resigned in 1876, when he entered upon a somewhat unsuccessful tour through America (this tour is described in his "Notes d'un Musicien en Voyage," 2d ed., Paris, 1877).

From the time of his return to Paris until his death he diligently devoted himself to composition. He was a very prolific composer, his operatic and other productions comprising over 102 independent works, many of which are in three or four acts. His best works are: "Orphée aux Enfers" (1858), an operetta, which by 1875 had had 400 performances in Paris alone; "La Belle Hélène" (1864); "Barbe-Bleu" and "La Vie Parisienne" (1866); "La Grande Duchesse de Gerolstein," which created a great sensation during the Paris Exhibition of 1867; "Madame Favart" (1879).

OFFERING. See Sacrifice.

OG.—Biblical Data: Amorite king of Bashan, who reigned in Ashtaroth and was conquered by Moses and Israel in the battle of Edrei (Num. xxi. 33), sixty fortified cities, with high walls, gates, and bars, comprising the region of Argob, being taken and given to the children of Machir, son of Manasseh (Deut. iii. 13; Josh. xiii. 31). Og was one of the giants of the remnant of the Rephaim. His iron bedstead in Rabbath, the capital of Ammon, is described as having been nine cubits in length and four cubits in breadth (Deut. iii. 11).

E. G. H. E. Schr.

——**In Rabbinical Literature:** Og was not destroyed at the time of the Flood (Niddah 61a), for, according to one legend, the waters reached only to his ankles (Midr. Peṭirat Mosheh, i. 128, in Jellinek, "B. H." ii.). Another tradition states that he fled to Palestine, where there was no flood (Rashi to Niddah, *ad loc.*); while, according to a third legend, he sat on a rung of the ladder outside the ark, and, after he had sworn to be a slave to Noah and his children, received his food each day through a hole made in the side of the ark (Pirḳe R. El. ch. xxiii.). Og was known also as "Ha-Paliṭ" (see Gen. xiv. 13).

It was Og who brought the news to Abraham of the captivity of Lot. This he did, however, with an evil motive, for he thought that Abraham would seek to release Lot and would be killed in battle with the great kings, and that he, Og, would be able to marry the beautiful Sarah (Gen. R. xlii. 12). A long lease of life was granted him as a reward for informing Abraham, but because of his sinister motive he was destined to be killed by the descendants of Abraham. Og was present at the banquet which Abraham gave on the day Isaac was weaned (comp. Gen. xxi. 8). As Og had always declared that Abraham would beget no children, the guests teasingly asked him what he had to say now that Abraham had begotten Isaac, whereupon Og answered that Isaac was no true descendant since he could kill Isaac with one finger. It was in punishment for this remark, one legend declares, that he was condemned to live to see a hundred thousand descendants of Abraham and to be killed in battle against them (Gen. R. liii. 14). When Jacob went to Pharaoh and blessed him (Gen. xlvii. 7), Og was present, and the king said to him: "The grandson of Abraham, who, according to thy words, was to have no descendants, is now here with seventy of them." As Og cast an evil eye upon the children of Israel, God foretold that he would fall into their hands (Deut. R. i. 22).

Death of Og.

During the battle of Edrei (Num. xxi. 33) Og sat on the city wall, his legs, which were eighteen ells long, reaching down to the ground; Moses did not know what monster he had before him until God told him that it was Og. Og hurled an entire mountain against the Israelites, but Moses intercepted it (Deut. R. *l.c.*). According to another legend, Og uprooted a mountain three miles long, intending to destroy all Israel at once by hurling it upon their camp, which was also three miles in length; but while he was carrying it upon his head a swarm of locusts burrowed through it, so that it fell round his neck. When he attempted to throw off this unwieldy necklace long teeth grew from both sides of his mouth and kept the mountain in place. Thereupon Moses, who was himself ten ells tall, took an ax of equal length, jumped upward ten ells, so that he could reach Og's ankles, and thus killed him (Ber. 54b).

Shabbat (151b) and 'Erubin (48a) also indicate that Og was regarded as an unusually large giant. A legend says that a grave-digger pursued a stag three miles inside of one of Og's bones without reaching the other end (Niddah 24b).

W. B. J. Z. L.

OHALOT ("Tents"): Treatise in the Mishnah and the Tosefta dealing with defilement through a dead human body, through the dead body of an animal, or through contact with one that is diseased; based on Num. xix. 14-16. In the Tosefta it is called **Ahilot** ("Tentings"), which name occurs also in the Palestinian Talmud (M. Ḳ. ii. 81b). Ohalot is the second tractate in the mishnaic order of Seder Ṭohorot and is divided into 18 chapters and 133 paragraphs.

Ch. i.: The various kinds of defilement by a dead human body (§§ 1-3); the degrees of defilement sustained by an individual and the degrees of defilement sustained by a vessel (§ 4); the defilement of person or clothing through contact with one having a discharge (§ 5); defilement by touching the dead body of either man or beast does not occur until after formal verification of death (§ 6); contact with a single member, provided it is entire, defiles, even though it is less than normal size (§ 7); enumeration of the 248 parts of the human body (§ 8).

Ch. ii.: The amount of flesh, bones, or blood, of ashes of an incinerated body, or of dust from a grave, which is capable of defiling (§§ 1-2); those parts of a corpse which defile through being touched or carried, but not by their presence in the tent; other things which defile by being merely touched or carried (§ 3); the cover of a tomb and its walls defile by being touched, but not by being carried (§ 4); cases in which the given quantity of flesh, blood, or bones is diminished or is divided, or in which the given quantity is from two or more bodies (§§ 5-7).

Ch. iii.: Various defilements comprised under the same name (§ 1); blood which has been spilled upon, or has soaked into, a garment (§ 2); cases in which the teeth, hair, or nails of a corpse defile (§§ 3-4); blood that defiles and blood that does not defile (§ 5); how large openings, as doors and windows, must be, on the one hand, to enable defilement to spread, or, on the other hand, by allowing uncleanness to escape, to protect other exits against defilement (§§ 6-7).

Ch. iv.: In regard to a tower, and the relation between a cabinet standing in the house or in the doorway and the house itself, in connection with uncleanness in either.

Ch. v.: The fireplace within and the chimney without the house (§ 1); things in a dormer-window, between the house and the roof, protect the roof from uncleanness in the house (§§ 2-5); cases in which the covering of a well or cistern gives protection against defilement (§§ 6-7).

Ch. vi.: How men and vessels may be regarded as tents in so far as they defile, but do not protect against defilement (§§ 1-2); the relation of the house or the roof to the outer wall, the partition wall, and the floor, in respect to any uncleanness in them (§§ 3-7).

Ch. vii.: Uncleanness which penetrates vertically in both directions; the slanting roof and the slanting sides of a tent (§§ 1-2); the doors of a house in which there is a corpse (§ 3); defilement in connection with a still-born child (§§ 4-5); when the unborn child may be cut up while in the womb and removed piecemeal in order to save the life of the mother, and when the child may not be injured in spite of the danger to the mother (§ 6).

Ch. viii.: Things which, being regarded as "tentings," may defile other things, but which may, on the other hand, protect from uncleanness (§§ 1-2); things which defile but which can not protect from defilement (§ 3); things which protect from defilement and which can not defile (§ 4); things which neither protect from nor cause defilement (§ 5).

Ch. ix.: The relation between a house and a basket in it (§§ 1-10); a basket or barrel in the open air, and circumstances in which uncleanness in it spreads upward or downward; defilement in connection with a tomb hewn in the rock (§§ 11-16).

Ch. x.: Openings in a house with reference to uncleanness in the house or above the openings.

Ch. xi.: The case of a fissure in the roof of a house or in a vestibule (§§ 1-2); the case of one who, leaning out of a window, places a covering over a corpse (§ 4); the case of those who, while bearing a body to burial, step over a person lying in the doorway (§ 5); concerning a dog which has eaten of the flesh of a corpse (§ 7); other details in regard to the covering of a cistern (§§ 8-9).

Ch. xii.: Further details in regard to circumstances under which defilement spreads, or does not spread, upward or downward.

Ch. xiii.: The size of windows or other openings with respect to the entrance or the removal of uncleanness (§§ 1-4); things in an opening which render it "smaller" and things which do not render it "smaller" (§§ 5-6).

Ch. xiv.: The connection of moldings with uncleanness.

Ch. xv.: Boards lying side by side or above one another with reference to uncleanness (§§ 1-3); uncleanness in a divided house, or in one filled with straw, grain, etc. (§§ 4-7); the entrance to a tomb, and the things in connection with it which may defile (§§ 8-9).

Ch. xvi.: How far movable things, as tents, may spread uncleanness (§§ 1-2); when a place in which one or more bodies have been buried must be recognized as a burial-place; how a field in which a grave has been found may be purified (§§ 3-5).

Ch. xvii.: When a field in which a grave has been plowed through becomes a burial-place ("bet ha-paras").

Ch. xviii.: Further details regarding the three kinds of "bet ha-paras," and how they may be purified (§§ 1-6); fields on the frontier between Palestine and Syria; houses and dwellings of the Gentiles, and under what circumstances they are unclean (§§ 7-10).

The Tosefta to this treatise, also divided into eighteen chapters, contains various details which serve to explain the Mishnah. For instance, Tosefta v. 11-12 explains in detail why the Bet Hillel, as Mishnah v. 4 says, revoked its original decision, and how the Bet Shammai decided. Similarly Tosefta xviii. 13 explains what is meant by "the eastern side of Cæsarea" ("mizraḥ Kisrin"; Mishnah xviii. 9). Among the sayings of R. Joshua given in the Tosefta are the following: "Whoever learns without taking pains is like him who sows without reaping, for his studies will profit him nothing." "Whoever learns the Torah and straightway forgets it, is like unto a woman who gives birth to children who die immediately after birth" (Tosef. xvi. 8).

W. B. J. Z. L.

OHIO: One of the North-Central States of the United States of America; admitted to the Union in 1803. Jews did not settle there until 1817, when Joseph Jonas, the pioneer, came from England and made his home in Cincinnati. He drew after him a number of English Jews, who held divine service for the first time in Ohio in 1819, and, as the community grew, organized themselves in 1824 into the first Jewish congregation of the Ohio Valley, the B'ne Israel. This English immigration was followed in the next two decades by the coming of German immigrants. A Bavarian, Simson Thorman, settled in 1837 in Cleveland, then a considerable town, which thus became the second place in the state where Jews settled. Thorman was soon followed by countrymen of his, who in 1839 organized themselves into a congregation—the first in Cleveland, and the second in Ohio—called the Israelitish Society. The same decade saw an influx of German Jews into Cincinnati, and these in 1841 founded the Bene Yeshurun congregation. To these two communities the Jewish history of Ohio is confined for the first half of the nineteenth century.

Congregations.

After the middle of the century congregations sprang up throughout the state. In 1850 it had six congregations: four in Cincinnati and two in Cleveland. In 1901 eighteen cities and towns had one or more Jewish institutions, sixteen of them having fifty regularly organized congregations (comp. "American Jewish Year Book," 5662 [1902], p. 146).

Outside of Cincinnati, which has twelve congregations, and Cleveland, which has fourteen, the following places have Jewish organizations:

Akron has the Akron Hebrew Congregation, organized in 1865 (rabbi, Isador Philo). It has also the Francis Joseph Society, a charitable organization, and an Orthodox congregation. **Bellaire** has three congregations, Agudath Achim founded in 1850 (rabbi, Becker), Moses Montefiore, and Sons of Israel, the last-named organized in 1896. It has further a Young Men's Hebrew Association, and a Ladies' Auxiliary Society. **Canton** has a congregation and a Hebrew Ladies' Aid Society. **Chillicothe** has a Jewish Relief Society. **Circleville** has a congregation, Children of Israel.

Columbus, the capital of the state, has a Jewish population estimated at between 1,500 and 1,800. It has a Reform congregation, Benai Israel (rabbi, David Kline), and two Orthodox congregations, one of them being Agudath Achim (rabbi, Abraham Wohlkin). **Dayton** is also the seat of a considerable Jewish community. It has three congregations, Bnai Yeshurun, founded in 1854 (rabbi, David Lefkowitz), and two orthodox congregations, one of which, the House of Jacob, was founded in 1886. **Fremont** has a congregation. In **Hamilton** the Congregation B'nai Israel (rabbi, L. Liebman) was founded in 1866. **Ironton** and **Mansfield** have each a congregation. **Lima** has a Jewish community of thirty-five families. **Marion** has a Jewish Aid Society and a Hebrew Sabbath-school. **Piqua's** congregation, Anshe Emeth, was founded in 1858, and about the same time that of **Portsmouth,** the Congregation Beneh Abraham (rabbi, Louis Kuppin), was organized. Portsmouth has also a Ladies' Hebrew Benevolent Society. **Springfield** has two congregations, Chesed Shel Emeth (rabbi, H. Arnofsky) and Ohev Zedakah (founded in 1866).

Toledo has one of the largest Jewish communities in Ohio. Its oldest religious institution is a ḥebra ḳaddisha, Beni Israel, founded in 1867. It has three congregations, Bnai Israel (rabbi, Joseph Levin), Bnai Jacob (rabbi, Herz Benowitz); founded in 1870), and Shomer Emonim (rabbi, Charles Freund; founded in 1870, dissolved in 1874, and reorganized in 1884). **Youngstown** has two congregations, Children of Israel (rabbi, J. Friedman) and Rodef Sholem (rabbi, J. B. Grossman; organized in 1867). Youngstown has also a Ladies' Aid Society and a Hebrew Charity Society. **Zanesville** has two congregations, Beth Abraham and K'neseth Israel. Holy day services are held in **Bowling Green,** Chillicothe, **East Liverpool, Findlay,** and Marion. Almost every town of importance has therefore some Jewish organization. In addition, five cities have sections of the Council of Jewish Women, four have nine Zionist societies, and eight have fifty-two lodges (comp. "American Jewish Year Book," 5662, p. 146).

Statistics.

In the statistics of the Jews of the United States published by the Union of American Hebrew Congregations in Sept., 1880, Ohio was credited with a Jewish population of 6,581 (comp. David Sulzberger, "Growth of Jewish Population in the United States," in "Publ. Am. Jew. Hist. Soc." No. 6, p. 144), which seems to be too low an estimate. The number of Jews in Ohio is now (1904) supposed to be about 50,000 (comp. *ib.* p. 149; "American Jewish Year Book," 5663 [1903], p. 144). This estimate makes the Jewish community of Ohio one of the largest in the country, surpassed in numerical strength only by New York, Pennsylvania, Illinois, and Massachusetts. The Jews of Ohio form a little over 1 per cent of the total population, which is 4,157,545. About two-thirds of the Jews live in Cincinnati and Cleveland, the Jewish population of the former city being estimated at 15,000, and that of the latter at between 15,000 and 25,000. These two cities are not only the most important numerically; they are the seats of all Jewish educational and charitable organizations and of the Jewish press of the state.

The activity of Isaac M. Wise in Cincinnati, and the location of the Hebrew Union College there, as also the fact that it is the seat of a number of Jewish national organizations—*e.g.*, the Union of American Hebrew Congregations, the Central Conference of American Rabbis, the Hebrew Sabbath-School Union, and the National Jewish Charities—have made Ohio prominent in Jewish affairs.

The Jews of Ohio have taken their part in the life of the commonwealth. In the Civil war they responded generously to the call to arms, and 1,004 Jews were enrolled for Ohio, a number exceeded only by the Jewish contingent of New York. This fact points also to the relative size of the Jewish community

Distinguished Jews of Ohio.

of Ohio at that time (comp. Simon Wolf, "The American Jew as Patriot, Soldier, and Citizen," p. 424, Philadelphia, 1895). One of these soldiers, Marcus M. Spiegel, rose from the ranks to a colonelcy, and but for his untimely death would have become a brigadier-general, for which rank he had been recommended (*ib.* p. 320). Four others, David Orbansky, Henry Heller, Abraham Grunwalt, and Isaac Gans, received "medals of bravery" for their gallantry in action (*ib.* pp. 107, 108). In political life also the Jews have been active. Moses Alexander was elected mayor of Chillicothe in 1827, being the first Jew in the state to hold office. Joseph Jonas, Jacob Wolf, William Bloch, Daniel Wolf, Caspar Lowenstein, Harry M. Hoffheimer, Fred A. Johnson, Frederick S. Spiegel, Charles Fleischmann, James Brown, Henry Mack, Alfred M. Cohen, and Max Silverberg have served in the state legislature. Julius Freiburg was a member of the convention to change the constitution. Jews have filled also many local offices, judicial and administrative, both through election and appointment (comp. "The Jew as a Politician," in "American Jews' Annual," 1888, pp. 97 *et seq.*). Of federal office-holders may be mentioned: Nathaniel Newburgh, appointed by President Cleveland as appraiser of merchandise, and Bernhard Bettman, appointed by President McKinley as collector of internal revenue, a position which he still (1904) holds. See also CINCINNATI; CLEVELAND.

BIBLIOGRAPHY: *American Jewish Year Book*, 5661 (1901), pp. 402-417; 5662 (1902), pp. 146-147, and the bibliography under CINCINNATI and CLEVELAND.

A. H. G. F.

OHOLAH and **OHOLIBAH** (A. V. **Aholah, Aholibah**): Symbolic names of two sisters mentioned in the twenty-third chapter of Ezekiel: Oholah, the taller sister, representing Samaria, as the capital of the larger kingdom, Israel; while the shorter one, Oholibah, is the representative of Jerusalem, the capital of the smaller kingdom, Judah. Both are represented as the wives of God who deceive their husband and commit adultery. Oholah applies to a powerful lover, Assur (Assyria), but at the same time does not forget her old paramour, Egypt, to whom also she has surrendered herself. Assur, however, takes advantage of her, merely to destroy her later. Oholibah is much more wanton than Oholah. She heeds not the lesson taught by the misfortune of her elder sister, and also has intercourse with Egypt and Assyria. After these have perished, she sins with Chaldea.

The symbolic meanings of the names themselves serve to complete the entire picture. "Oholah" means "tent," and is meant to signify that the tent of God is Samaria, the capital of Israel. "Oholibah" signifies "My [God's] tent is therein"; that is, the Temple which is located in the center of the territory of Judea, on Zion. It is remarkable that the prophet, contrary to Lev. xviii. 18, represents two sisters as the simultaneous wives of a single husband.

The picture of the wife who is faithless to her husband is not a new one, having been employed by Hosea, 200 years before Ezekiel (Hos. i., iii.). Further, the coquetting of Israel and Judea with their neighbor states, Assyria, Egypt, and Babylon, was likewise censured by earlier prophets (Amos v. 26; Hos. vii. 11; Isa. ii. 14; Jer. xix. 13). However, the figure of Jehovah Himself taking wives is original with Ezekiel.

In a "ḳinah" (lamentation) for the Ninth of Ab Samaria and Oholibah lament over their sins and misfortunes, in the form of a dialogue. Samaria complains that Assur destroys her and leads her sons into exile. To this Oholibah answers that Samaria's misfortune is not so great as hers, Oholah having only once fallen a victim to the enemy, whereas she (Oholibah) has twice been the victim of her offenses. The ḳinah begins with the words "Shomron ḳol titten" = "Samaria plaintively raises her voice."

E. G. H. S. O.

OHOLE SHEM ASSOCIATION: Association founded in New York city Oct. 8, 1895, to promote and foster the study of Hebrew and other Semitic languages and to encourage the study of Jewish history and literature. The association was founded by Herman Rosenthal, who was assisted in this work by Dr. A. Radin, Dr. S. Brainin, and others. Since its organization the association has inaugurated a series of lectures, in Hebrew, German, and English, on subjects relating to Jewish science. In 1895-96 it published a Hebrew monthly entitled "Ner ha-Ma'arabi," and in 1901 "Ha-Modia' le-Ḥodashim"; for 1904 it issued an annual entitled "Yalḳuṭ Ma'arabi." In 1901 it celebrated the one hundredth anniversary of the birth of Zacharias Frankel, and in 1903 the seventieth birthday of Baron Horace Günzburg. In 1904 it commemorated the twenty-fifth anniversary of the literary activity of the Hebrew poet M. Dolitzky, to whom the first volume of the "Yalḳuṭ Ma'arabi" was dedicated.

H. R. F. H. V.

OHOLIAB (A. V. **Aholiab**): Son of Ahisamach of the tribe of Dan; contemporary of Moses. He was appointed by God ("and I, behold, I have given," Ex. xxxi. 6) to work with Bezaleel, the son of Uri, the son of Hur, of the tribe of Judah, in the construction of the Tabernacle (*ib.* xxxv. 34; xxxvi. 1, 2). Oholiab was "an engraver, and a cunning workman, and an embroiderer in blue, and in purple, and in scarlet, and fine linen" (*ib.* xxxviii. 23).

E. G. H. B. P.

OHOLIBAMAH (A. V. **Aholibamah**): Daughter of Anah, a descendant of Seir the Horite (Gen. xxxvi. 2, 21), and one of the three wives of Esau. In an earlier narrative she is called "Judith, daughter of Beeri, the Hittite" (*ib.* xxvi. 34). See also *ib.* xxxvi. 40-43; I Chron. i. 52.

E. G. H. B. P.

OIL: In the Bible olive-oil alone is mentioned, although it may be inferred from the expression "shemen zayit" that other oils were known. Olive-oil, like grain and wine, was one of the chief products of Palestine; and at an early period it was exported to Egypt and Phenicia, figuring also in the payments of tribute. It formed, moreover, a substitute for animal fats and butter, and was used not only for cosmetics, massage, and medicine, but also for the purposes of cooking and illumination. In early times oil was kept in horns ("ḳeren"), but later in flasks and jars. It became an object of luxury, and typified wealth and fertility, while its smoothness metaphorically denoted flattery.

In the mishnaic period there were many varieties of oil (Tan., Beha'aloteka, ed. Buber, beginning), from sesame, radishes, nuts, colocynths, and the castor-oil plant (Shab. ii. 1-2; *ib.* Gemara 26a; Yer. Shab. 4d; Tosef., Shab. ii. 3-4). The best olive-oil came from Tekoa (probably the Galilean city), Giscala in Galilee, and Regeb in Peræa. Oil was adulterated with the juice of the horn-poppy (*Glaucium corniculatum* Curt.); and special caution was necessary in buying it from the women of upper Galilee, although it might be purchased from children and slaves if they did not bring it secretly. The best season for its sale was summer, although it was to be had at all times. The merchant was required to wash his measures once a week in order to maintain their accuracy.

Oil can not be used alone for food, but it is an invaluable adjunct in cooking, and is indispensable in the case of the Passover lamb. All manner of foods and drinks are prepared with its aid, and according to a haggadah (Bacher, "Ag. Pal. Amor." i. 444), the manna tasted like oil to the children of Israel (comp. Num. xviii. 8) and like food of meal, oil, and honey to the sick.

While the various sorts of oil enumerated above were used for illuminating purposes, R. Ṭarfon permitted only olive-oil for the festal lights on the Sabbath. Not only was oil employed for massage, in which respect its use was regarded as a pleasure forbidden during seasons of fasting and mourning, but it was also highly valued as a hygienic agency, especially in the case of wounds and eruptions, and as a gargle (Yoma viii. 1; *ib.* Gemara 76b). In ceremonial usage it found its most important application in Anointing, whence the Messiah received his title. Perfumed oil was also well known. The best was that which was mixed with balsam, while other varieties were of sesame-oil with various perfumes, including that of the rose. The holy oil of anointing, which could not be used for any profane purpose, was made by Moses in the desert, and was kept in the Holy of Holies, serving miraculously for the anointing of the Tabernacle and of all high priests and kings. Its place was taken in the Second Temple by perfumed oil (Ker. 5b; Tosef., Yoma, iii. 7).

The Halakah frequently mentions oil, which was forbidden to all non-Jews from the time of Daniel until the prohibition was officially abrogated by the patriarch Judah II., since the increased production and the mixed population of Galilee rendered this law a dead letter. Special regulations were connected with the blessing on taking oil, and on the oil of the heave-offering for the priest, the oil of the year of jubilee and of the various tithes, and the oil of sacrifice.

In the Haggadah the power and the use of oil are illustrated in many ways, of which the following examples may be quoted: "Ye shall take olive-oil to light the Temple as an atonement for your souls, which are like to lamps; not for my sake" (Bacher, "Ag. Pal. Amor." ii. 466). "The yoke of Sennacherib broke because of the oil which Hezekiah had lighted in the schools" (*ib.* p. 263). "As perfumed oil yields all manner of fragrance, so the Scriptures yield all manner of interpretations" (Cant. R. iv. 10). Korah regarded himself as a "son of oil" (בן יצהר), and as such destined to attain to the highest rank ("Ag. Pal. Amor." p. 370). The "sons of oil" are generally the scholars of Palestine (*ib.* p. 223). The oil (A. V. "ointment") of Cant. i. 3 is the light of redemption; and the verse "let thy head lack no ointment" (Eccl. ix. 8) refers to the honor conferred by the study of the Law (Bacher, "Ag. Tan." ii. 516); a single sin outweighs many of the most varied deeds of righteousness as a dead fly defiles fragrant ointment (*ib.* i. 413).

E. G. H. I. Lö.

OINTMENT. See Anointment.

OKBARA AND OKBARITES. See Meshwi al-'Ukbari.

OKLAH WE-OKLAH: Old Masoretic work in which the notices and rules of the Masorah are collected; it consists of groups of rare words or of certain peculiarities of the text arranged either alphabetically, or in the order of the books of the Bible, or according to some other principle, and contains also brief rules and notes on various phenomena found in the original text of the Bible. This work, whose author is unknown, takes its title from the first two words of the opening passage, which is an alphabetical list of words occurring only twice in the Bible, in one passage without the prefixed waw and in the other with it, the first of these pairs of words being "oklah" (I Sam. i. 9) and "we-oklah" (Gen. xxvii. 19).

The book is first mentioned by Abu al-Walid ibn Janaḥ, not only in his lexicon (article חלך), but even in his first work (see "Opuscules," ed. Derenbourg, p. 57). Ibn Janaḥ there calls it "Masoret Oklah we-Oklah," and designates it as the most correct book on the Masorah. It is quoted, however, as early as the tenth century by the Karaite lexicographer David b. Abraham under the (Arabic) title of "The Great Masorah" (see "Journal Asiatique," 1862, p. 139), and it is referred to as the "Masoret ha-Gedolah" by Rashi and his grandson R. Jacob Tam (see "Monatsschrift," 1887, pp. 23 *et seq.*). It is clear, furthermore, from references in manuscripts that R. Gershom b. Judah, the "Light of the Exile" (d. 1040), made a copy of this "great Masorah" (*i.e.*, the "Sefer Oklah we-Oklah"), and another transcript was made in the twelfth century by R. Menahem of Joigny. Graetz misinterpreted the first reference to mean that R. Gershom wrote the book (*ib.* pp. 18 *et seq.*, 299 *et seq.*), but by Gershom's time this work had long been known and highly valued in Spain, as the quotation from Ibn Janaḥ shows. In the thirteenth century David Ḳimḥi mentioned the work (*ib.* p. 21), and in the fourteenth century a copy was taken from Catalonia to Venice (*ib.* p. 301).

When Jacob b. Ḥayyim was editing the Masorah for the Bomberg edition of the Bible (1524-25), he borrowed most of the material for the "Masorah Finalis" from the "Sefer Oklah we-Oklah." Elijah Levita also used the work in his Masoretic studies, describing it as a book small in size but great in value ("Masoret ha-Masoret," ed. Ginsburg, Introduction, p. 93). For three centuries it was supposed to be lost, until it was published by Sol. Frensdorff from a Paris manuscript (Bibliothèque Nationale, MS. No. 148), under the title "Das Buch Ochlah W'ochlah" (Hanover, 1864). This edition led to the discovery of a second manuscript of the work in the library of the University of Halle, by H. Hupfeld, who described it in the "Z. D. M. G." (1867, xxi. 201 *et seq.*). Graetz, comparing the Frensdorff edition with the Halle manuscript ("Monatsschrift," 1887, pp. 1 *et seq.*), showed that the unedited version of the work contained an earlier and more complete text, and also that the version used by Jacob b. Ḥayyim must have differed from the two preceding recensions. In the Halle manuscript the material is logically arranged in two orders, although this division is not observed in the edition. The manuscript, with which the passages quoted from R. Gershom's copy, as well as the citations in Rashi, agree, includes more than 500 numbers instead of the 374 numbers of the edition, whence it is evident that in the course of time the "Oklah we-Oklah" received several revisions and amplifications, as R. Jacob Tam had already pointed out when he said ("Hakra'ot," ed. Filipowski, p. 11) that various things were added to the book of "the great Masorah" which did not originally belong to it.

OLD TESTAMENT. See Bible Canon.

OLDENBURG: Grand duchy of northern Germany. It includes nine Jewish communities, among which are **Delmenhorst, Jever, Oldenburg, Varel, Vechta,** and **Wildeshausen.** The presence of Jews in Oldenburg during the Middle Ages is proved by a very old bronze seal-ring, found in the immediate neighborhood, on which are depicted two swimming frogs together with the words: "Reuben, the son of R. Jeremiah—may his memory be blessed." From a document of the knight Leborius of Bremen it appears that the Jews were expelled from Wildeshausen in 1350. Among those to whom privileges were granted by the counts of the city of Oldenburg in 1365, mention is made of the Jews (Spiker, "Ueber die Ehemahlige und Jetzige Lage der Juden in Deutschland," pp. 180 *et seq.*, Halle, 1809). Some of the Jews of that district, mentioned by Glückel of Hameln in her memoirs (ed. Kaufmann, pp. 154 *et seq.*), attended the Leipsic fair in the seventeenth century (see "Monatsschrift," 1901, pp. 473, 489).

In the middle of the eighteenth century three Jewish families lived at Vechta, and were required to contribute to the war fund exacted at the time of the Seven Years' war. The Jews in Jever in 1791 instituted a patriotic festival in honor of the ruling prince, Friedrich August of Anhalt-Zerbst, and his wife, Friederike Augusta Sophia; and the cantata then sung was published (Jever, 1791).

When Varel fell to Holland in 1807, the Jews of that place became Dutch subjects, whereas Oldenburg in 1811 was incorporated into the French empire. A district rabbinate for Oldenburg was instituted by the law of Aug. 25, 1827. The first district rabbi was Nathan Marcus Adler, who delivered his inaugural address June 6, 1829, and in 1831 accepted a call to Hanover. His successor until 1841 was Samson Raphael Hirsch, with whom Graetz studied (see Jew. Encyc. vi. 64b, *s.v.* Graetz; "Monatsschrift," 1904, pp. 90 *et seq.*). He was succeeded by Bernhard Wechsler (1841–74), who had officiated at Birkenfeld since 1837. The new synagogue at Oldenburg was dedicated by Wechsler Aug. 24, 1855, and he celebrated the twenty-fifth anniversary of his tenure of office in 1862. Rabbi Glück officiated for fifteen years (until 1890); the present incumbent (1904) is Dr. Mannheimer. The number of Jews in Oldenburg is about 1,150. A few benevolent organizations exist in the communities of Oldenburg, Jever, and Varel, among which are women's, orphans', and literary societies.

The principality of **Birkenfeld,** which has belonged to Oldenburg since 1817, numbers 650 Jews, who live chiefly in Birkenfeld, Bosen, Hoppstädten, Idar, Oberstein, and Sötern. Of the rabbis of this district the following may be mentioned: Felsenstein, Elias Grünebaum, David Einhorn, Wechsler, Goldschmidt (now in Offenbach-on-the-Main), J. Lövy (now in Graudenz), and the present holder of the rabbinate, Julius Lewit. In **Eutin,** which also belongs to Oldenburg, there are about twenty Jews.

D. A. Lew.

OLIPHANT, LAURENCE: English traveler, author, and politician; born at Cape Town in 1829; died at Twickenham, England, Dec. 23, 1888. He traveled in nearly every country and engaged in many occupations, from filibustering with Walker in Nicaragua to filling the position of secretary of legation at the Japanese capital.

In middle life he resigned his seat in Parliament (1867) to study occultism in a community at Salem-on-Erie, to which he bequeathed his fortune. He was for a short time Paris correspondent of the London "Times" and was the means of obtaining that position for De Blowitz (1871). In 1879 he conceived the idea of a Jewish settlement in Palestine, mainly as a commercial speculation. After some personal investigations he decided that the colony should be located in the land of Gilead to the east of the Jordan, at the upper end of the Dead Sea, where to tropical farming could be added the working of the mineral deposits. However, in spite of the semiofficial approval of the British government and the unanimous assent of the ministers of the Porte, he failed to secure the sultan's permission. In connection with this project he wrote his "Land of Gilead" (1880).

In 1882 Oliphant again went to the East as an agent for the administration of the Mansion House Fund, which had been raised for the relief of the Russian Jews. He renewed his propositions to the sultan, but with no better result. Abandoning the project, he retired with Mrs. Oliphant to Haifa, near Mount Carmel, where they lived in the midst of a community of Jewish immigrants and enthusiasts, among whom was N. H. Imber. After Mrs. Oliphant's death in 1887 Oliphant gave himself up entirely to mysticism and endeavored to establish a new religion; his work "Sympneumata" (London, 1885) shows some traces of the influence of the Cabala.

Bibliography: Margaret Oliphant, *Memoir of the Life of Laurence Oliphant and . . . His Wife*, London, 1891.

J. V. E.

OLIVE: Evergreen tree, one of the most characteristic of Palestine. The term "zayit" is applied in the Old Testament only to the cultivated olive-tree, the wild olive, the oleaster of the ancients, being designated as "'eẓ shemen" (Neh. viii. 15), though some scholars take this term to apply to the *Elæagnus angustifolia*, also abundant in Palestine, but entirely different from the olive. Whether a variety of the wild olive or the cultivated olive furnished the wood for the Temple (I Kings vi. 23, 31) is still a matter of dispute. It is difficult to determine the original home of the olive, as the tree in a wild state was widely scattered even in the earliest times. Its cultivation in Egypt and Syria dates very far back, and it was early among the plants characteristic of the flora of the Mediterranean. In Palestine it was cultivated long before the advent of the Israelites (Deut. vi. 11; Josh. xxiv. 13), who were taught by the Canaanites how to raise it. Indeed, reference is made to the olive in the story of the ark (Gen. viii. 11).

The olive is propagated by means of wild stocks which are grafted. The soil around the trees must be loosened with the plow several times during the year. Old trees are often surrounded with a wall or mound, as a prop and protection for the bark. Generally the tree bears fully every second year. The harvest is in October and November, the fruit being picked by hand (comp. Pliny, "Hist. Naturalis," xv. 3) or carefully knocked down (Isa. xvii. 6, xxiv. 13; Deut. xxiv. 20).

For the preparation of oil the olives are gathered before they are entirely ripe, as the dead-ripe fruit produces oil of an inferior quality. For the best oil in Biblical times the fruit was crushed in a vessel without being pressed very hard (Ex. xxvii. 20, xxix. 40; I Kings v. 25; Ps. xcii. 11). Oil so obtained was used in the Temple. Ordinary oil was prepared in presses hewn out of the rock in the vineyards and olive-orchards, the fruit being crushed and pressed with the feet in the same way as grapes (Micah vi. 15; Joel ii. 24; comp. "Gethsemane" = "oil-press," the name of the garden in the valley of the Kedron). Oil-mills and oil-presses are mentioned in the Talmud (B. B. iv. 5). The oil-mill was considerably larger than the hand-mill used for flour. The nether stone (ים), hollowed out, measured two meters or more in diameter, to judge by those that have been found. The upper stone (ממל) was not horizontal, as that of the flour-mill, but vertical to the nether stone, and was moved around horizontally by means of a stick fastened in the center (comp. Oliphant, "Haifa," p. 95). On the uses of olive-oil see Oil.

Olives were an important article of food among the Hebrews, both rich and poor; the latter frequently ate them raw with bread or dipped in salt (Ma'as. iv. 3). At the present day all olives for table use or for preserving are soaked in brine from twenty to thirty days; and this custom probably prevailed in ancient times also. In agreement with the foregoing the Mishnah (Ter. 1, 8) correctly distinguishes between three kinds of olives: (1) for oil, (2) for preserving, and (3) for eating raw. For present customs connected with the olive see Anderlind in "Z. D. P. V." 1888, xi. 72; and Landberg, "Proverbes et Dictons," etc., p. 16.

OLIVER Y FULLANA, NICOLAS DE. See Fullana, Nicolas de Oliver y.

OLIVEYRA, SOLOMON DE: Ḥakam and author; son of the Portuguese scholar David Israel de Oliveyra of Amsterdam; died May 23, 1708, at Amsterdam. He was preacher at several philanthropic institutions, successor of Moses Raphael de Aguilar as teacher at the Keter Torah in Amsterdam, and member and, after Jacob Sasportas' death in 1698, president of the rabbinical college of the Spanish-Portuguese community of the same city. As early as 1652 Oliveyra published a Portuguese translation of the Canon of Avicenna, which was used by Sousa in his "Vestigios de Lingua Arabica em Portugal" (Lisbon, 1798, 1830); but even as a youth he devoted himself to Hebrew poetry, writing occasional and liturgical poems, generally in imitation of older piyyuṭim. These poems are found in the author's Hebrew riming dictionary "Sharshot Gablut" (Amsterdam, 1665), which was published together with his "Ayyelet Ahabim," a Hebrew text-book on rhetoric with excellent exercises (*ib.* 1665; Vienna, 1818). For school use he published: "'Eẓ Ḥayyim," a Hebrew-Aramaic-Portuguese lexicon (Amsterdam, 1682); "Zayit Ra'anan," a collection of Talmudic and scientific Hebrew terms with some Hebrew riddles (*ib.* 1683); "Ilan she-'Anafaw Merubbin," a Portuguese vocabulary, with additions to "'Eẓ Ḥayyim" (*ib.* 1683); "Yad Lashon" and "Dal Sefatayim," a Hebrew manual and a short Aramaic grammar (*ib.* 1688); "Darke No'am," a dictionary of rabbinical terms, published with "Darke Adonai" (*ib.* 1688). Other works by Oliveyra are: "Ṭa'ame ha-Ṭe'amim," on accents, published together with the text of the Pentateuch (*ib.* 1665; the portion on the Psalms was republished with the text of the Psalter, *ib.* 1670); "Calendario Fazil y Curioso de las Tablas Lunares" (with the text of the Pentateuch, *ib.* 1666, 1726; with "Circulo de los Tequphot," *ib.* 1687); "Enseña á Pecadores Que Contiene Diferentes Obras Mediante las Quales Pide al Hombre Piedad á Su Criador" (*ib.* 1666), a Portuguese translation of part of Isaiah Hurwitz's ascetic work; some occasional speeches in Portuguese. A collection entitled "Peraḥ Shoshan," containing various treatises on the fine arts, grammar and logic, the virtues, the festivals, etc., as well as several treatises on the calendar, is extant in manuscript.

E. C. M. K.

OLLENDORF, GUSTAVE: Art critic; born at Paris March 4, 1850; died at Saint-Cloud Sept. 19, 1891. Both Gustave and his brother Paul, the present (1904) editor of "Gil Blas,"' received their Jewish education from the chief rabbi Zadoc Kahn. During the Franco-Prussian war (1870–71) Ollendorf served in the Garde Nationale Mobile at Paris. In 1871 he entered the service of the ministry of public instruction and fine arts, where he was rapidly advanced. He was president of the Union Française de la Jeunesse, which he founded immediately after the close of the war. After receiving his degree in law he was appointed secretary of the Conférence des Avocats (1879), and seven years later was created chevalier of the Legion of Honor. He was at the head of the bureau of museums, expositions, and art in the department of the fine arts until 1888. In that year Edouard Lockroy became minister of commerce and appointed Ollendorf, who had been for some time his private secretary, to the direction of his cabinet, in which position he was one of the most influential promoters of the exposition held at Paris in the following year. When Lockroy resigned Ollendorf succeeded to the direction of the staff of technical instruction, a position which he held until his death.

Ollendorf frequently acted as the representative of the ministers of commerce and public instruction at public functions. He wrote: "Traité de l'Administration des Beaux-Arts" (in collaboration with Paul Dupré; Paris, 1889); "Critique d'Art sur les Salons de Peinture de 1886 et 1887"; and "Etude d'Art" (in "Revue des Deux Mondes," 1889).

S. J. KA.

OLLENDORFF, HENRI: French linguist; originator of the Ollendorff method of teaching modern languages; born at Rawicz, Posen, in 1802; died at Paris April 3, 1865. At an early age he went to London, where he began to apply in his teaching the system which subsequently brought him an international reputation. This method is based on the principle that a foreign language should be taught in the same way in which a child learns to speak its mother tongue. Confining itself to the most indispensable grammatical rules, the system begins with simple sentences containing only a subject and a predicate, and then proceeds gradually to the most complex constructions. The allusions to this method in Captain Basil Hall's "Schloss Hainfeld; or, A Winter in Lower Styria" (London, 1836), brought it at once into general notice.

Ollendorff went to Paris about 1830. The first work he published there was the "Petit Traité sur la Déclinaison Allemande"; this was followed by the "Méthode Appliquée à l'Allemand," first in French and then in English. The latter book became very popular in England, and was even translated into Gujarati, a language of British India. Ollendorff himself adapted his method to Italian, Spanish, modern Greek, etc. On the advice of Salomon Munk he sent a copy of his work to the University of Jena, which conferred upon him in return the doctorate of letters. On the publication of his "Méthode de l'Allemand à l'Usage des Français" (1833), which attracted the attention of De Salvandy, minister of public instruction, Ollendorff's system was introduced, despite some opposition, into the French colleges. As soon as it appeared Ollendorff's "Méthode" was pirated at Frankfort-on-the-Main, where it was not protected by copyright, and his system was generally followed. Ollendorff was his own publisher, printing his works in the Rue Richelieu, in his own establishment.

S. J. KA.

OLMO, JACOB DANIEL BEN ABRAHAM: Italian rabbi and poet; born at Ferrara about 1690; died there the first day of Pentecost, 1757. He studied Talmud under his father and, later, under Isaac Lampronti, and received the rabbinical diploma in 1715. He became one of the heads of the flourishing rabbinical academy of Ferrara and was appointed preacher to that community. Some of his decisions are included in the "Paḥad Yiẓḥaḳ" of Lampronti and the "Gib'at Pineḥas" of Phinehas Vita di Piatelli. His first "pesaḳ," entitled "Reshit Bikkure Ḳaẓir," was written in 1714 and was published at Venice in the following year. His unpublished collection of "pesaḳim" bears the title of "Pi Ẓaddiḳ." A "pesaḳ" directed against the writings of Nehemiah Ḥayyun appeared in the polemical work "Milḥamah la-Adonai" (Amsterdam, 1714). He wrote also, in addition to an elegy on the death of his teacher Abraham Isaac Marini of Padua, the "Sefer Minhagim le-Bet ha-Keneset Ashkenazim" (Venice, n.d.), and was the author of several piyyuṭim printed in various Italian prayer-books, the most noteworthy of these poems being those beginning "Malka rama" and "Ak ẓaddiḳim yodu li-shimeka." Olmo furthermore composed, in imitation of the "Tofteh 'Aruk" of Moses Zacuto, a poem of 277 hendecasyllabic sextains entitled "'Eden 'Aruk," following his model not only in the conception of the subject but even in the form. The poem is a dialogue between a just man, an angel, and God, and describes the last moments of the life of the righteous, the separation of the soul from the body, and its reception into paradise, of which Olmo gives a long description resembling that in the Midrashim and in portions of the Cabala. The "'Eden 'Aruk" is not a work of great poetic merit, being prolix and uninteresting. It was published with the "Tofteh 'Aruk" and a double commentary by Abiab Sar Shalom Basilea at Venice in 1744 and, with the addition of a German translation by Moses ben Mattithiah Levi, at Metz in 1777. It has recently been translated into Italian by Cesare Foà under the title "Eden Gnaruch, Ossia il Paradiso" (Finale-Emilia, 1904).

OLMÜTZ: City of Moravia in which Jews were living as early as the twelfth century (Maḥzor Vitry, p. 388, Berlin, 1899–1903). In 1454, under Ladislaus, owing to the agitation of John Capistrano, the Jews were expelled from Olmütz, and their synagogue and their cemetery were given to the city. From that time there are no references to the permanent settlement of Jews at Olmütz, and until 1848 only one or two Jewish families were allowed there. With the more liberal laws of 1848 and 1860, however, the Jews, who had for centuries found a resting-place in some of the neighboring towns, returned to Olmütz and soon became an influential portion of the population. The institution of regular worship in rented halls in 1859 was due to the efforts of Hermann Zweig and the well-known Jewish scholar and physician Adolf Brecher. These services were officially approved by the authorities in 1860; and in 1863 an entire floor, which was subsequently acquired by the community, was dedicated by the Rev. Dr. Schmiedl, at that time of Prossnitz, but now of Vienna. In 1892 the "Cultusverein" was changed into a "Cultusgemeinde," and its constitution was confirmed two years later in conformity with the law of March 20, 1890. The handsome new synagogue, designed by the architect J. Gärtner, was dedicated April 11, 1897, by Dr. Berthold Oppenheim, the first rabbi of the community. In 1901 a communal cemetery was acquired, and the community has thirty-five funds for philanthropic purposes, with property valued at 50,000 crowns, besides a pension fund for superannuated officials, founded in memory of the jubilee of Emperor Francis Joseph. There are, furthermore, poor and hospital funds, a ḥebra ḳaddisha, a women's club, and a society which provides free board for poor students. The Jews of Olmütz now (1904) number 1,676 in a total population of 21,933.

OLSCHWANG (LEVIN), JACOB SOLOMON: Russian Hebraist; born at Kokhanovo, government of Moghilef, May 4, 1840; died at Yekaterinoslav Jan. 17, 1896. He was a descendant of David Conforte, the author of "Seder ha-Dorot." Olschwang received a thorough Ḥasidic education, and studied Talmud and Halakah, the Zohar and various other cabalistic works. He then went to Kovno, where he studied at the yeshibah of Navyazki. In 1862 he settled in Friedrichstadt, Courland, where he joined the circle of the Maskilim and in a short time was able to write Hebrew well. His family name was then **Levin,** which he changed to Olschwang when he removed to Krementchug in 1866.

Olschwang contributed numerous articles to "Ha-Meliẓ" (from 1860), "Ha-Shaḥar," "Ha-Boḳer Or," and other Hebrew periodicals. The most interesting of Olschwang's writings are "Abot de-Kartina" (in "Ha-Meliẓ," 1863) and "Haggadah shel Pesaḥ" (in "Ha-Shaḥar," 1877), both satirical sketches of Jewish life in Russia.

Olschwang maintained a correspondence with most of the Russian Maskilim of his time, especially with Jacob Reiffmann, Lillienblum, Zederbaum, L. Schulman, Dobsevage, and Rosenthal. Many of his articles were signed "YaShBaL."

Bibliography: *Sefer Zikkaron*, p. 203, Warsaw, 1889; *Luaḥ Aḥiasaf*, iv. 304.

H. R. A. S. W.

OLSCHWANGER, ISAAC WOLF: Russian rabbi; born at Plungian, government of Kovno, Aug. 30, 1825; died in St. Petersburg Aug. 5, 1896. He was on one side a descendant of Mordecai Jaffe, the author of the "Lebushim," and on the other of Judah Löw ben Bezaleel of Prague and R. Meïr of Padua. He received a thorough Hebrew education and studied Talmud under Israel Lipkin. Olschwanger received his rabbinical diploma in 1845, and in the following year was elected rabbi at Tauroggen. He then devoted himself to secular studies. In 1878 he was elected rabbi in St. Petersburg, which position he held until his death. Olschwanger took an active interest in Jewish affairs and maintained a correspondence with the well-known rabbis of his time. He was an active member of the Society for the Promotion of Culture Among the Jews of Russia and of the Ḥibbat Ẓiyyon movement.

Bibliography: *Luaḥ Aḥiasaf*, v. 313.

H. R. A. S. W.

OLSHAUSEN, JUSTUS: German Orientalist; born in Hohenfelde May 9, 1800; died at Berlin Dec. 22, 1882; educated at the universities of Kiel (Ph.D. 1823), Berlin, and Paris. He became professor of Oriental languages at Kiel in 1830, but lost this position in 1853 in consequence of his political views. He was called to Königsberg in the same capacity in 1858, and spent the remainder of his life there. Olshausen's scientific activity was divided almost equally between Pahlavi, in which he did excellent pioneer work, and Old Testament criticism and theology. His first work on this latter subject was a series of emendations (Kiel, 1826), followed by another series of critical observations (1856). His commentary on the Psalms (Leipsic, 1853) was epoch-making in its textual and historical criticism and its keen exegetical insight based upon a profound grammatical knowledge. He set forth his grammatical views in his "Lehrbuch der Hebräischen Sprache" (Brunswick, 1861), in which he undertook to go back to Old Hebrew forms as the basis of his presentation, and appealed to Arabic analogies, forming thus a system opposed to that of Ewald. Most succeeding writers on Hebrew grammar (Stade, for example) have attempted a synthesis of the views of Ewald and Olshausen (or of the methods of these two authors and Gesenius).

OMAHA. See Nebraska.

OMAR I. (IBN AL-KHAṬṬAB): Second calif; succeeded Abu Bakr in 634 c.e.; assassinated in 644. Omar I. was the great champion and organizer of Islam, and through his force of character and his influence over Mohammed and Abu Bakr he ruled long before he actually became calif. During his califate Syria, Persia, and Egypt were brought under Arabic dominion, and the government of Islam reached a higher degree of organization. Omar instituted the divan, a department of the exchequer in which exact lists were kept of all Arabs who shared in the division of spoils, and strict record was made of all revenue—from conquests, taxes, tithes, etc. It was Omar also who instituted the system of dating from the Hegira.

Ordinance of Omar.

Omar's name is associated with an ordinance which has had an important part in the history of the Jews in Mohammedan countries. This ordinance provided that Jews and Christians were to be distinguished from Mohammedans by certain peculiarities of dress: they might not ride on horseback nor hold state positions. They were required to pay a head-tax and a land-tax and were obliged to entertain any traveling Moslem for three days. They might not build any new churches or synagogues. A Moslem might enter a church or synagogue whenever he pleased, but a Jew or Christian might not similarly enter a mosque. On festival days neither Jews nor Christians might have processions. Their graves were to be level with the ground, and they were to pray silently for their dead; never might they sing aloud.

It is probable that not all these provisions were made by Omar himself, and it is certain that they were not strictly enforced during his reign. They were, however, enforced at different times and are in the main in effect to-day in Mohammedan countries. Omar expelled the Christians from Nejran and the Jews from Khaibar because, he said, Mohammed wished to have only one religion in Arabia. It is also stated that after the conquest of Jerusalem—which surrendered only to Omar in person—Omar, in agreement with the wishes of the patriarch Sophronius, drove the Jews out of Jerusalem, and that he afterward expelled them from Tiberias; there seems, however, to be little ground for this story (Grätz, "Gesch." 3d ed., v. 111).

OMEN: Occurrence or incident regarded as foreshadowing a favorable or unfavorable issue in a certain conjuncture. The belief in prognostic signs is closely connected with DIVINATION and mantic, from which it is distinguished, however, in that it presupposes neither higher inspiration nor special knowledge. The principal characteristic of the omen is the fortuitousness of the phenomenon or of the event, which otherwise need be in no way remarkable. Usually it is even a commonplace occurrence. The belief in omens, in the more accurate acceptation of the term, is the most primitive stage of divination and soothsaying. Studying the signs of the heavens (ASTROLOGY) and predicting from the flight of birds (AUGURY) or from other circumstances (DIVINATION), were prohibited by Judaism. But this superstition was so deep-rooted that, in a form in which it did not betray its connection with idolatry and magic, it was practised in the time of the Talmud, and it is tolerated even at the present time.

The best-known examples from the Bible are the signs accepted by Eliezer (Gen. xxiv. 14) and by Jonathan (I Sam. xiv. 9), which the Talmud declared to be simple omens. "As his name, so is he; Nabal [= "disgrace"] is his name, and folly is with him" (I Sam. xxv. 25), suggests the "nomen et omen." A man by the name of Kidor was distrusted by R. Meïr (about 150 C.E.) because in Deut. xxxii. 20 occur the words, "For a generation ["ki dor"] of perversity are they." Name-superstition was wide-spread, although many sought to combat it (Yoma 83b). Even the Sibylline Books (iii. 224 *et seq.*) already declared the signs of sneezing, the flight of birds, etc., to be illusory (comp. Josephus, "Ant." xix. 8, § 2; Blau, "Das Altjüdische Zauberwesen," p. 164). As examples of sentences which, in accordance with the Biblical prohibition of divination (נחש; Deut. xviii. 10; comp. Lev. xix. 26), it is forbidden to regard as ominous, the following are quoted: "The bread fell from my mouth"; "My staff fell from my hand"; "A snake crept to my right"; "A fox ran to my left and his tail blocked the road in front of me" (Sifre, Deut. 171). The Babylonians took omens from weasels and snakes, references to which occur in the Talmud (Blau, *ib.* p. 45), and Winckler is probably not wrong in maintaining ("Alte Orient," iii., parts ii. and iii., p. 41) that the oldest form of the sibyl was modeled after the pattern of the Babylonian collections of omens.

Omens are divided into two main groups—good and bad omens. Examples are given in the article AUGURY; but there may be enumerated here some of those which are of a specifically Jewish character, showing a Jewish-monotheistic tinge. If upon rising in the morning a passage of the Bible occurs to one's mind, it is a sort of prophecy (Ber. 55b, below). Especially well liked were prognostics which were suggested by Scriptural passages recited by children (Yoma 75b *et passim*). The name of Mount Sinai is looked upon as a good omen for Israel (Shab. 89a). The eating of a plant the name of which means "to multiply" (רוביא) is recommended (Ker. 6a), and even to-day carrots are eaten for this reason. On the eve of the Feast of New-Year, in South Germany, one eats cabbage cooked in water, because of the resemblance in sound of the German "kohl mit wasser" ("cabbage with water") to "kol mewasser," the ordinary pronunciation of קול מבשר ("announcing voice"). The calendars record numerous varieties of weather-omens the prototypes of which can be found in the Talmud. Regarding omens in the Middle Ages, see AUGURY. See also BIBLIOMANCY.

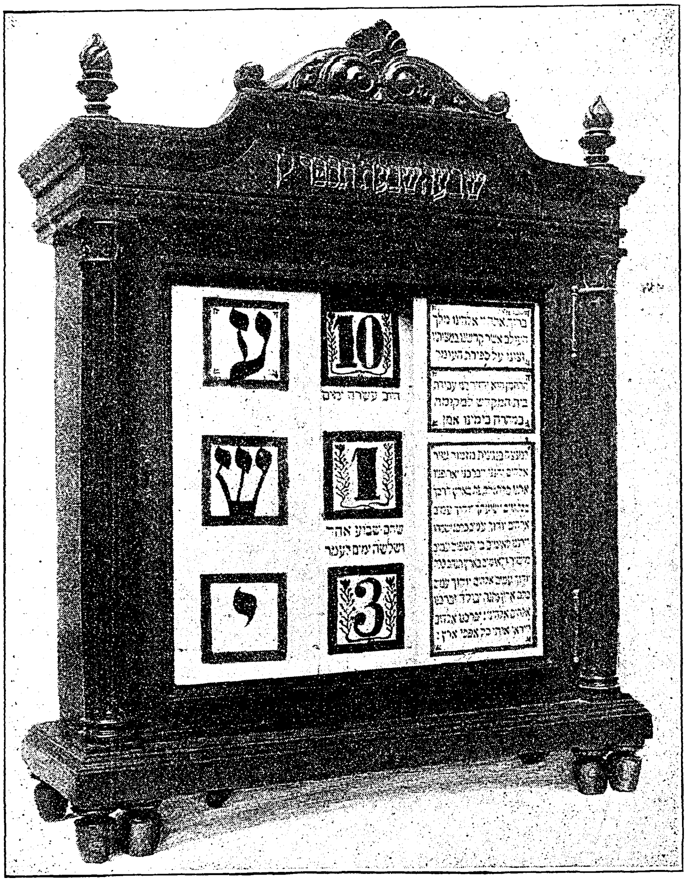
'OMER (= "sheaf"). —**Biblical Data:** The Israelites were commanded after the conquest of Canaan to bring at harvest-time an 'omer of the first-fruits to the priest as a wave-offering (Lev. xxiii. 10–11). The day on which the 'omer of the wave-offering had to be brought is vaguely indicated as "on the morrow after the Sabbath." It would appear from Lev. xxiii. 11 that the priest had only to wave it on the morrow of the Sabbath, while it might be brought on some previous day; but verse 15 of the same chapter shows that the bringing and waving were to take place on the same day. That day required a special sacrifice after the waving of the 'omer, namely, a "he-lamb without blemish of the first year for a burnt offering, two tenth parts of an ephah of fine flour with oil for a meal-offering, and of wine the fourth part of an hin for a drink-offering." The Israelites were forbidden to eat of the newly harvested grain till after they had brought the sacrifices of the 'omer (*ib.* verses 12–14). From the day on which the 'omer of the wave-offering was brought the Israelites had to count seven weeks or forty-nine days, the fiftieth day being the Feast of Pentecost (*ib.* verses 15 *et seq.*). The counting is still practised; and, though the bringing of the 'omer ceased with the destruction of the Temple, the days between Passover and Pentecost are called the "'omer days" (see Pentecost).



'Omer Table.

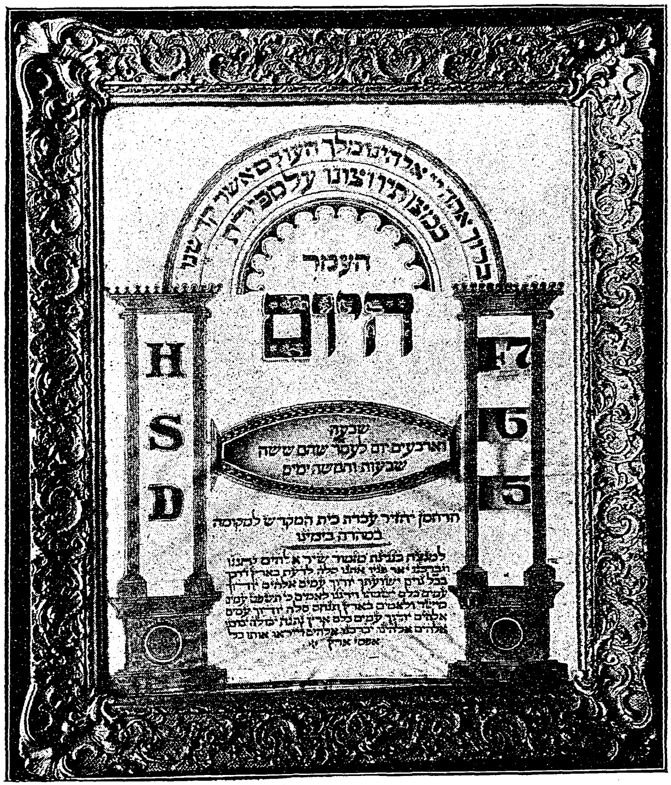
(In the library of the Jewish Theological Seminary of America, New York.)

——**In Post-Biblical Literature:** The Rabbis, contrary to the Septuagint and later non-Jewish translators, consider the word "'omer" as designating the measure, which is one-tenth of an ephah (comp. Ex. xvi. 36; A. V. "omer"); therefore they hold that the wave-offering did not consist of a sheaf but was an 'omer of grain (see Rashi to Lev. xxiii. 10). They assert also that although the kind of grain is not specified in the Bible the only sort which could be used for the offering was barley (Pesiḳ. viii. 70a; Men. 68b). The grain had to be reaped on the day, or during the night preceding the day, it was to be brought into the Temple (Meg. 20b; see below). According to the Rabbis, the wave-offering was brought on the 16th of Nisan, that is, on the morrow after the Passover Feast, the main point of difference between the Rabbis and the Boethusians and modern Karaites being that the latter explained literally the words "morrow after the Sabbath" (Lev. xxiii. 15) as the day following the first Sabbath after the Passover Feast (Men. 65b; Meg. Ta'an. i.). Although the ephah contained three seahs (see Targ. pseudo-Jonathan to Ex. xvi. 36; see also Weights and Measures), so that the 'omer became one-tenth of three seahs, yet, according to R. Ishmael, if the 16th of Nisan is a week-day, five seahs of barley must be reaped, for after the grain has been cleaned and sifted several times only three seahs will remain. If the 16th of Nisan falls on a Sabbath, only three seahs must be reaped, for otherwise the work would take too long. According to the other rabbis, the quantity to be reaped was always three seahs.

Regulations Concerning the Reaping.

There arose a difference also between R. Ḥanina Segan ha-Kohanim and those who asserted that the grain for the 'omer must always, even on a Sabbath, be reaped by three persons, each with his own sickle and basket, in order to give the reaping more publicity; R. Ḥanina Segan ha-Kohanim declared that on a Sabbath only one man might reap the 'omer, with one sickle and one basket (Men. vi. 1). The grain must be taken from a field near Jerusalem, if ripe enough; otherwise it may be gathered elsewhere (Men. vi. 2).

The reaping was done with much ceremony. Messengers, sent by the bet din to the chosen field on the day preceding the Passover Feast, drew the heads of the stalks together in sheaves and tied them in order to facilitate the work of the reapers. Then when the hour for gathering came the reapers thrice asked permission to reap; this was done in order to impress upon the Boethusians that this was the proper time for the gathering of the 'omer (Men. vi. 3).



'Omer Table.

(In the United States National Museum, Washington.)

Manner of Waving the 'Omer.

After the grain had been gathered it was brought to the courtyard of the Temple, where, according to R. Meïr, it was parched while it was still in the ear; according to the other rabbis, it was first thrashed and then parched. The grain was ground into coarse meal and then sifted through thirteen sieves until it became very clean, after which the tenth part was taken, the measure of the 'omer, and given to the priest. The remainder, which was subject to ḥallah, and, according to R. Akiba, to tithe also, could be redeemed and eaten even by laymen. The priest proceeded with the 'omer as with any other meal-offering: he poured oil and frankincense over the meal, "waved" it, and then burned a handful of it on the altar; the remainder was eaten by the priests (Men. vi. 4). The "waving" was done in the following way: The offering was placed on the extended hands of the priest, who moved them backward and forward (to counteract the effects of injurious winds) and then upward and downward (to counteract the effects of injurious dews; Pesiḳ. R. xviii. [ed. Friedmann, p. 92a]; Pesiḳ. viii. 70b; Men. 62a; Lev. R. xxviii. 5). As soon as the 'omer ceremony was completed the people of Jerusalem were permitted to eat of the newly harvested grain; people of towns far from Jerusalem might not do so until after noon, when it was certain that the ceremony at Jerusalem had been concluded. After the destruction of the Temple, R. Johanan b. Zakkai decided that the new grain might not be eaten at all during the 16th of Nisan (Men. vi. 5). No grain might be reaped until the barley for the 'omer had been gathered (Men. vi. 7).

The Rabbis considered the bringing of the 'omer as one of the most important observances: it is a repayment to God for the manna given in the wilderness, of which every Israelite collected the measure of an 'omer (see MANNA). God made the repayment so easy that only the quantity of one 'omer, and that of barley only, was required from all Israel. The virtue of the 'omer was so great that, according to the Rabbis, on its account God promised the land of Canaan to Abraham. The 'omer made peace between husband and wife, that is, the meal-offering of jealousy did, which consisted of the tenth part of an ephah of barley-meal (comp. Num. v. 15). It was the 'omer that rescued the Israelites from the Midianites in the time of Gideon, from the Assyrians in the time of Hezekiah, from the Babylonians in the time of Ezekiel, and from the Amalekites in the time of Haman (see MORDECAI IN RABBINICAL LITERATURE), these conclusions being inferred by the Rabbis from the word "barley" mentioned in connection with each of these events (Pesiḳ. R. *l.c.*; Pesiḳ. *l.c.*; Lev. R. xxviii. 4-6).

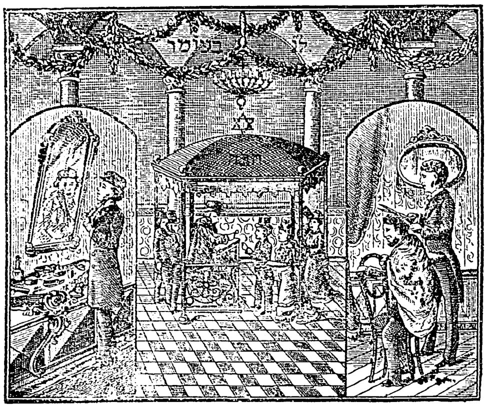
'OMER. See WEIGHTS AND MEASURES.

'OMER, LAG BE-: Thirty-third day in the period of the counting of the 'omer ("Lag" = ל"ג, the numerical value of which is 33), corresponding to the 18th day of Iyyar. This day is celebrated as a semi-holiday, although the reason for this celebration has not been definitely ascertained. The reason most commonly given is that the plague which raged among the disciples of R. Akiba during the period of the 'omer (Yeb. 62b) ceased on that day

(Shulḥan 'Aruk, Oraḥ Ḥayyim, 493, 2). The day is therefore known as the "Scholars' Festival," when the baḥurim indulged in various kinds of amusement and merrymaking. There is, however, no foundation in the Talmud for this tradition, unless, as was suggested, the text be changed to read "from Passover to the middle ["peras"] of 'Aẓeret" (Heilprin, "Seder ha-Dorot," vol. ii., *s.v.* "Akiba," § 4; Jacob Mölln, "Sefer ha-Maharil," § 54, Sabbionetta, 1556; comp. "Bet Yosef" and "Darke Mosheh" to Ṭur Oraḥ Ḥayyim, 493). But even then casuistic methods have to be employed to make the incident fit the day in question. Another reason given is that the manna first descended on this day ("Ḥatam Sofer," on Shulḥan 'Aruk, Yoreh De'ah, 233). For the reasons suggested in more modern times see 'Omer.



Lag be-'Omer.
(From an old print.)

The cabalists attach a peculiar importance to Lag be-'Omer. It is a tradition with them that Simeon ben Yoḥai, the alleged author of the Zohar, died on that day, and at his death revealed to his pupils many secrets which were subsequently incorporated into the Zohar. The day is therefore called "Hillula de-Rabbi Simeon ben Yoḥai" (Zohar, ed. Amsterdam, 1685, p. 291b). The term "Hillula" (= "wedding") points to the harmonious union of all the worlds that was effected at the death of that great rabbi. The day is celebrated with illuminations, because, according to the narrative, at the death of R. Simeon the world was filled with light, since the revelations which he had received were then put in writing in the Zohar (see Zohar, *l.c.* and p. 296b). A hymn entitled "Bar Yoḥai," which consists of ten stanzas, each stanza corresponding to one of the ten sefirot, is sung in many communities on that day. School-children are given bows and arrows, for, according to tradition, the rainbow did not appear during the life of R. Simeon; hence the children playing with bows symbolize the death of the sage. Another interpretation is given of this custom, in accordance with a saying in the Zohar that a bow of many colors will appear in the sky immediately before the coming of the Messiah. The bow with which the children play on that day thus symbolizes the prayer of the Jews that the promised bow shall appear.

The Palestinian Jews, especially those living in Safed, on this day visit the traditional grave of R. Simeon near the village Meron, after which they go to the woods near by and celebrate the event with much rejoicing (Luncz, "Luaḥ 'Ereẓ Yisrael," for the year 5663, Jerusalem, 1902; a full and interesting description of the celebration is given by Goldfarb in "Luaḥ Aḥiasaf" for 5664, pp. 331-403). This custom has been deprecated by many rabbinical authorities (see Löb Balkover, "Shem Aryeh," on Oraḥ Ḥayyim, No. 14, Wilna, 1873; comp. "Ḥatam Sofer," on Yoreh De'ah, 233).

All the restrictive laws that are in force during the other days of the 'omer, as the law against cutting the hair, or that against the performance of marriage ceremonies, are suspended on this day. Custom, however, varies widely with regard to these restrictions. In some communities the restrictive laws are in force only during the first thirty-three days, and are entirely suspended thereafter. In other places the restrictive laws are enforced only after the new-moon of Iyyar, and, with the exception of Lag be-'Omer, continue in force during the whole month. The prevailing custom is to abstain from all joyous celebration during all the days of the 'omer with the exception of the new-moon of Iyyar and of Lag be-'Omer (Oraḥ Ḥayyim, 493, 2, and Isserles' gloss; Abraham Danzig, "Ḥayye Adam," 131, 11). There is no special ritual for this day. The prayer "Taḥanun" is, however, omitted from all the three services, as well as from the "Minḥah" service of the previous day.

E. C. J. H. G.

OMNAM KEN (אמנם כן): A penitential hymn in the ritual for the eve of Atonement, according to the Polish rite. The author has been identified by Joseph Jacobs with R. Yom-Ṭob of Joigny, the rabbi and leader of the Jews who so heroically faced their enemies in the castle of York on March 17, 1190. A translation, preserving the meter, rime-system, and alphabetical acrostic of the original Hebrew, by I. Zangwill, was first published in Jacobs' "Jews of Angevin England," p. 109. The traditional melody is of very much later date, and of a jingling nature scarcely worthy of the subject. Although it is entirely devoid of Jewish character, the associations of the occasion when it is used endeared it during the nineteenth century to many a congregation, and the local versions differ but little, save in the phrase next preceding the cadence, where local fancy has run riot. This is probably due to the circumstance that the original form of the cadence, still preserved in north Germany, inconveniently displaces the customary accent of the Hebrew word used as refrain ("salaḥti" = "I have forgiven"). In the English tradition there is a relic of the cooperation of those vocal accompanists of the past, the "singer" and "bass" (see Music, Synagogal), in the repetition of a portion of the second line of each couplet, originally their wordless variation of the ordinary strain just chanted by the ḥazzan.

OMNISCIENCE OF GOD. See God.

OMRI (עמרי): **1.** The first king of the fourth dynasty of the Northern Kingdom of Israel (I Kings xvi. 16–28). He is first mentioned as captain of the host of Elah which was besieging Gibbethon, one of the cities of the Philistines. At the same time this Elah, son of Baasha, second king of the second dynasty of the Northern Kingdom, was intoxicated in the house of Arza at Tirzah. While in this condition Zimri slew him and all his kinsfolk and usurped the crown (*ib.* xvi. 8–15). As soon as this news reached the ears of Omri and of the army at Gibbethon, the host made Omri their king, and all marched at once to dispute the succession with Zimri. Tirzah was besieged and quickly taken. Zimri, to avoid the certain tortures of capture, withdrew into his palace and burned it over his head. Omri had not yet won over all the people. Tibni, a rival, contested his claim to the throne. Apparently at the end of four years Omri became sole ruler of the Northern Kingdom. His reign extended, counting from his coronation by the army, over twelve years (885–874 B.C.). The associations of Tirzah were so repellent and sanguinary, and the location so poor for a capital, that Omri purchased a new site, Shomeron, from Shemer for two talents of silver (about $4,000). Here he built his capital, which became and remained a strong fortress down to its capture by Sargon II. in 722 B.C.

The brief record of King Omri's reign is not commensurate with his political career. He was harassed by the Syrians and compelled to make certain concessions to them in Samaria (*ib.* xx. 34). His power, however, is seen in the fact that he conquered and held under him the Moabites, as is shown by the Moabite Stone. The Assyrian annalists, too, for nearly 150 years referred to this land as the "land of the house of Omri," or the "land of Omri." Jehu, even, the founder of the fifth dynasty, is called by Shalmaneser II. "the son of Omri," probably because he was a successor of the great Omri on the throne of Israel. Omri's friendly relations with the Phenicians doubtless led to the marriage between his son Ahab and the princess Jezebel.

Though his reign was comparatively short, he displayed signal statesmanship and diplomacy in his selection of his capital and in his relations with the surrounding peoples. His moral character was on a par with that of the founder of the Northern Kingdom. I. M. P.

2. A son of Becher and grandson of Benjamin (I Chron. vii. 8). **3.** A descendant of Judah through Pharez (*ib.* ix. 4). **4.** Son of Michael, prince of the tribe of Issachar in the time of David (*ib.* xxvii. 18).

OMSK. See Siberia.

ON. See Heliopolis.

ONA'AH ("overreaching"): Term applied to the sale of an article at so much more, or to the purchase of an article at so much less, than its market value that fraud or the taking of an undue advantage is presumed. Were not ona'ah thus construed in the Mishnah (B. M. iv. 3-9), "oppression" would be the more suitable term; where ona'ah is transferred from business to social conduct (B. M. iv. 10) "wronging" is the fittest translation. In Lev. xix. 33 and xxv. 14 the Authorized Version's renderings of the verb from which this noun is derived and on which the doctrine is based are "to vex" and "to oppress"; the Revised Version renders it "to wrong."

Overcharge or Underestimate.

I. The doctrine of ona'ah answers to the "læsio major" of Roman law. But while such "læsio" in that law covered much broader ground, it interfered only when the disproportion between price and value exceeded two to one. In Jewish law a discrepancy of one-sixth enabled the wronged party to secure the cancelation of the sale or purchase; that is, an article worth six money-units in the market may not be sold for seven or bought for five (B. M. 49b). It seems that overcharge by the merchant selling to the consumer was the most frequent instance in which the application of the rule was called for; the claim had to be made as soon as the buyer had had an opportunity to show his purchase to a merchant or to one of his friends. It is said that R. Ṭarfon taught at Lydda that the discrepancy must amount to one-third to justify an action, whereupon the merchants rejoiced; but when he extended the time for rescission to the whole day they demanded the restoration of the old rule.

Either seller or purchaser, whether merchant or one in private life, may make the complaint, notwithstanding the opinion to the contrary of R. Judah ben Ilai. The purchaser imposed upon may ask either for rescission of the transaction or for the return of the excess paid by him.

In the case of changing money it was suggested that a lack in weight of even one in twelve should be sufficient ground for complaint, but the prevailing opinion fixed here also the ratio of one in six. Within a great city the time for complaint extends until the money in question can be shown to a money-changer; in villages, where no money-changer is to be found, until the eve of the Sabbath, when the party deceived is apt to tender the coin in payment for his purchases.

Exceptions.

The smallest amount for which a complaint of overreaching can be brought is one-sixth of a "sela'," or shekel, though a suit over a smaller amount may be instituted on other grounds. The rule as to overreaching by an excess or deficiency of one-sixth does not apply to the sale or purchase of slaves, of bonds for money, or of real estate; the proposition of R. Judah to except also books of the Law, pearls, gems, and cattle, on the ground that they have no fixed market value, was not adopted, the former exceptions alone being sanctioned by tradition. It has been shown under Appraisement that in judicial sales of land an effort was made to sell within one-sixth of the market value.

Where the seller distinctly and truly states what the goods are worth, or what they have cost him, and how much he is charging for his profit, he can protect himself against the claim for overcharge; the buyer can do the same by admitting the true value of the goods for which he is offering an inadequate price (B. M. 51b). Thus the law of ona'ah is a protection against fraud only, not against open extortion; but a mere stipulation against the law of ona'ah without a true statement of value or cost is unavailing (B. M. 51a). It is said that a householder who sells some of his own household goods may charge more than their market value, as they have for him a sentimental value of which the buyer is supposed to be aware (*ib.*).

In the mishnah dealing with ona'ah nothing is said of the nature or origin of the "sha'ar" or market price. But from Baba Meẓi'a (v. 7), where the usury law and the different ways of evading it are discussed, certain bargains are said not to be closed "till the 'sha'ar' comes out," that is, until the price of the grain or other produce for that season is fixed. It seems, therefore, that the market price was in some cases at least set by public authority, probably after the character of the year's harvest became known (comp. Hammurabi's code, § 51). But that an official tariff of market prices was not always made among the Jews under Talmudic influence appears from the discussion among Babylonian amoraim, reported in B. B. 89a, on the propriety of appointing officials to set the market price for leading kinds of goods, like officials for inspecting weights and measures; for the tone of the discussion shows that the practise was not approved.

Ona'ah in Words.

II. In another section (B. M. iv. 10) the Mishnah proceeds: "As there is 'wronging' in buying and selling, so there is 'wronging' in words; a man may not ask, 'What is this article worth?' when he has no intention of buying; to one who is a repentant sinner it may not be said, 'Remember thy former conduct'; to him who is the son of proselytes one may not exclaim, 'Remember the conduct of thy forefathers'; for it is said, 'Thou shalt neither vex a stranger, nor oppress him'" (Ex. xxii. 21). In a baraita (B. M. 58b) which follows this section the subject is further developed. "When a proselyte comes to study the Law one should not say, 'He that ate the meat of fallen or torn beasts, of unclean and creeping things, now comes to study the Law that was spoken by the mouth of Omnipotence!' When trouble or sickness comes upon a man, or when he has to bury his children, none should say to him, as Job's friends said to Job, 'Where is thy fear of God, thy trust, thy hope, and the innocence of thy ways?'" The baraita forbids also practical jokes. "If ass-drivers come to one for fodder, one may not send them to N. N. to buy it, knowing that N. N. never sold hay or grain in his life."

On the authority of R. Simeon ben Yohai, it was said that wronging by words is worse than wronging in trade, for the Scripture as to the former, but not as to the latter, commands, "Thou shalt fear thy God": R. Eleazar says, because one injures the man himself, the other affects only his property; R. Samuel b. Naḥman says, because in one case there is opportunity for restoration, in the other there is not. The Talmud then dwells upon the unpardonable sin of "blanching the face of one's neighbor in public," and closes with the admonition that under all circumstances a man should beware of "wronging" his wife, because her tears are ever ready to accuse him before the throne of God.

ONAN: A son of Judah; he refused to enter into a levirate marriage with his sister-in-law after the death of his elder brother Er, and it was for this reason that the Lord "slew him also" (Gen. xxxviii. 7-10).

E. G. H. S. O.

ONDERWIJZER, ABRAHAM SAMSON: Dutch rabbi; born at Muiden (near Amsterdam) July 24, 1863; studied at the theological seminary and the University of Amsterdam (B.A. 1884). He was appointed rabbi of the congregation at Amsterdam on July 5, 1888. Onderwijzer has published a translation of the Pentateuch and Rashi's notes (Amsterdam, 1895). On Oct. 29, 1895, he founded the Jewish labor-union Bezaleel, of which he is the honorary president. Bezaleel cares especially for the religious needs of its members (200 in 1904), who are for the greater part diamond-workers. With the other congregational unions of Amsterdam, Patrimonium and St. Eduardus, it supports the Algemeene Nederlandsche Diamantbewerkers Bond, though Bezaleel is entirely independent of that organization.

S. E. SL.

ONIAS ('Ονίας, from Hebr. חוניא = נחוניא): Name of several high priests at the time of the Second Temple. The sequence given them below is based on the statements of Josephus, which are unreliable, since Josephus did not have access to trustworthy sources.

Onias I.: Son of the Jaddua mentioned in Neh. xii. 11, according to Josephus ("Ant." xi. 8, § 7); this Jaddua is said to have been a contemporary of Alexander the Great, but I Macc. xii. 7, 8, 20 regards Onias as a contemporary of the Spartan king Areus (309-265 B.C.). Yet it is doubtful whether Onias I. is meant, for the entire correspondence and the treaty with the Spartans are probably fictitious. The Simon (I.) the Just extolled in Ecclus. (Sirach) l. 1 and in legend (according to the Hebrew text the son of Jonathan, but according to the Greek text the son of Onias) was probably the son of Onias I. Many scholars take Simon the Just to be the second of that name, in which case a later date must be assigned to his son Onias II.

Onias II.: Son of Simon the Just. He was still a minor when his father died, so that his uncle Eleazar, and after him the latter's uncle Manasseh, officiated as high priests before he himself succeeded to that dignity (Josephus, "Ant." xii. 4, § 1). According to Josephus, he was a covetous man and of limited intelligence, whose refusal to pay the twenty talents of silver which every high priest was required to pay to the King of Egypt threatened to imperil both the high priest and the people; but at this juncture Joseph, the clever son of Tobias and nephew of Onias, succeeded in pacifying King Ptolemy III. (Euergetes). Onias is said (*ib.* § 10) to have died, almost simultaneously with his nephew Joseph, during the reign of Seleucus Soter, hence about 181 B.C. His successor in office was his son Simon II.

Onias III.: Son of Simon II. He is described as a pious man who, unlike the Hellenizers, fought for Judaism (II Macc. iii.-iv.). Seleucus Philopator defrayed all the expenses connected with the sanctuary and was friendly to the Jews. A traitorous official of the Temple, however, Simon the Benjamite, induced the king to undertake the plunder of the Temple treasury (see HELIODORUS); the attempt was not successful, and the Syrian court never forgave the high priest for its miscarriage. When Antiochus IV. (Epiphanes) became king, Onias was obliged to yield to his own brother Jason (II Macc. iv. 7). According to Josephus ("Ant." xii. 5, § 1), Jason became high priest after the death of Onias, the latter's son, who bore the same name, being then a minor. It is strange that both father and son should have been named Onias, and still more strange is the statement of Josephus that the high priest who succeeded Jason and was the brother of Onias and Jason, likewise was called Onias, and did not assume the name of Menelaus until later; for according to this statement there must have been two brothers of the same name.

While this confusion may be due to the Greek transcription of the related Hebrew names Johanan, Ḥonya, and Neḥonya, the account of Josephus appears wholly unreliable for this very reason. According to II Macc. iv. 23, Menelaus was not an Aaronite, but a brother of the Simon mentioned above, and hence a Benjamite. When Menelaus purloined some vessels from the Temple to curry favor with the Syrian nobles, Onias accused him publicly and then fled to the asylum of Daphne, near Antioch, where Menelaus, aided by the royal governor Andronicus, had him secretly assassinated, in defiance of justice and of his oath. The murdered priest was deeply mourned by both Jews and Greeks, and the king also, on his return, wept for him and sentenced Andronicus to a well-merited death (II Macc. iv. 29-39).

Wellhausen and Willrich regard the story of the murder of Onias, as well as the entire list of high priests from Jaddua to the Maccabees, as legendary, while Schürer and Niese consider them historical, The passage in Dan. ix. 26, "shall Messiah be cut off, but not for himself," is generally referred to the murder of Onias (comp. Baethgen in Stade's "Zeitschrift," 1886, vi. 278). Onias III. is the central figure of the legendary history of later times; the Byzantine "Chronicon Paschale" says that he officiated for twenty-four years, thus placing the beginning of his term of office under Egyptian rule. The Byzantine "Chronographeion Syntomon" follows Josephus in mentioning "another Onias" as the successor of Onias III., referring probably to Menelaus, who ought, perhaps, to be added to this list as Onias IV.; an account of his life is given, however, in Jew. Encyc. viii. 491, *s.v.* Menelaus.

Onias IV. (V.): Son of Onias III. and the lawful heir of the legitimate high priests. He had reason to hope that the victory of the national party under Judas Maccabeus would place him in the office of his fathers; but being disappointed in his expectations by the election of Alcimus, he went to Egypt to seek aid against the tyranny of the Seleucids at the court of the Ptolemies, their political enemies. About 154, with the permission of Ptolemy VI. (Philometor), he built at Leontopolis a temple which, though comparatively small, was modeled on that of Jerusalem, and was called by the name of its founder. Onias doubtless expected that after the desecration of the Temple at Jerusalem by the Syrians the Egyptian temple would be regarded as the only legitimate one; but the traditional teachings of Judaism, as contained in the Mishnah, concede only quasi-legitimate status to the temple of Onias (Men. xiii. 10); in fact, even for the Egyptian Jews the latter did not possess the same importance as did the Temple of Jerusalem.

Onias IV., who enjoyed the favor of the Egyptian court, succeeded in elevating Egyptian Judaism to a position of dignity and importance. A large number of able-bodied Judeans had accompanied Onias to Egypt, and these strangers, who were there called Κάτοικοι ("inhabitants"), received, on condition of performing military service and preserving the internal peace of the country, tracts of land of their own, on which they lived with their families ("Ant." xi. 8, § 6; see Paul Meyer in "Philologus," 1897, lvi. 193). The district inhabited by them lay between Memphis and Pelusium, and was long called the "country of Onias" ("Ant." xiv. 8, § 1; "B. J." i. 9, § 4). The first-born sons of the colonists inherited their fathers' privileges and duties; but both Chelkias and Ananias, the sons of Onias, performed military service and acted as generals under Cleopatra III. (117-81; "Ant." xiii. 10, § 4). Even Ptolemy Physcon (146-117) had to fight against Onias, who was faithful to his benefactor (Josephus, "Contra Ap." ii. 5), which proves that candidates for the office of high priest occupied a prominent military position. In the course of time the family of Onias lost its prestige, and the later Alabarchs belonged to another family, not entitled to the rank of high priest. A family of "Oniades," in the sense of "Tobiades" as the term is used by Büchler, existed neither in Palestine nor in Egypt, and the designation "Oniades" is, therefore, misleading.

G. S. Kr.

ONIAS (ḤONI) HA-ME'AGGEL ("the circle-drawer"): Teacher and miracle-worker; lived in the first century B.C. Tradition declares him to have been a descendant of Moses (Tan., Wayera, ed. Buber, p. 22). He was an Essene, stood in high repute, and was respected on account of his pious life and his ability to work miracles. He had many pupils and, according to later accounts, was a great scholar, so that in his day halakic sentences were clear and intelligible; for whenever he entered the schoolhouse he used to reply lucidly to all questions and answer all objections addressed to him by the rabbis (Ta'an. 23a). Nevertheless no halakah of his has been preserved.

His "Miracles."

Onias is better known through his miracles. Once when a drought had lasted almost throughout the month of Adar and the people had supplicated in vain for rain, they came to Onias to ask him to bring rain by his prayers. Onias thereupon drew a circle (hence probably his name, "the circle-drawer"), and, placing himself in the center of it, prayed for rain; and his prayer was immediately answered. When the rain had continued to fall for some time in torrents, and there was danger that it might prove harmful instead of a blessing, he prayed that it might cease; and this prayer also received an immediate answer. Simon b. Sheṭaḥ, who was displeased at the unseemly tone of Onias' prayer, said to him: "Wert thou not Ḥoni I would put a ban upon thee; but what shall I do to thee since thou sinnest before God and yet He does thy will? Of thee was it said [Prov. xxiii. 25]: 'Thy father and thy mother shall be glad, and she that bare thee shall rejoice.'" In the same way the members of the Sanhedrin showed their respect for him by interpreting the verses Job xxii. 28 *et seq.* to refer to him (Ta'an. *l.c.*). It was related of him that whenever he entered the hall of the Temple the place became brightly lighted up (Yer. Ta'an. *l.c.*).

The end of this pious scholar was a sad one. During the war between the two Hasmoneans Hyrcanus and Aristobulus, after the death of Queen Salome, Aristobulus, who had shut himself up on the Temple mount, was besieged by Hyrcanus. The soldiers of the latter found Onias, who lived in a lonely district, and, dragging him into Hyrcanus' camp, tried to force him to use the power of his prayers to destroy the besieged. Instead of cursing the besieged the pious man uttered the following prayer: "Lord of the earth, since the besieged as well as the besiegers are Thy people, I beg that Thou wilt not answer the curses which they may utter against each other." The rude soldiers, who did not sympathize with these brotherly sentiments of Onias, stoned him on the spot (Josephus, "Ant." xiv. 2, § 1; comp. Jew. Encyc. vi. 517b, *s.v.* Hyrcanus II.). This story of Onias' death is not mentioned in the

Talmud; and there is another tradition according to which he is said to have slept seventy years, and when he awoke, as no one would believe that he was Onias and as he was refused the respect due to him, he himself sought death (Ta'an. *l.c.*). According to Yerushalmi (Ta'an. *l.c.*) he went to sleep at the time of the destruction of the First Temple and did not awake until after the building of the Second Temple. But this tradition in the Jerusalem Talmud may refer to his grandfather, who also was called Onias (comp. Brüll, "Einleitung in die Mischna," i. 24–25, Frankfort-on-the-Main, 1876). The parallel with the Seven Sleepers and with Rip Van Winkle is of course obvious.

ONḲELOS (commonly called the **Proselyte Onḳelos**): Tanna of the end of the first century C.E. Although the proselyte Onḳelos is frequently confounded with the proselyte Aquila in the Talmud and the Tosefta, even the designation of the official targum to the Pentateuch as "Targum Onḳelos" being based on this confusion between the two proselytes (comp. JEW. ENCYC. ii. 36 *et seq.*, *s.v.* AQUILA; see TARGUM ONḲELOS), yet there is no reason to doubt the existence of a tanna by the name of Onḳelos (Ἄγκυλος or Ἀγκυλιων = "crooked," both forms occurring as proper names; see Pape, "Wörterb. der Griechischen Eigennamen," 3d ed., i. 11). This Onḳelos originated the explanation that the cherubim had their heads bent backward in the manner of a pupil when leaving his teacher (B. B. 99a). This statement being quoted as a tannaitic sentence, it is impossible to substitute here "Aquila" for "Onḳelos," the Scriptural comments of the former in the Talmudic Midrash literature always being quoted as those of a translator and not of a tanna.

Strict Observance.

As a characteristic of Onḳelos is mentioned his extraordinarily strict observance of the Levitical laws of purity; he observed in his daily life the same laws of purity that Scripture commands at sacrifices. He surpassed on this point even the patriarch Gamaliel II., who also was extremely rigorous in these observances (Tosef., Ḥag. iii. 2–3). Once, when both were at Ashkelon, Onḳelos took his ritual bath in the sea because he held that the bathing-places outside of the Jewish territory were not fit to be used; the patriarch, however, was not so rigorous (Tosef., Miḳ. vi. 3). The relation between the two seems to have been a very close one, as Onḳelos is almost always mentioned together with the patriarch (in addition to the passages quoted, comp. Tosef., Kelim, B. Ḳ. ii. 4); hence when R. Gamaliel died Onḳelos arranged a costly funeral by burning spices and other materials that were used at the burial of royal personages (Tosef., Shab. vii. 18; 'Ab. Zarah 11a; Sem. vii.). It is related, as an example of Onḳelos' piety, that on coming into possession of the property which his pagan father had left to him and his pagan brother, he laid aside those things that were forbidden to the Jews, nor would he exchange them for anything else, as he might legally have done (Tosef., Dem. vi. 13; Yer. Dem. 25a reads "Aquila" instead of "Onḳelos," but it has been by no means proved—notwithstanding Frankel and many other modern scholars—that Yerushalmi has the right reading).

Conversion to Judaism.

There are a number of Talmudic legends concerning Onḳelos. He is said to have been the son of a Kalonymus, or, according to another version, of Kalonikos. When he had become a convert to Judaism, the emperor sent a cohort to take him prisoner, but Onḳelos converted his would-be captors by citing Biblical sentences; this happened no less than three times. The fourth time he was taken prisoner because the soldiers had strict orders not to speak with him. They noticed, however, on leaving the house, that he laid his hand on the mezuzah, and had the curiosity to ask what it was; whereupon the proselyte gave them such an answer that they also were converted: thereafter he was left in peace ('Ab. Zarah 11a, top). This story, and also the legend of the acts of necromancy which "Onḳelos, the son of Kalonikos, and sister's son of Titus," performed before his conversion to Judaism (Giṭ. 50a; comp. JEW. ENCYC. *l.c.*), are probably only the Babylonic versions of legends that had gathered around Aquila and FLAVIA DOMITILLA in Palestine. At Babylon hardly anything was known of the proselyte Aquila, while Onḳelos was known through the tannaitic traditions; hence legends that were really connected with the former were transferred to the latter proselyte. This explains also the statement of the Babylonian Talmud (Meg. 3a) "that Onḳelos translated the Pentateuch into Aramaic according to the instructions of R. Eliezer and R. Joshua." For as soon as Aquila had to give place to Onḳelos it was natural that Aramaic should be named as the language in which he made his translation, for a Greek Bible was hardly known in Babylonia.

ONKENEIRA, ISAAC BEN SAMUEL: Turkish Talmudist, poet, and polemical writer; flourished at Constantinople about the middle of the sixteenth century. He was a friend of Don Joseph Nasi, Duke of Naxos, and is supposed to have transcribed and prefaced, under the title "Ben Porat Yosef" (Constantinople, 1577), the religious disputation which took place between the latter and a Christian scholar. This work contains both an apology for Judaism and a refutation of Christianity. Onkeneira was also the author of "Ẓofnat Pa'neaḥ" (*ib.* 1566) and "Ayummah ka-Nidgalot" (*ib.* 1577 or 1672). The latter work is a diwan, containing riddles and stories, and the dispute between the letters of the alphabet at the time of Creation. Zunz ("Z. G." p. 228) gives the date of its publication as 1577; but L. Dukes, in Jost's "Annalen" (i. 416), asserts that it was written in 1573 and printed in 1672. The "Ẓofnat Pa'neaḥ" is a commentary on R. Naḥshon's "Re'umah," dealing with the laws concerning slaughtering.

OPET, OTTO: German legist; born in Berlin April 1, 1866. He was formerly privat-docent in Bern, Switzerland, and at present (1904) is judge and instructor in law at the University of Kiel. He has published the following works: "Die Erbrechtliche Stellung der Weiber in der Zeit der Volksrechte" (Berlin, 1888); "Gesch. der Prozesseinleitungsformen im Ordentlichen Deutschen Rechtsgang" (part i., *ib.* 1891); "Deutsches Theaterrecht" (*ib.* 1897); "Das Verwandtschaftsrecht des Bürgerlichen Gesetzbuchs" (*ib.* 1899); "Das Familienrecht" (part i., "Bürgerliche Ehe," *ib.* 1904; in "Kommentar zum Bürgerlichen Gesetzbuch"). S.

OPFERPFENNIG, GOLDENER: Personal tax, for the benefit of the emperor, imposed upon the German Jews by Ludwig the Bavarian in 1342. The general principle governing the treatment of the Jews in Germany from the earliest times was that they were crown property, and that therefore all taxes paid by them went to the emperor. From the thirteenth century the growing power of territorial rulers encroached upon the imperial privileges; the barons claimed for themselves the right of taxing the Jews, and during the course of the fourteenth century this right was often ceded to them by the emperor, either in return for services rendered or as a compromise in a case of political conflict. Ludwig the Bavarian (1314-47) was often in great financial straits; therefore, as security for loans, he frequently surrendered temporarily to vassals the right to tax the Jews (see Thiele, "Bilder aus der Chronik Bacharachs," p. 32, Gotha, 1891; L. Müller, "Aus Fünf Jahrhunderten," pp. 8 *et seq.*, Nördlingen, 1899; "Allg. Zeit. des Jud." 1902, p. 405). Wishing to secure for the imperial treasury an inalienable income from the Jews, he introduced, in 1342, a special tax, the Goldener Opferpfennig, which consisted of one florin, payable annually by every Jew and Jewess over twenty years of age and possessing property of no less than twenty florins in value. The basis for this tax was the "half-shekel" which, in accordance with the Talmudic interpretation of Ex. xxx. 11-16, every male person was required to pay into the Temple treasury and which Vespasian, after the destruction of the Temple, diverted to the imperial treasury. The German kings, who claimed to be the heirs of the Roman emperors, were according to Ludwig's conception entitled to this tax. According to an agreement with the Jews this tax could not be ceded or pledged to anybody, but was to be paid only into the imperial treasury. This stipulation, by which the Jews expected to protect themselves against further extortions, was not kept faithfully, and in 1413 Emperor Rupert sold one-half of the taxes, including the Opferpfennig payable by the Jews of Brunswick-Lüneburg, to the dukes of that territory. Occasionally a community compromised by paying one large sum instead of the per capita tax. Thus the Jews of Augsburg, about 1429, paid 200 florins annually for their taxes, including the Opferpfennig.

D.

OPHEL. See JERUSALEM.

OPHIR: District first mentioned in the Old Testament as a Joktanite or south-Arabian tribe (Gen. x. 29 *et seq.*), and later as the port of destination of Solomon's fleet. The earliest reference to Ophir in this connection is in I Kings ix. 26 *et seq.* (= II Chron. viii. 17 *et seq.*), where it is said that King Solomon built a navy of ships in Ezion-geber, near Eloth on the Ælanitic Gulf in the Red Sea, manned them with the expert crew given him by Hiram, and sent them to Ophir, whence they brought him 420 talents of gold. A later reference (*ib.* x. 11 *et seq.* = II Chron. ix. 10 *et seq.*) says that the navy of Hiram (or of Solomon) brought back from Ophir "great plenty of almug-trees and precious stones." From that time Ophir was to the Hebrews the land of gold par excellence (comp. Isa. xiii. 12; Ps. xlv. 10 [A. V. 9]; Job xxii. 24, xxviii. 16; I Chron. xxix. 4). The Septuagint renders the name in Gen. x. by *Οὐφείρ*, but in other passages by *Σουφείρ*, *Σωφείρ*, *Σωφηρά*, *Σωφείρα*, etc., while Josephus writes *Σώφειρα*.

Site.

The land of Ophir has been assigned to the most various points of the compass, including Armenia, South Africa, Arabia, the West Indies, Peru, the coast of India, Spain, and Ceylon. Only a few of these identifications, however, deserve serious consideration. Reland, Lassen, the geographer Ritter, and others place Ophir in India, near the mouth of the Indus, equating the word with the Sanskrit "Abhira" (the name of a shepherd tribe) and the "Aberia" of Ptolemy. Others identify it with the port *Σούπαρα* mentioned by Ptolemy, the *Οὔππαρα* of Arrian. Although the name *Σώφειρα* in the Septuagint and in Josephus designates a part of India proper, as may be shown from Coptic vocabularies, this merely proves that Josephus and others identified Ophir with India, basing their conclusions on the fact that at that time India was regarded as the land of gold.

Still less convincing is the argument that the exports from Ophir were of Indian origin, a view based on I Kings x. 22, which says that in addition to gold and silver the ships brought also "habbim," "ḳopim," and "tukkiyim." The renderings "ivory," "apes," and "peacocks," and the view that these terms are loan-words from the Sanskrit, are very doubtful; and the same criticism applies to the purely conjectural translation of "almuggim" as "sandalwood" (see ALGUM). Moreover, in the only passage

(I Kings x. 22) in which these products are mentioned Ophir is not named as the port of destination of the ships, the reference being merely to the fleet of Tarshish, which made the voyage once every three years, while the parallel passage, II Chron. ix. 21, states that the ships went to Tarshish. It must also be taken into account that no gold was exported from that part of India, and that the Jews became acquainted with India only in the Greco-Persian period.

Sofala Theory.

The view, of which Peters is the protagonist, that Ophir was situated in South Africa in the coast district of Sofala opposite Madagascar, is still more improbable. In 1871 the African traveler Mauch found at Zimbabiye on Mount Afura, forty German miles inland from Sofala, certain remarkable ruins which are traced by tradition to the Queen of Sheba or to Solomon. These remains are situated in rich gold-fields; in a neighboring river topazes and rubies are found, and large yew forests are said to have furnished the almug-wood. Although silver has not yet been found there, ivory is one of the chief articles of commerce of East Africa; and apes abound. On the other hand, the gold-mines of Sofala have become known only since the time of Ptolemy, while it is most improbable that the servants of Hiram and Solomon should have exploited gold-mines almost 200 miles from the sea when they could have gone to others nearer home. The name of Sofala has no connection with Ophir (= Σωφείρα), but is derived from the Arabic "safala" = "to be low" and denotes "lowland" (Hebr. "shefelah").

Probably South Arabia.

The most probable view is that Ophir was situated in Arabia. This is indicated, as mentioned above, by the Biblical reference in Gen. x. 29. An old tradition recorded by Eupolemus (*c.* 150 B.C.) also assigns Ophir to this region, identifying it with the island of Uphre in the Red Sea. Both the east and west coasts have been considered as the site. Glaser assigns Ophir to the east coast, in view of the three years' voyage, which would be much too long if it were on the west coast; and he also compares it with the cuneiform name "Apir" applied to the northeast and the northwest coast of the Persian Gulf. The Arabic geographer Hamadani says that gold-mines were situated in the northeastern part of Arabia. Glaser locates Havilah here (Gen. ii. 11) and identifies Ophir with the coast district belonging to it.

Since the reference to the three years required for the voyage is not found in the earlier account, there is ample justification for the view which prefers the western coast of Arabia, especially as there are a number of references in the ancient authors to the rich gold of the southwestern coast of Arabia. According to Agatharchides, these mines contained pieces of gold as large as walnuts; but this metal was of little value to the inhabitants, and iron and copper were worth two and three times as much. It is hardly probable that Solomon and Hiram would have sent their ships past Yemen to fetch gold from the Gulf of Persia, which was much farther away.

To the southwest coast of Arabia, the coast of Somaliland, which lies opposite it, may perhaps be added, for the Egyptians designated both coasts by the common name of Punt. This theory gains in probability if the author of I Kings x. 22 meant to imply that the exports were native to Ophir itself; for apes, ivory, and ebony are among the commercial products of Somaliland.

E. G. H. I. BE.

OPHITES: Collective name for several Gnostic sects which regarded the serpent (Greek, ὄφις; Hebrew, "naḥash"; hence called also **Naasseni**) as the image of creative wisdom. Such sects existed within Judaism probably even before the rise of Christianity; and as there were Ophites who rejected the Gospels it would be proper to make a distinction between Jewish, Christian, and anti-Christian Ophites were not the sources, which are all post-Christian, too confused to admit of even approximately positive discriminations.

Irenæus, who, toward the end of the second century, wrote a history of heresy, did not know the Gnostics under the name of "Ophites"; but Clement ("Stromata," vii. 17, § 108) mentions beside the "Cainists" (see CAIN) the "Ophians" (*'Οφιανοί*), saying that their name is derived from the object of their worship. Philaster, an author of the fourth century, places the Ophites, the Cainites, and the Sethites at the head of all heresies (ch. 1–3), because he holds that they owed their origin to the serpent (the devil). The Ophites, Cainites, Sethites, Naasseni, etc., declared the serpent of paradise to be wisdom itself (*σοφία*), since wisdom had come to the earth through the knowledge of good and evil which the serpent had brought. Hence they exalted Cain and Seth, who they held were endowed with this knowledge, as the heroes of the human race; other Gnostics regarded Esau, Korah, the Sodomites, and even the traitor Judas, as tools of Sophia; whereas Jacob and Moses, for instance, who were the instruments of the Creator (Demiurgus), were regarded as being inferior (Irenæus, "Against Heresies," i. 31, § 2). All Ophistic circles believed in a demonic hebdomad (*i.e.*, seven spirits under the dominion of the serpent) side by side with the holy hebdomad under Jaldabaoth. The last-mentioned is the son of fallen wisdom ("yalda bahut" = "son of chaos"), and from him proceeded, in successive generations, Jao (יהו), Sabaot, Adoneus, Elœus, Oreus ("or" = "light"), and Astaphæus, which are said to be manifestations of the God of the Old Testament. The Ophites claimed that Moses himself had exalted Ophis by setting up the serpent, and that Jesus also had recognized it (comp. John iii. 14).

The Naasseni went even further, and the retention of the Hebrew name shows that their belief represents the oldest stage of the heresy. "Whoever says that the All proceeded from the One, errs; but whoever says, from Three, speaks truth and can explain the All. The first of these three is the blessed

The Naasseni.

nature of the sainted higher man, Adamas [strangely explained as "diamond"]; the second is the death below; the third is the unruled race that had its origin above, and to which belong Mariam, 'the sought one' (ἡ ζητουμένη), Jothar (Jethro), the great sage, Sepphora, the seeing one, and Moses." The three words "Kavlakav," "Savlasav," and "Zeer Sham" (taken from Isa. xxviii. 10), they declare, indicate Adamas above, death below, and the Jordan flowing upward (Hippolytus, "Philosophumena," v. 8), and present the threefold division of the realm of blessedness or immortality which forms a part of all Gnostic heresies—the world of spirits, the corporeal world, and redemption. The "Naas" is the primal being and the source of all beauty (*ib.* v. 9)—the spiritual principle. Side by side with it exists chaos, or matter. The human soul leads a troubled existence between chaos and spirit until redeemed by Jesus.

Diagram.

The mysterious diagram of the Ophites is famous. Celsus and his opponent Origen ("Contra Celsum," vi. §§ 24–38) both describe it, though not in the same way. Celsus maintains that there were circles above circles; but Origen maintains that there were two concentric circles, across the diameter of which were inscribed the words ΠΑΤΗΡ ("father") and ΥΙΟϹ ("son"); a smaller circle hung from the larger one, with the words ΑΓΑΠΗ ("love"). A wall divides the realm of light from the middle realm. Two other concentric circles, one light and one dark, represent light and shadow. Hanging from this double circle was a circle with the inscription ΖΩΗ ("life"), and this enclosed two other circles which intersected each other and formed a rhomboid. In the common field were the words ΣΟΦΙΑϹ ΦΥϹΙϹ ("the nature of wisdom"), above ΓΝΩϹΙϹ ("cognition"), and below ΣΥΝΕϹΙϹ ("knowledge"); in the rhomboid was ΣΟΦΙΑϹ ΠΡΟΝΟΙΑ ("the providence of wisdom"). There were altogether seven circles, with the names of seven archons: Michael, in the form of a lion; Suriel, of a bull; Raphael, of a dragon; Gabriel, of an eagle; Thauthabaoth ("Tohu wa-Bohu"), of a bear's head; Erataoth, of a dog's head; and Onoel or Thartharaoth, of an ass's head. The archons are perhaps identical with the above-mentioned seven generations of Jaldabaoth. They signify the corporeal world, which follows the middle realm, and with which the dominion of Sophia ends. The hexagram (Shield of David) of the Jews, whose thought was not always foreign to Gnosis, may be in some way connected with this diagram. But the serpent as symbol is found likewise in connection with the mysteries of Egypt, Greece, Phenicia, Syria, and even Babylonia and India. For the Jewish elements in this strange Gnostic lore see Cabala, Name and Origin.

OPHRAH (עפרה): **1.** A town in Benjamin (Josh. xviii. 23) situated, according to Eusebius, five miles northeast of Beth-el, and probably identical with the modern Al-Ṭaiyyibah. According to I Sam. xiii. 17, it must have been a few miles north of Michmash; for one of the three expeditions of the Philistines against Saul, who was in Gibeah of Benjamin, went thither.

2. Family seat of the Abiezrites, where an angel appeared to Gideon, and where he built an altar for a thank-offering (Judges vi. 11, 24). There, too, he brought the earrings of the conquered Midianites, and made an ephod of them, "which thing became a snare unto Gideon, and to his house" (*ib.* viii. 27); and there he died and was buried (*ib.* verse 32).

Ophrah was taken from Jeroboam by Abijah (II Chron. xiii. 19), and was later conquered by Vespasian during his expedition against Jerusalem (Josephus, "B. J." iv. 9, § 9). The town lay west of the Jordan, not far from the plain of Jezreel, and is, according to Conder, identical with the modern Far'ata.

3. Son of Meonothai, head of a Judahite family.

OPPELN: City in Prussian Silesia. Although the first explicit reference to Jews at Oppeln belongs to the fourteenth century, and the Jews' street is not mentioned until a century later, they doubtless settled there at an earlier date; for Oppeln, the principal city of the duchy of Oppeln, was an important commercial center, the great highways from Hungary and Little Poland to Breslau crossing the Oder at that point. In 1557 the community was a small one, numbering only seventeen taxpayers. The existence of a synagogue at that time is attested by documents, but there is no reference to a cemetery. Abraham of Oppeln, who became influential at Breslau about the middle of the fifteenth century, was martyred there in 1453, during the persecution caused by the charge of host desecration (comp. Brann, "Gesch. der Juden in Schlesien," in "Jahresbericht des Jüdisch-Theologischen Seminars," p. xliv., Breslau, 1901). In the Silesian diet of 1557, Ferdinand I., as Duke of Oppeln, proposed that the Jews be expelled; the estates concurred, and in 1565 all Jews were forced to leave the city and the territory of Oppeln.

Jews are not mentioned again as living in Oppeln until Silesia had come under Prussian rule (1742). The community numbered five families in 1813; 98 individuals in 1816; 200 in 1825; 404 in 1840; and 590 in 1861. The dead were buried at Zülz until 1822, when a cemetery was obtained, while services were conducted for many years in rented quarters. A synagogue was begun in 1840 and was dedicated in 1842 by Abraham Geiger; the large synagogue now (1904) in use was dedicated in the summer of 1897. The first rabbi, Dr. Solomon Cohn, was chosen in 1847. His successor, Dr. Adolph Wiener (1853-95), an advocate of Reform, was closely identified with the history of the Jews of Oppeln; the freedom of the city was bestowed upon him on his eightieth birthday. It was due to his efforts that the community, the first to use the modern ritual, became the champion of religious progress in Upper Silesia. Dr. Hermann Vogelstein officiated from

1895 to the beginning of 1897, his successor being the present incumbent, Dr. Leo Bäck. The total population of Oppeln is 30,200, of whom 750 are Jews. The community of Gogolin, numbering about 50 persons, is associated with that of Oppeln.

OPPENHEIM: German town in the province of Rhein-Hessen. The earliest documents relating to Jews in Oppenheim date back to the thirteenth century. Unlike their coreligionists in other parts of Germany, the Jews of Oppenheim in the Middle Ages were very favorably situated, being under the immediate protection of the lords of the castle, to whom alone they paid taxes. They gained the favor of these lords to such a degree that they were protected by them even during the riots in 1280 and 1298. But after the city was pawned to the archbishopric of Mayence (Archbishop Matthias), in 1352, there was a terrible slaughter of the Jews. On Dec. 18 of the same year, however, the city was redeemed and again became a free town, and the condition of the Jews was thereupon ameliorated. When Rupert became emperor, in 1400, he confirmed for three years, at the instance of the lords of the castle, the privileges of the Jews.

Under the Electors.

As Rupert was always in need of money, and the Jews paid him their taxes promptly, he commissioned two of the latter, in 1403, to collect the "sacrificial" penny among their coreligionists throughout the province; one of these was the Jew Isaac of Oppenheim, the other was a certain Elyon (Elias) of Winheim. Isaac seems to have acted in this capacity down to 1404 only. Rupert died at Oppenheim in 1410, and his son Ludwig the Bearded, as elector of the Palatinate, assumed dominion over Oppenheim, which had been pawned to the Palatinate in 1375. The condition of the Jews remained a very favorable one, except for the burdensome taxes they had to pay. If they desired letters of privilege, which they could obtain only for periods of six years, they had to pay one gulden to each of the two burgomasters, a fee to the writer of the privilege, and in addition 40 gulden a year for the six years.

Special Form of Jewish Oath.

It is not known whether the community had its own rabbi. The Jews had a special oath-formula of their own, composed not later than the middle of the fifteenth century, and which differed from the oath used in other cities in that it contained neither their terrible curses nor their offensive addresses. The original oath is recorded in the municipal registers of Oppenheim (fol. 134, in Frank, "Esch. v. Oppenheim," p. 221) and is reprinted verbatim in "Monatsschrift," 1860 (pp. 289-290). The oath had to be taken before the Torah roll, the person taking the oath being obliged to place his hand up to the wrist in the scroll. He could bring his own copy of the Torah, and no special passage for taking the oath was prescribed, the hand being placed on any random passage on opening the scroll. Record of only one sentence of death has been preserved, this case occurring in 1412, when a Jew was sentenced to be quartered. In 1414 Emperor Sigismund issued an edict remitting the taxes of the Jews of Oppenheim in recognition of the "faithfully useful and willing" services they had rendered to the lords of the castle.

Later History.

In 1422 Hans Candengiesser and Henn Drach attempted to slay the Jews, but did not succeed, as the latter were protected by the municipal council. In 1423 the lords of the castle, twenty-seven in number, levied a special tax, the so-called "third penny," which the Jews were not able to pay. They appealed to the palsgrave Ludwig, who thereupon issued a special decree (Mayence, 1423) in which he remitted this tax to the Jews of Oppenheim in recognition of their former privileges. The civil judges and the clergy were strictly forbidden to call the Jews before any ecclesiastical or temporal court; they could merely be cited before the imperial court at Oppenheim. An order accompanied this edict, commanding the citizens to pay their debts to the Jews, one-half at Michaelmas and one-half on Ash Wednesday; the Jews were referred for assistance to the judges and the burgrave of Alzey. Any citizen unable to pay his debt was ordered to give his Jewish creditor a pledge equivalent to the money he had received from him, and the Jews were privileged to sell these pledges after the lapse of a certain time. In spite of these seemingly favorable measures the Jews were obliged, in 1434, to submit another petition to Sigismund, declaring their inability to pay the taxes. Under the palsgraves the Jews were deprived of their synagogue, and the plot of ground on which it stood was given to the monks of the monastery of Erbach. When the city was taken by the French under Mélac, on Pentecost, 1689, and the greater part of it was burned to the ground, most of the Jews emigrated and settled at Frankfort-on-the-Main.

In 1904 there were about 180 Jews in the city, the total population being 3,704. There are a synagogue, two societies for men and women respectively, and a philanthropic society. The community belongs to the district rabbinate of Mayence.

J. S. O.

OPPENHEIM: German family, probably originating in the town of that name. Its best-known members are:

Bernhard (Issachar Baer) Oppenheim: Austrian rabbi; born at Strassnitz, Moravia, about 1790; died at Eibenschütz Dec. 26, 1859. He received his first instruction from his father, Ḥayyim, rabbi in Strassnitz, afterward continuing his studies under Baruch Fränkel, rabbi in Leipnik, where he married. About 1830 he was called as rabbi to Eibenschütz, where he remained until his death. Two of his sons, David and Joachim, became rabbis, and his daughter Hinde married Isaac Hirsch Weiss. Responsa of his are found in the collection of Moses Sofer (Yoreh De'ah, No. 345) and in the Hebrew supplement of "Der Treue Zionswächter."

Bibliography: Wertheimer, *Jahrbuch für Israeliten*, vii. 155-156, Vienna, 1860; Dembitzer, *Kelilat Yofi*, ii. 58b, Cracow, 1893; Fuenn, *Keneset Yisrael*, p. 178; Eisenstadt-Wiener, *Da'at Ḳedoshim*, pp. 172, 176; *Deborah*, 1902, pp. 7, 86.

David Oppenheim: Austrian rabbi; born at Leipnik, Moravia, Dec. 18, 1816; died at Vienna Oct. 21, 1876. His father, Baer Oppenheim, having been called as rabbi to Eibenschütz, David frequented his yeshibah and in 1834 went to Prague, where he continued his Talmudic studies and at the same time attended lectures in philosophy at the university. In 1846 he was called to the rabbinate of Jamnitz, Moravia, and in 1859 to that of Nagy-Becskerek, Hungary; the latter position he retained until his death. He was elected to a chair in the rabbinical seminary in Budapest, but he died before the seminary was opened. Oppenheim was a very prolific writer, and he contributed a number of essays of permanent value to the "Allgemeine Zeitung des Judenthums," "Monatsschrift," "Bet ha-Midrash," and other periodicals; his essays on comparative folk-lore are especially valuable. In his religious attitude Oppenheim was conservative; he opposed Leopold Löw's advanced views; and the latter in return attacked him severely in his "Ben Chananja." David Oppenheim's son **Joachim,** born at Jamnitz 1848, was rabbi at Carlsbad, and since 1871 has been secretary of the Jewish congregation of Brünn.

BIBLIOGRAPHY: *Die Neuzeit*, Oct. 27, 1876.

Joachim (Ḥayyim) Oppenheim: Rabbi and author; born at Eibenschütz, Moravia, Sept. 29, 1832; died at Berlin April 27, 1891. Having received his first instruction from his father, Bernhard Oppenheim, rabbi of Eibenschütz, he went to Brünn, where he attended the gymnasium (1849–53), and then entered the University of Vienna, continuing his Talmudic studies under Rabbi Lazar Horowitz. Having graduated in 1857, he succeeded his brother David as rabbi of Jamnitz in 1858, and his father as rabbi of Eibenschütz in 1860, and in 1868 he was called to Thorn; this last rabbinate he held till his death, which occurred in Berlin, where he had undergone a surgical operation.

Of Oppenheim's independent publications two sermons only are known, entitled "Das Tal-Gebet" (Vienna, 1862); but he was a frequent and valued contributor to Jewish scientific magazines. He wrote by preference in Hebrew. Oppenheim contributed to Frankel's "Monatsschrift," Sonneschein's "Homiletische Monatsschrift," Kobak's "Jeschurun," "Ha-Maggid," "Ha-Karmel," "Ha-Shaḥar," "Bet Talmud," and to various Hebrew year-books. His history of the compilation of the Mishnah, "Toledot ha-Mishnah," published originally in the second volume of the "Bet Talmud," was printed separately (Presburg, 1882).

His son **Berthold Oppenheim** is rabbi of Olmütz.

D.

OPPENHEIM, ABRAHAM: German rabbi; born at Mannheim; died at Hanover Nov. 2, 1786; son of Löb Oppenheim. He was for many years prebendary in the KLAUS of Mannheim, whence he was called in the same capacity to Amsterdam and subsequently to Hanover, where he died at an advanced age. He published various notes on the Oraḥ Ḥayyim, including "Margenita Shappira," on the regulations concerning the shofar (Amsterdam, 1767), and "Eshel Abraham" (on the "Be'er Heṭeb"), a collection of comments to Oraḥ Ḥayyim and Yoreh De'ah.

D. M. K.

OPPENHEIM, ABRAHAM: Communal leader; born at Worms; died at Heidelberg Dec. 2, 1692; son of Simon Wolf Oppenheim, brother of Samuel Oppenheim, court factor of Vienna, and father of David Oppenheim. He was called also **Abraham "zur Kanne,"** in allusion to the sign of his beautiful house at Worms. He was director of the community of Worms, and enjoyed great favor with the German princes as "Shtadlan." He owned many houses, including six in the Jews' street at Worms, which disappeared with the destruction of the city in 1689. Together with his coreligionists he fled to Heidelberg, where he died at an advanced age; he was buried at Mannheim.

D. M. K.

OPPENHEIM, ABRAHAM ḤAYYIM: Rabbi at Péczel, Hungary, where he died at the age of twenty-eight, before 1825. He was the author of "Har Ebel" (Lemberg, 1824), ritual regulations on visiting the sick, mourning customs, etc., and of a treatise entitled "Nishmat Ḥayyim" (Dyhernfurth, 1829), on the immortality of the soul, both of which were published by his relative Simon Oppenheim, dayyan at Budapest.

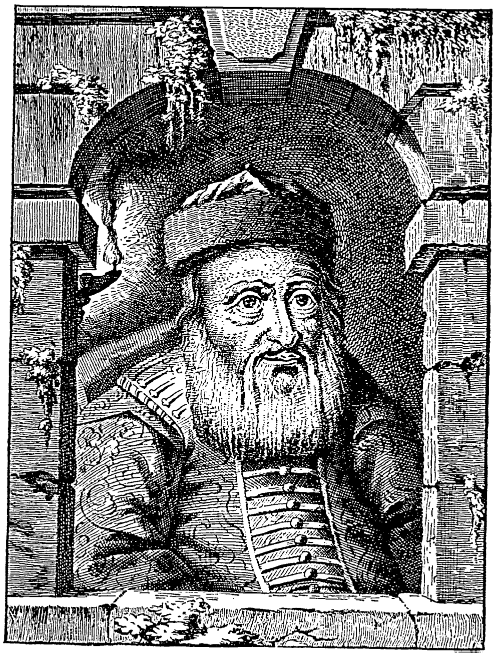
H. R. A. S. W.

OPPENHEIM (or OPPENHEIMER), DAVID BEN ABRAHAM: Austrian rabbi, cabalist, liturgist, mathematician, and bibliophile; born at Worms 1664; died at Prague Sept. 12, 1736. After studying at Metz under Gershon Oulif, Oppenheim married Genendel, the daughter of Leffmann Behrends (Liepmann Cohen), court agent of Hanover. Through associations thus formed, combined with an immense fortune bequeathed to him by his uncle, Samuel Oppenheim, court agent of Vienna, he became one of the leading Jews in Germany. In 1691 Oppenheim was appointed rabbi of Nikolsburg and chief rabbi of Moravia. In 1698 he accepted a call to the rabbinate of Brest-Litovsk, but continued to reside at Nikolsburg until 1702, when he became chief rabbi of Prague. In 1713 Oppenheim was apappointed "Landesrabbiner" over one-half of Bohemia, and in 1718 over the whole of it. These nominations were confirmed by decrees of the emperors Leopold I., Joseph I., and Charles IV.

Oppenheim, concurrently with his rabbinical duties, engaged in business transactions on a large scale, which necessitated his frequent absence from Prague. About this time a controversy arose between him and Jonathan Eybeschütz, the rabbi of Prague. The latter, profiting by Oppenheim's frequent absences, tried continually to win the favor of the Jews of the city. As Oppenheim was a distinguished cabalist, he welcomed Nehemiah Ḥayyun, the well-known Shabbethaian, whose erudition he admired, and gave him both moral and material aid. Moreover, when, later, Oppenheim was drawn by the other rabbis into the fight against Ḥayyun, he seemed to avoid any direct attack on the latter. In 1725 Oppenheim refused his signature to the excommunication of the Shabbethaians, probably because Eybeschütz was one of the signatories. Toward the end of his life he became blind.



David ben Abraham Oppenheim.
(In the Jewish Museum at Vienna.)

Oppenheim was a prolific author, but of his works only the following have been published: "Mo'ed Dawid," novellæ, a part of which was printed with the "Bet Yehudah" of Judah b. Nissim (Dessau, 1698); novellæ on "Sugya Arba' Mittot" (Prague, 1725); several responsa printed in the collections "Shiyyure Keneset ha-Gedolah," "Ḥawwot Ya'ir," and others. The best known of his unpublished works are "Meḳom Dawid," a dictionary of all the places mentioned in the Talmud and of the events that occurred there; "Mezudat Ẓiyyon," collectanea; "Yad Dawid," commentary on the Pentateuch; "Tefillah le-Dawid," homilies; "Shelal Dawid," containing homilies, novellæ, and responsa; "'Ir Dawid," collectanea and novellæ; "Nish'al Dawid," responsa in the order of the four Ṭurim. He left besides a large number of writings, containing novellæ on the Talmud and commentaries on many cabalistic works. In 1713 Oppenheim composed two seliḥot on the occasion of the epidemic which ravaged Prague at that time. In his epitaph he is praised as a great mathematician.

Oppenheim is especially renowned for his famous Hebrew library, the foundation of which was a numerous collection left to him by his uncle, Samuel Oppenheim, in which were some valuable manuscripts. Oppenheim labored energetically to increase the library, and spared neither money nor time in purchasing rare and costly books. In 1711 he compiled a list of books which he did not possess and made efforts to obtain them. Wolf ("Bibl. Hebr." i. 290) estimated the number of works in Oppenheim's possession at 7,000, including 1,000 manuscripts. Oppenheim was desirous to throw open his library for public use, but could not do so at Prague on account of the censorship; he therefore removed it to Hanover, where it was thrown open under the protection of his father-in-law, Leffmann Behrends, who, owing to his position, had great influence in that city. After Oppenheim's death the library came into the possession of his son Joseph Oppenheim, who pawned it with a senator of Hamburg for 50,000 marks ($12,000). In 1829 the collection, which had been stored in chests at Hamburg, was bought by the Bodleian Library, Oxford, for 9,000 thalers (about $6,435). It consists of cabalistic, theological, Talmudic, philosophical, mathematical, and medical works. Catalogues of it have been made by Tychsen (Hanover, 1764), Israel Bresslau (Hamburg, 1782), Isaac Metz, under the title "Ḳehillat Dawid" (*ib.* 1826), and Jacob Goldenthal (Leipsic, 1843). The best-arranged catalogue is the "Ḳehillat Dawid." It contains 4,221 numbers, divided into four classes according to the sizes of the books, each class being subdivided into different branches, and each branch arranged in the alphabetical order of the titles. To the above-mentioned number of works must be added 1,200 bound with others. The manuscripts follow the printed books in each branch.

E. C. M. Sel.

OPPENHEIM, HEINRICH BERNHARD:

German jurist, economist, and deputy; born at Frankfort-on-the-Main July 20, 1819; died at Berlin March 29, 1880. He was the son of a wealthy jeweler, and the grandson of Gumpel, the rich Hamburg banker. He studied law at Göttingen, Heidelberg, and Berlin, and sought to establish himself as privat-docent at the University of Berlin; but not even the influence of Bettina von Arnim could at that time secure from the great jurist Savigny this right for a Jewish applicant. Oppenheim finally secured the right at the University of Heidelberg, where he taught "Staatswissenschaft" and "Völkerrecht" from 1841 to 1845, during which period he began his literary activity by the publication of "Studien der Inneren Politik" and "Geschichte und Staatsrechtliche Entwickelung der Gesetzgebung des Rheins" (1842). In 1843 he contributed to the second volume of Weil's "Constitutionelle Jahrbücher" the essay "Staatsrechtliche Betrachtungen über Regierungsfähigkeit und Regentschaft, mit Besonderer Rücksicht auf die Thronfolge in Hannover," in which he opposed the succession of Crown Prince George. His next work was the important "System des Völkerrechts," Frankfort-on-the-Main, 1845 (2d ed. Stuttgart, 1866).

Oppenheim then went to Berlin to participate in the agitation that culminated in the revolution of 1848, and, with Arnold Ruge, founded the journal "Die Reform." In 1849 he went to Baden and participated in the revolutionary movement there. In May, Brentano, the leader of the provisional government, appointed Oppenheim editor of the "Karlsruher Zeitung," in place of Karl Blind. When differences arose between Brentano and Struve, Oppenheim supported the latter in his attempt to secure the leadership; but the result was not favorable, and Oppenheim left Baden to travel in Switzerland, France, Holland, and England. He returned to Germany in 1850 and published his "Philosophie des Rechts und der Gesellschaft," Stuttgart, 1850. This was followed by a number of political writings, mostly of a controversial character. In Oct., 1862, he began the publication of the "Deutsche Jahrbücher für Politik und Litteratur," which was continued till 1864, thirteen volumes being published. In 1863 he issued "Die Lassalle'sche Bewegung im Frühjahr 1863"; in 1864, "Ueber Politische und Staatsbürgerliche Pflichterfüllung"; and in 1865, "Die Deutschen im Ausland." A number of his political writings, together with studies of Stahl, De Tocqueville, and Riehl, were collected and published under the title "Vermischte Schriften aus Bewegter Zeit," *ib.* 1866.

Oppenheim's purely economic writings date from 1870, when he published "Ueber Armenpflege und Heimathsrecht," which was followed by "Blumenlese aus der Eisenacher Social-Conferenz" (in "Gegenwart," 1872, Nos. 41, 42). In the same year appeared his "Der Kathedersocialismus" (Berlin, 1872; 2d ed. 1873), from which work university professors who teach socialistic doctrines derive their name of "Kathedersocialisten."

On Jan. 10, 1874, Oppenheim was elected a member of the Reichstag from Reuss; but his parliamentary career ended with his defeat in 1877 by his Socialist opponent.

S. M. Co.

OPPENHEIM, HERMANN: German physician; born at Berlin Jan. 1, 1858. He studied medicine at the universities of Göttingen and Bonn, taking his degree in 1881. Settling in Berlin, he became assistant at the Maison de Santé in the hospital for neurology in 1883, which position he retained until 1891. Admitted to the medical faculty as privat-docent in 1886, he received the honorary title of professor in 1893. Since 1891 he has conducted a private dispensary and laboratory. He resigned his university position in 1902.

Oppenheim has published essays in the "Archiv für Psychiatrie," Virchow's "Archiv," "Charité-Annalen," "Zeitschrift für Nervenheilkunde," etc. He has written: "Die Traumatischen Neurosen," Berlin, 1889, 2d ed. 1892; "Zur Kenntniss der Syphilitischen Erkrankungen des Centralen Nervensystems," *ib.* 1890; "Lehrbuch der Nervenkrankheiten," *ib.* 1894 2d ed. 1898; "Die Geschwülste des Gehirns," in Nothnagel's "Spezielle Pathologie und Therapie," Vienna, 1896; "Die Encephalitis und der Gehirnabscess," *ib.* 1899.

S. F. T. H.

OPPENHEIM, JACQUES: Dutch barrister; born at Gröningen March 3, 1849. Educated at the gymnasium and university of his native town, he was graduated in 1872 as LL.D., and became teacher at the gymnasium there. This position he resigned in 1873, upon his appointment as secretary to the town of Gröningen. In 1885 he was elected professor of jurisprudence at the university there. In 1893 he was called as professor of public law to the University of Leyden, which position he still holds (1904). He has taken great interest in the Jewish community and in the public life of the Netherlands. He was twice appointed a member of commissions for framing public laws.

Oppenheim has been since 1872 editor of the "Provinciale Gröninger Courant." Among his works may be mentioned: "Het Nederlandisch Gemeinterecht," Leyden, 1895 (3d ed. Gröningen, 1904); and "Bydrage tot Regeling der Administratieve Rechtspraak," Haarlem, 1899. Besides he has written many essays in the professional journals.

S. F. T. H.

OPPENHEIM, LEO PAUL: German naturalist; born in Berlin May 28, 1863. After graduating from the Königliche Französische Gymnasium of that city in 1882, he studied natural sciences, especially zoology and geology, at Heidelberg and Berlin, taking his degree at the latter university with a treatise on fossil butterflies. This essay was followed by others on the insects of the lithographic slate of Bavaria, on the crustaceous larvæ of the same formation, etc. Oppenheim then turned his attention to the Tertiary period, on which he wrote a number of longer essays. He has especially studied Italian geology, his researches covering Capri and Sorrento, and Venice. He has dealt also with the fauna of Austria, Hungary, southern France, the Balkan Peninsula, and Germany. His paleontological studies include the foraminifera (nummulitidæ), corals, echinites, and mollusks. In 1902 he was in charge of the rich collections that Zittel, Schweinfurth, and Blanckenheim brought from Egypt and the Libyan Desert. Some of Oppenheim's writings have been published separately, and some have appeared in the "Zeitschrift der Deutschen Geologischen Gesellschaft." S.

OPPENHEIM, LEWIS: English physician; born in London Dec., 1832; died there Jan. 7, 1895. He studied for the medical profession, entering as a student at the London Hospital in 1850. In 1853 he went to the Crimea, and was attached to the medical staff at Scutari, where he remained some time doing hospital work under the direction of Florence Nightingale. He returned to England in

Nov., 1854, on the conclusion of peace with Russia, and was entrusted with the care of a large number of invalided troops. Before settling in private practise, he became surgeon on the ship "Kent," in which he sailed twice to Australia and back.

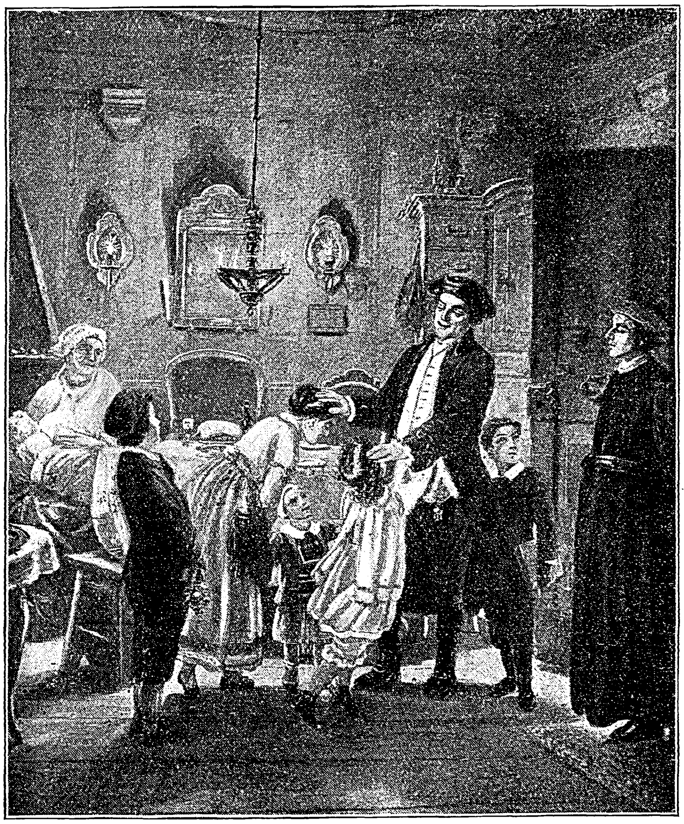
J. G. L.

OPPENHEIM, MORITZ DANIEL: German genre- and portrait-painter; born of Orthodox parents at Hanau in 1801; died at Frankfort-on-the-Main Feb. 26, 1882. He received his first lessons in painting from Westermayer, in Hanau, and entered the Munich Academy of Arts when only seventeen years of age. Later he visited Paris, where Regnault became his teacher, and then went to Rome, where he was cordially received into the circle of artists presided over by Thorwaldsen, Niebuhr, and Overbeck. There he studied the life of the ghetto and made sketches of the various phases of its domestic and religious life, in preparation for several large canvases which he painted on his return to Germany. In 1825 he settled at Frankfort, and shortly after exhibited his painting "David Playing Before Saul," to see which a great number of admirers from all parts of Europe visited his studio. In 1832, at the instance of Goethe, Grand Duke Karl August of Saxe-Weimar conferred upon him the honorary title of professor.



"Sabbath Blessing."
(From a painting by Moritz Daniel Oppenheim.)

Oppenheim's pictures of Jewish life and his portraits of Emperor Joseph II., Moses Mendelssohn, and Börne established his reputation as one of the foremost Jewish artists of the nineteenth century. His "Home Coming of a Jewish Soldier" is considered by most art critics to be his masterpiece. "Mignon and the Harper," "Italian Genre Scene," "Confirmation," and "Sabbath Blessing" are also admirable and characteristic examples of his power of conception and skill at grouping.

S. F. C.

OPPENHEIM, MORRIS SIMEON: English lawyer; born in London 1824; died there Jan. 3, 1883; son of Simeon Oppenheim, secretary of the Great Synagogue. He became secretary to the Jews' and General Literary Institution (Sussex Hall), and while acting in this capacity studied for the bar. He was admitted as a student to the Middle Temple Nov. 9, 1854, and was called to the bar in 1858. As a special pleader he was a member of the south-eastern circuit, the Surrey sessions, the Surrey assizes, and practised in the lord mayor's court.

Oppenheim undertook important communal work. He served on the Law and Parliamentary committees of the Board of Deputies, London, of which he was elected a member in 1869. To the marriage laws as they affected Jews, Oppenheim devoted much attention; and he wrote the chapter on that subject in Picciotto's "Sketches of Anglo-Jewish History." As warden of the Central Synagogue he took a conspicuous part in the deliberations of the council of the United Synagogue, and prepared the by-laws of the constituent synagogues.

Oppenheim died by his own hand, having suffered for some time from attacks of depression.

J. G. L.

OPPENHEIM, SIMON BEN DAVID: Austrian plagiarist; born in Kromau, Moravia, 1753; died at Pest, where he was dayyan, Jan. 24, 1851. He seems to have pursued his studies in Prague, where he lived at the end of the eighteenth century. There he published a book entitled "'Ammud ha-Shahar," Prague, 1789; this is a plagiarism of Baruch Lindau's text-book of geography, natural science, etc., which had been published the year previously at

Berlin under the title "Reshit Limmudim." Another book, on religious ethics, which he called "Nezer ha-Ḳodesh," Ofen, 1831, is a plagiarism of Jehiel ben Jekuthiel Anaw's (Jew. Encyc. i. 567) "Ma'alot ha-Middot" (Cremona, 1556). He further wrote: "Har ha-Karmel," novellæ on the laws, in the Yoreh De'ah, of menstruation and ritual bath (Prague, 1812). Ezekiel Landau censured him very severely for his vanity in assuming pompous titles on the title-page of his first book. The family name Oppenheim he seems to have adopted from his father-in-law, Löb Oppenheim, rabbi in Freistadt.

"Confirmation."

(From a painting by Moritz Daniel Oppenheim.)

OPPENHEIMER, SIR CHARLES: British consul-general at Frankfort-on-the-Main; born at Nastätten, Nassau, 1836; died at Frankfort June 21, 1900. He received his education in the latter city, and, emigrating to London at the age of eighteen, established himself as a general merchant. Oppenheimer soon built up a flourishing concern, and, after remaining head of his firm for seventeen years, retired in 1871 to Frankfort. Here he threw himself into every benevolent work, especially assisting specifically Jewish charities. In 1880 he received the honorary appointment of British consul for Frankfort-on-the-Main, the province of Hesse-Nassau, and the grand duchy of Hesse. Two years later he was promoted to the consul-generalship of that district and of the grand duchy of Baden.

The English government highly appreciated Oppenheimer's work; and in 1892 Queen Victoria conferred on him the honor of knighthood, which was followed in 1897 by the Jubilee Medal. The reigning princes of several of the German states also conferred on him many decorations.

J. G. L.

OPPENHEIMER, FRANZ: German physician and writer; born at Berlin March 30, 1864. His father, Julius Oppenheimer, is rabbi of the Berlin Reform Congregation. He studied medicine at the universities of Freiburg and Berlin (1881–86), and was graduated M.D. in 1885. In 1887 he established a practise in Berlin, becoming a specialist in diseases of the throat and nose; but he soon gave up the medical profession to devote himself entirely to literature, principally to political economy and sociology. He has published the following: "Weg zur Liebe," 1887; "Föhn," a drama, 1893; "Die Ferienwanderung," Berlin, 1894; "Freiland in Deutschland," 1895; "Die Siedlungsgenossenschaft: Versuch einer Ueberwindung des Kommunismus Durch Lösung des Genossenschaftsproblems und der Agrarfrage," 1896; "Grossgrundeigenthum und Soziale Frage," 1898; "Detlev von Liliencron," 1898; "Das Bevölkerungsgesetz des T. R. Malthus und der Neueren Nationalökonomie," 1901.

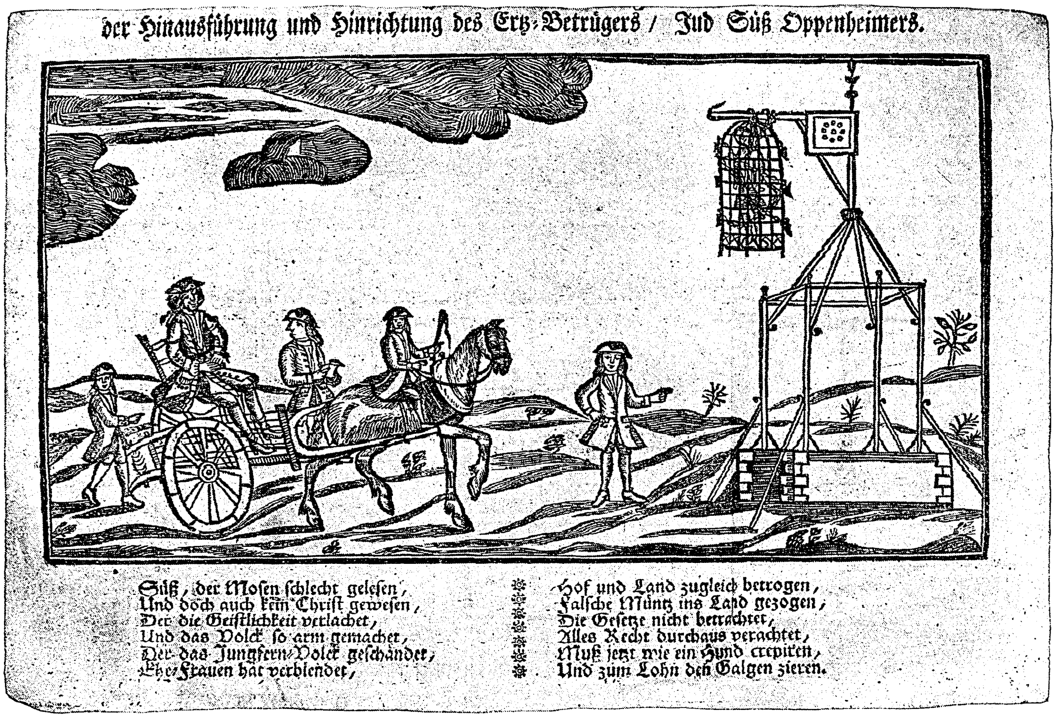
Wie dieſer freche Jud Süß Oppenheimer that,
Wen Geiß und Ubermuth auch Wolluſt eingenommen,
Der muß wie Haman dort zuleſt an Galgen kommen

Joseph Süss Oppenheimer.
(From a copperplate of 1738.)

OPPENHEIMER, JOSEPH SÜSS: German financier; born at Heidelberg in 1698; executed at Stuttgart Feb. 4, 1738. He was the son of R. Issachar Süsskind Oppenheimer, a singer and leader of a wandering troupe of singers and players, and of Michele, daughter of the reader R. Salomon of Frankfort-on-the-Main. A sister and a brother of his embraced Christianity and took the name of Tauffenberger; the latter became private secretary at the court of Darmstadt. Joseph's father died prematurely, leaving the boy to the care of an uncle, who undertook his training and education. Joseph had little inclination for study, but he showed a marked leaning toward business and obtained employment in large Jewish commercial houses in Frankfort-on-the-Main, Amsterdam, Prague, Vienna, and elsewhere, gaining an insight into the life of the nobility. At an early age he openly scandalized his coreligionists by his violations of the Jewish religious laws. His wide business knowledge and cleverness secured him the position of adviser and business manager to a lawyer named Lauz at Mannheim. Subsequently he furnished the stamped paper for the court of the Electoral Palatinate, and then the coin for Darmstadt. The elector appointed him in 1734 chief court and war factor. Oppenheimer's business connections compelled him to maintain two residences, one in Mannheim and one in Frankfort-on-the-Main. In 1732, through Isaac Simon of Landau, he became acquainted at Wildbad with Prince Carl Alexander of Württemberg, at that time imperial general and governor of Servia. Gaining the favor of the prince and his wife, Oppenheimer was appointed chief court and war factor and keeper of the prince's privy purse.

When Prince Carl became Duke of Württemberg (Dec., 1733), he found himself surrounded by many opponents. His position was embarrassed and his measures were thwarted by intrigue, and it became necessary to associate to himself counselors of integrity and ability. In accordance with this policy he appointed Oppenheimer his confidential adviser, whose special duty was to assist the duke in regulating the finances. On Jan. 9, 1734, the prince appointed Oppenheimer resident and privy factor. In conformity with an agreement made between the duke and Oppenheimer at Heilbronn June 5, 1734, the latter undertook, from July 1, the control of the mint, guaranteeing to the duke a largely increased revenue. Oppenheimer's management yielded unexpected profits, and the duke's confidence in him increased; while the opponents of the prince looked on with evil eyes as Oppenheimer's skill enriched the duke and conducted to successful issues the various private financial enterprises entrusted to his management by his master. In 1735 a new source of income was provided for the duke through a monopoly of the printing of playing-cards, granted to Moses Drach and his company for a stated yearly sum.



der Hinausführung und Hinrichtung des Ertz=Betrügers / Jud Süß Oppenheimers.
Süß, der Moſen ſchlecht geleſen,
Und doch auch kein Chriſt geweſen,
Der die Geiſtlichkeit verlachet,
Und das Volck ſo arm gemachet,
Der das Jungfern=Volck geſchändet,
Ehe=Frauen hat verblendet,
Hof und Land zugleich betrogen,
Falſche Müntz ins Land gezogen,
Die Geſetze nicht betrachtet,
Alles Recht durchaus verachtet,
Muß jetzt wie ein Hund crepiren,
Und zum Lohn den Galgen zieren.

Execution of Joseph Süss Oppenheimer.

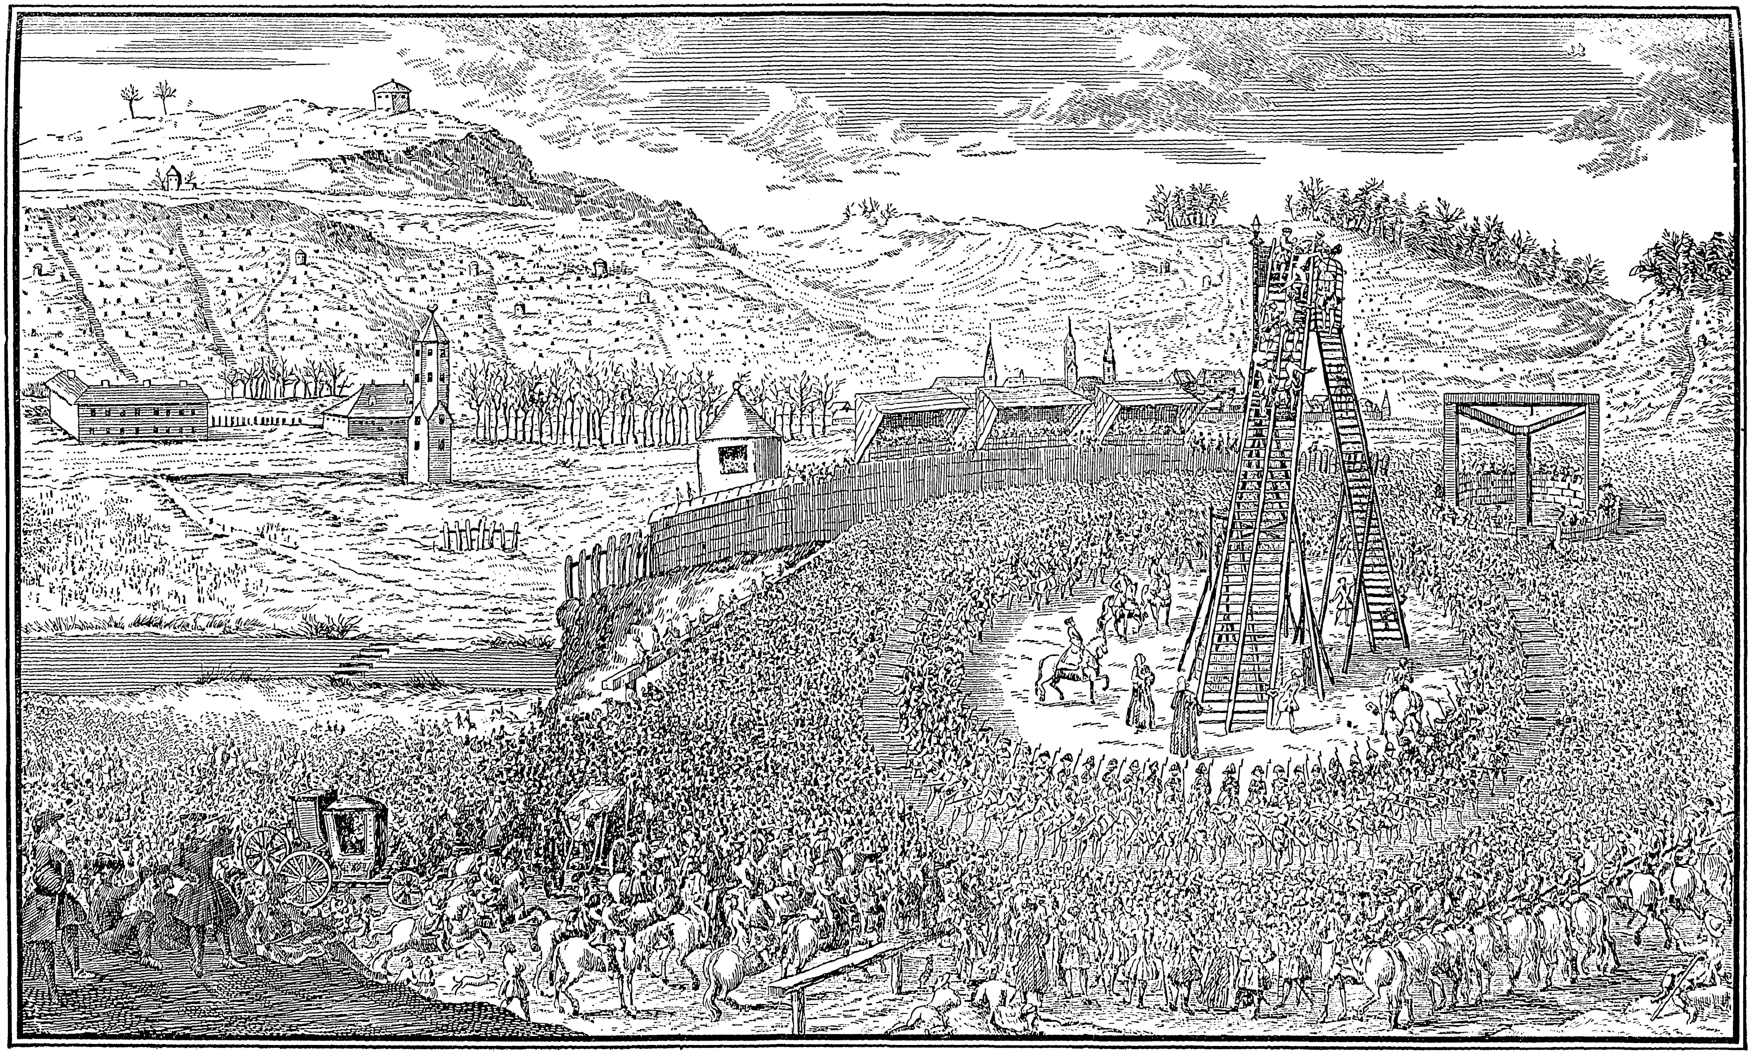
(From a contemporary woodcut.)

Mint-Master.

Oppenheimer had obtained for Jews contracts for supplies for the army on the Rhine. In consequence the enmity toward the Jews increased in the country, and plans were laid to bring about Oppenheimer's disgrace. Complaints were brought against his management of the mint. These complaints were reenforced by the fact that the duke was not at the time reaping the profits he expected, though this was due only to the many improvements Oppenheimer had been obliged to make as well as to various untoward circumstances for which Oppenheimer was not responsible. After much discussion a new agreement was made in regard to the mint (Oct., 1735), not less advantageous for the purse of the duke than the former agreement. Yet the difficulties in connection with the mint inevitably increased, there being at that time a monetary crisis throughout Germany. In Württemberg, Oppenheimer was accused of having minted coin below the standard and in quantities larger than those authorized, thus enriching himself and the duke. Oppenheimer therefore requested the duke to make a thorough examination and accounting (Feb. 15, 1736) and asked to be relieved of the charge of the mint. After obtaining the opinions of experts the duke publicly proclaimed (March 20, 1736) that Oppenheimer had not caused the crisis at the mint. The counselors Boesenius and Hallwachs undertook the accounting and kept it dragging on until Oppenheimer again insisted on being released and declared his intention of leaving the country and the duke's service.

Privy Councilor of Finance.

The duke now gave signal evidence of his confidence in Oppenheimer by appointing him privy councilor of finance. In his new dignity Oppenheimer succeeded in settling a large number of Jewish families at Ludwigsburg, in spite of the strong objections of the states, to which the duke paid no attention, and regardless of the law prohibiting Jews from settling in the country. The continual monetary difficulties of the duke, his desire to be financially independent of the states, and the military plans he had in view compelled him to seek ever new sources of revenue, and in this he needed Oppenheimer's advice. By the decree of Dec. 22, 1736, a "tutelary council" was appointed whose duty it was to keep a record of marriage dowries and supervise the division of property in case of death, certain taxes being imposed in these cases. It was also the duty of this council to determine where and how this decree was



EXECUTION OF JOSEPH SÜSS OPPENHEIMER.

(From a contemporary engraving.)

violated and to impose the necessary fines. By this decree a kind of supervision was instituted over the property of every person of means, which caused a great deal of discontent. Loud complaints arose of the injustice of the tutelary commissioners, who accepted bribes and oppressed those who would not bribe them.

In the same year, 1736, the duke issued another regulation which greatly excited the people of the country and which was laid at the door of Oppenheimer. This was the institution of commissions to examine into the conduct of certain officials, to fine them or remove them from office, to appoint new incumbents, and to redistribute such positions. These commissions became a menace; they led to blackmail and bribery. Some bribed the commissioners in order to be retained in office; others, to be appointed; others, to escape punishment or disgrace. A "Gratialamt" was established, where applications for positions were received; and the duke had permitted Oppenheimer to accept considerations from the applicants, he and his master dividing such receipts between them.

Attack on Oppenheimer.

The sums collected by these devices had become so large toward the end of 1736 that the officials and the people, the Church and the aristocracy, the landowners and the merchants—in short, all who possessed or earned money—became more and more incensed at the proceedings of the tutelary council, the commissions, and the "Gratialamt," and every wrong was ascribed to the evil advice of Oppenheimer. The general bitterness was intensified when the duke decreed (Jan. 13, 1737) that the export and import of tanned leather and of hides should be supervised—that a board of supervisors should impose certain duties and collect heavy fines in cases of violation of the law. Five days later the duke decreed that all salaries should be paid promptly and regularly by the chief pay-offices, which should always be furnished with the necessary sums by the privy councilor of finance (Oppenheimer), but that, in return, three kreutzer to the florin should be deducted from all salaries. The excited people called this deduction the "Judengroschen." A few days afterward (Jan. 21, 1737), the duke ordered that all Jews who were obliged to travel through Württemberg should be permitted to enter and leave the country on payment of the usual taxes, and that those Jews who intended to remain in the capital should report to Privy Councilor of Finance Oppenheimer, who would then confer with the duke.

The civil officials endeavored to secure the abolition of the "Judengroschen," but the duke explicitly confirmed his order in a decree of Feb. 1 following. To all these regulations, which were intended to fill the private purse of the duke, there was added the monopoly of the coffee-houses, of chimney-sweeping, of the trade in tobacco, salt, wine, and spices. Besides these there were various stamp-taxes, a lottery, and a tax on the sale of tickets for the carnival festivals. For those seeking legal advice a "Fiscalamt" was established, which levied fees in every case. It was furthermore planned to organize a bank in which all the moneys of the clergy and of ecclesiastical foundations should be deposited.

The states did not agree to any of these schemes and institutions, insisting on their constitutional rights, to which the duke paid no attention. Foreigners reaped the profits of all the monopolies. The suspicion of the Protestants that the duke was contemplating a coup d'état in order to make the Catholic religion that of the country was added to all those grievances. Oppenheimer (the "Jew Süss") was taken to be the cause of it all; his luxurious life further exasperated the people, and a long statement of grievances was sent to the duke with the object of bringing the Jew into disgrace. But the duke declared, in a decree of Feb. 12, 1737, "that the Privy Councilor of Finance Oppenheimer was a faithful servant of his prince and of the state, and was intent in every way upon the welfare of both, for which he deserved the thanks of all. Since instead he was persecuted by envy and ill-will to such an extent that attempts were even made to bring him into disfavor with the duke, the latter accorded him his especial protection and expressly forbade the continuation of such attacks."

Arrest and Execution.

Yet Oppenheimer, recognizing the danger that threatened him, balanced his accounts, submitted them to the duke, who declared them to be correct (March 8, 1737), and prepared to leave the country. On March 11, 1737, the duke called him to Ludwigsburg to spend the last night with him. At half-past nine that night the duke suddenly died, and Oppenheimer was induced to accompany Colonel Röder to Stuttgart to notify the duchess. That same night all the Jews in Stuttgart, including Oppenheimer, were made prisoners. After a futile attempt at flight he was taken to Neuffen and thence to Asperg, where, after having been tried, he was condemned to be hanged (Dec. 17, 1737). On Dec. 4 Pastor Rieger had endeavored to convert him to Christianity, but Oppenheimer remained firm, although much weakened by imprisonment and much distressed mentally.

The sentence of death was confirmed Jan. 25, 1738, by the administrator of the duchy, Prince Rudolph. Oppenheimer, who had no idea of the fate in store for him, was taken to Stuttgart Jan. 30, 1738, and on the next day his sentence was read to him, and he was admonished to repent and accept the Christian faith. Oppenheimer, however, declared: "I will die as a Jew; I am suffering violence and injustice." Again two ministers and a baptized Jew, a lector in Tübingen, made an attempt to convert him to Christianity, but Oppenheimer resisted firmly. On Feb. 3 he prepared for death in the presence of the lector and of some Jews. The next day he was taken to the gallows specially erected for him, amid the rejoicing of thousands of people. A last attempt was made to convert him, but as it also proved fruitless, he was drawn up the ladder by the hangmen. Crying aloud "Shema' Yisrael," he was forced into a cage fastened at the top, and the rope that had been placed around his neck was drawn. The rope was taken off after a quarter of an hour, and a chain was placed around his neck and the cage locked. Those accused with him were not executed, their sentences being either remitted or mitigated. His death is now admitted by modern historians to have been a judicial murder.

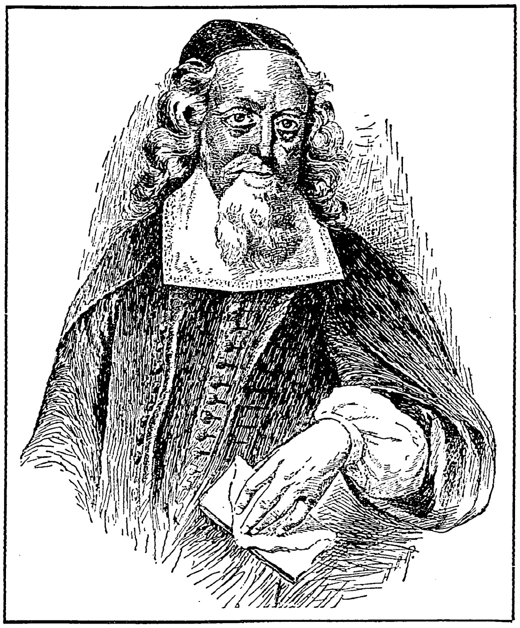
D. T. K.

OPPENHEIMER, SAMUEL: German banker, imperial court factor, and diplomat; born at Heidelberg about 1635; died at Vienna May 3, 1703. He enjoyed the especial favor of Emperor Leopold I., to whom he advanced considerable sums of money for the Turkish war. Prince Eugene of Savoy brought him a large number of valuable Hebrew manuscripts from Turkey, which became the nucleus of the famous David Oppenheimer Library, now comprised in the Bodleian Library at Oxford. Although the Jews had been recently expelled from Vienna, the emperor permitted Oppenheimer to settle there, together with his "Gesinde," or his followers, who included a number of Jewish families. He even received the privilege of building a mansion in the heart of Vienna. He was appointed "Oberfaktor" and court Jew at the recommendation of Margrave Ludwig of Baden, the imperial general in Hungary, to whom he had advanced 100,000 gulden for war expenses. He also enabled Prince Eugene to provide medical attendance for the army during the Turkish war. About the year 1700 a riot broke out and houses were sacked and property looted. As a result one man was hanged for sacking Oppenheimer's house and others were imprisoned for participating in the disturbance. When Austria was embarrassed by its depleted exchequer on the outbreak of the War of the Spanish Succession, in 1701, Samuel Oppenheimer and his two sons, together with the most important commercial houses of Germany, took charge of the commissariat of the imperial forces in Lombardy, the Upper Rhenish states, Tyrol, Bavaria, and Hungary.



Samuel Oppenheimer.

During the Eisenmenger controversy Oppenheimer took steps to suppress the former's "Entdecktes Judenthum," spending large sums of money in order to win the court and the Jesuits to the side of the Jews. As a result an imperial edict was issued forbidding the circulation of Eisenmenger's work. Oppenheimer was employed also by the emperor in political missions which were often of a delicate nature.

OPPER, FREDERICK BURR: American political caricaturist; born at Madison, Lake County, Ohio, Jan. 2, 1857. He attended school until fourteen years of age and then worked for a short time in a newspaper office. In 1873 he went to New York, where, encouraged by the sale of some of his humorous sketches, he adopted art as a profession. Opper served on the art staff of "Frank Leslie's Weekly" for three years, and for eighteen years was the leading artist for "Puck." In May, 1899, he accepted a position on the "New York Journal" and contributed to it humorous and political cartoons that secured him a prominent place among American caricaturists. His caricatures during the presidential campaign of 1900 attracted wide attention, and were reprinted in book form under the title "Willie and His Papa" (New York, 1901).

Opper has illustrated a number of the works of Mark Twain, Hobart (Dinkelspiel), and Dunne (Mr. Dooley). Many of his humorous creations have been impersonated on the American stage. Opper is the author of "Folks in Funnyville," a collection of verses, illustrated by himself.

A. I. G. D.

OPPERT, ERNST JACOB: German merchant and traveler; born at Hamburg Dec. 5, 1832; died Sept. 19, 1903; brother of Jules Oppert. He chose a mercantile career, and went in 1851 to Hongkong; later he founded a business at Shanghai; in 1866 and 1868 he traveled through Korea. He then returned to Hamburg, where he lived as a merchant.

Oppert has written, from his own notes and from the notes of the missionary Féron, a description of his experiences in the "hermit kingdom," and of the country and its people, under the title "A Forbidden Land," London, 1879 (German transl. "Ein Verschlossenes Land," Leipsic, 1880). He is also the author of "Ostasiatische Wanderungen," Leipsic, 1898; and "Erinnerungen eines Japanesen," *ib.* 1898.

Bibliography: *Brockhaus Konversations-Lexikon*.

S. F. T. H.

OPPERT, GUSTAV SOLOMON: German Orientalist; brother of Jules and Ernst Jacob Oppert; born at Hamburg July 30, 1836. He was educated at the universities of Bonn, Leipsic, Berlin, and Halle, where he devoted his attention especially to the history and the languages of India. Six years after receiving the degree of doctor of philosophy, in 1860, he went to Oxford as assistant librarian at the Bodleian, and in the same year he became assistant librarian to the queen at Windsor. He left England in 1872 to accept the professorship of Sanskrit in the Presidency College, Madras, which chair he held until 1893, when he resigned, and, after a tour of northern India, China, Japan, and America, returned to Europe in 1894. Settling in Berlin, he became privat-docent in Dravidian languages at the university.

Oppert's work began with "Der Presbyter Johannes in Sage und Geschichte" (Berlin, 1864; 2d ed. 1870). He wrote also "On the Classification of Languages" (London, 1879) and "On the Weapons, Army Organization, and Political Maxims of the Ancient Hindoos" (Madras, 1880), as well as "Original Inhabitants of Baratavarṣa or India" (Westminster, 1893). In 1895 appeared his "Reise nach Kulu im Himalaya," and in 1903 "Tharshish und Ophir." From 1878 to 1882 Oppert was editor of the "Madras Journal of Literature and Science."

Oppert's first Sanskrit work was his "Lists of Sanskrit Manuscripts in Private Libraries of Southern India" (2 vols., Madras, 1880–85). His "Contributions to the History of Southern India" (part i., *ib.* 1882) was an epigraphical study. Oppert further edited the philosophical works "Nítiprakaśika" (*ib.* 1882) and "Śukranítisara" (vol. i., text and critical apparatus, *ib.* 1882), and the "Sutrapaṭha of the Śabdanuśasana of Śakaṭayana" (*ib.* 1893), this being followed in the same year by an edition of Śakaṭayana's grammar with the commentary of Abhayacandrasuri. He published at Madras in 1893 the very important first edition of Yadavaprakaśa's lexicon, the "Vaijayantī," and likewise edited for the first time the "Rama Rajiyamu" or "Narapati Vijayamu," a Telugu poem of the sixteenth century (*ib.* 1893).

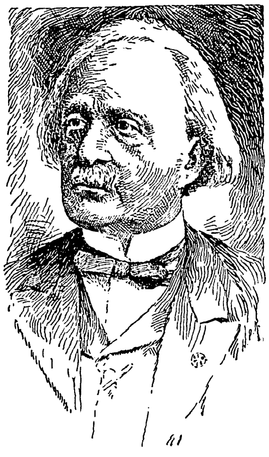
Bibliography: *Meyers Konversations-Lexikon.*

S. L. H. G.

OPPERT, JULES: French Orientalist; born at Hamburg, Germany, July 9, 1825. He received his earliest education at the "Johanneum" in his native city, and in 1844 began the study of law at Heidelberg. Becoming interested in Oriental studies, he left Heidelberg for Bonn, and later studied at Berlin and at Kiel (Ph.D. 1847). The title of his dissertation was "De Jure Indorum Criminali." Leaving Germany, Oppert went to France in the same year in which he received his degree. There he was welcomed by such scholars as Letronne, Burnouf, De Saulcy, and Longpérier, whose attention had been attracted by his "Lautsystem des Altpersischen" (Berlin, 1847). This work was a preliminary to one of the most important contributions on Old Persian, his "Mémoire sur les Inscriptions Achémenides Conçues dans l'Idiome des Anciens Perses" (in "Journal Asiatique," 4th series, vols. xvii.-xix., Paris, 1851–52; also published separately in the latter year). In 1848 Oppert was appointed professor of German in the lycée at Laval, whence he was called in 1850 to Reims.

In 1851, with Fulgence Fresnel as director and Felix Thomas as architect, Oppert went as the Assyriologist of an expedition sent by the French government to explore Media and Mesopotamia. Here he first definitely identified the site of ancient Babylon. In 1854 Oppert returned with the party, excepting Thomas, who had died, and published the results of the mission in his "Expédition Scientifique en Mésopotamie" (2 vols., *ib.* 1857–64). This received the prize, then awarded for the second time, of 20,000 francs offered for the work or discovery best fitted to honor or benefit France. The year of his return he was naturalized as a French citizen for his services.

Expedition to Mesopotamia.



Jules Oppert.

In 1855 Oppert was sent to England by the minister of public instruction to examine the Assyrian collections in the British Museum. On his return to France in the following year he received the cross of the Legion of Honor, of which he became an officer in 1885. In 1857 he was appointed professor of Sanskrit and comparative philology in the school of languages attached to the Bibliothèque Nationale. In 1859 his "Grammaire Sanscrite" appeared (2d. ed., *ib.* 1864). This was his last important book on an Indo-Iranian subject, although he has published a few occasional papers, such as the "Dissertation sur l'Honover, le Verbe Créateur de Zoroastre" (*ib.* 1862) and "Sur la Formation de l'Alphabet Perse" (in "Journal Asiatique," 7th series, vol. iii., *ib.* 1874). Here, too, belongs his attempt to reconstruct the Persian calendar of the Achæmenian period in his paper, "Der Kalender der Alten Perser" (in "Z. D. M. G." vol. lii., Leipsic, 1898).

In 1869 Oppert was appointed instructor in Assyriology at the Collège de France, and in 1874 he became professor of Assyrian philology and archeology at the same institution. In 1857 appeared his first contribution to this field of learning, the "Etudes Assyriennes," followed three years later by the "Eléments de la Grammaire Assyrienne" (2d ed., Paris, 1868). His labors were by no means confined to Indo-Iranian and Semitics. During his journey to the East he found some inscriptions which he declared were written in a language that had hitherto been unknown. This tongue, which he supposed to belong to the Ural-Altaic group, he called first "Casdo-Scythian" and later "Sumerian." He advanced his theory in his "Ecriture Anarienne" (*ib.* 1855), and asserted also that the entire system of cuneiform writing was Sumerian in origin. His views are summed up in his "Etudes Sumériennes" (*ib.* 1876). In 1856 he published a "Chronologie des Assyriens et des Babyloniens," and in 1865 issued at Versailles his

Contributions to Assyriology.

"Histoire des Empires de Chaldée et d'Assyrie," extending from the settlement of the Semites in Mesopotamia, about 2000 B.C., to the Seleucid period, about 150 B.C.

In Assyriology Oppert devoted himself during this period to historical, juristic, and mythological inscriptions. Although he published many articles on these texts, his only books are the "Fastes de Sargon, Roi d'Assyrie" (2 vols., *ib.* 1863), "Les Inscriptions de Dour-Sarkayan" (*ib.* 1870), and "Documents Juridiques de l'Assyrie et de la Chaldée" (*ib.* 1877), the last prepared in collaboration with Joachim Menant. Not only was Oppert the first to study these texts, but he led the way in the interpretation of the Babylonian contract-tablets, and was also the pioneer in the investigation of the astronomical and astrological inscriptions. He likewise discussed Assyrian measures in his "Etalon des Mésures Assyriennes" (*ib.* 1875).

Biblical Studies.

Oppert's Biblical studies consist in the main of brief papers (all published in Paris), such as the "Commentaire Historique et Philologique du Livre d'Esther" (1864), "Le Livre de Judith" (1865), "La Chronologie Biblique Fixée par les Eclipses des Inscriptions Cunéiformes" (1869), "Salomon et Ses Successeurs" (1877), and "La Chronologie de la Genèse" (1877).

In 1876 Oppert turned his attention to the language now usually called "New Susian," and which he termed "Median." The result of his study was embodied in his work entitled "Le Peuple et la Langue des Mèdes" (1879).

The influence of Oppert on Semitic scholarship has been profound. His services have not been unrecognized. On March 18, 1881, he was made a member of the Académie des Inscriptions et des Belles-Lettres, succeeding the Egyptologist Mariette; in 1890 he became vice-president; and in the following year he was elected president.

Oppert's writings are very numerous, comprising, up to the end of 1902, 427 titles. They are for the most part comparatively brief articles in various learned periodicals, mainly French, but occasionally German and English. In cooperation with Ledrain he founded in 1881 and edited the "Revue d'Assyriologie," and on the foundation of the "Zeitschrift für Assyriologie" by Bezold, in 1886, he became one of its contributing editors.

Oppert has always taken great interest in Jewish affairs, and throughout his residence in France has been associated with students of Jewish history, literature, and archeology. He has been an active collaborator on the "Revue des Etudes Juives"; he was a charter member of the administrative board of the Société des Etudes Juives, and is now (1904) its president. Since 1876 he has been a member of the Central Committee of the Alliance Israélite Universelle, and he is at present one of its vice-presidents, besides being a member of the Central Consistory of the Jews of France.

OPTIMISM AND PESSIMISM:

Philosophical and theological systems according to which this world and human life are considered as essentially good or essentially evil. Plato, Cicero, Thomas Aquinas, Nicolaus Cusanus, and especially Leibnitz, Wolf, and Mendelssohn, are among the exponents of optimism, while Buddhism may be said to be the religion of pessimism and Schopenhauer's system its philosophical exposition.

Judaism must be said to be fundamentally optimistic. Gen. i. proclaims that all that God made was good, very good. Man alone of all creatures is not so described. He is endowed with the freedom to choose evil or good. Hence the evils of life are not inherent in the nature of things, but are consequent upon man's conduct. This is the theory worked out in Gen. ii. These two basic concepts—the essential goodness of Creation and man's moral liberty, in which is involved his freedom to sin and thus to bring upon himself both physical and moral suffering as the wage of sin—recur, though in various forms, in the successive developments of Jewish thought. According to this theory happiness and goodness must be coincident. This simple faith was rudely shaken by abundant observation of both public and private experiences to the contrary (Hab. i. 3-4; Isa. xlix. 4; Jer. xii. 1-3; Mal. ii. 17, iii. 13-15; Ps. xliv. and lxxiii.; comp. Ber. 7a). The Messianic hope, however, or the ultimate manifestation of the all-harmonizing retributive power of God, was urged as the solution of the perplexity (Ps. xxxvii. 10-22, xcii. 13-16; Isa. ii. 2-4, xi. 9; Mal. iii. 18, iv. 1-3). It is characteristic of these Biblical attempts at a theodicy that no reference is made to retribution or recompense in the hereafter (but see Ibn Ezra on Ps. lxxiii.).

Job and Ecclesiastes.

The Book of Job is devoted to an exposition of the problem. The poem positively rejects the equation between suffering and sin, but has no explanation to offer for the often unhappy lot of the righteous. Moreover, the vanity of human life finds frequent enunciation (Job vii. 1-9, xiv. 1-2), a thought which is also a favorite theme of the Psalms (lxii. 10, lxxxix. 45 *et seq.*, xc. 9-10). This idea is dominant in Ecclesiastes—a work of post-exilic origin, and it is by no means clearly established that its author points to divine retribution in the hereafter as the solution of the problem (comp. iii. 17, xii. 7). Yet, even in Ecclesiastes optimism is not silent; the world is good even if life is vain (iii. 11; comp. Shab. 30b).

During and after the Exile the idea of immortality led to a modification of the relations between optimism and pessimism. In Ecclesiasticus (Sirach), for example, a practical pessimism is joined to the fundamentally optimistic assurance that ultimately harmony will result. Moral evil is not caused by God, but is involved in man's freedom (x. 21-22, xv. 14 *et seq.*). Physical evil is purposed by God for the undoing of the wicked (ii. 5, xi. 14, xxxix. 33-36). Yet God's work is good (xxxix. 33 *et seq.*).

Optimism is the fundamental note in Philo's theology. God's goodness is more original than His power. Evil originates in matter, which, he declares, is not created by God. See PHILO.

The question of life's worth and the inherent value of the world as it confronted post-Biblical Judaism under the stress of persecution and suffering had not merely a speculative interest. The contrast between the other-worldliness of the nascent Church and that of the Synagogue is significant for the latter's optimism. Of discussions on the problem of life's value only those between the schools of Hillel and Shammai have been reported ('Er. 13b). The conclusion is given that, abstractly, it would have been better for man not to have been born; but as he has life he should strive after moral perfection.

In the Talmud.

In the darkest days of national or individual affliction the Jews sought and found solace in the study of the Law, which they made the one abiding aim and interest of life. Nahum of Gimzo's motto, "Gam zu le-ṭobah," is characteristic of the irrepressible optimism of the Jewish world-conception (Ta'an. 21a). That the future will bring about a compensating readjustment of present ills is the conviction of such books as the Apocalypse of Baruk (comp. ch. xiv.) and the Fourth Book of Ezra (iii., iv. 2 *et seq.*, and especially vi. 6, vii. 1 *et seq.*, 15–16), while the Book of Tobit argues that evil, in truth, is unreal and always turns out to be good for the righteous.

R. Akiba's contention that whatever God does is done for good (Ber. 60b) may be said to be the summing up of what was Israel's belief in his time. Suffering is disciplinary (Sifre, Deut. 32; Ber. 5b); "Man must bless God for evil as well as for good" (Ber. 54a, 60b). R. Meïr advances the same doctrine (Ber. 60b, "ṭob me'od" = "ha-mawet"; Gen. R. ix.). This position may be said to be that of the medieval Synagogue. The Messianic hope and the belief that divine judgment will bring about justice "in the world to be," giving to its doctrine the character of transcendental optimism, though practical pessimism in view of life's deceptiveness (Eccl. R. ii.; Ber. 61b; *et al.*), is never altogether absent.

Among the Medieval Philosophers.

Among the Jewish philosophers this optimism reappears as the theme of argumentation and demonstration. Saadia argues that evil is negative as far as God is concerned; it arises from man's liberty ("Emunot we-De'ot," ii.). This life is incomplete (*ib.* x.). Hence evil is a mighty lever to influence man to strive after the completer, purer life (*ib.* vi., ix.). Suffering may be the consequence of sin, but it may also be disciplinary (*ib.* v.). The seeming prosperity of the wicked is not an argument against God's justice or His goodness. On the contrary, God is long-suffering, and even rewards the wicked for any good deeds he may have done. Saadia's theodicy culminates in the doctrine of future retribution.

Joseph ben Jacob ibn Ẓaddiḳ inclines toward pessimism. He denies teleological intentions to be determinant of Creation. Evil is caused by God, though Creation is an emanation from God's goodness. But evil is disciplinary. Still, he who takes cognizance of this world must hate and despise it and strive for that (other) world which is of eternal duration. For good is something exceptional in this world; this world is only endurable as preliminary to another and a better (see his "'Olam Ḳaṭan," *passim*).

Judah ha-Levi, in his "Cuzari," states very clearly the difficulties of the optimistic view (comp. iii., § 11, for instance), but he takes refuge in the direct statement of revelation that God's doings are perfect. Human mental limitations are at the bottom of the assumed imperfections in God's work (v., § 20). The fulfilment of God's Law is Israel's destiny. In this, life's contrasts will be adjusted. This life, if well lived, prepares for the higher world.

Abraham ibn Daud proceeds from the position that evil can not originate in God ("Emunah Ramah," Introduction). God is not, like man, a composite being. As a composite being man is able to do both good and evil, but good issues from reason and evil from desire or passion. The simplicity of God precludes His being the source of two antithetical forces; He can produce only the good. Evil in the world is due to matter, which is antipodal to God. But as matter is largely the negative principle, so in evil inheres for the most part no positive quality. Negations are; they are not produced. Hence God, the Creator, has no share in the being of evil. Moreover, the proportion of evil to good in Creation is so small as scarcely to be worth noticing; and even as such, evil proves to be but good in disguise (see "Emunah Ramah," *passim*).

Views of Maimonides.

Maimonides also contends that from God only the perfect can emanate. Evil is caused by matter, and as such it is privative, not positive. Evil is found only in sublunar things and is always accidental. Man's soul is free from evil. How far this ascription of evil to matter serves to establish a theodicy depends upon the view taken of matter. If it, too, is ultimately the work of the Creator (and this is Maimonides' opinion), evil still is the creation of God. Another difficulty is apparent. Metaphysically evil may be nonentity, a privative negation; but physically it is fraught with suffering. Even so, according to Maimonides, evil is an infinitesimal quantity compared with the preponderating good in the world ("Moreh," iii. 12); and, besides, moral evil, rooted in the freedom of man, is the parent of most of the physical ills, but it is bound to diminish in measure as the active reason is put in control; and this ever-enlarging dominion of reason is preordained in the nature of things. The deeper the wisdom of men becomes, the less ardent will be their (foolish) desires; and wisdom is as inherent in man as the power to see in the eye. With the wider and fuller spread of truth, hatred and discord will vanish from among men (*ib.* iii. 11). Man is only a small part of the universe, not its main and only end. Even if it were proved that in human life evil and suffering exceed the good, this would not demonstrate the essential evilness of Creation. Most ills to which man is heir are either beneficial to his race or are directly traceable to his own conduct, and therefore are accidental and avoidable.

In Crescas' system evil is not regarded as something negative. It is apprehended as real, but still relative, that is, as something which, from the higher point of view, is seen to be good. Later Jewish thinkers have added but little to the elucidation of the problem. In modern theological literature the question has not been extensively discussed. Samuel Hirsch ("Catechismus," p. 100) contends that, in reality, evil has only the power to deceive and destroy itself, while the physical or moral suffering entailed by evil on the doer or on others is to be regarded as probationary and disciplinary. Man's relation to things decides their characterization as "evil" or "good." For the righteous even pain is a blessing.

Judaism, therefore, never advised passive resignation, or the abandonment of and withdrawal from the world. It rejects the theory that the root of life is evil, or that man and life and the world are corrupt as a consequence of original sin. Its optimism is apparent in its faith in the slow but certain uplifting of mankind, in the ultimate triumph of justice over injustice, and in the certain coming of a Messianic age.

OR TORAH. See Periodicals.

ORABUENA (מזל טוב): Spanish family; flourished in Navarre in the fourteenth and fifteenth centuries. Many of its members were rabbis or tax-lessees. Another family, very likely related, has the similar name of **Buenahora.**

Judah Orabuena: Son of D. Juze Orabuena. His father appointed him his successor in the rabbinate in 1408. Like his father, he stood high in the favor of the king. He was the frequent companion of Charles III., from whom he received 200 "libras" yearly. Nothing further is known of him.

Judah b. Samuel Orabuena: Rabbi in Tudela in 1348 (with Yom-Ṭob ben Jonah Abbas). Judah b. Samuel and Vitas Benjamin, in the name of the aljama, assumed, in Jan., 1350, the responsibility of raising the sum due for taxes from 1346 to 1349.

Bibliography: Judah ben Asher, *Zikron Yehudah*, Responsa, No. 81; Jacobs, *Sources*, No. 1420.

Juze (Joseph) Orabuena: Chief rabbi of Navarre and physician and adviser to the king; born in Tudela toward the middle of the fourteenth century. He studied Talmud, and was practising medicine in Estella in 1385. Two years later the king recognized the value of his services by conferring upon him the title of "Maestre J. O. Fisico" and settling upon him a yearly salary and a pension of 50 "libras," which amount in 1392 was raised to 150 "libras" for life. As a visible token of appreciation for his services the king gave him, in 1401, several houses in the Jewry of Monreal, together with the courtyard belonging thereto. He supplied the queen and the infanta with rabbit-skins imported from Castile and Germany and bought mules for the king. In conjunction with Judas Levi he farmed the taxes for several years; and when Judas, after his death, was denounced as a heretic, Orabuena brought Ḥasdai Crescas, rabbi in Saragossa, and Maestre Astruc, rabbi in Tudela, to Pamplona, at the expense of the king (1401), to exonerate him. At Orabuena's request the king exempted the Jews of Tudela from their overdue taxes in order that they might repair their synagogue. Orabuena accompanied the king in 1408 to France; he was still in the service of the king as physician in 1413. In the latter year the king presented 50 "libras" to Orabuena's daughter Sorbellida (wife of the receiver-general Abraham Euxep, or Euxæp, in Estella).

Other members of this family were: **Isaac (Acah) Orabuena** (president of the community of Tudela in 1367); another **Isaac Orabuena** (tax-farmer in Tudela; still living in 1450); **Abraham Orabuena; Moses Orabuena; R. Solomon Orabuena** (provided the court with pine-trees from Castile).

ORAH ḤAYYIM. See Caro, Joseph.

ORAL LAW (תורה שבעל פה): Term used to denote the laws and statutes which, in addition to the Pentateuch, God gave to Moses. According to the rabbinical interpretation of Ex. xxxiv. 27, the words על פי indicate that besides the written law —תורה שבכתב—God gave orally to Moses other laws and maxims, as well as verbal explanations of the written law, enjoining him not to record these teachings, but to deliver them to the people by word of mouth (Giṭ. 60b; Yer. Meg. iv. 74a; comp. also IV Ezra [II Esdras] xiv.). The expression "Torah shebe-'al peh" denotes, therefore, "the law indicated in the word ''al peh,'" and hence only the law which was given to Moses orally. But even disregarding that Talmudic interpretation, the expression is equivalent to the Torah, which was given orally (על פה), not in writing. Compare קורא על פה (Soṭah vii. 7), used of a recitation of the Biblical text by rote. In a wider sense, however, "Torah shebe-'al peh" includes all the interpretations and conclusions which the scribes deduced from the written Torah, as well as the regulations instituted by them (comp. Yoma 28a, b and Rashi *ad loc.*), and therefore comprises the entire traditional teaching contained in the Mishnah, the Tosefta, and the halakic midrashim, since these were taught only orally and were not committed to writing. In later haggadic statements, however, the complete body of rabbinical doctrine is said to have been revealed to Moses on Sinai; so that R. Joshua b. Levi declared (Yer. Peah ii. 17a) that all the rabbinical teachings, even those which the scholars found and promulgated later, were given to Moses on the mountain (comp. also Ber. 5a).

Meaning.

These passages, on the other hand, are by no means intended to be taken literally, or to be supposed to imply that God imparted to Moses the entire rabbinical teachings as they were developed in the course of time; since the forty days which Moses spent on Sinai would not have been sufficient, and the Midrash itself says (Ex. R. xli.) that the full extent of the rabbinical teachings was revealed to Moses in outline by giving him the rules according to which they might be developed. In conformity with this statement, the substance of these teachings either was deduced from the written law by means of exegetical interpretations and logical conclusions —being therefore contained by implication in the written law and so given to Moses—or it consisted of statutes which the Rabbis promulgated according to their own judgment, as they were justified in doing according to the traditional interpretation of Deut. xvii. 10–11 (comp. Sifre, Deut. 153–154 [ed. Friedmann, pp. 104b–105a]), since Moses had thus provided for such contingencies.

Terminology.

The earliest name for the oral teachings was "miẓwat zeḳenim" (Suk. 46a). In the New Testament it is called *παραδόσεις τῶν πρεσβυτέρων*, and by Josephus and Philo *παράδοσις ἄγραφος τῶν πατέρων διαδοχή*. After the destruction of the Temple the term Mishnah, the *δευτέρωσις* of the Church Fathers, was employed instead; the phrase "Torah shebe-'al peh" (see Sifre 112c [ed. Weiss]; Sifre, Deut. xxxvii. 10, 145a [ed. Friedmann]) is found already in the time of the Tannaim, and is also ascribed to Shammai and Hillel (Shab. 31a), the words "shebe-'al peh" in this passage being a later addition made to explain the expression "shete torot" (two laws). Shammai and Hillel were the first to speak of the written and the oral law as equally authoritative (*ib.*). This is illustrated by the episode between Hillel and the Bene Bathyra (Yer. Pes. vi. 33a), who would not at first admit Hillel's arguments that it was permitted to desecrate the Sabbath by the Passover sacrifice, although they submitted as soon as he said: "Kak shama'ti" (= "It has been transmitted to me"). This story, as well as the phrase "im ḳabbalah neḳabbel" (= "if it is a tradition, we must accept it"), which occurs frequently in the halakic midrashim, shows that even though no explicit reference to such law outside of and in addition to the Pentateuch is found anywhere in the prophetic or the hagiographic books of the Old Testament, the belief in the existence of an oral law was widely accepted, and was not rejected by any scholar. This belief is also mentioned in Sifre, Deut. 4 (ed. Friedmann, 66b), and by R. Akiba in Men. 29b, while, according to the generally accepted explanation, the Mishnah Abot i. 1 indicates the successive traditioners of the oral law.

Necessary Supplement.

The existence of an oral law was deduced, furthermore, from the character of the written law as well as of the other books of the Old Testament. Many of the Mosaic laws are worded very briefly, and are almost unintelligible without certain presuppositions which were assumed to be generally held; and some of the laws even contradict each other, *e.g.*, Ex. xiii. 6 and Deut. xvi. 8 (comp. Mek., Bo, 17 [ed. Weiss, p. 25a]). If the written Torah is regarded as a complete code, it must be assumed that on certain points of some of the laws the people received instruction supplementing the Pentateuch itself, so that the written law might be put into a brief form. Thus Judah ha-Nasi infers (Ḥul. 28a) from the sentence "Thou shalt slaughter" ("we-zabaḥta"; Deut. xii. 21), in which is no reference to any description of the ritual connected with slaughtering, that God taught Moses orally the place and method of the act. This proof of Judah ha-Nasi's of the existence of an oral tradition regarding the ritual of slaughtering was generally but erroneously interpreted as though he had inferred from "ka-asher ẓiwitika" (= "as I have commanded thee"), the words following "we-zabaḥta," that God verbally instructed Moses how to slaughter. This proof was, therefore, attacked on the ground that the words "as I have commanded thee" refer to *ib.* xii. 15. Judah ha-Nasi actually drew his inference, however, merely from the words "we-zabaḥta," since the term "slaughter" implies a certain ritual in the performance; and as this was not given to Moses in writing it must have been given to him by word of mouth. The following examples of Mosaic laws are held to require some explanation or supplement not given in the written law, and consequently to presuppose the existence of an oral law to furnish the explanation or supplement in question.

Judah ha-Nasi and Oral Tradition.

Biblical Examples.

The law given in Ex. xviii. 2 says that a Hebrew slave acquired by any person shall serve for six years; but it does not state why and how such a slave may be acquired. The law furthermore provides that if such a slave has served for six years, his wife, if he has one, shall go free with him; but it does not state that the wife of the slave accompanies him to his master's house, nor does it define her relation to the master. The law in Deut. xxiv. 1 *et seq.* says that if a man dismisses his wife with a bill of divorce ("sefer keritut"), and she marries again but is dismissed with a bill of divorce by her second husband also, the first husband may not remarry her. The fact that a woman may be divorced by such a bill has not, however, been mentioned, nor is it stated how she is divorced by means of the "sefer keritut," or what this document should contain, although it must have had a certain form and wording, though possibly not that of the later "geṭ." These examples, to which many more might be added, are held to imply that in addition to and side by side with the written law there were other laws and statutes which served to define and supplement it, and that, assuming these to be known, the written law did not go into details. It appears from the other books of the Old Testament also that certain traditional laws were considered to have been given by God, although they are not mentioned in the Pentateuch. Jeremiah says to the people (Jer. xvii. 21–22): "Bear no burden on the Sabbath day, nor bring it in by the gates of Jerusalem; neither carry forth a burden out of your houses on the Sabbath day, neither do ye any work, but hallow ye the Sabbath day, as I commanded your fathers." In the Pentateuch, on the other hand, there is only the interdiction against work in general (Ex. xx. 9–11); nor is it stated anywhere in the Torah that no burdens shall be carried on the Sabbath, while Jeremiah says that the bearing of burdens, as well as all other work, was forbidden to the fathers. It is clear, furthermore, from Amos viii. 5, that no business was done on the Sabbath, and in Neh. x. 30–32 this prohibition, like the interdiction against intermarrying with the heathen, is designated as a commandment of God, although only the latter is found in the Pentateuch (Deut. vii. 3), while there is no reference to the former. Since the interdictions against carrying burdens and doing business on the Sabbath were regarded as divine laws, although not mentioned in the Pentateuch, it is inferred that there was also a second code.

Objections to Its Existence.

The existence of an oral law dating from the Mosaic time implies, of course, the belief that the Pentateuch, in the form in which it now exists, was entirely the work of Moses, to whom it was revealed by God. That an oral law has existed since the Mosaic time can be denied only from the point of view of modern Biblical criticism (for the views of Reform Judaism on the Oral Law see Reform). Objections, on the other hand, which are brought against the assumption of the existence of the oral law by those who believe in revelation and who recognize the divine origin of the written law, or "Torah shebi-ketab," lack support. The chief argument against the oral law is based on Deut. iv. 2: "Ye shall not add to the word which I command you, neither shall ye diminish aught from it, that ye may keep the commandments of the Lord your God which I command you." Those who deny the existence of the oral law refer the phrase "the commandments which I command you" to the written law only, which is, therefore, designated by this passage as a complete code needing no amplification and admitting no diminution, whence the conclusion is deduced that there was no oral law in ancient times, since the written law precluded its existence. On the other hand it is held that the phrase "the commandments which I command you" does not necessarily exclude oral laws and statutes.

Sinaitic Commands.

Moreover, the interdiction against adding to the law was directed only against individuals, not against the Sanhedrin or the judges, who were expressly empowered (Deut. xvii. 9–11) to expound and interpret the laws and to make new statutes; for the Sanhedrin or any other court would formulate their decisions only after examining the traditions preserved among the people and in conformity with certain logical and hermeneutic rules deduced from Scripture. Nor are the other arguments against the existence of the oral law valid in view of the fact that a denial of it necessarily leads to a denial of the divine origin of the written law; since the latter must appear defective in great part unless supplemented by the former—a view which is incompatible with the assumption of its divine origin. The arguments in favor of the Mosaic origin of the oral law, however, merely prove that certain traditions and verbal regulations were current among the people or their elders and scribes from the time of Moses, although the identity of the traditions and statutes derived from Moses on Sinai, and which are scattered through the Mishnah and the halakic midrashim (Yer. Peah ii. 17a), is unknown, and there is no reliable account or trustworthy criterion to separate and distinguish the Mosaic requirements from the great mass of the oral law in the wider sense. While it is true that the Mishnah and the Talmud contain many sentences called "halakot le-Mosheh mi Sinai" (= "oral laws revealed to Moses on Sinai"), some of which may really be based on Mosaic tradition, yet there is no proof of the accuracy of this terminology. The phrase "halakah le-Mosheh mi Sinai" must not be taken literally, since many of the halakot thus designated are admittedly later rabbinical statutes. The expression merely indicates, as Asher b. Jehiel explains in "Hilkot Miḳwa'ot," 1, that the halakot in question are as clear and as generally recognized as if they were derived from Moses on Sinai (comp. Jair Ḥayyim Bacharach in his responsa "Ḥawwot Yair," No. 192), while, according to R. Samuel (Tem. 16a), many of the halakot which Moses had taught orally were forgotten, and were never transmitted to later generations. In like manner the observances designated in the Talmud as "taḳḳanot" derived from Moses can not be definitely ascribed to him, and many of them are stated by the casuists to be rabbinical regulations. The phrase "Mosheh tiḳḳen" (= "Moses established") does not mean that Moses instituted or introduced the usage in question, and then transmitted it to the people by word of mouth, but that, as the "Pene Mosheh" to Yer. Ket. i. 5, 25a explains, some allusions are found in the Pentateuch concerning certain regulations which may, on the strength of these allusions, be ascribed to Moses (comp. M. Bloch, "Die Institutionen des Judentums," i. 1–53).

Contents of Oral Law.

The substance of the "Torah shebe-ʿal peh" in the wider sense, as found in the Mishnah, in the Tosefta, and in the halakic midrashim, may be divided into the following eight groups:

(1) Explanations of certain statutes of the written law, which are not altogether intelligible without them, and which statutes therefore presuppose an oral interpretation. Such explanations admit of being connected in some artificial way with Scripture.

(2) Ancient halakot which have no connection whatever with Scripture and can not be connected with it, thus deriving their authority only from the tradition which ascribes them to Moses on Sinai. In the case of these two groups it is impossible to ascertain which elucidations and rules were really given to Moses on Sinai, and which were added later. The criterion of Maimonides, that all interpretations and statutes which never evoked divergent opinions are Sinaitic in origin, is correct only in a negative sense. Those explanations and regulations which have been interpreted in various ways are certainly not Sinaitic; but, on the other hand, many interpretations and statutes which are accepted unanimously and generally are equally non-Sinaitic in origin, since they are rabbinical institutions and laws which have never been explained divergently (comp. Ẓebi Hirsch Chajes, "Mebo ha-Talmud," pp. 10b *et seq.*).

(3) Halakot found in the prophetic books. Some of these originated at the time of the Prophets; but others are much older, and are, perhaps, even Sinaitic, having been transmitted orally, and committed to writing by the Prophets (comp. Sanh. 22b). They are called also "Dibre Ḳabbalah" (Words of Tradition).

(4) Interpretations and regulations defining many written laws, as well as new halakot, which the first scribes, beginning with the time of Ezra, formulated. They are called also "Dibre Soferim" (Words of the Soferim).

(5) Interpretations and regulations covering the written law, as well as new halakot, which the Tannaim deduced from Scripture by means of hermeneutic rules or by logical conclusions. There are differences of opinion among the scholars in regard to most of these explanations and definitions; but they are of equal weight with the written law, and are called also "Debar Torah" (Regulation of the Torah).

(6) Customs and observances ("taḳḳanot") which were introduced at various times by different scholars. They are ascribed partly to Moses, partly to Joshua, but chiefly to the members of the Great Synagogue or the Soferim, and are called also "Dibre Soferim."

(7) Statutes and decisions ("gezerot") decreed by the Sanhedrin or court, and generally accepted, thus becoming laws which could be abrogated only by another court superior to the first one in numbers and scholarship.

(8) Statutes and regulations for which the scholars had no tradition or allusion in Scripture, but which they accepted as standards after deriving them from the customs and laws of the country in which they were living. These are called "Hilkot Medinah" (Statutes of the Country). The regulations, observances, and statutes included in the last three groups were not considered equal in validity to the written law, but were regarded merely as rabbinical regulations ("de-rabbanan").

Objection to Writing.

The entire oral law in the wider sense, namely, the entire material of the Mishnah, the Tosefta, and the halakic midrashim, was preserved only orally, and was not reduced to writing until the beginning of the third century C.E., because there was a prejudice against recording halakot. The origin of this objection is unknown. There has never been any formal interdiction against recording halakot, nor are there any references to any date of such a prohibition or to any person who issued one. Even the two Talmudic passages which allude to the custom of not recording halakot do not mention a formal interdiction. One of these passages, the comment of Judah b. Naḥmani, "What has been said orally thou mayest not say in writing, and vice versa" (Giṭ. 60b and parallel passages), is merely a haggadic explanation of the prevailing custom. If this interpretation had been taken literally, the Prophets would not have been allowed to commit their prophecies to writing (comp. Weiss, "Dor," i. 92 *et seq.*). The second passage, which is by R. Johanan and reads as follows: "He who records halakot is like him who burns the Torah; and whosoever studies these written collections has no reward" (Tem. 14b), is merely a reproof directed against those who make such compilations for public use. As the MISHNAH had been committed to writing by the time of R. Johanan (199-279), there could be no question of a prohibition against recording halakot.

It may be proved also that halakot were committed to writing even before the time of Judah ha-Nasi. In addition to "Megillat Ta'anit," which is mentioned in 'Er. 62b and elsewhere, and "Megillat Yuḥasin," which is mentioned by Ben 'Azzai (Yeb. 49b), Johanan b. Nuri, a contemporary of R. Akiba, mentions a "Megillat Sammanim," which was a list of the spices used for the incense and had been given to him by an old man (Yer. Sheḳ. v. 49a). R. Meïr and R. Nathan, wishing to embarrass R. Simon b. Gamaliel, wrote halakic questions and answers on slips of paper which they threw into the academy (Hor. 13b). It is evident, therefore, that it was merely customary not to commit halakot to writing, this usage, which was not a formal prohibition, possibly being derived from Eccl. xii. 12. Various other explanations have been given for the origin of this prejudice, the earliest one being that in Tan., Ki Tissa (ed. Buber, pp. 58b-59a), which is implied in IV Ezra xiv. According to this passage, the Mishnah, the Tosefta, and the halakic midrashim were not committed to writing originally, in order that they might remain the peculiar property of Israel; for had they been recorded, other nations would have appropriated them as they appropriated the written Torah (through translations), and Israel would in that case have been like the Gentiles (comp. Yer. Peah ii. 17a).

According to more recent explanations (Krochmal, "Moreh Nebuke ha-Zeman"; Weiss, *l.c.*), the scribes were unwilling to record their elucidations and regulations because they depended largely on the interpretation and approval of the court (bet din); but if they had been committed to writing, they would have become fixed and definite laws without such interpretation. See SINAITIC COMMANDMENTS.

ORALES. See BADGE.

ORAN (Arabic and Hebrew, **Wahran**): Capital of the department which forms the western part of the French colony of Algeria; situated at the head of a bay on the Mediterranean. There are no records concerning the date of settlement of Jews there, but since the city was a center of commerce in the tenth century it may be supposed that Jews had been attracted to it earlier. Like all the Jews of Mauretania, those of Oran suffered many vicissitudes of fortune during the dominion of the Arabs; fairly treated by the dynasties of the Aghlabites and Almoravides, they were cruelly persecuted by the fanatical Almohades, so much so that many emigrated to the East, while many others embraced Islam. In 1509 Oran fell into the hands of the Spaniards, who seem to have allowed the Jews to remain, if not in the city itself, at least in the immediate neighborhood; in 1679, however, the Jews were banished from the province.

In 1792 the Spaniards were finally dispossessed, and Bey Mohammed al-Kabir invited the Jews of Tlemçen, Mostaganem, Mascara, and Nedroma to settle in Oran. On condition of the payment of certain taxes and of building within fixed limits he conceded to them a piece of land between which is now the Château-Neuf and Fort Saint-André. This concession, which was not committed to writing until 1801, was made to Ald Jacob, Jonah ben David, and Amram. The community was soon augmented by the arrival of new settlers from Morocco, Gibraltar, and Algiers, who gave a new impulse to the export of corn and cattle, the chief articles of the trade carried on by the Jews of Oran. They had correspondents at Malaga, Carthagena, Almeria, and Gibraltar, and, owing to their foreign connections, some of them were employed by the bey as commercial and diplomatic agents. The soul of the new community was Mordecai Darmon, the author of the homiletic work "Ma'amar Mordekai" (Leghorn, 1787), who had enjoyed the bey's confidence before the conquest of Oran.

The year 1805 was an unfortunate one for the community. A rebellious Marabout, who had maltreated the Jews of Mascara, threatened the city, and numerous families sought refuge at Algiers. The Napoleonic wars, too, affected the community of Oran, which was divided between the adversaries and friends of France. Among the latter was a Jewess named Jaminah, who, being a favorite of Bey Mohammed, caused him to restore to France a brig which had been seized by the English and which happened to be in 1810 in the Bay of Oran. In 1813 Jaminah and her sons Joseph (comtador to the bey) and Saadia were burned alive by the dey of Algiers for participation in the rebellion of Mohammed against the central government.

In common with all Algerian communities, that of Oran was governed by a "muḳaddam," who was assisted by a council ("ṭobe ha-'ir"). Since the French conquest of Algeria the system of consistories has been introduced, and Oran has become the seat of a consistory having at its head a grand rabbi and a president. The successive consistorial rabbis were: L. Cahen, Charleville, Isaac Bloch, and Moses Netter. Oran has its own ritual (Maḥzor Wahran; see MAḤZOR). The total population of Oran is 74,510, of whom about 16,000 are Jews.

ORANGE: Chief town of the department of Vaucluse, France; until 1702 capital of the small independent principality of the same name. The earliest documents relating to the settlement of Jews in Orange date from the fourteenth century. Accused of usury and dissolute conduct, they were penalized by heavy laws, were forbidden to bear witness against Christians without the prince's mandate, and were excluded from office, besides being heavily taxed and compelled to furnish six men for the town guard ("Archives Municipales d'Orange," A A i., and B B, fols. 81, 82). In 1477 they were excluded from the wheat traffic. Despite a demand for their expulsion (*ib.* B B, 7, fol. 68), the Jews were favored by the prince, to whom they paid an annual tax of 300 crowns (*ib.* G G, fol. 50). After reiterated demands on the part of the municipality for their expulsion the prince offered to consent if the city would take upon itself the Jew tax. This was at first refused; but on the influx of persecuted Jews from other countries the municipality consented to pay 300 crowns a year. Thereupon the Jews were banished (April 20, 1505) by the regent Philibert of Luxemburg, at the instigation of the bishop. They, however, received two months' grace, and those who accepted baptism were permitted to remain (*ib.*). Economic crises rapidly followed; and from 1550 to 1556 negotiations for the return of the Jews were carried on, but without result (*ib.* B B 12, fol. 281; 14, fols. 36, 38; 15, fols. 104 *et seq.*).

The lamentable condition into which the country had fallen compelled the municipality in 1669 to authorize the return of a limited number of Jews (*ib.* 17, fol. 50); and it was decided to obtain permission for the construction and occupation of 200 Jewish houses (*ib.* 17, fol. 60). In June, 1687, the Jews were again expelled. Some, who appear to have escaped expulsion, were driven out in 1703; but in 1720 three families which still remained were protected against the demands of the council by the Comte de Médavy. In revenge the council ordered these Jews to wear yellow hats "under penalty of having their beards shaved" (*ib.* fol. 38).

There are now (1904) about twenty Jewish families in Orange, in a total population of 9,980.

ORDEAL: A form of judicial trial wherein supernatural aid was invoked in place of evidence; an appeal to the immediate judgment of God. The ordeal (Anglo-Saxon, "ordel" = "judgment") was widely disseminated among the Aryan peoples. It still flourishes among the Indians, and it continues to live also in the superstitious imaginations of the peoples of Europe. During the Middle Ages it was sanctioned by both church and state; indeed, special liturgical formularies were drawn up for its application. In those dark centuries this absurd ceremony, variously termed trial by the cross, the communion, fire, water, etc., took the form of actual orgies (Patetta, "Le Ordalie," 1890; Rocca, "I Giudizi di Dio," 1904; Herzog-Hauck, "Real-Encyc." vii. 33-35; Meyer, "Der Aberglaube des Mittelalters," p. 230, and elsewhere; Wuttke, "Deutsche Aberglaube," Index). The "judicium Dei" was encountered not only among the Aryans, but also among other peoples (see Tylor, "Primitive Culture," Index; an example from New York is given in the German ed. i. 85); and traces of it are to be found in the history of ancient Israel and of its descendants, the Jewish people.

Some maintain that an ordeal is referred to in Ex. xxii. 8, 10. More correct would it be to regard the curse which makes a thief confess (Judges xvii. 2; comp. Lev. v. 1) as some form of ordeal, as ordeals generally were employed for the discovery of thieves (comp. sieve and shears oracle in Tylor, *l.c.* German ed., i. 127; praying in the words of Ps. xvi. and cix. to this end in Meyer, *l.c.*; Wuttke, *l.c.* § 307). However, the real characteristics of the ordeal are manifest only in the method practised in the case of the woman suspected of adultery, described in Num. v. 11-31 (see Jew. Encyc. i. 217b, *s.v.* Adultery). This form of ordeal was actually practised (Ber. 63a and parallels). The chiefs of the Sanhedrin administered the bitter water to female proselytes and liberated female slaves also ('Eduy. v. 6 and parallels); a separate place in the Temple, the doorway of the gate of Nicanor, was designated for the trial (Soṭah i. 5); and it was held in public (*ib.* 8). The characteristics of the ordeal are manifested in its twofold nature: (1) it was efficacious only when the husband was innocent, acting simultaneously upon the adulterer and the guilty woman (*ib.* ix. 9 and Gemara 47b); and (2) it was applied in doubtful cases only, hence purely as evidence, and solely at the request of the husband (*ib.* iii. 6, iv. 2). It was suspended by Johanan ben Zakkai (60-70), because adulterers became too numerous and it hence lost its ordeal character (*ib.* ix. 4).

The Talmud knows of no other ordeal that was practised officially. Some traces of ordeals, however, are to be found. The conqueror of the Temple observed bubbling blood; and he intended to stop it by the slaughter of human beings. It was, however, the blood of the murdered prophet Zechariah, and it would not be stopped—obviously because the murderers were not among the slaughtered ones (Yer. Ta'an. 69a, below, and parallels; comp. Wuttke, *l.c.* §§ 289, 741). Judah ben Tabbai committed a judicial murder through lack of knowledge of the Law. Thereupon a plaintive voice was heard from the grave of the murdered man (comp. Gen. iv. 10), which the people took to be the voice of the victim. The lamentation ceased after the death of Judah (Mak. 5b, below, and parallels; Wuttke, *l.c.* § 13). A man killed his brother; the mother thereupon took a goblet, filled it with his blood, and put it aside. Every day she saw the blood bubble until, one day, it became still. She then knew that the other son had also been slain (Gen. R. ii. 25; Pesiḳ. R. 24 [ed. Friedmann, p. 124b]).

In the Middle Ages the Jews believed that the wound of the slain would begin to bleed when the murderer approached his victim ("Sefer Ḥasidim," § 1149). Manasseh ben Israel endeavors to prove this from the property of the soul ("Nishmat Ḥayyim," iii. 3). The wound of the slain would bleed when one approached it with a knife to which clung remnants of food (Güdemann, "Gesch." i. 200, note 3). However, the Jews did not make use of this ordeal in judicial proceedings. Trial by water they looked upon as idolatry. Waters utilized for such an ordeal, for this very reason must not be used for the purpose of bathing ("Sefer Ḥasidim," § 439).

The present writer is not aware of the survival of any remnants of the ordeal in the popular belief of the Jews of to-day.

E. C. L. B.

ORDINANCE. See Taḳḳanah.

ORDINATION: Appointment and solemn public dedication to the office of judge and teacher of the Law and to all the functions associated therewith. The custom of ordination is a very ancient one; Joshua was ordained by Moses, who thereby indicated him as his successor (Num. xxvii. 22-23). The ceremony was as follows: Moses placed Joshua before the priest Eleazar and the congregation and laid his hands upon him while giving him instructions. A portion of Moses' spirit was transferred to Joshua through Moses' hands (comp. *ib.* verse 20, and Deut. xxxiv. 9). Moses ordained also the seventy elders who assisted him in governing the people (Num. xi. 16-17, 24-25). It is not expressly stated that the elders were ordained by laying on of hands: it is merely said that some of Moses' spirit was imparted to the elders. This transference of the spirit, however, could take place only by laying on of hands, as appears from the passage Deut. xxxiv. 9. Maimonides says that Moses ordained the elders in the same way as he ordained Joshua ("Yad," Sanhedrin, iv. 1).

The laying on of hands is mentioned nowhere else in the books of the Old Testament. According to tradition the elders ordained by Moses ordained their successors, who in turn ordained others, so that there existed an unbroken series of ordainers and ordained from Moses down to the time of the second Temple ("Yad," *l.c.*).

In the Sanhedrin.

During the time of the second Temple the custom of ordination grew into a regular institution. The various members of the Sanhedrin were dedicated to their office by ordination. This ceremony was considered an especially important one in the latter part of the rule of Alexander Jannæus, when it became desirable to prevent Sadducees from becoming members of the Sanhedrin. At that time only those were admitted to membership in the Sanhedrin who had been dedicated by ordination. Persons so ordained bore the title of "zaḳen" (elder; Sanh. 14a), like the seventy "elders" of Moses (Num. xi. 16). Three rows of scholars always sat before the Sanhedrin, and whenever it became necessary to choose a new member a scholar from the first row was chosen and ordained. Ordination was necessary not only to membership in the Great Sanhedrin, but also to membership in the smaller sanhedrins and in any regular college of judges empowered to decide legal cases. It was decreed at the time of Judah ha-Nasi that any religio-legal decision, including decisions relating to the ceremonial law, could be handed down only by those properly authorized (Sanh. 5b).

The manner of ordination and the person perform-

Mode of Ordination.

ing the ceremony varied at different times. Originally it was customary for each teacher to ordain his own pupils (Yer. Sanh. 19a). The relation between Moses and Joshua was regarded as the prototype of this relation between teacher and pupil. As Joshua was ordained by the hands of Moses resting upon him, so, probably, every pupil was ordained by the hands of his own teacher. The ceremony of ordination derives its name, "semikah," from the custom of the laying on of hands (Tosef., Sanh. i. 1; Ket. 112a). The manner of ordination was subsequently changed, and instead of the laying on of hands the custom was introduced of dedicating the candidate by pronouncing his name. This change seems to be connected with another change, when only the patriarch was empowered to perform the ceremony. Yer. Sanh. 19a says that the original custom for every teacher to ordain his own pupil was abolished, it being decided, as a mark of honor to the patriarchal house, that any ordination performed by the college without the consent of the patriarch was invalid, while the patriarch received the privilege of performing the ceremony without the consent of the college. This occurred after the Bar Kokba war, when affairs in Palestine were in general reorganized, and on the cessation of the Hadrianic persecution, during which ordination was strictly forbidden ('Ab. Zarah 8b; Sanh. 13b–14a).

Confined to the Patriarch.

Simeon b. Gamaliel was the first to receive the privilege of ordaining as an honorary function (comp. Grätz, "Gesch." 3d ed., iv. 453). When the ceremony of ordination became an official prerogative of the Patriarch, the custom of laying on of hands, which had a meaning only where the teacher ordained a pupil, as Moses had ordained Joshua, lost its signification and was abolished. Another cause may have contributed to the abolition of the custom: the dedication of disciples as independent officiants by means of the laying on of hands, and the transference of the office of teacher by this ceremony had been adopted by Christianity; the Apostles laid their hands, while praying, upon the seven disciples elected by the congregation of Jerusalem (Acts vi. 6; comp. *ib.* xiii. 3). As an act dedicating the candidate as a teacher of the Law and recipient of the divine grace the ceremony is mentioned three times in the two Epistles to Timothy (I. v. 22, II. i. 6). The custom, therefore, had become a Christian institution by the middle of the second century, and this fact may have induced the Palestinian Jews to abandon it. At the same time the name was changed, the term "minnuy" (institution, appointment) being substituted for "semikah," or "semikuta," which had been derived from the practise of laying on of hands.

Minnuy.

The term "minnuy" (from the Hebrew verb מנה; Aramaic, מני) really means any kind of installation into an office (comp. Dan. i. 11; I Chron. ix. 29), and so the Temple servants were called "memunnim," while in the vernacular of the Palestinian schools "minnuy" was used especially to designate the ordination of scholars. But in Babylonia the old term continued to be used, "semikuta" here designating the same ceremony as the Palestinian minnuy (Yer. Sanh. 19a). Subsequently another reform was introduced into the ceremony of ordination; the patriarch's right of ordaining was restricted in that the ceremony performed by him was valid only if performed in agreement with a collegiate decision of the court (*ib.*). According to Grätz (*l.c.* iv. 230, 453), this reform was introduced under Judah II., that patriarch being thus restricted in consequence of his abuse of the privilege in ordaining unworthy candidates. But according to Rashi (B. M. 85b, bottom), it was Judah I. who was deprived of the privilege of ordaining without the consent of the college, and who was for this reason unable to ordain Mar Samuel. A list of the persons ordained was kept in a book in the patriarchal house, in which their names were successively entered (Bacher, "Zur Gesch. der Ordination," in "Monatsschrift," xxxviii. 125 *et seq.*; comp. Ket. 112a).

The Ceremony.

The ceremony of ordination was as follows: The candidate wore a special garment on the day of ordination (Lev. R. ii. 4; Pesiḳ. 17a; comp. Sachs, "Beiträge zur Sprach- und Alterthumskunde," i. 87). He was ordained simply by being addressed by the title "Rabbi," receiving at the same time permission to decide religious questions of any kind and to act as judge (Sanh. 13b; "Yad," *l.c.* iv. 2). Then the scholars present praised in rhythmic sentences the person ordained. The following sentence was pronounced at the ordination of R. Zera: "Not rouged, not painted, and not bedecked, but yet full of grace"; at the ordinations of Ammi and Assi: "Ordain for us men like these, not foolish, stupid, and uneducated men" (Ket. 17a; Sanh. 14a). After the ceremony the candidate delivered a public discourse on some subject, as appears from Sanh. 7b.

Degrees of Ordination.

There were different degrees in ordination: the highest degree entitled the person ordained to inspect the firstlings to determine whether any blemish rendered them ritually unfit for sacrifice ("Yad," *l.c.* iv. 8; Sanh. 5a). The next degree entitled the rabbi to decide religious questions and to judge in criminal cases, but not to inspect the firstlings. The next degree entitled the rabbi to decide religious questions and to judge in civil cases, while the lowest degree entitled the rabbi to decide religious questions only ("Yad," *l.c.*). The privileges of ordination might also be limited to a certain time ("Yad," *l.c.* iv. 9; Sanh. 5b). An absent candidate could be ordained in writing ("Yad," *l.c.* iv. 6); but both the candidate and the rabbi ordaining him had to be in Palestine, since the ceremony could take place only in the Holy Land (Sanh. 14a; "Yad," *l.c.*). The ordination, performed in the Holy Land, privileged the recipient to exercise his functions as rabbi outside as well as within that country (*ib.*). The practise of ordaining ceased in Palestine when the Judean academies were closed. According to Naḥmanides (in his notes to Maimonides, "Sefer ha-Miẓwot," No. 153), the ceremony of ordination was abolished prior to the determination of the Jewish calendar by Hillel II. (361 C.E.), who was induced thereby to undertake that work. For after it had been abolished there would soon have been no college entitled to determine the calendar, and hence later generations would have been without an authoritative mode of reckoning.

In 1538 the ceremony of ordination was for a short time restored in Palestine by Jacob Berab. He justified his action by the statement of Maimonides (*l.c.* iv. 11) that if the wise men of Palestine agree to ordain one of their number they are entitled to do so, and that the person so ordained is privileged to ordain others. As Safed was at that time the largest community in Palestine, the Talmudists there were in a position to reintroduce the Sanhedrinic dignity.

Attempt to Revive Ordination.

Twenty-five officiating and non-officiating rabbis convened at the instance of Berab, whom they ordained as chief rabbi. In a discourse Berab established the legality of this step upon Talmudic principles and refuted all possible objections to it. Thereupon various Palestinian Talmudists in the other communities gave their consent to the innovation. Berab then undertook to restore the Sanhedrin, ordaining four other rabbis and Talmudists, including Joseph Caro and Moses di Trani. But as Berab had neglected to obtain the consent of the rabbinical college of Jerusalem, the latter felt slighted. When the college, at that time under the presidency of Levi b. Jacob ibn Ḥabib, was requested to recognize Jacob Berab as a legally ordained member of the Sanhedrin, it protested, and Levi b. Jacob ibn Ḥabib wrote an entire treatise to prove the illegality of the innovation ("Ḳontres ha-Semikah"). A bitter controversy arose between Levi and Berab, and after the latter's death, in 1541, the renewed institution of ordination was again abolished. See BERAB, JACOB; ḤABIB, LEVI BEN JACOB IBN; HATTARAT HORA'AH.

W. B. J. Z. L.

OREGON: One of the Northwestern States of the United States of America; admitted into the Union in 1859.

The first Jewish settlers—in the main immigrants from various parts of southern Germany—came to Oregon from New York and other eastern states by way of Panama and California, in the early part of the fifth decade of the nineteenth century. They settled principally in **Portland,** and soon their number had increased to such an extent as to lead to the organization of Congregation Beth Israel (May 2, 1858), the founders being Leopold Mayer, M. Mansfield, B. Simon, Abraham Frank, Jacob Mayer, H. F. Bloch, Samuel Levy, D. Simon, L. Cahn, S. M. Lyon, L. Cohn, Simon Blumauer, and J. Micholup. The title of priority properly rests with the Mt. Sinai Cemetery Association, which, as its name implies, was organized in order to make possible the performance of Jewish burial-rites and interments in a Jewish cemetery, the cemetery being taken over by Congregation Beth Israel. The first Hebrew benevolent association was founded less than one year thereafter (April 24, 1859) by the men who had established the congregation, and was reorganized July 6, 1862. The first ladies' Hebrew benevolent society was founded May 2, 1874, and has ever since faithfully supplemented the work of the men's society.

First Congregation.

Soon after the admission of the territory of Oregon into the Union the Jews began to take a prominent part in municipal and state politics. Solomon Hirsch was a member of the lower and upper branches of the state legislature, president of the state senate, and United States minister to Turkey (1889-92) by appointment of President Harrison. Joseph Simon was member of the state senate for twenty years and its presiding officer during half that time. He was elected to the United States Senate in 1898, his term expiring in 1903. Oregon is one of the two states in the Union that have been honored by the appointment of one of their Jewish citizens as minister of the United States to a foreign country, and, at the same time, one of the few states in the Union that have been represented in the United States Senate by a Jew. Among those who have held public office or have in other ways helped to build up the commonwealth of Oregon are: D. Solis-Cohen, Phillip Wasserman, member of the state legislature and mayor of Portland, Bernard Goldsmith, mayor of Portland, Louis Fleischner, state treasurer, Edward Hirsch, state senator, state treasurer, and postmaster of Salem, Benjamin Selling, state senator, S. Sichel, state senator, S. H. Friendly, mayor of Eugene and regent of the state university, R. Alexander, mayor of Pendleton, I. Bergman, mayor of Astoria, Henry Blackman, state senator and United States internal revenue collector, Hyman Abraham, collector of the port of Portland, McKinley Mitchell, member of the state legislature, and Jacob Mayer, grand master of masons of the state.

For a number of years Congregation Beth Israel in Portland remained the only congregation in the state. Its first synagogue was erected Aug., 1861, at Fifth and Oak streets. Its present house of worship was erected in 1889, during the ministration of J. Bloch and the presidency of Simon Blumauer, who has been president of the congregation during more than half of the forty-seven years of its existence. It was reconstructed and freed from debt in 1903. The ministers of the congregation have been S. M. Laski, H. Bien, H. Bories, Julius Eckman, Isaac Schwab, M. May, A. Rosenspitz, J. Bloch, David Levine, and the present incumbent, Dr. Stephen S. Wise (since 1900). Congregation Ahawei Sholom was founded in 1866 by some of the members of Beth Israel, among the founders and earliest members being N. Goodman, H. Harris, H. Mitchell, E. Elkeles, G. Wood, H. Wolf, I. Franklin, L. Cohen, and M. Simon. The following have served as ministers: Julius Eckman, A. Raeger, M. Mellis, I. Kayser, Edelman, A. Danziger, R. Farber, and the present (1904) incumbent, R. Abrahamson, who has been rabbi of the congregation for more than twenty years. In Sept., 1904, the congregation dedicated its new synagogue, erected at a cost of $25,000. Congregation Neveh Zedeck was founded by Russian immigrants in May, 1889, among its ministers being E. Marcus and J. Blaustein. Congregation Talmud Torah was founded in July, 1895, and was consolidated with Neveh Zedeck in 1901; ministers: M. Levine, N. Mosesohn, Mechvedovsky, and A. Abbey, the present incumbent.

Institutions.

The Jews of Oregon have always associated themselves with Jewish movements of national and international scope. The Independent Order of B'nai B'rith has been represented in Oregon since April, 1866, when Oregon Lodge was organized. Lodges of later formation were North Pacific (April, 1879), Portland (May, 1891), Sabato Morais (Oct., 1897). North Pacific and Sabato Morais were consolidated in 1904 under the name Theodor Herzl Lodge. For a number of years Portland was the seat of an active branch of the Alliance Israélite Universelle, and long gave support to the Jewish Theological Seminary. In recent years Portland has been foremost among American Jewish communities in contributing to the Galveston Fund, Kishinef Fund ($5,000), and "National Tribute to the Children of Dr. Herzl." The Zionist movement is represented by four Zionist societies: Portland Zionist Society, Portland Lovers of Zion, Junior Zion League, and Portland Junior Zionists. The Council of Jewish Women has an active section in Portland, which has been instrumental in founding the Neighborhood Guild House, erected in 1904 at a cost of $10,000, with manual training, sewing, domestic science, and religious classes, and gymnasium. Among the other religious, educational, and charitable societies of the community may be mentioned the following: Ladies' Hebrew Sewing Society, Judith Montefiore Society, Sisters of Israel, Ladies' Jewish Endeavor Society, Young People's Culture Union of Temple Beth Israel, Beth Israel Altar Guild, Children's Guild of Personal Service, Jewish Boys' Endeavor Society, Jewish Free Loan Society, Concordia Club, and the Young Men's Hebrew Association (now defunct); the last-mentioned society led in a notable celebration of the centenary of the birth of Sir Moses Montefiore.

Outside of the Jewish community of Portland, the settlement of Jews in Oregon has been inconsiderable. Of late years services have been held during the high holy days at **The Dalles, Astoria, Oregon City,** and **Baker City.** The Jewish population of Oregon is about 6,000, a little more than 1 per cent of the total population of the state (1904). The "American Hebrew News" was published in Portland from 1892 to 1901; and the "Jewish Tribune" was first issued in the same city in 1903.

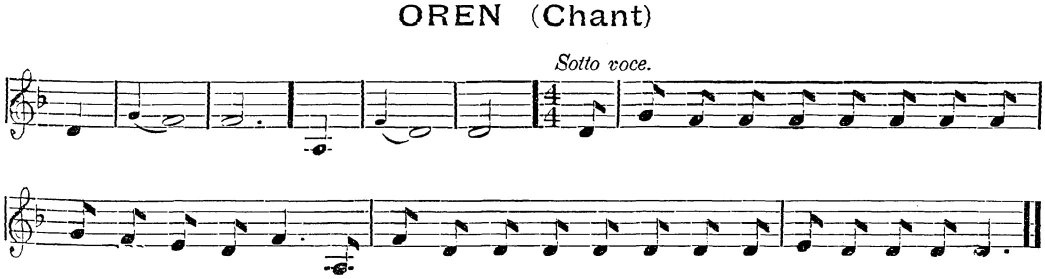
A. S. S. W.—D. S. Co.

OREN: A word formed by the addition of the German infinitive suffix to the Latin "ora" (= "pray"), which was very familiar to every one in the Middle Ages, as it still is in Catholic countries, from its repeated use in the frequent litanies of the Church. "Oren" is used by Jews of German descent not so much to signify "to pray" as "to say one's prayers"; that is, to recite a set form of devotions, whether with the congregation or in domestic privacy. Among Jews resident in Slavonic lands, "oren" is replaced by "dawenen"; in England and America, more generally "daven." This word has been supposed (by I. B. Lewisohn originally) to be a varied pronunciation of the Middle English "dawen" in its lengthened form "dawenen," identical with the modern English "dawn," and referring especially to the prayer of early morning. But much more probably it is to be derived from the Arabic "da'wah" = invocation, although this word is not used in Arabic for "prayer," since "du'a" (from the same root, "da'a") denotes prayer. In some manner, however, perhaps through the Turkish, "da'wah" became known to the Jews of eastern Europe in the sense of "prayer," the verbs "da'wenen," "dawenen" being formed from it.

The woman who recites prayers aloud to companions unable to read the square Hebrew or rabbinic characters, or unprovided with books, is, on the other hand, called a SAGERIN, from the German word "sagen" (= "to say"), because while all the men "said" their prayers in Hebrew, the women as a rule "said" them—especially the less frequent piyyuṭim and other passages reserved for festivals and the like—in "Tchines-Teutsch" or "Siddur-Teutsch" (*i.e.*, "prayer-German"; see JUDÆO-GERMAN).

Both "oren" and "dawenen" are sometimes specifically used to connote the artistic and devotional elements in the musical intonation of the prayers (comp. JEW. ENCYC. i. 76, *s.v.* 'ABODAH, MUSIC OF) according to the traditional Jewish manner (see ḤAZZANUT); but this is only when one who publicly officiates as cantor is spoken of, and in the same sense an officiant is termed a "ba'al tefillah" (lit. "master of prayer," *i.e.*, "competent leader of the devotions"). When a private worshiper is alluded to, the terms are applied to the monotonous wailing chant in which the prayers were crooned in an undertone by congregants or private worshipers of a past generation in northeastern Europe. The melody of this intonation was a form of the plaintive strain which prevails in the recital of the ḲINAH and much other medieval He-

OREN (Chant)



brew verse, and which closely reproduces the melancholy that is so noticeable in much of the folk-song of the Slavonic peoples.

A. F. L. C.

ORENSTEIN, ISRAEL: Russian novelist; born at Yampol, government of Podolia, 1831. At the age of twenty-one he went to Rumania, where he published (1870) his first novel in Hebrew—"Bet Ya'aḳob o Dim'at 'Ashuḳim." He subsequently published the following novels in Judæo-German: "Arba'ah Abot Neziḳin"; "Das Schlechte Kind"; "'Eẓ ha-Da'at"; "Ḥezyon Yisrael," or "Ḥibbut ha-Keber"; "Die Geheimnisse der Jassyer Gemeinde"; and "Die Genarrte Welt."

ORGAAN VAN NEDERLAND. See Periodicals.

ORGAN: According to Jewish authorities, the organ was one of the instruments of music in the Temple. In the Authorized Version rendering of Ps. cl. 4 the terms "stringed instruments" and "organs" used to translate the Hebrew "minnim" and "'ugab" are supposed by commentators to be misplaced, and it is held that "organs" is the proper translation of the first Hebrew word "minnim." Accordingly, Targum Jonathan translates "minnim" as "ḥalilin" (pipes, tubes); and in the second introduction to Mendelssohn's translation of the Psalms, "minnim" is accepted as denoting the organ. In modern Hebrew, however, "'ugab" is the equivalent of either "organ" or "piano." The Temple organ very likely was the "magrefa" mentioned in the Talmud as one of the instruments of the sanctuary. It is described by Samuel as consisting of ten pipes, each pipe having ten holes; a total of 100 notes was thus obtainable. An earlier baraita describes the size of the magrefa as an ell square with a board extension, on which were attached pipes capable of producing 1,000 different tones; but this number is thought to be an exaggeration ('Ar. 10b, 11a; see Rashi *ad loc.*). Apparently the extension was the keyboard, and the pipes acted as air-channels, as in the modern organ.

Cessation of Instrumental Music.

Instrumental music in divine services ceased with the destruction of the Temple. Music was prohibited generally, in token of mourning for the destruction of Jerusalem, except on festal occasions and especially at the marriage ceremony in order to delight and make happy the bridegroom and bride. It appears that the organ was employed in nuptial ceremonies which took place in the synagogue. The Ṭur and Shulḥan 'Aruk (Oraḥ Ḥayyim, 338, 2) allow non-Jews to play musical instruments at weddings on the Sabbath of the week in which a wedding occurs, in honor of the bridegroom and bride. David b. Abi Zimra (RaDBaZ) in his responsa (i., No. 132) permits one to engage a non-Jew on Friday to play on Sabbath for a religious occasion.

The modern organ in Reform synagogues as an accessory of worship was first introduced by Israel Jacobson at Berlin in the new house of prayer which he opened for the Shabu'ot festival, June 14, 1815. It aroused great indignation and opposition on the part of the rest of the community, a successful appeal being made to Emperor Frederick William III. to close the place, on the plea that the Reform schism was detrimental to the established rights of the Jewish Church, and was especially disturbing to the Jewish congregation of Berlin. The house was closed Dec. 6, 1815. The members of the Reform party succeeded in building and dedicating their first temple on Oct. 18, 1818, at Hamburg, where they set up a fine organ, but employed a non-Jewish organist.

Reasons Given for Prohibition.

The rabbis immediately issued protests against the Reform movement in general and the use of the organ at the services in particular. Among those who attempted to prohibit the use of the organ were the rabbinate of Hamburg, Mordecai Benet, rabbi of Nikolsburg, Abraham Tiktin, rabbi of Breslau, Moses Sofer, rabbi of Presburg, Akiba Eger, rabbi of Posen, and Rabbi Samuel of Amsterdam. The objectors based their prohibition of the organ in the Synagogue on the following grounds: (1) playing on musical instruments is prohibited on Sabbaths and holy days (Maimonides, "Yad," Shabbat, xxiii. 4; Oraḥ Ḥayyim, 338, 339), and even to engage a non-Jew to play for Jews on Sabbath is considered a "shebut" or disturbance of the Sabbath rest; (2) music, except at marriage ceremonies, is generally prohibited, in token of mourning for the destruction of Jerusalem; (3) Jewish divine services must not be made to imitate the customs of the Christian Church.

Eliezer Liebermann justified the playing of the organ by a non-Jewish organist in divine services on the ground that the act was a religious one and could not, therefore, be shebut, and that this disposed of the objection based on the mourning for Jerusalem. As to aping Christian practise, Liebermann claimed that organ-playing had been the Jewish custom in the Temple prior to the Christian adoption of the organ. This latter view, however, is confined in Europe to the extreme wing of Reform. Moderate Reform objects to the introduction of the organ. Güdemann, for instance, characterized the use of that instrument in Jewish services as a "mésalliance." In the large cities of Russia, Rumania, Galicia, and the whole of the Orient the rich congregations employ a male choir, but the mixed choir and the organ are excluded. The organ is used in the Reform temples in western Europe and generally in America.

In America.

Among the Reform congregations in the United States the organ was first introduced in 1840 in Temple Beth Elohim at Charleston, S. C., under Rabbi Gustav Posnanski, by a vote of 46 against 40 of the older members, who objected to the innovation and who in 1844 carried the matter into the courts. The decision was against the minority, who appealed the case; and the higher court affirmed the decision in 1846. In the opinion, written by Judge Butler, the court held that, being unable to decide the merits of this religious controversy, it must rely upon the judgment of the majority of the congregation (text of decision in Elzas collection, "The Jews of South Carolina," article viii., "The Organ in the Synagogue"). The minority finally withdrew and organized a separate congregation. The foremost Reform congregation of America, Emanu-El of New York, introduced the organ in its temple at 56 Chrystie street in that city in 1847. Opposition to it was started by Isaac Leeser in the "Occident," and in public sermons by the rabbis, particularly those of the Eastern States. Joshua Falk in his "Abne Yehoshua'" (1860), the first rabbinical work in Hebrew published in America, bitterly attacked the employment of the organ in divine services, and quoted "Wo to them that are at ease in Zion . . . that chant to the sound of the viol and invent to themselves instruments of music, like David" (Amos vi. 1, 5). See CHOIR.

ORḤOT ẒADDIḲIM: Book on ethics written in Germany in the fifteenth century, entitled "Sefer ha-Middot" by the author, but called "Orḥot Ẓaddiḳim" by a later copyist. Under this title a Judæo-German translation, from which the last chapter and some other passages were omitted, was printed at Isny in 1542, although the Hebrew original did not appear until some years later (Prague, 1581). Subsequently, however, the book was frequently printed in both languages. The author of the work is unknown, although Güdemann ("Gesch." iii. 223) advances the very plausible hypothesis that he was Lipmann Mühlhausen. The "Orḥot Ẓaddiḳim," which was designed to be a very popular code of ethics, contains the following maxims among others:

"It is evil pride to despise others, and to regard one's own opinion as the best, since such an attitude bars progress, while egotism increases bitterness toward others and decreases thine own capability of improvement" (ch. i.).

"Be just and modest in association with others, and practise humility even toward the members of the household, toward the poor, and toward dependents. The more property thou hast, the greater should be thy humility, and thy honor and beneficence toward mankind" (ch. ii.).

"Be kind to thy non-Jewish slaves; make not their burdens heavy, nor treat them scornfully with contemptuous words or blows" (ch. viii.).

"Forget not the good qualities thou lackest, and note thy faults; but forget the good that thou hast done, and the injuries thou hast received" (ch. xx.).

"Abash not him who hath a bodily blemish, or in whose family there is some stain. If one hath done evil and repented, name not his deed in his presence, even in jest, nor refer to a quarrel which has been ended, lest the dead embers be rekindled" (ch. xxi.).

In ch. xxvii. the author bitterly attacks the pilpul, reproves his countrymen who engage in this quibbling study of the Talmud, and reproaches those who neglect the study of the Bible and of all sciences.

ORIA (אורם, אוריא): City of southern Italy, possessing one of the oldest Jewish communities in Europe. AHIMAAZ BEN PALTIEL in his Chronicle represents his ancestor Amittai I. as living in Oria as early as 850; Hananeel, Amittai's son, held a disputation with the Archbishop of Oria in 880; and Ahimaaz traces his family in the city down to about the year 1060. Oria was a home of Jewish scholarship: the study of philosophy and the Talmud was pursued there; the Jews studied Greek and Latin also, and were not averse to the profane sciences (medicine and natural science). Oria was the native city of the first Hebrew writer that European Judaism produced—Shabbethai Donnolo (b. 913). Ten scholars of the community, which could not have been a very large one, fell in the massacre that took place when the Arabs under Ja'far ibn 'Ubaid conquered Oria (July 4, 925). The Jews shared the fate of the Christian inhabitants, with whom they were probably on friendly terms; at least, Donnolo had friendly relations with the archbishop Nilus.

The latest relic of the Jewish community is an epitaph, in Hebrew and Latin, of the year 1035; but Jews probably lived in Oria until toward the end of the fifteenth century.

G. I. E.

ORIENT, DER: German weekly, founded by Julius Fürst, and published in Leipsic from Jan. 4, 1840, to June, 1851. Among its collaborators were Jost, Carmoly, Chajes, Letteris, Chwolson, Slonimsky, Frankel, Graetz, Jellinek, and Luzzatto. The periodical was divided into two parts, the first being devoted to the communal life of the Jews, and the second, a supplement entitled "Literaturblatt des Orients," to their history and literature. The first part was discontinued Jan. 4, 1851, on account of the passage of a new press law in Saxony. The editor promised, however, to continue publishing the literary supplement, which was suspended five months later, and to enlarge it, but he failed to do so. The general object of "Der Orient" was to promote the knowledge of the history of the Jews and to improve their condition by means of sweeping reforms.

H. R. S. O.

ORIGEN (ORIGENES, perhaps = "Horus-born"; surnamed **Adamantius):** Christian theologian; born in Alexandria about 185; died in Tyre about 254. Trained in the study of the Bible by his father, and in philosophy by the Neoplatonist Ammonius Saccas, he early devoted himself to the philosophical study of religion, and became an influential Church teacher and the founder of a school. His broad treatment of Christian doctrine exposed him to the charge of heresy; and his writings gave rise to prolonged controversies. Of his numerous works a few only have survived. Of these the most important are: the commentaries on the Gospels of Matthew and John; the great theological treatise "De Principiis" (Περὶ Ἀρχῶν); and the "Contra Celsum," a reply to the attack of the philosopher Celsus on Christianity (see CELSUS).

His Exegesis.

Origen's allegorical and spiritualizing interpretation of Scripture and conception of the Logos are similar to those of Philo; but his precise relation to the latter can hardly be definitely determined. It is uncertain whether he drew directly from Philo's writings or derived his hermeneutical method and his Logos doctrine through his teacher from the Alexandrian grammarians and philosophers. It is probable, however, that he, like his older contemporary Clement, was influenced by the Philonic doctrine. His works abound in explanations of Old Testament and New Testament passages. Though he had public disputations with Jews, his personal relations with them appear to have been friendly. In a number of places he speaks of consulting learned Jews on the meaning of Old Testament words and passages (see, for example, "De Principiis," i. 3, § 4). In the "Contra Celsum" he throughout defends the Jewish faith against the philosopher's attacks.

His "Hexapla."

Origen was, so far as is known, the first Christian scholar to undertake the study of Hebrew. It is not likely that he had a thorough knowledge of the language; though he in many places cites and explains Hebrew words, his Old Testament quotations are from the Septuagint, which he seems to have regarded as not less authoritative than the Hebrew text. There is no indication that he was acquainted with the Midrash. His chief contribution to Biblical science was his attempt to establish the true text of the Septuagint, his object being to define the exegetical relations between Jews and Christians. To this great work—the foundation of the science of Biblical text-criticism—he devoted twenty-eight years, collecting materials from all parts of the Christian world. He arranged his texts in six columns: Hebrew in Hebrew characters; Hebrew in Greek characters; Aquila; Symmachus; Septuagint; and Theodotion. Passages in the Septuagint not in the Hebrew he marked with an obelus (a horizontal line), Hebrew passages not in the Septuagint with an asterisk, the defective Septuagint passages being filled out, mostly from Theodotion. The resulting work, the "Hexapla," was deposited in the library at Cæsarea (in Palestine), was never transcribed, and perished, probably in the seventh century. Omitting the first two columns, Origen edited also the four Greek versions in parallel columns (the "Tetrapla"), but this edition seems likewise to have perished. He added in some places two other Greek versions (the "Quinta" and the "Sexta"); and Jerome (on Hab. ii. 11) mentions a seventh, of which, however, nothing more is known. Excerpts from the "Hexapla" are preserved in the writings of various Christian authors, particularly in those of Jerome. These have been collected by Montfaucon ("Hexaplorum Origenis Quæ Supersunt," Paris, 1713) and Field ("Origenis Hexaplorum Quæ Supersunt," Oxford, 1875). Field's edition contains all the material accessible at his time for the elucidation of the "Hexapla"; and nothing of importance has since been brought to light.

The Septuagint column of the "Hexapla" (with the critical marks and marginal notes) was transcribed by Eusebius and Pamphilus, and was widely circulated (Jerome, Preface to Chronicles). From it was made a Syriac version (the "Hexaplar Syriac"), which has preserved the critical marks, and is therefore useful for the establishment of Origen's Greek text. The outcome of Origen's gigantic labors has been very different from what he intended. The carelessness of copyists, who often neglected the diacritical marks, has introduced foreign elements into his Septuagint text, the true form of which it is in many cases impossible or difficult to determine. Nevertheless the *disjecta membra* of his great work contain much of value furnishing no little material for fixing the Hebrew and Alexandrian Greek Old Testament texts of his time. A new critical edition of his work is being brought out by a commission of the Berlin University (Berlin, 1899 *et seq.*).

In all probability Origen was on terms of personal acquaintanceship with R. Hoshaiah, the head of the school of Cæsarea (see Bacher, "Ag. Pal. Amor." i. 92), and he was also, as he himself says, acquainted with a patriarch Ἰοῦλλος, a misreading of the name of Judah II. (see Jew. Encyc. vii. 338).

ORIGINAL SIN. See Sin.

ORION (כסיל): One of the constellations. The Septuagint translates "Kesil" in Isa. xiii. 10 and Job xxxviii. 31 by "Orion"; the Targum renders it in these two passages and in Job ix. 9 by "Nefila" (lit. "giant"), while the Peshiṭta in Amos v. 8, Job ix. 9 and xxxviii. 31 uses "Gabbara" (lit. "hero"), both of which names likewise denote "Orion." There are therefore four references to this planet in the Bible. The Talmud likewise regards "Kesil" as denoting Orion (Ber. 58b), as does Jerome, who translates Amos v. 8 and Job ix. 9 according to Jewish tradition. This tradition was not uniform, however, for Saadia Gaon (10th cent.) and Abu al-Walid (11th cent.; "Kitab al-Uṣul" and Hebr. transl., *s.v.*) interpret the word as "Canopus" (Arabic, "Suhail"), while more recent exegetes (see Gesenius, "Th." *s.v.*, and Ideler, "Sternnamen," p. 264, cited in Schiaparelli, "L'Astronomia nell' Antico Testamento," p. 77) have identified it with another constellation. At present, however, the opinion represented by the oldest tradition is generally accepted (G. Hoffmann, in "Zeitschrift für die Alttestamentliche Wissenschaft," ii. 107; Schiaparelli, *l.c.*). In Amos v. 8 and Job ix. 9 Orion is mentioned together with the Pleiades and with two other constellations whose identification is still doubtful, and which are merely said to have been created by God; in Isaiah (xiii. 10) occur the words, "the stars of heaven and the Orions [A. V. "constellations"] thereof shall not give their light"; and in Job xxxviii. 31 mythological conceptions seem to be contained in the verse, "Canst thou bind the sweet influences of Pleiades, or loose the bands of Orion?"

The Aramaic and Syriac names of Orion have been connected with the ancient Oriental tradition that NIMROD, who is called in the Bible a hero and mighty hunter, was fettered by God for his obstinacy in building the tower of Babel, and was set in the sky (Winer, "B. R." ii. 157). It is possible that the ancient Hebrews saw in this constellation the figure of a man who was naturally regarded as extraordinarily tall and strong, exactly as the Greeks named it "Orion," the Egyptians "Sahu," and the ancient Hindus "Triçanka" (Schiaparelli, *l.c.*). The Targum to Job xxxviii. 31 speaks of the "bands which lead Orion." The Babylonian scribe and physician Samuel (d. 257), who was celebrated also as an astronomer, said: "If a comet should pass over Orion the world would perish" (Bab. Ber. 58b; Yer. Ber. 13c), and in the same passage of the Babylonian Talmud further declares that "if it were not for the heat of Orion, the world could not exist on account of the cold of the Pleiades; and if it were not for the cold of the Pleiades, the world could not exist on account of the heat of Orion." See JEW. ENCYC. ii. 246a, 250b, *s.v.* ASTRONOMY.

E. C. L. B.

'ORLAH ("Foreskin" [of the trees]): Name of a treatise in the Mishnah, Tosefta, and Yerushalmi, devoted to a consideration of the law, found in Lev. xix. 23–25, which ordains that the fruit of a newly planted tree shall be regarded as "'orlah" (A. V. "uncircumcised") for the first three years, and that therefore it may not be eaten. This treatise is the tenth in the mishnaic order Zera'im, and is divided into three chapters, containing thirty-five paragraphs in all.

Ch. i.: The conditions which exempt trees from or subject them to the law of 'orlah (§§ 1–5); mixing of young shoots of 'orlah or "kil'ayim" with other young shoots (§ 6); parts of the tree which are not considered fruit, such as leaves, blossoms, and sap, and which are therefore not forbidden, either as 'orlah in the case of a young tree, or to the Nazarite in the case of the vine; it is noted in passing, however, that in the case of a tree dedicated to idolatry (the ASHERAH) the use of these parts in any way is likewise forbidden (§ 7); the parts which are considered fruit in reference to 'orlah, but not in reference to "reba'i" (the fourth year); so that, although these parts may not be eaten during the first three years, it is not obligatory to take them to Jerusalem in the fourth year (§ 8; comp. Lev. xix. 24); concerning the planting of 'orlah shoots (§ 9).

Ch. ii.: On the mixing of oblations ("terumah"), the priests' share of the dough ("ḥallah"), firstlings ("bikkurim"), 'orlah, and kil'ayim with things which may ordinarily be eaten; the quantity of ordinary things which renders a mixture lawful in spite of the intermingling of unlawful things (§ 1); unlawful things which nullify one another when two or more of them are mixed with lawful things, and those which are added together, so that a larger quantity of lawful things must be in the mixture if it is to be eaten (§§ 2–3); cases in which ordinary dough is leavened with leaven made of oblations, 'orlah, or kil'ayim, or food is seasoned with spices made of the same ingredients (§§ 4–15); other mixtures which are unlawful (§§ 16–17).

Ch. iii.: On garments dyed with dye made from 'orlah fruit (§§ 1–2); on garments partly woven from the wool of a firstling or the hair of a Nazarite (§ 3); on bread baked in an oven heated by the peelings of 'orlah, and on food cooked on a hearth heated in the same way (§§ 4–5); 'orlah and kil'ayim which cause lawful things mixed with them to become unlawful, although the latter constitute the larger portion of the mixture (§§ 6–8); difference between Palestine, Syria, and other countries with reference to the laws regarding 'orlah and kil'ayim (§ 9).

In the Tosefta the treatise 'Orlah stands fourth in the order Zera'im, and consists of a single chapter. In the Palestinian Gemara to this treatise the several mishnayot are explained, and new regulations regarding 'orlah are added. Especially noteworthy is the passage i. 2, which states that R. Ishmael, by explaining the difference in wording between Num. xv. 18, and Lev. xix. 23, and deducing a law therefrom (Sifre, Num. 110 [ed. Friedmann, p. 31a]), violated the principle which he had enunciated elsewhere to the effect that different expressions if they have the same meaning may not be explained in such a manner as to permit of the deduction of different laws.

W. B. J. Z. L.

ORLEANS (אורלינש or אורליינש): Chief city of the department of Loiret, France. Its Jewish community dates from the sixth century. The various councils which met at that time in the city enacted special laws against the Jews. In 533 the second Council of Orleans forbade marriages between Jews and Christians, under pain of excommunication of the latter; and the third, in 538, forbade Christians to permit Jews to act as judges, and prohibited the Jews from appearing in public between Maundy Thursday and Easter Monday, also interdicting the clergy from eating with them. The fourth council decided, in 541, that any Jew who should make a convert, or should induce one of his former coreligionists to return to Judaism, or who should appropriate a Christian slave, or should induce a Christian to embrace Judaism, should be punished by the loss of all his slaves; if, on the other hand, a Christian became a Jew, and gained his liberty on condition of adhering to the Jewish faith, that such terms should be invalid; for it would not be just for a Christian convert to Judaism to enjoy freedom.

When Gontran, King of Burgundy, made his entry into Orleans in 585, Jews mingled in the throng hailing his arrival with joyful acclamations. They delivered a Hebrew address to him, but the king received them with derision, saying: "Wo to this wicked and treacherous Jewish nation, full of knavery and deceit! They overwhelm me with noisy flatteries to-day; all peoples, they say, should adore me as their lord; yet all this is but to induce me to rebuild at the public expense their synagogue, long since destroyed. This I will never do; for God forbids it."

At the beginning of the eleventh century the report spread through Europe that the calif Ḥakim Bi-Amr Allah had destroyed the Church of the Holy

Sepulcher at Jerusalem at the instigation of the Jews of Orleans, who had warned him, by letters written in Hebrew, of the departure of an expedition for the deliverance of the Holy Land. Although this accusation was utterly baseless, the Jews of Orleans, to escape a general massacre, were obliged to leave the city for a time. They soon returned, however, to resume their studies. Their academy was one of the most noted in France in the twelfth century; and their savants, known as the "Anciens" of Orleans, took part in the synod held at Troyes about 1150, under the leadership of R. Tam and of RaSHBaM. Philip Augustus expelled them in 1182, and turned their synagogue into a church, which he gave to the Hospital of St. John of Jerusalem in the year 1200.

Accused of Treason.

Like their coreligionists in other cities of France, the Jews of Orleans were obliged to wear the wheel badge, for which they were forced to pay an annual tax. In 1285 the badges in the bailiwick of Orleans brought fifty livres to the treasury, but in 1295 only thirty sous. The special tax imposed on the Jews amounted in 1298 to 500 livres, but in 1299 to 40 livres only, while by 1301 it had risen to 265 livres. The sale of their estates, exclusive of personal property, plate, and jewels, amounted in 1306 to the sum of 33,700 livres, 46 sous, 5 deniers. Their great school building, confiscated by Philip the Fair, was sold at auction at the same time and brought 340 livres, while the smaller school, situated in the city, brought 140 livres.

The principal scholars of Orleans were as follows: In the eleventh century: Isaac ben Menahem (Tos. to Men. 5a and to Giṭ. 21a); Meïr ben Isaac, liturgical poet (Zunz, "Literaturgesch." p. 251). In the twelfth century: Eleazar ben Meïr ben Isaac, Solomon ben Isaac, JOSEPH BEN ISAAC BEKOR SHOR (Tos. to Ḥul. 112b; Yeb. 25b, 36b; Mak. 6a; Shab. 12a; Zunz, *l.c.* pp. 282–285; *idem*, "Z. G." p. 75), JACOB OF ORLEANS or R. Tam (died in London 1189; Tos. to Yoma 34a; Pes. 5b, 15a; Yeb. 4a; Ket. 47a; Giṭ. 8c; Zunz, "Z. G." p. 75), Abraham ben Joseph (Tos. to Ber. 45b and to Mak. 6b).

At the present time (1904) there are only a few Jewish families in Orleans.

ORNAMENT: The mention made in the Old Testament of numerous articles of adornment leads to the conclusion that in antiquity self-adornment occupied among both men and women the same place as it does to-day in the Orient. It is probable, however, that only the rich men decorated themselves, whereas even the poorest woman managed to find some adornment; and the rich woman, then, as now in the Orient, was distinguished from the poor one by the number of her ornaments (comp. Isa. iii. 16 *et seq.*). The following are the general designations for ornaments: (1) "keli," in Isa. lxi. 10, for those of the bride; (2) "'adi," in Ex. xxxiii. 4, for those of a man, and in Jer. ii. 32 for those of a woman; (3) "migdanot," in Gen. xxiv. 53 and II Chron. xxi. 3. As special articles of adornment are mentioned the following: "nezem," both ear- and nose-ring (Prov. xxv. 12; Isa. iii. 21); earrings, on account of their round form, were probably called also "'agil" (Num. xxxi. 50), or "neṭifot" (Isa. iii. 19) because they were shaped like a drop.

The necklace, variously called "ḥali" (Prov. xxv. 12), "ḥelyah" (Hos. ii. 15), "'anaḳ" (Cant. iv. 9), was worn both by women (Ezek. xvi. 11) and by men (Prov. i. 9, iii. 3). It probably did not consist of a mere single gold or silver circlet, but of several chains united (comp. Cant. iv. 9). Smelling-bottles ("batte nefesh"; Isa. iii. 20), and especially ornaments in the form of little moons ("saharonim"; Isa. iii. 18) and suns ("shebisim"), were attached to such chains. "Kumaz" was probably another designation for necklace (Ex. xxxv. 22; Num. xxxi. 50). To judge from the Arabic "kuma'at," it consisted of little gold balls strung together. The seal-ring ("ḥotam") was worn on a string ("petil") round the neck by men, just as by the dwellers in the cities of Arabia to-day (comp. Robinson, "Palästina," i. 98). Afterward the ring was worn on the right hand, according to Jer. xxii. 24 (comp. Gen. xli. 42), and on the arm, according to Cant. viii. 6. Probably there was set in the ring a precious stone, perhaps an onyx ("shoham"), on which a picture or monogram was inscribed (comp. Ex. xxviii. 11). This ring, together with the staff ("maṭṭeh"), doubtless richly decorated, was the chief adornment of the Israelites as of the Babylonians (comp. Herodotus, i. 195; Strabo, 16, 1, 20). Bracelets ("ẓamid") are mentioned more frequently (Gen. xxiv. 22, xxx. 47; Ezek. xvi. 11). It is doubtful in what respect "eẓ'adah" (Num. xxxi. 50; II Sam. i. 10) differs from "ẓamid"; perhaps the latter was worn on the wrist, and the former on the upper arm. The "sherot" (literally "chains") mentioned in Isa. iii. 19 were probably likewise ornaments for the arm (comp. the Arabic "siwar"). Finger-rings ("ṭabba'ot") were worn by women (Isa. iii. 21), but the word designates also the seal-ring (comp. Ex. xxxv. 22; Num. xxxi. 50).

All sorts of ornaments were fastened to women's girdles; *e.g.*, smelling-bottles ("batte nefesh"), bags ("ḥariṭim"), and mirrors ("gilyonim"). Anklets ("'akasim"), fastened above the ankle, were also worn (Isa. iii. 18). They were frequently joined together with chains in order to keep the pace of the wearer even.

The importance of these ornaments for Israelites of all times may be judged from the fact that they were worn as amulets ("leḥashim"; Isa. iii. 20; comp. Gen. xxxv. 4), just as these are worn to-day among the Arabs, to whom "amulet" and "ornament" are identical expressions. It is probable that ornaments were usually of gold or silver, or, among the poorer population, of bronze, after the fashion of the modern poor Egyptian women, who wear brass rings with glass balls. The fact that precious stones were used as ornaments is evidenced in passages like II Sam. xii. 30; Ex. xxviii. 8 *et seq.*; Ezek. xxviii. 13 *et seq.* Such stones as could be engraved were especially valued for rings (comp. Ex. xxxi. 5, xxxv. 33).

ORNAN. See Araunah.

ORNSTEIN, ABRAHAM PHILIP: English rabbi; born in London 1836; died at Cape Town Dec. 6, 1895. He was at first a teacher in the Jews' Free School, London, and at eighteen became minister to the Portsea congregation. In 1860 he removed to Birmingham as principal of the Birmingham Hebrew National Schools, remaining there till 1866, when he accepted a call as minister to the Hebrew Congregation, Melbourne, which position he held for ten years. In Melbourne he edited "Australian Israel," founded and took an active share in the management of the almshouses, and became life governor of the hospital. Returning to London in 1875, he made a tour to America, and returned in 1876 to Portsea as principal of Aria College.

In 1882 Ornstein went to Cape Town, where till 1895 he filled the post of head of the congregation. He laid the foundation-stone of the Oudtshoorn Synagogue, and established the congregation at Paarl. On his retirement from ministerial duties he devoted his attention to the establishment of a Jewish collegiate school, in which he achieved considerable success.

His nephew, **Abraham Ornstein** (b. Jan., 1863; d. Kimberley 1885), was minister to the Kimberley congregation.

ORNSTEIN, JACOB MESHULLAM: Galician rabbinical authority; died at Lemberg 1839. He was the son of the Lemberg rabbi Mordecai Zeeb Ornstein. Jacob Meshullam at the death of his father was too young to succeed him in the Lemberg rabbinate; and accordingly that position, which had remained in the Ornstein family for more than 150 years, was given to another. Ornstein passed his youth in Jaroslaw, in Galicia, in the house of his father-in-law. Thence he was called as rabbi to Zolkiev, a smaller Galician town, but one which had always had prominent rabbis. When in 1806 the rabbinate of Lemberg again became vacant Ornstein was called to it, and he held the position for thirty-three years, until his death.

Ornstein, who was rich and independent, performed the duties of his office with energy and severity. He employed this severity also against the pioneers and the propagators of enlightenment and civilization among the Jews of Galicia, such as Rapoport, Erter, and others, and used his powerful influence to persecute these innovators. Nevertheless a large share of the persecution carried on in his name against the champions of enlightenment must be laid to the charge of his proud and haughty son Mordecai Zeeb Ornstein. The latter was probably the author of the document found one day on the door of the synagogue at Lemberg, placing Rapoport, Erter, Natkees, and Pastor under the ban. The reformers denounced Ornstein before the government; and the latter compelled him to revoke the ban. Ornstein had to endure much scorn and insult at the hands of the Progressivists, especially from Isaac Erter, who ridiculed him in a witty satire in his "Ha-Ẓofeh."

The most important of Ornstein's works is: "Yeshu'ot Ya'akob," a commentary in many volumes on the Shulḥan 'Aruk; namely, on the Oraḥ Ḥayyim, four parts; on the Yoreh De'ah, three parts; and on the Eben ha-'Ezer, three parts. This commentary is divided into a short and a long commentary. In the former the author explains the Shulḥan 'Aruk, and in the latter he brings together from other works what has been said on the subject in hand, discusses it in pilpulistic fashion, and tries to remove difficulties and to solve contradictions. Under the same title, "Yeshu'ot Ya'akob," he wrote a commentary on the Pentateuch, which is printed with the text in many Pentateuch editions. Besides these works decisions of his are found in various collections of responsa, such as "Yad Yosef," "Mayim Ḥayyim," etc.

ORNSTEIN, MORDECAI ZEEB: Austrian rabbinic scholar; died at Lemberg Oct. 28, 1837; son of Jacob Meshullam Ornstein, rabbi of that city, by whom he was instructed in Talmudic and rabbinical literature. At an early age he showed remarkable capacity, and several of his responsa are scattered through his father's "Yeshu'ot Ya'akob." The success he thus attained with so little exertion, as well as the early recognition he received, increased his self-esteem to such an extent that he manifested it in his general behavior as well as in the fact that he sought only very important rabbinical positions. One effect of his pride was that for a long time he declined to accept any call as rabbi. Finally Przemysl, the third largest city of Galicia, offered him its rabbinate, and he accepted the invitation; but he died before he could enter upon his new duties.

ORNSTEIN, ẒEBI HIRSCH: Austrian rabbi; born at Lemberg; died there March 21, 1888; son of Mordecai Zeeb Ornstein, and grandson of Jacob Meshullam Ornstein, rabbi of that city. He was educated by his grandfather and father, and while quite young manifested exceptional talent. Responsa of his were published in the "Yeshu'ot Ya'akob" of his grandfather, in the first decades of the nineteenth century, and his reputation soon spread far beyond the limits of his own land. He occupied his first rabbinate at Brest-Litovsk, where he succeeded (1855) Jacob Meïr Padua. Even here, where, in opposition to the Galician critical treatment of the Talmud and of rabbinical literature, the Wilna method of instruction prevailed (in which the study of the Talmud consisted in memorizing it), Ornstein's wonderful powers of memory excited admiration. This respect for a foreigner displeased the government, which seized the occasion of a general expulsion of foreigners to remove him from his position. He was obliged to leave the city in 1874. Hard times now befell him. He was no longer rich, and was compelled to seek any vacant rabbinate. The regard felt for him in Galicia was still unbounded; in spite of nine years' absence the community of Rzeszow at once extended to him a call as rabbi, which he accepted, officiating there from 1874 to 1875. In the latter year, after a hard fight for election, he obtained the rabbinate of Lemberg, which had been held by several of his ancestors; and there he remained till his death.

After Ornstein's death his son-in-law—he had no sons of his own—published, with notes, under the title "Milḥamot" (Lemberg, 1889), a collection of responsa which formed a small fragment of Ornstein's Talmudic work "Birkot Rabbi Ẓebi Hirsch" (RaẒaH).

OROBIO DE CASTRO. See Castro, Balthazar (Isaac) Orobio de.

ORPAH: A Moabitess; daughter-in-law of Naomi, and wife of Mahlon. After the death of her husband, Orpah and her sister-in-law Ruth wished to go to Judea with Naomi. She was persuaded, however, by Naomi to return to her people and to her gods (Ruth i. 4 *et seq.*).

In rabbinical literature Orpah is identified with Harafa, the mother of the four Philistine giants (comp. II Sam. xxi. 22); and these four sons were said to have been given her for the four tears which she shed at parting with her mother-in-law (Soṭah 42b). She was a sister of Ruth; and both were daughters of the Moabite king Eglon (Ruth R. ii. 9). Her name was changed to "Orpah" because she turned her back on her mother-in-law (*ib.*; comp. Soṭah *l.c.*). She was killed by David's general Abishai, the son of Zeruiah (Sanh. 95a).

E. C. J. Z. L.

ORPHAN: A child bereft of one or both parents, more commonly the latter.—**Biblical Data:** The Authorized Version, in all cases but one, renders "yatom," the Hebrew word for "orphan," by "fatherless"; the exception being in Lam. v. 3, where "yetomim" is rendered "orphans," the word being followed by the expression "and fatherless." Orphans are represented throughout the Bible as helpless beings; and therefore the Pentateuch reiterates continually the command to render justice to orphans. In the contrary case their oppressor is to expect the severest punishment (see Ex. xxii. 21-23, and elsewhere). God Himself is termed "the father of the fatherless" (Ps. lxviii. 6 [A. V. 5]). When Job wished to point out the excessive wickedness of his companions he said: "Ye would overwhelm the fatherless" (Job vi. 27). In other instances Job speaks of the wicked who are not afraid to commit injustice even toward orphans (*ib.* xxiv. 9; xxxi. 17, 21).

——**In Talmudic Law:** Owing to the emphasis of the Biblical prohibition against oppressing an orphan (see Biblical Data, above), the latter is regarded by the Rabbis as especially privileged. There is no fixed limit of age; as long as the boy can not manage his own affairs he is treated as an orphan (Maimonides, "Yad," De'ot, vi.; Isserles, in Shulḥan 'Aruk, Yoreh De'ah, 160, 18; comp. Isserlein, "Terumat ha-Deshen," No. 300). The blessed man "that doeth righteousness at all times" (Ps. cvi. 3) is the man who brings up an orphan boy, or girl, until marriage has given him, or her, another home (Ket. 50a). He who brings up an orphan in his house is regarded as the orphan's father (Sanh. 19b). One must deal with orphans gently and kindly, and must not speak harshly to them, and their guardian must take greater care of their money than of his own. Even while teaching them the Law or a handicraft, which may be done against their will, they must be treated differently from other pupils. In this respect the fatherless and the motherless are alike (Maimonides, *l.c.*). But the privileges enjoyed by the orphan in civil law extend only to the fatherless (Samuel de Modena, Responsa, iv., Nos. 196, 454). Most of the laws relating to orphans having been treated already (see Alienation and Acquisition; Guardian and Ward; Inheritance, etc.), it will be sufficient here to give a few of the general laws which show the inviolability of the orphan's property.

With regard to Ona'ah, the orphan's property is considered equivalent to consecrated property (B. M. 56b). Orphans, although they may be rich, are exempt from taxation for charitable purposes, even for the ransom of captive Jews, unless the taxation is with the object of doing honor to them. They must, however, contribute to the fund for the safeguarding of the city in which they live (B. B. 8a; comp. Shulḥan 'Aruk, Yoreh De'ah, 248, 3). Orphans' property may be sold under judgment only when mortgaged upon usurious terms, so that its retention might cause the orphans great loss ('Ar. 22a). They need no Prosbul for the Sabbatical year (Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 67, 28).

Certain laws relate exclusively to female orphans, such as that conferring the right to protest against her marriage while she is a minor (see Majority, § 2). In one case she is termed "an orphan that has a father" (*i.e.*, a minor daughter, but no longer under her father's control). Such an orphan is under the same rule as a fatherless girl with regard to protesting and vows, that is, the vows of both are valid (Shulḥan 'Aruk, Eben ha-'Ezer, 155, 1). A female orphan has priority over a male orphan in regard to both support and the provisions for marriage (Ket. 67a; Shulḥan 'Aruk, Yoreh De'ah, 251, 7). He who gives an orphan girl in marriage should provide her with a dowry of not less than fifty zuzim. When an orphan girl is given in marriage by her mother or brothers with her consent, she can recover, when she reaches her majority, her part of the inheritance (Ket. vi. 5-6).

When a male orphan wishes to be married with the assistance of charity, the trustees of the fund hire a house for him and furnish it with all that is necessary; then they find him a wife (Ket. 67b). In certain ritual observances the term "orphan" ("yatom") is applied, during the whole year, to one in mourning for his father or his mother (see Ḳaddish).

Bibliography: Kohut, *Aruch Completum*, s.v. יתום; Lampronti, *Paḥad Yiẓḥaḳ*, s.v. יתום, יתומים; Levy, *Neuhebr. Wörterb.* s.v. יתום.

M. Sel.

It should be noted that in the civil law of the Talmud the term "yetomim" is almost always applied to heirs when the liability of their ancestor is cast upon them, even when the ancestor is not the father and when the heirs are not under age; as in the case of Debts of Decedents, and wherever the rights of the children and those of the widow come into conflict (see Ketubah). In The Jewish Encyclopedia "heirs" has generally been substituted for יתומים.

E. C. L. N. D.

ORSHA: Town in the government of Moghilef. Orsha is mentioned in the Russian chronicles of the eleventh century. In 1579 Isaac Yakubovich, a Jew of Brest, farmed the customs duties of Orsha, Moghilef, and other places. In 1643 Nikolai Kishka, assistant treasurer of the grand duchy of Lithuania, having been empowered by the diet to collect taxes throughout the grand duchy, entrusted their collection to Shaye Nakhimovich of Orsha, among others.

According to the census of 1880 the town had 837 houses (of which 431 were owned by Jews), one synagogue, and ten houses of prayer. Its present (census of 1897) population is 13,161, including about 7,000 Jews. Of the latter 950 are artisans and 273 are day-laborers. The local Talmud Torah affords instruction to 200, the Jewish elementary school (with industrial annex) to 105, and the two girls' private schools to 140 pupils. The city school has 30 Jewish pupils on its rolls. The charitable institutions of Orsha include a biḳḳur ḥolim, a gemilut ḥasadim, and a poor-aid society.

Bibliography: *Regesty i Nadpisi*, i., No. 595, St. Petersburg, 1899; Dembovetzki, *Opyt Opisaniya Mogilevskoigubernii*, ii. 95, Moghilef, 1884.

H. R. S. J.

ORSHANSKI, ILYA GRIGORYEVICH: Russian jurist and author; born at Yekaterinoslav 1846; died there Sept. 5, 1875. He was descended from a family which produced a number of distinguished rabbis and communal workers. At the age of four Orshanski entered the "ḥeder," and at ten was well read in Hebrew theological and philosophical literature. While studying the Talmud under the guidance of an uncle he acquired also a fair knowledge of the Russian and other languages, at first by self-instruction and then with the help of a tutor. At the age of fifteen he studied the most difficult treatises of the Cabala under the guidance of the local rabbi. In 1863 Orshanski entered the University of Kharkov and studied law. In the same year he wrote his first treatise, on Alexander the Great in the Talmud, "Talmudicheskiya Skazaniya ob Aleksandrye Makedonskom," which appeared in a series of articles published by the Society for the Promotion of Culture Among the Jews of Russia (St. Petersburg, 1866). Another of his works written about this time was not passed by the Russian censor until 1878, when it appeared in the "Yevreiskaya Biblioteka" (vol. vi.) as "Istoria Vyklyuchki." This work, dealing with the history of a Jew exempted by the "ḳahal" from conscription, shows that scientific method of investigation which Orshanski afterward successfully employed in his larger works.

In 1865 he published in the Hebrew periodical "Ha-Meliẓ" several popular articles, translated or original, on natural science. In that year, too, he accepted the position of tutor in the family of S. A. Trachtman of Odessa, and secured admission to the university in that city.

Early Attempts.

At this time his bent for literature and juridical science expressed itself in two directions,—in the investigation of the Jewish question in Russia, and in researches in connection with problems of Russian life and law in general. His essays written at that time on the isolation of the Jews, "O Zamknutosti Yevreyev," and on Jewish folk-songs, "Prostonarodnyya Pyesni Russkikh Yevreyev," appeared in the Russian supplement of the Hebrew periodical "Ha-Karmel" (1866). During his stay in the university Orshanski also contributed to the periodicals "Odesski Vyestnik," "Novorosiski Telegraf," and "Ha-Meliẓ." In 1864 the Odessa section of the Society for the Promotion of Culture Among the Jews of Russia, as an expression of its gratitude for his services to Judaism, elected him a member of that society. He was in such reduced circumstances at this time that he was compelled to accept a clerkship in a district court at a very small salary. In 1868 Orshanski graduated bachelor of law. The university council offered him the privilege of remaining at the university to prepare himself for a professorship, provided he embraced Christianity; but he rejected the proposition. He then tried to practise law in Odessa; but his modesty and shyness were unsuited to such a career, and the courts often slighted the young lawyer. His views were sometimes startling, and the judges attributed them to a deficient knowledge of practical jurisprudence and to an imperfect comprehension of the given case. It is easy to imagine their astonishment when a few years later the eminent St. Petersburg attorney V. N. Gerard, in the course of a lawsuit, cited, in confirmation of his views, the works of Orshanski, whom he described as "the acknowledged authority on questions of civil law."

Contributions to "Den."

Orshanski soon abandoned the practise of his profession to devote himself entirely to theoretical research. From 1869 to 1871 he contributed to the periodical "Den"; indeed, he was its most active collaborator, publishing a series of essays on the economic, social, and legal conditions which afterward formed the basis of his two principal works on the Jewish question. Of these, one is an investigation of Jewish economic and social life in Russia; the other treats of the legal position of the Jews and the motives which prompted the Russian restrictive legislation with regard to them.

In 1871 the "Den" was suppressed by the government, and in October of that year Orshanski went to St. Petersburg to write editorials for the "Novoe Vremya." His stay in the Russian capital, though short, was very prolific in scientific and literary activity. But the rigorous climate of St. Petersburg affected his health, and he went abroad, remaining three and a half years in Heidelberg, northern Italy, and the Tyrol. During this time he wrote a long series of treatises on Russian jurisprudence, concerning problems of traditional, hereditary, and family law. For profundity of thought and clearness of exposition many of them rank among the best productions of Russian juridical literature. Such are the essays: "Narodny Sud i Narodroe Pravo"; "Rost i Likhva"; "O Znachenii Predyelakh Sovbody Voli v Pravye"; "Rol Kazonnavo Interesa v Russkom Pravye"; "Dukhovny Sud i Brachnoe Pravo"; "Chastny Zakon i Obshchiya Pravila." These and many others contain valuable observations demonstrating the practical application of older laws to modern forms of life.

In the summer of 1875, his health having considerably improved, Orshanski returned to Russia and settled in Yekaterinoslav with his parents, intending to go to Odessa for the winter; but a second attack of hemoptysis resulted in his death.

The sentiments entertained by the Russian Jews for Orshanski are best demonstrated by the memorial modeled by M. Antokolski, and erected in 1890 on his grave in the Yekaterinoslav Jewish cemetery. This memorial represents an altar composed of a disorderly heap of books of various sizes; a large, half-open book on the top bears the following inscription in Hebrew, in red letters: "If I forget thee, O Jerusalem, let my right hand forget her cunning" (Ps. cxxxvii. 5). A wreath of laurels encircles a pen and merges into the shield of David.

Orshanski represents the singular combination of a Jewish publicist fearlessly standing up for his oppressed and ill-treated brethren and a learned civilian investigating theoretical and practical problems of general law. His desire to treat the Jewish question independently of national sympathies, and from a historical standpoint, is acknowledged even by his adversaries. As a theorist he acquired a high reputation in the literature of Russian civil law. The chief service, however, that Orshanski rendered to jurisprudence and to the scientific investigation of Jewish conditions in Russia consisted in his application to Russian legislative enactments of principles deduced from the laws of western countries. He endeavored also to show that Russia must pass through the same phases of judicial development as western Europe. He made it his chief task to disentangle the contradictions and correct the misconceptions of Russian lawyers, resulting from a lack of understanding of the relationship between the Russian code and the laws of other countries. Orshanski skilfully compares various legal institutions and the elements of law and applies the resultant data to the analysis of decisions rendered by the courts, thus giving a practical sense to abstract scientific theses.

Other works published by Orshanski were: "Russkol Zakonodatelstvo o Yevreyakh," St. Petersburg, 1877; "Izslyedovaniya po Russkomu Pravu Semeinomu i Naslyedstvennomu," *ib.* 1877; "Izslyedovaniya po Russkomu Pravu Obychnomu i Brachnomu," *ib.* 1879; and "Izslyedovaniya po Russkomu Pravu," *ib.* 1892.

Orshanski, *Izslyedovaniya po Russkomu Pravu* (has a biography of the author), St. Petersburg, 1892; *Ha-Modia' la-Ḥadashim*, New York, Feb., 1901.

H. R.

ORSHANSKI, ISAAC: Russian physician; born in Yekaterinoslav about 1851. His early education was confined to the study of the Old Testament and of the Talmud and its commentaries. His parents were poor, and as a boy he was required to help his father at butter-making. The influence of his elder brother Ilya, then a university student, led him to books and to miscellaneous reading. At the age of fifteen, and again at sixteen, he unsuccessfully essayed to enter the classical gymnasium of his native town. After removing to Odessa he studied mathematics and registered (1869) for the medical course of the university. A growing predilection for psychology led him to devote many hours to the subject. Graduating in 1875, he was appointed county physician in the government of Nijni-Novgorod, where he spent one year. He then resolved to devote himself to research work, went to St. Petersburg, and studied in the clinical laboratories of Dolinski and Orvsyanikov.

During the Turko-Russian war Orshansky was attached to the Army of the Caucasus as a surgeon; at the end of the war he returned to St. Petersburg, and then went back to Yekaterinoslav, where he spent three years in the practise of his profession and in charge of the ward for nervous diseases in the county hospital. During the years 1881 and 1882 he studied in Germany and France. In 1883 he was appointed privat-docent in the University of Kharkof, and while there he collected the material for his work on heredity.

In 1898 he was commissioned by his university to study the organization of the psycho-physiological laboratories of Europe, the results of which investigation have not yet been published. On his return he settled in Odessa, where he is now (1904) senior physician of the City Hospital for Nervous Disorders.

OSER, BARUCH: German ab bet din; born about 1743 at Prague; died 1822 at Hamburg. From 1783 to 1814 he was dayyan in the latter city, and in Jan., 1814, he became president of its rabbinate, at the time when the town was occupied and was being ransacked by the French. After the foundation of the Tempel (1818), Oser protested in the name of the Hamburg rabbinate against the reforms in the service; and he threatened to excommunicate all who should further them. In order to confirm his action he asked the most celebrated Orthodox rabbis for their opinions, and published their answers under the title "Eleh Dibre ha-Berit" (Altona, 1819). In 1821 he resigned on account of old age.

S. A. Fe.

OSER, LEOPOLD: Austrian physician; born at Nikolsburg, Moravia, July 27, 1839; studied medicine at Vienna University, graduating and establishing himself as a physician in that city in 1862. In 1872 he became privat-docent at the university, department chief at the general dispensary, and physician at the Rothschild Hospital, Vienna; and in 1885 he was appointed assistant professor.

Oser is a collaborator on Eulenburg's "Encyclopädie der Gesammten Heilkunde" and on Nothnagel's "Handbuch der Speziellen Pathologie und Therapie." He has written essays for the medical journals, and is the author of: "Experimentelle Studien über Uterusbewegungen" (with Schlesinger), Vienna, 1873; "Ueber Darmsyphilis," *ib.* 1875; "Bericht über den Fleckentyphus," *ib.* 1876; "Ueber Darmsyphilis," *ib.* 1880; "Pathologie und Therapie der Cholera," *ib.* 1887; "Zur Pathologie der Darmstenosen," *ib.* 1890; etc.

s. F. T. H.

OSIMO, MARCO: Italian physician; born at Montagnana in 1818; died at Padua May 1, 1881. He received his degree in medicine at the university of the latter city in 1851. In 1854, becoming interested in the diseases of silkworms, he began the study of them and presented memoirs thereon to the Academy of Literature, Arts, and Sciences of Padua, of which he was a member, and to the Institute of Venice. He published also two works on the same subject: "Cenni sull' Attuale Malattia dei Bachi da Seta" (3d ed. Padua, 1877) and "Ulteriori Ricerchi e Considerazioni sull' Attuale Malattia dei Bachi da Seta" (*ib.* 1876). He wrote, besides, "Narrazione della Strage Compiuta nel 1547 Contro gli Ebrei d'Asolo e Cenni Biografici della Famiglia Koen-Cantarini" (Casale-Monferrato, 1875).

Bibliography: *Il Vessillo Israelitico*, 1881, p. 149.

s. U. C.

OSIRIS, DANIEL: French philanthropist and art patron; born at Bordeaux July 23, 1825. For more than half a century a close friend of men prominent in art, politics, literature, and science, he has devoted his life and fortune to benefactions. He presented his native city with public fountains, and at Arcachon in the Gironde, where his summer residence is, he built a magnificent synagogue. He erected a statue of Joan of Arc (by Frémiet) at Nancy, which in return bestowed on him the freedom of the city; and he established there a serotherapeutic institute also as well as a municipal crèche. Owing to Osiris' efforts a synagogue was built in the Rue Buffault in Paris, which was dedicated Sept. 3, 1877, and in which services are held according to the Sephardic ritual; while he presented a second in 1903 to Bruyères in the Vosges. At Paris, furthermore, he restored many dilapidated tombs of famous men in the cemetery of Père-Lachaise, and presented the city with a statue of Alfred de Musset by Mercié, while Switzerland received from him a statue of William Tell, set up at Lausanne, with the inscription "A la Suisse, en reconnaissance de l'hospitalité donnée à l'armée française 1870." In 1903 he presented to the state the famous château of Malmaison, the residence of the empress Josephine. He has also purchased that part of the field of Waterloo where the last grenadiers of the Old Guard fell, and proposes (1904) to erect there a monument to their memory.

The benefactions of Osiris to art include a prize of 100,000 francs, founded at the Exposition Universelle in 1889, for the most noteworthy contribution to art, science, and industry. This prize was awarded to the Galerie des Machines. He offered a similar prize to the Exposition of 1900, which was divided four years later between Mme. Curie (60,000 francs), for her discovery of radium, and M. Branly (40,000 francs), for his contributions to wireless telegraphy. A third prize of 100,000 francs, to be awarded triennially by the Institut de France for the most important contribution to the progress of humanity, was awarded for the first time in 1903, the recipient being Dr. Roux, of the Pasteur Institute.

Osiris has had reproduced in bronze the colossal statue of "Moses" by Michelangelo; and he is the possessor of the original drawing for the well-known etching "Jews at the Wailing Place," by Alphonse Masson.

OSKAR JUSTINUS. See Cohn, Oskar Justinus.

OSNABRÜCK: Capital of the district of the same name in the province of Hanover, Prussia. A Jew named Jacob is mentioned in a document of 1267 as living there; and the text of a Jewish oath of the same period has been preserved. On Nov. 28, 1309, Bishop Engelbert II. directed the lay assessors to protect the Jewish families in Osnabrück, then numbering about thirteen, from wrong or violence. The same bishop issued other decrees regarding the Jews (Nov. 7, 1312), which forbade them to receive more than one pfennig per mark as weekly interest. Bishop Gottfried gave his protection (June 15, 1327) to fifteen Jewish families, mentioned by name, in return for an annual tax of from two shillings to eighteen marks on each family; and the Jews were compelled to act as complainants or defendants only before him or his court. On July 8, 1337, Emperor Ludwig the Bavarian entrusted the protection of the Jews to Count Heinrich of Waldeck, who was to collect from them all tribute and taxes. During the period of the Black Death Jews were martyred in Osnabrück as elsewhere, and their possessions were claimed by Bishop John II. (named Hoet), who redeemed with them all property which was in pledge. A few years later, however, eight Jews, each with a household consisting of a servant, a maid, and a tutor, were allowed to reside in Osnabrück, but each one was bound to pay the city an annual tax of thirty marks. In 1386 the Jews of Osnabrück purchased a cemetery, and the city had at that time a "Judenteich," a "Judenstrasse," and a "Judengraben" (later called, apparently, "Weibergraben"). There were five Jewish families in the town in 1413, each of which paid from seven to eight gold gulden as tax, but their number had dwindled by 1423 to two, named Lefmann and Isaak. On Oct. 20, 1424, Bishop Johann of Diepholz was compelled to promise to rid the city of Jews, since the citizens disliked them, but these two families, both of which were privileged, were permitted to remain.

For several centuries no Jews were allowed in Osnabrück. In his concordat with the city Duke Ernst August II., who was also Bishop of Osnabrück, enacted (May 29, 1716) that no Jew should be allowed to engage in trade or to live in the town contrary to the will of the council. There were but three Jewish families in Osnabrück in 1848, a local statute fixing that number as the maximum. In 1901 the Jews of the city numbered 397; it now (1904) belongs to the district rabbinate of Emden, and includes 420 souls. The Jewish community possesses a public school, a benevolent society and women's club, and a biḳḳur ḥolim society.

OSNAPPER. See Asnapper.

OSPREY (A. V. **Ospray**): Rendering in the English versions of the Hebrew "'ozniyyah" in the list of unclean birds in Lev. xi. 13 and Deut. xiv. 12. As the osprey proper (*Pandion haliaetus*) is not common in Palestine, "'ozniyyah" may be a generic term including several species, such as the golden, the imperial, and the short-toed eagle. The last-named is the most abundant of the eagle tribe in Palestine, and closely resembles the osprey.

In Ḥul. 62a the 'ozniyyah is described as a bird which does not sojourn in settled places. In Kelim xvii. 14 it is mentioned by the name of "'oz," and it is stated that tools were made of its wings.

E. G. H. I. M. C.

OSSIFRAGE (פרס): An unclean bird, mentioned in Lev. xi. 13 and Deut. xiv. 12; the *Gypaetus barbatus*, commonly known as the lammergeier (R. V. "gier-eagle"). It derives its name from its habit of breaking bones, its favorite food, by letting them fall from a great height upon the rocks. The "peres" is characterized in Ḥul. 62a as a bird which does not haunt the habitations of man.

ÖSTERREICHER, JOSEPH MANES: Hungarian physician; born at Alt-Ofen 1756; died at Vienna Dec. 14, 1831. He studied medicine, but could not practise until after the promulgation of the edict of toleration by Emperor Joseph II. in 1781. He received his medical diploma in 1782. He was thereupon appointed physician at the hospital in his native town, and subsequently head physician of the county of Zala. In 1785 he became physician at the health resort Balaton Füred.

In 1802 Österreicher went to Vienna to practise. His investigations into the adulteration of food attracted the attention of Emperor Francis, who rewarded him with handsome gifts; and on his appointment as chief physician to the imperial household in 1818, he received the great gold medal of citizenship.

Österreicher's works include: "Analysis Aquarum Budensium Item Aquæ Sarisapiensis et Acidulæ Fürediensis," Vienna, 1781; "Nachricht von den Bestandtheilen und Kräften des Füreder Sauerbrunnens," *ib.* 1792; "Sal Mirabilis Nativus Hungaricus," *ib.* 1801.

OSTRAU. See Mährish-Ostrau.

OSTRICH: The Hebrew term for this bird occurring most frequently in the Bible is "bat ha-ya'anah"; the plural form "ye'enim" occurs in Lam. iv. 3, and "renanim" in Job xxxix. 13 (A. V. "peacocks"). The Authorized Version renders also "ḥasidah" (*ib.*) by "ostrich" (see Stork).

The ostrich is an unclean bird (Lev. xi. 16; Deut. xiv. 15). Allusions are made to its living in deserted and lonely places (Isa. xiii. 21, xxxiv. 13, xliii. 20; Jer. l. 39; Job xxx. 29), to its melancholy cry (Micah i. 8), and to its speed in running (Job xxxix. 18). The idea of its being pitiless toward its young (Job xxxix. 16; Lam. iv. 3) has, as Tristram says, some foundation in fact, because "when surprised by man with the young before they are able to run, the parent bird scuds off alone and leaves its offspring to their fate." So also with regard to its stupidity (Job xxxix. 17): "When surprised it will often take the very course that insures its capture." These two characteristics are ascribed to it by the Arabs also. On the other hand, the belief that the ostrich leaves its eggs to be hatched by the sand (*ib.* 14 *et seq.*) may have arisen from its habit of scattering some unincubated eggs around its nest to serve as food for the young when hatched.

In the Mishnah "na'amit," in the Talmud "na'amita," is used besides "bat ha-ya'anah" for the ostrich (Shab. 110b; M. Ḳ. 26a). The voraciousness of the bird is illustrated by its devouring a pair of phylacteries (Yer. M. Ḳ. 83b), and it is also related (Yer. Yoma iv. 4) that an ostrich swallowed gold pieces of the size of an olive and ejected them in a polished condition. It does not even disdain broken glass as food (Shab. 128a). Yalḳ. Shim'oni ii. 17a makes the ostrich consume the flesh of the slain Agag. In Kelim xvii. 14 is mentioned a vessel made of a glazed ostrich-eggshell, having a capacity of twenty-four hen eggs. The egg of the ostrich was used for medicinal purposes (Shab. 110b).

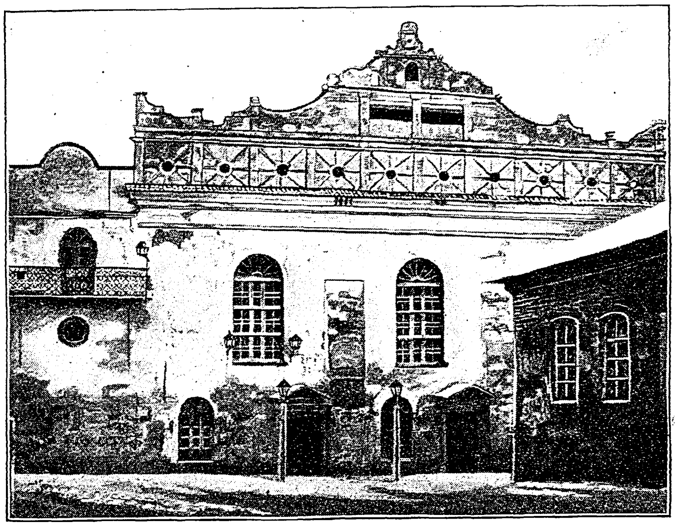
E. G. H. I. M. C.

OSTROG: Russian city in the government of Volhynia. A Jewish community was probably founded at Ostrog toward the end of the fourteenth century, when Lutsk was already noted for its important Jewish population. The first published reference to the Jews of Ostrog is dated 1532, and deals with the imposition of customs duties on horned cattle brought from Wallachia by Jewish drovers of Ostrog and other towns. The extent of this trade may be seen from the statement that Isachka, an Ostrog Jew, bought 1,500 oxen in Wallachia. In 1536 a number of Ostrog Jews were accused before King Sigismund I. of having driven several thousand head of cattle from Wallachia to Poland by way of Lithuania without paying the required customs duties: the accused claimed that they had paid the required duties in Poland, and that they had not passed through Lithuania at all. In 1550 the celebrated Jewish scholar Solomon Luria became rabbi of Ostrog. His fame brought many students to Ostrog, and the town thus became the seat of a widely famed rabbinical seminary. He was frequently called upon to act as judge in civil cases, especially in important legal suits. In 1568 the well-known tax-farmers Isaac Borodavka and Mendel Isaakovich went to Ostrog to submit a suit to a rabbinical court composed of Solomon Luria and the rabbis of Brest and Pinsk. Luria was followed by other noted rabbis—Eliezer ben Simḥah Kohen of Tulchin (d. 1612), Simson ben Isaac Boch (d. 1636), and Samuel Edels (d. 1631). The house of the last-named was preserved until 1889, when it was destroyed by fire. The fame and learning of these rabbis gave Ostrog great prominence among Jewish communities, so much so that it was styled by a contemporary writer "the great city of scholars and writers, uniting within itself learning and greatness."



Synagogue at Ostrog, Russia.
(From a photograph.)

Toward the middle of the seventeenth century Ostrog had about 1,500 Jewish householders, and the importance of the community may be seen from the fact that Ostrog was one of the four "main Volhynian communities" that sent their delegates to the diet of the Volhynian "ḳahals," which in turn selected delegates to the Council of Four Lands. The prosperity of the Ostrog community was shattered by the Cossack uprising under Chmielnicki. In Aug., 1647, the city was pillaged by the Cossacks, and the Jews who had not made their escape were massacred; in Feb., 1649, the town was again attacked, the Jews, with few exceptions, being killed in one night; men, women, and children were slain on the streets and squares, their houses were utterly destroyed, and the synagogue was transformed into a stable. Three rows of graves are still pointed out in one of the streets of Ostrog as being those of the victims of the massacre. It is the custom among the pious Jews of Ostrog to visit these graves on the Ninth of Ab and throw garlic on them: the origin of the latter custom is not definitely known.

In 1661 the town still bore witness to the destructive violence of the Cossacks. In that year there were only five Jewish houses in Ostrog, and the once flourishing community had vanished as if by magic. In 1666 a certain Aaron Zelig of Ostrog was sent as delegate to the general council at Pshevorsk. In the next decade of the same century the community of Ostrog had as its rabbi Shmelka Sack, who was at the head of the local yeshibah and who rebuilt at his own expense the synagogue destroyed in 1648. His synagogue was ruined by fire in 1889. Sack died in 1680 and was succeeded by the cabalist Naphtali Kohen, who went to Posen in 1689, then to Frankfort-on-the-Main and Prague, and after a checkered career returned to Ostrog in 1715. From Ostrog, Kohen started for Palestine, but died on the way, in Constantinople (1719). Joel Heilprin, previously rabbi of Lutsk, was rabbi of Ostrog between 1690 and 1710, and was called by the Jews there "Joel the Great." He was succeeded by Bezaleel Kohen (son of Naphtali Kohen), who died in 1717.

In the eighteenth century Ostrog was divided by the hereditary princes into two parts; and this led naturally to the division of the Jewish community into two ḳahal organizations, under their separate rabbis. The two ḳahals were not always on friendly terms. Internal dissensions arose and seriously affected the welfare of the community, rendering it less able to defend itself against common enemies. These internal dissensions were reflected in the relations of the community with other Volhynian communities, as exemplified by the formal protest, in 1758, of two rabbis, Löb of Kremenetz and Saul of Vladimir, against the conduct of the Ostrog ḳahal, in which some of the leaders of the latter were accused of abuse of their official positions.

Ostrog was affected but little by the Haidamack raids which kept the Jewish populations of Kiev, Volhynia, and Podolia in a state of fear betweer 1734 and 1768. A few Jewish merchants from Os trog were killed while returning from a neighboring fair, and according to tradition an attempt was made by peasants from near-by villages to smuggle arms into the town with the purpose of later massacring the Jews and the Poles; the plot was discovered and frustrated by the aid of the Tatars living in the vicinity. The Jews of Ostrog regarded this as a miraculous escape, and for decades celebrated the event by reading appropriate psalms on the day after Passover.

The second half of the eighteenth century was a troubled time for the Polish Jewry. The census returns of that period show that the Ostrog community, like the rest, felt the pressure of contemporary events. The statistical data for 1765–87 collected in compliance with the regulations of the diets show the following:

Date.	Number of Jews in Ostrog.	Jewish Houses in Ostrog.	Total Number of Jews in District of Ostrog.
1765	1,777	415	2,429
1778	963	Not given	1,399
1784	1,123	323	1,556
1787	1,829	282	2,348

Statistics.

With the disappearance of their prosperity the Jews of Ostrog lost also much of their learning. Poverty, helplessness, and ignorance created conditions favorable to the teachings of the Ḥasidim, and in the last two decades of the eighteenth century Ḥasidism rapidly gained adherents throughout Volhynia. The last district rabbi of Ostrog under Polish rule was the famous Meïr Margolies (d. 1790), a faithful follower of BeSHT. The rabbis of Ostrog during the eighties of the eighteenth century were Jacob Joseph (d. 1790), known, after the title of his work, as "Rab Yeba," and Asher Ẓebi Koretzki, author of a Ḥasidic work. Both were pupils of Baer of Meseritz, and untiring preachers of Ḥasidism in Ostrog.

On the second partition of Poland Ostrog passed into the possession of Russia. During the siege of the city by the Russian army (1792) the old synagogue, in which the Jews had gathered for protection, was hit repeatedly by cannon-balls. One of these may still be seen embedded in the outer wall of stone, and another is suspended by an iron chain from the inner wall of the synagogue. The Jews of Ostrog regarded the escape of their synagogue from complete destruction as a miracle, and commemorated the event for many years on the sixth and seventh days of Tammuz. A house in Ostrog which belonged to a Jew and which was the home of the printing establishment that issued, in 1581, the first New Testament in Slavonic is still standing.

Ostrog has a total population of 14,530, of whom 8,000 are Jews. The community possesses three synagogues, fifteen houses of prayer, several Jewish schools, a Jewish hospital, and a Jewish government school. The Jews of Ostrog are chiefly engaged in retail trading and in handicrafts, especially tailoring and shoemaking.

OSTROGORSKI, MOISEI YAKOVLEVICH: Russian political economist and sociologist; born in the year 1854. He is the son of a Jewish teacher at Grodno (see "Ha-Shaḥar," v. 273). After studying law in the University of St. Petersburg, he held for some time a subordinate position in the Ministry of Justice. He published his "Khronologiya Russkoi Istorii," a chronology of Russian history, in 1872 (St. Petersburg), and in the following year his "Khronologiya Vseobschei i Russkoi Istorii," which has been frequently reprinted (14th ed., *ib.* 1897). His "Istoriya Rossii dlya Narodnykh Uchilishch," a history of Russia for the public schools, enjoyed a like popularity (14th ed., *ib.* 1896). In 1876 he began to publish the yearly "Yuridicheski Kalendar." In 1889 appeared his "De l'Organisation des Partis Politiques aux Etats Unis" (Paris; reprinted from the "Annales de l'Ecole Libre des Science Politique"). His "La Femme, au Point de Vue du Droit Public" (Paris, 1892) was crowned by the Faculté de Droit of Paris and has been translated into both German and English ("The Rights of Woman," London, 1893). "De l'Organisation de Partis Politiques" subsequently formed the basis of a larger work, in three volumes, on the political parties of Great Britain and the United States, of which an English translation appeared under the title "Democracy and the Organization of Political Parties," with a preface by James Bryce (New York, 2 vols., 1902).

OSTROPOLI, SAMSON BEN PESAḤ: Polish rabbi; martyred at Polonnoye, government of Podolia, in the Cossacks' Uprising July 15, 1648. When the Cossacks laid siege to Polonnoye, Samson, with 300 of his followers, arrayed in their shrouds and praying-shawls, went to the synagogue, and stood there praying until the enemy came and butchered them all.

Ostropoli was a noted cabalist. He was the author of a commentary (published by his nephew Pesaḥ at Zolkiev in 1709) on the cabalistic work "Ḳarnayim." According to the author of "Yewen Meẓulah," he wrote also a commentary on the Zohar in conformity with the cabalistic system of Luria; but this work has not been preserved. Other works of his are: "Dine we-Hanhagot ha-Adam" (Ostrog, 1793), a collection of cabalistic liturgical regulations from the works of Ostropoli and other cabalists: "Sefer Liḳḳuṭim" (Grodno, 1794), cabalistic exegetics and elucidations of many passages in the Zohar and other works; and "Nifla'ot Ḥadashot" (*ib.* 1797), elucidations of the Pentateuch and the Five Megillot, and homiletics.

OSTROWO. See Posen.

OTHNIEL: One of the sons of Kenaz, according to the chronicler (I Chron. iv. 13); hence one of the Kenizzites. After Caleb had been assigned his possession (Josh. xv. 13 *et seq.*), he drove out the giants and otherwise secured it for himself, except the town of Kirjath-sepher, as a prize for whose capture he offered his daughter Achsah. "Othniel the son of Kenez, the brother of Caleb, took it, and he gave him Achsah his daughter to wife" (*ib.* xv. 16, 17). Othniel's heroism, however, achieved the greatest results for his people when he delivered them from foreign oppression. The tribes had no sooner settled in the land than a conqueror from the country of Mesopotamia, Cushan-rishathaim, probably an Aramean, swept down over Syrian territory and subjected Israel. For eight years they were compelled to pay the price of submission and oppression. When they cried for mercy Yhwh raised up a savior, "even Othniel the son of Kenaz, Caleb's younger brother" (Judges iii. 9). By the spirit of Yhwh that came upon him he routed the king from Mesopotamia and saved Israel from its oppressor. "And the land had rest forty years." The question of marriage involved in this narrative is not troublesome. The marrying of near kin was allowable in that day, as is seen in the cases of Abraham (Gen. xx. 2, 5, 12), of Isaac and Rebekah, of Jacob and Rachel and Leah, and often in later times. Othniel's real relation to Caleb is plain if the narrative is allowed to tell its own story.

OTIYYOT DE-RABBI AḲIBA. See Akiba ben Joseph, Alphabet of.

OTRANTO (אוטרנטו): City of southern Italy. It was one of the oldest seats of Jewish learning in Europe, so that at an early date the proverb "From Bari shall the Law go forth, and the word of the Lord from Otranto" came into circulation. In the Middle Ages the community was a comparatively large one. Benjamin of Tudela, who speaks of the town as being "on the coast of the Grecian Sea," found there about 500 Jews, leaders among whom were Rabbis Menahem, Caleb, Meïr, and Mali. The community survived until about 1540 the various vicissitudes experienced by all Jews in the kingdom of Naples. As late as 1538 mention is made of regular sermons preached in Otranto; and at about the same time a divorce document was drawn up there.

The following scholars are known to have lived at Otranto: Moses b. Shem-Ṭob ibn Ḥabib of Lisbon (15th cent.) and the liturgical poet Menahem b. Mordecai Corisi (קוריצי). The Jews of Otranto spoke Greek and often had Greek names.

G. I. E.

OTTENHEIMER, HENRIETTE: German poetess; born at Stuttgart Sept. 10, 1807; died there 1883. A faithful Jewess, she was filled with the desire, even at an early age, to combat anti-Jewish prejudice; and she numbered among her friends and correspondents many famous personages, including Uhland, Rückert, Michael Beer (the author of "Struensee"), Gabriel Riesser, Menzel, and others. The last years of her life she spent, almost completely paralyzed, with an aged sister near Ratisbon.

Henriette Ottenheimer wrote much, both in prose and in poetry, although she published little. Her most important work is the poem "Der Kettenschmied, ein Märchentraum" (Stuttgart, 1835), dedicated to Uhland. Other works include: "Gedichte" (*ib.* 1832), a volume of poems; "Bilder und Lieder" (Munich, 1833); "Erzählungen und Gedichte" (Stuttgart, 1836); and "Erzählungen" (Leipsic, 1841). She also contributed stories and lyric poems to the "Morgenblatt," Lewald's "Europa," Duller's "Phœnix" and "Deutsches Stammbuch," Spindler's "Damenzeitung," and other periodicals.

Bibliography: Kayserling, *Die Jüdischen Frauen*, pp. 238 *et seq.*

S. M. K.

OTTENSOOSER, DAVID: German author; born 1784; died May 22, 1858, at Fürth. An infant prodigy, he was an omnivorous reader from early youth; and his unceasing activity continued throughout his life. Ottensooser was a thorough scholar, although entirely self-taught; but his mode of expression is frequently obscure owing to his lack of training.

His literary activities were manifold. He translated and annotated the Books of Job, Isaiah, and Jeremiah, edited philosophical works of Maimonides, Bedersi, and Shem-Ṭob ben Joseph Falaquera, wrote a Jewish history based on Josephus, and published anecdotes from the Talmud and from Maimonides.

In Ottensooser's time the yeshibah of Fürth was at its prime, and the students of the Talmud there found in him a constant benefactor.

Bibliography: H. Zirndorf, in *Allg. Zeit. des Jud.* 1858, p. 471; Fürst, *Bibl. Jud.* iii. 58-59; Zeitlin, *Bibl. Post-Mendels.* ii. 258.

OTTENSOSER, LAZARUS: German rabbi; born at Weimarsschmieden in 1798; died at Hochstädt Aug., 1878; son of the "Cultusbeamte" Naphtali Ottensoser of Weimarsschmieden, with whom he went in early youth to Kleinabstadt. Beginning life as a pedler, Lazarus was subsequently called as teacher to the community of Scheinfeld. In 1821 he was called as "moreh ẓedeḳ" to Aub, and in 1828 to Hochstädt. In 1861 the Bavarian government officially sanctioned the Talmud Torah which he had established.

S. S. O.

ÖTTINGEN: Former principality and county of Germany, covering about 100 square kilometers. It belonged to the two houses of Öttingen-Spielberg and Öttingen-Wallerstein, and included, aside from the capital of Öttingen, the communities of Hainsfurth, Mönchsroth, Harburg, Deggingen, Ederheim, Schopfloch, Erdlingen, Pflaumloch, Baldern, Oberdorf, and Aufhausen. The earliest date mentioned in connection with the Jews of Öttingen is 1298, the time of the Rindfleisch persecutions; this occurs in the "Martyrologium," where the capital is referred to in connection with the same date. On May 30, 1331, Emperor Ludwig granted to Count Ludwig the Elder of Öttingen the right "to use and enjoy his Jews, together with all rights, honors, and good habits." On Nov. 21, 1342, an imperial edict was issued ordering every Jew twelve years of age and over to pay the "Opferpfennig" and one gulden (in gold) every Christmas into the imperial exchequer. On June 16, 1439, Count Ludwig sent at the emperor's command the physician Enoch b. Abraham to a conference with the royal councilors at Nuremberg. In 1552 Count Ludwig XVI., of the house of Spielberg, expelled all the Jews from the territory; they went to Esslingen, and refused to return even when the governor Conrad Zwickh sent them "resolutions" as an inducement to do so. In 1587 only seven Jews and one Jewess are mentioned as at Öttingen. From 1608 to 1614 the two branches of the house conferred with a view to expelling all Jews, but the plan was not carried out. In 1658–1659 the Jews were expelled from Öttingen-Baldern by the countess Isabella Eleonore, and admitted to Erlingen at the intercession of the head of the Order of St. John, Heinrich von Lützow. In 1714 the regulations restricting the Jews of Öttingen to the towns of Spielberg and Wallerstein were abolished.

Earliest Documents.

The earliest documents referring to the Jews there belong to the fifteenth century and are letters of protection granted by the counts to individual Jews. The earliest of these letters, of the year 1434, was granted to the brothers Hirsch and Süssmann. Jews were permitted to lend money on pledges at a weekly interest of one pfennig in the gulden. If involved in lawsuits, the testimony of at least two Christian citizens was required against them. This contract was indefinite as to time and could be canceled at the pleasure of the count. Similar letters of protection were granted in 1444 by Count Wilhelm to the Jew Jacob of Wemding, and in 1559 by a later Count Wilhelm to some Jews of Neresheim. These Jews were each required to keep in their houses a Christian as a substitute in case of war, and a spear, and to pay the yearly state tax in addition to ten gulden as protection money. Letters of protection for the Jews were granted at Öttingen only after the Thirty Years' war. In the introductions to these letters it was invariably observed that the Jews ought to be "expelled and abolished," and that the count granted them his protection only by special request, and his favor only for the specified time. A request for the renewal of a letter had to be made half a year before the expiration of the old one. On being taken under protection the Jews were required to take an oath of fealty, for which joining of hands was substituted in 1806.

The Jews of Öttingen were subjected to the following taxes in addition to those mentioned already: (1) the "Kleppergeld" (in the form of one or two good saddle-horses, sent to the castle for the use of the count every two or three years; frequently a sum up to ten gulden per family was required instead); (2) the "Ordinari" tax (introduced in 1649, for real estate, which was entered every year at the "Rentkammer"); (3) the goose-tax (introduced in 1719; it consisted in the delivery to the count of "fattened, unplucked, and live" geese every year, on St. Martin's day; this tax also was often commuted to a money-payment at the rate of one gulden per goose); (4) the Michaelmas tax; (5) the "Herbstzins" or synagogal tax; (6) the New-Year's and "Sacrist" money (from 75 to 100 gulden, collected by the parnasim of the various communities and handed to those of Öttingen, who solemnly transferred it to the prince's exchequer).

Jewish Business.

In addition to these taxes the Jews were obliged to send a valuable present to the count on his wedding. If a Jew married one of his sons or daughters, he could keep the young couple only one year (the "Kostjahr") thereafter in his house, after which they had to leave the county. Beginning with 1806 a Jew was permitted to marry only when another family had disappeared in some way, or on receiving special permission. Jews were not permitted to take more than 7 per cent interest for their money. Any Jew convicted of usury, or of taking any object in addition to his legitimate interest, forfeited the loan and was compelled to pay a fine amounting to double the sum loaned. The Jews of Öttingen were not allowed to deal in spices in the seventeenth and eighteenth centuries. In 1785 those of Öttingen-Spielberg were permitted to establish chintz-, cotton-, and silk-mills. One Moses the Elder was considered to be the richest Jew of Öttingen, the value of his property being estimated at 12,000 gulden in 1684.

Restrictions.

In the fifteenth, sixteenth, and seventeenth centuries the houses of the Jews were officially inspected every second year; beginning with 1806, every third year. Every Friday each Jew was compelled to clean the street in front of his house, under penalty of a fine of two thaler. Although a decree of 1530 ordered the Jews to wear yellow rings on their caps, this was never enforced in Öttingen, and Charles V. annulled it entirely in 1541, since Jews wearing this badge beyond the county would be in peril of life and limb. The Jews were furthermore permitted to ride through the streets of the town with baldric and side-arms, except on Easter, Whitsuntide, and the Christmas holidays. On June 8, 1623, the Jews of Öttingen were forbidden to make their purchases in the weekly market before the "Jew's flag" was hoisted. The tongue of every ox killed for Jewish consumption was sent to the court. Intercourse with foreign Jews was strictly forbidden; a foreign Jew coming into the county paid a poll-tax of eighteen kreuzer per day and reported daily to the authorities. As Jewish beggars were especially troublesome in the territory of Öttingen, the state established inns for them at Harburg and Wallerstein. A detailed description of the Jewish tramps, who, with others, often made the roads unsafe, was given by the Jew Joseph Isaac, bookseller at Goschheim, in the "Journal von und für Franken," 1790; for the betterment of their condition he published in 1791, in Hebrew and German, a work entitled "Gedanken über Betteljuden und Ihre Bessere Versorgung."

Difficulties between Jews and Christians were

Legal Status.

brought into the Christian courts, before which Jews and Christians were equal; and the former had their own ceremony in taking the oath. The Jew about to take an oath first covered his head; then he washed his hands, said the prayer "Asher Yaẓar," drew the ṭallit over his head, put on the tefillin, turned with his face toward the east, took the roll of the Law into his right hand, covered it partly with the left hand, and recited the formula of the oath. In especially difficult cases he held a butcher's knife in his hand, or took the oath in the synagogue, sitting, arrayed in a shroud, on a coffin before the open ark. In 1783 the "Ordnung des Jüdischen Eides vor Christlichen Gerichten" appeared.

In 1583 the Jew Abraham Haas was hanged by the feet on a gallows, beside a hungry dog, and expired after thirty hours. In 1555–56 the Jews Hirsch Rubin and Schmerein were accused of having killed a Christian child for ritual purposes. Anna Grävin, the complainant, however, was convicted of calumny and sentenced to death by drowning. The Jews were liberated June 30, 1556, on taking a solemn oath to renounce their feuds. On Jan. 12, 1611, "Jacob the Tall," after committing a burglary, made an attempt to blow up the "Deutsche Ordenshaus" with gunpowder; he was captured, tortured several times in spite of having confessed, and hanged by his feet on the gallows, between two dogs. A great fire was built near him, at which he was slowly roasted for half an hour, until he expired. In May, 1690, the Jews were suspected of having murdered a Christian child, but they succeeded in proving that the Christian Hans Hopfenstetter committed the deed. The Jews thereupon held services of thanksgiving and appointed the 18th of Iyyar as a day of fasting in commemoration of their deliverance, which day is still observed.

Rabbis and Teachers.

The Jews had local and two district rabbis, the former being elected by the communities and the latter by the parnasim, who convened for this purpose from the various communities. The rabbis, cantors, schoolmasters, slaughterers, and "schulklopfers" were exempt from all taxes, administered justice with the consent of the county, imposed fines, and pronounced the sentence of the lesser or the greater excommunication upon individual members. The district rabbis received from 45 to 90 gulden; after the Jewish courts were abolished in 1811 they received 400 gulden.

The communities were divided into two groups, each constituting a district rabbinate: the Öttingen-Spielberg group, including the eight larger communities, and the Öttingen-Wallerstein group, including six communities. The following rabbis were associated with the former group: 1661–96—Enoch b. Abraham, Simon Hirsch, Simon b. Yishai, Moses Meïr Tarnopol (author of the Pentateuch commentary "Me'or Ḳaṭon"); 1696–1705—Naphtali Enoch b. Mordecai, Rabbi Isaac (or Seligman); 1719–53—Abraham David Mahler of Prague, "Hochfürstlicher und Hochgräflicher Landesrabbiner"; 1753–64—Abraham Benjamin (Wolf), Levi b. Samuel Levi; 1764–95—Jacob Phinehas Katzenellenbogen; 1795–1844—Phinehas Jacob Katzenellenbogen. The rabbis connected with the Öttingen-Wallerstein group were: Phinehas Katzenellenbogen (1630–50); Hirsch Jacob (from 1655); Isaac Israel of Prossnitz (1730–50); Hirsch Kohn of Fürth (1751–63); Isaac Hirsch Kohn (1763–72; called to Bonn); Benjamin Hirsch Kohn (1772–89; called to Bonn); Asher Löw (1789–1809; descendant of Saul Wahl).

Communal Government.

In Öttingen the parnasim were the actual administrative officials, and three or four were elected for each community, serving for three years. Their political duties included guarding the interests of the exchequer of the count or prince; policing the community; making an inventory of the property of the Jews every three years; caring for the poor; and collecting the taxes. They were exempt from all services and taxes while holding office, and received a fee for each paper bearing their signature. They were also empowered to fine any member of the community to an amount not exceeding five gulden. Since the house of Öttingen had a Catholic and a Protestant branch, these terms were applied to their Jewish supporters. Thus there were "Catholic" and "Protestant" synagogues and "Catholic" and "Protestant" Jews. On a market-ship going to Mayence one Wagenseil is said to have created a disturbance by asking a Jew whether he was a "Catholic" or a "Protestant" Jew. These designations were applied to the Jews as early as the middle of the seventeenth century. When a quarrel broke out between the two branches of the house in 1674 the Jews of their respective territories were forbidden to traffic with each other.

Court Jews.

Noteworthy among the court Jews of Öttingen were Hirsch Neumark and David Oppenheim. Hirsch Neumark lived in the second half of the seventeenth century, first at Wallerstein and then at Öttingen. Through the great influence he exercised over Count Albert Ernst he succeeded, supported by the suspicions of the Jews of Fürth, in having the Swiss citizen Paccaton arrested at Nördlingen; consequently, when the suspicions proved to be unfounded, the Jews were expelled from the cantons of Bern, Freiburg, and Basel (1701). In 1672 David Oppenheim (Oppenheimer) was granted protection for fifteen years by Count Albert Ernst of Öttingen; he was made director of the mint of Öttingen with the title "Mint Jew of the Prince" (1674–95). He received also the privilege of furnishing the metal necessary for coinage; he used for this purpose foreign coin, which he purchased cheaply and recast. Bavaria, Swabia, and Franconia protested against this practise. In 1695 Oppenheim was arrested by order of the president of the council, Count Wolfgang, but died in prison before the end of the trial. The following court Jews are also mentioned: Öttingen: Koppel zu Lauchheim (Baldern; 1710); Abraham Elijah Model of Mannheim (Wallerstein; 1739); Löw Manasseh (1740); Joseph Löw Zachariah (1771); Zachariah Model (1772); Hänle Meïr, Simon Ḥayyim Springer, Itzig Wolf Springer, Wolf Ḥayyim Springer (1775); Wallerstein: Abraham Itzig, Ḥayyim Löw (1792). Jacob Hechinger (1803), at Harburg, was the last court factor in the territory of Wallerstein. Abraham Jonas (1811) was the last court factor of Öttingen, having been appointed by the princess Marya Aloysia.

The community of the town of Öttingen does not seem to have possessed its own cemetery. Between 1444 and 1461 it used the cemetery of Nördlingen. Then Wallerstein offered its cemetery. When a quarrel broke out between the two communities on this account in 1716 they compromised with the understanding that the community of Öttingen should pay eight gulden a year to the community of Wallerstein.

Present Conditions.

The present community of the town of Öttingen numbers (1904) 141 Jews, the total population being 2,975. It has a Hebrew young men's association and a philanthropic society. Wallerstein has 32 Jews, and has a ḥebra ḳaddisha and a poor-fund. Hainsfurth has 135 Jews in a total population of 1,037. Mönchsroth has 90 Jews, and Pflaumloch 28. Dr. H. Kroner and Dr. A. Kohn respectively are the officiating rabbis at the last two places.

S. S. O.

ÖTTINGEN, ELIJAH B. ABRAHAM B. MORDECAI HA-LEVI: Rabbi at Wengrow, Poland, in the first half of the seventeenth century. His first work, "Berit ha-Lewi" (Lublin, 1645), is an ethical exposition of the prayer of Moses (Deut. iii. 23-26) by 365 different methods, interwoven with the 613 commandments, and is based upon stories from Midrash and Talmud. A second, larger work of his, entitled "Minḥat Eliyahu," is mentioned by Fürst, but is otherwise unknown. Another work, notes on the tractate Horayot, was printed together with the tractate Sukkah (Dyhernfurth, n.d. [17th cent.]; republished Amsterdam, 1727). Steinschneider and Michael, however, think that this work was written by one of the tosafists, and that Öttingen was merely its editor.

ÖTTINGER. See Ettinger.

ÖTTINGER, EDUARD MARIA: German writer; born at Breslau Nov. 19, 1808; died at Blasewitz, near Dresden, June 26, 1872. In 1828 he became a Catholic. He lived as a journalist in Berlin (editing "Eulenspiegel," 1829), Munich ("Das Schwarze Gespenst," 1830), Berlin ("Neuer Eulenspiegel," 1831; "Figaro," 1832-36), Hamburg ("Argus," 1836-38), Mannheim, Leipsic ("Charivari," 1842-52; "Narrenalmanach," 1843-49), Paris, Brussels, and after 1860 in Blasewitz.

Öttinger wrote many works, comprising novels, poems, satires, and historical and bibliographical writings, a complete list of which may be found in "Moniteur des Dates," vi. 83, Dresden. 1868. Among them may be specially mentioned: "Buch der Lieder" (Berlin, 1832; 5th ed., Leipsic, 1850); "Der Ring des Nostradamus" (Leipsic, 1838; 2d ed., *ib.* 1845); "Historisches Archiv" (Carlsruhe, 1841); "Bibliotheka Shahiludii" (Leipsic, 1844), a bibliography of chess; "Graf Saint-Germain" (*ib.* 1847); "Rossini" (*ib.* 1847); "Bibliographie Biographique" (*ib.* 1850; 2d ed., Brussels, 1854; this work, containing biographical data of about 200,000 persons, was the forerunner of the "Moniteur des Dates"); "Neues Buch der Lieder" (Dresden, 1852); "Iconographia Mariana" (Leipsic, 1852), a bibliography of the miracle-working pictures of the Virgin Mary; "Auf dem Hradschin" (Prague, 1856); "Gesch. des Dänischen Hofes von Christian II. bis auf Friedrich VII." (Hamburg, 1857-59); "Die Moderne Semiramis" (Berlin, 1863); "Mutter und Sohn" (*ib.* 1864). His historical novels were for a time much read in Germany.

In 1866 Öttinger commenced to edit and publish in Dresden, under the patronage of the King of Prussia (later Emperor William I.), his well-known work "Moniteur des Dates," which he continued until his death. This great undertaking was finished by Hugo Schramm-Macdonald in Leipsic in 1881. The work gives short biographical notes of all important men (over 1,000,000 in number) from the dawn of history to the date of the completion of the book, including living persons.

Bibliography: Brümmer, *Dichter-Lexikon*, s.v.; Schramm-Macdonald, in *Illustrirte Zeitung*, Leipsic, July 27, 1872; Öttinger, *Moniteur des Dates*, s.v.

S. F. T. H.

ÖTTINGER, JACOB JOSEPH: German rabbi; born at Glogau 1780; died at Berlin Nov. 7, 1860. A pupil of Hirsch Samosc, he acquired a wide knowledge of rabbinical literature. In 1820 he was called to Berlin as assistant rabbi, and was appointed acting rabbi five years later, on the death of Meyer Simon Weyl. Only a few of his novellæ have been printed; but many modern Hebrew works and new editions of earlier books were approved by him and by Elḥanan Rosenstein, his colleague at Berlin. His pronounced stand on the question of Reform deserves especial mention.

Bibliography: Landshuth, *Vollständiges Gebets- und Andachtsbuch zum Gebrauch bei Sterbenden*, Appendix, p. 1, Berlin, 1867 (contains his epitaph).

S. M. K.

ÖTTINGER, JOSEPH: Austrian physician; born at Tarnow, Galicia, May 7, 1818; died at Cracow Oct. 2, 1895. He was educated at the University of Cracow (M.D. 1843; Doctor of Surgery 1850). In 1851 he had charge of the lectures on the history of medicine and medical jurisprudence at the university, but the "venia legendi" was refused him for political reasons, mainly because of his intense Polish sympathies as opposed to Austrian control. It was not until 1867 that he became privatdocent. Seven years later he was appointed assistant professor; and this position he held until 1889, when, having reached the age-limit, he retired.

In addition to his university duties Öttinger was physician-in-chief to the Jewish hospital at Cracow, and was a member of the Cracow Academy of Sciences and other learned societies.

Öttinger wrote many studies for the professional journals; he was the editor of a dictionary of Polish medical terminology, published by the Society of Physicians of Cracow, of which he was president; and for many years he edited also the medical journal "Przeglad Lekarski." Among his works special mention may be made of the following (all written in Polish): "Notes on the Chief Epidemic Diseases" (1865); "On Medical Superstitions" (1867); "On Epidemic Insanity" (1868); "The Principal Results of Medical Experience" (1870); "The Sick in the Jewish Hospital at Cracow and Their Diseases" (1871); "Some Reminiscences of the Previous History of the Medical Faculty of the Jagellonic University" (1874–76); "The Plague in Europe During the Last Two Centuries" (1879); "Collection of the Hippocratic Writings in the Light of Modern Criticism" (1879); "Medical Notes from the Sixteenth Century" (1880).

OTTO, JULIUS CONRAD. See Margolioth, Naphtali.

OTTOLENGHI, ABRAHAM AZARIAH (BONAJUT): Italian rabbi; born at Acqui 1776; died in 1851; brother of Israel Emanuel Ottolenghi. On the occasion of the entrance of the French army in 1796, after the battle of Montanotte near the walls of Acqui, he made an address on the significance of the tree of liberty. After the French reverses of 1799 and the battle of Novi, the populace rose against the Jews of the city. The Ottolenghi were persecuted, Abraham Azariah being attacked by the reactionary party. The brothers Ottolenghi escaped and fled to the Alps; but their father was seized as a hostage by the French troops and taken to Genoa. On the restoration of order after the battle of Marengo, Azariah returned and resumed his theological studies. He assumed, without claiming any fees, the rabbinical functions at Acqui, and continued to discharge them until shortly before his death. He was the author of "Shir le-Kabod ha-Torah" (Leghorn, 1808).

S. U. C.

OTTOLENGHI, DONATO: Italian author; born at Acqui Nov. 7, 1820; died Oct. 5, 1883, at Alessandria, Piedmont, where he had resided since 1848. He was an ardent patriot, and maintained a correspondence with D'Azeglio, Bianchi-Giovini, Balbo, and Gioberti. Being very wealthy, he devoted all his energies to the elevation of the poorer classes of Alessandria, making his philanthropic plans known both through the daily press and by means of his own writings.

In addition to numerous articles in "La Provincia" and "Il Vessillo Israelitico," Ottolenghi's works include: "La Causa dei Poveri Deferta al Sesso Gentile," Alessandria, 1860; "Si Pensi al Povero, Considerazioni e Proposte," *ib.* 1860; "Progetto per la Fondazione di un Comitato Centrale e Permanente di Beneficenza in Alessandria," *ib.* 1862; "Della Povertà e della Beneficenza in Alessandria," *ib.* 1868.

Bibliography: *Il Vessillo Israelitico*, 1883, pp. 328 *et seq.*, 343 *et seq.*

OTTOLENGHI, EMILIO (Count of Vallepiana): Italian philanthropist; born at Acqui Nov. 5, 1830; since 1848 he has been a resident of Alessandria, Piedmont. In 1882 he was elected to the common council and was re-elected for several years. He was likewise a member of the advisory board of the "Ricovero di Mendicità," and the founder of refuges and asylums, and is a director of the Bank of Italy, the Savings Bank, and the Hebrew community, as well as president of the national society for the province of Alessandria. Ottolenghi has been successively made chevalier, officer, and commander of the Crown of Italy by Humbert I., who has created him (Feb. 22, 1883) Count of Vallepiana.

Bibliography: *Ottolenghi di Vallepiana*, in *Famiglie Illustri Italiane.*

S. U. C.

OTTOLENGHI, GIUSEPPE: Italian general; born at Sabbionetta, Lombardy, Dec. 26, 1838; died at Turin Nov. 2, 1904. He began the study of law at Turin, and then entered the military academy of that city. He enlisted as a volunteer in the campaign of 1859, was promoted, and took part in the campaigns of 1860 and 1861, being the first Jew to belong to the staff. In 1863 he was promoted to the rank of captain. In 1864 he fought against the brigands of Basilicata, and won the silver medal for military valor; while in the campaign of 1866 he received the Cross of Savoy as well as several other decorations. Ottolenghi was for some time professor of military history and tactics in the Royal Military School at Modena, and was military attaché with the French army in the Franco-Prussian war. He was likewise the Italian delegate to the European commission to determine the boundary between Turkey and Montenegro, after the Eastern war. He was made brigadier-general in 1888; commandant of the division of Turin in 1895; commandant of the fourth army corps in 1902; minister of war, 1902–3; senator of the kingdom, 1902; and commandant of the first army corps, 1903.

Giuseppe Ottolenghi.

OTTOLENGHI, LAZZARO: Italian rabbi; born at Acqui 1820; died in Rome 1890. He occupied successively the rabbinates of Turin, Moncalvo, and (1858) Acqui. The last years of his life were spent in Rome. Ottolenghi was a preacher of some note, and wrote a number of Hebrew poems. Among his writings are: "Matrimonio Misto," a comedy; "Dialoghi Religioso-Morali"; and "Ḳol

Ḳore," designed for the study of Hebrew literature. In his youth he wrote several tragedies, one of which, "Etelwige," was produced at Acqui in 1852.

s. U. C.

OTTOLENGHI, LEONETTO: Italian philanthropist; born at Asti Nov. 3, 1829; died at Pisa Feb. 20, 1904. In 1889 he rebuilt the Jewish synagogue at Asti, and two years later organized the exposition held there, of which he was president. In 1898 he promoted a second exposition. King Humbert I. visited both expositions, and on March 14, 1899, conferred upon Ottolenghi the hereditary title of count. In 1903 Ottolenghi presented a statue of Humbert I. to Asti, and founded an Alfieri collection in the Palazzo Alfieri.

OTTOLENGHI, SALVATORE: Italian physician; born at Asti March 20, 1861. He received his education at his native town and at the University of Turin (M.D. 1884). He has been since 1888 assistant professor of medicine and chief of the medico-forensic department in the University of Sienna.

Ottolenghi has contributed to the medical journals nearly eighty essays, especially on forensic medicine, anthropology, and criminology, and is the author of: "Anomalie del Campo Visivo Nei Precopatici e Nei Criminali," Turin, 1891; "Duocento Criminali e Prostitute" (with U. Rossi), *ib.* 1894; "La Sensibilità della Donna," *ib.* 1896; "La Suggestione e le Facoltà Psichiche Occulte in Repporto alla Pratica Medico-Forense" (with U. Rossi), *ib.* 1899; "Il Glicogeno dei Muscoli e del Fegato nel Cadavere a Diverse Epoche della Morte," Sienna, 1901.

s. F. T. H.

OTTOLENGO, JOSEPH: Italian scholar of the sixteenth century; died about 1570. He was a German by birth, but went from Ettlingen to Cremona. There he conducted a school ("Hebr. Bibl." v. 125, note), and became involved in a feud with Joshua dei Cantori, who, partly for this reason, agreed to serve with Vittorio Eliano on the censorship committee which condemned the Talmud. He published, or caused to be published at his expense, about twenty Hebrew books at Riva di Trento, between 1558 and 1562, in the printing-house founded by Cardinal Cristoforo Madruz. Ghirondi says erroneously that Ottolengo had these books printed at Cremona, and both he and Fürst wrongly ascribe to him the authorship of the "Diḳduḳe Rashi," a compendium of Elijah Mizraḥi's supercommentary to Rashi, which he merely edited. It is possible that the author was really Jacob Marcaria, who wrote prefaces to some of Ottolengo's editions. Ottolengo was the author of the following works: "Luaḥ mi-Kol ha-Dinim" (Riva di Trento, 1558), a list of the decisions of the RaN; and "Simane Mordekai" (*ib.* 1558).

s. U. C.

OTTOLENGO, SAMUEL DAVID BEN JEHIEL: Italian rabbi of the cabalistic school; flourished in the seventeenth and eighteenth centuries; born at Casale-Monferrato; died 25th of Ab, 1718. He was chief rabbi of Padua and Venice, and was the author of the following works: "Ḳiryah Ne'emanah" (Venice, 1701), extracts from the "Ma'abar Yabboḳ" of Aaron Berechiah of Modena; "Me'il Shemuel" (*ib.* 1705), extracts from the "Shene Luḥot ha-Berit" of Isaiah Horwitz, with an index; and "Tiḳḳun Shobabim" (*ib.* 1719), containing among other things extracts from the similarly entitled work of Moses Zacuto. Ottolengo wrote also a number of responsa, as well as several piyyuṭim and elegies, some of which have been printed, while others exist only in manuscript. He also left a manuscript collection of "ḥiddushim" on various treatises of the Talmud. His haskamah is found in the "Paḥad Yiẓḥaḳ," *s.v.* "'Ones Noten Arba'ah Debarim."

Bibliography: Nepi-Ghirondi, *Toledot Gedole Yisrael*, pp. 330, 335; *Allg. Zeit. des Jud.* July, 1902.

OULIF, CHARLES NARCISSE: French lawyer; born at Metz July, 1794; died in Paris March 3, 1867; educated at the Imperial Lyceum of Metz and later at Strasburg, where he was the first Jew to receive a degree in law (Dec., 1815), being admitted to the bar at Metz. Two years later he became an officer in the National Guard, and later was an enthusiastic supporter of the revolution of 1830. Almost immediately after the inauguration of his legal career Oulif began his struggle to remove the disabilities of the Jews of France. For many years he strove to secure the abolition of the Jewish oath, and he was twice successful (1816 and 1827), at least within the jurisdiction of the court of Metz, while he also secured the suppression of the term "Jew" in all judicial measures and documents in the same court.

In the latter part of 1834 Oulif accepted a call to the chair of law at the University of Brussels, where he remained for over thirty years. The year after his appointment he was admitted to the Brussels bar.

The interest of Oulif in Judaism was unremitting. While at Metz he had established a school for Jewish youths, and had been one of the founders of a society for the encouragement of Jewish arts and industries which served as models for similar institutions at Nancy, Strasburg, Paris, and other cities. Later he became vice-president of the board of trustees of the Central Rabbinical School of France, which was originally situated at Metz, but was later transferred to Paris as the Jewish Seminary. The same keen interest which he always felt in this school was manifested by him in the Alliance Israélite Universelle. Later still he was one of the founders of the French Benevolent Society of Brussels. He was a member of the Legion of Honor (1837) and received the decoration of the Order of Leopold of Belgium.

The literary works of Oulif include: five volumes of the decisions of the court of Metz, begun by him and his colleague Paraut in 1818; a pamphlet, "Sur l'Etat de l'Enseignement Supérieur en Belgique"; and numerous articles on important political questions in the Belgian liberal journals, the most striking being a series entitled "France et Belgique."

S. J. KA.

ÓVÁRY, LEOPOLD: Hungarian historian; custodian of the Hungarian state archives; born at Veszprim Dec. 31, 1833. He took part in the Hungarian struggle for liberty in 1848 and in the Italian war of independence in 1860. After the political troubles had been settled he devoted himself to the study of history, in which he soon achieved distinction. In 1876 he was appointed assistant custodian of the state archives, in 1904 chief custodian; and in 1892 he was elected a member of the Hungarian Academy of Sciences. A knighthood of the Order of the Crown of Italy has been conferred upon him.

Ováry's writings had considerable political influence, especially those attacking the anti-Hungarian Rumanian propaganda in Italy. His chief works include: "Nápolyi Történelmi Kutatások" (Budapest, 1874); "III. Pál Pápa s Farnese Sándor Bibornok Magyarországra Vonatkozó Diplomácziai Levelezései" (*ib.* 1879); "Oklevéltár Bethlen Gábor Diplomácziai Összeköttetéseinek Történetéhez" (*ib.* 1886); "Zsigmond Királly és az Olasz Diplomaczia" (*ib.* 1889); "A Magyar Anjouk Eredete" (*ib.* 1893); "La Questione Dacoromana e lo Stato Ungherese" (Rome, 1894; German ed., Budapest, 1894; French ed., Paris, 1894). Ováry embraced Christianity.

S. L. V.

OVEN: Stoves built into a room for the purpose of heating it have always been unknown in the East. The substitute for them is the "aḥ," or portable brazier, which even at present in the Orient is placed in the room during cold weather (comp. Jer. xxxvi. 23). In some regions it is the custom to put a wooden frame like a low table over the pot of coals when the latter no longer send up flames; and over this is spread a large rug to keep in the heat, its ends serving to cover up to the waist the persons lying around the brazier. It is questionable whether the Hebrews were acquainted with this practise (comp. Niebuhr, "Reisen," ii. 394). The usual word for oven, "tannur," designates the baking-oven, which was probably like that still used among the Arabs. It commonly consists of a large open pot or jar which is half filled with small bricks. These, when properly heated, serve to bake the dough spread over them or stuck to the sides of the jar. Horse or sheep dung is usually used as fuel by the modern fellahs (comp. I Kings xvii. 12; Isa. xliv. 15; Ps. cxx. 4). As now, so probably among the ancient Hebrews the dough was baked in a few minutes, often being slightly burned (comp. Hos. vii. 4, 7 *et seq.*). Such ovens are to-day usually placed in special huts, each household either having one to itself or sharing it with several families. In cold winters the fellahs not seldom use these to warm themselves.

The "maḥabat" was probably a pan devised for baking thin cakes (Lev. ii. 5, vii. 9; Ezek. iv. 3), and in which meat also was sometimes roasted (II Macc. vii. 3, 5). In II Sam. xii. 31, Jer. xliii. 9, and Nah. iii. 14 "malben" is used to indicate the large brick-kiln for burning bricks. In Ecclus. (Sirach) xxvii. 5, xxxviii. 10 is mentioned the *κάμινος*, which was used for burning pottery. "Kibshan" and "kur" (comp. Gen. xix. 28; Ex. ix. 8, 10; xix. 18; Mal. iv. 1) designate the smelting-furnace. The latter term is used in Prov. xvii. 3, xxvii. 21 (comp. Wisdom iii. 6) for the smelting of gold, and in Ezek. xxii. 18–22 and Isa. xlviii. 10 for that of silver. In Deut. iv. 20, I Kings viii. 51, and Jer. xi. 4, however, it is used also to designate the furnace employed for smelting iron ore.

In Dan. iii. a furnace ("attun") is mentioned into which Daniel's three friends were thrown. It is evident that this was like a smelting-furnace, open at the top to admit of the reception of the ore, and having an opening also below, which could be closed, for raking the fire and withdrawing the molten metal (comp. *ib.* verses 22, 23, 26).

OVERREACHING. See ONA'AH.

OVRUCH (OVRUTCH): District town in Volhynia. In 1629 only three houses there were owned by Jews; but a fairly large Jewish community must have existed, for in that year a synagogue was built ("Arkhiv Yugo-Zapadnoi Rossii," VII., ii. 413). In 1883 in the whole district of Ovruch there were, besides Jewish settlements in towns, seven rural settlements and forty-two Jewish farmers. In 1896 the Jews of Ovruch numbered 4,177 in a total population of 9,845, and they possessed three houses of prayer and one poorhouse. In the same year there were in the whole district, in a total population of 194,976, about 20,750 Jews, possessing two synagogues and twenty-one houses of prayer. Petty trades, especially in the smaller towns, were almost entirely in the hands of the Jews.

H. R. A. S. W.

OWL: Rendering in the English versions of the following Hebrew words: "kos" (Lev. xi. 17; A. V. "little owl"); "yanshuf" (*ib.*; A. V. "great owl"; LXX. ἶβις); "tinshemet" (*ib.* v. 18; R. V., after the Samaritan and Targum, "horned owl"; Vulgate and A. V. "swan"). The Authorized Version renders "bat ha-ya'anah," "ḳippoz," and "lilit" also by "owl" (but see OSTRICH; SERPENT).

"Kos," referred to in Ps. cii. 7 as living among ruins, may be identified with the *Carina glaux*, the emblem of Pallas Athene, and called by the Arabs "bumah," the most abundant of all owls in Palestine. "Yanshuf" is usually identified with the *Bubo ascalaphus*, which inhabits ruins and caves throughout Palestine, but is especially abundant around Petra, the ancient Edom (comp. Isa. xxxiv. 11). There are also found in Palestine the white owl, the great horned owl, the wood-owl (*Syrnium aluco*), the Indian fish-owl (*Ketupa ceylonensis*), and the long-eared and the short-eared owl (*Strix otus* and *S. brachyotus*).

The terms for "owl" occurring in the Talmud are: קקותא, קקואי, and קואי. This bird was eaten in Babylon, but was forbidden as food in Meraba, where it was called תחוותא (Ḥul. 63a). There is also קפופא or קריא (or קדיא; comp. Targ. on "kos," Lev. xi. 17), described by Rashi as a bird screeching in the night, with a countenance resembling that of a cat, the cheeks of a man, and having the eyes in front (Niddah 23a; Ber. 57b). It is said that its appearance in dreams is of bad omen (*ib.*).

OX or **BULLOCK** (Hebrew, שור, פר).—**Biblical Data:** Among the agricultural Semites the ox or bull had a sacred character. Thus in Sabea it was sacred to Athtar (comp. Mordtmann in "Z. D. M. G." xxx. 289, and Barton in "Hebraica," x. 58); at Tyre, Astarte was represented with the head of a bull or cow (comp. ASHTORETH); and the sacred character of the bull in Babylonia is indicated by the name of the constellation Taurus (comp. Jensen, "Kosmologie," pp. 62 *et seq.*). That the Israelites also held the bull sacred in the early days of their agricultural life, is proved by the worship of YHWH in the image of a calf (see CALF-WORSHIP). This worship was perhaps borrowed from the Canaanites. Tobit i. 5, which speaks of "Baal the heifer," shows that the Canaanites, as well as their cousins of Tyre, represented their deity in this form.

It was probably due to the sacred character thus acquired that the figures of twelve oxen were employed in the Temple to support a large laver (I Kings vii. 25; II Kings xvi. 17; Jer. lii. 20). Partly in consequence of this sacred character, too, partly because of its use for food, the bull became one of the most important of the sacrificial animals (Ex. xxix. *passim*; Lev. iv. *passim*; Num. xxviii., xxix. *passim*; Ps. l. 13; etc.). From its sacred and economic importance, the proper performance of the functions of the bull became, as in Job xxi. 10, a token of prosperity.

J. JR. G. A. B.

——**In Rabbinical Literature:** The Hebrew word "shor" is said to apply to an ox even when it is only one day old (B. Ḳ. 65b), as well as to the different kinds of oxen, including the wild ox ("shor ha-bar" or "shor ha-midbar"; comp. B. Ḳ. 44b) and the unicorn. Hence the Talmudic saying: "The ox which Adam offered to God had only one horn in its forehead" ('Ab. Zarah 8a). Egyptian oxen, it is said, have large bellies (Suk. 21b; comp. Parah ii. 2). If in the month of Adar the ox is cold in the morning but at noon lies down in the shade of a fig-tree, this is an indication that the month has fallen in its proper season, and that it is not necessary to intercalate a second Adar month (Sanh. 18b; comp. Yer. R. H. ii. 58b). R. Ḥisda declared that a black ox is the most valuable for its skin, a red ox for its flesh, and a white ox for plowing, and that a black ox with white spots is inferior in every respect (Nazir 31b). Oxen are considered to be dangerous domestic animals; so much so that one who, while praying, sees an ox coming toward him may interrupt his prayer. The Talmudists strongly warned the people to keep out of the way of an ox: "'When thou seest the head of an ox in its food-basket, ascend upon the roof and throw the ladder down after thee." Still, according to Samuel, it is only a black ox in the month of Nisan that is dangerous, because Satan jumps between its eyes (Ber. 33a). See UNICORN.

E. C. M. SEL.

OXFORD: County town of Oxfordshire, England. According to Anthony à Wood, Jews settled there almost immediately after the Conquest. They located along Fish street (now St. Aldate) from Carfax to the great gate of Christ Church, forming a Jewry with St. Edward's Church in the center. Several of the halls which were the foundation of the university were owned by Jews—as Moysey's, Lombard's, and Jacobs' Halls. In 1141, during the conflicts between the empress Matilda and King Stephen, the Jews were mulcted by both sides, giving to Maud an "exchange" and to Stephen "three exchanges and a half," after the latter had burned the dwelling of Aaron son of Isaac. The earliest record is of a payment by the sheriff of Oxfordshire, on behalf of the Jews, of 100 shillings, in 1156. Shortly afterward a miracle was said to have occurred: St. Frideswide caused a Jew named Dieulecres fil Moyse of Wallingford to lose his senses because he had mocked at her miracles ("Acta Sanctorum," viii. 576). Only five Jews of Oxford are mentioned as having contributed to the Northampton donum of 1194 on Richard I.'s return to England, but these contributed the comparatively large sum of £44 1s. 6d. Among their names is that of Benedictus le Puncteur, whom Jacobs has identified with BERECHIAH BEN NATRONAI KRESPIA HA-NAḲDAN.

About this time the Jews obtained possession of a cemetery outside the East Gate, where the Tower of Magdalen now stands. It was afterward transferred to the opposite side of the road, now the Botanic Gardens. About 1221 the Dominicans, or Black Friars, settled in the heart of the Jewry at Canon Hall, and a little later Henry II. established a house of converts next to the Guild Hall, on the site of the present town hall (M. Lyte, "University of Oxford," p. 26). On the other hand, a synagogue had been built in Fish street on land granted to Copin of Worcester by the prior of St. Frideswide.

In 1222 a deacon of the Church fell in love with a Jewess and was converted to Judaism, whereupon he was handed over to the secular power and burned ("Annales Monastici," iv. 62). For attempting to rescue a young Jewish convert a number of Jews of Oxford were in 1235 imprisoned in the castle, but were afterward released as innocent. The Jews here as elsewhere earned their livelihood by lending money, which naturally led to disputes. In 1244 the Jewry was attacked and the houses sacked; forty-five of the rioters were imprisoned. It may have been in consequence of this that four years later the king limited to 43 per cent the amount of interest Jews could collect from scholars. Questions in dispute between Jews and scholars were decided by the chancellor, though in 1260 the constable of Oxford Castle vainly claimed jurisdiction over the Jews. The jurisdiction of the chancellor over them was confirmed in 1286; he was allowed to issue his writ to the constable for that purpose. In 1268 a Jew of Oxford attacked a procession of clergy going to hear a sermon on Ascension day, and, seizing the processional cross, trod it under foot. The Jews, consequently, were compelled to make a cross for Church processions, and to erect a marble one on the spot where the act was committed, in front of their synagogue. It was afterward moved to a spot in front of Merton College, which was built on ground purchased by Walter de Merton from Jacob, son of Master Moses of London.

At the expulsion the king came into possession of bonds and other property, belonging to twenty-three Jews of Oxford, amounting to £30 1s. 4d., and of corn and wool equivalent to £285 1s. 8d. and £150 13s. 4d. The community had a synagogue on which it paid yearly to the prior and monastery of St. Frideswide the sum of 18s. 9d. A large number of deeds exist relating to the loan transactions of the Jews of Oxford, which have been collected by Neubauer ("Collectanea of the Oxford Historical Society," xvi. 289–314).

At the beginning of the seventeenth century a certain number of converted Jews are mentioned as teaching Hebrew at Oxford, among them James Wolfgang and James Levita (possibly identical). Casaubon had a Jewish secretary named Jacob Barnet at Oxford in 1609; he expressed a willingness to become converted, but fled at the last moment; he was banished from England in 1613. Another Jew, Antonio Maria de Verona, was treated favorably at Oxford in 1626, at the request of the queen Henrietta Maria. An Italian Jew named Alexander Arniedi taught Hebrew at Oxford a little later. A Jew named Jacob was the first person to open a coffee-house at Oxford; indeed, he is credited with having introduced coffee into England about 1650. Toward the end of the seventeenth century Isaac Abendana taught Hebrew at Oxford, and edited a Jewish calendar from 1692 to about 1700.

The connection of Jews with Oxford in more recent years has been chiefly with the university, a large number of Jewish students accepting the opportunities opened to them by the University Test Act of 1871. S. Alexander became a fellow of Lincoln. A small congregation has collected in Oxford, whose synagogue, in Richmond road, was founded in 1841.

——**Typography:** The first Hebrew book printed at Oxford appears to have been an edition of the Mishnah, with a Latin version by Samuel Clarke, in 1667 (see Wolf, "Bibl. Hebr." ii. 704, iv. 323). The next was a part of Maimonides' "Mishneh Torah," with translation and notes by H. Prideaux, in 1679. Hyde's Hebrew treatises on chess were also produced in Oxford, in 1694, and Clavering's "Talmud Torah"—a text and translation of Maimonides' "Yad"—in 1705, all by the Clarendon Press. In more recent years the same press has produced several rabbinical texts edited by Neubauer, Driver, Cheyne, etc., and a new English edition of Gesenius' "Dictionary." The order of prayers of the Sephardic ritual, edited by Dr. M. Gaster, is now (1904) being printed at the Clarendon Press.

OẒAR HA-ḤOKMAH WEHA-MADDA'. See PERIODICALS.

OẒAR NEḤMAD: Hebrew annual founded and published at Vienna by Ignatz Blumenthal of Brody, Galicia, in 1836. Only four volumes appeared, in 1836, 1857, 1860, and 1863 respectively. Their contents consisted of essays in an epistolary form on Jewish literature by the principal Jewish scholars. The first volume contained fifty letters dealing with literature, by I. S. Reggio, S. D. Luzzatto, S. Rapoport, Samson Bloch, Abraham Geiger, Gentiluomo, Della Torre, and Leopold Dukes; and poems by Wessely, Rapoport, and Joseph Almanzi. The second volume comprised twenty-four letters, the new contributors being Steinschneider, Carmoly, and R. Kirchheim. The third volume included contributions by I. Levy and Mortara in addition to the collaborators already mentioned, while the fourth and last volume contained an essay by Soave.

H. R. S. O.

OẒAR HA-SIFRUT: Hebrew annual devoted to Jewish literature, science, poetry, and belles-lettres; founded by Isaac Shaltiel Gräber at Yaroslav, Galicia, in 1887. For the first three years it was published regularly; but the fourth volume did not appear until 1892, while the fifth, which is thus far the last, was issued in 1896. Among its collaborators were Jacob Reifmann, Abraham Epstein, David Kaufmann, W. Bacher, Samuel Poznanski, Leon Gordon, Reuben Asher Braudes, and Solomon Mandelkern.

H. R. S. O.

'OZER BEN MEÏR: Polish rabbi; died at Zolkiev May, 1710; great-grandson of Solomon Luria. 'Ozer was rabbi at Clementow. He wrote: "Eben 'Ozer 'al Yad" (with text, Amsterdam, 1742), on the Yoreh De'ah, on Oraḥ Ḥayyim, and on Eben ha-'Ezer; novellæ on some massektot (Zolkiev, 1753); and others of a similar character, published in "Maginne Ereẓ" (Amsterdam, 1753).

PACIFICO CASE: An affair arising out of a claim made on the Greek government by one David Pacifico, commonly known as "Don Pacifico" (born a British subject at Gibraltar 1784; died in London April 12, 1854). Pacifico first began business at Lagos, Portugal, in 1812, but owing to sympathy with the Liberals his property was confiscated by Don Miguel. He was, nevertheless, appointed Portuguese consul at Morocco Feb. 28, 1835, and two years later Portuguese consul-general to Greece. Owing to some complaints he was dismissed from this latter post Jan. 4, 1842; but he continued to reside at Athens. When the Easter burning of Judas Iscariot customary in that city was given up in 1847 at the request of the Rothschilds, the mob in revenge burned down Pacifico's house, whereupon he claimed compensation to the amount of £26,618. When this rather preposterous claim, as well as others, including one of G. Finlay, the Greek historian, was not treated seriously by the Greek government, Lord Palmerston sent a British fleet to Piræus (1850), and seized all the ships in the harbor. The French government also sent a commission, which could not agree with the English claimants; and the Pacifico case thereupon resulted in a general quarrel, in the course of which the French ambassador took the serious step of withdrawing from London. Palmerston was censured for his action in the matter by the House of Lords (June 18, 1850), but was reassured by a vote of confidence passed in the House of Commons by a majority of 46.

Ultimately Pacifico received 120,000 drachmas and £500 in settlement of his claims; and with this sum he passed the rest of his life in London.

PADAN-ARAM (Assyrian, "Padanu"): The first element in the word is variously explained as meaning "road" or "field," "yoke," and "plow." It may indicate in this connection that portion of Aram which could be cultivated—the lowland between the Euphrates and the Tigris, generally mentioned in contrast with the high plateau of Palestine. The district is referred to by this name only in Genesis, while Hosea xii. 13 (R. V. xii. 12), in describing the life of Jacob, terms the same region "sedeh Aram" (= "field of Aram"). Bethuel, the father of Isaac's wife Rebecca, came from Padan-aram (Gen. xxv. 20), whither Jacob had gone to escape from Esau, and where he married two wives (Gen. xxviii. 2, 5-7).

PADERBORN: Town in the province of Westphalia, Prussia. The presence of Jews there is first mentioned in 1606, when the diet of Paderborn decided to prevent any increase of the Jewish inhabitants on account of the exorbitant interest exacted by those of them engaged in money-lending. On Feb. 23, 1607, the prince bishop Theodor von Fürstenberg promised the diet to do his best to comply with its wishes; and he issued to the Jews of the locality the following directions: They were not to charge a higher rate of interest than one schwanenheller per week on every thaler; once in every year they were absolutely obliged to settle in full with their debtors; every obligation of a debt was to be approved by the authorities; pledges obtained from Christians and not redeemed within the prescribed time might be sold only in accordance with an official valuation; Jews might no longer lend money on real estate; claims of every kind whatever would not, under any consideration, be valid for more than two years. Jews were permitted to deal only in gold, silver, gilded goblets, rings, and precious stones. When Duke Christian of Brunswick in 1621 passed through Westphalia, levying war contributions, the Jews of Paderborn were compelled to pay the sum of 30,000 thaler.

Restrictions in the Eighteenth Century.

The expulsion of the Jews and their absolute exclusion from trade were again sought in 1651; but the request was not complied with. The decree regulating their position, promulgated at the end of the seventeenth century by Bishop Hermann Werner von Metternich, continued in force until the foundation of the kingdom of Westphalia under Jerome, brother of Napoleon I. A supplementary edict of the elector Clemens August on their legal condition was proclaimed Feb. 3, 1718 (or 1719). No Jew was allowed to marry without the permission of the sovereign; and the maximum number of Jewish families in Paderborn was fixed at 125. The excess of young persons was compelled to emigrate. Nevertheless there were at times more than 200 Jewish families in Paderborn. The Jews were under the protection of the bishop; and it was his personal right to investigate every year most minutely the domestic affairs of every Jewish family. No Jew could be admitted as a resident unless he possessed a letter of safe-conduct from the sovereign. To obtain this it was necessary to produce evidence of the possession of at least 1,000 thaler as well as a testimonial of good behavior. The applicant was then obliged to take an oath that he would be true to the bishop, and would not undertake anything that might be detrimental to the interests of the cathedral chapter. After these formalities had been complied with he became a "vergleiteter Jude."

Foreign Jews were not permitted to stay in the locality longer than three days. They were not obliged to pay any fees; but the resident Jews were compelled to pay an assessment of 25 thaler yearly for them. In Rietberg, a county near Paderborn, a bearded Jew was obliged to pay a poll-tax of 12 groschen; a beardless one, a tax of 6 groschen only.

Foreign Jews.

The Jews of Paderborn were privileged to hold divine service, and to build synagogues; but neither the latter nor Jewish dwellings were permitted in the neighborhood of a church. Jews were not allowed to enter churches or Christian cemeteries; they were obliged to keep their stores closed and their blinds down on Sundays and holidays; they were prohibited under penalty from attending processions; monetary transactions were not permitted on holidays; Christians were not allowed to live with Jews, and the latter were forbidden (until 1808) to keep either Christian servants or Christian wet-nurses; and Christians were prohibited from calling Jewish physicians into their houses. To distinguish them from the Christian clergy, the Jews were not allowed to wear laces or collars; and to distinguish them from rich citizens, they were forbidden to dress in silk or in velvet. Further, they were not allowed to have woven buttons on their coats, to wear a cue, or powdered hair, nor to carry guns or pistols. Under the name "Geleitgeld" (safe-conduct money) they were obliged to pay to the prince bishop a yearly tribute of 200 thaler. Further, for the confirmation of their privileges, they were required to present a homage gift of 12,000 thaler to every new bishop. The Jews were not allowed to pursue the trade of tavern-keeper, brewer, distiller, or baker. Peddling also was prohibited, under a penalty of 5 thaler. A decree of Jan. 8, 1720, granted Jews the right to charge 10 per cent interest on sums not exceeding 25 thaler, 8 per cent on amounts from 25 to 100 thaler, and only 6 per cent on sums exceeding 100 thaler. They were allowed to trade in grain provided they did not purchase any of it in foreign countries so long as there was a sufficient supply in the diocese. However, even this privilege was withdrawn by the elector Clemens August (Sept. 16, 1741).

Right to Trade in Grain Forfeited.

The marriage laws and ritual matters were concerns of the Jews' Commission, which was under the supervision of the rabbi. After the latter had rendered a judgment, an appeal against the same was permissible only within three days; the penalty for the transgression of such laws was to be paid to the collector-in-chief within thirty days. Blasphemy and religious disturbances came within the jurisdiction of the archidiaconal courts. In commercial disputes between Jews and Christians the former were never allowed to take the so-called "Erfüllungsen." The oath in court was always taken in an abbreviated form. The person taking it placed his right hand upon his covered head, and affirmed solemnly, wishing that, if he swore falsely, he might be eternally cursed, execrated, and engulfed by the earth like Korah, Dathan, and Abiram, and that his wife might become a widow and his children orphans.

The Jews formed among themselves a corporation, with a presiding officer, a treasurer, and deputies; and at certain intervals they used to assemble, under a princely official, for a so-called diet, at which the following subjects were discussed: the contraction of loans and the payment of such as were due; valuation of the property of the individual members of the community, and the assessment of the taxes to be paid by them to defray the yearly expenses. An exact record of the proceedings was sent to the prince.

Although the Jews were not permitted to live in the main streets of the town, they had no distinct ghetto. Their cemetery was bought by them in 1728 in one of the most remote parts of the township boundaries, near the Libori Berg; and it was derisively called by the populace "Abraham's Bosom." The Jews owned it for a short time only, because it was robbed and the bodies disinterred.

No Distinct Ghetto.

The edict of June 13, 1747, prescribed that a foreign Jew might enter Paderborn through the western gate only; there he was to remain until a member of the Jewish congregation and the collector-in-chief had given bond for him. If he stealthily entered the town, in violation of these regulations, a penalty of three months' carting was inflicted upon him, and the congregation was fined ten gold florins for having neglected its duty. Under the edict of Sept. 5, 1750, every Jew was required to submit to a yearly search of his house for stolen or "doubtful" goods, and to submit his packages or boxes of goods to inspection. The edict of May 7, 1765, prohibited foreign Jews from entering the town under any circumstances, even though a bond was furnished and an exact description of the person was given. When, in 1788, the last prince bishop, Franz Egon von Fürstenberg, entered upon office, he was made to declare, in the capitulation prescribed for him, that the Jews in his territory should, with the exception of 125 families, be expelled. In 1808, however, when the kingdom of Westphalia was founded, the Jews were placed upon an equal footing with the other citizens. By the decree of March 31 of that year they were given a consistory of their own which was invested with the supervision of divine service, of the public schools, and of the charitable and philanthropic institutions.

To-day (1904) the Jews of Paderborn number 420 in a total population of 23,000. The orphan asylum is located in the town; and there is a Jewish women's society, besides a ḥebra ḳaddisha.

PADOVANI, ELISHAMA MEÏR: Italian Talmudist of the eighteenth century; born in Modena; died at Padua 1830. He was educated and first served as rabbi in his native place; he then became joint rabbi at Mantua with Jacob Cases, and, finally, rabbi of Padua, where he was the teacher of M. G. Ghirondi. He was the author of sermons, halakic decisions, and a short compendium on the laws contained in Shulḥan 'Aruk, Yoreh De'ah, 29-60, 98-110, which work Ghirondi possessed in manuscript. He wrote, besides, notes to Reggio's "Ha-Torah weha-Filosofia" (MS. Almanzi, 115), published anonymously in Modena in 1797, and "Il Luminario Ecclissato" (Parma, 1797), in answer to the "Luminario dei Ciechi" of the neophyte Maria Gazzoli.

E. C. I. E.

PADUA: City of upper Italy, 22 miles west of Venice, on the Bacchiglione; capital of the province of the same name. Its Jewish congregation, for centuries one of the most important of Italy, with the synagogue and cemetery, existed as early as 1300. The first Jew in Padua known by name was the physician Jacob Bonacosa, who, in 1255, translated there the "Colliget" of Averroes (Steinschneider, "Hebr. Uebersetzungen," p. 671). Toward the middle of the fourteenth century numbers of Jews from Rome, Pisa, Bologna, and the Marches of Ancona established themselves in Padua as money-lenders; and many of the Jews who had been persecuted in Germany and the Alpine countries removed to Padua after 1440. The statutes of the community were liberal; the population was tolerant; and the Jews were admitted without restrictions. They were placed on an equal footing with other foreigners; and occasionally they were even made citizens of the town. Thus they obtained full liberty with respect to their commerce and their loan-banks, the demand for banks being very great in that district. As the court of the Carraresi and the students of the university lived in high style, more and more merchants moved to Padua; and the congregation assumed a size which was quite considerable for that period. The condition of the Jews remained equally favorable when the Carraresi made themselves masters of the city: they were not hindered from carrying on their trade in merchandise; they could even engage in agriculture, and were taxed only moderately. The authorities were directed to protect the Jews, and were required to pay an indemnity if any injury which might have been prevented was done to the latter. The Jews built a synagogue and laid out a cemetery in the district in which they lived, outside the city, on the opposite side of the river. When their burial-ground was filled, Francesco Novello da Carrara permitted them to buy an adjacent plot; and for their benefit he repealed a law according to which only citizens were allowed to buy real estate.

Prosperity in the Fourteenth Century.

The rule of the Carraresi was forcibly abolished as early as 1405, to the detriment of the Jews, and the territory of Padua was incorporated in the republic of Venice. The congregation at that time was already considerable. It was prominent at the Congress of Forli in 1418; the money for the expenses of the deputation which the congress resolved to send to the pope was to be collected in Padua. With the advent of Venetian rule the fortunate period of the Jews ceased. They lost their citizenship and the right of settlement; they were compelled to acquire a residence-privilege ("condotta") for a limited period; and every time this was renewed they were subjected to new restrictions, or the payment of larger sums was imposed upon them. Besides all this, the danger of expulsion threatened them continually. They were no longer permitted to acquire farms or other real estate; and their liberty in respect to commerce also was restricted. But, if the rights of the Jews were not greater under Venetian rule than in other states, the senate at least saw that the laws were administered justly toward the Jewish inhabitants, and protected them from acts of violence. It interfered especially against the authorities of Padua, who repeatedly attempted to utilize the weakness of the Jews to their disadvantage; it prevented, when possible, threats of expulsion, or, if such had been already carried into effect, it hastened to recall the Jews. The Jews themselves did not submit to oppression without remonstrances. The city government objected to the rate of interest demanded by them, and to the method adopted with regard to unredeemed pledges. When the senate purposed to interfere forcibly in this matter, the Jews declared that they were unable to do business on the terms suggested, and closed their banks (1415). They were sustained by the populace; and especially the university took their part, for, in the interest of the students, it could not spare the Jewish merchants and money-lenders. Both at that period and later the university repeatedly and energetically defended the Jews. Subsequently they were often threatened with expulsion, but the "condotta" was always extended, though only after haggling and even fighting. The energetic refusal of the Jews to continue their business transactions caused their opponents to agree to their demands; but there was no solidarity among the Jews, and when the authorities or the citizens of Padua were in need of funds, they found many Jews in the neighborhood who were more accommodating than those of Padua.

Decline Under the Venetians.

Action of the Monks.

The relation of the Jews to the Christian population grew much worse when the monks began to preach Christian socialism and declared it to be a crime to permit the Jews to remain in the city or even to tolerate them in any fashion. In 1455 these preachers incited the population so successfully that the Jews were expelled, and forgiveness was asked in Rome for the toleration which had so long been accorded them. However, the exigencies of the situation proved stronger than the requirements of the faith; and the Jews were again admitted. These events were repeated in 1473, although the rights of the Jews were still more restricted. In 1482, under similar circumstances, the Jews were placed under the exclusive supervision of the senate in Venice, and were withdrawn from the authority of the community. But the monks gave them no rest. Bernardinus of Feltre, the great enemy of the Jews, went to Padua, and a "monte di pietà" (pawn-shop) was solemnly dedicated in his presence (1491). Then came the period of the fierce combats between Francis I. of France and Charles V., during which the territory of Venice suffered fearfully from the troops of foreign mercenaries. The great sack of Padua took place in the year 1509; and the Jews were among those that suffered most. During the long-continued struggles and the general distress there was no time to take heed of them; but in 1547 another storm was raised against the Jewish bankers, and the republic ordered their banks to be closed. Had not the university, and especially the juridical faculty, energetically guarded the interests of the Jews, the latter probably could not have remained in Padua. As it was they were able to maintain themselves in the city, although they were forbidden to carry on money transactions.

Closing of Banks.

Now the authorities desired to separate them from the Christians. From 1541 the establishment of a ghetto was demanded; but the senate did not agree until 1581, and, owing to numerous obstacles and difficulties on the part of the Jews, the institution did not come into existence until 1602. There the Jews lived, always amid the same struggles and in the same state of uncertainty, until 1797. On April 28 of that year the French military entered Padua, and the hour of liberty for the Jews came. On Aug. 28 following they were accorded the unrestricted right to live in any part of the city; and the ghetto was called "Via Libera."

The French were displaced in 1798 by the Austrians, who, animated by the spirit of Joseph II., accorded far-reaching privileges to the Jews—some families were even ennobled—so that their régime was generally hailed with joy. From 1805 to 1814 Padua was included in the kingdom of Italy by Napoleon; and thus the Jews, as subjects of the French empire, had the opportunity of participating in the Sanhedrin at Paris; Rabbi Isaac Michael Finzi acted as vice-president of that body. After the treaty of Vienna, Padua again belonged to Austria, except during brief intervals; and the Jews enjoyed all the privileges with the exception of eligibility to public offices. Full emancipation was not accorded to them until 1866, when Padua was incorporated into the present kingdom of Italy.

Under French and Austrian Rule.

The Jews of Padua occupied themselves originally with money transactions, and thereby fulfilled an economic mission which was highly beneficial to the district. The demand for money both by the authorities and by private individuals was urgent, loans at burdensome rates of interest being obtained from numerous citizens and Tuscans. The Jews did not impose heavier terms than the latter; and the high rate of interest, 20 to 30 per cent, was not considered exorbitant during those uncertain times. The transaction of monetary affairs by the Jews was furthered under the Carraresi; and they established several trading societies which pursued the business of banking. The great demand for money is evidenced by the fact that in 1432, with 17,000 inhabitants, the town possessed seven loan-banks. The customers of the Jews included, besides private individuals, the community, which was compelled to borrow money in cases of extraordinary expenses, and the bishop, who pledged his receipts to obtain funds. But the university, above all, urgently required the presence of the Jews in the capacities of foreign lecturers and students.

Occupations of the Jews.

Economic conditions changed about the middle of the fifteenth century, and the intention was to restrict the Jews to a lower rate of interest; but they protested that they could not continue to do business if the rate was reduced, and so kept the upper hand. The establishment of the above-mentioned "monte di pietà" advanced their business rather than injured it, as now they were able to obtain money at moderate interest. The number of banks increased enormously, and all of them prospered. But, as mentioned previously, in 1547 the Jews were compelled to close the banks, and money transactions were prohibited. Two years previously the authorities of the city had forced the Jews to adopt the Italian language in their business documents, for which, until then, in spite of numerous protests, they had employed Hebrew.

The majority of the Jews of Padua were not, however, engaged in money transactions, but dealt in merchandise. They attempted to be active in all spheres; but everywhere they encountered Christian competition. Nevertheless, they maintained their ground, except in cases in which the law prevented them from doing business. The Jewish merchants kept well-assorted stocks, and sold their goods at a moderate profit. But the more their business flourished and increased—in 1615 they owned eighty-four of the eighty-six stores in the city—the more actively did the community petition the senate of Venice to prohibit them from engaging in mercantile pursuits. Again the representatives of the university emphasized the economic advantage derived from the presence of the Jews, and defended the rights of the latter. The Jews were obliged to struggle also against the merchant gilds. Ever since the fourteenth century they had dealt in gold, silver, and precious stones; they did exceedingly well in the import of foreign goods; and they worked also as goldsmiths. But the gild of goldworkers harassed them wherever it could. The Jews had been allowed to purchase the pledges of the "monte di pietà" when they were sold at auction; but as the Christians did not wish Jewish competition, Jews were forbidden to participate further in these sales. The university demanded that the Jews should at least be allowed to buy the books of the students, so that the latter might be able to purchase them back at moderate prices; but in this it was not successful. The retailing of goods and peddling were the only occupations not denied them; and they were even admitted into the pedlers' gild, or, rather, a "fraglia degli strazzaroli Giudei" was formed beside the Christian one (1448). Upon the payment of 125 lire per year, the Jews were permitted to participate in all the rights of the gild. An agreement was also made, in 1539, with the gild of the shoemakers, that the Jews should be permitted to trade in leather; but when they proposed to enlarge their business they were strictly forbidden to do so.

Jewish Merchants.

The gild of manufacturers also opposed the Jews. The latter did an extensive business in cloth, linen, and similar goods; but in 1558, in consequence of the opposition, they were ordered to be excluded from this trade. A protest from the university

Protests Against Manufactures.

caused a suspension of the decree; but the interdict was repeated in 1571. Again the university interceded for the Jews; and it was now supported by the community, which acknowledged the advantages of Jewish commercial activity. A fierce conflict ensued between these authorities and the gild; and at length the Jews were accorded the privilege of dealing in manufactured goods (1581). Owing to the luxury common in Padua, they prospered. The Christian merchants did not, however, cease their struggle against the annoying competition. In 1623 they determined that only members of the gild should be allowed to sell manufactured goods; and the Jews, accordingly, were compelled to suspend operations. Later, however, they were permitted to resume.

Moses Mantica had attempted, as early as the fifteenth century, to establish silk-factories in Padua; but he had not been successful. In 1645 a Jew named Trieste established a factory for silk goods; and 6,000 persons in the vicinity found work at the looms. The Christian merchants, unable to compete with him, endeavored to obtain a decree forbidding the Jews to manufacture. The brothers Cantarini wished to establish a silk-spinning mill in 1713; but they were prohibited from erecting a building. The conflict continued for a long time, the Jews meanwhile pursuing their operations, to the great benefit of the population; but in 1779, in consequence of continued calumnies, they were absolutely forbidden to manufacture. Nor were they allowed to devote themselves to any trade, even that of tailoring.

(From a photograph.)

Dwellings of the Jews.

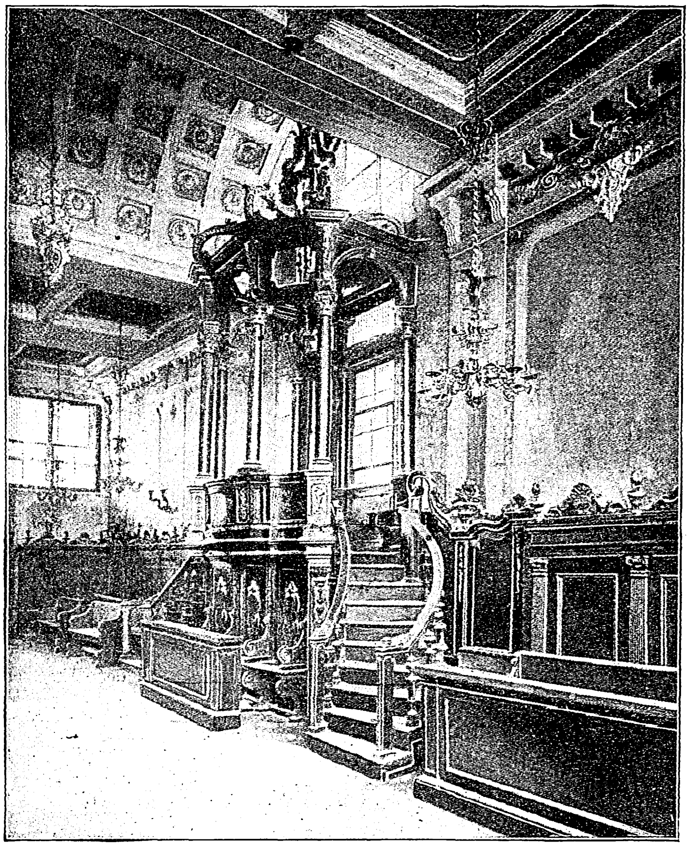
The Jews were originally unrestricted with regard to their dwellings. At first they settled across the river, in remote parts of the town (near the present railroad station); but with increasing numbers, they removed into the central parts of the town, the street Volto dei Negri, in which many of them lived, being called "Volto degli Ebrei." They continued to spread as far as the vicinity of the cathedral. The ghetto established in 1602 comprised those streets which had already been principally inhabited by Jews. It was enclosed by four gates, on which were insulting inscriptions; these were published by Wagenseil ("Sota," pp. 476 *et seq.*, Altdorf, 1674). The Jews were compelled to submit to the new regulations as to residence; but they soon complained of the miserable and unhealthful dwellings, for which they were obliged to pay excessively high rents. The streets were narrow and dark; the houses, damp; and, besides, the habitations were so overcrowded that during epidemics the ghetto was a fearful focus of infection. The congregation lost an enormous number by death during epidemics; for instance, during the plague of 1631. The ghetto existed until 1797, when the French destroyed the gates. They were never re-erected.

Other ecclesiastical measures against the Jews were enforced; *e.g.*, those concerning the Jews' oath and, from 1430, the badge. Frequent exceptions were, however, allowed, as in the case of the interdicts against going abroad during Passion week and keeping Christian servants. The senate at Venice would not accede to further encroachments by the Church. When, after the death of Simon of Trent in 1475, Jew-baiting prevailed, the senate prohibited the sermons; and in 1570 it forbade the compulsory attendance of Jews at Christian discourses. The senate in 1587 declined to allow them to be placed under ecclesiastical jurisdiction. On the other hand, it permitted in 1556 the burning of the Talmud and other Hebrew books. The state prohibited compulsory baptism also; but converted Jews were richly rewarded, and their baptism was celebrated amid great rejoicing of the most distinguished circles. The greatest sensation was caused in 1602 by the baptism of a rabbi (?), Solomon Cattelau, whose conversion was regarded as a merciful miracle, and was described in a special book.

Taxes were paid for all its members by the congregation, which assessed the individuals. The levies were moderate under the Carraresi; but they gradually rose until they became an important source of income. The Jews were compelled to pay 850 ducats yearly for their loan-banks and 200 (from 1585 onward, 300) ducats for the right of residence. The latter tax went to the community. The taxes and the fees for the right of residence together amounted to 900 ducats in 1700. Besides, the congregation was compelled, from 1591, to contribute 700 ducats annually for the support of the banks

Taxation.

needed in Venice by the state. To these sums were added extraordinary contributions for the equipment of the army and of the fleet; and, to escape heavier requisitions, the Jews often bound themselves to voluntary taxes. The state demanded large loans also; *e.g.*, in 1691, not less than 16,300 ducats, and in 1704 the sum of 20,000 ducats. The taxes imposed by the commune were also considerable; and, although the senate exempted the Jews therefrom, the commune levied an income-tax upon them, the amount of which it frequently augmented. Thus the burdens of the congregation increased, whereas the receipts diminished. Wealthy Jews, tired of the constant vexations, removed from the city, while those who remained lost the income from their businesses, or obtained exemption from the taxes payable to the congregation. Thus the debts of the congregation grew considerably, and in 1736 it was compelled to appeal to the state for the regulation of its finances. The means employed were of no avail; and the congregation, which had a yearly deficit of 4,786 lire and a debt of 56,000 ducats, was forced in 1761 to become bankrupt. It was relieved only when, with the entrance of the French, the oppressive encumbrances, special taxes, and economic restrictions of the Jews were removed.



Almemar of the Synagogue at Padua.
(From a photograph.)

Persecutions.

The strained relations which constantly existed between Jews and Christians have already been mentioned. Temporary expulsions repeatedly took place, but the decrees of exclusion were always revoked. Exceptional cases of violence are reported only twice. Although in 1509, during the sack of Padua, the Jews were spared by the foreign soldiery, later, when those citizens of Padua who had sided with Charles V. were attacked in the city, the Venetian troops pillaged the houses of the Jews in a ruthless manner, and, with the assistance of the rabble, robbed them of everything. The complaints of the Jews were unavailing; and they recovered none of their property. They fared still worse in 1684, after the siege of Vienna by the Turks, when the news was disseminated that the long resistance of Buda to the Imperial and Venetian armies had been due to the Jews of that city. On August 20, 1684, a threatening host of farmers entered the ghetto at Padua and began to storm the houses in search of plunder. The better element among the citizens, who armed themselves, and soldiers hastened to the rescue of the Jews. Severe punishment was imposed upon the pillagers, and still severer ones threatened, yet for six days the Jews dared not leave the ghetto. Two authors have described the terrors of those days—Rabbi Isaac Ḥayyim Cantarini in his "Paḥad Yiẓḥaḳ," and a poet, Sema Cuzzeri, who devoted to Paduan Jews an Italian poem which is still unpublished. It goes without saying that insults and petty outrages were continually committed against the Jewish inhabitants; but in general the republic of Venice maintained law and order in its domains.

The University and the Jews.

The relations of the Jews to the university deserve special mention. As already stated, the university often defended the Jews and endeavored to protect them from violent and illegal measures; while the students were among their best customers. This did not prevent many cases of friction. The students of medicine claimed the corpses of the Jews for anatomical purposes; and often they took them forcibly from the burial-place in spite of the fact that the Jews possessed the privilege that the bodies of their dead were not to be touched. For this privilege they paid large sums. Being severely punished, the students were at last obliged to submit. When the first snow of each winter fell, the Jews, like the other citizens, following an old custom, were required to pay a certain tax to the students—in olden times 6 ducats. This "celebration of the first snow" was abolished in 1633; but the Jews were compelled to continue payment of the tax in order to provide confetti for the students, whose number was about 1,000.

As the Jews were admitted to the study of medicine, a great many of them, some from distant countries, entered the university. During the period from 1517 to 1619 eighty Jewish students, and from 1619 to 1721 as many as 149, obtained the degree of doctor of medicine. The Jews were obliged, before graduation, to deliver 170 pounds of confetti to the other students; and during the fifteenth century they were even compelled immediately after receiving their degrees to invite the entire student body to dinner. The graduation fees were considerably higher for Jews than they were for Christians. Jewish graduates were exempted from wearing the Jews' hat; but if they attempted to practise medicine among Christians as well as among their coreligionists, they encountered a fierce opposition. As the gilds fought against the Jewish merchants, so the Christian physicians opposed their Jewish competitors; and they were not particular as to the means employed to show their hostility. In spite of this opposition, however, the ability and the conscientiousness of the Jewish physicians procured them good practises. The Jews were not allowed to enter other professions, except to the extent that the congregation was entitled to select four young men to study law for administrative purposes.

Communal Organization.

The congregation was formed early, soon after the first Jewish settlement. Its condition changed with the privileges of its members. During times of oppression many endeavored to withdraw in order to obtain freedom from taxes; but this was prohibited in 1732, owing to the financial difficulties of the congregation. Nevertheless, as stated above, the congregation was ultimately forced to become bankrupt. The community owned quite a number of synagogues. The oldest, situated in the Corso Savonarola, existed as early as about 1300. Later ones were established in more central positions. The Italian synagogue was founded in 1548, by Rabbi Johanan Treves; it was enlarged in 1680 and in it in 1832 was introduced the first divine service in Italy with a choir. The German synagogue, of about the same age, was the largest, and was called "Bet ha-Keneset ha-Gedolah." In 1682 it removed into its present building. The Spaniards, who were not numerous, established in 1617 a synagogue of their own, which, however, was destroyed by fire in 1629; and subsequently they attended the services of the Italian congregation. Recently all synagogues, with the exception of the German one, were closed; and in that the Italian ritual was introduced.

Like the other congregations of Italy, that of Padua had its charitable institutions. These were recently consolidated as the Società di Mutuo Sorregno. The cemeteries, with the exception of the oldest, which was laid out in 1386, are all in existence. In the second one, which was established in 1450 and was used for a century, the body of Isaac Abravanel of Venice was interred in 1508; but the graves and stones were destroyed in 1509, so that his tomb can no longer be identified. Quite recently (1904) the congregation erected in the center of the burial-ground a stone in his memory. From 1530 onward the Jews owned a cemetery in the Borgo degli Ebrei, in which was erected the tomb of R. Meïr Katzenellenbogen and of his family. Another burial-ground was established in 1653, and still another in 1754 (according to some, 1774). The present cemetery beyond the Porta Eugenia was opened in 1864. It contains the grave of S. D. Luzzatto.

Public Activities.

The Padua congregation, owing to its size, intelligence, and readiness to make sacrifices, has repeatedly made its influence felt in public affairs, and has been a careful guardian of the interests of the Jews. As already mentioned, it participated in the Congress at Forli in 1418; it also fought to protect Hebrew books from the Inquisition. The first synod held for this purpose, at Ferrarâ in 1554, was presided over by Meïr Katzenellenbogen, then rabbi of Padua. A congress was held in 1585 in Padua itself, at which were discussed the measures to be taken to obtain permission for the printing of Hebrew books (see Massarini, vol. viii.). Prominent men repeatedly drew the attention of Jewry and of the civilized world to the congregation of Padua. Elijah Delmedigo, celebrated for his philosophical and medical knowledge, lectured in 1485 at the University of Padua. At the same time the school of Rabbi Judah Minz attracted numerous pupils from Italy, Germany, and Turkey; and the fame of the school was maintained by his son Abraham, as well as by Meïr Katzenellenbogen, who was Abraham's son-in-law. Later rabbis, like Samuel Archevolti and the above-mentioned Isaac Ḥayyim Cantarini, were noted for their Talmudic learning combined with scientific scholarship. From 1829 to 1870 Padua was the seat of the Istituto Rabbinico Lombardo-Veneto, the reputation of which spread over the entire world, especially through the brilliant achievements of S. D. Luzzatto. A Hebrew printing establishment existed temporarily in Padua during the eighteenth century.

Rabbis and Scholars.

Of the rabbis and scholars of Padua the following deserve mention: Meïr b. Ezekiel ibn Gabbai (until about 1500); Elijah (d. 1493); Menahem Delmedigo (1510); Judah Minz (until 1508); his son Abraham (until 1526); Abraham's son-in-law, Meïr of Padua (Katzenellenbogen; until 1564); Meïr's son Samuel (until 1590); these were the ancestors of the "King of the Poles," Saul Wahl. Contemporaries of the last-named were: Meshullam b. Asher da Mucciano (1535); Joseph b. Jacob Ashkenazi; Johanan Treves (1543); Raphael b. Joshua Ẓarefati, the commentator of the Roman Maḥzor (1554); Jacob b. Moses Levi (1572); Benzion b. Raphael, under whose leadership the excommunication against Azariah dei Rossi's "Me'or 'Enayim" was signed; Judah b. Moses Fano; Samuel b. Elhanan Archevolti (until 1609); Aryeh Cattalani (until 1622); Abram Cattalani; Benedetto Luzzatto (1627); and the doctors Judah b. Samuel Cantarini (until 1651), and his relative Samuel (until 1631), Ḥayyim Moses (until 1660), Isaac Ḥayyim Moses, celebrated both as physician and apologist (1644-1723). Of the Marini family: the brothers Solomon (until 1670) and Shabbethai b. Isaac (until 1685); Isaac, son of the former (until 1700); Aaron Romanin (1676); Samuel David b. Jehiel Ottolenghi (1700); Isaiah Mordecai b. Israel Hezekiah Bassani (1700); Michael Terni (1710); Abram Shalom (1730); Moses Ḥayyim Luzzatto (1707-47); Solomon b. Isaiah Nizza (1750); Jacob Raphael Forti (until 1786); Isaac Raphael Finzi, vice-president of the Paris Sanhedrin (until 1812); and Israel Conian (1820). Of the Ghirondi family: Solomon Eliezer b. Benzion (until 1700); Benzion (until 1730); Mordecai Samuel b. Benzion, author of "Toledot Gedole Yisrael" (until 1852); his son Ephraim Raphael (until 1857). In the nineteenth century: Rabbis Leon Osimo (until 1869), Graziadio Viterbi (until 1879), Giuseppe Bassevi (until 1884), Eude Lolli, and Alessandro Zammatto. Scholars: S. D. Luzzatto (died 1865); his son Filosseno (died 1854); Lelio della Torre (died 1871); Giuseppe Almanzi (died 1863); Eugenia Gentilomo Pavia (1822–94); Gabriele Trieste (died 1860); Marco Osimo (died 1881).

In 1615, among the 35,463 inhabitants of Padua there were 665 Jews; in 1865, about 800; in 1901, about 1,050; in 1904, in a total population of nearly 50,000, about 1,100.

PADUA or PADOVA FAMILY. See Maẓliaḥ, Judah b. Abraham Padova.

PADUA, JACOB MEÏR: Russian rabbi; born in Brest-Litovsk; died there Dec. 12, 1854. He was a descendant of the Katzenellenbogen family which had been prominent in Brest for more than three centuries. His father, Ḥayyim (d. 1837), and his grandfather, Aaron b. Meïr (d. 1777), author of "Minḥat Aharon," both lived in that city, which chose Jacob Meïr Padua as its rabbi after the death of his relative Aryeh Löb Katzenellenbogen in 1837. He was at that time rabbi of Pinsk-Karlin, government of Minsk; and he did not enter upon the duties of his new rabbinate until 1840. In 1852, when there was a great dearth, which caused much suffering among the poor, Padua permitted Jews to eat peas and beans at the Passover; and he defended his action, which was a departure from Orthodox practise, in one of his responsa (No. 48). He held the rabbinate of Brest-Litovsk until his death.

Padua was the author of "Meḳor Ḥayyim" (2 parts, Sudzilkow, 1836), on Shulḥan 'Aruk, Yoreh De'ah, and on some Talmudical subjects, with an appendix containing responsa by his above-mentioned grandfather; "Ketonet Passim" (Königsberg, 1840), on Joseph Ḥabiba's Alfasi commentary, "Nimmuḳe Yosef," with an appendix, "Ḥiẓẓe Yehonatan," on R. Jonathan's Alfasi commentary to the tractate 'Erubin. His responsa, entitled "Teshubot Maharim" (Warsaw, 1854), appeared in the year of his death.

PAGANISM. See Gentile; Worship, Idol.

PAGAY, HANS: Austrian actor; born at Vienna Nov. 11, 1845. His father was a broker, and destined his son for the same career; but Pagay preferred the stage, and began as a chorus singer, going subsequently to Linz and Odessa, where he sang comic parts in operettas. He then traveled through Austria-Hungary and southern Germany, and in 1887 accepted an engagement at the Residenztheater, Berlin, where he now (1904) occupies a noteworthy position as a character actor.

His wife, **Sophie Pagay** (*née* Berg, born at Brünn April 22, 1860), took children's parts at the age of seven at the Stadttheater, Brünn, where she also filled her first engagement after reaching maturity. She then appeared successively at Reval, Kiel, Görlitz, Breslau, Augsburg, and Hanover. In 1887 she went to Berlin, where she was connected with the Residenztheater until 1896, and then with the Lessingtheater until 1899. In that year she joined the company at the Königliche Hoftheater, where she plays chiefly old ladies' rôles.

S. L. V.

PAGAY, JOSEPHINE: Austrian actress; born at Vienna; died at Berlin Nov. 18, 1892. She made her first appearance at the age of fourteen in the rôle of *Cupido* in "Orpheus in der Unterwelt," at the Quaitheatér, Vienna. Her spirited delivery, humor, and histrionic talents made her a favorite with the public, and she scored triumphs in the operettas of Offenbach, Suppé, Millöcker, and Strauss, and in the farces of Kaiser, Bittner, Berla, Costa, and Langer. She was at the height of her career in the sixties and seventies, but toward the middle of the eighties she suddenly left the stage and retired to Berlin.

PAGEL, JULIUS LEOPOLD: German physician and medical writer; born at Pollnow, Pomerania, May 29, 1851; educated at the gymnasium at Stolp and at the University of Berlin (M.D. 1875). In 1876 he established himself as a physician in Berlin, receiving from the university in that city the "venia legendi" in 1891, and the title of professor in 1898. In 1902 he became assistant professor of the history of medicine.

Pagel has been since 1885 assistant editor of Hirsch's "Biographisches Lexikon"; he is also editor of the "Deutsche Aerzte-Zeitung" and of the "Biographisches Lexikon Hervorragender Aerzte des Neunzehnten Jahrhunderts," Berlin and Vienna, 1901; and since 1899 he has been collaborator for medical history on Virchow's "Jahresbericht über die Leistungen und Fortschritte in der Gesammten Medizin."

Among his works may be mentioned: "Die Anatomie des H. v. Mondeville," Berlin, 1889; "Die Chirurgie des H. v. Mondeville," *ib.* 1892 (French transl. by E. Nicaise, Paris, 1893); "Die Angebliche Chirurgie des Joh. Mesuë," Berlin, 1893; "Medizinische Deontologie," *ib.* 1896; "Entwickelung der Medizin in Berlin," Wiesbaden, 1897; "Einführung in die Gesch. der Medizin," Berlin, 1898; "Medizinische Encyclopädie und Methodologie," *ib.* 1899.

Pagel has also written essays for the "Allgemeine Zeitung des Judenthums," among others "Gebet des Maimonides," "Doctor Esra," etc.

PAGGI, ANGELO: Italian Hebraist; born at Sienna May 4, 1789; died at Florence June 7, 1867. He received his Hebrew training under Leon Vita Monseles, and also studied Italian and Latin literature. For a short time he was engaged in business;

but he soon abandoned it to open an educational institution, where he introduced a rational and logical method of teaching. He was principal of the Jewish school at Florence from 1836 to 1846, when failing health obliged him to retire, although he continued to write and teach in private. Among his pupils was Prof. Fausto Lasinio, with whom he translated the hymns of St. Ephraem from the Syriac. He also wrote "Compendio di Tutte le Dottrine Israelitiche"; "Grammatica Ebraica"; "Grammatica Caldaico-Rabbinica"; and he left several unpublished works: "Storia Giudaica dalla Creazione del Mondo ai Nostri Giorni"; "Grammatica Ebraica e Rabbinica Compendiata ad Uso delle Scuole"; "Dizionario Ebraico-Italiano"; "Dizionario Caldaico-Rabbinico-Italiano"; "Dizionario Italiano-Ebraico-Caldaico-Rabbinico"; "Dissertazione Critica Sopra una Leggenda Talmudica"; "Poesie Ebraiche"; "Autobiografia"; and "Scritti di Pedagogia e Morale." A review by him of Renan's "Vie de Jésus" was published posthumously in the "Vessillo Israelitico" (June, 1879, *et seq.*).

S. U. C.

PAHLAVI LITERATURE, JEWS IN: The Pahlavi or Middle Persian literature, extending approximately from the third to the tenth century C.E., is devoted mainly to the theology of Zoroastrianism. In its polemics, therefore, it naturally mentions and criticizes other religions, especially Judaism, Christianity, Manicheism, and, very guardedly, Mohammedanism. The more scanty historical and geographical literature also alludes occasionally to Jews. While some of these references are vague, others are of considerable importance, especially the statements in the "Dinkard" and the "Shikand-gumanig Vijar" for religion, and in the "Dina-i Mainog-i Khiraṭ" and the "Shatroiha-i Eran" for history and geography. In the "Shayast la-Shayast," vi. 7 (West, in "S. B. E." v. 297)—dating perhaps from the seventh century—there is an allusion to the Zandiks (a heretical Zoroastrian sect), the Jews, and the Christians as being "of a vile law," while according to the "Dinkard" (translated into English and edited by Sanjana, p. 24)—the longest and, from a religious point of view, the most important work in all Pahlavi literature; it dates from the ninth century, having been begun by Atur-farnbag, who flourished during the califate of Al-Mamun (813-833), and completed by Aturpaṭ, son of Hemeṭ, a contemporary of Zaṭ-Sparam, who was alive in 881—Judaism, Christianity, and Manicheism are all to be checked as degraded in creed and perilous to Zoroastrianism. In like spirit the "Dinkard" (p. 257) declares that the evil of the worst age of the world is due to the "sinful dispositions of all men, derived from the Yahudi [Jewish] religion" (comp. *ib.* p. 456), and the Zoroastrians were warned by the Dastur Seno (for the form of this name see Justi, "Iranisches Namenbuch," p. 279, Marburg, 1895) to keep aloof from Judaism, the laws and tenets of which were calculated to ruin and devastate the world ("Dk." p. 310).

In the "Dinkard."

Religious Disputations.

The "Maṭigan-i Gujastak Abalish" (i. 15) records a religious disputation between the Zandik Abalish and the orthodox Atur-farnbag, which was held before the calif Al-Mamun about 825, and at which Zoroastrians, Mohammedans, Jews, and Christians were present. The only point of Jewish religion mentioned in this polemic is called forth by the later Zoroastrian custom of performing ablutions in the morning with "gomez" to insure freedom from any possible defilement by the "druj nasu" (= "demon of dead matter"; comp. also the later "Sad-Dar," lxxiv. 1, transl. by West in "S. B. E." xxiv. 337-338). To uphold the practise of bathing on rising, Atur-farnbag appeals to "the Jews, the Christians, and the Mohammedans, each of whom, on rising at dawn, washes his hands and face, begins the invocation of God and the angels, and puts himself in a state of grace to receive food or to undertake his occupations" ("Maṭigan-i Gujastak Abalish," v. 12-15). It would seem, moreover, that this same Atur-farnbag was acquainted with the Gemara, if the reading "Gyemara" in "Dk." v. 1, §§ 2-3 be correct (comp. West, *l.c.* xlvii. 119-120; Preface, p. xiv.), and that he employed it in religious controversies. The "Ture" or Torah is likewise mentioned in the "Dinkard" with disapproval, being characterized as "the words of devils and unworthy of belief" (ed. and transl. Sanjana, pp. 604-605).

Furthermore, in this work (West, *l.c.* xviii. 399-410; comp. also the translation by Sanjana, pp. 90-102, which varies from West's version in several respects, the passage being a very difficult one) there is a refutation of a Jew who had attacked the Zoroastrian custom of "khvetukdas" or next-of-kin marriage. This term is understood by the modern Parsis to denote marriage of first cousins, although its ancient connotation is generally agreed to have implied such unions as those of brother and sister, father and daughter, or mother and son (comp. Justi, "Gesch. Irans bis zum Ausgang der Sasaniden," in Geiger and Kuhn, "Grundriss der Iranischen Philologie," ii. 434-437, and the literature there cited). The very circumstance that the Jew made this protest implies, moreover, that "khvetukdas" denoted a closer union than that of first cousins, since such a marriage is by no means abhorrent to Judaism (see Consanguinity Among Jews). The chapter of the "Dinkard" which records the controversy states only the fact that the Jew objected to the practise of "khvetukdas," giving no allusions either to his tenets or his arguments, but devoting almost its entire content to upholding the system, which it defends by drawing parallels with the excellent results obtained by the inbreeding of cattle.

Protest Against Dualism.

The assumed dualism of Judaism and Manicheism is naturally condemned when compared with the practical monism of later Zoroastrianism (comp. Jackson, "Iranische Religion," in Geiger and Kuhn, *l.c.* ii. 629-630); for the Hebraic recognition of evil as a rival power to good is somewhat casuistically interpreted by the Zoroastrian theologians as a plea for the necessity of its existence as a cosmic and moral force, while they themselves distinctly subordinate Ahriman, the principle of evil, to Ormuzd, the principle of good ("Dk." ed. Sanjana, p. 211). The "Dinkard" goes further than this, however, and declares that the Jewish Scriptures were first composed by Zohak, a monstrous dragon of the race of Ahriman, who dwelt at Babylon (Jackson, *l.c.*, pp. 663-664; Spiegel, "Eranische Alterthumskunde," i. 530-544, Leipsic, 1871-78). This statement seems to be based simply on "odium theologicum," not on any actual misreading of proper names or popular legend. Zohak is said to have deposited the Bible in the "fortress of Jerusalem," and to have led the Jews to believe in Abraham and later in Moses, whom they "accepted as their prophet and messenger of faith, and unto whom they ascribe the salvation of sins committed" (Sanjana, *l.c.* pp. 372-373). Thrice Zohak made mankind submit to the Jewish faith (*ib.* p. 379)—possibly a vague allusion to the frequent collocation of Abraham, Isaac, and Jacob, or, more probably, of Abraham, Moses, and Elijah (or Enoch), the latter two as being the forerunners of the Messiah (comp. *ib.* p. 439, and Macler, "Apocalypses Apocryphes de Daniel," pp. 110-112, Paris, 1895).

Zohak and the Bible.

The diabolical origin of the Bible is developed somewhat more specifically in the "Dinkard" (pp. 438-439). Here it is said that Zohak composed ten "universally noxious precepts" to counteract the ten beneficent regulations of the pious Jemshid (Spiegel, *l.c.* i. 522-530). These precepts of Zohak (evidently a reminiscence of the Decalogue) were written out at his command, and were preserved in Jerusalem. Since Abraham followed their teaching, "people came to look upon these precepts of Zohak as the work of the prophet Abraham, who was to come at the end of the world. . . . Thus every one of the Jewish race and faith came to look upon Zohak's religious words as meant for himself and to believe in them." These ten commandments, which show no resemblance to the Decalogue, but are, in fact, quite its reverse, may be summarized as follows (Sanjana, *l.c.* pp. 437-438): (1) the Almighty is the injurer of the universe; (2) the Devs (demons) must be worshiped as the source of all earthly prosperity; (3) men should practise injustice rather than justice; (4) men should act unrighteously and disgracefully in every matter; (5) men should lead greedy and selfish lives; (6) fathers should withhold from their children such training as would fit them in their turn for noble fatherhood; (7) the poor should be deprived of protection; (8) goats should be killed before reaching maturity, according to Jewish usage; (9) the Devs should sacrifice good and pious men as do the Jews; (10) men should be cruel, revengeful, and murderous. Only two of these commandments, the eighth and ninth, mention the Jews; the former referring to the sacrifices of kids as sin-offerings (*e.g.*, Lev. iv. 23 *et passim*), and the latter possibly to a distorted reminiscence of some such passages as II Chron. xxviii. 3; Ps. cvi. 37-38; Isa. lvii. 5; Jer. xix. 4-5, xxxii. 35; Ezek. xvi. 20-21; xxiii. 37, 39, which allude in condemnatory terms to human sacrifices practised in Israel, or even to the view maintained in the Midrash, Targum, and Talmud, that Jephthah actually sacrificed his daughter to Yhwh (comp. Jew. Encyc. vii. 95a). In any case the number of the commandments, ten, is a palpable imitation of the Decalogue.

In the "Shikand-gumanig Vijar."

Unfavorable as are the criticisms on the Jews in the "Dinkard," they are far less hostile and explicit than those in the "Shikand-gumanig Vijar," a polemical work of the latter part of the ninth century. Marṭan-farukh, the author of this book, in the course of his defense of the Zoroastrian religion, criticizes the Mohammedans, the Christians, the Manicheans, and the Jews, the twelfth and thirteenth chapters, as well as a few paragraphs of the eleventh, being devoted to the last-named. In these sections Marṭan-farukh cites numerous passages from the Bible, which is characterized as "full of delusion" and "of every iniquity and demonism" ("Shikand-gumanig Vijar," xiii. 4, xiv. 2). The verses quoted are mainly from the Pentateuch, although a few are from Isaiah, and one is from the Psalms. The list of such verses is as follows, excluding mere vague reminiscences: Gen. i. 2-3; ii. 16-17; iii. 9, 11-16, 18-19; vi. 6; Ex. xx. 5 (scarcely, as has been suggested, an attempt to translate Gen. iv. 15); Deut. xxix. 4, xxxii. 35 (less probably a paraphrase of Nah. i. 2); Ps. xcv. 10; Isa. xxx. 27-28, xlii. 19. The source of these citations has not yet been determined with any degree of certainty. It seems safe to affirm, however, that it was not a complete translation of the Bible into Pahlavi from which Marṭan-farukh quoted his texts, even though there may once have been such a version which has long since disappeared (comp. Jew. Encyc. iii. 190b, vii. 317b). This is shown by the variations in the rendering of Gen. ii. 16-17 and iii. 11 in the "Shikand-gumanig Vijar." The former verses are translated thus: "The Lord, who is the sacred being himself, commanded Adam thus: 'Eat of every tree which is in this garden, except of that tree of knowledge; because when thou eatest thereof you die'" (*ib.* xiii. 18-20); "The sacred being commanded Adam thus, 'Thou shalt not eat of this one tree which is in paradise'" (*ib.* xi. 352); "When you eat of this tree you die" (*ib.* xiii. 143). Gen. iii. 11 is translated: "Mayest thou not ever yet ["agarat"] have eaten of that tree of knowledge, of which I said ["guft"] that you shall not eat?" (xiii. 33), and also: "Mayest thou not ever yet ["hargizhica"] have eaten of that tree of which I commanded ["farmuṭ"] that you shall not eat?" (xiii. 139).

Biblical Names.

The spelling of the Hebrew proper names offers little help in the determination of the source used by the "Shikand-gumanig Vijar," especially as the entire work is a Pazand transcription in Avesta letters of a Pahlavi original. The names in question are as follows: "Abrahim" ("Abreham" in "Daṭistan-i Denig," xxxvii. 90); "Adam"; "Adino" (= אדני); "Asarasarā̃" (a misreading of Pahlavi "Asrayilan" [= "Israelites"]); "Asinaa" (in the Sanskrit version, "Asinaka" [= "Isaac"]; comp. West, *l.c.* xxiv. 225, note 4); "Havae" (= "Eve"); "Hurusharm"

(="Jerusalem" [Pahlavi, "Aurishalem," in "Dina-i Mainog-i Khiraṭ," xxvii. 67; "Aurushalim," in the "Dinkard"; comp. ed. Sanjana, glossary to vol. vi.]); "Mashyae" (= "Messiah" [Pahlavi, "Mashikha," in "Daṭistan-i Denig," xxxvii. 90-91]); "Mushae" (= "Moses"); "Zuhuṭ," "Zuhudā," "Zuhudaa" (= "Jew," "Jews," "Jewish" [Pahlavi, "Yahuṭan," in "Dina-i Mainog-i Khiraṭ," xxvii. 67, "Shayast la-Shayast," vi. 7, and "Dinkard," *passim*; on the misreading of Pahlavi "y" as "z," comp. Haug, "Essay on Pahlavi," in his "Pahlavi-Pazand Glossary," p. 97, Bombay, 1870; Kirste, "Semitic Verbs in Pehlevi," pp. 5-7, Vienna, 1903]).

The translations of the verses cited in the "Shikand-gumanig Vijar" are, in general, fairly accurate. The principal variations from the text as represented by the Hebrew are as follows: Gen. i. 2, "There first arose earth, without form and void, darkness and black water; and the breathing of the sacred being ever yearns over the face of that black water" ("Shikand-gumanig Vijar," xiii. 6-7). Gen. iii. 18-19 is translated (*ib.* xiii. 38-40): "Thy eating shall be through the scraping off of sweat and the panting of thy nostrils, until the end of thy life; and thy land shall grow all bodily refuse and dung." The original of the verse translated "I am the Lord, seeking vengeance and retaliating vengeance, and I retaliate vengeance sevenfold upon the children" (*ib.* xiv. 5-7), is somewhat obscure. It may be based on Nah. i. 2 (R. V.), or on Deut. xxxii. 35, or on Ex. xx. 5. The last seems the most probable source, not only in view of the fact that the great majority of the Old Testament citations in the "Shikand-gumanig Vijar" are taken from the Pentateuch, but also on account of the so-called Targum of Jonathan, which expands the phrase "jealous God" into "a jealous and avenging God, and avenging myself with jealousy," while the "sevenfold" vengeance is evidently a misunderstanding of the "third and fourth generation." The only citation, however, which seems to give any real clue to the original version employed by Marṭan-farukh is Gen. iii. 14. According to the "Shikand-gumanig Vijar" (xiii. 42-44), "He spoke to the serpent thus: 'Thou shalt be accursed from amid the quadrupeds and wild animals of the plain and of the mountain; for thee also there shall be no feet; and thy movement shall be on thy belly, and thy food shall be dust.'" This version is very probably also based on the Targum of Jonathan, which adds to the Hebrew original the phrase, "and thy feet shall be cut off."

Haggadic Stories.

In addition to direct citations from the Bible, whose basis may have been, at least in part, the Targum of Jonathan, the "Shikand-gumanig Vijar" contains four stories, purporting to be from the sacred writings of the Jews. The first of these (*ib.* xiv. 36) states that "every day he prepares, with his own hand, ninety thousand worshipers, and they always worship him until the night-time; and then he dismisses them, through a fiery river, to hell." This tale is founded on the Talmudic legend that no portion of the heavenly host praises God for more than a single day; for at the end of that time they are dismissed to the stream of fire from which they were created (comp. Dan. vii. 22; Ps. civ. 4), while a new company of angels takes their places (comp. Jew. Encyc. i. 586a). The same chapter also relates ("Shikand-gumanig Vijar," xiv. 40-50) how the Lord visited Abraham to comfort him in his old age and his affliction. Abraham thereupon sent his son Isaac to fetch wine from paradise, and entreated the Lord to drink of it. Ignorant of its provenience, however, God refused to do so, until He was assured by His host of the purity of its origin. The legend is evidently a confusion of the account of the visit of the Lord to Abraham in the plains of Mamre (Gen. xviii.) with the story of the wine brought by Jacob to his father, Isaac (Gen. xxvii. 25); for according to the Targum of Jonathan and Yalḳ., Gen. 115, this wine was contained in the grapes made at the creation of the world and was borne from paradise to Jacob by the archangel Michael. The third story ("Shikand-gumanig Vijar," xiv. 58-70) likewise has a Talmudic basis. In dire poverty a righteous man beseeches divine aid, and in answer to his prayers an angel descends from heaven, and tells him that the sum of joy and sorrow may not be changed. In recognition of his piety, however, there is destined for the petitioner in the future life a throne the feet of which are of jewels; and he may if he wishes have the benefit of one of these feet on earth. After consultation with his wife, the pious man declines to mutilate his reward in heaven, even though he knows that his sufferings in this world must otherwise continue unabated. This legend is taken from the account of Ḥanina b. Dosa, who received under similar circumstances a golden table-leg from paradise. His wife, however, had a vision in which she beheld the righteous feasting in heaven at three-legged tables, while her husband's board had but two supports. When she told her dream to Ḥanina, he immediately prayed to God to withdraw the bounty for which he must pay so dearly; and he thus chose earthly poverty rather than diminution of heavenly bliss (Ta'an. 25a; Ber. 17).

The last story ("Shikand-gumanig Vijar," xiv. 75-78) states that the Lord boasted of slaying "in one day an assemblage of sinners, as well as innumerable innocents." And when the angels talked much of the unreasonable performance, He then spoke of it thus: "I am the Lord, the ruler of wills, superintending, unrivaled, and doing my own will; and no one assists or is to utter a murmur about me." The source of this passage is uncertain. It may be suggested, however, that it rests upon some such passage in the Bible as Job ix. 22, 12: "He destroyeth the perfect and the wicked." "Behold, he taketh away [R. V. "he seizeth the prey"], who can hinder him? who will say unto him, What doest thou?" (comp. Ezek. xxi. 3-5; Dan. iv. 35).

Allusions to Jewish History.

Allusions to Jewish history are found in two Pahlavi works, the "Dina-i Mainog-i Khiraṭ," which was probably written before the Arabic conquest of Persia, and the "Shatroiha-i Eran," a geographical treatise dating perhaps from the ninth century. In the former work there is a passage (xxvii. 64-67) which states that Loharasp, the Aurvaṭ-aspa of the Avesta ("Yasht," v. 105), whose capital has been located at Balkh by Firdusi, Ṭabari, Mas'udi, Yaḳut, and others, "demolished the Jerusalem of the Jews, and made the Jews dispersed and scattered." This is repeated in the "Dinkard" (West, *l.c.* xlvii. 120-121; ed. Sanjana, *l.c.* pp. 611-612), with the additional statement that Loharasp was accompanied on this expedition against Jerusalem by Bukht-narsih, or NEBUCHADNEZZAR. At the basis of this tradition there plainly lies a historical foundation. According to the Armenian translation of the chronicles of Eusebius (ed. Aucher, Venice, 1818, i. 22), Nebuchadnezzar had married a Median princess, while Alexander Polyhistor states ("De Judæis," fragment 24, in Eusebius, "Præparatio Evangelica," ix. 39, §§ 4-5) that he was assisted in his expedition against Zedekiah by a contingent of Medes. Of the several hypotheses which might be advanced to reconcile the classical and Pahlavi accounts, it seems most plausible to assume that the Greek versions mentioned the Medes as the Iranians best known to them, while the Pahlavi writings naturally refer to the Bactrians as the representatives of Iran. Both Medes and Bactrians may, therefore, denote the same body of troops in the army of Nebuchadnezzar, or there may have been divisions of both among his followers. It seems, at all events, practically certain that he had Iranian allies in his expedition against Judah which ended in the destruction of Jerusalem and the downfall of the kingdom in 586; and it appears equally clear that a tolerably accurate tradition of this fact is preserved in the passages cited from the "Dinkard" and the "Dina-i Mainog-i Khiraṭ."

Yezdegerd's Jewish Wife.

The references to the Jews in the "Shatroiha-i Eran" allude to the Sassanian period, and concern chiefly the Jewish wife of Yezdegerd I. (399-420). According to §§ 46-47, "the cities of Shus [Shushan] and Shuster were built by Shoshan-dukht [?], wife of Yazdkarṭ I., son of Shahpuhr [Sapor]. She was the daughter of the Reshgalutak, King of the Jews; she was the mother of Bahram [V.] Gor." The reading of the name of this princess is somewhat uncertain. It can scarcely be "Shayan-dokht," as Darmesteter first thought; but his later conjecture that it is "Shasyan-dokht" is more plausible. A still better reading is "Shoshan-dukht," regarded by Blochet as formed from the Hebrew שושן ("lily") and the Pahlavi "dukht," "dokht" = "daughter" (for similar names having "dukht" as the last member, see Justi, *l.c.* pp. 492-493). The foundation of the two cities Shosh and Shoshtar by her is explained by Marquart ("Erān-šahr," pp. 53 (note 1), 144, Berlin, 1901) as a tradition based on the similarity of their names to her own, although it may also denote that she established Jewish colonies in them. The name "Shoshan-dukht" is likewise read, however, "Gasyan-dukht" (= "glory of the throne") by Justi (*ib.* Supplement). The high station of the "resh galuta" or EXILARCH in Persia at this period makes such a marriage between his daughter and the king not altogether improbable, while such epithets as "al-athim," "al-khashm" (= "hard," "wicked"), "dafr" (= "stinking"), and "bazah-kar" (= "sinner"), applied to Yezdegerd, find their explanation in great part in his religious laxity as shown by his toleration of Jews and Christians during a portion of his reign (comp. Justi in Geiger and Kuhn, *l.c.* ii. 526; Modi, "Aiyadgar-i Zariran," etc., pp. 137-143).

The particular exilarch who was the father of Shoshan-dukht or Gasyan-dukht is not certain, although, from the passage in the "Shatroiha-i Eran," he would seem to have been in office in 407, the year in which Bahram Gur or Gor was born (comp. Spiegel, *l.c.* iii. 341). He may have been, therefore, either Mar Kahana or Mar Yemar or Mar Zuṭra I., who successively filled the position of resh galuta for brief periods about that time (Grätz, "Gesch." 3d ed., iv. 463). At all events the queen can hardly have been the daughter of HUNA B. NATHAN, as has been supposed; for, despite the favor which he enjoyed at the court of Yezdegerd, he was never exilarch. According to the "Shatroiha-i Eran," moreover, the same Jewish princess established a colony of her coreligionists at Gai, a quarter of Ispahan (§ 54). In like manner Narses, "the son of a Jewess" ("Narsai Yahuṭakan"), "founded" the city of Khwarezm, the modern Khiva (*ib.* § 10), although the town itself is mentioned as early as the Avesta ("Yasht," x. 14) under the name "Hvairizem" (comp. Geiger, "Ostiranische Kultur im Altertum," pp. 29-30, Erlangen, 1882; Modi translates, in his "Aiyadgar-i Zariran," etc., p. 61, "The chief of the Jews founded the city of Khvarzem"). This Narses was evidently the younger brother of Bahram Gur; he could scarcely have been the vizier of his father, Yezdegerd I. (comp. Justi, "Iranisches Namenbuch," p. 223a). For the general relations of the Jews in Persia during the Sassanid period, see PERSIA.

PAINTING: The art least developed among the Hebrews. If it is borne in mind that painting was affected by the Mosaic interdiction against images, it is not surprising that this art is hardly mentioned in the Old Testament. Decorations on walls include only carvings in relief, as in the Temple, and drawings traced by means of a sharp point, the outlines of which were colored (comp. Ezek. viii. 10, xxiii. 14). The decorations on earthenware also were only colored outline-drawings. See ART.

PAIVA (PAYBA), DE: Spanish Marano family of Amsterdam, with some members in Mexico.

Abraham de Paiva: Poet; lived in Amsterdam about 1687. A Spanish sonnet by him is included in a pamphlet by D. L. de Barrios ("Tora Or," p. 40).

Jacob Ribero de Paiva: Also lived in Amsterdam: author of a Spanish arithmetic.

Moses Pereyra de Paiva: Merchant of Portuguese descent; lived at Amsterdam in the seventeenth century. He visited Malabar and resided in Cochin, publishing at his own expense an account of the Jews in those regions, under the title "Notisias dos Judeos de Cochim" (Amsterdam, 1687), which appeared also in Judæo-German under the title "Zeitung aus Indien" (Prague, 1688; Amsterdam, 1713), and was published in Spanish as "Relacion de las Noticias de los Judeos de Cochim," this latter version existing only in manuscript.

PAKS CONFERENCE: Meeting of rabbis held Aug. 20 and 21, 1844, at the town of Paks, Hungary. The discussions in the Hungarian Parliament concerning the emancipation of the Jews produced in Hungary, as elsewhere in Europe, a demand for the reform of both dogma and ritual, in order that Jews might be drawn more closely toward their Christian fellow citizens. One of the principal demands was the establishment of a rabbinical seminary. To anticipate such an attempt, Paul (Feiwel) Horwitz, rabbi of Papa, planned a rabbinical conference which should establish a hierarchical constitution for the Hungarian congregations. Horwitz, who had mastered the Hungarian language thoroughly—a very rare thing among Orthodox rabbis in those days—wished to protect Orthodox Judaism against changes that might be decreed by the government or that might be introduced by individual congregations desirous of gaining the good-will of the government. He therefore addressed himself first to the Orthodox authorities, without neglecting the liberal partizans. To Leo Holländer in Eperies, a communal leader among the liberals, he wrote that his idea was to gather a representative body of Jews of all religious opinions; and even Aaron Chorin, the representative of what was in Hungary ultra-Reform, was invited.

The meeting was attended by twenty-five rabbis, who held the proxies of twenty-five others. The recognized Orthodox leaders, Samuel Wolf Schreiber of Presburg and the disciples of his famous father, Moses Sofer, ignored the convention. Of Orthodox authorities, only Judah Assód of Szerdahly and Götz Kohn Schwerin of Baja were present; Löw Schwab of Budapest represented the middle view; Aaron Chorin, who died a few days after the convention, was too weak to attend, and sent a letter in which he urged the adoption of reforms. Horwitz, however, confined his labors to a proposal for the organization of a hierarchy in which the rabbi of each congregation should have absolute power in religious affairs, while a rabbinical committee should govern the affairs of every one of the four districts into which Hungary was to be divided. Finally the Jewish affairs of the whole country were to be governed by a "Great Synod," meeting every three years.

Schwab demanded that, first, a convention of rabbis and laymen should be called which should deliberate on the organization of a representative body, comprising both rabbis and laymen, and which should be the highest tribunal on all Jewish questions, such as management of congregations and schools, authorization of religious text-books, and the like. He further demanded a declaration with regard to the attacks of the anti-Semites on the Jews, and he asked that the conference should declare that Judaism demanded of every Jew love for his country; that the same laws of morality regulate relations between Jew and Jew as between Jew and Christian; that an oath sworn in civil courts be binding on every Jew; and that training in manual labor be encouraged. The convention did not arrive at any definite result, and finally it was decided that in the following year another convention should be called; but the untimely death of Horwitz (Feb. 24, 1845), at the age of forty-nine, brought the whole movement to a close.

PALACE: The Hebrews learned from the Phenicians the art of erecting large buildings having several rooms. David's palace was built by workmen sent by Hiram of Tyre; and Solomon also availed himself of their services. Of David's palace no details are known, except that it stood in the City of David, and thus was situated on the southern slope of Zion, the eastern hill. Farther up this hill, to the north of this building, Solomon afterward erected his palace, an extensive structure which enclosed within its walls not only the king's mansion, but also the Temple and other edifices. The site of this palace corresponds in all probability to the southern part of the present Ḥaram al-Sharif. The main entrance was from the south.

It may be assumed that the description of the palace, found in I Kings vii. 1–12, names the buildings according to some definite order, probably that in which they would be seen by one coming from the City of David. On this hypothesis, next to the outer wall of the palace of David stood the house of the forest of Lebanon, a building about 50 meters long by 25 meters broad and 15 meters high; it took its name from the forty-five cedar pillars on the lower floor, which formed a large hall, and whose ceiling and upper floor they supported. This hall was used for meetings, the upper rooms containing Solomon's armory (*ib.* x. 16–17). To the north and higher up the hill was a porch with pillars, about 25 meters long and 15 meters wide, approached by a perron and a vestibule, and serving as an anteroom for those who sought audience. Through its rear exit the porch of judgment or throne-room with the magnificent ivory throne of Sclomon was reached (*ib.* x. 18). The walls of the porch of judgment, where, as its name indicates, the king received his subjects in audience and administered justice, were wainscoted from floor to ceiling with cedar. To the north of this hall, in a court whose walls separated it to some extent from the state buildings just mentioned, stood the palace itself, which also consisted of a ground floor with an extensive hall and wainscoted walls.

The king's harem formed probably a separate building connected with the palace; but the fact that no strangers might find admission there accounts for the absence of any detailed knowledge of its architecture. It is stated, however, that the daughter of Pharaoh, in conformity with her rank, had a house of her own, which was, in all probability, connected with the royal palace, and stood, like the other harems, inside the court. At all events, this palace with its harems seems to have been, like other Oriental palaces, an extensive complex of wings, courts, and gardens, although no detailed description is given anywhere in the Old Testament. Still farther north, and likewise surrounded by a special court, but connected with the whole palace by the large enclosing wall, was the TEMPLE.

PALACHE, SAMUEL: Moroccan envoy sent by the King of Morocco to the Netherlands about 1591; subsequently acted as consul there; died at The Hague 1616. He proposed to the magistrates of Middleburg in Zealand to make that town an asylum for the Maranos, who would raise it to a considerable seaport. The clergy of the town were against the proposal, which fell through. Palache did much for the settlement of the Maranos in Amsterdam in 1593, and gained great favor with the stadholder. Prince Maurice of Orange attended Samuel's obsequies.

PALÁGGI (FALAJI), ABRAHAM: Turkish rabbinical author; born at Smyrna in 1809; died there 1899; son of Ḥayyim Palaggi. On the death of his father (1869), Abraham succeeded him as chief rabbi of Smyrna in virtue of an imperial decree; and he held this position for thirty years until his own death, repeatedly defending his coreligionists against the charge of ritual murder.

Palaggi was the author of sixteen works in Hebrew and one in Judæo-Spanish, each containing in its title the author's name, Abraham. The list is as follows: "Shema' Abraham" (Salonica, 1850), responsa; "Berak et-Abraham" (*ib.* 1857), sermons; "Shemo Abraham," vol. i., ethics (*ib.* 1878); ii., sermons (Smyrna, 1896); "Wa-Yiḳra Abraham" (*ib.* 1884), ritual laws; "Wa-Yashkem Abraham," meditations on the Psalms (*ib.* 1885); "Wa-Ya'an Abraham" (*ib.* 1886), responsa; "Abraham et Yado" (*ib.* 1886), sermons; "Abraham et-'Enaw" (*ib.* 1886), commentary on the Talmud; "Abraham Anoki" (*ib.* 1889), commentary on the Bible; "Abraham Ezkor" and "Wa-Yemaher Abraham" (*ib.* 1889), religious ethics; "Zekuteh de-Abraham" (*ib.* 1889), sermons; "Abraham Shenit," religious ethics; "Padah et Abraham" (*ib.* 1894), sermons; and "We-Abraham Zaḳen" (*ib.* 1899), sermons. The Judæo-Spanish work is entitled "We-Hokiaḥ Abraham," on ethics (*ib.* 1859).

PALAGGI, ḤAYYIM: Turkish rabbinical author; born at Smyrna 1788; died there 1869; maternal grandson of Joseph b. Ḥayyim Hazan, author of "Ḥiḳre Leb"; pupil of Isaac Gategno, author of "Bet Yiẓḥaḳ." After serving as president of the tribunal in his native city, he was appointed ḥakambashi there in 1854. His declining years were saddened by his deposition, although he was reinstated and held the position until the year before his death, and by disturbances among the people. He was held in great veneration by the masses; and at his funeral the hearse was escorted by a battalion of troops—an honor which has been shown by the Turkish authorities to two or three chief rabbis only.

Ḥayyim Palaggi (MaHaRḤaF) was a very prolific writer. Not counting twenty-six manuscripts which were lost in a fire, and a large number which are unpublished, he produced twenty-six works, most of them containing in their titles his name, Ḥayyim. They are as follows: "Darke Ḥayyim 'al Pirḳe Abot" (Smyrna, 1821), commentary on the Pirḳe Abot; "Leb Ḥayyim" (vol. i., Salonica, 1823; ii.-iii., Smyrna, 1874-90), responsa and comments on the Shulḥan 'Aruk; "De-Raḥamim le-Ḥayyim"; "Semikah le-Ḥayyim" (Salonica, 1826); "Nishmat Kol Ḥai" (2 vols., *ib.* 1832-37), responsa; "Ẓedaḳah Ḥayyim" (Smyrna, 1838); "Ḥiḳeḳe Leb" (2 vols., Salonica, 1840-49), responsa; "Tokaḥat Ḥayyim" (2 vols., *ib.* 1840-53), moral counsels and sermons; "'Aṭeret Ḥayyim"; "Yimmaẓe le-Ḥayyim"; "Nefesh Ḥayyim" (*ib.* 1842); "Torah we-Ḥayyim"; "Ḥayyim Tehillah"; treatises on various subjects, and a eulogy of Sir Moses Montefiore, with an appendix, "Derakaw le-Mosheh" (*ib.* 1845); "Ḥayyim Derakaw" (*ib.* 1850); "Ḥayyim la-Roshe"; "Kaf ha-Ḥayyim"; "Mo'ed le-Kol Ḥai"; "Re'e Ḥayyim" (3 vols., *ib.* 1860); "Ḥayyim we-Shalom" (Smyrna, 1862); "Katub le-Ḥayyim"; "Sippur Ḥayyim"; Birkat Mordekai le-Ḥayyim" (*ib.* 1868); "Sefer Ḥayyim" (Salonica, 1868); "Ginze Ḥayyim" (Smyrna, 1872).

PALÁGYI, LUDWIG (originally **Silberstein**): Hungarian poet; born at Becse April 15, 1866; educated privately by his father, a former public school-teacher, and by his elder brother Melchior Palágyi. He began to write at the age of thirteen, his first poem appearing in 1879 in the "Magyar Népbarát." He soon became a contributor to the literary periodicals "Vasárnapi Ujság," "Országvilág," "Magyar Szalón," "Fövárosi Lapok," and "Képes Családi Lapok," and in 1890 he won the prize of 100 ducats offered by the Petöfi Society for a poem to be recited at the monument of the thirteen martyrs. In recognition of his services to the Hungarian language he was appointed professor at the State Teachers' Seminary for women at Budapest.

Palágyi's works include: "Humoros Költemények," Esztergom, 1888; "Küzdelmes Evek," Budapest, 1890; "Komor Napok," *ib.* 1890; "Magányos Uton," *ib.* 1893; "Az Ifjú Szerzetes" (*ib.* 1894), a philosophical poem; "Nemzeti Dalok," *ib.* 1895; "Bibliai Emlékek," *ib.* 1896; "A Rabszolga," a tragedy which won the prize of the Hungarian Academy in 1902.

PALÁGYI, MELCHIOR (originally named **Silberstein**): Hungarian writer; born at Paks Dec. 26, 1859. He received his primary instruction from his father, and then attended the lyceums at Temesvar and Kassa. In 1877 he went to the School of Technology at Budapest, where he passed his examination as secondary school-teacher in mathematics and physics in 1881. Five years later he became professor in a commercial school at Budapest.

While still a student Palágyi wrote a mathematcal treatise which was published in 1880 by the Academy of Sciences; but he subsequently took up the study of philosophy. His works include: "Az Esz Törvénye," Budapest, 1896; "A Hellenismus és a Philonismus Kosmogeniája," *ib.* 1899; "Neue Theorie des Raumes und der Zeit," Leipsic, 1901; "Der Streit der Psychologisten und Formalisten in der Modernen Logik," *ib.* 1902; "Die Logik auf dem Scheidewege," *ib.* 1902; "Kant und Bolzano," Halle, 1902; and minor contributions to ethics and esthetics.

In 1882 Palágyi edited the "Irodalmi Lapok," in 1887 the "Uj Nemzedék"; in 1896 he published the review "Jelenkor." Palágyi embraced Christianity.

S. L. V.

PALE OF SETTLEMENT: A portion of Russia in which Jews are allowed to reside. Unlike other Russian subjects, the Jewish inhabitants do not generally possess the natural right of every citizen to live unrestrictedly in any place in the empire. Furthermore, they are permitted to leave the Pale of Settlement—that is, to move to another place for permanent or for temporary residence—only under certain conditions defined by law.

Beginnings of the Pale.

The Pale was first established in 1791, when the White-Russian Jews, who had passed under Russian rule (1772) at the first partition of Poland, were forbidden to join merchant or artisan gilds in governments other than those of White Russia. As a favor to the Jews, Catherine II. extended at the same time their right of citizenship to the viceregency of Yekaterinoslav and the territory of Taurida. Since that time this regulation has been constantly in force, though the limits of the Pale have been modified from time to time.

The fundamental official motive for this limitation is ostensibly the protection of the less enlightened Russian people against the economic enslavement that might be imposed upon them by the Jews. But the exceptions made by the government were directly calculated to develop the economic activity of the Jewish population; hence it may be assumed that by the establishment of the Pale it was really intended to remove the religious influence of the Jews over the Russians. Accordingly, the Pale included, besides the Polish governments, the South-Russian governments, where the Greek-Orthodox element did not form a considerable portion of the mixed population. With the successive partitions of Poland the Pale was enlarged by the addition of governments wherein Jews lived in great numbers. In 1794 it included those of Minsk, Izyaslav, Bratzlav, Polotzk, Moghilef, Kiev, Chernigov, Novgorod-Syeversk, and Yekaterinoslav, and the territory of Taurida. To these were soon added the Lithuanian governments of Wilna and Grodno; and in 1799 the Pale was further augmented by the addition of Courland. In 1804 Jews were given access to the governments of Astrakhan and Çaucasia; but at the end of the reign of Alexander I. and in the reign of Nicholas I. the extent of the Pale was diminished. Thus in 1835 the governments of Astrakhan and Caucasia were no longer included. At the same time the Jews were forbidden to reside in certain places within the Pale itself, *e.g.*, in the military ports of Sebastopol and Nikolaief (Nikolayev), and in Kiev; in the villages of the governments of Moghilef (Mohilev) and Vitebsk; and on crown lands and in the Cossack villages of the governments of Chernigov and Poltava. Aside from this, the Jews were forbidden to settle anew in the fifty-verst boundary zone. About this time also Jews were expelled from the villages and hamlets of certain governments.

Poland Not in the Pale.

Jews have lived and still continue to live in the governments of Warsaw, Kalisz, Kielce (Kyelstzk), Lomza (Lomzha), Lublin, Piotrkow, Plock, Radom, Suwalki, and Siedlec (Syedletzk); but these are not included in the Pale. Formerly they were considered almost as a separate world. Until 1862 the Jews of these governments were forbidden to reside in the Pale; and, on the other hand, the Jews of the Pale had not the right to reside in any of these (Polish) governments.

At present (1904) the Pale includes, according to law, fifteen governments: Bessarabia, Wilna, Vitebsk, Volhynia, Grodno, Yekaterinoslav, Kovno, Minsk, Moghilef, Podolia, Poltava, Taurida, Kherson, Chernigov, and Kiev. Moreover, Jews registered in the merchant gilds may reside in Sebastopol (since 1861), in Nikolaief (since 1866), and in Kiev (since 1861). The right of temporary residence in the last-cited place is granted also to young men studying in schools or in workshops, as well as to their parents. Two districts only, Plock (Plossk) and Lybed, are assigned for residence to the Jews; and Jews may live in other parts of the city only by special permission of the local authorities. Under Alexander III. the city of Taganrog, the district of Rostov, and the city of Yalta (1893) were excluded from the Pale, which was still further narrowed during his reign by the so-called "Temporary Regulations" (1882), which have now remained in force for more than twenty years.

By the provisions of the new law Jews were forbidden to settle anew outside of towns and townlets; and only those Jews were allowed to remain in the villages who had already lived there for many years. Yet the general conditions of the times led to the expulsion also of those who had the legal right to reside in villages. The senate was overwhelmed with complaints, and repeatedly declared that certain expulsions were illegal, explaining, for instance, that the removal of a Jew from one house to another in the same village could not be considered sufficient cause for his expulsion from the village itself; and that a Jew who had left a village for a term of service in the army did not thereby lose the right at the conclusion of such service to return to his old residence. The local authorities, however, continued and still continue to expel the outlawed Jews. In the reign of Alexander III. the Jews were energetically removed from the fifty-verst boundary zone, where they had again settled during the milder reign of Alexander II. Recently the law prohibiting Jews from living in the boundary zone was abolished; and the Pale was correspondingly augmented.

Conditional Residence.

There are places outside the Pale where Jews who comply with certain requirements are permitted to reside. In Courland, as also in the townlet of Shlok in the government of Livonia, *the right of permanent residence* is granted only to those Jews (and their descendants) who were registered there in the census of 1835; but the settlement of Jews from other governments is prohibited. Jews who were living in the Caucasus at the time of its conquest by Russia are known as "mountain" Jews; and their descendants enjoy the rights accorded to the other mountaineers. In the second decade of the nineteenth century attempts were made to expel the Jewish inhabitants of the Caucasus; but as many of them occupied entire villages, were engaged in agriculture, and were in some places owned as serfs by the landlords, it was decided in 1837 not to disturb the Caucasian Jews. Other Jews, however, were forbidden to establish themselves in the Caucasus. Subsequently, from 1852 to 1869, at the instance of the viceroy of the Caucasus, 460 Jewish families were allowed to register in the local communities. Outside the Caucasus the mountain Jews are permitted to live only in the Pale and in the Polish governments mentioned above.

Case of Siberia.

In Turkestan the right of residence is granted to those Jews only whose forefathers have lived there from time immemorial. In Siberia Jewish farmers were assigned certain districts in 1835, in the governments of Tobolsk and Omsk; but in 1837 not only was the further settlement of such farmers prohibited, but provision was made for diminishing the number of those already settled there. Only criminals and their sons of eighteen years of age or upward were allowed to remain in the districts in question. In the reign of Alexander II. the right of Jews to register in Siberian communities was revoked. Only those Jews who had been sent to Siberia for some crime, and their children, were excepted.

The right to leave the Pale of Settlement and to reside permanently in any part of Russia is with certain exceptions accorded to the following classes of Jews:

(1) Merchants of the first gild: The law of 1859 permits Jews who have been registered for a period of five years as merchants of such gild within the Pale to register also in the gilds of any place outside the Pale, and to establish themselves in such places with their families and a certain number of servants. But when a merchant who has been a member of the gild for less than ten years ceases to be a member of it, he must, even when possessing real property, move back to the Pale within two years. Only continuous membership in the first gild for a period of ten years secures to the merchant the right to remain without the Pale after leaving the gild. A special exception is made in the city of Moscow. A Jew may become a member of the Moscow merchant gild only by permission of the minister of finance and the governor-general of Moscow; and the right of residence in Moscow is withdrawn on resignation from the gild.

Exceptions; Higher Education.

(2) Persons possessed of a higher education: According to the law of 1861, Jews having diplomas as doctors of medicine, or as doctors, masters, or candidates in other university faculties, have the *right to reside permanently* in any of the governments and provinces of the Russian empire, whether as government employees or as merchants or manufacturers. They are also permitted to have with them the members of their families and a certain number of Jewish servants and clerks. By the laws of 1865, 1866, and 1867 this right was extended to Jewish physicians not possessing the higher academic degrees, and in 1872 to Jewish graduates of the St. Petersburg Institute of Technology. An imperial decree of 1879 granted this right also to graduates of the higher schools of learning, to assistant pharmacists, dentists, non-graduate surgeons, and midwives.

(3) Persons who have completed their term of military service in accordance with the conscription regulations: Jews were first drafted into military service in 1827; but until 1867, discharged privates and non-commissioned officers were not given the right of residence outside the Pale. Exception was made (1860) in the case of those who had served in the Imperial Guard. But in 1867 a regulation was issued whereby all such soldiers, as well as those in the reserves, together with their families, were given not only the right to reside in any part of the empire, but also the right to register in merchant or artisan gilds (they still retain this privilege), provided that such veterans and their descendants had been uninterruptedly registered as members of a community outside the Pale. This right is recognized, however, only in the case of those soldiers who served under the old conscription regulations, but not in the case of Jews who (since 1874) have served for shorter periods in accordance with the new conscription laws. However, by an imperial decree of 1892 these rights of the veterans and their children were abolished in the case of the city and government of Moscow, except as regards those who were already registered in the artisan gilds there or were members of permanent artisan gilds.

(4) Artisans: In order to remedy the deficiency in Russia of skilled artisans, Jewish artisans have long been permitted to live outside the Pale when fol-

lowing their vocations. In 1819 Jews were permitted to engage in the distilling of whisky in the governments of Great Russia, until the acquisition of the trade by the Russians; but in 1826 this privilege was withdrawn, the government at that time being engaged in suppressing the JUDAIZING HERESY. Jews were permitted, however, to work in the government distilleries at Irkutsk. After the expulsion of the Jews from the central governments and from the Caucasian provinces, it was decreed in the third decade of the nineteenth century that at the request of the governor-general of any province in the Caucasus Jewish artisans should be allowed to remain temporarily, on account of the dearth of skilled labor. In 1844 Jewish artisans were given permission to reside temporarily in the fortified towns on the eastern shore of the Black Sea.

Exceptions; Artisans.

A radical change was made by the law of 1865, granting Jewish mechanics, brewers, distillers, and master workmen and apprentices in general, together with their families, the privilege of unrestricted residence in any part of Russia; but under Alexander III. the law of 1891 prohibited such Jews from living in the city or government of Moscow. Accordingly, all the artisans residing there were expelled. Temporary sojourn in any part of Russia is, with certain exceptions, allowed to merchants of the first gild who have the right to live only in the city in whose gild they are registered; and merchants of the first gild have the right to visit twice a year places otherwise closed to them, and to remain there for a period not exceeding six months in all. Merchants of the second gild may visit places outside the Pale only once a year and for a period not exceeding two months. Merchants may send their clerks in their stead. Merchants of the first gild may also attend certain fairs. In general, Jews may leave the Pale for a period of six weeks, with an extension to eight weeks, in connection with legal matters, or in order to take possession of property inherited by them, or for commercial purposes, or to submit bids on contracts for work to be done within the Pale. Graduates of middle-class schools may reside without the Pale for the purpose of completing their education in the higher schools. Young men under eighteen also may visit places outside the Pale in order to learn a trade, and may remain there until the expiration of their apprenticeship.

Besides those mentioned, the following limitations are in force: No Jew has the right of permanent residence in Finland. In the military province of the Don the right of residence is given (since 1880) only to persons possessing a higher education. In the provinces of Kuban and Tersk permission to reside is given (since 1892) only to graduates of the higher institutions of learning, and among merchants only to those who have long been registered in one of the local communities. Jews have not the right to settle anew in Siberia. Jews illegally residing outside the Pale are sent home and are then prosecuted.

By a decree of Aug. 11, 1903, the limitations concerning the right of residence have been somewhat lessened. The following classes of Jews may now reside in villages and other rural communities: (1) Graduates of higher educational institutions and their children—their daughters until marriage, their sons until they reach their majority or until they complete their course in the higher educational institutions, but not beyond the age of twenty-five. (2) Merchants of the first gild and members of their families; also merchants who have been members of the first gild for a period of fifteen years. (3) Artisans and master workmen. (4) Retired soldiers who have served under the old conscription statutes.

Unrestricted right of residence is accorded to counselors of commerce and of manufactures (the number of these is very small), and to soldiers who have participated in the campaign in the Far East. Jews who have been members of the first gild, even though not continuously, for a period of ten years receive the right of unrestricted residence and may register in a local community. There are several other privileges of minor importance. The rights here enumerated do not apply, however, to those localities where special regulations concerning the Jews exist, as, for instance, the city and government of Moscow, Finland, Siberia, etc.

H. R. *

PALENCIA (Hebrew, פלינסיא): Capital of the province of Palencia, Spain, situated between Burgos and Valladolid. A large and wealthy Jewish community settled here as early as the eleventh century. The first ghetto, called "Juderia Vieja," "the Old Jewry," lay on the right side of the Carrion, in the vicinity of the Church of San Julian; hence the Jews are called in the earliest documents "los Judios de San Julian." This ghetto soon became too small, and another one, called "Juderia Nueva," was formed near the Cathedral of San Miguel, hence called also "Juderia de San Miguel"; it extended to the Carrion.

Beginning with the year 1185, the Jews of Palencia were under the immediate protection of the bishop of that city, who collected one-half of the taxes paid by them. In 1291 they paid a poll-tax of 33,380 maravedis, which sum was divided equally between the king and the bishop, after 8,607 maravedis had been appropriated for "servicio." During the dissensions between the episcopate and the municipal council on account of the Jews' tax, the Jews sided with the council; and they actually took part in the conflict against the bishop until Ferdinand III. declared them to be vassals of the crown (1305).

The Palencia Jews suffered greatly during the civil war between Don Pedro of Castile and Don Henry of Trastamara. When the latter entered the city with his army the war-taxes he laid upon the Jews were so heavy that they were unable to pay them. According to the account of Samuel Çarças, who was living in Palencia at the time (not Valencia, as Wiener writes) and composed his "Meḳor Ḥayyim" there, the ensuing famine completely ruined the rich and flourishing community. In 1391 the ghetto was completely destroyed, and nearly all the Jews who escaped with their lives were baptized. One of the old synagogues was transformed into a hospital; and the old Jewish hospital was later used as a prison.

PALEOGRAPHY—Greek and Latin Inscriptions: Besides a certain number of pagan inscriptions mentioning Jewish affairs, about 500 texts referring directly to persons professing the Jewish religion are known. These have been found throughout the ancient world; but the greater number comes from Italy, where several important Jewish catacombs have been discovered. Though a collection of Jewish inscriptions from Italy has been prepared for the last twenty years by Prof. Nicolaus Müller of Berlin, there exists no corpus or general collection of such texts. The author of this article has been entrusted, by the Société pour l'Avancement des Etudes Juives, with the preparation of a corpus of Jewish inscriptions in Greek and Latin; and he has compiled the following lists, divided under four heads: (*a*) geographical list of the proveniences of all the known texts, together with a rough bibliography; (*b*) principal kinds of inscriptions; (*c*) characteristic formulas; (*d*) typical examples of Jewish inscriptions in Greek and Latin.

Geographical List of Inscriptions. **Rome** (General Bibliography): Nearly all the early collections of Greek and Latin inscriptions, both printed and manuscript, contain Jewish inscriptions from Rome. The following may be specially noted: Th. Sig. Baier, "Lucubrationes de Inscriptionibus Judaeorum Graecis et Latinis," Regiomonti, 1721, reprinted in Th. Sig. Baier, "Opuscula," ed. Klotzius, pp. 380-410, Halle, 1770; Gaetano Migliore, "Ad Inscriptionem Flaviae Antoninae Commentarius sive de Antiquis Judaeis Italicis Exercitatio Epigraphica," MS. in Codex Ferrar. 269; J. G. H. Greppo, "Notice sur des Inscriptions Antiques Tirées de Quelques Tombeaux Juifs à Rome," Lyons, 1835; R. Garrucci, "Alcune Iscrizioni di Cimiteri Giudaici Diversi," in his "Dissertazioni Archeologiche di Vario Argomento," ii. 178-185, Rome, 1866; Engeström, "Om Judarne i Rom Under Äldre Tider och Deras Katakomber," Upsala, 1876; Schürer, "Die Gemeindeverfassung der Juden in Rom in der Kaiserzeit," Leipsic, 1879; A. Berliner, "Gesch. der Juden in Rom," Frankfort-on-the-Main, 1893; Vogelstein and Rieger, "Gesch. der Juden in Rom," Berlin, 1896 (vol. i. contains an appendix with 195 inscriptions: "Die Inschriften in den Jüdischen Cömeterien in Rom"); C. Hülsen (and others), "C. I. L." vi. 2885-2886, Nos. 29,756-29,763.

Five Jewish catacombs (cemeteries) have been found at various dates at Rome, the respective sites of which were as follows: (1) Via Portuensis: The only Jewish catacomb known till the middle of the nineteenth century; discovered in 1602 by Antonio Bosio, the celebrated explorer of the catacombs, and described by him in his "Roma Sotterranea" (pp. 141-143, Rome, 1632; 2d ed. *ib.* 1650, pp. 186-192). His description has been reprinted by many authors, among them Aringhi ("Roma Subterranea," i. 231-239, Paris, 1659) and Kirchhoff ("C. I. G." iv. 587). Another description, the only other extant, is in a manuscript of Ioannes Zaratinius Castellini at Verona.

At Rome.

The galleries were described by Venuti, in 1748, as in a very ruinous condition; and they have since disappeared completely, though in 1879 Mariano Armellini thought he had found the remains of part of them ("Il Cimiterio degli Antichi Ebrei Presso la Via Portuense," in "Cronichetta Mensuale," 1879, v. 27-30). The inscriptions found in 1748 are at Naples, at the Capitoline Museum, and at S. Paolo Fuori delle Mura, Rome (for the bibliography see the books on Jewish inscriptions of Rome generally, and more especially the following: Uhden, MSS. at Berlin; Raponi, "Codex Borgianus"; Marini, "Codd. Vaticani"; Cardinali, "Inscriptiones Antiquae Ineditae"; Danzetta, "Codex Vaticanus 8324"; F. Lenormant, in "Journal Asiatique," 1861, xviii. 268; N. M. Nicolai, "Della Basilica di S. Paolo," pp. 160-163, Rome, 1815).

(2) Via Appia: The largest Jewish catacomb known; discovered in 1859 in the Vigna Randanini, now Vigna Mora, near the Church of Saint Sebastian, between the Via Appia and the Via Appia Pignatelli. More than 180 inscriptions were found in it, only 136 of which were still in situ in 1904. There are in all 50 Latin texts and 130 Greek ones, not a single Hebrew letter occurring in the whole series (E. Herzog, "Le Catacombe degli Ebrei in Vigna Randanini," in "Bulletino dell' Istituto di Correspondenza Archeologica per l'Anno 1861," pp. 91-104; R. Garrucci, "Cimitero degli Antichi Ebrei Scoperto Recentemente in Vigna Randanini," Rome, 1862; *idem*, "Descrizione del Cimitero Ebraico di Vigna Randanini Sulla Via Appia," in "La Civiltà Cattolica," 1862, iii. 87-97; *idem*, "Nuove Epigrafi Giudaiche di Vigna Randanini," vi. 102-117, *ib.* 1863, reprinted in his "Dissertazioni," etc., ii. 153-167; *idem*, "Epigrafi Inedite del Cimitero di Vigna Randanini," in "Dissertazioni," etc., ii. 178-185; *idem*, "Storia della Arte Cristiana," vi., plates 488-492 [comp. pp. 155-157], Prato, 1880; O. Marucchi, "Breve Guida del Cimitero Giudaico di Vigna Randanini," Rome, 1884, reedited in French in his "Eléments d'Archéologie Chrétienne," 2d ed., ii. 208-226, *ib.* 1903; *idem*, "Scavi Nella Vigna Randanini," in "Cronichetta Mensuale," 1883, ii. 188-190; N. Müller, in "Römische Mittheilungen," 1886, i. 56).

(3) Vigna Cimarra (Berliner, *l.c.* pp. 90-92 [comp. p. 48], published De Rossi's copies of six tombstones. Comp. De Rossi in "Bulletino di Archeologia Cristiana," 1867, v. 3, 16). (4) Via Appia Pignatelli: Catacomb very carefully explored in 1885 by N. Müller, who has published a description of it ("Il Catacombe degli Ebrei Presso la Via Appia Pignatelli," in "Römische Mittheilungen," 1886, i. 49-56; see, also, Fiorelli, "Memorie della R. Accademia dei Lincei," 1885, i. 334). (5) Via Labicana: In the Vigna Apolloni the galleries of an ancient quarry cross the remains of a Jewish catacomb discovered and described by O. Marucchi ("Di un Nuovo Cimitero Giudaico Scoperto Sulla Via Labicana," Rome, 1887, reprinted from "Dissertazioni della Pontificia Academia di Archeologia," series ii., 1884, ii. 499-548). A catacomb has also been discovered at Porto near Rome (R. A. Lanciani, "Ricerche Topografiche Sulla Città di Porto," in "Annali dell' Istituto," 1868, xl. 144-195, especially p. 191; De Rossi, *l.c.*

1866, iv. 40; J. Derenbourg, "Elazar le Peitan," in "Mélanges Renier," Paris, 1887 = "Bibliothèque de l'Ecole des Hautes Etudes," lxxiii. 429–441; G. Kaibel, "Inscriptiones Graecae Siciliae et Italiae," pp. 246, 694, Berlin, 1890; E. le Blant, in "Comptes-Rendus de l'Académie des Inscriptions," 1886, xiv. 195–196; J. Ficker, "Die Altchristlichen Bildwerke im Christlichen Museum des Laterans," p. 36, No. 86, Leipsic, 1890).

Other Towns of Italy: Aquileia: Latin tombstone (E. Pais, "Additamenta ad Vol. V Galliae Cisalpinae," p. 228, No. 1166, Rome, 1884). Brescia ("C. I. L." v. 465, No. 4411, Latin; G. Kaibel, *l.c.* p. 547, No. 2304, Greek). Capua ("C. I. L." x. 392, No. 3905). Marani, near Pouzzoles (*ib.* x. 231, No. 1893). Milan (*ib.* v., Nos. 6251, 6294, 6310 [comp. No. 6195]; three Latin inscriptions published in better form by V. Forcella and E. Seletti, "Iscrizioni Cristiane in Milano Anteriori al IX. Secolo," pp. 70–73, Nos. 76–78 [comp. p. 19, No. 19], Codogno, 1897). Naples (?) (*ib.* x. 237, No. 1971). Pola (Istria): Latin tombstone (*ib.* v. 18, No. 88). Pompeii: Jewish inscriptions in Latin somewhat doubtful ([C. Rosini], "Dissertationis Isagogicae ad Herculanensium Voluminum Explanationem," part i., plate xii., Naples, 1797; R. Garrucci, in "Bulletino Archeologico Napolitano," new series, 1853, ii. 8; De Rossi, *l.c.* 1864, ii. 70; *idem*, "Dei Giudei Libertini e dei Cristiani in Pompei," *ib.* pp. 92–93; Fiorelli, "Pompeianarum Antiquitatum Historia," i. 160, Naples, 1860; E. le Blant, in "Comptes-Rendus de l'Académie des Inscriptions," 1885, xiii. 146). Salerno ("C. I. L." x. 316, No. 3492). Syracuse (Orsi, in "Römische Quartalschrift," 1900, xiv. 194 [two Greek tombstones]; "C. I. G." iv. 585, No. 9895, dedication in Greek verse of part of a synagogue). Tarentum: Late tombstones (Fiorelli, in "Notizie degli Scavi," 1882, pp. 386–387; 1883, pp. 179–180).

At Venosa.

Venosa: Jewish catacombs discovered in 1853 (two manuscripts at Naples by Stanislas d'Aloe and by Paschalis de Angelis and Raphael Smith; O. Hirschfeld, "Le Catacombe degli Ebrei a Venosa," in "Bulletino dell' Istituto," 1867, pp. 148–152; G. I. Ascoli, "Iscrizioni Inedite o Mal Note Greche, Latine, Ebraiche di Antichi Sepolcri Giudaici del Napolitano," Turin and Rome, 1880, reprinted from "Atti del IV. Congresso Internazionale degli Orientalisti Tenuto in Firenze nel Settembre, 1878," i. 239–354, Florence, 1880; J. Derenbourg, "Les Anciennes Epitaphes des Juifs dans l'Italie Méridionale," in "R. E. J." 1881, ii. 131–134; Th. Mommsen, "C. I. L." ix. 660–665, Nos. 6195–6241; comp. p. 61, Nos. 647–648 [the only complete publication]; F. Lenormant, "La Catacombe Juive de Venosa," in "R. E. J." 1882, vi. 200–207; R. Garrucci, "Cimitero Ebraico di Venosa in Puglia," in "La Civiltà Cattolica," 1883, series xii., i. 707–720; N. Müller, in "Römische Mittheilungen," 1886, i. 56 [the author spent five months at Venosa and made facsimiles of every fragment]).

Africa: The Jewish inscriptions have been carefully collected by P. Monceaux ("Enquête sur l'Epigraphie Chrétienne d'Afrique: Inscriptions Juives," in "Revue Archéologique," 1904, iii. 354–373). He gives the texts of no less than forty-three inscriptions (*idem*, "Les Colonies Juives dans l'Afrique Romaine," in "R. E. J." 1902, xliv. 1–28; *idem*, "Païens Judaïsants, Essai d'Explication d'une Inscription Africaine," in "Revue Archéologique," 1902, xl. 208–226). Auzia (Aumale) ("C. I. L." viii. 1963, No. 20,759). Carthage: Jewish cemetery at Gamart described by Delattre, "Gamart ou la Nécropole Juive de Carthage," Lyons, 1895. (With the exception of two short texts on lamps, the inscriptions [Latin] are all given in "C. I. L." viii. 1375–1376, 1380, 1382, Nos. 14,097–14,114, 14,191, 14,230.) Cirta (Constantine): Four Latin inscriptions (Monceaux, *l.c.* pp. 368–369, Nos. 142–145). Fesdis: Marble cancellum ("C. I. L." viii. 435, 956, No. 4321). Hammam-Lif: Jewish synagogue, with three remarkable inscriptions in mosaic in the pavement (frequently published; see "C. I. L." viii. 1284, No. 12,457; Monceaux, *l.c.* pp. 366–368). Henchir-Fuara (Morsot): Column with inscription ("C. I. L." viii. 1594, No. 16,701). Sitifis (*ib.* viii. 729, No. 8499; p. 721, No. 8423 [the same man named in both inscriptions]; pp. 738, 1921, No. 8640 [= 20,354] [inscription of a Jew converted to Christianity]). Utica: Fragment (*ib.* viii. 152, 931, No. 1205). Volubilis, Morocco: Greek fragment (*ib.* viii. 2079, No. 21,900).

Spain (Emil Hübner, "Inscriptiones Hispaniae Christianae," Berlin, 1871; good facsimiles): Abdera: Latin tombstone (Hübner, in "C. I. L." ii. 268, No. 1982). Dertosa (Tortosa): Trilingual tombstone in Hebrew, Greek, and Latin (Hübner, *l.c.* No. 186). Emerita (Merida): Latin tombstone with long and interesting formula (Hübner, *l.c.* No. 34). Vinebre (Hübner, *l.c.* No. 187).

Gaul: Auch: Late tombstone in very bad Latin (T. Reinach, "Inscription Juive d'Auch," in "R. E. J." 1889, xix. 219–223; *idem*, "Nouvelles Remarques sur l'Inscription Juive d'Auch," *ib.* 1890, xx. 29–33; Le Blant, "Nouveau Recueil des Inscriptions Chrétiennes de la Gaule," No. 292, Paris, 1892). Bordeaux: Gold ring with inscription (C. Jullian, "Inscriptions Romaines de Bordeaux). Narbonne: Long tombstone inscription dated A.D. 688 (T. Reinach, "Inscription Juive de Narbonne," in "R. E. J." 1889, xix. 75–83).

Danube Provinces: Series of tombstones from various places all collected by Th. Mommsen in "C. I. L." vol. iii. Gran (*ib.* 1714, No. 10,599; Latin in Greek letters). Intereisa (Th. Mommsen, "Ephemeris Epigraphica," 1875, ii. 361, No. 593). Pestinum ("C. I. L." iii. 1716, No. 10,611; Latin in Greek letters). Schwarzenbach (*ib.* 1824, No. 11,641; doubtful Greek fragment). Senia (Dalmatia) (*ib.* 1642, No. 10,055; Latin in Greek letters). Soklos (*ib.* 463, No. 3688; Latin).

Crimea: All the Jewish inscriptions (Greek) of this country are collected in Basilius Latyschev, "Inscriptiones Antiquae Orae Septentrionalis Ponti Euxini Graecae et Latinae," St. Petersburg, 1901. Gorgippia: Manumission (*ib.* pp. 208–209, No. 400). Panticapæum (Kertsch): Two important manumissions (*ib.* 49–53, Nos. 52–53); five unimportant tombstones (*ib.* 154–155, Nos. 304–306; iv. 224–225, Nos. 404–405). Taman Peninsula: Tombstone (*ib.* pp. 235–236, No. 426).

Greece: Ægina: Greek inscription in mosaic relating to the building of a synagogue (Fränkel, "C. I. P." i. 29, No. 190, Berlin, 1902; comp. "American Journal of Archæology," 1902, vi. 69). Arnaut-keui (T. Reinach, "Inscription Juive des Environs de Constantinople," in "R. E. J." 1893, xxvi. 167–171). Athens (St. A. Koumanoudis, *'Αττικῆς 'Επιγραφαὶ 'Επιτύμβιαι*, Athens, 1871; C. Bayet, "De Titulis Atticae Christianis Antiquissimis Commentatio Historica et Epigraphica," pp. 122–125, Nos. 121–125; comp. pp. 45–46, Paris, 1878; G. Dittenberger, "C. I. A." iii. 2, 253, No. 3545–3547). Corinth (B. Powell, in "American Journal of Archæology," 1903, vii. 60, No. 40). Laconia (S. Reinach, in "R. E. J." 1885, x. 77). Mantinea (Fougères, *ib.* 1896, xx. 159). Patras ("C. I. G." iv. 585, No. 9896). Tegea (G. Mendel, in "Bulletin de Correspondance Hellénique," 1901, xxv. 281, No. 34). Thessalonia (*idem, ib.* 1885, x. 77–78).

Asia Minor: Acmonia (Erjish) in Phrygia (S. Reinach, in "Revue Archéologique," 1888, xii. 225; Ramsay, in "Revue des Etudes Anciennes," 1901, iii. 272; two important Greek inscriptions). Corycos, Cilicia (H. Thédenat, in "Bulletin de la Société des Antiquaires de France," 1881, p. 225; R. Heberdey and A. Wilhelm, in "Denkschriften der Akademie der Wissenschaften zu Wien," 1896, xliv. 168, No. 145). Cyprus (T. Reinach, "Une Inscription Juive de Chypre," in "R. E. J." 1904, xlviii. 191–196). Ephesus: Two tombstones (Hicks, "The Collection of Ancient Greek Inscriptions in the British Museum," iii. 2, pp. 262–263, Nos. 676–677, Oxford, 1890). Germa Galatia (S. Reinach, in "R. E. J." 1885, x. 77). Iasos, Caria (*idem, ib.* 1885, x. 76). Magnesia Sipyli (*idem, ib.*). Myndos, near Halicarnassus (T. Reinach, "La Pierre de Myndos," *ib.* 1901, xlii. 1–6). Odemisch, near Hypæpa (Lydia) (S. Reinach, "Les Juifs d'Hypaepa," *ib.* 1885, x. 74–78). Phocæa (S. Reinach, "Une Nouvelle Synagogue Juive à Phocée," in "R. E. J." 1886, xii. 236–243). Smyrna ("C. I. G." iv. 585, No. 9897; S. Reinach, "Inscription Grecque de Smyrne: la Juive Rufina," in "R. E. J." 1883, vii. 161–166).

Syria: The following list is very incomplete. Other inscriptions will be found in various volumes of the "Revue Biblique"; "Pal. Explor. Fund, Quarterly Statement"; "Echos d'Orient"; and "Z. D. P. V." Arsuf (Germer-Durand, in "Revue Biblique," 1892, i. 247–248, No. x. Beirut (Berytus) (Renan, "Mission de Phénicie," p. 348, Paris, 1864; Germer-Durand, *l.c.* 1894, iii. 251–252). Byblus (Renan, *l.c.* pp. 187, 856). Cæsarea (Germer-Durand, *l.c.* 1892, i. 246–247, No. ix.). Emmaus (Clermont-Ganneau, in "Revue Critique," 1883, xv. 145; Germer-Durand, *l.c.* 1894, iii. 253–254). Gaza (T. Loeb, "Chandeliers à Sept Branches," in "R. E. J." 1889, xix. 100–105). Gezer: Bilingual boundary-stones, Greek and Hebrew (Clermont-Ganneau, "Pal. Explor. Fund, Quarterly Statement," 1899, pp. 118–127). Jaffa (Clermont-Ganneau, in "Revue Critique," 1883, xv. 142–143; *idem*, in "Pal. Explor. Fund, Quarterly Statement," 1900, pp. 110–123; J. Euting, "Epigraphische Miscellen," in "Sitzungsberichte der Akademie der Wissenschaften zu Berlin," 1885, pp. 669–688, and plates vi.–xii.; Clermont-Ganneau, "Une Epitaphe Judéo-Grecque de Jaffa," in "Revue Archéologique," 1878, xxxvi. 312–316). Jerusalem: Important stela of the Temple (Clermont-Ganneau, "Une Stèle de Jérusalem," in "Revue Archéologique," 1872, xxiii. 214–234, 290–296); numerous stone caskets ("ossuaires") with graffiti (names) in Greek or in Hebrew (*idem*, "Nouveaux Ossuaires Juifs avec Inscriptions Grecques et Hébraïques," *ib.* 1873, xxv. 398–414; *idem*, "Ossuaire Juif Provenant d'Alexandrie," *ib.* 1873, xxvi. 302–305; *idem*, "Ossuaire Juif de Joseph Fils de Jean," *ib.* 1878, xxxv. 305–311; *idem*, "Epigraphes Hébraïques et Grecques sur des Ossuaires Juifs Inédits," *ib.* 1883, i. 257–276, and plate ix.; F. Hugues Vincent, "Nouveaux Ossuaires Juifs," in "Revue Biblique," 1902, xi. 103–107. Doubtful fragment: Germer-Durand, in "Revue Biblique," 1892, i. 581, No. 41). Lydda: Sarcophagus (Clermont-Ganneau, in "Revue Critique," 1883, xv. 145). Sepphoris (H. Lammens, in "Musée Belge," 1902, vi. 55–56, No. 112). Ṭafas: Dedication of a synagogue (C. Fossey, in "Bulletin de Correspondance Hellénique," 1897, xxi. 47). Wadi-Yasul (Euting, *l.c.*).

Egypt: Alexandria: Jewish catacombs (Nerontsos, in "Bulletin de l'Institut Egyptien," 1875, xiv. 78; *idem*, "L'Ancienne Alexandrie," pp. 82–84, Paris, 1886); Greek inscribed pedestal (Botti, in "Rivista Quindicinale," 1892, iv. 130); various (S. de Ricci, in "Archiv für Papyrusforschung," 1903, ii. 29-30; Strack, *ib.* pp. 541–542, No. 15; p. 559, No. 41; "C. I. L." iii. 1202, No. 6583; T. Reinach, "Sur la Date de la Colonie Juive d'Alexandrie," in "R. E. J." 1902, xlv. 161–164; Clermont-Ganneau, in "Revue Critique," 1883, xv. 142, note; C. Smith, in "Journal of Hellenic Studies," 1883, iv. 159). Antinoupolis (S. de Ricci, in "Annales du Musée Guimet," 1903, xxx., part 3, p. 142, No. 8). Athribis: Three inscriptions (S. Reinach, "La Communauté Juive d'Athribis," in "R. E. J." 1888, xvii. 235–238). Berenice (Franz, "C. I. G." iii. 557–559, No. 5361; E. Roschach, "Musée de Toulouse, Catalogue des Antiquités et des Objets d'Art," pp. 97–101, Toulouse, 1865). Contra Apollonos: Two Greek graffiti ("C. I. G." iii. 400, No. 4838c; comp. p. 1217). Fayum (Lefebvre, in "Bulletin de Correspondance Hellénique," 1902, xxvi. 454, No. 16). Heliopolis: Remarkable honorary decree (T. Reinach, "Un Préfet Juif il y a Deux Mille Ans," in "R. E. J." 1900, xl. 50–54). Onion: Curious fragment (A. H. Sayce, in "Recueil de Travaux," 1887, viii. 6); numerous Greek tombstones (E. Naville, "The Mound of the Jew and the City of Onias," in "Seventh Memoir of the Egypt Exploration Fund," London, 1890).

To the foregoing list of articles on Jewish inscriptions proper might be added a list of pagan inscriptions relating to the Jewish wars of Vespasian and Hadrian; but as the number of such inscriptions might be indefinitely increased according to the more or less comprehensive plan adopted, it seems preferable to give here only a list of articles in which such inscriptions are discussed and explained: Leon Renier, "Mémoire sur les Officiers Qui Assistèrent au Conseil de Guerre Tenu par Titus Avant de Livrer l'Assaut au Temple de Jérusalem," in "Mémoires de l'Académie des Inscriptions," 1867, xxvi., part i.; Arsène Darmesteter, "Notes Epigraphiques Touchant Quelques Points de l'Histoire des Juifs sous l'Empire Romain," in "R. E. J." 1880, i. 32-55 (discusses 15 inscriptions); S. Reinach, "Inscription Relative à la Guerre de Judée," *ib.* 1888, xvii. 299-300; R. Cagnat, "L'Armée Romaine au Siège de Jérusalem," *ib.* 1891, xxiv., xxxi.-lviii.; J. Offord, "Roman Inscriptions Relating to Hadrian's Jewish War," in "Proc. Soc. Bibl. Arch." 1898, xx. 59-69; *idem*, "Inscriptions Relating to the Jewish War of Vespasian and Titus," *ib.* 1902, xxiv. 325-328.

Principal Kinds of Inscriptions: The great bulk of Greek and Latin Jewish inscriptions are on tombstones; texts not of this character are quite the exception. The following epigraphical types are represented:

(1) Dedications. Actual ex-votos are perhaps not to be found, the known votive inscriptions having all apparently formed part of a building or monument dedicated by the author of the inscription. Most of them refer to synagogues or parts of synagogues built or repaired. Several are inserted in mosaic in pavements. (2) Honorific decrees, similar to pagan ones. (3) Manumissions (three interesting specimens from the Crimea). (4) Tombstones (some are in Greek verse). (5) Small texts (a few specimens of rings, seals, and plaster jar-stoppings).

Characteristic Formulas: It may be asked by what signs a Jewish inscription may be distinguished from a pagan or a Christian one. Is there any absolute criterion which may be taken as a sure indication of the Jewish religion? The surest sign of all is the favorite Jewish emblem, the seven-branched candlestick, which occurs repeatedly on every possible class of Jewish monuments—lamps, seals, tombstones, sarcophagi, frescoes, etc. In spite of many assertions to the contrary, there is not a single representation extant of the Jewish candlestick on a purely Christian lamp or monument.

Among characteristic words, the clearest of all are the epithets Ιουδαιος, "Iudæus," Εβρεος, and "Hebreus." The first of these is exceedingly frequent on tombstones, especially in Africa and in the valley of the Danube. The second is in many cases the designation not of the Jewish religion, but of a particular synagogue. There are also a few religious qualificatives which may be taken as probable signs of Judaism. The most frequent is "metuens" (comp. a remarkable inscription ["C. I. L." v. 88] "matri pientissimae religioni Iudeicae metuenti"), the Jewish character of which is quite unmistakable. Others, such as οσιος or δικαιος, are of rarer occurrence; some, such as θεοσεβης, occur in Christian inscriptions also. The question whether the frequent references to Θεος υψιστος in inscriptions all refer to the God of the Jews is too intricate to be examined here. The foregoing lists do not contain such inscriptions. A good criterion, but one to be used with caution, is the occurrence of proper names exclusively or more particularly Jewish, the principal of which are: Αστεριος, Αστερια, Αββας, Ελεαζαρος, Ζαβουττα, Ζωναθα, "Ionata," Ιασων, Ιακωβ, Ιοκαθινος, Ιουδας, Ιωσης, Ιωσηπος, Ιωσηφ, "Gesua," Σαβατιος, Σαβατια, Σαββατις, Σεμωηλ, Σιμον, Σολομων, and Τουβιας Βαρζααρωνα. Another distinct sign of Judaism would be the mention of synagogues (a προσευχη is apparently always a Jewish synagogue), if the existence of pagan associations called "synagogues" were not a well-established fact. It is, however, in most cases possible to distinguish pagan synagogues from Jewish ones. The following nine Jewish synagogues, all in Rome (?), are mentioned in Jewish inscriptions, chiefly from Rome: συναγωγης Αγριππησιων; συναγωγης Αυγοστησιων, συναγωγης των Αυγουστησιων, συνα[γωγης] Αυγουστη[σιων], "ton Augustesion"; συναγωγης Αιβρεων, [συν]αγωγη Εβρ[εων], των Εβρεων; συνα[γωγ]ης Ελεας, συναγωγης Ελαιας; [συνα]γωγης [των] Ηροδιων (?); συναγωγης Καλκαρησιων, συναγωγης των Καρκαρησιων; συναγωγης Καμπησιων (two inscriptions), "Synagogarum Campi et Bolumni"; Σιβουρησιων, Σ[ιβο]υρησιων.

Finally, certain inscriptions are often considered to relate to Jews because of the Jewish titles, civil or religious, which they contain. The following is a rough list of such titles (chiefly from Rome): αρχων; ιερευς αρχων; μελλαρχων; προαρχων; γραμματευς; μελλογραμματευς; γερουσιαρχης (at Venosa, γερουσιαρχων); πρεσβυτερος; διαβιου, ζαβιου, "iabin"; μαθετης σοφων και πατηρ συναγωγων, πατηρ συναγωγης, μητηρ συναγωγης, "mater synagogarum" (at Venosa, "pater" and "pateressa"); αρχισυναγωγος (note a ταφος Καλιστου νηπιου αρχισυναγωγου ετων γ at Venosa, remarkable because of the youth of the bearer of such a title; note also "arconti et archisynagogo honoribus omnibus fu[n]ctus"); προστατης; διδασκαλος; νομωδιδασκαλος; πατηρ λαου; νομομαθης; επιστατης; φροντιστης; υπηρετης; αρχιατρος; "rebbi"; "proselyta"; and at Venosa, "apostulus" and "maiures cibitatis."

Formulas.

There are few if any formulas peculiar to Jewish inscriptions: as a general rule the latter are, according to their date, written in the same terms as the pagan or Christian inscriptions of the town or country in which they are found. On tombstones the final acclamation εν ειρηνη [η sometimes added here] κοιμησις σου [or υμων or αυτου, αυτης, αυτων] (Latin: "en irene quimesis su"; "en irene ae cymesis su"; "en hire[n]e e cymesis autoes"; "iren. cubis. aut.") is rarely, if ever, found on Christian monuments, while it is exceedingly frequent on Jewish tombstones. It is a lengthy equivalent of the Hebrew acclamation "Shalom!" Other final acclamations are mere variants on a similar theme: "dormitio tua in bono," "dormi tuaua i bonis"; "dormitio tua inter dicaeis"; μετα των δικεων η κυμησις αυτου, καλως κοιμου μετα των δικεων, [μετ]α των δικαιων η κοιμησις σου. On the other hand, acclamations such as Θαρσι Σαμωηλ ουδις αθανατος, θαρι αβλαβε νεωτερε ουδις αθανατος are far more frequent on pagan and Christian tombstones than on Jewish ones.

The ordinary initial formula in Italy is the well-known ενθαδε κειται (at Venosa, ωδε κειται and ταφος N.). A certain number of exceptional formulas, some very elaborate, are given among the specimens of inscriptions in the list below. The initial formula ευλογια, ευλογια πασιν is distinctively Jewish. The following texts include a good selection of eulogistic or affectionate phrases, to which may be added such expressions as "benemerentis et sic non merenti"; κοζουγει βουαι ετ δισκειπουλιναι βουαι; "fratri et concresconio et conlaboronio meo"; βρεφος αγαπητον; "omniorum amicus"; φιλολαος φιλεντολος; καλως βιωσας; καλως αντιζωσας βιον κοινον; πασης τειμης.

Typical Examples of Jewish Inscriptions:

Inscriptions on Public Monuments.

Acmonia: Τον κατασκευασθε[ντ]α οικον υπ[ο] Ιουλιας Σεουηρας Γ(αιος) Τυρρανιος Κλαδος ο διαβιου αρχι[συν]αγωγος και Λουκιος Λουκ[. . .] και Ποπιλιος [. . . κατεσ]κευασαν εκ τ[ων ιδιων . . .] καταθεμενω[ν και εδειμαν(?) τους τοι]χους και την ορο[φην και] εποιησαν την των θυριδων ασφαλειαν και τον λυπον παντα κοσμον ουστινας κ[αι] η συναγωγη [ε]τειμησεν οπλω επιχρυσω δια τε την εναρετον αυτων . . . ωσιν και την π[ρ]ος την συναγωγην ευνοιαν καισπουδην. Ægina ("C. I. P." 190): Θεοδωρου νεω(τε)ρ(ου) φροντιζοντ(ος) [εκ της πρ]οσοδον της συναγ(ωγης) εμουσωθη · ευλογια πασιν [τοις εισ]ερχ[ο]μενοις. Tombstones: Arnaut-keui: Ενθαδε κατακητε Σανβατις υιος Γερωντηου πρ(εσβυτερου) γραμματευς κ(αι) αιπηστατις τον παλεων ηριvη. Athens ("C. I. G." 9313): Κοιμητηριον Ευτυχιας της μητρος Αθηνεου κε Θεουκτιστου. Auch: "In Dei Nomine s[an]cti Peleger qui ic Bennid D(eu)s esto cum ipso, ocoli inuidiosi crepen[t] de D[e]i donum Iona fecet שלום." Beirut (Berytus): Τοπος διαφερων Σαμουηλου σιρικαριου Κανδεδας υιος και Δεβωρας δ. Cæsarea: Μημοριον διαφερων Μαριας κ(αι) Λαζαρου. Carthage ("C. I. L." viii. 1091 = 14,230): "Uictorinus cesquet in pace et irene." Dertosa (Tortosa) (Hübner, "Inscr. Hisp. Christ." No. 186): שלום על ישראל הקבר הזה של חלליושא בת יהודה ולקירא מרים זכותה תהי לברכה נשמהה לחיי העולם הבא נפשה בצרור ההיים אמן שלום. "In nomine Domine hic est memoria ubi requiescit benememoria Meliosa filia Iudanti et Cuiramaries uixit an[nos uigi]nti et quattuor cum pace amen." [Εν] ωνω[μα]τη Κ(υριο)υ ωδε εστην μεμνηον ωπου αναπ[αυ]σαν Παμμνη[στος Μελιωσ]α Ιουδαντ[ιου και Κυραμα]ρες ζησ[ασα ετη εικοσι] τεσερα ην [ειρηνη αμην]. Ephesus: Το μνημειον εστι Μαρμουσσιου Ιαιρεος ξη κηδονται οι Ιουδαιοι. Merida (Hübner, *l.c.* note 34): The following reconstruction is from E. Renan's manuscripts: "Sit nomen [D(omi)ni bened(ictum) qui uiuos] uiuif(i)cat et mor[tuos suscitat] pauset in sepulc[ro hoc Simeon fi]lius de Rebbi Se[muel . . . (10 letters)] suporans (read "soporans") in sor[te instorum deposi]tus in ligatorium [aeterni indi]cis aperiti (read -te) porta[s principes uestras] ingrede cum pace m[. . . natus annos] LXIII repletus sa[pientia . . .] praeducens (read -docens) artem i[10 letters?] ego Simeon filius de Rebbi Sa[muel] missam pax[ ]." Naples (?) ("C. I. L." x. 1971): "[Cl]audia Aster [Hi]erosolymitana [ca]ptiua curam egit [Ti(berius) C]laudius Aug(usti) libertus [Ares]cusus, rogo uos fac[er]e per legem ne quis [mi]hi titulum deiciat cu[ra]m agatis; uixit annis XXV." Narbonne: "Ic requiescunt in pace benememori tres fili d(omi)ni Paragori de filio condam d(omi)ni Sapaudi id est Iustus Matrona et Dulciorella qui uixserunt Iustus annos XXX, Matrona ann(o)s XX, Dulciorela annos VIIII שלום על [י]שראל obuerunr [read "obierunt"] anno secundo d(o)m(in)i Egicani regis."

At Rome.

Rome, Via Portuensis: (1) Λοκου Βεσουλες ανουρο ρεκεσητ κε. (2) "Locus Bellulae quiescet in pace." (3) "Hoc nomen Telesini." (4) "Ueritas amor et anestase tituios." *Ib.*, Vigna Randanini: (1) "Hic posita Eparchia theosebes que [u]ixit annos LV d(ies) VI dormitio tua in bono." (2) "Iulia Afrodisia Aur(elio) Hermiati coingi benemerenti fecit et rogat uti loc(us) ei reseruetur ut cum coinge suo ponatur quam donec." (3) Ζωτικος αρχων ενταδε κειμε καλως βειωσας πα[ντ]ων φ[ιλ]ος και γνοσιος [π]ασι [ευ]πρ[επι]α ανδριαι ωνησι [μετ]α των δικαιων η κοιμησις σου. (4) Θαρσι Ιουλια Εμιλ[ια] ια ετων καλως εξησας μετα του ανδρος σου ευχαριστω τη προνοια και τη ψυχη σου. Other inscriptions in Rome are: "Beturia Paulla(e) f(ilia) domi heterne quostituta, que bixit an(nos) LXXXVI meses VI, proselyta an(nos) XVI nominae Sara, mater synagogarum Campi et Bolumni; eu irenae au cymisis autis" ("C. I. L." vi. 29,756). "Iul[iae] Irene aristae h[ono]r Dei uirtute[m] et Fidem sa[lua]tionis conseruatae, iuste legem colenti, Atronius Aeusebius u(ir) [c(larissimus)] filius pro debit[o] obseq[uio u(ixit) a(nnos)] XLI" (*ib.* 29,758).

Syracuse: (1) Κατα του μελλητεικου μηδις ανοιξη ωδε οτει Νοφειος κε Νυφη κειτε · ευλογια τοις οσιοις ωδε. (2) Ειρηνα Νυμφη ωδε κειται κατα του μυστηριου ουντουτου μητις ωδε ανυξη. Tegea: Σαμουηλ πρεσβ(υτερος) · δοτε δοξαν τω Θεω · μη τις τορμησι ανυξε την σορον μου πλεον της γενισεος μου επι ινε αυτοι υπο τον ορον. Venosa: "Absida ubi cesquit Faustinus Pater" ("C. I. L." ix. 647). "Hic ciscued Faustina filia Faustina filia Faustini pat[ris] annorum quattuor deci mēnsurum quinque, que fuet unica parenturum; quei dixerunt trēnus duo apostuli et duo rebbites et satis grande dolurem fecet parentebus et lagremas cibitati מצבה של פוישטינא מנוחהב שלום que fuet pronepus Faustini pat(ris) nepus Biti et Aseni qui fuerunt maiures cibitatis" (*ib.* 648).

T. S. de R.

——**Hebrew:** Owing to the fact that no authentic Hebrew documents of a literary, economic, or legal nature can be assigned to an earlier date than the ninth century B.C., information concerning the various stages in the development of the Hebrew script can be obtained only through a study of the old Hebrew inscriptions. The script used by the Hebrews in the pre-exilic times was that adopted later by the Samaritans; this script, like all the systems of letters now in use, was derived from the Phenician. The oldest document in this script is the Moabite Stone (see Alphabet; Moabite Stone), discovered in 1868 by the Alsatian missionary Klein, near Dibon, in the land of Moab. It dates from Mesha, King of Moab (mentioned in II Kings iii. 4), who describes the victories gained by him over Israel. With slight variations, the language of the inscription is Hebrew, and the form of its letters is

The Moabite Stone.

essentially cursive. Of a much later date, perhaps from the time of Hezekiah, is the inscription discovered in 1888 in the Siloam tunnel, and relating an episode in the construction of the conduit (see Alphabet). Its script betrays a marked preference for curved lines, frequently terminating in short strokes or flourishes. Besides this monument there exist from pre-exilic times only some very short inscriptions engraved on Seals.

Not long after the return of the Hebrews from the Babylonian Exile, the old Hebrew script was superseded in secular writings by the Aramaic, from which, by gradual changes and transformations, developed the square characters, which do not greatly differ from the present ones. The only specimens of the old Hebrew script from post-exilic times are those engraved on coins (see Numismatics), and several unimportant inscriptions from the fourth and fifth centuries of the common era. The oldest Hebrew monument inscribed in other characters than those of the old Hebrew script is that discovered in a cavern at ‘Araḳ al-Amir. It consists of a single word, the reading of which is, according to some, ערביה, and, according to others, טוביה. As the cavern is generally identified with the one which, according to Josephus ("Ant." xii. 4, § 11), was excavated by Hyrcanus, son of Joseph the tax-farmer, the inscription can not antedate the year 183 B.C. The characteristic feature of its writing is the mingling of various types of letters: the ע has the old Semitic form; the ב, ה, and י are similar to the Aramaic characters of the Persian period; while the י has the form used at a much later date. Paleographically interesting is the inscription found by De Saulcy on the architrave of a tomb in the valley of Jehoshaphat. It is the epitaph of eight members of the sacerdotal family of the Bene Ḥezir, mentioned in I Chron. xxiv. 15. With the exception of ג, ט, צ, and ת the inscription contains all the letters of the alphabet in the form and shape as they continued to be in use, with more or less essential modifications, until about the ninth century. The א has already the specifically Hebrew form; the strokes and curves of the ב, כ, ד, and ר are turned upward instead of being on the left side as in the Aramaic; the י has the shape of a hook; while the ס has an angular form. The inscription of the Bene Ḥezir is believed to date from the first century B.C.

Tomb of the Bene Ḥezir.

From about the same period date the ossuaries or stone sarcophagi which are found in great numbers in Palestine. However uninteresting their details may be, they are of great value for the study of the development of the square characters. In them is noticeable the attempt to give to the letters such forms as would admit of a whole word being written with the minimum number of breaks, each letter being gradually made to approach as near as possible the following one. Thus the perpendicular lines which originally formed part of the letters ץ, ף, ן, and ך were bent toward the left; but when one of these letters stood at the end of a word it retained its original downward stroke.

To the inscriptions dating from the second half of the first century of the common era probably belong the following: the two-lined inscription discovered on the Mount of Olives, of which only a few letters can be identified with certainty; that found in the subterranean canal which served as an outlet for the waters used in the Temple; the boundary-stones discovered by Clermont-Ganneau, among which is one indicating the municipal limits of the city of Gezer beyond which no one was allowed to pass on Sabbath; the short legend צדה מלכתא, written both in Syriac and in Hebrew, on a sarcophagus belonging, according to Renan, to a princess of Adiabene. All these inscriptions, in spite of the insignificance of their contents, are very interesting for the study of the Hebrew paleography. Several fragmentary inscriptions found in Jerusalem and vicinity may be assigned to the first centuries of the common era. Especially interesting is the two-lined inscription found in a synagogue at Kafr Bir‘im in Galilee, northwest of Safed, which reads as follows: יהי שלום במקום הזה ובכל מקומות ישראל יוסי הלוי בן לוי עשה השקוף הזה תבא ברכה במעיוש ("May peace abide within this place [synagogue ?] and in all places [synagogues ?] of Israel! Jose ha-Levi, son of Levi, erected this lintel; blessing attend his works [?]"). Here some letters occur several times in various shapes. The left line of the "alef" is perpendicular instead of being bent to the left as in the earlier inscriptions. The ב is distinguished from the כ by an upward stroke. The left line of the ה sometimes is fastened to the upper cross-bar, and sometimes it is separated. The ן is distinguished from the י by its length; the ז has a little stroke on the right. Two small strokes, one upward and the other downward, distinguish the ב from the כ, which has only one downward stroke. The ס has the shape of a triangle; the stem of the ק is joined to the horizontal line, and the middle stroke of the ש is oblique. To a somewhat later date seems to belong another inscription found in Kafr Bir‘im; this record contains only a proper name, and is written in more cursive characters. From about the beginning of the sixth century dates the inscription engraved on the monolith in the caves of the Al-Aḳṣa mosque. It contains the names of a married couple of Sicily, Jonah and his wife Shabbataya.

Galilean Synagogues.

The oldest inscriptions that have been discovered outside of Palestine are the short legends daubed with red lead on the walls of the catacombs of Venosa. They belong probably to the period between the second and fifth centuries, and present the oldest examples of cursive script. Longer texts in cursive characters are furnished by the clay bowls discovered by Layard in Babylonia and bearing exorcisms against magical influences and evil spirits. They date from the seventh or eighth century, and some of the letters are written in a form that is very antiquated. Of about the same date are the papyri discovered at Fayum, which contain hymns and prayers. They have been described and explained by Steinschneider (in Stade's "Zeitschrift," 1879; Berliner's "Magazin," 1880).

All the Hebrew inscriptions that have been found in Europe are on gravestones. Of these the oldest are those of Italy, some of which are believed to be-

In Southern Italy.

long to the fifth or sixth century. They have been described and explained by A. G. Ascoli in his "Iscrizione Inedite o Mal Note Greche, Latine, Ebraiche in Antichi Sepolcri Giudaici del Napolitano" (Turin and Rome, 1880). The following inscription discovered at Brindisi and bearing date of 832 will serve as a specimen of the style and eulogies employed:

פה שכ[ב]ת לאה בת יפה מזל שתהא נפשה בצרור
החיים שהיא נפטרת משהרב בית המקדש עד מותה
שבע מאות וששים וארבעה שנה וימי חייה היו שבע
עשר שנה והקב״ה יזכה אותה להקים נפשה עם הצדקת
ותבוא שלום ותנוח על מנוחתה שומרי גנזי גן עדן פתחו
לה שער[י] גן עדן ותבוא לאה לגן עדן פיתחו לה שערי
גן עדן מהמדים בימינה וממתקים בישמואלה זאת
תענה ותאמר לה זה דודי וזה רעי.

"Here lies Lea, daughter of Yefeh Mazal [may her soul be in the bundle of life!] who died in the year seven hundred and sixty-four from the destruction of the Temple, at the age of seventeen. May the Holy [blessed be He!] grant that she be resurrected with the pious [women], and may she enter into peace and repose in her resting-place. Guardians of the treasures of the Garden of Eden! Open for her the gates of the Garden of Eden that she may enter the Garden of Eden. Open for her the gates of the Garden of Eden [that she may have] delightful things to her right and sweet things to her left. This Thou shouldst answer and tell her: 'This is my beloved, my companion.'"

In France and Spain.

The oldest epitaph discovered in France is at Narbonne and dates from 688. It is written in Latin, but contains the Hebrew eulogy שלום על ישראל (T. Reinach, in "R. E. J." xix. 75-83; Schwab, "Rapport sur les Inscriptions Hébraïques en France," p. 147). Not much less ancient is an epitaph at Vienne, Dauphiné, which contains the name of a certain Samuel ben Justus (יושתו). Of a later date is the epitaph, found at Arles, of a certain Meïr. To the thirteenth and fourteenth centuries belong the epitaphs found at Mantes, Senneville, Orléans, and other localities ("R. E. J." xvii. 150, xxii. 294). They are all written in the same style; the preferred expression for "died" seems to have been נפטר לגן עדן ("He departed for paradise"). About ten small inscriptions are engraved on the walls of the Tour Blanche, Issourdin. They are believed to belong to the time of Philip the Fair and to have been executed by the Jewish prisoners who had been confined by that monarch in order to extort money from them (*ib.* xx. 283).

An interesting epitaph is that written in Greek, Latin, and Hebrew which has been discovered at Tortosa. It reads as follows:

שלום ע[ל יש]ראל
הקבר הזה של [מ]לליוש[א] בת
יהודה ולקורה(?) מר[ים זכרונ]ה
לברכה נישמתה לחיי עולם ו[ת]ה[י]
נפשה בצרור החיי[ם] אמן
שלום

"Peace on Israel! This tomb is that of Meliosa, daughter of Judah and of Mrs. (?) Miriam; may her memory be blessed! May her spirit [that of Meliosa] pass to eternal life, and her soul remain in the bundle of living! Amen! Peace!"

The epigraphists are divided as to the approximate date of this inscription. According to some it belongs to the sixth century, it being held that after that time Greek was no longer used by the Jews of Spain; while others assign it to a much later date because of its relatively modern forms of eulogies. To the ninth century belongs the epitaph found at Calatayud (Fidel Fita, in "Boletin Acad. Hist." xii. 17; Isidore Loeb, in "R. E. J." xvi. 273), and probably also that of Coruña (Isidore Loeb, *ib.* vi. 118).

The following dated inscription was found at Leon:

זה הקב[ר] ל . . .
סו׳ יוסף בן עזיז הצורף נ[פטר?]
בן חמש וששים שנה באח[ד]
בשבת חמשה עשר יום ליר
לירח כסליו שנת שמונה
מאות וששים ואחד למנין
ליון מתא הקבה יזכהו
ויסלח עוניו ויכפר חט
חטאתיו וירחמהוויעד
ויעמדהו לגורלו לקץ הימין
ויחייהו לחיי העולם הבא

"This tomb is that of R. Joseph, son of 'Aziz, the goldsmith, who died at the age of sixty-five, on Sunday, the 15th of the month Kislew, in the year eight hundred sixty-one according to the computation of the city of Leon [1100 C.E.]. May the Holy [blessed be He!] grant him favor, forgive him his sins, pass over his failures, have pity on him, make him stand in his lot at the end of the days [allusion to Dan. xii. 13] and resuscitate him for the life of the future world" (see Soave in "Bulletino Italiano degli Studii Orientali," 1877, No. 24).

The epitaphs of the cemetery of Toledo have been described by Joseph Almanzi in a work entitled "Abne Zikkaron" (Prague, 1841). The oldest of them is that of Joseph ben Solomon ibn Shoshan, which dates from 1205.

In Germany and Holland.

Fourteen Alsatian inscriptions, among which are several dedications of synagogues, have been examined paleographically by J. Euting (in "Festschrift zur Feier des 350Jährigen Bestehens des Protestantischen Gymnasiums," pp. 227-246, Strasburg, 1888). The oldest of them dates from the twelfth century; the most modern, from 1391. The oldest epitaphs found in Germany are those of Worms. Of these, sixty have been described by L. Lewyson in his "Nafshot ha-Ẓaddiḳim" (Frankfort-on-the-Main," 1855). The most ancient of them dates from 905. Among other German epitaphs which have been published are those of Erfurt (Philip Kroner, in "Monatsschrift," xxxiii. 349; *idem*, "Geschichte der Juden in Erfurt"); Coblenz and Cologne (Gildemeister, in "Jahrbücher des Vereins von Alterthumsfreunde ins Rheinlande," l., lii.; the dates given there are certainly wrong; the epitaphs are much more modern); Frankfort-on-the-Main (M. Horovitz, "Die Inschriften des Alten Friedhofes der Israelitischen Gemeinde zu Frankfurt," 1901); and Berlin (Landshuth, "Sefer ha-Ḥayyim," Berlin, 1867). Among the epitaphs found in Austria which have been published are those of Vienna (Frankl, "Inschriften des Alten Jüdischen Friedhofes in Wien," 1855); Prague (Foges, "Alterthümer der Prager Josefstadt," i. 855, Prague; Lieben, "Gal 'Ed," with an introduction by S. Rapoport, Prague, 1856); and Lemberg (Gabriel ben Naphtali, "Maẓebet Ḳodesh," Lemberg, 1860-69).

Of the epitaphs found in Holland, the oldest dates from 1614, in which year the first Dutch cemetery was dedicated. It is in verse and has this particularity that the words are put into the mouth of the dead. It reads as follows:

בה
תחת העפר התפלשתי
בזער ימים עולם נטשתי
חנוכת בית החיים עשיתי
שעד לפק עדן הלכתי
יוסף שמי אשר עזבתי
בן לדוד שניאור כשתי
בזאת קבר קבבו
אתי
חדש אייר יומו
שני

"In this place I rolled myself in dust. After a short life I quitted the world and dedicated the cemetery. In the year 374 (1614) I departed for the Eden. My name which I abandoned was Joseph, son of David Senior—his name is my glory! In this tomb I was interred the second day of the month of Iyyar."

Many old Holland epitaphs have been published by De Castro and in various Dutch periodicals.

A discussion which greatly promoted the study of Hebrew paleography was that concerning the epitaphs of the Crimea published by Abraham Firkovich under the title "Abne Zikkaron" (Wilna, 1872). Chwolson (in "Mémoires de l'Académie de St.-Pétersbourg," ix. 1866) defended the dates given by Firkovich, and assigned some of these texts to the time of Jesus, while Harkavy ("Altjüdische Denkmäler aus der Krim," 1876) endeavored to demonstrate that the dates had been forged and that all the texts belonged to the thirteenth century.

In Russia and Africa.

Among other Russian epitaphs the most noteworthy are those of Wilna, published by Fuenn in his "Ḳiryah Ne'emanah" (Wilna, 1860). Eighty-eight epitaphs, ranging from 1083 to 1553, from various European countries were published under the title "Gal Abanim" by Aaron Luzzatto (Triest, 1851).

With the exception of the ossuaries of Alexandria, which date from the first centuries of the common era, very few ancient epitaphs have been found in Africa. The oldest one known seems to be that of Volubilis, which has been published by Philippe Berger, who assigns it to one of the early centuries of the common era ("Rapport sur une Inscription Punique Trouvée à Linus et sur une Inscription Juive Ancienne de Volubilis," Paris, 1892). A collection of Algerian epitaphs, ranging from the fifteenth century to the end of the eighteenth, was published by I. Bloch ("Les Inscriptions Tumulaires des Cimetières d'Alger," Paris, 1892).

The British Museum possesses five epitaphs from an old cemetery of Aden. Among these is one which was published by Jacob Safir in "Ha-Lebanon" (iii.) and which bears date of the year 29 of the Seleucid era (283 B.C.). As this date is absolutely impossible, there can be no doubt that the sign denoting "thousand" was omitted by the lapidary; accordingly, if the remainder of the date is correct, the epitaph would be of the year 717 of the common era; but considering the modernity of the style and of the formulas employed, even this latter date is considered by some scholars to be altogether too early. For the various forms of eulogies see INVOCATION. See, also, MANUSCRIPTS.

J. I. BR.

PALERMO (פלירמו): Capital of the island of Sicily; situated on the northern coast. Its Jewish community dates from the Roman period. Under Gregory the Great (d. 604), when it is first mentioned, it is already in possession of a synagogue and a hospital with garden. When the Bishop of Palermo forcibly took possession of these and turned the synagogue into a church, the Jews, with the aid of the community at Rome, obtained from the pope the concession that the bishop should be obliged to make full reparation. The synagogue was not restored, however, because it had already been dedicated as a church. The supremacy of the Roman bishop over the city ended in 831, when it came under the dominion of the Arabs, who treated the Jews justly.

The community grew rapidly, captive Jews from Syracuse being brought to the city in 878 and often later; the parents of Shabbethai Donnolo came in

Under the Normans.

this way to Palermo in 925. Frequently captives were redeemed; but others continued to live in the city. During the Norman dominion (Palermo being the capital after 1072) the Jews were brought again under the supremacy and jurisdiction of the Church; and they had much to endure, as the ecclesiastical authorities worked either for their conversion or for their destruction. In the year 1220 about 200 Jews are said to have been converted, probably as the result of a severe persecution. Emperor Frederick II. indeed proclaimed equality of rights for all his subjects, Jews as well as Christians; but his successors allowed the ecclesiastical jurisdiction to have full sway again, and, furthermore, placed the Jews under special laws. Thus King Frederick II. ordained (July 23, 1312) that Jews must live outside the city wall in a ghetto; and although they were soon afterward allowed to come into the city, they were still compelled to live in one quarter.

Privileges in the Fifteenth Century.

Palermo remained under clerical jurisdiction even when other cities were freed from it in 1333; and the bishops at times had the presidents of the Jewish community arrested and scourged. On the other hand, the privilege was granted to the Jews of wearing only a small, almost invisible badge; and in 1471 even this requirement was practically dispensed with. From Martin V. and Alfonso V. (1416-56) the Jews of Sicily obtained a confirmation of old bulls which granted them religious freedom and which forbade compulsory baptism. To the large sums which were necessary to secure this confirmation Palermo contributed liberally, giving more than any other Sicilian community. In 1449 Capistrano preached his inflammatory sermons against the Jews; but in 1450 they obtained very favorable concessions, being allowed to practise medicine among Christians and to live outside the ghetto. In 1452 they were placed under secular jurisdiction. In the disputes about municipal taxes and rights in 1453 and 1471 the Jews were supported by the king. When, in 1491, immigrant Jews from the Provence were to be sold as slaves, the Jews of Palermo were able to avert the catastrophe. Nevertheless in the following year an order was issued banishing all Jews from Sicily (an attempt at emigration to Palestine in 1455 had been frustrated); and although a deputation of the citizens of Palermo protested energetically, pointing out the advantages derived by the country from the presence of the Jews, the latter were compelled to leave the land.

The number of Jews, already considerable in 600, had increased at the time of Benjamin of Tudela's visit, about 1170, to 1,500; in 1453 the Jews claimed to form one-tenth of the whole population; and at their banishment in 1492, according to the protest made by the city their number was reckoned at 5,000. From the expulsion until 1861 no Jews lived in Palermo; and at present (1904) they do not number more than 50, and do not form a community.

Palermo the Chief Sicilian Community.

The Jews lived originally in the old city, in the Cassero (now the Corso Vittore Emanuele). King Frederick II. ordered the location of their ghetto near the town hall and the Augustine monastery of S. Nicolo Tolentino. As stated above, the community owned a synagogue from very early times. The later so-called Meshita court contained a synagogue, a hospital, and forty-four dwellings. The community of Palermo was not only the largest and most influential on the island, but it held a special rank through the fact that Martin V. in 1392 declared it chief of all the Sicilian communities; and in 1405 he established there the supreme court, which appointed judges and administrative officials ("proti") for the individual communities, and decided questions as a final court of appeal. Joseph Abbanasia was the first supreme judge, administering his office jointly with four substitutes. After his death the court was transferred to Messina; and in 1447, in consequence of disputes as to its meeting-place, it was altogether abolished. The viceroy in Palermo then wished to interfere in the election of the "proti"; but his measures were frustrated in 1490.

In addition to the taxes paid by the Jews of Palermo in common with the other Jews of Sicily, special taxes were imposed on them on occasions of births, marriages, etc. The city also taxed the Jews excessively.

The following scholars of Palermo are known: David Ahitub (1286), to whom Solomon of Barcelona addressed a polemic against Abraham Abulafia; Isaac b. Solomon Aldahav (*c.* 1380), author of astronomical tables; Joseph Abbanasia and his substitutes Farina, Moses Gauxü, Moses and Samuel Thetibi (1406), Gaudio, rabbi of Sacerdotu, and Samuel Cuxino (1424), the two last-named being physicians, as well as Moses Krinos.

G. I. E.

The Name.

PALESTINE: The portion of Syria which was formerly the possession of the Israelites. It includes the whole of the country between the River Jordan and the Mediterranean as well as the country immediately to the east of the Jordan. The word represents the Greek form, *Παλαιστίνη*, of the Hebrew פלשת (Ex. xv. 14; Isa. xiv. 29, 31; Ps. lx. 10 [A. V. 8]), although in the Old Testament פלשת is applied only to the land of the Pelishtim (פלשתים), or Philistines, and hence denotes merely the coast district south of Phenicia. It was the Greeks who began to denote the inland country as well by this term; such an application, by a foreign people, of the name of the coast to the interior is no rare phenomenon. As early as Herodotus, who is followed by other classical writers, as Ptolemy and Pliny, the phrase *Συρίη ἡ Παλαιστίνη* denotes both the littoral and the neighboring inland region (Judea and Palestine), as well as the entire interior as far as the Arabian desert. Josephus, however, usually limits the name to the land of the Philistines. In the course of time the term "Palestine" superseded the longer "Palestinian Syria," and it is used with this connotation by Josephus and Philo, while Vespasian officially designated the country as "Palestine" on the coins which he struck after the suppression of the Jewish insurrection in 70 C.E., implying thereby the territory of the Jews. The name is used in this sense by Christian authors beginning with Jerome, as well as by the Jewish writers (פלסטיני), while the Arabic "Filasṭin" is more restricted in meaning, denoting only Judea and Samaria.

Although there was no inclusive name in antiquity for the country of the Israelites and the coast, the designation "Canaan" (כנען) is applied in the Old Testament to Palestine west of the Jordan.

Canaan.

The meaning of the word "Canaan" (on the El-Amarna tablets "Kinakhni" or "Kinakhkhi"; Greek, Χνᾶ) is uncertain, nor is it clear whether it was originally an appellative or not; for the usual explanation, that it means "the lowland," in contrast to "Aram" (the highland), is entirely without basis. Canaan is bounded on the west by the sea, on the east by the Jordan, the Lake of Tiberias, and a line drawn northward from that point (Num. xxxiv. 6, 11). While on the one hand the non-Israelitic plain of Philistia and Phenicia on the coast was included in Canaan, the east-Jordan district, on the other hand, was not Canaanitish, although it was held by the Israelites. The northern and southern boundaries of the region also extended beyond the territory of the Israelites, which reached from Dan in the north to Beer-sheba in the south (Judges xx. 1; II Sam. xxiv. 2, 15; *et al.*). The southern boundary of Canaan, on the contrary, ran from the southern end of the Dead Sea to Kadesh-barnea (the modern 'Ain Ḳadis), and thence to the "river of Egypt" (comp. Ezek. xlvii. 19; Num. xxxiv. 7), which corresponds to the present Wadi al-'Arish, where lay Rhinocorura (the modern Al-'Arish), the ancient frontier city between Egypt and Syria. The boundary of Canaan extended beyond that of Israel in the north. While the latter terminated south of the Lebanon (Dan = Tell al-Ḳadi, at the southern foot of Mount Hermon), Canaan included all Lebanon (Josh. xiii. 5; comp. Judges iii. 3), extending to a line drawn from the sea opposite "the entrance of Hamath" to that city (Num. xxxiv. 7 *et seq.*; Ezek. xlvii. 15-20).

This "entrance of Hamath" must be located a little south of the city, which corresponds to the present Ḥama on the Al-'Aṣi (the ancient Orontes). The natural boundary in this region is the Nahr al-Kabir, which separates the Lebanon from the Nuṣairi mountains on the north and forms the ascent from the coast to Ḥimṣ and Ḥama, thus corresponding in all probability to the boundary as indicated by the ancient statements, if these were based on the physical conformation of the country and not on a difference in the population or merely on a theory. Within these limits the west-Jordan district, or Canaan, was regarded as a country promised to the Israelites by God, as their possession in the Messianic time, although they never occupied it entirely. There are other passages, however, in which the boundaries of Canaan are described as less extensive, and from them all mention of the Lebanon is frequently omitted (comp. Gen. x. 19; Deut. i. 7; Josh. xi. 17, xii. 7). Canaan, as a matter of fact, had no definite boundaries, and opinions differ regarding the extent of territory promised to the Israelites.

Gilead.

The east-Jordan country, at least in so far as it was Israelitic, is called "Gilead" in the Old Testament. This name also was originally applied to a smaller territory, and has various connotations in the Bible. It designates, in the first place, a small mountainous region, the "mountains of Gilead," the modern Jabal al-Jal'ud, south of the Jabbok (Nahr al-Zarḳa). In a wider sense the name is applied to the region extending to the Yarmuḳ in the north, while the east-Jordan district is divided into Gilead and Bashan (Deut. iii. 10; Josh. xiii. 11; II Kings x. 33), and the term is finally used to designate the east-Jordan country in general, which otherwise had no special name (Gen. xxxvii. 25; Josh. xxii. 9; II Sam. ii. 9; II Kings x. 33; Amos i. 3; *et al.*).

As the country of Palestine was neither a geographical nor, in pre-Israelitic times, a political unity, the Egyptians and Assyrians had no special term to designate the region. The Egyptians borrowed the name of Canaan from the Semitic Syrians, however, and used it to denote all Egyptian Asia, including Phenicia, so that its application was very similar to that found in the Old Testament. Southern Syria was usually called "Kharu" by the Egyptians, and this term applies on the whole to the Israelitic territory of the west-Jordan district, including the coast of the Philistines, while the northern plateau, especially Lebanon, Cœle-Syria, and the region of the Orontes, was called "Rutennu." The oldest Assyrian name for the district was "Amurru," which included Palestine, Phenicia, and its inland region, as well as Cœle-Syria. Later, in the El-Amarna letters, the term "Kinakhkhi" (= "Canaan") was used, especially for southern Syria, while "Amurru," in a more restricted sense, was applied to the Lebanon and Phenicia. After the time of Tiglath-pileser III., Syria, beginning with the Taurus and including Palestine, was called the "Land of the Khatti" (the Hittites), this term, like that of Canaan, being an amplification of the original meaning of the name, since there were no Hittites in Phenicia or Palestine. The various names applied to the country and its different parts under Roman rule will be discussed below.

Boundaries and Extent.

The region now called Palestine is the southernmost part of Syria, and is included between two lines drawn from the Mediterranean eastward—the lower from the southeast corner of the Mediterranean through the southern end of the Dead Sea, and the upper from Tyre to the southern foot of Mount Hermon. This portion of Syria has certain natural boundaries to justify its historical individuality: the sea to the west, the Syrian desert to the east, and the desert of Al-Tih to the south. The desert boundary-lines vary, however, since these regions are not sandy wastes, like those in Egypt, but partially arable steppes. The line of habitation has, therefore, varied greatly, especially to the east, so that at times a settled population has advanced, under the influence of a strong and well-ordered polity, for a considerable distance into the steppes, only to be ultimately pushed back by the more powerful Bedouins. In the north the deep and wild Liṭani (called Nahr al-Ḳasimiyyah in its lower course) separates the upper Lebanon range from the lower hill-country of Galilee, and in the east Mount Hermon closes the country to the north. The sources of the Jordan are on the southern spur of this mountain.

Palestine extends, therefore, from 31° to 33° 20′ N. latitude. Its southwest point (at Raphia = Tell Rifaḥ, southwest of Gaza) is about 34° 15′ E. longitude, and its northwest point (mouth of the Liṭani) is at 35° 15′ E. longitude, while the course of the Jordan reaches 35° 35′ to the east. The west-Jordan country has, consequently, a length of about 150 English miles from north to south, and a breadth of about 23 miles at the north and 80 miles at the south. The area of this region, as measured by the surveyors of the English Palestine Exploration Fund, is about 6,040 square miles. The east-Jordan district is now being surveyed by the German Palästina-Verein, and although the work is not yet completed, its area may be estimated at 4,000 square miles. This entire region, as stated above, was not occupied exclusively by the Israelites, for the plain along the coast in the south belonged to the Philistines, and that in the north to the Phenicians, while in the east-Jordan country the Israelitic possessions never extended farther than the Arnon (Wadi al-Mujib) in the south, nor did the Israelites ever settle in the most northerly and easterly portions of the plain of Bashan. To-day the number of inhabitants does not exceed 650,000. Palestine, and especially the Israelitic state, covered, therefore, a very small area, approximating that of the state of Vermont.

Situation; Roads.

Palestine lies at the juncture of Africa and Asia, and its geographical position has determined its entire history, development, and culture. At the time of the earliest historical knowledge of Palestine great kingdoms with a high degree of civilization flourished on the banks of the Nile and the Euphrates. Since it was vital for a state on the Euphrates to have access to the Mediterranean and consequently to be in possession of the coast districts, Egypt had previously seized the only neighboring country amenable to culture. From that early period down to the days of the successors of Alexander the Great, Palestine was the bone of contention between Egypt and the power dominant in Syria; it was seldom entirely independent and free, but nearly always was subject to one of these two powers. Thus the formation of a great Palestinian polity was rendered impossible by its situation, which, on the other hand, offered all the advantages of close contact with the two great civilizations of ancient times. Palestine was traversed by the highways of antiquity, the great military and commercial roads leading from Egypt to the Euphrates and northern Syria passing through its territory. The highway from Egypt led along the coast to a point south of Mount Carmel; there it divided. One branch followed the coast-line across the "Syrian stair" north of Acre into Phenicia, to the Dog River (Nah ral-Kalb, north of Beirut)—where its course is marked by tablets cut into the rocks with inscriptions of Assyrian and Egyptian kings—and thence farther north. The other branch traversed the eastern end of Mount Carmel and the plain of Esdraelon, going along the side of Mount Tabor and Ḳarn Ḥattin to the Lake of Tiberias, crossed the Jordan south of Baḥrat al-Ḥulah, and thence led along the southern and eastern sides of Mount Hermon to Damascus and the Euphrates. At Ḳarn Ḥattin it met a road from Acre, called "Derek ha-Yam" (the Way of the Sea; Isa. viii. 23 [A. V. ix. 1]), which formed the shortest and most important connection between Damascus and the sea.

Another branch of this great road from Egypt ran north through the Jordan valley, leading through the Biḳa' (Cœle-Syria) and the valley of the Orontes by way of Ribla to Hamat and northern Syria. Another highway led from Damascus directly south through the east-Jordan district to southern Arabia and to Elath on the Red Sea.

Foreign culture entered with the armies and caravans which traversed the country along these highways. Too small and too poor, and also too disrupted politically, to produce an important culture of its own, middle and southern Syria willingly accepted the elements of foreign civilization brought to it, fusing them to suit its own requirements. The predominance of Babylonian culture in Palestine even as early as 1400 B.C. is indicated by the fact that in the El-Amarna letters the scribes of Palestinian vassal kings wrote to their suzerain, the Pharaoh of Egypt, in the Babylonian language and script. The statements frequently made in regard to the seclusion of Palestine by natural barriers can not, therefore, be substantiated. Only the southern part of the country, which later was called Judah, had this character of seclusion, since it was not traversed by the highways already mentioned, but was closed in to the east by the deep basin of the Dead Sea, while the mountain slopes on the same side were steep and impassable. The country would be more accessible on the south were it not for the desert, which cuts off all commerce and gives approach only to a barren plateau that offers no inducements to settlers. Entry from the west is impossible except through narrow valleys flanked by steep mountains. Judea is really accessible only on the north; the single road connecting the southern with the northern country runs along the ridge of the mountain, almost on the watershed line between the Mediterranean and the Jordan valley. Judea is thus secluded by its physical conformation, so that a small state was able to maintain an independent existence there for a long time.

Physical Features.

Palestine, being really a part of Syria, presents the same physical features as that country. The chief topographic characteristic of the district is a great chasm running from north to south through the entire length of the great chalk-bed abutting on the Syrian desert. This deep and rather wide chasm divides the country into an eastern and a western part. It begins to the northeast of the ancient Antioch and forms in its southern course first the Orontes valley (Al-Aṣi), then the depression between Lebanon and Anti-Lebanon (Cœle-Syria), and finally the valley of the Jordan. Even a little south of Lebanon, at Lake Ḥulah, it is barely 2 meters above the level of the Mediterranean, and thence it descends rapidly to its greatest depth in the Dead Sea. It then rises southward, continuing through the 'Arabah, and ending at the Gulf of Aila in the Red Sea. The rift dates from the end of the Tertiary period, but the view formerly held that the Dead Sea was once connected with the Red Sea, and that the sea flooded the valley, is now disproved, since the watershed in the 'Arabah, between the Red Sea and the Dead Sea, rises to 250 meters above the level of the Mediterranean. The water in the Dead Sea, however, was formerly about 426 meters higher than now, and 32 meters above the present level of the Mediterranean. At this altitude has been found sediment left by the water, which was not so saline then as now. The rift divides the country into three longitudinal zones which differ widely in their conformations: the eastern mountain district, the chasm itself, and the western mountain district. The coastal plain, of varying width, although contained in the territory of Palestine, forms a fourth division.

The Coastal Plain.

This coastal plain is of relatively late origin. In some prehistoric period the level of the sea was at least 60 or 70 meters higher than at present, as may be seen by the deposits on the mountainsides in which are embedded the same varieties of *Conchifera* as are found in the Mediterranean, whose waves washed also the foot of the mountains in southern Palestine. The old coast-line was part of the great system of faults of the entire country. When the sea receded to the present coast-line the plain emerged, although it is covered by late deposits of the diluvial sea. It can not be determined whether the line has changed within historical times, but in several places, as at Tyre, Acre, and Gaza, it has been moved farther out to sea by alluvial deposits of Nile mud. The coast forms almost a straight line from the southeastern corner of the Mediterranean to the headland of Carmel, and is a continuous strip of flat coast with neither promontories nor indentations. Along this line the depth of the sea increases as gradually as the elevation of the country; and along a large part of the coast, frequently separating marshy strips from the sea, run dunes which reach a width of 6 kilometers between Gaza and Jaffa. North of Carmel the character of the coast changes, and plains and bluffs alternate. Thence the low coast extends to Acre, and in a straight line to the Ras al-Naḳura. From that point, as far as the Ras al-Abyaḍ, the rocks run down to the sea, and travelers along the coast were obliged to pass by way of the "Stairway of the Tyrians." Then follows a low coast with a small plain. Here also the formation of the sea-bottom corresponds to that of the coast. At the bluffs of Carmel and the Tyrian Stairway the height-line of 100 meters, which, at Gaza, is more than 30 kilometers distant from the land, approaches the coast to within 13 or even 10 kilometers, while shallow water is again found along the beaches north of Carmel and of the Tyrian Stairway. In consequence of this conformation of the coast there are no good harbors, and ships find no adequate anchorage, since the shallow water does not permit them to approach the land closely, and they have no protection against winds, especially against those from the west. Although the bluffs at Jaffa are nearly 300 meters long and form a natural breakwater, they also close the entrance to the harbor basin. The harbor of Ḥaifa, next to that of Beirut, is the best on the entire Syrian coast, being protected against the south and west winds. The formations at Acre, Tyre, and Sidon are unfavorable, and all ships are obliged to anchor in the offing.

The Plain of the Shefelah.

The coastal plain south of Carmel is divided by its conformation into two parts, which were distinguished as early as Old Testament times, the dividing line being the Nahr Rubin, immediately south of Jaffa. The southern part, the land of the Philistines, is the "Shefelah" lowland of the Old Testament (Deut. i. 7; Josh. ix. 1, x. 40; Judges i. 9; *et al.*). This country is a rolling plain; and between the numerous ranges of hills running from the mountains toward the west and northwest are other plains of varying size and a number of wadis, including the Wadi Ghazzah, Wadi al-Ḥasi, Nahr Sukrair, and Nahr Rubin, the two last-named being perennial brooks in their lower courses. The boundary on the east is much less sharply defined than that in the northern part of the plain, since the hill-country rises very gradually to the mountain district proper. The Shefelah has, therefore, often been regarded as the hill-country adjoining the mountains, in contrast to the plain of Philistia itself. This view is incorrect, however, for the designation includes both the plain and the hill-country, as the conformation itself shows. South of Gaza the plain ends in the desert, and the Wadi al-'Arish (the river of Egypt, mentioned above) traverses only a waste. The most southerly city on the plain is Gaza, a great oasis in the desert, which, although it has no harbor, since it was on the great highway from the Euphrates to the Nile has always been an important commercial center. It was important, moreover, strategically, both as a defense against Egypt and as the key to Syria. The other Palestinian cities of Ashkelon ('Asḳalan) and Ashdod (Asdud), on the coast, as well as Ekron ('Aḳir) in the interior, which once were prominent, are now insignificant, while the very site of Gath is unknown. The Shefelah is a fertile region except for a few districts on the sea; Gaza exports much barley, and the date-palm grows in the southern part of it, in addition to the other fruit-trees of Palestine. Altogether, the plain is to-day as it was in antiquity—populous and well cultivated.

Plain of Sharon.

The northern part of the coastal plain, called the plain of Sharon in the Old Testament, extends from the Nahr Rubin to Mount Carmel and is much more level than the southern part. It has few considerable elevations, one of these being the hill of Jaffa, which rises from the sea. The plain is about 100 kilometers long. On the north, along the ridge of Carmel, it is very narrow, and about 30 kilometers south of the edge of Carmel, on the Nahr al-Zarḳa, it has a width of only 3 or 4 kilometers, but from this point it widens suddenly, being 12 kilometers broad at Cæsarea and 20 kilometers at Jaffa. It ascends gradually toward the mountain on the east. It is well watered, since the

Map of Palestine.

(From a Passover Haggadah printed at Amsterdam, 1695.)

streams from the mountains drain into it, and it is irrigated in the north by the rivers from Mount Carmel, as well as by a series of perennial brooks. The Nahr al-Zarḳa is the Crocodile River mentioned by Pliny, and its marshes still harbor some of those reptiles. The Nahr Iskandarunah forms the outlet of the large valley leading from Nablus, and the short Nahr al-Falik was made by the water collected their piercing the sand-hills on the coast for an outlet. The Nahr al-'Auja, two hours north of Jaffa, is, despite its short course, the most copious river in Palestine, next to the Jordan. Sand-dunes along the greater part of the coast, however, have closed the outlet of the streams coming from the mountains and have formed marshes in many places. More important than all these rivers is the abundant supply of good water which may be obtained everywhere a short distance below the surface, and which is used for irrigation both in the orange groves of Jaffa and in the Jewish colonies in the plain.

In consequence of this abundant supply of water the plain has always been a very fertile one, although no humus has formed on the alluvial land. The plain of Sharon was famous in antiquity for its rich vegetation (comp. Isa. xxxiii. 9, xxxv. 2), and was considered good pasture-land (I Chron. xxvii. 29), while in the spring it was brilliant with flowers (comp. Cant. ii. 1). The southern part of the plain is well cultivated, and there are famous orange groves extending for many miles around Jaffa. The German colony of Sarona and several Jewish agricultural colonies are in this part of the plain. In the northern portion there are still many acres of untilled land, which is used as pasture. Among the coast towns was the ancient Dor (the modern Ṭanṭurah), the most southern settlement of the Phenicians (Josh. xi. 2, xii. 23, *et al.*); it now lies in ruins, as well as Cæsarea, which, built by Herod the Great, was for a time the capital of Palestine, and in whose remains, still termed Ḳaiṣariyyah, a small colony of Circassians has settled. Jaffa alone has retained its importance as the port for Jerusalem and the entire southern part of Palestine, and is steadily developing, containing more than 40,000 inhabitants in 1904.

The most northern part of the coast-line is the plain of Acre, which extends for about 35 kilometers north from Carmel to the promontory Ras al-Naḳurah of the Jabal al-Mushaḳḳah. The southern part, between the cities of Ḥaifa, at the northern foot of Carmel, and Acre, on the northern end of the finely curved Bay of Acre, extends with a width of 6 kilometers along the bay, being separated from the plain of Esdraelon only by a slight elevation. This is traversed by the Kishon (the modern Nahr al-Muḳaṭṭa'), which, like the Nahr Na'man farther north (the ancient Belus), empties into the Bay of Acre. The greater part of this region is marshy and unhealthful, and only the more elevated edges are cultivated. The smaller, northern portion of the plain north of Acre is very narrow, but fertile and well cultivated.

The West-Jordan Mountain District.

The west-Jordan mountain district extends almost in a straight line from south to north as the connecting-link between the table-land of Al-Tih, in the Sinaitic Peninsula, and the Lebanon. In consequence of the rift described above, which caused the bed of the Jordan to sink, the cretaceous layer that was originally horizontal has taken the form of a flat arch, which declines much more steeply on the east than on the west. In distinction from a mountain ridge and a level plateau, the west-Jordan mountain district may be described as a table-land of highly irregular and diversified conformation. Its most important characteristic is in the fact that the axis of the mountain range lies much nearer to the Jordan than to the sea, so that about two-thirds of the west-Jordan country lies west of the watershed. This is highly important for the hydrographic conditions of the region, since it permits the development of longer and richer valley systems westward toward the sea, some of which widen into small though fertile plains. The descent toward the east, on the contrary, is much too steep to permit such conformations. The difference in the elevation is, moreover, much greater, in view of the low level of the Jordan valley. Thus, between Hebron and Jerusalem the elevation of the ridge is from 800 to 1,000 meters, while the level of the Dead Sea is 393 meters below that of the Mediterranean, so that the entire difference is between 1,200 and 1,400 meters, although the ridge is only about 25 kilometers distant from the Dead Sea. This makes a fall of 48 or 50 meters per kilometer.

Toward the north the conformation is somewhat more favorable as regards the difference in elevation, but toward Nablus the watershed approaches to within 15 or 20 kilometers of the Jordan. Naturally, the water can not sink into the ground there, and no level valleys can be formed; the torrents carry the soil and smaller rocks down with them while rushing through the deep and nearly perpendicular cañons which they have cut out. The force of these streams should not be underestimated, although these cañons were cut in remote prehistoric times, when more rain fell in Palestine than at present. The mountain ridge is the center of the country from a physical as well as a cultural point of view, for there all the important cities were situated: Hebron, Bethlehem, Jerusalem, Beth-el, Shechem, and Samaria; and along this ridge ran the principal, or rather the only, commercial highway of the Israelitic kingdom. This circumstance, which seems strange at first sight, is easily explicable from the conformation, for there is no valley running from the north to the south, and numerous wadis, some of which are deep, run east and west from the ridge. This renders it difficult, if not impossible, to have roads north and south on the mountainsides, for they would be forced to either cross or go around the valleys; furthermore, access to the wadis was very difficult in the east and west, especially in the southern part of the country.

The west-Jordan mountain district is divided into two unequal parts by the plain of Esdraelon—the mountain district of Galilee to the north, and that of Judea and Samaria to the south. A peculiarity in the conformation corresponds to this geographical division, Galilee, the northern country, being more

The Negeb.

diversified than the bare and monotonous southern part. The Judean mountains rise in the south from a bare plateau, which extends on the west side of the ‘Arabah southward from the Dead Sea for about 100 kilometers. The Canaanitic portion of this area is called in the Old Testament the Negeb, or "Barren Country," a territory of indefinite boundaries. On the east the declivities toward the Dead Sea southward are comprised in the "wilderness of Judah" (see below), so that the "Salt City" (the modern Khirbat al-Milḥ), only 25 kilometers east of Beer-sheba, is occasionally included in the desert of Judah. In the north the Negeb extends as far as the mountain district proper, about half-way between Beer-sheba and Hebron, where the mountains at Al-Ḍahariyyah and Khirbat ‘Attir (Jattir) reach an elevation of 600 or 650 meters, this entire region being much more inviting in character on account of the vegetation resulting from the greater abundance of water.

The Negeb is rightly called "barren land." To-day it is a steppe on which some small cattle are raised. Only Bedouins, the Azaziwah Arabs, pitch their tents here. In ancient times it was more populous, and a number of its cities are mentioned in the Old Testament (Josh. xv. 21–22, xix. 2–8; comp. I Chron. iv. 20–33). The best known is Beer-sheba, the famous old sanctuary (Gen. xxi. 33, xxvi. 33, xlvi. 1), which was still a place of pilgrimage in the time of Amos, visitors coming even from the Northern Kingdom (Amos v. 5, viii. 14). This city is regarded as the southernmost frontier city of the Israelites, since no Israelites were living in places farther south in the Negeb. The city derives its name from its wells, which were of great importance in antiquity and were an object of contention between Israel and the Philistines (Gen. xxi. 30, xxvi. 34). Beer-sheba was still an important place at the time of Jerome and Eusebius, and had a Roman garrison. The old name has been preserved in its modern appellation, Khirbat Bir al-Saba‘. The city of Ziklag, on the other hand, mentioned in the story of David (I Sam. xxvii. 6), has not yet been definitely identified. There are many evidences, such as terraced slopes, and dams for water-works in the valleys, that this region was formerly cultivated, at least in part.

The Judean Plateau.

The characteristic features of the west-Jordan mountain district (see above) are most prominent in Judea. This region is a plateau with a compact mass of mountains whose ridge runs in an approximately straight line northward from Hebron to Baitin, with larger or smaller plateaux to the west. There are no definite natural boundaries separating the northern part of this district from the mountains of Samaria, although the traditional boundary, set for political reasons, finds its justification in the geographical conformation. Within the Judean hill-country the group of mountains about Hebron in the south and those of Baitin in the north are marked by an elevation which sometimes reaches 1,000 meters, while the less lofty mountain district of Jerusalem does not exceed 800 meters. In the group of mountains surrounding Hebron the ridge rises in the Ṣirat al-Balla‘, somewhat north of the city, to an elevation of 1,027 meters, being the highest point in southern and middle Palestine. The mean elevation of the plateau is 900 meters. There are two fertile plateaux of considerable size on the west close to the watershed: in the south the plateau of Hebron, with the famous old city of Hebron, the modern Al-Khalil; and farther north the plateau of Ḥalḥul and Bet Ṣur (the Halhul and Beth-zur of Josh. xv. 58; see II Chron. xi. 7; I Macc. iv. 29, 61, *et al.*; Beth-zur was an important fortress during the wars of the Maccabees). The latter plateau is drained by the Wadi ‘Arrub, whose source fed the aqueduct leading to the so-called "Pools of Solomon" and to Jerusalem.

Jerusalem.

The middle district of the hill-country of Jerusalem is much lower, its highest point being the Nabi Samwil, northwest of Jerusalem, 895 meters high (perhaps the ancient Mizpah in Benjamin and Samuel's seat of judgment; Josh. xviii. 25; I Sam. vii. 5 *et seq.*; see Ramah). At Jerusalem the watershed sinks to 817 meters, but to the north rises again to 881 meters at Baitin, where the fertility of the country is due to a number of smaller plateaux west of the watershed, as at Bethlehem and Bait Jala (a large, flourishing Christian village, half an hour northwest of Bethlehem, where the country still justifies its name [Bait Laḥm = "house of bread"]). Southwest of Jerusalem lies the plateau of Al-Biḳa‘, probably the plain of Rephaim, fertile in grain (Isa. xvii. 5).

Farther north from Jerusalem, somewhat more distant from the watershed, is the plain of Yalo (the Ajalon of Josh. x. 12; I Sam. xiv. 31, etc.). The water from this plain collects on the north in the Wadi Bet Ḥaninah, and on the south in the Wadi al-Ward, both of which join the Wadi al-Ṣarar, the principal valley of Judea. The railway between Jaffa and Jerusalem runs through this valley. The cities of Bethlehem and Jerusalem lie somewhat east of the watershed, while farther north, on the ridge of the mountain, are the following well-known places: "Gibeah of Saul" (I Sam. xi. 4), on the hill Tall al-Fal; Ramah in Benjamin (I Kings xv. 17; see Ramah), the modern Al-Ram; Beeroth (II Sam. iv. 2), probably the modern Al-Birah; and finally Beth-el, the pre-Israelitic sanctuary (Gen. xxviii. 11, 19) and the modern Baitin. East of Ramah lay a second Gibeah, in Benjamin (or Geba; I Sam. xiii. 16, xiv. 16, etc.), the present Jaba‘, and opposite it on the north side of the deep valley Wadi al-Suwainiṭ was Michmash (I Sam. xiii. 23; Isa. x. 28 *et seq.*), now the deserted Makhmas, while west of Ramah was situated the great Gibeon (the modern Al-Jib, with eight springs), with its famous altar (Josh. x. 2 *et seq.*; I Kings iii. 4 *et seq.*).

The third northern group, the mountain district of Beth-el, is less regular than the two preceding. Since the watershed is somewhat to the east, the road northward runs to the west of it in the parallel Wadi al-Jib. In the Tell ‘Aṣur the mountain ridge again reaches an elevation of 1,011 meters. Near the watershed lies the famous old sanctuary of Shiloh (I Sam. i. 3 *et seq.*), the modern Sailun.

BORMAY & CO., N.Y.

district, at least that of the two southern groups, is differentiated from that of the more northern region by the fact that in the north the mountains slope abruptly toward the plain, while in the south there is a hill-country between the mountains and the plain of the Philistines which, as already noted, approaches the coast and is designated by the Hebrew name "Shefelah." About half-way down the slope, and between 20 and 25 kilometers west of the ridge, the mountains are cut off from the plain by a series of secondary valleys, which meet the principal valleys running east and west at right angles and form together, as members of the same system, a line from north to south, parallel to the great rift of the Jordan.

The Desert of Judah.

The eastern slope of the Judean mountain district also shows these lines running north and south. It has three terraces in the south, while the northern system has but two, these also being generally parallel to the watershed and corresponding to the conformation of the country. In the Old Testament this eastern slope is called the "wilderness" of Judah (Josh. xv. 61), which has never been of importance in history. It is for the greater part a barren desert, only a few small plains being covered with sparse grass in the spring, while elsewhere the calcareous rock with its strata of flint lies bare. Cañons pierce the declivity, and the passage downward is difficult.

The mountains of Samaria form, as noted above, a continuation of those of Judea, but since its physical conformation is different, a geographical separation is justified. Instead of a narrow plateau sloping toward the west and east with sharply defined boundary-lines, one finds, on going farther northward, a conformation of increasing variety. Central Palestine (Samaria) is, therefore, the natural transition between Judea and the mountains of northern Palestine. The change becomes apparent in southern Samaria, which may be said to extend northward as far as the Wadi al-Sha'ir, the principal valley of Samaria, connecting the mountains with the coast (see above). There the watershed no longer runs in a straight line north and south, but changes its direction frequently. North of Tell 'Aṣur it turns at first to the northeast, approaches within 15 or 20 kilometers of the Jordan, and then runs north until near Nablus, turning toward the west at Gerizim, the present Jabal al-Ṭur (870 meters). Then it traverses as a very low ridge the plain between Gerizim and Ebal, east of the present Nablus, ascends the Ebal (Jabal Aslamiyyah, 938 meters), and runs thence farther north. While Ebal is entirely bare, a number of large springs are found at the northern foot of Gerizim, which make the vicinity of Nablus one of the most fertile regions of all Palestine.

The northern foot of Gerizim also is covered with vegetation, so that Ebal was the mountain of cursing, while Gerizim was the mountain of blessing (Deut. xi. 29, xxvii. 12 *et seq.*). Shechem lay on the watershed ("shekem" = "shoulder"), east of the present Nablus, which corresponds to the ancient (Flavia) Neapolis, a name given to the city when it was rebuilt after the war of Vespasian, this being one of the rare cases in which a Roman local name has replaced the ancient Semitic one. On the eastern slope of Gerizim, and before the great gate to the west between it and Ebal, spreads the large plain of Al-Makhnah, with an area of about 20 square kilometers; and on the northeast, and connected with it, is the plain of Salim, a fertile grain-country, surrounded by finely formed mountains covered with olive-trees.

Mount Ebal marks the southern boundary of the mountains of northern Samaria, whence the ridge extends first north and then northeast to the Jabal Faḳu'ah, the Old Testament mountains of Gilboa (I Sam. xxxi. 1; II Sam. i. 21). This elevation, extending in the shape of a crescent from southeast to northwest, forms in a certain sense the terminal point of the range. It slopes steeply toward the Jordan, and to the brook of Jalud (see below) and the plain of Jezreel. On the northern side, however, there are numerous small plains set in the mountain-side, such as those of Al-Fandaḳumiyyah, 'Arabah with Tell Dotan (the Dothan of Gen. xxxvii. 14-17), and Marj al-Gharaḳ, which forms in winter a large marshy region with no drainage, although it dries up in the summer, leaving a field for cultivating grain. The eastern slope of the mountains of Samaria is more varied than in the south; instead of the terraces parallel with the ridge, four mountain ranges about 20 kilometers long run from northwest to southeast, almost to the Jordan. The beautiful wide valleys between them are very fertile, the most important one being the Wadi Far'ah, south of the Ḳarn Ṣarṭabah. The most southern of these ranges ends in the Ḳarn Ṣarṭabah, 379 meters above the sea, and about 679 meters above the Jordan valley, of which it forms the great landmark.

Mount Carmel.

On the northwest there is another outlying range of hills, reaching an elevation of 518 meters in the Shaikh Iskandar, which, together with its continuation, the Bilad al-Ruḥah, connects the mountain country with Mount Carmel. Otherwise Carmel occupies a position apart, being separated from the rest of the mountains by two deep valleys, the Wadi al-Milḥ and the Wadi al-Maṭabin. It consists of a wooded range with its axis running from southeast to northwest; it is widest at the southeast end and narrows to a point at the northwest. It reaches its highest elevation in the southeastern part, near the wide base of the mountain at Asfiyyah (552 meters). Thence the ridge declines slowly and evenly to the convent of Carmel on the northwestern point (169 meters), sloping abruptly to the sea at an angle of 35 degrees. The slope toward the plain of Esdraelon also is a steep one, while it is merged into wooded hills on the southwest. Owing to its abundant supply of water, and especially to the heavy dew, it is covered with luxuriant vegetation, remaining green even through the summer, hence its name Carmel (= "garden," "grove"; comp. Amos i. 2; Jer. iv. 26; Isa. xxxv. 2). It is covered with holm-oaks and pine-trees, although here, as elsewhere in Palestine, the trees are for the most part small. In spite of its fertility Mount Carmel is now deserted, having only two villages, Asfiyyah and Daliyyah, although but a century ago there were numerous others here. There are many caves in the gray calcareous rock, especially on the side toward the coast, so that in olden times Mount Carmel was considered a safe place of refuge for the persecuted (Amos ix. 3). Much game is found there, as gazels and partridges, deer and tiger-cats.

The Plain of Esdraelon.

The mountain country of Samaria is separated from Galilee by a deep plain extending from the sea to the valley of the Jordan. The central portion was the ancient plain of Esdraelon, its modern name being Marj ibn 'Amir. On the west it is connected with the plain of Acre. Spurs of the mountains of Galilee extend toward the southeast foot of Carmel, separating the two plains, and leaving only a narrow passage for the Kishon. Toward the east the plain continues in the valley of the Nahr Jalud, where the range of Gilboa is again connected with the mountains of Galilee by a low ridge, with an altitude of 123 meters, running northward and forming the eastern boundary of the plain. On it lies the ancient royal city of Jezreel (I Kings xviii. 45 *et passim*), the modern Zar'in. There the Nahr Jalud, which has its source half an hour east of Zar'in, begins to descend in a rapidly widening bed, reaching the valley of the Jordan at Baisan. This sloping bed of the brook of Jezreel is referred to in the Old Testament under the name of the "valley of Jezreel" (Josh. xvii. 16; Hos. i. 5), while the plain now bearing that name and extending west of Zar'in to the coastal plain corresponds to the ancient "valley of Megiddo" (II Chron. xxxv. 22), or, simply, the "great plain" (I Macc. xii. 49).

This latter plain is in form a rectangular triangle; the shortest side on the east running almost directly from south to north, and extending along the ridge of Zar'in (see above) from Janin to Mount Nabi Daḥi, or little Mount Hermon, and to Mount Tabor, the northeast corner. Its northern edge runs almost directly west along the southern edge of the mountain of Nazareth to the bed of the Kishon (see above) and Mount Carmel. The hypotenuse extends thence southeast along the slope of Carmel, the Bilad al-Ruḥah, and the other Samaritan mountains. It rises eastward gradually and evenly from the bed of the stream at an elevation of about 25 meters, and at Zar'in reaches a height of 123 meters. The plain itself is drained by the Nahr al-Muḳaṭṭa'; the ancient Kishon (Judges v. 19 *et seq.*), which, with its network of tributaries, gathers up all the water from the mountain slopes. The river is continuously full only to the point where it breaks through the mountains; in the plain it dries up in the summer, while in winter the drainage there is not sufficient, and numerous large morasses are formed. There are, consequently, no settlements in the plain itself, all villages being built, now as in antiquity, in the

higher districts. In the southeast corner of the plain, near a large spring and amid gardens and palms, lies the city of Janin, the Ginæa mentioned by Josephus, and perhaps the En-gannim (Josh. xix. 21, xxi. 29) and Beth ha-Gan (II Kings ix. 27) of the Old Testament. Zar'in on the eastern edge has already been mentioned.

Farther north are Sulam—the ancient Shunem (Josh. xix. 18; I Kings i. 3; *et al.*)—on the southern foot of the Nabi Daḥi, the wretched village of Nain on the northern foot of the same mountain (Luke vii. 11 *et seq.*), and toward the east the small Endur (the ancient En-dor; Josh. xvii. 11; I Sam. xxviii. 7). Along the northern edge are Daburiyyah (the Daberath of Josh. xix. 12), Iksal (the Chesulloth of Josh. xix. 18), and Jabatah (the ancient Gabbatha). On the southern side the ancient Jokneam (Josh. xii. 22) rises near the western corner of the Tell Ḳaimun. Then follow the two principal towns of the plain, Megiddo and Taanach, both of them ancient fortresses. Megiddo, called "Maketi" by the Egyptians and "Legio" by the Romans, corresponds to the modern Al-Lajjun. The great highway from Egypt entered the plain there, protected by the fortresses. In pre-Roman times the city lay on the neighboring hill of Tell al-Mutasallim (recently excavated by the German Palästina-Verein; comp. Josh. xii. 21; II Kings xxiii. 29 *et seq.*). Taanach (Judges v. 19; I Kings iv. 12; *et al.*), the modern Tell Ta'anuk, three or four Roman miles east of Legio, protected the eastern portion of the road. The entire plain, with its dark-brown soil, broken in many places by black basalt, is very fertile and well cultivated, and looks like a sea of grain in summer. In antiquity it was the great battle-field of Palestine (comp. Judges v. 19 *et seq.*, vii. 1 *et seq.*; I Sam. xxxi. 1 *et seq.*; I Kings xx. 26 *et seq.*; II Kings xxiii. 29); the French, under Kleber, also fought a bloody battle there with the Turks in 1799.

Galilee.

The mountains of Galilee, as already stated, are but loosely connected with Samaria by the low ridge of Zar'in. This conformation of the country has left its mark in history, for it is no accident that Galilee has always preserved an attitude of comparative independence toward the more southern districts. Since the time of Josephus, Upper Galilee in the north has been separated from Lower Galilee in the south, the two being entirely different in character.

The most peculiar characteristic of southern Galilee is the system of four parallel ridges which form the mountain country and run from west to east at right angles to the more southerly mountains and the line of the watershed. These ridges are separated from one another by wide valleys and small plains. The most southerly ridge is the Nabi Daḥi, also called Little Hermon, in which the range reaches an elevation of 515 meters. The hilly plateau slopes abruptly toward the Jordan, rising sharply in the west from the plain of Esdraelon, and is bounded on the south by the valley of the Nahr Jalud, and on the north by the Wadi al-Birah. The second ridge is the hill-country of Nazareth; it begins with the low hills at the gap of the Kishon, rises in the Jabal al-Sikh, north of Nazareth, to an elevation of 560 meters—the highest point being Tabor, a finely rounded cone rising in almost complete isolation from the plain of Esdraelon to an elevation of 562 meters—slopes to 358 meters in the outer mountains on the Jordan, and then falls abruptly to the valley. The small plain of the Wadi al-Rummanah, which flows toward the west, and, farther east, the larger and lower Sahal al-Aḥma divide this group from the third group, the hill-country of Ṭur'an. This reaches its highest elevation in the mountain of the same name; on the east the Ḳarn Ḥaṭṭin (316 meters) and Al-Manarah (294 meters), above the Lake of Tiberias, belong to it, the slope of both being toward that lake. In the east all these ranges bend in a crescent toward the south, thus producing a remarkable parallelism to the ranges of northern Samaria which run from the ridge toward the Jordan (see above).

The fourth or northernmost group is the plateau of Al-Shaghur, which is separated on the south from the hill-country of Ṭur'an by the plain of Sahal al-Baṭṭuf (the ancient plain of Asochis in Josephus) and the deep Wadi al-Ḥammam, which extends to the Lake of Tiberias. The range begins in the west at the large village of Shafa 'Amr. Its highest tops are the Jabal al-Daidabah (543 meters) and the Ras Kruman (554 meters). The plateau north of this range is the plain of 'Arabah, which is bordered on the north by a rather low ridge. The northern boundary of this plateau of Al-Shaghur, and of southern Galilee as well, is the plain of Ramah, about 370 meters above sea-level, and which drains toward the sea and the Lake of Tiberias. It is evident from the preceding description that the watershed of Lower Galilee does not run in a straight line, but winds east and west.

Upper Galilee is a plateau in the form of an irregular square, bordered on all four sides by chains of hills and intersected by two mountain ranges. It is highest and widest in the south and slopes gradually but perceptibly toward the north to the Nahr al-Ḳasimiyyah. The most southerly range begins near Acre and rises in a steep grade to a considerable height in the Nabi Haidar (1,049 meters) and the Jabalat al-'Arus (1,073 meters). There lies Safed, the highest city in Palestine (838 meters), mentioned as early as the Talmud and inhabited chiefly by Jews, who look upon it as a holy city, since, according to tradition, it is there that the Messiah will appear. The western edge begins somewhat west of Nabi Haidar (see above), and runs northward almost parallel to the coast. The declivity toward the slope is somewhat steep, although several valleys break through it and connect the plateau with the coast. The eastern edge begins at the mountains at Safed and runs in part in parallel ridges with small plains interspersed to the Jabal Hunin (900 meters), where the northern edge, sloping toward the Nahr al-Ḳasimiyyah, turns west. Among the mountain ranges in the interior of the plateau the one which runs northwest from the Jabal al-'Arus is especially noteworthy, for to it belongs the highest mountain of Palestine, the Jabal Jarmaḳ (1,199 meters), west of Safed. The watershed in Upper Galilee runs for a considerable distance along the mountains of the eastern border, so that the ridge of

the mountain slopes without intersecting ranges toward the plain of the Jordan.

The Jordan Valley and Sources.

The origin and extent of the great dip have been discussed above. The Hebrews called the valley from the Lake of Tiberias to the Red Sea the 'Arabah Steppe. The Arabs term the valley from the Lake of Tiberias to the Dead Sea, and the district on the southern end of the latter, Al-Ghur, and its continuation toward the south is still designated as Al-'Arabah. The Jordan itself (Ha-Yarden) is commonly said to have derived its name (= "the descender") from its rapid course, although this etymology is very doubtful. It is also called Al-Urdunn by the Arabs, although its more usual name is Shari'at al-Kabirah (= "the great watering-place"), or simply Al-Shari'ah (= "the watering-place").

The Jordan has three sources, all of them at the foot of Mount Hermon. The most distant one lies outside of Palestine near Ḥaṣbaiyah, on the western foot of Mount Hermon, 520 meters above the sea. The Nahr Ḥaṣbani, as the stream is there called, flows rapidly southward along the eastern edge of the plain of Marj 'Ayun (perhaps the Ijon of I Kings xv. 20). The second source is the Nahr al-Laddan, called by Josephus the Lesser Jordan, which is fed by two sources from the Tell al-Ḳaḍi, the ancient Dan (see above), 154 meters above the sea. This source is the largest, having three times as much water as the Ḥaṣbani and twice as much as the Nahr Baniyas. This latter source emerges as a large brook from a grotto (329 meters), formerly sacred to Pan, at the foot of the mountain of the Castle of Baniyas, the ancient Paneas, which was subsequently called Cæsarea Philippi. About 8 kilometers south of the Tell al-Ḳaḍi, 43 meters above the sea, these three streams unite, forming a river about 14 meters in width.

The Lake of Ḥulah.

As far as the Lake of Ḥulah the valley of the Jordan is a beautiful plain, 10 kilometers wide, called Arḍ al-Ḥulah; it is watered by numerous brooks, with many marshy places, covered with reed and papyrus plants, in the central district, although otherwise it is very fertile. The marshy country ends in the south in the Baḥr al-Ḥulah, a triangular basin with its surface about 2 meters above the sea and with an extreme width of 5.2 kilometers and an extreme length of 5.8 kilometers, its depth varying from 3 to 5 meters. Josephus calls the entire district Ulatha (Οὐλαθά), and the lake, Samachonitis. The "waters of Meron," which are frequently placed there (Josh. xi. 5, 7), are, however, the springs and brooks near Merom in Upper Galilee (Meron in the Jabal Ṣafad). The great caravan highway which traverses the coast (see above) crosses the Jordan about 2 kilometers south of the lake on the old Jisr Banat Ya'ḳub ("bridge of Jacob's daughters"), where a ford has always existed. From Ḥulah to the Lake of Tiberias (208 meters below sea-level) the Jordan falls 210 meters in a distance of 16 kilometers, or about 13 meters per kilometer, wearing its bed deep into a great stream of lava and forming rapids in many places.

Lake of Tiberias.

The Lake of Tiberias, called Chinnereth in the Old Testament, and Gennesaret, or the Sea of Galilee, in the New, has the form of an irregular oval, with an extreme width of 10 kilometers in the northern half, an extreme length of 21 kilometers from north to south, and an area of 170 square kilometers. It is 208 meters below the Mediterranean, and its depth varies from 50 to 70 meters, according to the season. Its brachiate form is due to the fact that the steep southern coast recedes slowly toward the south in consequence of the erosive activity of the waters of the Jordan, while the silt of the river is deposited in the north. It does not derive its name Chinnereth from its shape, which resembles the form of a "kinnor" (= "harp"), but from the city or district of that name (Josh. xix. 35; I Kings xv. 20). Similarly, Gennesar was the name of a small district on the western side, probably the same plain that was once called Chinnereth, although it now bears the name of Baḥr Ṭabariyyah, after the city of Tiberias. On the eastern side the mountains approach very closely to the lake, but in the north, where the Jordan empties into it, there is a small plain called Al-Abṭiḥah, or Al-Baṭiḥah, about 7 kilometers from east to west and between 2 and 5 kilometers in width, well watered and fertile, where stood the city of Bethsaida Julias. The bank on the west is wider, and in ancient times it contained a number of towns. In the north lay Capernaum, with a Roman toll-gate and garrison. This city, frequently mentioned in the New Testament as a center of the activity of Jesus, and called Kephar Nome by Josephus, is the modern Tell Ḥum, 4 or 5 kilometers west of the mouth of the Jordan. The plain of Gennezar (the modern Al-Ghuwair) extends from Khan Minyah southward to the deep Wadi al-Ḥamam, 5 kilometers in length by 1.5 kilometers in width, and once famous for its fertility, being praised by Josephus and in the Talmud. Gennezar, Magdala, and Taricheæ are the best-known places there. Farther south, where the mountains again approach the lake more closely, lies Tiberias (Ṭabariyyah, called Raḳḳat in the Talmud), being separated from the plain to the north by a rocky headland; an hour farther south are the hot springs of Hamath. The Castle of Sennabris (the modern Sinn al-Nabra) defends the road against the southern end of the lake.

Lower Course of the Jordan.

From the Lake of Tiberias to the Dead Sea the Jordan has a length of about 110 kilometers in a straight line, with a fall of 186 meters—from 208 to 394 meters below sea-level. This results in a number of very sharp turns in the soft marly and loamy soil; and as the river carries away a large amount of this soil it has a muddy-yellow color. The valley varies in width; at the head of Lake Tiberias it is only about 4 kilometers wide; on the east side of the river it widens gradually; and on the west side it broadens at intervals into plains, as those of Baisan, Phasælis, and Jericho, with a width of 24 kilometers, while in other places it contracts to a narrow strip where the mountains approach the river. The stream has made a bottom for itself without sharp turns in this soft soil, about 15 meters deep, although the width and depth vary. The channel itself is between 3 and 4 meters deep, with an average width of 30 meters, and with very sharp turns, the course varying greatly in consequence of the soft soil and the large fall, so that the bridge at Al-Damiyah, built in the thirteenth century (see below), is now 38 meters from the water. The river-bottom of the Jordan is called Al-Zur by the Arabs, as contrasted with Al-Ghur, which, as already stated, designates the entire dip. The valley is covered with a thick growth of trees and shrubs, in which animals abound, including wild boars, while lions were found there in antiquity (Jer. xlix. 19). It is also called the "pride of Jordan" by the prophet (Zech. xi. 3) on account of the contrast between its refreshing verdure and its barren surroundings. This bottom is frequently inundated in the rainy season, but the river does not enter the plain above, even during very high water, so that the valley has always been barren and unproductive. Settlements are possible, now as in antiquity, only along the edge of the valley, where other springs and brooks come from the mountains.

The intercourse of the two banks of the river is facilitated by fords, of which there are five between the Lake of Ḥulah and the Lake of Tiberias, while between the latter and the Dead Sea there are fifty-four. The ford of Al-Damiyah, near the mouth of the Nahr al-Zarḳa, corresponds to the Maʻbeh ha-Adamah of I Kings vii. 46, and that of Makhaḍat ʻAbarah, north of the mouth of the Nahr Jalud, corresponds to the Bethbara of Judges vii. 24 (which is to be emended accordingly) and John i. 28. These fords, however, can not be used in the winter, when the river is full. There are two bridges, in addition to the one already mentioned, dating from the Middle Ages: the "bridge of Jacob's daughters" and the Jisr al-Mujamiʻ, about 10 kilometers south of the Lake of Tiberias. A small bridge has recently been built at Jericho by the Turkish government.

Tributaries of the Jordan.

Most of the numerous wadis which enter the Jordan valley from the western and the eastern mountain district are only winter brooks, and even the perennial streams carry little water down to the Jordan, for much of it evaporates in the valley or sinks into the soil. The following two may be mentioned on the left or eastern side: the Shariʻat al-Manaḍirah and the Nahr al-Zarḳa. The Shariʻat al-Manaḍirah enters the Jordan a short distance south from the point where the Jordan leaves the Lake of Tiberias. This river, the Hieromyces of the Greeks and the Yarmuḳ of the Talmud, rises in the Ḥauran, and is the largest tributary of the Jordan, containing nearly as much water as the latter. The Nahr al-Zarḳa ("Blue River"), the ancient Jabbok (Gen. xxxii. 22; Num. xxi. 24; Josh. xii. 2), enters the Jordan farther south, about half-way between the Lake of Tiberias and the Dead Sea. Before crossing the plain to enter the Jordan it flows for quite a distance parallel to that river and along the foot of the mountains.

The plain of the right or western side broadens out triangularly where the larger brooks come down from the mountains. Thus the famous oasis of Baisan, the Scythopolis of the Greeks and the Beth-shean of the Old Testament (Judges i. 27; I Sam. xxxi. 7 *et seq.*), is formed at the mouth of the Nahr Jalud (see above); this is a well-watered and fertile plain in the form of a rectangular triangle, whose sides run from east to west and from north to south and are about 20 kilometers long. Much smaller are the two plains north and south of the mouth of the Ḳarn Ṣarṭabah (see above). On the north the Wadi Fariʻah comes down from the region of Nablus, and on the southwest the Wadi al-Ifjim. The former runs for a long stretch parallel to the Jordan before it is able to break through the high banks of the river. The oasis of the ancient Phasælis, now the ruins of Khirbat Fasa'il, belongs to the district of the mouth of the Ḳarn Ṣarṭabah. From this point the plain of the Jordan continues wide on the west side, for the plain of Jericho, traversed by the lower course of the Wadi al-Ḳalt, joins it without intervening mountains. In the time of Herod the plain was well watered and settled, and famous for its balsam and other products. The spring of ʻAin al-Sulṭan, according to tradition the spring of Elisha mentioned in II Kings ii. 19 *et seq.*, is the most important of the perennial springs to which the oasis has owed its existence since ancient times. In the Old Testament this most southern part of the Jordan valley is called ʻArbot Yeriḥo (plains of Jericho), or, on the other side east of the Jordan, ʻArbot Mo'ab (plains of Moab). In like manner Abel-shittim (acacia meadow) must have been east of the Jordan. For further details see Jericho.

Dead Sea.

The reservoir for the waters of the Jordan, the Dead Sea, occupies the lowest portion of the valley, its surface being 393.8 meters below sea-level. It has an extreme depth of 399 meters, so that the extreme depth of the rift is 792.8 meters below the level of the Mediterranean. The northern part is deeper than the southern, which is only from 1 to 6 meters deep and is separated from the northern by the peninsula Al-Lisan, running out from the east. The water-level varies from 4 to 6 meters, according to the season. The area of the southern part is considerably enlarged in the rainy season, when the entire Sabkhah is flooded. The extreme length of the Dead Sea, from north to south, is 76 kilometers, and its greatest width, south of the Wadi Mujib, is 15.7 kilometers, while the peninsula of Al-Lisan reduces its width at that point to 4.5 meters (comp. the Lashon in the south of the sea, mentioned by Josh. xv. 2 *et seq.*). On the north and south the country behind the banks is entirely level, but on the east and west the steep mountains approach the sea so closely that in some places there is not even space for a foot-path. The eastern edge runs in a straight line from north to south; here the mountains rise between 800 and 1,100 meters above the Mediterranean, or from 1,200 to 1,400 meters above the Dead Sea, toward which they slope steeply. The western edge is more diversified and is considerably lower, being only between 500 and 570 meters above the Dead Sea, from which it recedes somewhat in most places. The fresh-water springs ʻAin Fashkhah and, farther south, ʻAin Jidi (the ancient Engedi) produce small oases in the plain along the bank. The mountain fortress of Masada, opposite the peninsula of Al-Lisan, built by

Jonathan Maccabeus and refortified by Herod, is famous in later Jewish history. An interesting object at the extreme southwest point of the sea is the isolated salt mountain of Jabal Usdum, 11 meters long and about 45 meters high, which consists almost entirely of pure salt, and where, according to Josephus, was shown Lot's wife turned to a pillar of salt (comp. Gen. xix. 29; Wisdom x. 7). Fresh water is carried to the Dead Sea only by a few rivers from the east, the most important, next to the Jordan, being the Wadi al-Mujib (the ancient Arnon). It is but natural that legends of all kinds should have become connected with so strange a natural phenomenon as the Dead Sea. The stories of the destruction of Sodom and Gomorrah may, for instance, have been based on prehistoric geological events, but the problem can not be discussed here. On the origin of the Dead Sea and the curious composition of its water compare the article Dead Sea.

The East-Jordan Country.

The northern part of the east-Jordan country has been surveyed by the German Palästina-Verein, although most of the maps and reports are as yet unpublished, while only a small section of the southern part has been surveyed by the Palestine Exploration Fund, by which maps have been issued. A description of the country on the basis of the material now accessible is merely a repetition of a few known facts. The Wadi al-Ḥaṣa (or al-Aḥṣa), the ancient Zared or Zered, forms the southern boundary, as explained above, since it is the natural dividing line between the ancient Moab and Edom (Num. xxi. 12; Deut. ii. 13; comp. verse 18). The region extending from the Wadi al-Ḥaṣa to the Wadi al-Sha‘ib may be taken together as the most southerly portion, which has a uniform character. In the Old Testament (Deut. iii. 10, Hebr.) this district is called Mishor (corresponding to the Moabitic plain), in contradistinction to the more northerly region; only the northern part of this plain was, temporarily, in the possession of the Israelites. The name correctly characterizes the nature of the country; it is a plateau, with an elevation of about 1,000 meters in the southern and 800 or 900 meters in the northern part; it slopes to the desert in the east with no sharp dividing line, although it falls steeply toward the west. Three large wadis start in the east as low rifts, but soon develop into deep chasms, with almost vertical sides where they reach the Dead Sea. These are: in the south, the Wadi al-Karak, receiving its name from the city of Al-Karak (the ancient Kir Moab), which it passes; in the north, the Wadi al-Mujib (the ancient Arnon), already mentioned, and the largest of the three; and finally the Wadi Zarḳa Ma‘in, containing the hot springs of Callirrhoe a few hours above its mouth. For details concerning the district and its cities see Moab.

The Mountain of Gilead.

The small district extending northward to the Nahr al-Zarḳa is called Jabal Jil‘ad, a form which preserves the ancient name of Gilead. The highest point of this range running from west to east lies in the western part, and is the Jabal Usha‘, 1,096 meters high, with a magnificent view over a large part of Palestine. On the west the ridge slopes down to a somewhat extensive plateau, the Al-Buḳai‘ah, about 610 meters high, with mountains of considerable altitude on its southern border. The Nahr al-Zarḳa flows at the foot of the Jabal Jil‘ad, along the northern and eastern sides and a part of the southern, since in its upper course it runs from west to east, turning with a large bend, at the southeast end of the plateau, to the north, where it descends the moderately steep northern slope of the mountains of Gilead and runs thence west to the Jordan. The district between the Nahr al-Zarḳa on the north and the Wadi al-Mujib on the south is now called Al-Balḳa.

‘Ajlun.

The district of ‘Ajlun extends north of the Nahr al-Zarḳa to the Yarmuḳ, and the ridge of the range of Jabal ‘Ajlun runs from north to south, toward which it rises. Being situated in the eastern part of the district, it forms the watershed between the streams flowing west, directly to the Jordan, and the tributaries of the Yarmuḳ. This river also rises on the eastern side of the mountains, rather far to the south, and runs as the Wadi Warran and the Wadi Shallalah for a considerable distance to the north, forming a deep bed before it turns to the west. In a small valley near the banks of the river and somewhat above the place where it leaves the mountains to enter the plain of the Jordan are the hot springs of Al-Ḥammi, 176 meters below the Mediterranean. On the east the Jabal ‘Ajlun is merged in a rolling hill-country about 12 or 15 kilometers wide, which is called Bilad al-Ṣuwait in the north and Jabal Kafkafa in the south. The steppe Al-Ḥamad adjoins it on the east. The Jabal ‘Ajlun is, on the whole, well wooded and has many springs, like the plateau, which extends west of the ridge to the steep and generally bare declivities on the Jordan.

The Jaulan.

The final portion of the east-Jordan country, the district of the Yarmuḳ, extends farther east than any other part of the cultivable strip between the Jordan and the desert, reaching to the mountains of the Ḥauran. On the north Hermon is the boundary, as already stated, while farther east the district of Jaidur separates it from the plain of Damascus. This northern portion of the east-Jordan country has never had a general name, but the following four districts, from west to east, may be distinguished: Jaulan, Al-Nuḳrah, Lajah, and Jabal Ḥauran, which differ radically from one another. The Jaulan derives its name from the ancient city of Golan (Josh. xx. 8), called Gaulanitis by Josephus, while in the Old Testament the districts of Geshuri and Maachah (Josh. xiii. 1; II Sam. x. 6, 8, etc.) correspond to it. It forms a plateau between the Yarmuḳ and Hermon; it is highest in the north, and slopes toward the south, its mean elevation being about 700 meters. Its highest points are a number of extinct volcanoes, which run in a chain parallel to the Wadi al-Ruḳḳad and include Tell al-Shaikhah (1,294 meters) and Tell Abu al-Nada (1,157 meters). Broken pieces of lava from these volcanoes cover the northern and middle portions of the Jaulan, so that the "stony" Jaulan is distinguished from the "level" Jaulan in the south. Despite its name, the stony Jaulan offers good and abundant pasture in the spring, and it is cultivated and very fertile where it is free from stones. In the level Jaulan the masses of lava have become decomposed, producing an extremely rich and dark-brown lava soil, which is found also in the Nuḳrah. East of northern Jaulan, beyond the Wadi al-Ruḳḳad and north of the Nuḳrah, extends the plateau of Al-Jaidur, whose southern slope toward the Nuḳrah is perhaps included in the Bashan of the Old Testament.

Bashan, Lajah, and the Ḥauran.

Bashan proper is identical with Al-Nuḳrah, or the plain of the Ḥauran, so called in contradistinction to the mountains of the Ḥauran. It practically corresponds to the ancient provinces of Batanæa and Auranitis, and the name Bashan (Greek Basanitis or Batanaia) designates a fertile plain free from stones. Among the Bedouins the word "nuḳrah" designates the hollow in the tent for the fireplace, and it has been given to this region on account of its sunken situation among the hills. On the references in the Bible see Bashan. The Nuḳrah, which is bounded on the east by the Lajah and the mountains of the Ḥauran, and on the south by the steppe of Al-Ḥamad, is a wide plain, gradually rising from an elevation of 550 meters in the west to 880 meters in the east, a distance of about 42 kilometers. Large perennial streams are found in the southern part, the Wadi al-Zaidi (the southern boundary toward the steppe) and the Wadi al-Dahab, rising in the mountains of the Ḥauran and emptying into the Yarmuḳ. There are few springs in the plain, but a heavy dew falls in the summer, and it is covered, moreover, by the fertile red-brown loam resulting from the decomposition of the lava from the craters of the Ḥauran, which gives a loose and easily arable soil that drinks in all moisture with avidity. The plain is famous, therefore, for its fertility, and is the granary of Syria. The wheat grown there, which is nearly transparent, brings the highest price, while barley, durrah (white maize), and "kursannah" (a food for camels) also are cultivated.

The Lajah, which borders the Nuḳrah on the northeast, is the ancient Trachonitis, a rugged, almost inaccessible plateau covered with lava from the crater of the Ghararat al-Ḳibliyyah (1,211 meters). South of the Lajah and east of the Nuḳrah rise the mountains of the Ḥauran (Jabal Ḥauran, called also Jabal Druz, or mountain of the Druses, since many Druses from the Lebanon sought refuge there in 1861). It may be the Salmon of the Old Testament (Ps. lxviii. 15 [A. V. 14] *et seq.*) and the Asalmanos of the Greeks. The Ḥauran forms a somewhat wide plateau, part of which has an elevation of 1,500 meters, but the various peaks rise considerably above it, the central and northern portions having the highest—Tell al-Jainah (1,802 meters), Jabal al-Ḳulaib (1,724 meters), Tell Juwailil (1,749 meters), and others, all of which are extinct volcanoes.

Geology.

All the mountains of Palestine are composed of chalk formations. The oldest strata, in the so-called Nubian sandstone, appear only in the fractures along the eastern edge of the Dead Sea and of the 'Arabah. Under this are sandstone and dolomitic limestone of the Carboniferous age, beneath which appears a breccial conglomerate stratified by lodes and veins of porphyrite and diorite. These are the oldest rocks of Palestine. Elsewhere the rocks which are exposed to view belong to the Cenomanian, Turonian, and Senonian divisions of the Upper Cretaceous. Frequent mention is made of the extensive basalt beds, part of which may belong to the Tertiary period, especially those which are found in the higher chalk plateaux, while those in the deep valley-plains belong to the later diluvian epoch, since these valleys were not formed until after the Dead Sea acquired its present level. No lava is found in the west-Jordan district south of the plain of Esdraelon, which, however, contains basalt from the crater of the Tell al-'Ajjul, in Al-Daḥi. North of that point basalt occurs more frequently in the eastern half, so that northeast of Tabor and between Nazareth and Tiberias there are large stretches of reddish-brown, decomposed lava, while the Ḳarn Ḥaṭṭin (see above) is a basalt peak. The Jabal Ṣafad contains the principal crater, from which immense streams of lava flowed eastward. Volcanic action is most apparent in the east-Jordan country. The northern Jaulan and the mountains of the Ḥauran contain many craters, which inundated large districts with their lava, such as that of the Lajah (see above). Basalt is also scattered over several portions of the Moabitic plain, as at Diban and the Jabal Shiḥan, while the hot springs already mentioned are also proofs of volcanic activity. This was doubtless pre-psychozoic, even in so far as the formation belongs to the late diluvian epoch. Finally, the immense diluvial deposits must be mentioned. The entire coastal plain of Sharon and the Shefelah are covered with such deposits, which extend in the south beyond Beer-sheba, although they occur also throughout the lower Jordan valley, and owe their origin to the great lake which once existed there (see above). To this must be added the alluvial dunes on the coast, and the river deposits.

There are numberless caves found in the calcareous surface of the country, the best known being those at Bait Jibrin; many of these have been artificially enlarged to serve as habitations, as was frequently the practise in remote antiquity. These caves have always been used as burial-places also.

Fertility.

The arable land varies greatly in quality. The soil produced by the decomposition of lava is fertile, though, like the plain of Al-Nuḳrah, it requires much moisture. The alluvial land of the coastal plain, being reddish sand with reddish clay, is well adapted to the cultivation of many plants, such as lemons and oranges. In the mountain district west of the Jordan the formation of humus by the decomposition of animal or vegetable matter is out of the question, and it is also inconsiderable in the east-Jordan country. A red clayey soil is formed, however, by the decomposition of the soft stone under the influence of air and moisture, and this remains wherever it finds a bed in the hollows of the rock which save it from being washed away by the rains of winter. It becomes one of the principal tasks of agriculture to retain it on the slopes by means of terraces and walls. This soil, which constitutes the principal element, repays cultivation where it has sufficient water, although it is only moderately productive, for Palestine has never been a very fertile country. In the mountains of Judah wheat generally produces a double or treble crop in the year; but there the land is very level and dries out quickly. Under favorable conditions wheat produces fourfold and barley fivefold in fertilized soil; indeed, in the rich, fertilized, and well-cultivated soil of the plain of Sharon (in the German colony of Sarona) wheat produces on the average an eightfold and barley a fifteenfold crop. The reference to "a land flowing with milk and honey" does not allude to the fertility of the soil, but to a country with good pasturage for cattle, the land, probably, not being cultivated in antiquity at all (comp. Isa. vii. 15, 21–25).

Map of Palestine According to Talmudic Sources.

Unknown treasures may be hidden below the surface, for in this respect the country has not yet been sufficiently explored. Traces of an old iron-mine, Mugharat al-Wardah, have recently been found in southern 'Ajlun. Phosphates of a high percentage exist in the plateau of the east-Jordan country, and are about to be exploited. The mineral treasures of the Dead Sea are also under consideration; for this body of water occasionally throws out large masses of asphalt, many pits of which exist also in the desert of Judah, as well as deposits of mineral salt, sulfur, and chalk phosphates. The water of the Dead Sea holds in solution chlorate of potassium, chlorate of magnesium, bromid of magnesium, and iodid of potassium.

Palestine is deficient in water in that the arable land has not a quantity sufficient for its productive capacity. Much water is completely lost, as far as irrigation is concerned, especially in the case of the few perennial streams. Why this is so in the case of the Jordan has been shown above.

Irrigation. The streams of the coastal plain, as the Nahr al-'Auja, Nahr al-Zarka, and Kishon, run through a low country which requires no artificial irrigation, since there is everywhere sufficient water underground, and in places a superabundance, resulting in swamps (see above). The same statement applies to the springs, which on the whole abound in Palestine, although there are only a small number in some parts of the country. In general, there are fewer in the south than in the north; the Negeb is a dry region, but there are numerous large springs in the vicinity of Mount Hebron. There are very few in the immediate vicinity of Jerusalem, but Nablus is well supplied with them, and Galilee, like the east-Jordan mountain district, does not lack water. The springs generally emerge from the ground at the foot of the mountains, and are, therefore, unavailable for the mountain slopes, on which the greater part of the arable land is situated. The ruins of dams in the valleys show that attempts were made here and there in olden times to collect this water in reservoirs, but now scarcely anything is done in this direction, so that farmers and fields are entirely dependent on the yearly rainfall. If sufficient rain does not fall in time many of the springs dry up, and the land can not be properly cultivated; the crops wither, there is no harvest, and a general scarcity of grain results, so that the price of bread is closely connected with the rainfall.

Most of the hot springs have been mentioned above: those of Tiberias (58–63° C.), those in the valley of the Yarmuḳ (25-48° C.), and those of Callirrhoe, in the Wadi Zarḳa Ma'in (62.8° C.). There are also some hot springs where this river empties into the Dead Sea. Numerous other springs with lukewarm water seem to be thermæ that are gradually losing their heat. As all these springs are in the vicinity of the great rift of the Jordan, their origin must be connected with that of the rift.

Climate.

Climatically, Palestine is divided into three zones: the subtropical zone of the coast, the continental mountain district, and the tropical Jordan valley. In general there are only two seasons, the summer season, dry and hot, and the winter season, cool and rainy. They follow each other abruptly, the European and American spring being represented only by a few weeks following the close of the rainy season. Rain is rare as late as the second half of May, and no rain whatever falls between June and September. The rainy season sets in at the end of October, or, more frequently, in November. It begins with the "first rain" of the Old Testament (Deut. xi. 14 *et al.*), which loosens the dry earth for plowing. Then, after a period of mild weather, the heavy winter rains set in, toward the middle of December, soaking into the ground and filling the wells and cisterns. They are heaviest in January. The "latter rain," in March and April, promotes the growth of the grain. The crops depend not only on the quantity but also on the proper distribution of rain. The most profuse latter rain will not compensate for a lack of the early and the winter rains; and, conversely, the latter rain is necessary, even after abundant winter rains, to enable the growing crops to withstand the warm days of the early summer. The mean duration of the entire rainy season for Jerusalem is 192 days (the longest, 217; the shortest, 126); the mean rainfall is 581.9 millimeters during 52.4 days of rain. The vegetation withers early in the summer, since the dry season coincides with the hot, although the ill effects are somewhat modified by the heavy dews caused by the moist sea-winds. Snow frequently falls in Jerusalem during the winter, though it melts quickly, and occasionally there is hail. At Jerusalem the mean temperature is 17.2° C.; the highest temperature recorded is 44.4°, and the lowest —4°. Between the months of March and May the thermometer rises quickly from 11.8° to 20°, falling as rapidly to 11° between October and December. The great variations in a single day are characteristic, amounting on the average to 12.95° in the summer and 8.7° in the winter. The changes in the east-Jordan country are greater still.

Winds.

The principal winds are the trade-wind and the antitrade-wind. The former blows in the Mediterranean countries in the summer, from a northerly and northwesterly direction, and as it comes from cooler latitudes it is a dry wind; hence Jerusalem is swept between May and October for the most part by dry, cool winds coming from the north and northwest. In the winter the antitrade-winds prevail in the region of the Mediterranean, bringing rain; so that Jerusalem gets its rain-winds from the southwest and west. The regular alternation between sea-winds and land-winds is another important factor. During the day the calcareous mountains get heated much more quickly than the sea, so that the cooler lower strata of the air are blown toward the land, where the hot air rises. The reverse takes place at night, and the entire process is repeated on a larger scale in the summer and winter. Thus in the summer a light sea-wind rises every morning about nine or ten o'clock, reaches Jerusalem about noon, and blows until after sunset, when the cooler land-wind sets in. This daily sea-wind is highly important for men, beasts, and plants. At Jerusalem the cool north and northwest winds blow on an average during 114 days, and the west winds, which bring rain, blow during 55 days. The less frequent south wind is warmer. The east wind is dry; while it is welcomed in the winter, it is dreaded in the summer on account of its heat and parching effect. The southeast wind, the sirocco, which often blows for several days in succession, especially in May and October, is destructive. At such times there is an oppressive sultriness; the air is filled with fine dust, drying up the mucous membrane of the bronchial tubes and causing lassitude, headache, and even fever. If it sweeps through fields of growing grain in the spring it often withers them completely (comp. Jer. xviii. 17; Ezek. xxvii. 26; Job i. 19, xv. 2).

The climate of the coastal plain is warmer, the mean temperature being 20.5° C., but this region also gets more of the fresh sea-wind, and the number of rainy days as well as the quantity of rain is also larger, while less rain falls in the Jordan valley and no snow falls at Jericho. The mean temperature is estimated theoretically at about 24° on the northern shore of the Dead Sea, which nearly corresponds to the tropical heat of Nubia. In the Jordan valley the harvest begins between three and four weeks earlier than in the mountains, but there are no reliable records for any length of time for that district.

It is frequently asserted that the climate has changed within the historic period, and as the fertility of the country in former times is often mentioned, more favorable natural conditions must be assumed to have existed. All the references of the Old Testament, however, which bear on this question apply exactly to modern climatic conditions, and even if there were then more forests than at present, as is frequently asserted, this could not have been the case to an extent great enough materially to influence the climate.

Flora.

On account of the diversity of its topographic and climatic conditions Palestine is rich in the variety of its flora. Three plant-zones may be distinguished. (1) The vegetation of the coast region and the west-Jordan mountain district is most closely related to that of Italy, Sicily, Greece, Algeria, etc., the so-called flora of the Mediterranean. It is characterized by a number of evergreen shrubs, and of vernal herbaceous plants which wither quickly. There are also orange-, lemon-, olive-, and pine-trees, oleanders, myrtles, anemones, hyacinths, and tulips. (2) The subtropical flora of the Jordan valley recalls that of Abyssinia and Nubia. Peculiar to the Jordan valley are the 'oshr (*Calotropis procera*), bearing the true apple of Sodom; the false apple of Sodom (*Solanum sanctum*); the seyal acacia (*Acacia Seyal*; abounding also on Sinai), from which gum arabic is obtained; the zachun (oil-tree; *Balanites Ægyptiaca*), a thorny shrub with edible berries; the rose of Jericho (*Anastatica Hierochuntina*), which no longer grows in Jericho, but only at Masada; and the sidr- and nubk-trees (*Zizyphus lotus* and *Zizyphus Spina-Christi*) with their great thorns. The true African papyrus (*Papyrus antiquorum*) is also found at Lake Tiberias and Lake Ḥulah. (3) The Oriental steppe and desert vegetation is found especially in the Negeb and along the frontier of the cultivated region in the east-Jordan country, as well as on the eastern slopes of the west-Jordan district. Characteristic of this flora are the comparative lack of trees, the preponderance of small, thorny shrubs (*Poterium*), the wealth of species of astragalus (small, thorny plants), and of peculiar species of the thistle (*Cousinia*) in the summer, as well as of the quickly fading, brilliant little spring plants. On the fruit-trees, which are found in small groves at nearly every village, see Fig and Fig-Tree; Horticulture; Olive. Real forests are seen only in the east-Jordan country; the forest-trees, which are found but seldom and then in small groves in the west-Jordan district (at Mount Carmel and at Tabor in Upper Galilee), include several species of oak, the terebinth (*Pistacia Terebinthus*; Arabic, "buṭun"), and more rarely the cypress (*Cupressus sempervirens*), the Aleppo pine (*Pinus Halepensis*), and the wild St.-John's-bread-tree (*Ceratonia Siliqua*; Arabic, "kharrub"). Most of these species occur merely as bushes, since the goats which pasture in these "forests" do not allow the trees to attain full size. On the field and garden plants see Horticulture.

Fauna.

The fauna is no less varied; there is scarcely any other region of equal size in which so many different kinds of mammals may be found as here. Northern Palestine, together with Syria, belongs to the Palearctic region, while southern Palestine forms part of the Ethiopian region (Sinai, Egypt, Nubia). The approximate boundary-line runs from the southern edge of Carmel to the southern shore of the Lake of Tiberias. As some species overlap from one region to the other, there is a narrow, mixed district, while in both there are importations from the Indo-Mesopotamian zone. Representative of the Palearctic region are the deer, buck, snow-mouse, field-mouse, marmot, dormouse, polecat, ermine, stone-marten, badger, bear, and others; while characteristic of the Ethiopian fauna are the African mouse, jerboa, running mouse, fat sand-mouse (*Psammonis obesus*), and *Eliomys melanurus*; among the hares the *Lepus sinaiticus* and *Lepus ægypticus*; the rock-badger (*Hyrax syriacus*), a species of ibex (*Capra beden*), the gazel (*Gazella dorcas*), the desert-cat (*Felis manicalata*), the leopard (*Felis pardus*), the Nile fox (*Vulpes niloticus*), and the ichneumon (*Herpestes ichneumon*). The Indian fauna is thought to be represented by a species of field-rat, and the wolf, jackal, and hyena of Palestine are also supposed to be related to the Indian fauna. On the domestic animals see Ass; Cattle; Dog; Horse; Mule; etc.

Most of the birds belong, probably, to the Palearctic region, although there are many species of the Ethiopian and a few of the Indian region. The ornithological wealth of Palestine may be due to the fact that many migratory birds pass over the country in their flight. Among the reptiles 33 species of snakes and 44 of lizards are enumerated by Tristram. The African crocodile is found in the swamps of the Crocodile River, as already noted, and one was killed as late as 1901. The Lake of Tiberias and the Jordan abound in fish, of which Tristram enumerates 43 species; in the former, curiously enough, some exist that otherwise are found only in the Nile (*Chronus niloticus* and *Cerrias macrocanthus*). There is a superabundance of insects: flies, gnats, fleas, spiders, scorpions, etc., and more than 40 species of locusts. See Insects.

Political Geography.

The names given to Palestine by the Egyptians and Assyrians have already been enumerated, but a number of additional place-names are found in the Egyptian lists of Thothmes III., Rameses II., Shoshenḳ (the Shishak of the Bible), and Sethos I., including those of Megiddo and Taanach, Sharon, Beeroth, Ashtaroth, Joppa, Lod, Ono, Soco, Negeb, and many others. The boundaries of the Israelitic settlement have been mentioned above, as well as the division of the country in the Israelitic time and the names of the different divisions. The extent of the Jewish territory immediately after the return from the Exile was a very limited one. Its detailed discussion belongs to the history and not to the geography of the country, and the same statement holds true regarding the history of the enlargement of its boundaries under the Hasmoneans.

At the beginning of the present era Palestine was divided into the following districts: (1) Judea (with Idumea); (2) Samaria, extending from the southern boundary of Judea to the southern edge of the plain of Esdraelon; (3) Galilee, including the plain of Esdraelon; (4) Perea, the east-Jordan country, to the district of Jarash (Gerasa) and 'Amman (Philadelphia) in the east, and from the Wadi al-Mujib (Arnon) in the south to Khirbat Fahil (Pella) in the north; (5) the districts of the tetrarchy of Philip, comprising Gaulanitis (Jaulan), Batanea (Al-Nuḳrah), Trachonitis (Al-Lajah), and Auranitis (the mountains of the Ḥauran). The Hellenistic cities in the east-Jordan district (Damascus, Gerasa, Philadelphia, and others), together with Scythopolis (Baisan), were combined under the name of Decapolis. See Galilee; Samaria.

After the revolt of 66-70 the country became the Roman province of Judea under a pretorian prefect; and Hadrian gave it the name of Syria Palæstina after the insurrection of 132-135, when it was placed under a consular legate. The boundaries of this district varied, especially the line separating it from the province of Arabia, which had been formed by Trajan from the country of the Nabatæans. Septimius Severus (193-211) or Diocletian (285-305) incorporated Philadelphia, Gerasa, and other cities of the east-Jordan district with Arabia; but for a time Petra was united with Palestine, until it became, in 358, a separate province under the name of Palæs-

THE NEGEB
EDOM

tina Salutaris, including the Negeb and the country south of the Dead Sea. In the fifth century there were the following provinces: (1) Palæstina Prima (capital Cæsarea) = Judea and inland Samaria; (2) Palæstina Secunda (capital Scythopolis) = Judea and Perea; (3) Palæstina Tertia, or Salutaris (capital Petra) = the Negeb and the east-Jordan country south of the Arnon; (4) Phenicia Maritima (capital Tyre) = the coast region; (5) Phenicia ad Libanum (capital Emesa) = Cœle-Syria and the region of the Lebanon, together with Damascus and Palmyra; (6) Arabia (capital Bostra), the region of the Ḥauran, in the south.

Present Divisions.

In 636 the calif Omar divided Syria into five military districts, of which Filisṭin included the west-Jordan country as far as the plain of Esdraelon; Al-Urdunn (the Jordan) included Galilee and the Jordan valley; and the district of Damascus included the east-Jordan country. The discussion of the formation of small principalities under Turkish rule belongs to history. The country is now divided into the following administrative districts: (1) the vilayet of Beirut, comprising the territory between the sea and the Jordan, extending about as far south as Jaffa, and including the districts of Nablus and Acre; (2) the independent district of Jerusalem, directly under the Ottoman government, and including the remaining portion of the west-Jordan country; (3) the vilayet of Damascus, embracing the entire east-Jordan country and including the district of the Ḥauran (capital Shaikh Sa'd), which extends to the Nahr al-Zarḳa, and the district of Ma'an (capital Al-Karak). For the Medeba mosaic see MEDEBA.

BIBLIOGRAPHY: A bibliography from the fourth century to 1877 is given by R. Röhricht, *Bibliotheca Geographica Palæstinæ*, 1890, and for the following years in the annual bibliographies of the *Z. D. P. V.* (1878 to 1896) and the *Rev. Bib.* (1892 *et seq.*).

Explor. Fund*), 1889.

Works on geology, botany, zoology, climate: O. Fraas, *Aus dem Orient*, 2 vols., 1867-78; C. Diener, *Libanon*, 1886; Ed. Hall, *Memoir on the Physical Geology and Geography of Arabia Petræa, Palestine, and Adjoining Districts* (part of the *Survey of Western Palestine*); Celsius, *Hierobotanicon*, 2 vols., 1845-47; Edm. Boissier, *Flora Orientalis*, 5 vols. and Supplement, 1867-88; I. Löw, *Aramäische Pflanzennamen*, 1881; Leo Anderlind, *Die Fruchtbäume in Syrien*, in *Z. D. P. V.* 1888; G. E. Post, *Flora of Syria, Palestine, and Sinai*, 1896; H. B. Tristram, *Natural History of the Bible*, 3d ed., 1889; idem, *The Fauna and Flora of Palestine*, 1884 (part of the *Survey of Western Palestine*); H. Chichester Hart, *Some Account of the Fauna and Flora of Sinai, Petra, and Wady Araba*, 1891 (part of the *Survey of Western Palestine*); S. Bochart, *Hierozoicon*, 3 vols., 1792-96; L. Lewysohn, *Zoologie des Talmuds*, 1858; J. G. Wood, *Bible Animals*, 1883.

Maps: *Map of Western Palestine*, in 26 sheets, scale 1 inch (*Pal. Explor. Fund*, 1880; also reduced to ⅜-inch scale, 1881). Partial maps of the country east of the Jordan are contained in *Survey of Eastern Palestine* and in the works of Schumacher.

J. I. BE.

——**Modern Commerce:** West of the Jordan, around Jaffa, the main products of Palestine are grapes and oranges, and, in the vicinity of Safed, olives and olive-oil. Grain is produced principally in the south, Gaza being the center of the barley country, and in the Ḥauran district, east of the Jordan, which is the center of the wheat-producing territory. Grain production is still in the hands of the native Arabs with their ancient mode of cultivation and lack of proper milling facilities. Consequently, though Ḥauran wheat is considered among the best in the world, it does not make fine flour, which must be imported from Russia and America. "Durrah," a kind of maize, and "ḥimmiṣ," a species of pea, are easy to cultivate and are largely exported. Palestinian olives and olive-oil are equal, if not superior, to the Italian products, but the growers lack facilities for purifying the oil and extracting its "bitterness."

Fruit Produce.

Sesame (שומשמין), which produces a sweet-oil, is much appreciated by the natives, and is exported in large quantities to France. Cucumbers, tomatoes, and watermelons are exported to Egypt. The largest item of export is oranges from the groves at Jaffa. From Oct., 1898, to April, 1899, 338,000 boxes (containing about 50,000,000 oranges) were exported, of which England received 278,000 boxes. The average price in that year was $1.25 per box of 100 to 160 oranges. The orange export trade developed immediately upon the establishment of direct connection with Liverpool in 1892.

Wines and Cognac.

The center of viticulture was Hebron, where the oldest and best wines are still found; but since the Jewish colonies were established the center of that industry has been removed to Rishon le-Ẓiyyon, near Jaffa, where the Rothschild wine-presses are located. The export of wines and cognac is chiefly from the Rothschild vineyards. The Palestinian wine received the gold medal at the Paris Exposition of 1900. The high quality of the wine (mostly "Sauterne," "Malaga," and "Muscatel") and cognac from Palestine is evidenced by their increasing exportation, in the last few years, to various parts of the world.

The colocynth-plant (in Arabic, the "ḥanṭal") is a bitter apple, and its dried pulp is used as a purgative, also in the brewing of beer and for other purposes. The colocynth grows wild and abundantly on the plains between the mountains and the shore of the Mediterranean. The plant is sold in Gaza and Jaffa, where it is peeled, the pulp being dried in the sun and then closely packed in boxes for shipment, generally to England. The average annual export from Jaffa is 10,000 pounds; the price being about 30 cents per pound, on board, at Jaffa. The trade in honey has been developed by the Baldenberger family since 1880, at Ramlah, near Jaffa, where the bees have the benefit of the orange- and lemon-trees and of the wild thyme. Good markets are found in Germany, Switzerland, and England for all the honey produced.

Wool, Silk, and Soap.

Apart from the agricultural products, Palestine is suited for raising cattle and sheep, though the export of animals is now prohibited by the Turkish government. The principal grazing-places are near Hebron, Nablus, and Gaza, and in the Moabite countries across the Jordan. The sheep are all of the Barbary, broad-tailed variety. The fleece averages about five pounds per head, and is valued, unwashed, at about eight cents per pound. In 1900 the export from Jaffa reached 166,000 kilos (365,000 pounds) of wool. Very little of the wool is utilized for domestic purposes, as nearly all the weaving in Palestine is done on hand-looms. Waterproof cloaks called "'abayah" are made for the peasants' wear; the garment has black-striped borders and resembles the tallit. The Jewish Colonization Association has established a weaving-factory at Jerusalem, and in 1901 introduced a process of dyeing.

The silk produced in northern Palestine (Syria) exceeds 5,000,000 pounds and is exported via Beirut. A factory has been established at Rosh Pinah colony (near Safed) for the manufacture of silk floss, and there are several looms for silk ribbon. The factory buys the cocoons at about 30 cents each from the colonists in the neighborhood. The silk is shipped to Marseilles and Lyons.

Another article of export is soap, made chiefly at Nablus. Mrs. Finn, representing an English society, introduced into Jerusalem the manufacture of soap from olive-oil by the Yemenite Jews. The product is exported to England. The manufacture of sacred mementos from mother-of-pearl and bituminous limestone is conducted by Christian Arabs at Beth-lehem. But the carving of olive-wood and the pressing of flowers upon cards in the bazaars of Jerusalem are nearly all done by Jews. Most of the mementos of a Christian character are exported to England and America. In 1902 this export amounted to nearly $20,000. Beirut is next to Jaffa in importance as a seaport. One firm at Beirut is exporting to the United States over $1,000,000 worth of merchandise annually, mostly olive-oil and licorice-root. The Turkish duty on exports is 1 per cent and on all imports 8 per cent.

The principal hindrance to the development of Palestinian commerce comes from the Turkish government, in local taxation, the indirect exactions of the Turkish officials and neighboring sheiks, and the irades against all electrical appliances. Another drawback is the want of railways, the Jaffa-Jerusalem and Beirut-Damascus-Ḥamah-Muzerib railways being the only lines in operation.

Principal Articles of Import and Export at Jaffa During 1898–1902, as Reported by the British Consul.

Palestine is rich in minerals, as of old (Deut. viii. 9). There are asphalt-mines in the vicinity of Ḥasbaya, salt deposits in the Dead Sea, and phosphate deposits on either side of the Jordan. There are opportunities also for the cultivation of the sugarcane near Jericho, in the valley of the Jordan, where there are still found some ruins of ancient sugar-mills and where the soil is well suited for this purpose. The same soil may be cultivated for cotton and tobacco. Lately, experiments have been made by the Jewish colonists in planting tobacco, in which they have met with some success. See AGRICULTURAL COLONIES IN PALESTINE; AGRICULTURE.

J. J. D. E.

PALESTINE, HOLINESS OF: The sacredness of Palestine in the esteem of the Jews is partly accounted for by the fact that it was the cradle and sepulcher of their Patriarchs and their "Promised Land." Moreover, many of the Mosaic laws could apply to Palestine only, and the holiness of these laws was largely reflected on the Holy Land. Palestine was distinguished as "a land which the Lord thy God cared for: the eyes of the Lord thy God are always upon it" (Deut. xi. 12). God calls it "my land" (Joel iii. 2). The term "holy land" is mentioned only once in the Bible (Zech. ii. 12). In rabbinical literature Palestine is generally known as "Ereẓ Yisrael" (Land of Israel). "Ereẓ ha-Ḳedoshah" (The Holy Land) is used more as a poetical expression. The Mishnah says, "Palestine is the holiest of all countries" (Kelim i. 6).

Duration of Holiness.

From a legal standpoint, however, this holiness ceased with the destruction of the Temple and the dispersion of the Jewish people. Ezra resanctified Palestine on his return from Babylon; but whether or not the sanctification of Ezra continued after the Second Temple was destroyed is a moot question in the Talmud ('Eduy. viii. 6; Mak. 19a; Ḥul. 7a; 'Ar. 32a; Niddah 46b), and upon its solution, in exilic times, rested the validity of many obligations pertaining to tithes, the Sabbatical year (see SHEMIṬṬAH), etc. From a sentimental standpoint, however, the sacredness of Palestine never varied. "The Holy Temple built or destroyed, the Shekinah never moved from that place, as God promised at the dedication of the Temple: 'Mine eyes and my heart shall be there perpetually'" (I Kings ix. 3).

The angels that guarded Jacob in Palestine were of a higher order than those elsewhere. The angels, it is said, used to change guard at Mahanaim (Gen. R. lxviii. 18). To be driven out of Palestine means, "Go, serve other gods" (I Sam. xxvi. 19; Ket. 110b). R. Simeon b. Yoḥai said, "Elimelech, Mahlon, and Chilion were the foremost men and leaders in Israel, and the only sin for which they were punished was their sin in leaving Palestine in time of famine" (B. B. 91a).

One must not speak ill of Palestine. The wicked King of Assur merited the title "the great and noble Asnapper" (Ezra iv. 10) because he refrained from abusing the Holy Land, and held it in as much esteem as Babylon, when he said, "I [will] come and take you away to a land like your own land" (II Kings xviii. 32; Sanh. 94a).

Rewards of Residence.

Veneration and love for Palestine were maintained by the Rabbis in many ways. R. Johanan declared that one who walks a distance of 4 cubits in Palestine may be confident of a share in the future world (Ket. 111a). "The merit of living in Palestine equals the merit of observing all the commandments." It is told of R. Eleazar b. Shammua' and R. Johanan ha-Sandalar, who had decided to leave Palestine to study under R. Judah b. Beterah, that they had gone only as far as Sidon when the thought of the sanctity of Palestine overcame their resolution, and they shed tears, rent their garments, and turned back (Sifre, Deut. 80). R. Ḥiyya b. Gammada showed his devotion by rolling himself in the dust of Palestine, in conformity with the words of the Psalmist: "For thy servants take pleasure in her stones, and favor the dust thereof" (Ps. cii. 14). R. Jose ben Ḥanin kissed the stones of Acre, saying, "Up to this point is the land of Israel." R. Ze'era went through the waters of the Jordan without removing his garments (Yer. Shebu. iv. 9). As a mark of reverence this is done to-day also by devout Christian travelers in Palestine, who immerse themselves in the Jordan dressed in shrouds.

Reaction.

This ardent love for Palestine had certain disadvantages, inasmuch as it tended to bar emigration and limit the area of Jewish learning instead of diffusing it in other countries. Opposed to this tendency was the fact that the Jewish persecutions in Palestine for centuries after the destruction of the Temple made it so difficult for the Rabbis to maintain their position that many were compelled to remove to Babylon, which offered them better protection (comp. Pes. 87a). Under these circumstances the Babylonian rabbis found it necessary to counteract the ardor and high regard for Palestine. Judah thought "living in Babylon is like living in Palestine." He even declared it to be a transgression to return to Palestine, and quoted Jer. xxvii. 22 (Ket. 110b).

The revival of the feeling of reverence for Palestine is principally due to Naḥmanides and R. Jehiel of Paris, who left Europe to settle there in the thirteenth century. They were followed in the sixteenth century by the rabbis Alshech, Caro, and Luria, and, still later, by the disciples of Elijah of Wilna and Ba'al Shem-Ṭob. Zionism is a modern development of the ancient regard for Palestine.

Jewish liturgical literature comprises many poems on the holiness of Palestine. Among these are: "Ẓiyyon ha-Lo Tish'ali," by Judah ha-Levi (12th cent.); "Ereẓ ha-Ḳedoshah Yeḳarah Ḥamudah," by Abraham Selamah (1540); "Ereẓ Asher Adonai Eloheka Doresh," by Shabbethai Cohen (1622-63); "Ereẓ Yisrael Hayu Bah 'Eser Ḳedushshot," by Abraham Abele (1655-92; Zunz, "S. P." *passim*). A collection of Palestinian national songs, ancient and modern, under the title "Kinnor Ẓiyyon," was published in Warsaw in 1900.

The holiness of Palestine attracted Jewish settlers, not only to live, but to die there. R. Anan says, "To be buried in Palestine is like being buried under the altar" (Ket. 111a). All sins are considered absolved for the Jew who is buried in Palestine, according to the saying, "His land will absolve His peo-

Burial in Palestine.

ple" (Deut. xxxii. 43, Hebr.). Even Jeroboam, the most wicked king of Israel, is to be freed from Gehinnom and resurrected when the Messiah comes, solely because of his having been buried in Palestine (Pesiḳ. R. 81a; Yer. Ket. xii. 3). Palestine is named "Ereẓ Ḥayyim" (the land of the living; Ezek. xxvi. 20). R. Eleazar based on this his assertion that the dead will not be resurrected outside of Palestine, but that a subterranean passage will lead the righteous who die elsewhere into Palestine, where they will arise (Ket. *ib.*). The cabalists claim that the resurrection in the Holy Land is to precede the resurrection elsewhere by forty years. It is for this reason that some earth or sand from the Holy Land, generally from Mount Olivet, in Jerusalem, is spread over the dead when buried outside Palestine; this is called "terra santa" by Sephardim. The author of Midrash Talpiyyot (*s.v.* "Ereẓ Yisrael") says: "I heard that Palestinian dust put on the eyes, navel, and between the legs of the dead outside the Holy Land is equivalent to burying the body in Palestine." The custom of importing dust from Palestine for this purpose is in vogue among the Orthodox Jews all over the world, including America.

It is recorded of a number of great men who died outside Palestine that, either by their expressed will or to do them honor, they were disinterred and reburied in Palestine; for example, R. Ḥuna (M. Ḳ. 25a) and 'Ula (Ket. *ib.*). A special provision permits disinterment for the purpose of reinterring in the Holy Land (Shulḥan 'Aruk, Yoreh De'ah, 363, 1). The Talmud, however, declares that "there is a difference between being absorbed in the soil of Palestine when alive and after death." The Zohar is even more severe on this point. "It is a great privilege," said R. Judah, "for one to take up his abode in the Holy Land" ("Ar'a Ḳaddisha"), as he draws the dew of heaven dropping on the earth. One who is bound to the Holy Land when alive is destined to be bound to the higher Holy Land after death; but of one who dies elsewhere and has his body brought back to Palestine, the Scriptures say, "Ye defiled my land, and made mine heritage an abomination" (Jer. ii. 7): "Inasmuch as his soul is left in a strange place while his body is in a holy place, thus making the holy common and the common holy" (Zohar, Aḥare Mot, p. 72b, ed. Wilna, 1882). Since the sixteenth century the holiness of Palestine, especially for burial, has been almost wholly transferred to four cities—Jerusalem, Hebron, Tiberias, and Safed. See also HALUḲḲAH; PILGRIMAGE; ZIONISM.

PALESTINE, LAWS AND CUSTOMS RELATING TO:

Special laws, operative only in the Holy Land, are called "miẓwot ha-teluyot ba-areẓ," and may be classified as follows: (1) Laws that were in force at the time of the Temple ("bi-zeman habayit") and in connection with the Temple service. These relate to: the paschal lamb at the Passover festival; the bringing of the first-fruits to Jerusalem; the pilgrimage three times a year; the test applied to the wife suspected of faithlessness ("soṭah"); all the sacrifices, and the priestly Levitical services. (2) Laws in connection with Jewish civil and military government, as those relating to the king, to covenants with foreign countries, to taking the census, and to military affairs. (3) Laws concerning the products of the land: the heave-offering for the priests; the tithes to the Levites; the poor man's right to the gleanings, the forgotten sheaf, and the unreaped grain in the corners of the field; the use of young trees (prohibited during the first three years); the mixing of different kinds of vegetables (kil'ayim); the Sabbatical year. (4) Health laws: the quarantine regulations; the defilement and purification of persons, dwellings, and garments, and their examination by a qualified priest. (5) Laws connected with the functions of the Sanhedrin in the Jewish state: the ordination ("semikah"); the sanctification of the new moon, and the arrangement of the calendar; the laws of the jubilee, and the blowing of the shofar on Yom Kippur to announce the jubilee; the laws of Jewish servants; the right to sell a thief should he fail to make restitution for his theft; the regulations for the cities of refuge; corporal punishments and fines (capital punishment ceased seventy years prior to the destruction of the Second Temple, owing to the encroachments of the Roman rule, which began to assert its influence in Judea).

Rabbinical Distinctions.

After the destruction of Jerusalem all the special laws of Palestine became obsolete according to the strict interpretation of the Mosaic law, but the Rabbis, desiring to maintain some distinction between the Holy Land and the rest of the world, and for other reasons stated below, kept in force some of the special laws. These are recognized as "mi-de-Rabbanan" (by virtue of the Rabbis) in contradistinction to "mi-de-Oraita" (by virtue of the Mosaic law).

Those of the laws of Palestine that were extended after the Exile were originally enacted for the purpose of protecting the judicial administration and economic interests of Palestine, and with a view to encourage settlement there. Hence the semikah was still left in the hands of the Palestinian judiciary, with power to inflict the penalties of stripes and fines, and to announce the day of the new moon on the evidence of witnesses. But the power of the Sanhedrin was of short duration in consequence of incessant persecution, which drove the Talmudists to Babylon. The fixed calendar was then accepted everywhere, yet there still remained the difference between Palestine and the rest of the world as to the observance of the second day of holy days (see CONFLICT OF LAWS).

Furthermore, in Palestine during Purim the scroll of Esther was read on the 15th of Adar as had been done in Shushan (Esth. ix. 18, 19), instead of on the 14th, as was the practise in the walled towns that remained from the time of Joshua (Meg. i. 1, 2b).

If a Gentile living in Palestine claimed to have been converted to Judaism his claim was valid; but the same claim made by a Gentile living abroad was accepted only when corroborated by witnesses (Gerim iv.; Yeb. 46b). Similarly, a divorce signed by witnesses in Palestine was valid on prima facie evidence; but such a writ abroad was not valid unless verified by the oral testimony of the signing witnesses before the rabbinate, that "it was written and signed in our presence" (Giṭ. i. 1).

Agricultural Restrictions.

As economic measures for Palestine, the Rabbis prohibited the exportation of provisions which are necessaries of life, such as fruits, wines, oils, and firewood, and ordered that these provisions should be sold directly to the consumer in order to save to the purchaser the middleman's profit (B. B. 90b, 91a). Another ordinance was directed against the raising of small stock, as sheep and goats, in Palestine, except in woods or barren territory, in order to preserve the cultivated lands from injury (B. Ḳ. 49b).

To secure an adequate supply of servants in Palestine, the Mosaic law providing for the freedom of a servant who had fled from his master (Deut. xxiii. 15) was made applicable to a servant escaping from other lands to Palestine, but not to a servant escaping from Palestine (Giṭ. 43a; 'Ar. 49b).

For the benefit of settlers it was decreed that the owner of a town in Palestine must leave a public thoroughfare on all four sides of the town, and that a Jew about to purchase real property from a Gentile in Palestine may have the contract drawn up on Sabbath to facilitate and bind the bargain, though such a proceeding is prohibited in other lands (B. Ḳ. 80a, b). Residence in Palestine is regarded as becoming immediately permanent. For example: A rented dwelling outside the Holy Land need not have a mezuzah during the first thirty days, as the tenancy is considered temporary for the first month; but in Palestine the posting of the mezuzah is immediately obligatory (Men. 44a).

Settlement in Palestine.

The regulation of migration to and from Palestine had in view the object of maintaining the settlement of the Holy Land. One must not emigrate from Palestine unless the necessaries of life reach the price of a "sela'" (two common shekels) for a double se'ah-measure of wheat, and unless they are difficult to obtain even then (B. B. 91a). A husband may compel his wife, under pain of divorce, to go with him and settle in Palestine, but he can not compel her to accompany him to another country. The wife has the same right to remove to Palestine, and she may demand a divorce if her husband refuses to follow her (Shulḥan 'Aruk, Eben ha-'Ezer, 75, 4).

Besides these legal variations there were many differences, especially in the early periods, between Jewish practises in Palestine and in Babylon (sometimes called "the East"). The differences are fifty in number according to one authority, and fifty-five according to another. The most important ones are as follows:

(1) The fast-day after Purim in memory of the persecution of the Jews in Alexandria by the Greek general Nicanor prior to his defeat by the Maccabeans was observed in Palestine only (Soferim xvii. 4).

(2) The cycle of the Pentateuch reading, which in Palestine was completed in three or three and one-half years, was elsewhere completed in one year, on Simḥat Torah.

Minhagim.

(3) In Palestine one of the congregation was honored in being permitted to take the scroll from the Ark, and another was similarly honored in being permitted to return it to its place ("hoẓa'ah" and "hakna-sah"): elsewhere it was considered an honor only to restore the scroll to the Ark.

(4) In Palestine the "kohanim" who blessed the people covered their heads with the ṭallit: elsewhere they did not.

(5) In Palestine the ḥazzan and reader faced the Ark: elsewhere they faced the congregation.

(6) In Palestine seven persons constituted "minyan" for ḳaddish and barakut: elsewhere no less than ten persons were required.

(7) In Palestine the Sabbath was announced every Friday afternoon by three blasts on the shofar: this was not done elsewhere.

(8) In Palestine no one touched money on the Sabbath: elsewhere one might even carry money on that day.

(9) In Palestine the nuptial ceremony was distinguished by the sanctification of the ring given by the groom to the bride. In Babylon the ring "was not in sight" (this phrase is ambiguous, and some interpret it as meaning that the presentation of the ring occurred not in public at the synagogue, but in private [see "Sha'are Ẓedeḳ," responsum No. 12]).

(10) In Palestine the law that a widow should not be permitted to marry within twenty-four months after her husband's death if when he died she had a suckling babe, for fear she might commit infanticide, was enforced even if the child died within that period; in Babylon she was permitted to marry within that time if the child died.

(11) In Palestine mourning was observed for any infant: in Babylon, not unless it was older than thirty days.

(12) In Palestine a pupil was permitted to greet his teacher with "Peace to thee, master": in Babylon, only when the pupil was first recognized by his teacher.

Another difference between the Palestinian and the Babylonian school was in the degrees of confidence shown in supernatural remedies and charms; these occur much less frequently in the Jerusalem Talmud than in the Babylonian. In particular, the Palestinians did not believe in the apprehension of danger from the occurrence of even numbers, known as "zugot" (Pes. 100b).

PALESTINIAN TALMUD. See TALMUD.

PALEY, JOHN: American journalist; born Feb. 6, 1871, at Radoszkowice, government of Wilna, Russia. After receiving the usual education, he attended the Talmudical colleges of Minsk, Volosin, and Libau. In 1889 he emigrated to New York, where he became editor of "Der Volksadvokat." In 1891 he removed to Philadelphia, became connected there with the "Jüdische Presse," and, in 1892, with the "Volkswächter" (as editor and publisher). Returning to New York, he has been, since 1893, editor of the "Jüdische Tageblatt" and of the "Jüdische Gazetten," which he has made the most widely circulated Jewish paper in the world. Paley is the author of: "The Russian Nihilist" and "Life in New York" (dramas); "Die Schwarze Chevrah"; "Uriel Acosta"; "Mysteries of the East Side"; "The Erev Rav"; "Yichus und Verbrechen"; "Das Leben in New York"; etc.

Bibliography: *American Jewish Year Book*, 5665 (1904-5).

J. F. T. H.

PALGRAVE (COHEN), SIR FRANCIS: English historian; born in London July, 1788; died there July 6, 1861; son of Meyer Cohen, a member of the London Stock Exchange. He was an infant prodigy. At the age of eight he made a translation of Homer's "Battle of the Frogs" into French, which was published by his father (London, 1796). In 1823 he changed his name, by royal permission, to Palgrave, and married a daughter of Dawson Turner, the historian. He was trained as a solicitor, but, having embraced Christianity, was called to the bar in 1827, devoting himself to pedigree cases. He had previously shown great interest in the records, drawing up an elaborate plan for their publication; this was approved by the Royal Commission, for which he edited many volumes of records during the decade 1827-37. In 1832 he published "The Rise and Progress of the English Commonwealth," which is generally regarded as the earliest important study of English constitutional history founded on the records. He was knighted in that year, and in 1838 became deputy keeper of Her Majesty's records, in which capacity he issued twenty-two annual reports of great historic value. His most important work is "A History of Normandy and England," 4 vols., London, 1851-63.

Palgrave had four sons, each of whom attained distinction of various kinds: **Francis Turner Palgrave** (1824-1902), editor of "Golden Treasury of English Songs and Lyrics," and professor of poetry at Oxford; **William Gifford Palgrave** (1826-88), Eastern traveler, and author of "A Year's Journey Through Central and Eastern Arabia" (London, 1865), and other works; **Robert Harry Inglis Palgrave** (b. 1827), editor of "The Dictionary of Political Economy"; and **Sir Reginald Francis Douce Palgrave** (1829-1903), clerk of the House of Commons.

PALITSCHINETZKI, JOSEPH HIRSH: Biblical scholar; born 1805; died at Berdychev Feb. 27, 1886. He was instructor in the Bible in the rabbinical seminary at Jitomir until its close, and was an assiduous student throughout his life. Palitschinetzki was the author of "Ḳera Miḳra" (Jitomir, 1874), on Biblical Hebrew and various other Biblical subjects. In this work, as well as in his articles contributed to different periodicals, he evinces a wide knowledge of the Hebrew language and literature.

H. R. A. S. W.

PALM (*Phœnix dactylifera*): An evergreen tree growing in tropical climates in a dry atmosphere. The term for it, common to the Aramaic, Ethiopic, and Hebrew, is "tamar" (תמר). The Arabic "tamr" means more particularly the fruit of the date-palm. The Aramaic has also the name "diḳla," and a feminine form, "diḳleta" (see Jastrow, "Dict." *s.v.*). The stem of the date-palm is slender and very yielding, so that in a storm it sways back and forth, but does not break; and throughout its length it bears marks showing where leaves have fallen off. The tree is crowned by a mass of branches from 40 to 80 in number, and on these the fruit grows. There are distinct male and female trees—hence the masculine and feminine forms of the name in Aramaic—and artificial fertilization is necessary. The Assyrian monuments show figures of a god having a pail in one hand, and with the other spreading the pollen on palms.

When the fruit begins to grow it has a green color, which gradually changes, through yellow and red, until it becomes quite dark; it hangs in bunches from the stalk. The date-palm relies for nourishment upon its roots, which strike downward and reach water under the soil; if this fails, irrigation must be resorted to. Especially interesting in this light are the Babylonian contract tablets. From these it is learned that trenches were dug around the palms, so as to supply water to the roots. From the tablets it is clear also that dates were used quite frequently in payment of rent and of all kinds of debts (see "Babylonian Expedition of University of Pennsylvania," ix.).

The tree was very plentiful in Palestine in ancient times, but now is found only at the Lake of Gennesaret, near Jericho, and around the Dead Sea (Nowack, "Lehrbuch der Hebräischen Archäologie," i. 62). At Elim (Ex. xv. 27; Num. xxxiii. 9) there were seventy palms growing around the springs. The date-palm was put to many uses. The fruit was used for food, and from it a drink was distilled. The leaves were used as a roof-covering; the stem, for building purposes and for fuel. Parts of the stalk were used to weave ropes. From the better quality of dates, according to Josephus ("B. J." iv. 8, § 3), a kind of honey was pressed: this was also known to the Talmudic writers (Löw, "Aramäische Pflanzennamen," p. 124).

The qualities of the date-palm are referred to quite frequently in a figurative sense in the poetical books of the Bible. Together with another evergreen tree, the cedar, it is used to typify the prosperity of the righteous man (Ps. xcii. 13). Its tall, slender, graceful, mobile stalk symbolizes the beautiful female figure (Cant. vii. 8, 9). In Joel (i. 12) the date-palm is spoken of as languishing.

In the Temple service, branches of the date-palm were used at the Feast of Booths (Lev. xxiii. 40; Neh. viii. 15). A palm design was used as a decoration in the Temple of Solomon (I Kings vi. 29) and in the plan of Ezekiel's Temple (Ezek. xl., *passim*). A coin struck by Jaddua has on it the figure of the date-palm (De Saulcy, "Numismatique Juive," plate 1, fig. 6). Several names in the Bible give evidence of the plentifulness of the palm. Jericho is called "the city of palm-trees" (Deut. xxxiv. 3; Judges i. 16, iii. 13; II Chron. xxviii. 15). "Tamar" occurs in Ezek. xlvii. 19; and two other place-names have the word as an element, viz., "Hazazon-tamar" (II Chron. xx. 2) and "Baal-tamar" (Judges xx. 33); perhaps "Tadmor" (II Chron. viii. 4) also. Three women bear the name "Tamar" (Gen. xxxviii. 6; II Sam. xiii. 1, xiv. 27). Under a palm-tree Deborah sat and judged Israel; and on this account it was called "the palm-tree of Deborah" (Judges iv. 5; but see Deborah, the nurse of Rebekah). For the part this tree played in early Semitic civilization, see Barton, "Semitic Origins," Index, *s.v.* "Palm," 1901. The Mishnah (see Löw, *l.c.* pp. 109-125) mentions three kinds of dates.

E. G. H. G. B. L.

PALMA: Capital of the Spanish island of Majorca. As early as the Moorish period Jews were living in Almudayna, the most populous part of the city, which was surrounded by walls and contained the "Castell dels Jueus," the Jews' castle. About 1290 Alfonso III. or James II. assigned them a special ghetto, surrounded by walls with gates for their own protection. It was situated in the De Calatrava quarter in the parish of Santa Eulalia, and comprised the Calle de Monte Sion and "el Calle," or the Jews' street proper. In 1318 Sancho I. granted the Jews, at their own request, this ghetto as their habitation for all time. With the permission of the king, the Jews had built a fine synagogue, but it was hardly completed, in 1314, when Sancho I. took it from them by way of punishment, and converted it into the Church of Santa Fé. In 1331 James III. permitted them to build a new but plain synagogue ("casa de oracion") or school ("escuela") in the street in which their cemetery was situated, and they gave a mortgage on this building, which had not been entirely paid off in 1380. In addition to this synagogue there were two smaller ones, situated between the churches of Santa Fé, Santa Bartolome, and Santa Misericordia.

The Jews, to whom James I., conqueror of the Balearic Isles, granted privileges which were abrogated and renewed by subsequent rulers, formed in their aljama almost a state within a state. At its head were five representatives, called "secretarii" or "regidores," a treasurer ("tesorero"), and a council consisting of eight, and at times of more, persons, who were elected, according to an old privilege, by the Jews themselves, and were confirmed by the king. Sancho I., after abrogating in 1314 all the privileges granted the Jews, meddled with their internal affairs also, and arbitrarily appointed a certain Astruc b. Nono as secretary or representative. The other representatives protested to Sancho's successor, whereupon the right of free election was restored to the Jews ("Boletin Acad. Hist." xxxvi. 197, No. 45). Only honorable and independent men were eligible as "secretarii"; physicians, brokers, and all persons who sought to gain office by influence or other unfair means being excluded. The number of the members of the council varied. In 1374 the aljama consisted of thirty persons; but, since disputes and divisions often arose among them, a royal decree was issued on Jan. 24 of that year to the effect that the oldest and wealthiest taxpayers should have seats in it (*ib.* Nos. 71, 91). The representatives of the aljama had the right to make statutes and to issue regulations, which all its members had to obey implicitly. The men and women of the community were forbidden to buy or to wear garments of more expensive material than did the secretaries, and the council prohibited extravagant celebrations of betrothals and weddings. The secretaries and the council constituted a court of morals, and had the right to fine and, if necessary, to excommunicate refractory members (decree of Sept. 17, 1319, *ib.* No. 30). Any Jew or Jewess who dared to revile the secretaries or the council was to be punished with perpetual banishment from the island, and any one who returned in defiance of such a sentence was to have the right foot cut off (*ib.* Nos. 27, 61).

One of the most important tasks of the secretaries or representatives of the "Calle Juich," as the aljama of Palma was called, was the regulation of the taxes. They drafted a "Constitution," which was approved and confirmed by the king in 1318. All Jews over fifteen years of age, all Jewesses living independently, all strangers remaining for a month, and all foreign merchants doing business in the city for a year were subject to taxation. Each Jew and Jewess had to pay a certain tax, according to values, on every pound of flour or meat consumed, on every garment, on every purchase or sale, and on every house or lodging leased (*ib.* pp. 250 *et seq.*). The method of taxation was as follows: the governor appointed a committee of 51 persons, 17 from each of the three classes, and this body chose from each section one person in whom it had complete confidence. Each of these three commissioners was then obliged to take a solemn pledge before the governor that he would make the appraisements without fear or favor, according to the best of his knowledge and belief. The names of the members of the aljama were then given to each of the commissioners for appraisement, and according to their valuation the taxes were apportioned by the governor and announced to the secretaries (*ib.* No. 106). The division of the money for the poor was undertaken with the assistance of eight of the wealthiest taxpayers of the community. The following representatives of the aljama are mentioned between 1318 and 1390: Abraham Malaqui, Astruc b. Nono, Isaac b. Aaron, Ḥayyim Cohen, Juce Barqui, Vital Cresques, Moximus Natjar, Solomon Jono, Solomon Susan, Bione del Mestre, Maimon Xullell, Magaluf Natjar, Mahaluf Feraig, Bonsenior Gracia, and others.

The Jews of Palma were undisturbed in their religious observances. They were allowed to slaughter according to their own ritual in the Christian slaughter-house, while, by an agreement made with the representatives of the aljama in 1344, Christian butchers sold kasher meat for one dinar a pound more than other meat (*ib.* No. 55). The Jews took the oath on the Pentateuch, without the curses in the formula of Barcelona. At Palma, as elsewhere, they were engaged in agriculture, and especially in commerce, with connections as far as Roussillon, Catalonia, Aragon, Valencia, and various cities in northern Africa. They were allowed to keep Turkish and Tatar slaves, but on the condition that if these slaves should accept Judaism, they should become the property of the king (*ib.* Nos. 55, 85).

A great catastrophe befell the Jews of Palma on Aug. 2, 1391; 300 were killed, and many who sought safety in flight took ship for the Barbary States, while all who remained accepted baptism. The municipal council of Palma had promised them a large sum of money if they would accept Christianity, and the Jews were credulous enough to accept the terms; but when, after baptism, they demanded the money, the council refused payment on various pretexts, and the neophytes appealed in vain to the governor through their representatives, Miguel Gracia (formerly Bonsenior Gracia), Juan Amat or Mahaluf Faquim, Antonio Abraham Sasportas, Gabriel Fuster (formerly Moximus Natjar), Pedro Fuster (son of Maimon Natjar), and others (Villanueva, "Viaje Literario," xxi. 224; the letter of Ḥasdai Crescas at the end of "Shebeṭ Yehudah," ed. Wiener, p. 129; "Boletin Acad. Hist." xl. 152 *et seq.*; "R. E. J." xliv. 297 *et seq.*).

Accusations of ritual murder were brought against the Jews of Palma in 1309 and in 1435. While on the former occasion King James II. instituted severe proceedings against the false accusers, a century later the bishop of the city credited the report. Several hundred Jews were baptized in consequence of the persecution. This put an end to the Jewish community of Palma, and the synagogue was transformed into a church, although the cemetery was still called "El Campo de los Judios" as late as 1521. See BALEARIC ISLES; CHUETAS.

BIBLIOGRAPHY: The chief source for the history of the Jews of Palma, as of those of Majorca generally, is a manuscript written on parchment, and containing 113 documents, which probably once belonged to the aljama of Palma. After 1435 it came into the possession of the Inquisition, and was later acquired by the Marquis of Campo-Franco. This codex was used by Villanueva in his *Viaje Literario*, vols. xxi. and xxii., and by Morel-Fatio in *R. E. J.* iv. 31-50. The documents were recently published by G. Llabrès and F. Fita in *Boletin Acad. Hist.* vol. xxxvi.

G. M. K.

PALMYRA (Hebrew, **Tadmor**; Greek, Θοεδμόρ): Latin name of a city in a well-watered oasis of the Syrian desert, five days' journey from the Euphrates, between three and four days from Thapsakus, and three days from Aleppo. Palmyra was situated on the highway leading from Phenicia to the Euphrates by way of upper Syria, and in late antiquity was one of the largest commercial centers of the East. It was said to have been founded by Solomon when he conquered Hamath-zobah, thus obtaining partial control of the highway (I Kings ix. 18; II Chron. viii. 4). Under Jehu the Jewish realm seems to have lost Palmyra as well as its other Eastern possessions (II Kings x. 32-34), although it regained the city under Jeroboam II. (II Kings xiv. 24).

It was not until the third century of the common era that Judaism again came into contact with Palmyra. Although the empress Zenobia seems to have been friendly to the Jews, yet there are preserved in the Talmud a number of quotations from contemporary scholars which indicate that the ruling powers of Palmyra were not liked by the Jews. Thus, R. Johanan said: "Happy will he be who shall see the downfall of Tadmor" (Yer. Ta'an. iv. 8); and there was a popular Jewish proverb to the effect that "the impure mixture rolls from hell (Yeb. 17a) to Tadmor, and thence to Messene and Harpania" (Yeb. 16a, b, 17a; comp. Rashi *ad loc.*).

Later writers, who did not understand the Jewish hatred of Tadmor, sought an explanation in mixed marriages, or in the aid which the Palmyrenes had given to the Romans when the Temple was destroyed. R. Judah, a pupil of Samuel, said: "The day on which Tadmor is destroyed will be made a holiday" (Yeb. 16b-17a). Nevertheless Palmyrene proselytes were received (Yer. Ḳid. iv. 65c). The Jews even seem to have taken up arms against Palmyra. The story is told that a certain Ze'era bar Ḥinena (Ḥanina) was seized in the city of Sassifa and taken before Zenobia for sentence, whereupon R. Johanan's two disciples, R. Ammi and R. Samuel, went to the empress to plead for his liberty. She received them very ungraciously, however, saying, "Do you think that you may do what you please, relying on your God, who has vouchsafed you so many miracles?" At that moment a Saracen entered, bearing a bloody dagger, and cried: "With this dagger Bar Naẓar has killed his brother" (or, "has been killed"), whereupon Ze'era bar Ḥinena was released (Yer. Ta'an. viii. 46b). This story, in itself obscure, combined with the sayings cited above, shows the hostility of the Jews toward the city.

In the twelfth century more than 2,000 Jewish families were living in the vicinity of Palmyra. The men were warlike, and often came in conflict with the Christians and Mohammedans. A Hebrew inscription found in the ruins of the city and consisting of the beginning of the Jewish Shema' (Deut. v. 4-9) was published by Landauer in the "Sitzungsberichte der Berliner Akademie," 1884, pp. 933 *et seq.*

J. S. O.

PALTI or **PHALTI**: Name borne by two persons mentioned in the Old Testament; probably an abbreviation, or corruption, of PALTIEL. **1.** Son of Raphu, of the tribe of Benjamin; one of the twelve spies (Num. xiii. 9). **2.** Second husband of Michal, daughter of Saul, and wife of David (I Sam. xxv. 44); in II Sam. iii. 15 the name is given as "Phaltiel" ("Paltiel" in the Hebrew).

E. G. H. S. O.

PALTIEL: Vizier to the Egyptian califs Al-Mu'izz and 'Abd al-Manṣur; lived in the second half of the tenth century. The Chronicle of AHIMAAZ BEN PALTIEL, the only source for the history of this personage, makes Paltiel, by his mother Kassia, a grandson of Ḥisdai ben Hananeel and a descendant of the liturgical poet Shephatiah of Oria. When Oria was taken by Al-Mu'izz, Paltiel won the favor of the conqueror through his astrological skill. He predicted that Al-Mu'izz would reign over three countries On leaving Italy Al-Mu'izz took Paltiel with him to his kingdom of North Africa and entrusted him with the direction of the affairs of state. Soon the vizier had an opportunity to show his great administrative ability. During Al-Mu'izz's march through the desert against Egypt, Paltiel provided his army and retinue with all the necessaries of life. Ahimaaz expatiates upon the wise administration and the far-reaching influence of Paltiel, who, by a letter addressed to the Byzantine emperor, caused the release of the Jewish prisoners taken at Bari and Otranto. As an illustration of his generosity and modesty Ahimaaz relates the following: On the Day of Atonement Paltiel was called to the Torah. The whole congregation rose in his honor, but he bade all but the children to remain seated, announcing that otherwise he would not accept the office. When the reading was over he offered 5,000 dinars for various charitable purposes, including aid to the poor of Jerusalem and to the college at Babylon. Next morning he summoned a band of riders on horses and mules and despatched them, laden with the gold he had vowed, with a caravan. At his death his son Samuel, who succeeded him in the office of vizier, distributed 20,000 drachmas in similar benefactions.

Although no Arab historian mentions the name of Paltiel, it is believed by some scholars that the narrative of Ahimaaz has a certain historical basis. De Goeje endeavored to identify Paltiel with the vizier Jauhar al-Rumi, or Al-Saḳlabi, whose adventures present many points of analogy with those related of Paltiel by Ahimaaz.

S. I. BR.

PALṬIYA (PELAṬYA) OF NAWEH: Palestinian haggadist of the third century. He is cited but once, as author of a derashah. The haggadists consider the phraseology of Eccl. i. 4 peculiar, unless the expression "The earth abideth for ever" implies the perpetuity of Israel. Thereupon Samuel (of the fourth amoraic generation) quotes Pelatiah as teaching that Israel is, indeed, metonymically called "ereẓ" (earth, land). He says, "Scripture states [Judges xviii. 30]: 'Jonathan . . . and his sons were priests of Dan until the exile of the ereẓ'; but since an ereẓ can not be exiled, because it can not be moved, it is evident that Israel [the possessor of the ereẓ] is meant. This is confirmed by Malachi, who, addressing Israel, says [Mal. iii. 12], 'All the nations shall call you blessed, for ye shall be a delightsome ereẓ'" (Eccl. R. i. 4; see Einhorn *ad loc.*). As to Naweh, comp. Neubauer, "G. T." p. 245, with Hirschensohn, "Meḥḳere Areẓ," *s.v.* (see also Schwarz, "Toledot ha-Areẓ," ed. Luncz, p. 276; Schürer, "Gesch." 3d ed., ii. 13).

E. C. S. M.

PALṬOI B. ABAYI: Gaon of Pumbedita from 842 to 858. He was the first of a series of prominent geonim at that academy, the influence of which he extended to such a degree that the exilarch was obliged to go to Pumbedita if he wished to convene a public assembly. Palṭoi was both strict and energetic in his rule. In one of his letters he dwells on excommunication for disobedience to the Law, which he insists should be revived in practise (Responsa of the Geonim, "Sha'are Ẓedeḳ," p. 75, note 4). Many of his responsa, covering various branches of the Law, have been preserved in the collection "Sha'are Ẓedeḳ" (Salonica, 1792). He is said to have devoted himself to philosophy also, though none of his philosophical works has been preserved. A cabalistic prayer beginning "'Illat ha-'Illot" (Cause of All Causes) is erroneously ascribed to Palṭoi by Moses Botarel in his "Yeẓirah" commentary.

PAMIERS: One of the principal towns of the department of Ariège, France. A Jewish community existed here in the twelfth century. In 1256 Maurin II., Abbot of St. Antoine, granted protection to the Jew Bonio, son of Beslinenga, in consideration of a yearly tax of a gold marabotin. In 1279 the Jews of Pamiers agreed among themselves to refrain from making certain extravagant presents, especially those which it was customary to give to new-born infants; from inviting more than twelve persons to family festivals; from giving more than 12 deniers as a New-Year's gift to each child; from appearing in the public square on the Sabbath; and from participating in games of dice or chess. The cost of lawsuits and other general expenses were to be paid from the proceeds of certain taxes. The Abbot of St. Antoine approved these regulations, and, as a token of his good-will, permitted the Jews to wear on their garments a small embroidered wheel, instead of the large one of cloth. The king confirmed this decision in 1280. A few years previously (in 1274) the Parliament of Paris had forbidden the king's Jews to compel those belonging to the abbey of Pamiers to contribute to a certain tax.

In 1300 a curé of the diocese was excommunicated because he denied his indebtedness to a Jew. In 1391 Gaston III., Duke of Foix, imprisoned the seventy Jews then living at Pamiers and threatened them with death unless they paid him the sum of 3,000 scudis. In 1394 there were only 56 Jews at Pamiers, whom the duke would not allow to depart until he was forced to do so by the officers of the seneschal of Toulouse, acting under orders from the King of France.

PAMPLONA: Capital and oldest city of the kingdom of Navarra, Spain. Next to Tudela, it possessed the most important Jewish community. The Jewry was situated in the Navarreria, the oldest quarter of the city. When Navarra came under the guardianship of Philip the Fair, and the Pamplonians refused to pay him homage, the Jewry was destroyed by the French troops, the houses were plundered, and many Jews were killed (1277). In 1280, upon the complaint of the Jews, the city was directed to restore to them the confiscated properties and to assign to them other ground for building purposes. In 1319 the city council, in conjunction with the bishop, to whom the Jews were tributary, had resolved, in compliance with the wish of King Charles I., to rebuild the Jewry; but this was not done until 1336.

The new Jewry was near the Puente de la Magdalena, and was surrounded with strong walls to guard it against invasion. In the Jewry was the Alcaceria, where the Jews carried on considerable traffic in silk goods, while in a separate street were stores in which they sold jewelry, shoes, etc. Some of the Jews were artisans, and were employed by the royal court; others practised medicine. The physician Samuel, in recognition of his services as surgeon to the English knight Thomas Trivet, was presented by King Charles in 1389 with several houses situated in the Jewry and which had formerly been in the possession of Bonafos and his son Sento, two jugglers. In 1433 the physician Maestre Jacob Aboazar, who had his house near the Great Synagogue, accompanied the queen on a journey abroad. Contemporary with him was the physician Juce (Joseph).

In 1375 the Jews of Pamplona numbered about 220 families, and paid a yearly tax of 2,592 pounds to the king alone. They had, as in Estella and Tudela, their independent magistracy, consisting of two presidents and twenty representatives. Gradually the taxes became so burdensome that they could no longer be borne. In 1407 King Charles III. issued an order that the movable property of the Jews should be sold at auction, and the most notable members placed under arrest, unless they paid the tax due to him. To escape these frequent vexations many of the Jews resolved to emigrate; and a part of the Jewry was thus left uninhabited. No sooner had Leonora ascended the throne as coregent (1469) than she issued an order to the city magistrate to require the Jews to repair the dilapidated houses.

The policy of Ferdinand and Isabella triumphed in the Cortes of Pamplona in 1496. Two years later the Jews were expelled from Navarra. Many emigrated; and those who were unable to leave the city embraced Christianity. Ḥayyim Galipapa was rabbi of Pamplona in the fourteenth century; and the scholar Samuel b. Moses Abbas was a resident of the city.

PAN, TAUBE: Judæo-German authoress of the sixteenth century; lived in the Prague ghetto at the time of Mordecai Meisel; daughter of R. Moses Löb Pizker, and wife of R. Jacob Pan. Like many poets of this period, she published religious and ethical works in the current idiom of the Jews. Such publications were facilitated by the printing-press of the Gersonides then running in Prague. Among other pieces, she published, probably in 1609, a poem of six pages under the title:

"Ein Schönes Lied, Neu Gemacht,
Beloschen Techinna Ist's Worden Ausgetracht."

In the final verse she gives some autobiographical data, as follows:

"Wenn jetzt wollt wissen, wer das Lied hat gemacht,
Taube, Weib des R. Jakob Pan, hat es dertracht,
Tochter des ehrwürdigen Rabbi Löb Pizker sal [ז"ל],
Der Ewige mög' behüten uns all!"

Bibliography: Kayserling, *Die Jüdischen Frauen*, p. 152.

PANEAS. See Cæsarea Philippi.

PANET, EZEKIEL: Hungarian rabbi; born 1783 at Bielitz, Silesia; died Nisan 20, 1845, at Karlsburg, Transylvania. He studied in the yeshibah of Leipnik, Moravia, under Rabbi Baruch Fränkel, and then went to Prague, where Chief Rabbi Samuel Landau and the assistant rabbi Eleazar Fleckeles were his teachers. After his marriage in 1802 he spent five years at Linsk in Talmudic studies and then joined the ranks of the Polish Ḥasidim, with whom he maintained close relations throughout his life. He was successively rabbi at Ostrik (1807–13) and Tarczal, Hungary (1813–23), and was chief rabbi of Karlsburg from 1823 to 1845.

His principal literary work is "Sefer She'elot u-Teshubot me-Rab Yeḥezkel we-Sha'are Ẓiyyon," ed. M. M. Panet, Marmaros-Sziget, 1875. Most of his works are extant in manuscript and contain notes on the Talmud.

Of Panet's sons and grandsons the following were rabbis: (1) of Tasnád, **Ḥayyim Bezaleel Panet** (b. at Bielitz 1803; died at Tasnád 1877; author of several works and of the Halakah collection "Sefer Derek Yibḥar"); his grandson **Asher Samuel Panet,** of Hidalmás; (2) of Tarczal, his son **Lebush Panet;** (3) of Deés, his son **Menahem Mendel Panet** (author of several manuscript novellæ on the Talmud, besides responsa collections entitled "Sha'are Ẓedeḳ," "Abne Ẓedeḳ," and "Mishpaṭ Ẓedeḳ"); his grandson **Moses Panet** (successor to his father as rabbi of Deés).

Bibliography: J. B. Friedmann, in H. B. Panet's *Sefer Derek Yibḥar*, ed. A. J. Panet, Munkacs, 1894.

PANZIERI or **PANSIERI** (פנציירי, פאנסירי, פינציירי): Portuguese family members of which are met with in Constantinople and Rome from the sixteenth century. The family is still (1904) represented in Italy. The most important member of the Constantinople branch is:

Ephraim Panzieri: Physician and cabalist; flourished in Constantinople about 1550; died in Damascus. He went to the latter city to study under Ḥayyim Vital, and, leading an ascetic life there, was revered as a saint.

To the Roman branch belong: **Moses Panzieri** and his son **Jedidiah,** mentioned in the community annals of 1539; **Shabbethai Panzieri** and his son **Moses** (1580 and 1583); and **Shem-Ṭob,** son of Moses (1601–16).

To another line belong: **Isaac Panzieri** (whose wife **Piacentina** died in 1561), his son **David,** and his grandson **Samuel** (1602–17).

Shabbethai b. Mordecai Pansieri: Rabbi of Rome in 1652 and 1653, of Sinigaglia from 1680 to 1685, and again of Rome from the last-mentioned year. He had a reputation as a Talmudist, and corresponded with Samuel Aboab in Venice and with

Jehiel Finzi in Florence. When it was desired to introduce into the community the system of self-valuation of property supported by an oath, Shabbethai spoke very energetically in favor of the method hitherto pursued, namely, that of valuation by a commission of seven members. He was supported by Joseph Fiammetta.

A **Samuel Pansieri** lived at Rome in 1682; and in 1720 and 1721 **David** and **Shem-Ṭob b. Samuel Pansieri** were members of the congregation there.

PAOLI, BETTY (BARBARA ELISABETH GLÜCK): Austrian poetess; born at Vienna Dec. 30, 1814; died at Baden, near Vienna, July 5, 1894. Her father, a physician, died when she was very young; and, the family being left in very poor circumstances, Betty Paoli was compelled to earn her own living. For some time she supported herself as a teacher in Russian Poland, and then, returning to Vienna, she in 1843 became companion to Princess Marianne Schwarzenberg, which position she held until the death of the latter in 1848. The following three years she spent in travel, visiting Paris and Berlin, and in 1852 she settled again in Vienna.

Betty Paoli's poems, which evince deep feeling, a fertile imagination, and great power of representation, were widely read toward the end of the nineteenth century. Her works include: "Gedichte," Pest, 1841 (2d ed. 1845); "Nach dem Gewitter," *ib.* 1843 (2d ed. 1850); "Die Welt und Mein Auge," *ib.* 1844; "Romancero," *ib.* 1845; "Neue Gedichte," *ib.* 1850; (2d ed. 1856); "Lyrisches und Episches," *ib.* 1855; "Wien's Gemäldegallerien," Vienna, 1865; "Neueste Gedichte," *ib.* 1870; "Grillparzer und Seine Werke," Stuttgart, 1875.

PAPA: Babylonian amora of the fifth generation; born about 300; died 375; pupil of Raba and Abaye. After the death of his teachers he founded a school at Neres, a city near Sura, in which he officiated as "resh metibta," his friend and associate, R. Huna b. Joshua, acting as "resh kallah" (356–375). Papa's father seems to have been wealthy and to have enabled his son to devote himself to study (Yeb. 106a; Rashi *ad loc.*). Papa inherited some property from his father; and he also amassed great wealth by brewing beer, an occupation in which he was an expert (Pes. 113a; B. M. 65a). He likewise engaged in extensive and successful business undertakings (Pes. 111b), and his teacher Raba once said of him: "Happy is the righteous man who is as prosperous on earth as only the wicked usually are!" (Hor. 10b).

But Papa and his partner Huna were not always overscrupulous in their business, and their teacher said to them at times: "Ye would take the coats from people's backs" (Giṭ. 73a; Ket. 85a). Papa sold his beer at a higher price than ordinary because he gave the buyer credit, although this practise was regarded as a kind of usury (B. M. 65a). He was avaricious in other ways, and frequently refused to aid the poor (B. B. 9a, 10a). As his second wife he had married the daughter of Abba Sura'ah (of Sura), with whom he does not seem to have lived happily (comp. Sanh. 14b); for she prided herself on the nobility of her ancestry as contrasted with his own. He therefore said, referring to his own experience: "Be circumspect and not hasty in marrying, and take a wife from a class of society lower than thine own" (Yeb. 63a).

Papa was not a great scholar; and he lacked independence of judgment. In the case of two conflicting opinions he tried to accept both (Ber. 11b, 59b; Meg. 21b; Ḥul. 17b, 46a, 76b; Shab. 20a). He was, consequently, not greatly respected as a scholar; and R. Idi b. Abin termed him and Huna b. Joshua "dardeki" (children; Pes. 35a; Yeb. 85a). R. Huna b. Manoah, Samuel b. Judah, and R. Ḥiyya of Vestania, pupils of Raba, came, after their teacher's death, to attend Papa's lectures, which they found obscure and vague. They communicated their opinions to one another by signs, to the great chagrin of Papa, who noticed them, and said: "Let the scholars ["rabbanan"] go in peace" (Ta‘an. 9a, b). R. Simai b. Ashi (father of R. Ashi), who also attended Papa's lectures, often embarrassed him by questions; so that Papa once fell on his knees and prayed that God might protect him from being humiliated by Simai. Simai, who was a silent witness of this scene, thereupon resolved to desist; and he asked no further questions at any time. Papa was extremely anxious to obtain a reputation as scholar, but he also endeavored to do honor to all other scholars. He never excommunicated one (M. Ḳ. 17a), and whenever, during his business journeys, he came to a place in which a scholar lived he visited him (Niddah 33b). Once when an unseemly reference to scholars escaped him, he fasted in atonement (Sanh. 100a), although he disliked fasting and it did not agree with him (Ta‘an. 24b; R. H. 18b).

He made journeys in connection with his business (Ber. 42; Meg. 21; Niddah 33b), and thus gained much knowledge of the world. He was especially interested in the collection of popular proverbs which he considered as authoritative, using them even to refute the words of a sage (Ber. 59a). The aphorisms quoted by him include the following: "If no grain is in the house, quarrels knock at the door and enter" (B. M. 59a); "Sow corn for thy use that thou mayest not be obliged to purchase it; and strive to acquire a piece of property" (Yeb. 63a).

PAPER AND PAPYRUS. See MANUSCRIPTS.

PAPERNA, ABRAHAM JACOB: Russian educator and author; born at Kopyl, government of Minsk, 1840. He received a fair education, including the study of the Bible with Mendelssohn's translation, Hebrew grammar, Talmud, and secular literature. In 1863 he entered the rabbinical school of Jitomir, where he studied until 1865; he was then transferred to the rabbinical school of Wilna, from which he graduated in 1867. In 1868 he was appointed teacher at the government Jewish school at Zakroczyn, government of Warsaw; and in 1870 he became principal of the government Jewish school of Plotzk, government of Suwalki. He was also instructor in the Jewish religion at the gymnasium in the latter town, where he still (1904) resides.

Paperna was intimately connected with the Russian Haskalah movement in the last quarter of the nineteenth century, and contributed various books and articles to Russian as well as to Hebrew literature. His first Hebrew poem, "Emet we-Emunah," appeared in "Ha-Karmel" in 1863; and since then Paperna has been a constant contributor to that periodical as well as to "Ha-Meliẓ." Critical articles by him, entitled "Ḳanḳan Ḥadash Male Yashan" (in "Ha-Karmel," 1867, and printed separately, Wilna, 1868), attracted wide attention in the circles of the Maskilim. In these articles Paperna, influenced probably by the Russian critic Pisarev, adopted modern realistic methods of criticism. He exposed the worthlessness of the pseudo-classicism in Hebrew literature, and the absurdity of the "guess-philology" in the commentaries on the Bible and the Talmud. He also ridiculed the presumption of some of the young Maskilim, who from a desire for fame attempted to write books in Hebrew on botany, astronomy, and the other exact sciences, with which they were entirely unfamiliar. A curious essay on the drama entitled "Ha-Drama bi-Kelal we-ha-'Ibrit bi-Peraṭ" appeared as a supplement to "Ha-Meliẓ," 1868. It called forth harsh criticism from A. B. Lewinsohn in his pamphlet "Tokaḥti la-Beḳarim," written under the pseudonym "S. Friedman" (Paperna had attacked Lebensohn's "Emet we-Emunah"), and from J. Steinberg ("'En Mishpaṭ"). In 1869 Paperna published an article on the Russification of the Jews, entitled "K Yevreiskomu Voprosu v Vislyanskom Ḳraye" (in "Den," No. 13).

He now devoted himself to educational matters, and published: "Mesillat ha-Limmud" (Warsaw, 1871), a Hebrew grammar in Russian; "Kratkaya Grammatika Russkavo Yazyka" (*ib.* 1874); "More Sefat Russiya" (*ib.* 1876; 3d ed., 1884), Ollendorff's method for the study of the Russian language by Hebrews; "Samoychitel Russkavo Yazyka: Meruẓ Iggerot" (*ib.* 1874; 3d ed., 1884), a Hebrew-Russian letter-writer. Among his articles on education may be mentioned "O Khederakh Voobshche," etc. (Plotzk, 1884), on the ḥadarim. Memoirs ("Zikronot") by Paperna on the rabbinical school of Jitomir and its professors appeared in Sokolov's "Sefer ha-Shanah," 1900, p. 60.

BIBLIOGRAPHY: Sokolov, *Sefer Ziḳḳaron*, p. 83, Warsaw, 1890; *Ha-Asif*, v., vi.; Steinberg, *'En Mishpaṭ*, Wilna, 1868; Landau, in *Ha-Meliẓ*, 1868, p. 168; Gottlober, *ib.* p. 242; Zeitlin, *Bibl. Post-Mendels.* p. 216.

H. R.

PAPO, ELIEZER BEN ISAAC: Bulgarian rabbi and author; born in Sarajevo, Bosnia; died in 1824. He held the office of rabbi in Silistria, Bulgaria, till his death. He led a religious life, taking little food, and restraining himself from every kind of pleasure; hence he was surnamed "the Saint" ("ha-Ḳadosh").

Papo was the author of the following works: "Pele Yo'eẓ," rules of morality, in alphabetical order, in two parts (Constantinople, 1824; Bucharest, 1860); "Elef ha-Magen" (Salonica, 1828), containing sermons in the order of the sections of the Pentateuch; "Ḥesed la-Alafim" (*ib.* 1836), treating of the precepts of the Shulḥan 'Aruk, Oraḥ Ḥayyim, and published by his son Judah Papo. Several of his works remain in manuscript.

S. N. T. L.

PAPPENHEIM: Small town in Mittelfranken, containing one of the oldest Jewish communities in Bavaria. The statement of Stern-Neubauer that the word בהיים in R. Solomon bar Simeon's account of the persecution during the Second Crusade means "Pappenheim," is erroneous; for בהיים must be translated "Bohemia." Jews must have been living at Pappenheim before 1334, however; for in that year Louis the Bavarian confirmed the marshal of Pappenheim in "all rights and favors which his ancestors have received from kings and emperors, especially the right to protect the Jews dwelling with him."

After the expulsion of the Jews from Spain many went by way of Italy to Germany; and the community of Pappenheim was considerably increased by these immigrants, who formed a separate congregation, or at all events so strongly influenced the existing congregation that they were able to introduce the Venetian ritual. The Venetian minhag still exists there.

The earliest tombstone in the cemetery, which was closed in 1867, bears the date 5118 = 1357–58. The synagogue was built in 1811. At present the Jews of Pappenheim number 22 in a total population of 1,677.

D. M. L. B.

PAPPENHEIM, ISRAEL HIRSCH: Representative of the Bavarian Jews and champion of their emancipation; born at Munich; died there Sept. 8, 1837. He was liberal-minded and progressive. As early as Feb. 24, 1805, in a letter addressed to a nobleman he pleaded for the civic emancipation of his coreligionists. In 1821, as representative of a meeting of notables held at Munich, he presented to the king a memorial referring to the question of emancipation; and in 1827 he laid before the Bavarian ministry a proposition regarding the organization of the communities with a consistorial constitution. In the same year he prepared for the press the prayer-book with Alexander Behr's German translation (Munich). For twenty-five years he was president of the community of Munich, which owes to him the erection of a large synagogue and the establishment of several charitable foundations.

S. M. K.

PAPPENHEIM, SIMON: German writer; born at Dembiohammer 1773; died at Ratibor Aug. 6, 1840. He at first supported himself as a private tutor, and then he obtained in Ratibor a position as manager in a pottery. Pappenheim meanwhile pursued his literary studies with such zeal that he became "house-poet" ("Hausdichter") on the "Allgemeiner Oberschlesischer Anzeiger" established in Ratibor in 1802; and when Baron von Reiswitz retired from its editorship (1811) Pappenheim succeeded him. He published in his paper poetical contributions of a distinctly patriotic character. After 1816 he published the "Anzeiger" at his own expense and continued to edit it until his death.

Bibliography: Riedinger, *Hundert Jahre Oberschlesischer Anzeiger*, Ratibor, 1902.

S. A. Lew.

PAPPENHEIM, SOLOMON: German scholar; born Feb. 2, 1740, at Zülz, Silesia; died March 4 or 5, 1814, at Breslau; son of Associate Rabbi Seligmann Pappenheim of Zülz. He himself became associate rabbi at Breslau. Pappenheim is especially known for his book on Hebrew synonyms, which appeared in three parts under the title "Yeri'ot Shelomoh" (part i., Dyhernfurth, 1784; part ii., Rödelheim, 1831; part iii., Dyhernfurth, 1811; the fourth part remained unprinted). His "Arba' Kosot" is an imitation of Young's "Night Thoughts" in poetic prose (Berlin, 1790; Zolkiev, 1805; Vienna, 1809; with additions by M. Lemans, Amsterdam, 1817, and frequently reprinted). During the controversy on the subject of early burial he wrote several works in German favoring the practise among Jews: "Die Frühe Beerdigung bei den Juden" (Breslau, 1795); "Die Nothwendigkeit der Frühen Beerdigung" (*ib.* 1797); "Deduction Seiner Apologie für die Frühe Beerdigung" (*ib.* 1798). Against David Friedländer's views he wrote "Freymüthige Erklärung über die . . . Kritik des Gottesdienstes der Juden und deren Erziehung der Jugend" (*ib.* 1813), in which he holds up to his nation various abuses within and without the Synagogue, declaring "a convention of sensible rabbis for the purpose of remedying these abuses to be highly desirable."

Other works by Pappenheim are: "Beiträge zur Berichtigung der Beweise vom Dasein Gottes aus der Reinen Vernunft" (*ib.* 1794); "Abermaliger Versuch über den Ontologischen Beweis vom Dasein Gottes," etc. (*ib.* 1800). Of his Hebrew lexicon "Ḥesheḳ Shelomoh" only one number, on the particles, appeared (Breslau, 1802). "Ge'ullat Miẓrayim; Ueber die Erlösung aus Aegypten als Grundstein des Gesetzes," etc., was printed after his death by Hirsch Sachs (*ib.* 1815).

S. M. K.

PAPPOS B. JUDAH: Haggadist of the first half of the second century; contemporary and fellow prisoner of Akiba. At the time of the persecutions by Hadrian, when it was forbidden to study the Torah, Akiba imperiled his life in order to hold sessions with his pupils. The peaceable Pappos warned him to desist, since they were surrounded by spies; but Akiba demonstrated to him, by the well-known fable of the fox and the fishes, that the fear of death was no reason for deserting the Torah, which was life itself to the Jewish nation. When they afterward met by chance in prison, Pappos said: "It is well with thee, Akiba, who hast been imprisoned for studying the Torah; but wo to Pappos, who has been sentenced for vain, worldly things" (Ber. 61b). A haggadic exegesis by Pappos has been preserved, which interprets Gen. iii. 23 to mean that man is equal to the angels—an explanation which was refuted by Akiba (Gen. R. xxi.).

In Sifra, Beḥuḳḳotai v. (ed. Weiss, p. 111d) Pappos b. Judah is mentioned together with Luliani, and is called "the pride of Israel," although the reading "B. Judah" (בן יהודה) in this passage is probably due to the confusion of Pappos b. Judah with the Alexandrian Pappos, brother of Luliani.

W. B. J. Z. L.

PAPPUS: Leader of a rebellion under Emperor Hadrian (117-138). He is always mentioned together with Luliani, who was probably his brother ("'Aruk," *s.v.* הרג). They came originally from Alexandria (hence their Greek names); but they lived in Palestine. Pappus and Julianus were the pride of Judaism (Sifra, Beḥuḳḳotai, v. [ed. Weiss, p. 111d], where the incorrect cognomen "ben Judah" occurs). They were taken prisoners in Laodicea—it is not known why—but were liberated in consequence of the sudden death of their judge. The day of their escape, 12th of Adar, is celebrated as a feast-day (scholium to Meg. Ta'an.). When under Hadrian the Temple was to be built, the brothers set up exchange-tables on the road from Acre (Acco) to Antioch and provided with gold, silver, and other articles those who were coming into the country from Babylon (Gen. R. lxiv.); in other words, they organized a rebellion. After the rebellion—doubtless that of Bar Kokba—had been quelled they drank no more from colored glass goblets (Yer. Sheb. 35a), probably in token of mourning. They were executed in Lydda (confused with Laodicea), and are accordingly called "the martyrs of Lydda." From that time on Trajan's day was no longer observed (Yer. Ta'an. 66a). The Babylonian Talmud (Ta'an. 18b) appears to mention the same brothers by the names of Shemaiah and Ahiah; but the matter is still very confused.

G. S. Kr.

PARABLE (Hebrew, משל; Greek, *παραβολή*): A short religious allegory. That the Hebrew designation for "parable" is "mashal" (comp. David Ḳimḥi's commentary on II Sam. xii. 1-4 and on Isa. v. 1-6) is confirmed by the fact that in the New Testament the Syriac "matla," corresponding to the Hebrew "mashal," is used for *παραβολή* (Matt. xiii. 18, 31, 33; xxi. 45; Mark iv. 2; Luke v. 36, vi. 39). It must be noted, however, that "mashal" is used also to designate other forms in rhetoric, such as the fable and apothegm.

The Old Testament contains only five parables, corresponding to the definition here given, aside from a few symbolic stories, such as Ezek. iii. 24-26, iv. 1-4, and xxiv. 3-5. **Biblical Parables.** These parables are as follows: (1) Of the poor man who had raised a single lamb which a wealthy neighbor took to set before a guest (II Sam. xii. 1-4); intended to illustrate the sin which David had committed with Bath-sheba, Uriah's wife. (2) Of the wise woman of Tekoah, who induced David to make peace with his son Absalom (*ib.* xiv. 6-8). (3) Of the prophet's disciple, showing Ahab the wrong course which he had adopted toward Ben-hadad (I Kings xx. 39-40). (4) Of the vineyard which does not thrive despite the care bestowed upon it (Isa. v. 1-6), illustrating Israel's degeneracy. (5) Of the farmer who does not plow continually, but prepares the field and sows his seed, arranging all his work in due order (Isa. xxviii. 24-28); intended to show the methodical activity of God. All these parables were based on conditions familiar at the time; and even the event described in II Sam. xiv. 6-8 was probably no rare occurrence, in view of the custom which then prevailed of avenging bloodshed.

A large number of parables are found in post-Biblical literature, in Talmud and Midrash. The Talmudic writers believed in the pedagogic importance of the parable, and regarded it as a valuable means of determining the true sense of the Law and of attaining a correct understanding thereof (Cant. R. i. 8). Johanan b. Zakkai is said to have studied parables and fables side by side with the Miḳra, Mishnah, Halakah, Haggadah, etc. (B. B. 134a; Suk. 28a), and R. Meïr used to divide his public discourses into halakah, haggadah, and parables (Sanh. 38b). **In the Talmud.** In the Talmud and Midrash almost every religious idea, moral maxim, or ethical requirement is accompanied by a parable which illustrates it. Among the religious and moral tenets which are thus explained may be mentioned the following: the existence of God (Gen. R. xxxiv. 1); His manner of retribution, and of punishing sins both in this world and in the next ('Ab. Zarah 4a; Yalḳ., Lev. 464; Shab. 152a); His faithful governance ('Ab. Zarah 55a; Sanh. 108a); His impatience of injustice (Suk. 30a); His paternal leniency (Ex. R. xlvi. 6), and His relation to Israel (*ib.* xlvi. 4; Ber. 32a); Israel's sufferings (Ber. 13a); the folly of idolatry ('Ab. Zarah 54b-55a); the Law as the guardian and faithful protector in life (Soṭah 21a); the sin of murder (Mek., Yitro, 8 [ed. Weiss, p. 78a]); the resurrection (Sanh. 91a); the value of benevolence (B. B. 10a); the worth of a just man for his contemporaries (Meg. 15a); the failure of popularity as a proof of intrinsic value (Soṭah 40a); the evil tendency of freedom from anxiety (Ber. 32a); the limitations of human knowledge and understanding (Sanh. 39a); the advantage frequently resulting from what appears to be evil (Niddah 31a); conversion (Shab. 153a); purity of soul and its reward (*ib.* 152b).

Although the haggadists took the material for their parables from conditions of life with which their hearers were familiar, yet they selected details to which Biblical allusions were found to apply; since in certain cases the idea underlying the parable was already well known to their auditors. Thus parables dealing with kings were frequently chosen to illustrate God's relation to the world in general and to Israel in particular, as in Num. R. ii. 24, since the idea of the God-king had been made familiar to the people by the Bible (Ps. x. 16; Zeph. iii. 16; Zech. xiv. 16-17; Mal. i. 14). Israel is the first-born of the Lord (Ex. iv. 22; Deut. xiv. 1); there are accordingly many parables of a king who had a son who was very dear to him (Ber. 13a; Deut. R. iii. 12; Ex. R. xix. 8), which illustrate God's relation to Israel. This relation is also frequently illustrated by the parable of a king who had a beloved or a wife (*e.g.*, Num. R. ii. 14-15; Deut. R. iii. 9, 11, 16), since, according to Isa. liv. 5, Jer. ii. 2, and Hosea ii. 18, 21-22, Israel is the bride of God, His wife, whom He loves, and whom He always takes back, although He may at times disown her and cast her off. The attitude of God toward Israel is illustrated with especial frequency by the parable of a king who had a vineyard in which he planted fine vines (*e.g.*, Num. R. xv. 18, and in Tanḥuma in most of the weekly sections), on account of the comparison of Israel to the vineyard of God (Isa. v. 1-7), and to the noble vine which He planted (Jer. ii. 21). Similarly the flight of the prophet Jonah from God is illustrated by the parable of the servant who runs away from his master (Mek., Bo, i. [ed. Weiss, 1b]), since the idea that a prophet is a servant of God was familiar to the people from Isa. xx. 3, l. 10.

The following Talmudic parables may be quoted to show the manner in which the writers employed this form of argument:

Examples. A pagan philosopher once asked R. Gamaliel why God is angry with idolaters and not with idols, whereupon R. Gamaliel answered him with the following parable: "A king had a son who raised a dog which he named after his royal father; and whenever he was about to swear he said, 'By the life of the dog, the father.' When the king heard of this, against whom did his anger turn, against the dog or against the son? Surely only against the son" ('Ab. Zarah 54b).

Once Akiba was asked to explain why persons afflicted with disease sometimes returned cured from a pilgrimage to the shrine of an idol, though it was surely powerless. His answer was the following parable: "There was a man in a certain city who enjoyed the confidence of all his fellow citizens to such a degree that without witnesses they entrusted deposits to him, with the exception of one man in the city who always made his deposits before a witness. One day, however, this distrustful man forgot his caution, and gave the other a deposit without a witness. The wife of the trustworthy man attempted to induce him to deny having received a deposit from the distrustful man, as a punishment for his suspicion; but the husband said: 'Shall I deny my rectitude because this fool acts in an unseemly fashion?' Thus it is with the sufferings inflicted by Heaven upon man, which have a day and an hour appointed for their end. If it happens that a man goes on that day to the idol's shrine, the sufferings are tempted not to leave him, but they say, 'Shall we not fulfil our obligation to leave this fool, although he has behaved with folly?'" (*ib.* 55a).

Emperor Antoninus asked Rabbi how there could be punishment in the life beyond, for, since body and soul after their separation could not have committed sin, they could blame each other for the sins committed upon earth, and Rabbi answered him by the following parable: "A certain king had a beautiful garden in which was excellent fruit; and over it he appointed two watchmen, one blind and the other lame. The lame man said to the blind one, 'I see exquisite fruit in the garden. Carry me thither that I may get it; and we will eat it together.' The blind man consented and both ate of the fruit. After some days the lord of the garden came and asked the watchmen concerning the fruit. Then the lame man said, 'As I have no legs I could not go to take it'; and the blind man said, 'I could not even see it.' What did the lord of the garden do? He made the blind man carry the lame, and thus passed judgment on them both. So God will replace the souls in their bodies, and will punish both together for their sins" (Sanh. 91a, b). La Fontaine, in his "Fables," ascribes this parable to Confucius.

The Parable of the Banquet.

Johanan b. Zakkai illustrates the necessity of daily conversion and of constant readiness to appear before God in heaven by the following parable: "A king invited his servants to a banquet without stating the exact time at which it would be given. Those who were wise remembered that all things are ever ready in the palace of a king, and they arrayed themselves and sat by the palace gate awaiting the call to enter, while those who were foolish continued their customary occupations, saying, 'A banquet requires great preparation.' When the king suddenly called his servants to the banquet, those who were wise appeared in clean raiment and well adorned, while those who were foolish came in soiled and ordinary garments. The king took pleasure in seeing those who were wise, but was full of anger at those who were foolish, saying that those who had come prepared for the banquet should sit down and eat and drink, but that those who had not properly arrayed themselves should stand and look on" (Shab. 153a). Similar parables expressing the same thought are found in the New Testament (Matt. xxii. 10–12, xxv. 1–12; Luke xii. 36), but the Talmudic fable shows the finer and more striking elaboration.

Another parable may be cited from the Palestinian Talmud, which is found in the New Testament also. When R. Ḥiyya's son, R. Abin, died at the early age of twenty-eight, R. Zera delivered the funeral oration, which he couched in the form of the following parable: "A king had a vineyard for which he engaged many laborers, one of whom was especially apt and skilful. What did the king do? He took this laborer from his work, and walked through the garden conversing with him. When the laborers came for their hire in the evening, the skilful laborer also appeared among them and received a full day's wages from the king. The other laborers were angry at this and said, 'We have toiled the whole day, while this man has worked but two hours; why does the king give him the full hire, even as to us?' The king said to them: 'Why are you angry? Through his skill he has done more in the two hours than you have done all day.' So is it with R. Abin b. Ḥiyya. In the twenty-eight years of his life he has learned more than others learn in 100 years. Hence he has fulfilled his life-work and is entitled to be called to paradise earlier than others from his work on earth; nor will he miss aught of his reward" (Yer. Ber. ii. 5c). In Matt. xx. 1–16 this parable is intended to illustrate the doctrine that the heathen who have accepted Christianity have equal rights with the Jews in the kingdom of heaven. Other interesting parables of the Talmud are found in Ḳid. 2b; Niddah 31b; B. Ḳ. 60b; B. B. 16a; Ber. 7b, 9b; Yoma 38b–39a; Suk. 29a; Meg. 14a; M. Ḳ. 21b; Ḥag. 12b; Ta'an. 5b–6a; Sanh. 96a.

In the Midrash.

Parables occur with even greater frequency in the Midrash than in the Talmud, one or more parables being found in nearly every section in Midrash Rabbah as well as in Tanḥuma. It is not necessary to quote any of these, since they are used in the same way as in the Talmud, and the examples cited from the Talmud may serve also as specimens of midrashic parables, especially as nearly all of those quoted are found in the Midrash as well. The parables of both the Talmud and the Midrash, reflecting the characteristics of the life of their time, are a valuable aid in studying the cultural history of that period; Ziegler has shown, *e.g.*, that the parables dealing with kings reflect the conditions of the Roman empire. The same statement holds true in the case of the other parables of the Talmud and Midrash, which likewise mirror their time; for it may be assumed that the haggadists who made use of the form of the parable were intimately acquainted with the conditions upon which they drew for illustration, although they may have colored those conditions to suit their purposes.

The teachers, philosophers of religion, and preachers of the post-Talmudic period also had recourse to the parable to illustrate their meaning, such as Baḥya ibn Paḳuda in his "Hobot ha-Lebabot" (ii. 6, iii. 9), Judah ha-Levi in his "Cuzari" (i. 109), and Leon of Modena (comp. Azulai, "Shem ha-Gedolim," *s.v.*). In the eighteenth century Jacob Kranz of Dubno (Dubner Maggid) was especially noted as a composer of parables, introducing them frequently into his sermons. His homiletic commentaries on the Pentateuch and on certain other books of the Old Testament contain many parables taken from life and which serve to illustrate the condition of the Jews of his time. See MAGGID.

PARACLETE (פרקליט or פרקליטא): Rabbinical term adopted from the Greek *παράκλητός* (= "advocate," "intercessor"): Targumic translation of מליץ (Job xvi. 20, xxxiii. 23): "He who performs one good deed has gotten to himself one advocate [paraclete], and he who commits one transgression has gotten to himself one accuser" (Abot iv. 11). "Whosoever is summoned before the court for capital punishment is saved only by powerful advocates [paracletes]; such paracletes man has in repentance and good works, and if there are nine hundred and ninety-nine accusers and only one to plead for his exoneration he is saved" (Shab. 32a; comp. Job xxxiii. 23-24). "The works of benevolence and mercy done by the people of Israel in this world become agents of peace and intercessors [paracletes] between them and their Father in heaven" (B. B. 10a; Tos. Peah iv. 21). The sin-offering is like the paraclete before God; it intercedes for man and is followed by another offering, a "thank-offering for the pardon obtained" (Sifra, Meẓora‘, iii. 3; Tos. Parah i. 1). The two daily burnt offerings are called "the two paracletes" (Yer. Ber. iv. 7b), and the four kinds of plants at Sukkot are termed "paracletes" for the year's rain (Yer. Ta‘an. i. 63c).

The paraclete or intercessor created through each good deed is called "angel" (Ex. R. xxxii., with reference to Ps. xxxiv. 8; comp. Job xxxiii. 23—"an interceding angel," A. V. incorrectly translating "a messenger," "an interpreter"). In the sense of "Intercessor," the name "Paraclete" is given also to the Holy Spirit in the New Testament (John xiv. 16, 26; xv. 26; xvi. 7 [A. V. incorrectly, "Comforter"]; I John ii. 1 [A. V. "advocate"]), just as the Midrash calls the Holy Spirit "Synegor," which is the same as "Paraclete" (Lev. R. vi. 1; Deut. R. iii. 12). In the same sense Philo speaks of the "Logos" ("De Vita Mosis," iii., § 14) as the "Paraclete" who is to procure for the high priest forgiveness of sins, just as he uses the term "paraclete" elsewhere in the sense of "advocate" and "intercessor" ("In Flaccum," §§ 3, 4; "De Opificiis Mundi," § 6: "God is in no need of an 'intercessor,'" *i.e.*, a helper).

K.

PARADISE (Hebrew, פרדס; Greek, *παράδεισος*).—**Biblical Data:** The word "paradise" is probably of Persian origin. It occurs but three times in the Old Testament, namely, in Cant. iv. 13, Eccl. ii. 5, and Neh. ii. 8. In the first of these passages it means "garden"; in the second and third, "park." In the apocalypses and in the Talmud the word is used of the Garden of Eden and its heavenly prototype (comp. references in Weber's "Jüdische Theologie," 2d ed., 1897, pp. 344 *et seq.*). From this usage it came to denote, as in the New Testament, the abode of the blessed (comp. Luke xxiii. 43; II Cor. xii. 4; Rev. ii. 7).

Description in Genesis.

In the Old Testament, however, one has to do with the earthly Garden of Eden, of which there are two representations: one in Gen. ii., iii., and the other in Ezek. xxviii. 13-17. According to the first of these passages YHWH planted a garden "eastward in Eden," in which were the tree of life and the tree of knowledge; and He gave it to Adam to keep. There "went out" from this garden a river which was divided and became "four heads." The names of these were Pison, Gihon, Hiddekel (Tigris), and Euphrates. Adam and Eve were permitted to eat of all the trees of the garden except the tree of the knowledge of good and evil. In this garden were created and placed all sorts of animals; but none of these proved a suitable companion for man. Accordingly a woman was created. Adam and Eve then lived in the garden without clothing.

The most subtle of the creatures in the garden was the serpent. He questioned the woman concerning the trees of which she and Adam might eat, and was told that they were prohibited from eating of the tree of the knowledge of good and evil, and that death would result from such an act. The serpent declared that, so far from this being the case, if Adam and Eve were to eat of it they would become like gods. Eve was tempted and ate; then she persuaded Adam to eat. The result of this act was that the primitive pair realized their nakedness and began to make clothing. It was declared that the ground would bring forth to man thorns and thistles, that he should with difficulty wrest from it his sustenance, and that woman should bring forth children in pain. The pair were then expelled from Eden, lest they should eat of the tree of life. To prevent their return cherubim were placed at the entrance of the garden. It is probable that this account intended to locate the garden in Mesopotamia. The mention of the Tigris and Euphrates indicate this, though the allusion to the lands of Havilah and Cush, around which the Pison and the Gihon flowed, is not so clear.

Ezekiel's Conception of Eden.

Ezekiel's allusion to Eden occurs in a highly rhetorical passage in which he arraigns the King of Tyre. This king, he declares, was in the garden of God, clothed with many kinds of precious stones. According to the Masoretic text this king was the cherub, but the Septuagint reads more correctly "stood with the cherub." This garden was in "the mountain of God," where the king moved in the midst of the stones of fire. To form a complete picture of Ezekiel's conception of paradise one should add the reference to the cedar as the supreme tree of Eden (Ezek. xxxi.), and his description of the Temple at Jerusalem as a holy mountain from which flowed a river (*ib.* xlvii.). It is evident that Ezekiel had in mind a picture of Eden kindred in many ways to the account in Genesis, but which also differed in many points (comp. PARADISE, CRITICAL VIEW).

Ezekiel's conception of Eden is not unlike that of the heavenly paradise in Enoch xxiii.-xxviii. The happy destination of the righteous is pictured in this work (which dates from 200 to 170 B.C.) as a great mountain in the midst of the earth from under which streams of water flow. At the center of its sacred enclosure a palm-tree grows. Similar views find expression in other apocalypses (comp. Apoc. Baruch, iv.; II Esd. viii. 52; Rev. ii. 7, xxii. 2 *et seq.*). These passages form the transition from the earlier ideas of paradise as man's primitive home to the Talmudic and New Testament conceptions of paradise as the final abode of the blessed.

E. C. G. A. B.

——**In Rabbinical Literature:** The word פרדס is used metaphorically for the veil surrounding the mystic philosophy (Ḥag. 14b), but not as a synonym for the Garden of Eden or paradise to identify a blissful heavenly abode for the righteous after death. The popular conception of paradise is expressed by the term "Gan 'Eden," in contradistinction to "Gehinnom" = "hell." Jewish authorities are almost unanimous in maintaining that there is a terrestrial as well as a celestial Gan 'Eden; that the Garden of Eden in Genesis is a model in miniature of the higher Gan 'Eden called paradise (see EDEN, GARDEN OF). Paradise is occasionally referred to as "'Olam ha-Ba" (= "the world to come"); but generally this term is used for the post-millennial time, after the Messianic and resurrection periods. Sometimes the terms "Gan 'Eden" and "'Olam ha-Ba" are erroneously interchanged.

Definition. Gan 'Eden is recognized by Naḥmanides as "'Olam ha-Neshamot" (= "the world of the souls"), which the departed souls of the righteous enter immediately after death (see Sem. i. 5b; Tem. 16a).

The Midrash Agada gives, with cabalistic coloring and vivid imagination, a detailed description of paradise. Dimensions of the chambers, etc., are furnished; and the particulars contained are graphically stated in various forms of legendary narratives. These accounts are supposed to have been communicated by the very few individuals who, it is claimed, visited paradise while alive. The Haggadah credits nine mortals with entrance to heaven while alive: Enoch, Eliezer, Abraham's servant, Serah, the daughter of Asher (Soṭah 13a), Bithiah, the daughter of Pharaoh (I Chron. iv. 18), Hiram, King of Tyre, Elijah, Messiah, Ebed-melech the Ethiopian (Jer. xxxviii. 12), and Jabez b. Judah ha-Nasi (probably an error; should be Jabez the Judahite, mentioned *ib.* iv. 10). Others substitute Joshua b. Levi for Hiram, King of Tyre (Derek Ereẓ Zuṭa i., end; Yalḳ., Gen. 42). Joshua thus became the hero of nearly all the paradise legends. He often met Elijah before the gates of paradise (Sanh. 98a; see "'En Ya'aḳob" *ad loc.*); and he obtained permission from the angel of death to visit paradise before his death and to inspect his assigned place. He reported the result of his investigation to Rabban Gamaliel ("Seder ha-Dorot," ed. Warsaw, 1893, ii. 191). Probably the original accounts are in the Zohar, which contains all the elements in fragmentary documents (Zohar, Bereshit, 38a-39b, 41a, and Leka 81a, b). One of these accounts is credited to Enoch. Midrash Konen is probably the first compilation and elaboration of these fragments; it reads as follows:

"The Gan 'Eden at the east measures 800,000 years (at ten miles per day or 3,650 miles per year). There are five chambers for various classes of the righteous. The first is built of cedar, with a ceiling of transparent crystal. This is the habitation of non-Jews who become true and devoted converts to Judaism. They are headed by Obadiah the prophet and Onḳelos the proselyte, who teach them the Law. The second is built of cedar, with a ceiling of fine silver. This is the habitation of the penitents, headed by Manasseh, King of Israel, who teaches them the Law.

"The third chamber is built of silver and gold, ornamented with pearls. It is very spacious, and contains the best of heaven and of earth, with spices, fragrance, and sweet odors. In the center of this chamber stands the Tree of Life, 500 years high. Under its shadow rest Abraham, Isaac, and Jacob, the tribes, those of the Egyptian exodus and those who died in the wilderness, headed by Moses and Aaron. There also are David and Solomon, crowned, and Chileab (II Sam. iii. 3; Shab. 55b), as if living, attending on his father, David. Every generation of Israel is represented except that of Absalom and his confederates. Moses teaches them the Law, and Aaron gives instruction to the priests. The Tree of Life is like a ladder on which the souls of the righteous may ascend and descend. In a conclave above are seated the Patriarchs, the Ten Martyrs, and those who sacrificed their lives for the cause of His Sacred Name. These souls descend daily to the Gan 'Eden, to join their families and tribes, where they lounge on soft cathedras studded with jewels. Every one, according to his excellence, is received in audience to praise and thank the Ever-living God; and all enjoy the brilliant light of the Shekinah. The flaming sword, changing from intense heat to icy cold and from ice to glowing coals, guards the entrance against living mortals. The size of the sword is ten years. The souls on entering paradise are bathed in the 248 rivulets of balsam and attar.

Description in Midrash Konen.

"The fourth chamber is made of olive-wood and is inhabited by those who have suffered for the sake of their religion. Olives typify bitterness in taste and brilliancy in light [olive-oil], symbolizing persecution and its reward.

"The fifth chamber is built of precious stones, gold, and silver, surrounded by myrrh and aloes. In front of the chamber runs the River Gihon, on whose banks are planted shrubs affording perfume and aromatic incense. There are couches of gold and silver and fine drapery. This chamber is inhabited by the Messiah of David, Elijah, and the Messiah of Ephraim. In the center are a canopy made of the cedars of Lebanon, in the style of the Tabernacle, with posts and vessels of silver; and a settee of Lebanon wood with pillars of silver and a seat of gold, the covering thereof of purple. Within rests the Messiah, son of David, 'a man of sorrows and acquainted with grief' (Isa. liii. 3), suffering, and waiting to release Israel from the Exile. Elijah comforts and encourages him to be patient. Every Monday and Thursday, and Sabbath and on holy days the Patriarchs, Moses, Aaron, and others,call on the Messiah and condole with him, in the hope of the fast-approaching end" (Midr. Konen, in "Arze Lebanon," 3a, b, Venice, 1601; comp. Jellinek, "B. H." ii. 28, 29).

In other versions the sections of paradise are increased to seven. Another midrash, apparently composed of fragments of ancient versions, describes the three fire-walls of different colors around paradise, and places the section of the pious among the heathen nations outside the outer wall. This description is remarkable for the diminutive dimensions which it gives, *e.g.*, 600 ells between the walls, and 120 ells' space between the entrances; also for the fact that it antedates paradise to the creation of heaven and earth by just 1,361 years, 3 hours, and 2 minutes. This paradise has a tall music pillar which plays beautiful songs automatically. There are seven sections for the pious souls, and a separate division of seven sections for the souls of pious women, headed, in the order named, by Bithiah, the daughter of Pharaoh, a proselyte; Jochebed, wife of Amram; Miriam; Huldah the prophetess; Abigail; (sixth and seventh sections, the highest) the Matriarchs ("Gan 'Eden," second recension in Jellinek, *l.c.* iii. 131-140). In another version the sections are seven, but the grades of the souls number twelve, as follows: "those (1) who feared God, (2) who were charitable, (3) who buried the dead, (4) who visited the sick, (5) who dealt honestly, (6) who lent to the poor, (7) who cared for the orphans, (8) who were peacemakers, (9) who instructed the poor, (10) who were martyrs, (11) who learned the Law, (12) David, Solomon, and other righteous kings, such as Josiah and Hezekiah" (Jellinek, *l.c.* v. 41-48).

Female Souls.

The following midrashic narrative is attributed to R. Joshua b. Levi, though the style of the midrash appears to be much later, perhaps of the ninth century: "Paradise has two diamond gates, and there are 600,000 attending angels with shining faces. Immediately on the arrival of the righteous, they divest him of his shroud and clothe him with

Joshua b. Levi's Description of Paradise.

eight garments made of clouds of honor. They put a double crown of fine gold and jewels on his head, and place eight myrtles in his hand. The angels salute him, saying, 'Go eat thy bread with joy,' and lead him along valleys of water in which grow 800 species of roses and myrtles. Each of the righteous has a canopy as is befitting his excellence. Connected with each canopy are four rivulets of milk, wine, balsam, and honey. Over each canopy grows a golden vine studded with thirty pearls, each glittering like Venus. Under the canopy is a table of onyx set with diamonds and pearls. Sixty angels guard every righteous one and ask him to partake of the honey as compensation for his study of the Law, which is likened to honey (Ps. xix. 10), and to drink the wine, which has been preserved in its grapes ever since the six days of Creation, the Law being likened to spiced wine (Cant. viii. 2). The most uncomely of the righteous becomes as beautiful as Joseph and as R. Johanan. Exiguous silver pomegranates reflect the sun, which is always shining; for 'the path of the just is as the shining light' (Prov. iv. 18). There are three stages through which the newcomer has to pass: (1) the section of the children, which he enters as a child; (2) the section of the young; and (3) the section of the old. In each section he enjoys himself as befits his state and age" (Yalḳ., Gen. 20; comp. "Seder Gan 'Eden," in Jellinek, *l.c.* iii. 52–53).

Banquet for the Righteous in Paradise.

Regarding the feast that is prepared for the righteous in paradise, the Leviathan and "the wine preserved in its grapes since the six days of Creation" are the main courses to be served at the banquet (B. B. 75a). The order of the banquet follows: "The Almighty invites the righteous into paradise. King David requests God to join the company. The angel Gabriel brings two thrones, one for God and one for David, as the Scriptures say, 'his throne as the sun before me' (Ps. lxxxix. 36). They feast and drink three goblets of wine. The toast (grace before meals) is offered, to Abraham, 'the father of the world,' but he declines because he had a son (Ishmael) who antagonized God. Isaac, in turn, declines because one of his descendants (an Edomite) destroyed the Holy Temple. Jacob declines because he married two sisters (against the Law). Moses declines because he did not cross the Jordan into Palestine. Joshua declines because he left no issue. Finally, King David accepts the toast, saying: 'I will take the cup of salvation and call upon the name of the Lord' (Ps. cxvi. 13). After grace the Law is produced, and God, through the interpreter, Zerubbabel ben Shealtiel (Ezra iii. 2), reveals the secrets and reasons of the commandments. David preaches from the Haggadah, and the righteous say: 'Let His great Name be hallowed forevermore in paradise!' The wicked in Gehinnom, on hearing the doxology, take courage and answer 'Amen!' Whereupon the Almighty orders the attending angels to open the gates of paradise and to permit the wicked to enter, as the Scriptures say, 'Open ye the gates, that the righteous nation which keepeth the truth [אמנים] may enter in' (Isa. xxvi. 2), the word 'emunim' being interpreted 'who observe to answer "Amen"' [אמן; plural, אמנים]" (Tanna debe-Eliyahu Zuṭa xx.).

There are a nether Gehinnom and an upper one, over against the nether and the upper Gan 'Eden. Curiously enough, hell and paradise join each other. R. Johanan claims that a partition of only a handbreadth, or four inches wide, separates them. The Rabbis say the width is but two fingers (= inches; Midr. Ḳohelet; Yalḳ., 976). R. Akiba said: "Every man born has two places reserved for him: one in paradise, and one in Gehinnom. If he be righteous he gets his own place and that of his wicked neighbor in paradise; if he be wicked he gets his own place and that of his righteous neighbor in Gehinnom" (Ḥag. 16a; see "Sefer Ḥasidim," §§ 609, 610). The question "Who may be a candidate for either Gehinnom or paradise?" is solved by the majority rule. If the majority of the acts of the individual are meritorious, he enters paradise; if wicked, he goes to Gehinnom; and if they are equal, God mercifully removes one wicked act and places it in the scale of good deeds. R. Jose b. Ḥanina quotes, "Who is a God like unto Thee, that pardoneth iniquity" (נושא עון = "lifts a sin"; Mic. vii. 18; Yer. Peah i. 1, end).

Symbolic Significance.

The Talmud deduces the immortality of the soul from the Scriptures. "The spirit shall return to God who gave it" (Eccl. xii. 7); the body of the righteous "shall enter into peace" (Isa. lvii. 2); and the soul "shall be bound in the bundle of life with the Lord" (I Sam. xxv. 29), which is under God's "throne of honor" (Shab. 152b). The haggadic dimensions of paradise and names of the attendants, as well as the materials and articles described, have their cabalistic value and symbolic meaning. The feasting and enjoyment are spiritual, for which figures of speech were invented. Rab distinctly says: "In paradise there is no eating, no drinking, no cohabitation, no business, no envy, no hatred or ambition; but the righteous sit with crowned heads and enjoy the luster of the Shekinah, as it is written: 'They saw God and did eat and drink'" (Ex. xxiv. 11—the sight of God being considered the equivalent of food and drink; Ber. 18a).

In the Middle Ages, however, most of the people and many rabbis failed to grasp the spiritual meaning of paradise, and accepted all haggadic references in a literal sense. Maimonides was probably the first authority to strike a blow at this literalness, by asserting in unmistakable terms the fallacy of such a belief. "To believe so," he says, "is to be a schoolboy who expects nuts and sweetmeats as compensation for his studies. Celestial pleasures can be neither measured nor comprehended by a mortal being, any more than the blind can distinguish colors or the deaf appreciate music." Maimonides maintains that the Gan 'Eden is terrestrial, and will be discovered at the millennium (Maimonides, Commentary on Sanh. x.). This view evoked considerable opposition from the contemporary French rabbis; but the Spanish rabbis, especially Naḥmanides, defended Maimonides except as regards his theory of punishment after death. E. C. J. D. E.

——**Critical View:** The paradise narrative of Gen. ii.-iii. is a part of the J stratum of the Pentateuch; but it has long been recognized that it is not all from one hand. Dillmann regarded ii. 10-14 as supplementary (comp. his Commentary on Genesis); and the view is now generally accepted. Budde ("Urgeschichte," pp. 46 *et seq.*) showed that ii. 9b and iii. 22b, relating to the tree of life, are also later additions, a view which Toy rightly confirms ("Jour. Bib. Lit." x. 1 *et seq.*). In the original story but one tree appeared.

Babylonian Elements of Narrative.

As already noted, this garden seems to be placed by the writer in Babylonia, and presumably the Hebrew writer's knowledge of it came from Babylonian sources. Although no such narrative has yet been found in Babylonian sources, all the elements of it appear in Babylonian literature in one form or another. From Eridu, where there was a sacred garden containing a palm (comp. Barton, "Semitic Origins," p. 197), comes the Adapa legend (comp. Schrader, "K. B." vi. 92 *et seq.*, and "Assyrian and Babylonian Literature," Aldine ed., pp. 314 *et seq.*), in which it appears that there are a food and a water of life, of which, if a man partake, he may become like the gods—a thought also prominent in the story of Genesis. In the Gilgamesh epic there is a story of a wild man, Eabani, who lived with animals and had intercourse with them, and who through intercourse with a woman was enticed to leave them and cling to her. One of the enticements which she held out to him was that he would become like a god. Jastrow ("Adam and Eve in Babylonian Literature," in "Am. Jour. Semit. Lang." xv. 193 *et seq.*) claims that the parallelism of this to the Biblical story has been obscured by changes of the Biblical text, and that originally in Genesis also man consorted with the animals, which were created before woman, that the fruit by which he was tempted was intercourse with her, and that originally Gen. ii. 24 read "a man shall leave [עזב] the animals and cleave unto his wife." All this, as Barton has shown (*l.c.* pp. 93 *et seq.*), is in thorough harmony with primitive Semitic belief as to the origin of civilization, and is probably true.

The cherubim as the guardians of gates are identical with the lion and bull deities that performed similar offices in Babylonia and Assyria. The sacred tree also is an emblem which appears often on the Assyrian monuments. Frequently cherubim of a different character are represented as fertilizing it, thus showing it to be a palm-tree. On an old Babylonian cylinder a man and a woman are pictured sitting on either side of such a tree on which clusters of dates are seen hanging, and behind the woman a serpent stands on tail to whisper in her ear (see illustration in JEW. ENCYC. i. 175, *s.v.* ADAM; and for representations of cherubim comp. *ib.* iv. 15). The flaming sword associated with the cherubim is probably the "exalted lightning," which Tiglath-pileser (Col. vi. 15) mentions as an implement of punishment.

Divergent Views Respecting the Rivers.

The serpent as the author of evil has also a parallel in the dragon Tiamat in the Babylonian story of the Creation, though the two really belong to different spheres. The name "Eden" is found also in the Babylonian "edennu" = "field" or "plain." There can, therefore, be little doubt that the account came to the Hebrews from Babylonia; but scholars differ as to the location of the rivers Pison and Gihon. Delitzsch ("Wo Lag das Paradies?" 1881) identified these with two canals, of which one is not known, but the other, Gihon, was near Babylon. Cush, in this view, is the Kassite country east of the Persian Gulf. Haupt (in "Ueber Land und Meer," 1894-95, No. 15) regards the Hebrew writer's knowledge of geography as so defective that he identified the Pison with the Red Sea, which was supposed to flow as a river about Arabia (Havilah), and the Gihon with the Nile, which was supposed to flow through unknown countries until it appeared in Cush (Nubia). Hommel ("Aufsätze und Abhandlungen," pp. 326-340) identifies all the rivers except the Euphrates with Wadi Dawasir, Wadi al-Rumma, and Wadi Ṣirḥan in Arabia. Gunkel ("Genesis," in Nowack's "Kommentar," p. 33) regards the rivers as heavenly rivers, suggested by the Milky Way, to which the Tigris and Euphrates corresponded upon earth, and thinks paradise was situated at the north pole.

Barton has shown (*l.c.* pp. 93 *et seq.*, especially p. 96, note) that in the Semitic conception paradise was one of those fertile oases that are found in Arabia and North Africa (comp. W. R. Smith, "Rel. of Sem." 2d ed., pp. 102 *et seq.*), and that in Babylonia it became a garden because of changed economic conditions. Indefiniteness is, therefore, to be expected in its Babylonian location—such indefiniteness as is incident to mythology.

Ezekiel's Picture of Eden.

In Ezekiel's picture of Eden the outline of the primitive oasis is still further modified. In this the shrine is on a mountain, and the sacred tree is no longer a palm, but a cedar. In the Gilgamesh epic (Tablet V.) there is a parallel to Ezekiel's picture in the description of the beautiful shrine of Humbaba, god of Elam, in the midst of a forest of cedars. Recent discovery confirms the existence of a sacred cedar forest in Elam (comp. Scheil in De Morgan's "Délégation en Perse," ii. 58, 59, 63, 69). Out of this sacred mountain a sacred river ran; and here divine voices were heard (comp. Jensen in Schrader, "K. B." vi. 437, 441, 573). It is this picture which has indirectly influenced Ezekiel. Probably because of Tyrian influence in building Solomon's Temple, and the consequent impress of Tyrian ideas on Israel, the representation of paradise came to Ezekiel from Tyre (comp. Bevan in "Jour. of Theological Studies," iv. 500 *et seq.*); and Ezekiel speaks of this mountain as though it were identical with the hill of the temple in Tyre. Its cedars are for him cedars of Lebanon. The precious stones of Ezekiel's paradise were probably, as Bevan suggests, a reference to the two pillars of the temple at Tyre which shone brightly at night (Herodotus, ii. 44), and to the stones of the high priest's breastplate worn by the Tyrian king. The spring of the primitive oasis has here become a mountain stream, as in Babylonia it became rivers, because the paradise tradition has here come by way of a mountainous country.

Evolution of the Ideal Jerusalem.

These traditions of a primitive paradise from which man had been expelled for transgression made it natural that the goal of national prosperity, or of human life, should be represented as a regaining of these primitive conditions. It was this that led Ezekiel (Ezek. xlvii.) to portray the ideal Jerusalem in colors taken from the traditions of paradise as they were known to him. A trace of this appears also in Zech. xiv. 8 and Joel iv. 18. This method is taken up in greater detail in Enoch and in the apocalypses cited above, where the pictures of paradise are modified to suit each writer's fancy. As time went on and Jerusalem was more and more idealized, elements from the city were introduced into the picture of paradise and blended with the elements taken from the garden and the oasis. Thus in Rev. xxii. 2 *et seq.* paradise is a city, down the street of which a river, rising under the throne of God, flows; and on either side of the river the tree of life grows, bearing a fruit every month (comp. Barton, *l.c.* p. 96, note). See EDEN, GARDEN OF.

E. C. G. A. B.

——**In Arabic Literature:** Paradise is usually called in Arabic "jannah" = "garden," the Persian word "firdaus," which has given the word "paradise" to European languages, being applied to one part only of the celestial abode. "There are one hundred steps in paradise; the distance between every two steps is as that between the heavens and the earth; and Firdaus is the highest, and from it flow the rivers of the paradises; and God's throne is above Firdaus" ("Mishkat al-Maṣabiḥ," xxiii. 13, 1). In the Koran there are eight different designations for paradise, which, according to most Moslem theologians, indicate eight different heavens or degrees of bliss, although probably no such exact use of the names was intended by Mohammed. Eight different degrees in paradise are, however, referred to; and the prophet himself was carried through a succession of heavens on the occasion of his miraculous night journey.

There is also a difference of opinion as to whether the paradise of the future world is identical with the Eden from which Adam and Eve were ejected, some claiming that paradise has not yet been created. The orthodox, however, believe that the two are the same. The story of Idris or Enoch, who entered heaven without dying, illustrates the latter theory. In spite of the opposition of the angel of death and of Ridwan the gatekeeper, Enoch scaled the wall of paradise by the aid of the tree Tuba, which God directed to bend a branch toward Enoch and draw him in (G. Weil, "Biblical Legends of the Mussulmans," p. 52).

Description of the Mohammedan Paradise.

The paradise of the Mohammedans is full of material delights built up by a rich and often childish fancy, chiefly on a Jewish and a Christian foundation. In sura lxxvi. 12–22 paradise is described as follows: "And their reward for their patience shall be paradise and silk. Reclining therein upon couches, they shall see neither sun nor piercing cold; and close down upon them shall be its shadows; and lowered over them its fruits to cull; and they shall be served with vessels of silver and with goblets that are as flagons—flagons of silver which they shall mete out! and they shall drink therein a cup tempered with zinzabil [Baiḍawi: "ginger," with which Arabs flavor their water and like which the contents of this fountain are supposed to taste], a spring therein named Silsabil! and there shall go round about them eternal boys; when thou seest them thou wilt think them scattered pearls; and when thou seest them thou shalt see pleasure and a great estate! On them shall be garments of green embroidered satin and brocade; and they shall be adorned with bracelets of silver; and their lord shall give them to drink pure drink! Verily this is a reward for you and your efforts are thanked" (Palmer's translation, Oxford, 1880).

Flowing Water a Principal Feature.

As is natural for a people living in an arid country, one of the principal features of the Arabian paradise is the flowing water. The River Kauṣar is described as having water whiter than milk and sweeter than honey; its bed is of saffron, and its banks of musk. From it flow streams to all parts of the garden. Other chief features are the black-eyed virgins (houris) promised to the faithful. Every believer will have a tent formed of a hollow pearl of immense size, in the corners of which will be his wives. All bodily imperfections will be removed, and every man will enter paradise at the age of thirty; *i.e.*, his age will be changed to that if he be older or younger, and he will retain this age. Every possible wish will be immediately gratified. If one wishes to ride he will have a ruby horse with wings; if he desires children he will have them grown up at once; if he wishes to farm, whatever he plants will grow with incredible rapidity. There is a river of life also in paradise. After the Day of Judgment, when the faithful have passed over the narrow bridge across hell into heaven, God will ask them if there be any who had but a particle of good in them who have fallen into hell. After any such have been rescued, He, out of His great mercy, will take out of the burning fire those who in all their lives have not performed one good deed, and will throw them into the river of life, where, although they have been burned to coals, they will return to life ("Mishkat").

Much has been said in criticism of the materialism of the Mohammedan paradise. In connection with this a remark in the "Mishkat" is of interest, to the effect that all the joys of paradise are as nothing compared with the delight of beholding God's face.

E. C. M. W. M.

PARAH ("Heifer"): Name of a treatise in the Mishnah and the Tosefta, included in the order Ṭohorot. The Pentateuchal law (Num. xix.) decrees that a red heifer, "wherein is no blemish, and upon which never came yoke," shall be burned and her ashes mixed with spring water, that the compound so obtained may be used to sprinkle and cleanse every one who becomes unclean. The burning of the heifer and the preparation of the ashes, as well as the fetching of the water and its mixture for sprinkling, were attended by strict ceremonies, which constituted, according to Talmudic accounts, one of the principal differences between the Pharisees and the Sadducees, since many observances were introduced by the former only in protest against the Sadducean point of view. The treatise Parah contains a detailed description of these ceremonies, as well as various regulations concerning the purity of the water for sprinkling and its different effects.

In most editions the treatise is the fourth in the mishnaic order Ṭohorot, and is divided into twelve chapters, containing ninety-six paragraphs in all.

Contents.

Ch. i.: Age of the red heifer and of the young heifer (comp. Deut. xxi. 3); explanation of the word "shelashit" as three-year-old, and of "reba'i" as four-year-old (§ 1); age of the different sacrificial animals, and the different names which some of them bear according to their ages (§§ 2-4).

Ch. ii.: Whether the red heifer may be purchased from a non-Jew (§ 1); cases in which her horns and hoofs are black (§ 2); the defects, and the burdens carried which make the red heifer unavailable (§§ 3-4); cases in which she becomes unsuitable on account of some white or black hairs (§ 5).

Ch. iii.: Preparation of the priest who is to burn the red heifer (§ 1); prevention of any possible defilement, by rearing in houses built over hollow rock the children who fetch the water from Siloam (§§ 2-4); seven red heifers said to have been prepared in all: one by Moses, one by Ezra, and five in the time after Ezra (§ 5); a special passage was constructed for the priest and the red heifer from the Temple mount to the Mount of Olives, where she was burned (§ 6); the elders of the people went ahead to the Mount of Olives, where a miḳweh was erected. There the priest was made ritually unclean, and was then obliged to immerse himself immediately, thus directly rebuking the Sadducees, who insisted that the priest who performed the ceremony should be absolutely pure, a state which he could attain only after sundown of the day on which he had taken the ritual bath (§ 7); further details regarding the functions of the elders and the slaughtering and burning of the heifer (§§ 8-10); the ashes were divided into three parts: one part was kept in the "ḥel," the space between the wall of the Temple and the hall, and the second on the Mount of Olives, while the third was divided among the orders of priests (§ 11).

Ch. iv.: Circumstances which render the heifer unavailable (§§ 1-3); cases in which all who take part in the ceremony become ritually unclean; all preparations concerning the heifer must be made in the daytime (§ 4).

Ch. v.: Vessels which are suitable for receiving the ashes and the water; persons entitled to throw the ashes into the water; regarding the gutter in the rock.

Ch. vi.: Things which render the ashes and the water unavailable.

Ch. vii.: Acts which, if performed between or during the drawing of the water and its admixture with the ashes, render these parts of the ceremony invalid.

Ch. viii.: Preservation of the water for sprinkling (§ 1); instances in which an unclean thing can not cause defilement to a human being, but a thing which has been made unclean by such an object can cause ritual impurity (§§ 2-7); different kinds of water, and which of them are suitable for the water for sprinkling (§§ 8-11).

Ch. ix.: Causes which render the water for sprinkling unavailable (§§ 1-4); concerning water for sprinkling which has become unavailable (§ 5); the mixture of the ashes of the red heifer with ordinary ashes (§ 7); effects still exercised by water for sprinkling which has become unavailable (§§ 8-9).

Ch. x.: How one who is pure in regard to the water for sprinkling may become defiled; how the water becomes unclean.

Ch. xi.: Further details regarding defilement of the water for sprinkling (§§ 1-3); difference in its effect upon those who require a ritual bath according to the Pentateuchal law, and those on whom it is obligatory according to a scribal regulation (§§ 4-5); the proper species of hyssop (comp. Num. xix. 6), how many stalks of it must be taken, and how many stems there must be on each stalk (§§ 7-9).

Ch. xii.: Further details regarding the hyssop, the persons who may perform the act of sprinkling, and the cases in which the sprinkling is ineffective.

The Tosefta to this treatise contains much to supplement and explain the Mishnah. Especially noteworthy is the story of the Sadducean priest who attempted to burn the red heifer according to the ritual of his sect, but was prevented by Johanan b. Zakkai (Tosef. vi. 9).

W. B. J. Z. L.

PARALLELISM IN HEBREW POETRY: It is now generally conceded that parallelism is the fundamental law, not only of the poetical, but even of the rhetorical and therefore of higher style in general in the Old Testament. By parallelism in this connection is understood the regularly recurring juxtaposition of symmetrically constructed sentences. The symmetry is carried out in the substance as well as in the form, and lies chiefly in the relation of the expression to the thought. The same idea is expressed in its full import—that is, in its various aspects and turns—not in a continuous, uninterrupted sentence, but in several corresponding clauses or members with different words. Hence the name "parallelismus membrorum" or "sententiarum." It has also been aptly called "sinnrhythmus" (Ewald). For the parallel members are related to each other as rhythmical protasis and apodosis, as προῳδός and ἐπῳδός.

Discoverers.

The first to see this law clearly and to distinguish between its basic forms was the Anglican bishop Robert Lowth ("De Sacra Poesi Hebræorum Prælectiones," 1753, Lecture xix.; and "Preliminary Dissertation to Isaiah," 1778, pp. 12-26). Unknown to him Christian Schoettgen referred to this principle in a general way ("Horæ Hebr." 1733; comp. Diss. vi., "De Exergasia Sacra," pp. 1249-1263: "exergasia quid sit, omnes Rhetorum libelli docent, conjunctio scilicet integrarum sententiarum idem significantium"). But even before that Ibn Ezra and Ḳimḥi had characterized this feature of Hebrew poetry by the expression "kaful" ("doubling") or, more fully, "kefel 'inyan be-millot shonot" ("doubling of the thought with other words"). Both, however, regarded it merely as an elegant form of expression ("derek ẓaḥot"). On Abu al-Walid see Bacher, "Aus der Schrifterklärung des Abulwalid," p. 39.

According to the logical interrelation of the members there are distinguished three kinds of parallelism:

(1) The **synonymous,** in which the same sentiment is repeated in different but equivalent words:

"Shew me thy ways, O Lord;
Teach me thy paths" (Ps. xxv. 5; comp. *ib.* cxiv.; Num. xxiii. 7-10; Isa. lx. 1-3; etc.).

Frequently the second line not merely repeats but also reenforces or diversifies the idea:

"They shall eat of the fruit of their own way,
And be filled with their own devices" (Prov. i. 31);
"Saul hath slain his thousands,
And David his ten thousands" (I Sam. xviii. 7; comp. Isa. xlii. 7, lv. 6 *et seq.*; Ps. xcv. 2).

(2) The **antithetical,** in which the parallel members express the opposite sides of the same thought:

"The integrity of the upright shall guide them,
But the perversity of the treacherous shall destroy them" (Prov. xi. 3; comp. *ib.* x. 1 *et seq.*; Isa. liv. 7 *et seq.*; Ps. xx. 8, xxx. 6).

Frequently there are one or more synonymous elements in both members, thus making the contrast more emphatic:

"An unjust man is an abomination to the righteous,
And he that is upright in the way is an abomination to the wicked" (Prov. xxix. 27; comp. *ib.* x. 5, xvi. 9, xxvii. 2).

(3) The **synthetical** (called also **constructive** and **epithetical),** in which the two members contain two disparate ideas, which, however, are connected by a certain affinity between them:

"The fear of the Lord is the beginning of wisdom:
But the foolish despise wisdom and instruction" (Prov. i. 7; comp. *ib.* iii. 5, 7; Isa. l. 4; Ps. i. 3, xv. 4).

Kinds of Parallelism.

Lowth observes of these three fundamental kinds of parallelism ("Preliminary Dissertation," p. 26): "Synonymous parallels have the appearance of art and concinnity and a studied elegance; they prevail chiefly in shorter poems, in many of the Psalms, in Balaam's prophecies, in many of those of Isaiah, which are most of them distinct poems of no great length. Antithetical parallelism gives an acuteness and force to adages and moral sentences, and therefore abounds in Solomon's Proverbs, but elsewhere is not often to be met with. The poem of Job, being on a large plan and in a high tragic style, though very exact in the division of the lines and the parallelism, and affording many fine examples of the synonymous kind, yet consists chiefly of the constructive."

Other distinctions which refer rather to the structure and form of the verses than to the nature of parallelism are:

The **introverted** parallelism (Jebb, "Sacred Literature," 1820, § iv., p. 53), in which the hemistichs of the parallel members are chiastically arranged after the scheme ab-ba:

"My son, if thine heart be wise,
My heart shall be glad, even mine;
Yea, my veins shall rejoice,
When thy lips speak right things" (Prov. xxiii. 23 *et seq.*, Hebr.; comp. *ib.* x. 4, 12; xiii. 24; xxi. 17; Ps. li. 4).

The **palillogical** parallelism, in which one or more words of the first line are taken up, like an echo or the canon in music, in the second:

"The Lord is a jealous God and avengeth;
The Lord avengeth and is full of wrath;
The Lord taketh vengeance on his adversaries,
And he reserveth wrath for his enemies" (Nah. i. 2; comp. Judges v. 3, 6, 7, 11, 12, 15, 16, 23, 27; Isa. ii. 7, xxiv. 5; Hos. vi. 4; Ps. lxxii. 2, 12, 17; cxxi.; cxxiv.; cxxvi.).

Perfect and **imperfect** parallelism, according to the equality or inequality of the number of words in each line.

Sometimes a distich does not contain the logical development or repetition of the thought as in the instances quoted above; but the thought goes forward through both lines, either because one line was not sufficient to express it or because the second line supplements the first in the form of a relative, final, causative, or consecutive clause.

There is also that parallelism which is called (*e.g.*, by De Wette and Delitzsch) the **rhythmical:**

"All the kings of the earth shall give thee thanks, O Lord,
For they have heard the words of thy mouth" (Ps. cxxxviii. 4);
"The eyes of the Lord are in every place,
Keeping watch over the evil and the good" (Prov. xv. 3; comp. *ib.* xvi. 7, 10; xvii. 13, 15; xix. 20; xxi. 23, 25).

Number of Parallel Members.

The simplest and most frequent form is the distich, in which two lines balance each other in thought and expression. But the parallelism may extend to several lines with the same variety of relations as in the distich.

The tristich may consist either of three synonymous lines, as in Ps. i. 1; Num. vi. 25; Lam. i. 1; Isa. xlvii. 11; Mic. vi. 15; or of a distich with an introductory or a concluding line, as in Isa. xliii. 5; Ps. cxxiii. 2.

The tetrastich may comprise four synonymous lines (Num. xxiv. 6; Isa. i. 4, lviii. 6), or may consist of two distichs balanced against each other (Gen. xxv. 23; Isa. xliii. 2, 6), or, more elegantly, the lines of the distichs may be arranged crosswise after the scheme ac-bd (Ps. xxxiii. 13 *et seq.*; Isa. xlix. 2), or acdb (II Sam. iii. 23 *et seq.*). or while the pairs are synonymous within themselves they may be antithetic with reference to each other (Isa. liv. 10, lxv. 21 *et seq.*; Ps. xxxvii. 10 *et seq.*). Examples of antithesis within the two distichs are Ps. xxx. 6, and xx. 8 *et seq.*

The pentastich is either a combination of a distich and tristich (Zech. ix. 5) or of two distichs and a single verse (Num. xxiv. 3 *et seq.*; Josh. x. 12 *et seq.*; I Chron. xii. 19).

The hexastich is formed either of three distichs (Num. xxiv. 17; Isa. ii. 7 *et seq.*; Hab. iii. 17) or of a distich and a tetrastich (Gen. xxvii. 29; Cant. iv. 8). Such combinations are rare in lyrics, but more frequent in the prophetical writings.

The strophes are subject to the same law of parallelism as the lines themselves. Thus Num. xxiv. 39 is composed of five strophes of 5, 6, 4, 5, and 4 lines respectively. Job iii., after the introit in verse 3, can be divided into seven strophes with 6, 10, 6, 8, 6, 8, and 6 lines respectively, balanced against one another in thought (*e.g.*, cursing of day and night; the enviable condition of the still-born and those in the grave; and the pain of those tired of life). So also Ps. lxii. 2–5, 6–9, and 10–12; *ib.* ii. 1–3 and 4–6, which form two antithetical strophes.

——**In Post-Biblical Literature:** In the oldest post-Biblical Hebrew poetic productions extant, that is, the liturgy, the principle of parallelism is existent, though not exhibiting the regularity and symmetry of the Biblical poetry. It is sufficient here to refer to such prayers as "Le-El Baruk," "Ahabah Rabbah," "'Ezrat Abotenu," and the "Shemoneh 'Esreh." Parallelism is also discernible in the few poetic remnants preserved in the Talmud. So, for instance, in the elegy on R. Ḥanin, who, when a child came to him late in life died on the day of its birth:

שמחה להוגה נהפכה
ששון ויגון נדבקו
בעת שמחתו נאנח
בעת חנינתו אבד הנינו.

(TRANSLATION.)

"Gladness turned into sadness,
Joy and grief met together,
His joy was mingled with sighing,
Grace reached him only to depart" (Ket. 104a).

With the adoption of rime and meter in the Spanish period the parallelism fell into decay, though it maintained itself in the liturgy. Occasionally it breaks through in other poetical productions of that period, as in the complaint of Abraham ibn Ezra:

איגע להצליח ולא אוכל—כי עוהוני ככבי שמי
לו אהיה סוחר בתכריכין—לא יגועון אישים בכל ימי
גלגל ומזלות במעמדם—עוו במהלכם למולדתי
לו יהיו נרות סחורתי—לא יאסף שמש עדי מותי.

(TRANSLATION.)

"I strive to succeed, but without avail—for my horoscope was unlucky;
Were I trader of death-shrouds, none would die while I lived;
The cycle of planets in their position took a wrong course at my birth;
Were candles my wares, the sun would not set before my death."

Likewise in Judah al-Ḥarizi's maḳamah of the "Unhappy Marriage":

ברוך אשר יום צר נצרני
וברחמיו חסד גמלני
יצרי ביד סכלי מכרני
אך צור בחמלתו גאלני
אחרי אשר הדרי שאול באתי
במן שאול פתח והעלני.

(TRANSLATION.)

"Blessed He who preserved me on the day of distress
And in His mercy showed me grace.
My inclination sold me into the hand of my folly,
But the Rock in His compassion delivered me;
After I had already entered the chambers of hell,
He opened the belly of hell and brought me up."

The same may be noticed in modern Hebrew poetry. So, for instance, in N. H. Wessely's elegy on the death of Moses Mendelssohn:

מות עץ חטבת שאר פריהו
לא כלו שחת אכס קצהו
עוד מכתב חכמתו חרות על לוח
עוד דובר עם רעיו לשון וספר
לא מישפתי בשר עפר ואפר
לא אומר ודברים כי אם ברוח.

(TRANSLATION.)

"Death! thou hast hewn off the tree, but left its fruit;
Not the whole hast thou destroyed, but a small part.
The sum of his wisdom is engraved on the tablet,
Still is he discussing with his friends letters and science;
Not with lips of flesh, dust, and ashes,
Not in words and sounds, but in the spirit."

Exegetical Importance.

The importance of parallelism as an aid in determining text-critical and lexicographical questions, thus affording the key to the correct interpretation of many passages in the Bible, is evident. From an esthetical point of view the parallelism may be termed the rhythm of nature. Parallelism is not an exclusive peculiarity of Hebrew. It is met with not only in Assyrian (A. Jeremias, "Die Babyl.-Assyr. Vorstellung vom Leben nach dem Tode," p. 91, Leipsic, 1878; E. Schrader, in "Jahrbücher für Protestantische Theologie," i. 122) and in Egyptian (Georg Ebers, "Nord und Süd," i. 1; J. H. Breasted, in "The Biblical World," i. 55), but is also characteristic of Finnish song, especially the "Kalevala" (D. Comparetti, "Der Kalevala," Halle, 1892; J. C. Brown, "People of Finland," p. 280, London, 1892). A. Wuttke ("Der Deutsche Volksaberglaube der Gegenwart," p. 157, Berlin, 1869) and Eduard Norden ("Die Antike Kunstprosa," ii. 813, Leipsic, 1898) consider parallelism as the most ancient and the original form of poetry, as "perhaps the most important formal ethnic thought ["formale Völkergedanke"] in existence." But it is best adapted to the genius of the Hebrew language with its wealth of synonymous expressions which enables the poet or the prophet to dwell upon a theme with an almost inexhaustible variety of expression and coloring. The parallelism is so inwrought in the nature of Hebrew poetry that it can not be lost in translation; and to this fact is perhaps due not in a small measure the fact that the poetry of the Old Testament has become the common property of mankind.

E. C. I. M. C.

PARAN: 1. Desert, corresponding to the present Badiyyat al-Tih, bounded on the north by the Jabal al-Makhrah, on the south by the watershed toward the Sinai Peninsula, on the east by the mountains of Wadi al-'Arabah, and on the west by the Wadi al-'Arish. Ishmael is said to have settled here after his separation from Abraham (Gen. xxi. 21). The Israelites went there on leaving the territory of Sinai, and the spies went thence into Canaan (Num. x. 12, xiii. 3). David went to Paran after having made peace with Saul (I Sam. xxv. 1). In the Roman period a highway led through this desert, according to the "Tabula Peutingeriana" (ed. Miller, 1888), but now Al-Tih is a desolate waste.

2. Locality near the southern boundary of Canaan, between Israel and Edom. Moses repeated the Law to the Israelites "between Paran and Tophel" (Deut. i. 1), and the Edomite Hadad stopped at Paran when fleeing before Solomon to Egypt (I Kings xi. 18). According to the "Onomasticon" of Eusebius (ed. Lagarde, p. 298), this place is identical with the present Ḳal'at al-Naḥl.

3. Mountain or mountain range. "Yhwh shined forth from Mount Paran" (Deut. xxxiii. 2), and "the Holy One [came] from Mount Paran" (Hab. iii. 3). This mountain or mountain range may be identical with the mountains surrounding the present Wadi al-'Arabah.

PARASHAH (plural, **Parashiyyot**): A section of the Pentateuch. The Sephardim apply the word to each of the fifty-four weekly lessons into which the Torah is divided in the one-year cycle, as well as to smaller sections; the Ashkenazim call the week's lesson a Sidra, giving the name "parashah" to the smaller portions that are read on festivals or to one of the seven subsections in which the week's lesson is read on Sabbath mornings. The 153 parts into which the Torah was divided in the cycle of three years, which prevailed in Palestine till the exiles from Spain brought their customs into the Holy Land, are known as "sedarim" (singular, "seder"), as is seen from the Masoretic colophon at the end of each of the five books. Thus Genesis has 12 parashiyyot and 43 sedarim; Exodus, 11 and 29 respectively; Leviticus, 10 and 22; Numbers, 11 and 32; Deuteronomy, 11 and 27. The weekly lessons are marked in all Hebrew Bibles either by the current number or by the names which they take from the first word (*e.g.*, 1, "Bereshit") or from the first striking word (*e.g.*, 2, "Noah"), or sometimes from two words (*e.g.*, 3, "Lek Leka"; 50, "Ki Tabo"). In Pentateuchs printed for use in the synagogues the seven subsections are marked by ordinals prefixed to all but the first. The sedarim representing the three-year cycle, which has so long been out of use, are not marked.

In regard to the so-called "Four Parashiyyot" read, after the weekly lesson, on certain Sabbaths (see Parashiyyot, The Four) the Mishnah (Meg. iii. 4), after naming them, proceeds: "On the fifth they return to their order." This would indicate that in those times the weekly lessons were omitted on the four Sabbaths in question; but this is very unlikely, because the 153 sedarim could not have been gone through with in three years, and moreover because two at least of the parashiyyot (Nos. 1 and 2) are too small for subdivision into seven parts. Hence Bertinoro (*ad loc.*) explains that only the Hafṭarah, which on the four Sabbaths has depended on the additional parashah, returns to the regular order, that is, dependence on the weekly lesson.

The first parashah of the weekly lesson is read on the afternoon of the Sabbath preceding that on which the whole is read. If this Sabbath falls on a festival, the same subsection is read on the previous Sabbath afternoon, or even on the second preceding Sabbath afternoon. For example, when "Shemini" is to be read on Sabbath, Nisan 29, its first parashah is read on the afternoons of Nisan 8, 15, and 22.

The first parashah of the weekly lesson is read also on the mornings of Monday and Thursday before the Sabbath on which the whole lesson is read, unless displaced by a new moon, feast, or fast falling on such day.

For the reading on new moons, festivals, half-holy days, and fasts, see Fasting and Fast-Days; Festivals; Holy Days; Law, Reading from the; New Moon.

A. L. N. D.

PARASHIYYOT, THE FOUR: Besides the weekly lesson or parashah that is read from the scroll of the Law every Sabbath, there is sometimes read after it an additional portion appropriate to the particular day. Among such occasional Sabbaths are the two preceding and the two following the Feast of Purim, the four additional portions or parashiyyot for which are called respectively "Parashat Sheḳalim," "Parashat Zakor," "Parashat Parah," and "Parashat ha-Ḥodesh." The Sabbaths on which these four parashiyyot are read are consequently called "Shabbat Sheḳalim," "Shabbat Zakor," etc.

Parashat Sheḳalim.

Parashat Sheḳalim, comprising Ex. xxx. 11-16, which contains the commandment of the half-shekel offering, is read on the Sabbath immediately preceding the 1st of Adar or, if that day falls on Saturday, on the 1st of Adar itself. The reason for reading this particular portion on the Sabbath in question is that from the 1st of Adar messengers sent by the bet din formerly admonished the Jews to bring or to send their half-shekel offerings (comp. Sheḳ. i. 1). On Shabbat Sheḳalim two scrolls of the Law are required: one for the weekly lesson, which is divided among seven readers; and one for the Mafṭir who reads the parashah for Sheḳalim. When that Sabbath falls on the 1st of Adar, three scrolls must be used: one for the weekly lesson divided among six readers; one for the portion (Num. xxviii. 9-15) read on Rosh Ḥodesh Sabbath; and the third for the mafṭir who reads the parashah for Sheḳalim. The Hafṭarah is invariably II Kings xii. 1-17 (of the Sephardim, *ib.* xi. 17-xii. 1-17). It is fully understood that in a leap-year Adar Sheni is meant.

The Sabbath immediately preceding the Purim feast is called "Shabbat Zakor" because on that day the mafṭir reads the portion beginning with "Zakor," which comprises Deut. xxv. 17-19. This portion contains the command to blot out the remembrance

Parashat Zakor and Parashat Parah.

of Amalek; and it is allotted to the Sabbath preceding Purim because that feast commemorates the deliverance of the Jews from Haman the Amalekite. On Shabbat Zakor also two scrolls are necessary: one for the weekly lesson, and one for the Zakor parashah. The Hafṭarah is I Sam. xv. 2–34 (of the Sephardim, *ib.* 1–34), containing the narrative of the extermination of the Amalekites by Saul at the command of Samuel.

Parashat Parah (= "section of the Red Heifer"), which comprises the whole of Num. xix., is read on the last Sabbath but one of Adar or on the last Sabbath if the 1st of Nisan falls on Saturday. This is done in order to commemorate the purification of the unclean by sprinkling them with the "water of separation" so that they may be able to bring the Passover sacrifice. On this Sabbath, as on those cited above, two scrolls are necessary: one for the weekly lesson, and one for the mafṭir. The Hafṭarah is Ezek. xxxvi. 16–38 (of the Sephardim, *ib.* 16–36), verse 25 being an allusion to the "water of separation."

Parashat ha-Ḥodesh.

Parashat ha-Ḥodesh—that is, the section beginning with "Ha-Ḥodesh" (Ex. xii. 2–20), which passage contains the command to celebrate the Passover and the Feast of Unleavened Bread—is read on the 1st of Nisan if it falls on Saturday, or on the Saturday immediately preceding if it falls on a week-day. In the latter case two scrolls are used: one for the weekly lesson, and one for the mafṭir, who reads the above-cited portion. When this Sabbath falls on the 1st of Nisan, three scrolls are necessary, and the procedure is the same as on Shabbat Sheḳalim when that Sabbath falls on the 1st of Adar. The Hafṭarah is Ezek. xlv. 16–xlvi. 18 (of the Sephardim, *ib.* xlv. 18–xlvi. 15), which treats particularly of the Passover feast (Meg. *l.c.*; *ib.* Gemara 29b–30b; Shulḥan 'Aruk, Oraḥ Ḥayyim, 685, 1–5).

Reading of Parashat Zakor Obligatory.

Of the Four Parashiyyot, the reading of Parashat Zakor, and, according to some rabbis, that of Parashat Parah also, is considered as a Biblical commandment, so those Jews who live in villages where there is no Minyan must on Shabbat Zakor and Shabbat Parah repair to a place where there is a minyan in order to hear the reading of the parashiyyot (Oraḥ Ḥayyim, 685, 7; comp. Be'er Heṭeb *ad loc.*).

It will be seen that the four Sabbaths never follow each other uninterruptedly. In most cases there is an interruption ("hafsaḳah") between the Sabbath of Sheḳalim and that of Zakor, while the other three Sabbaths follow closely upon each other. When the 1st of Adar falls on Saturday, which is very rarely the case, the hafsaḳah immediately follows the Purim feast, that is, between the Sabbaths of Zakor and Parah. But when the 1st of Adar falls on Friday, there are two hafsaḳot: one on the 2d of Adar, that is, between Sheḳalim and Zakor; and one on the 16th of Adar, that is, between Zakor and Parah.

The morning service for the Sabbaths of the Four Parashiyyot has special piyyuṭim commonly called "yoẓerot." On Shabbat Sheḳalim and Shabbat ha-Ḥodesh some of these are recited in the Musaf also.

E. C. M. Sel.

PARDO: A family deriving its name from Prado in Castile. Its members have mostly distinguished themselves in the Levant. Among them may be mentioned:

David Pardo: Rabbinical commentator and liturgical poet; born at Venice March 29, 1719; died at Jerusalem 1792; son of Jacob Pardo of Ragusa, rabbi in Venice. After finishing his studies, Pardo left Venice and went to Ragusa. He then lived for some years in Sarajevo, Bosnia, where he engaged in teaching. From Sarajevo he went to Spalato, Dalmatia, where the rabbi, Abraham David Papo, engaged him as teacher at the yeshibah. After the death of Papo's successor, Isaac Ẓedaḳah, Pardo was elected chief rabbi of the city. Among his disciples were Shabbethai Ventura, David Pinto, and Abraham Curiel. In 1752 Pardo began to publish, his first work being "Shoshannim le-Dawid" (Venice, 1752), a commentary on the Mishnah.

In 1764 Pardo accepted the position of chief rabbi at Sarajevo, where he succeeded Joshua Isaac Maggioro. He employed his leisure time in writing and publishing various works. Toward the end of his life he went to Jerusalem, where he died.

Besides the above-mentioned commentary on the Mishnah, Pardo wrote the following works: "Maskil le-Dawid" (Venice, 1760), supercommentary on Rashi's commentary on the Pentateuch; "Miktam le-Dawid" (Salonica, 1769), responsa; "Ḥasde Dawid" (part i., Leghorn, 1776; part ii., *ib.* 1790), commentary on the Tosefta; "Ḥuḳḳat ha-Pesaḥ" (Leghorn, 1796), a ritual for the Passover season; "La-Menaẓẓeaḥ le-Dawid" (Salonica, 1795), novellæ on various Talmudic topics; "Sifre debe-Rab" (*ib.* 1804), commentary on Sifre. Among his liturgical works are the following: "Sekiyyot ha-Ḥemdah" (Salonica, 1756; often reprinted), ritual for the first day of Nisan; "Shirah Ḥadashah" (Amsterdam, 1776 [?]), the history of Esther in verse; "Mizmor le-Dawid" (Leghorn, 1818), notes on Shulḥan 'Aruk, Eben ha-'Ezer; "Shif'at Rebibim" (Leghorn, 1788, and often reprinted), prayers for holy days, with a poetical presentation of the Temple service on the Day of Atonement and other piyyuṭim, published by his disciple Elisha Ḥabillo, called also "Mercado." Notes of Pardo's on the Talmud are found in the Vienna edition of 1860–72, and on Alfasi in the Wilna edition of 1881–86. The library of the Jewish community at Rustchuk owns a "Miktam le-Dawid" bearing the author's signature.

Pardo married a young woman of Spalato, who aided him in his literary labors. She bore him three sons, named Jacob, Isaac, and Abraham, and one daughter. The last-named married Abraham Penso, author of the "Appe Zuṭre" (Salonica, 1798). Abraham Pardo married a daughter of the bibliographer Ḥayyim Joseph David Azulai.

Bibliography: *Miktam le-Dawid*, part i., pp. 1, 207; part ii., Nos. 2, 10, 12, 21, 31; part iii., Nos. 2, 5; part iv., p. 207; *Maskil le-Dawid*, Preface; *Shoshannim le-Dawid*, Preface; *Shif'at Rebibim*, title-page.

M. Fr.

David ben Joseph Pardo: Dutch ḥakam; born at Salonica in the second half of the sixteenth century; died at Amsterdam March 15, 1657. He went with his father to the latter city, where he became ḥakam of the Bet Yisrael congregation (founded 1618). This congregation was consolidated in 1638 with the other two congregations in Amsterdam, and Pardo was appointed ḥakam together with Isaac Aboab da Fonseca, Manasseh ben Israel, and Saul Levi Morteira. He was besides a trustee of the cemetery and ḥazzan of the Bikkur Ḥolim. In 1625 he founded the Ḥonen Dallim benevolent society.

Pardo published a transcription in Latin characters of Ẓaddiḳ ben Joseph Formon's "Obligacion de los Coraçones," a translation of the "Ḥobot ha-Lebabot" (Amsterdam, 1610).

Bibliography: Steinschneider, *Cat. Bodl.* col. 884; Zedner, *Cat. Hebr. Books Brit. Mus.* s.v.

David ben Joseph Pardo: Rabbi; born in Amsterdam; son of Joseph Pardo, ḥazzan in London. He translated into Spanish under the title "Compendio de Dinim" (Amsterdam, 1689) his father's "Shulḥan Ṭahor." The other works attributed to him by Fürst ("Bibl. Jud." iii. 67) were written by David ben Jacob Pardo. A. P.

Isaac ben David Pardo: Rabbi in Sarajevo, Bosnia; brother of Jacob Pardo. He was the author of "To'afot Re'em" (Salonica, 1801), a commentary on the responsa of R. Aḥai of Shabḥa, with an index of the different responsa.

Jacob ben David Pardo: Rabbi at Ragusa and Spalato in the eighteenth century. He was the author of: "Marpe Lashon" (Venice, 1780), prayers and religious poems for children, printed conjointly with his "Tehillah be-Ereẓ," poems on the earthquake in Ragusa; "Ḳehillat Ya'aḳob" (*ib.* 1784), commentary on the Earlier Prophets; "Toḳfo shel Nes" (*ib.* 1789), introduction to the "Ma'aseh Nissim" of Aaron Cohen Ragusano; "Appe Zutre" (*ib.* 1797), novellæ to the treatise "Hilkot Ishshut," *i.e.*, precepts for women; "Minḥat Aharon" (*ib.* 1809), precepts for the religious ritual upon awakening, for the three daily prayers, and moral precepts; "Mishkenot Ya'aḳob" (Leghorn, 1824), commentary on Isaiah, published by his son David Samuel.

Jacob Vita Pardo: Son of David Samuel Pardo; born in Ragusa 1822; died in 1843 at Padua, where he was a student at the Collegium Rabbinicum; his body was conveyed to Verona for burial. Five of his sermons, preached in Padua and Verona, were published after his death. When but eighteen years old he wrote a commentary on Micah, which was published by Samuel David Luzzatto as the first supplement to Joseph Almanzi's "Abne Zikkaron," Prague, 1841. The commentary is not complete, extending only to ch. iv. 8. An obituary, written by Luzzatto in memory of his talented pupil, serves as an introduction to the work.

Bibliography: Steinschneider, *Cat. Bodl.* cols. 883-884, 1245-1246, 1517-1518; Azulai, *Shem ha-Gedolim*, p. 46; Fuenn, *Keneset Yisrael*, i. 48b; Mortara, *Indice*; Benjacob, *Ozar ha-Sefarim*, pp. 46, 312 *et passim*; *Ozar Neḥmad*, i. 170; *Abne Zikkaron*, Supplements 2 and 3, Prague, 1841; Fürst, *Bibl. Jud.* iii. 67.

S. O.

Joseph Pardo: English ḥazzan; died in 1677. He appears to have gone to London from Amsterdam, where his father, David, was a rabbi. He wrote "Shulḥan Ṭahor," a compendium of the first two parts of Joseph Caro's Shulḥan 'Aruk, which was edited by his son, David, and printed at Amsterdam in 1686, dedicated to the "Kaal Kodes de Londres," but with an approbation from the bet din of Amsterdam. The book has been reprinted several times: Frankfort-on-the-Main, 1696, and, with notes by Moses Isserles, 1713; and Frankfort-on-the-Oder, 1704.

Bibliography: Steinschneider, *Cat. Bodl.* cols. 1517-1518; *Monatsschrift*, viii. 387; De Castro, *Auswahl von Grabsteinen*.

J.

Joseph Pardo: Rabbi; born at Salonica; died at Amsterdam Oct. 10, 1619. He emigrated to Holland and was appointed ḥakam of the Bet Ya'aḳob congregation in Amsterdam founded by Jacob Tirado, holding office from 1597 till his death. In 1615 he founded the Hermandad de las Huerfanas and Moher ha-Betulot, now the Santa Compania de Dotar Orphas e Donzelas. Some liturgical poems by him are included in the "Imre No'am" (Amsterdam, 1628; very rare).

His eldest son, **Isaac Pardo,** died at Uskup in Turkey, and his second son, **Abraham Pardo,** at Jerusalem.

Josiah Pardo: Dutch rabbi; son-in-law and disciple of Saul Levi Morteira. He removed to Rotterdam, where he was teacher at the yeshibah de los Pintos, which was transferred to Amsterdam in 1669. He was also ḥakam of the Ḥonen Dallim benevolent society. He emigrated to Curaçoa, where he was ḥakam in 1674, and later he filled a similar post at Jamaica.

D. E. Sl.

PARENTS. See Father; Mother.

PARENZO, ASHER B. JACOB: Hebrew printer in Venice from 1580 to 1600; brother of the printer Meïr b. Jacob. He was employed by Giovanni Bragadin in printing a large number of works of Hebrew literature; among them were: Isaac Abravanel's commentary on the Pentateuch (1579); the Bible (1586); part iv. of the "Ṭurim" (1594); etc. Parenzo states that his immediate ancestors and relatives were likewise printers.

Bibliography: Steinschneider, *Cat. Bodl.* cols. 2812, 2984; idem, *Jüdische Typographie*, in Ersch and Gruber, *Encyc.* section ii., part 28, p. 45.

J. I. E.

PARENZO, CESARE: Italian senator and deputy; born at Rovigo 1839; died at Nervi, near Genoa, April 15, 1898. He studied law, but after receiving his degree he volunteered under Garibaldi in 1860, and took part in the Sicilian expedition, following Garibaldi to Aspromonte in 1862, and to Tirol in 1866. He was elected deputy from Rovigo to the thirteenth and fifteenth legislatures, and from Chioggia to the fourteenth. He then devoted himself to journalism, and was for some time editor of the "Diritto." He also practised law in Rome, and on Jan. 29, 1889, was elected senator. He wrote: "Guida Popolare Amministrativo ad Uso del Privato e del Funzionario Comunale," Mantua, 1871; and "Dello Spirito e della Pratica delle Leggi," Bologna, 1881.

PARḤI. See FARḤI.

PARḤON, SOLOMON B. ABRAHAM IBN: Spanish philologist of the twelfth century; a native of Ḳal'ah (Ḳal'at Ayyub, Calatayud), Aragon. In the preface to his lexicon he mentions as his teachers, besides a certain R. Ephraim of whom nothing more is known, the two great Spanish scholars Judah ha-Levi and Abraham ibn Ezra. Ibn Parḥon refers also to conversations with Judah ha-Levi, mentioning, for example, his remarkable assertion regarding the inadmissibility of meter in Hebrew poetry, and tells of the sojourn of Ha-Levi and Ibn Ezra in North Africa.

The only one of his works which has been preserved is his lexicon. In it he appears as the true pupil of Ibn Ezra, becoming, like him, the propagator of Hebrew philology and Biblical exegesis as they flourished in the Arabic language in Spain. Ibn Parḥon relates in his preface that when he came to Salerno he found the people there entirely ignorant of the products of Judæo-Spanish literature, being acquainted only with the lexicon of Menahem ibn Saruḳ. He determined, therefore, to compile a lexicon to the Bible in which the substance of that literature should be made accessible in Hebrew. He completed his work on Kislew 1, 4921 (= 1160), and called it "Maḥberet he-'Aruk," combining the title of the dictionary of Menahem with that of Nathan's Talmudic lexicon. Except for the original matter which Ibn Parḥon incorporated in his work, it may be considered as an extract from the lexicon of Ibn Janaḥ, supplemented by extracts from the works of Ḥayyuj, as well as from the "Mustalḥaḳ" and the "Luma'" of Ibn Janaḥ.

Ibn Parḥon quotes by name only a few authorities, including Rashi and Solomon ibn Gabirol. The latter's interesting short grammatical didactic poem "'Anaḳ" has been preserved, at least in part, in Ibn Parḥon's introduction to his lexicon. The numerous explanatory notes, which are a notable characteristic of the lexicon, make it a mine of information on historical details relating to the ritual. It contains also various scientific excursus, including some on problems of religious law. The article בעל contains a sermon on illicit intercourse with Jewesses, which throws light on the moral status of the Italian Jews; and in another article, גלב, he seizes the opportunity of showing the inadmissibility of the custom of not cutting the hair, a custom prevailing in Christian countries. Twice, in the articles מנח and ערב, he attacks the practise which Jews living in Christian countries had adopted of combining the afternoon prayer with the evening prayer.

Although Ibn Parḥon introduces a few Aramaic phrases (occurring in the Talmud) to satisfy the taste of his readers, the language of his lexicon, with its pure Hebraisms and the fluency and precision of its style, betrays the influence of his teacher Ibn Ezra. The original matter contributed by Ibn Parḥon includes, in addition to the notes mentioned above, many interpretations of single Biblical passages, and numerous explanations of Biblical words by means of Neo-Hebraic and Aramaic. A brief summary of Hebrew grammar, together with an excursus on Neo-Hebraic prosody, is prefixed to the lexicon, and a number of chapters based chiefly on the "Luma'" of Ibn Janaḥ and dealing with syntactic and stylistic peculiarities of the Bible are appended. The preface and many of the articles contain interesting data on the history of Hebrew philology.

Ten years after its appearance Ibn Parḥon's lexicon was bitterly attacked by Judah ibn Tibbon, who translated the lexicon of Ibn Janaḥ and unjustly criticized Ibn Parḥon's work as being a translation thereof. Despite this, Ibn Parḥon's lexicon became very popular in succeeding centuries, although subsequently it was forgotten, until resuscitated by S. G. Stern, who edited it according to a Vienna manuscript together with an introduction by S. L. Rapoport (Presburg, 1844).

PARIS: Capital city of France. There were Jews in Paris prior to the date of the Frankish invasion. The councils of Varennes in 465 and of Orleans in 533, 538, and 541 adopted certain measures against the Jews, from which it would appear that there must have been Jews in Paris and in the north of France at that time. From the days of the first Frankish kings there was in Paris a Rue de la Juiverie (Street of the Jews), leading to the palace; in 582 a synagogue was erected in this street.

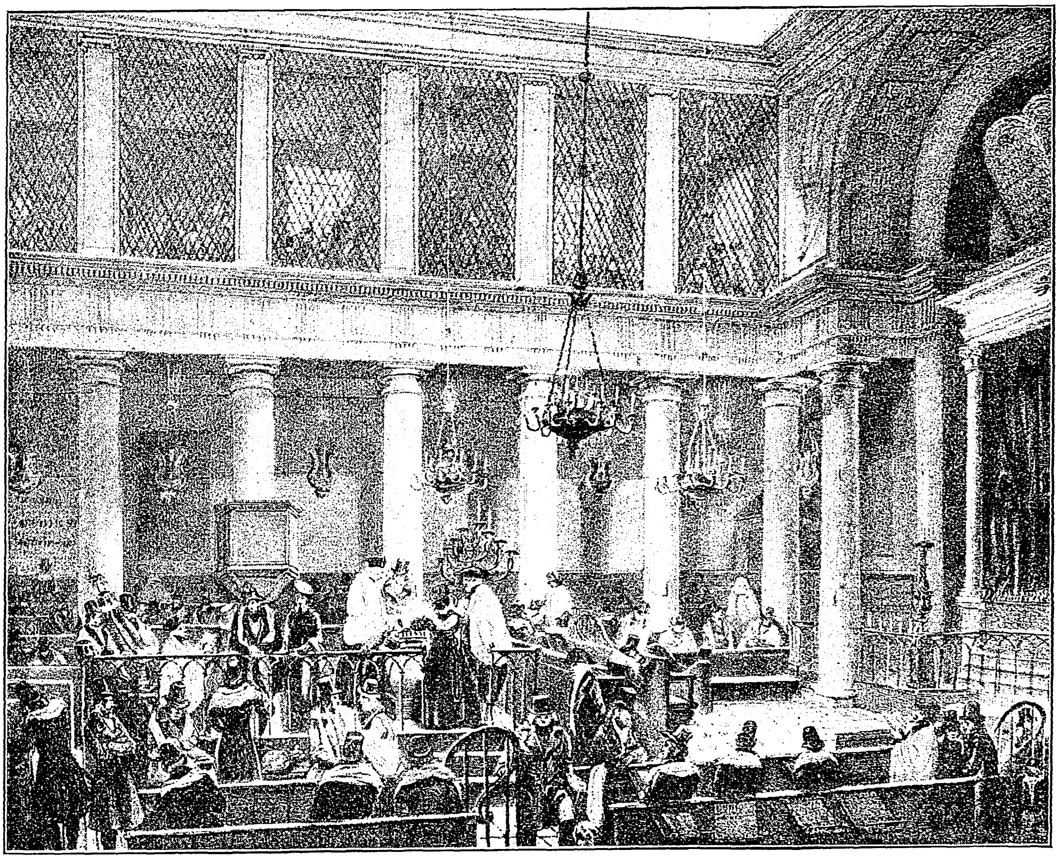
Until the sixth century the Jews who lived in Paris did so under favorable conditions. They enjoyed perfect freedom in the exercise of their religion, they maintained friendly relations with the Christians, and some of them even occupied public offices, as receivers of taxes. However, it was not long before the influence of the Church began to affect the king and nobles. Chilperic (561-584) endeavored to proselytize the Jews; among them was one named Priscus. When this unfortunate refused to "acknowledge the faith" he was thrown into prison. Under the last of the Merovingian kings the situation grew worse. Clotaire II. forbade the Jews to exercise any seigniorial functions or to serve in the army (615). His son Dagobert gave them the choice of conversion or exile (629). Many went into exile, and others suffered martyrdom. A deed of gift signed by King Dagobert in favor of the Abbey of St.-Denis alludes to one Solomon, collector of taxes at the Porte Glaucin, now the Quai aux Fleurs.

With the advent of the Carlovingian kings (687) there came a great change. Charlemagne (768-814), Louis le Débonnaire (814-840), and Charles the Bald (843-877) treated the Jews with great kindness. During the struggles that disturbed the kingdom for the two centuries that followed, the Jews remained unnoticed.

Of the Capetian kings Louis VI. (1108-37) and Louis VII. (1137-80) were favorably disposed toward the Jews. Under their rule the Jewish community in Paris largely increased. Many Jews dwelt also in the environs of the city and owned real estate there. According to certain chroniclers, they owned the greater part of Villejuif. In Paris itself they occupied Les Champeaux, a quarter consisting of a certain number of dark and narrow streets closed by gates at each end. Within this district were to be found the potters, the shoemakers, and the dealers in old clothes and rags. At that time there were two synagogues there; one in the Rue de la Juiverie, the other in the Rue de la Tacherie, formerly called also "Rue de la Juiverie." The community owned two cemeteries, one situated in the Rue de la Galande, the other toward the end of the Rue de la Harpe. Near-by, but on the opposite bank of the Seine, stood a mill which also belonged to the Jews. But their thrift and their wealth excited hatred and jealousy. All sorts of accusations were brought against them; they were charged with having arrested many Christians for debt, and of having accepted as pledges the sacred vessels used in church service. When, with much solemnity, Pope Innocent II. entered Paris, in 1139, the representatives of the Jewish community were permitted to present themselves with those of the city corporations. Wishing to honor the pope, the Jews, carrying the scrolls of the Law, greeted him with an address, to which he replied: "May the Lord God Almighty tear away the veil that conceals your hearts!"

In the Twelfth Century.

Then, too, the odious calumny of ritual murder was circulated freely. In 1179 the Parisian Jews were accused of having murdered at Easter a Christian named "William."



Interior of a Synagogue at Paris.

(From an old drawing by Marquis de Villeneuve.)

Philip Augustus (1180-1223), who succeeded Louis VII., displayed a hostile spirit toward the Jews, and had scarcely ascended the throne when, on a certain Sabbath-day in 1180, he ordered the imprisonment of all the Jews in his kingdom, their release being conditioned on the payment of the sum of 15,000 silver marks. In the spring of 1181 he banished them all, confiscated their lands and dwellings, and annulled four-fifths of their claims against the Christians, exacting the remainder for himself. The synagogues were turned into churches, that situated on the Rue

Banished by Philip Augustus.

de la Juiverie, within the city limits, Philip presented to Maurice, the Archbishop of Paris, in 1183, and it became the Church of Sainte-Madeleine-en-la-Cité. To the cloth-makers' gild the king leased twenty-four Jewish houses which were situated in the "Judearia Pannificorum" or ghetto, now the Rue de la Vieille Draperie, for the yearly payment of a tax of 100 livres.

The Jews Return.

In 1198 Philip, being hard pressed for money, permitted the Jews to return to France. They flocked back to Paris, where they repaired their synagogue in the Rue de la Tacherie, and established another in an old tower on the ramparts, La Tour du Pot-au-Diable, near the convent of St.-Jean-en-Grève. They settled near the Church of Petit-St.-Antoine, in the cul-de-sac or blind alley of St.-Faron, in the Rue de la Tissanderie, known later as the "Cul-de-sac des Juifs," in the vicinity of Mont Ste.-Geneviève, in the Rue de Judas, in the Rue Quincampoix, and in the Rue des Lombards, then inhabited by Italian usurers and therefore the financial center of Paris.

From this time the Jews enjoyed a certain degree of liberty and toleration. Some of them were compelled to pledge themselves not to leave the kingdom for a term of years. A bond given about the year 1204 by several Jews as a security for their continued residence contains the names of these Jews, the amount paid annually into the royal treasury, and the oath taken on the "roole" or scroll of the Law. One of these Jews, in a document dated 1209, is called "le Juif du roi," or the king's Jew. This appears to have been the designation of the Jews attached to the royal treasury (see Kammerknechtschaft). In order that he might extort from them greater sums of money, the king permitted them to charge a high rate of interest, which, however, was subjected to certain restrictions by a decree issued in the year 1218. At this time Paris contained some very rich Jews. In 1212 the chevalier Etienne de Sancerre pawned all his property to the Jew Elijah de Braie of Paris and his son Merote as security for the sum of 80 livres which he had borrowed from them, and for which he was obliged to pay two deniers per livre each week as interest. In 1217 Philip presented the grain-market in the Juiverie to his cupbearer Rinaldo.

Under Louis VIII. and Louis IX.

Under Louis VIII. (1223-26) the Jews were again molested. In Nov., 1223, the king, instigated by the clergy, annulled all Jewish loans of more than five years' standing, exempted Christian debtors from the payment of all interest even on debts contracted later, and decreed that all bonds for debts to Jews must thereafter be signed before the royal bailiff. If any Jews left the domain of their lord they must be returned to him by the owner of the land on which they had settled. By such means many of the wealthiest of Jewish families were reduced to misery.

Louis IX. (1226-70) did not show himself particularly friendly toward the Jews. He spared no efforts to convert them to Christianity. Gregory IX., acting under the influence of the apostate Jew Nicholas Donin, ordered an examination of the Talmud, and a controversy took place June 25, 1240, at the king's court in Paris between Nicholas Donin and four noted rabbis of the day, among whom were Jehiel de Paris and Moses de Coucy. As a result all the copies of the Talmud and of other Hebrew books that had been seized by order on March 3 were consigned to the flames. For several years thereafter Louis IX. stayed his hand, although the edicts against rabbinical works continued to be enforced strictly. But on his return from a crusade in 1254 he renewed his hostile attitude toward the Talmud and toward usury. As an outcome many Jews received severe punishments, and in 1257 all the landed property they held, excepting cemeteries and synagogues, was confiscated by the king. The community of Paris was compelled to solicit the help of the Jews of the surrounding country for the support of its school, formerly so active and noted. Among the numerous emigrants of that time was Jehiel himself, the illustrious head of the school, who set out for Palestine about 1259. By a decree dated June 12, 1269, St. Louis imposed upon the Jews in addition the wearing of the badge.

Under the Philips.

Philip III. the Bold (1270–85), while retaining all the decrees of his father against the Jews, enforced them only passively. In 1271 the council of St.-Quentin reproached him for allowing Jews to sue Christians for debt in a court of justice. Philip even allowed the Jews of Paris to open a new cemetery in a garden bought from a certain canon named Maître Gilbert. Although forbidden by law to reside in the neighborhood of Mont Ste.-Geneviève, they established their quarters in the interior of the city.

Under Philip the Fair (1285–1314) the condition of the Jews became almost intolerable. In 1288 he subjected the Jews of Paris to a fine for chanting too loudly in their synagogues. About the year 1299 he imposed upon them a tax of 244 livres and 12 sous, Tours currency, called the "recepta" (revenue), and 50 livres for exemption from the wearing of the badge. To the tyranny of the king were added the persecutions of the people. In 1290 a Jew of Paris, named Jonathas, was accused of having desecrated the host. He was burned at the stake, his house was razed, and a chapel built on its site which in 1685 bore this inscription: "Upon this spot the Jews defiled the Sacred Host." But notwithstanding their sufferings, the Jews still remained in Paris. At the close of the thirteenth century they inhabited the Rue du Trave-Mourier (now the Rue de Moussy), the Rue Neuve, the Court Robert de Paris (now the Rue Renard St.-Merry), the Tacherie (now the Rue de la Tacherie), and the Petit-Pont. The Jews bore French surnames and first names, such as "Copin le Mire" (the physician), "Mosse le Mire," "Sarre le Mirgesse," etc.

Decree of Exile.

But a terrible blow fell upon them when Philip pronounced his decree of exile against them on July 22, 1306. Then the king appropriated all their property for the royal treasury. In Dec., 1307, he gave to his coachman the synagogue in the Rue de la Tacherie. A number of the Parisian Jews pretended to adopt Christianity, but being unable wholly to conceal their Jewish feelings, they suffered martyrdom. The exile, however, was not of long duration, and the Jews were recalled in 1315 by Louis X. (1314–16). This monarch took them under his protection, and directed that they should be "defended from attacks, injuries, violence, and all oppression." Their synagogues, cemeteries, and other sacred places were restored to them.

But they were not allowed to enjoy royal protection for a great length of time. In 1320 Philip V., the Tall (1316–1322), imposed a tax of 100,000 livres upon the Jews of his kingdom, and of this amount 5,300 livres were payable by the Jews of Paris. In 1321 the accusation of poisoning the wells was made. Many of the Paris Jews were burned, others were exiled, and their property, to the amount of 150,000 livres, confiscated. Then followed a half-century during which the Jews of Paris, under the administration of Rabbi Mattithiah Troyes, seem to have been left unmolested. In 1360 Manecier de Vesoul entered into negotiations for the return of the exiles to France. He settled in Paris, and was appointed by the king collector of the imposts laid upon the Jews in the provinces of the North; he had as an assistant Jacob de Pont-Sainte-Maxence, also a resident of Paris. The Jews were for a time harassed by the king's agent, who threatened to procure their expulsion from the city (1370); but Charles V. (1364–80) ordered that they should be left in peace. The harsh measures against them were canceled, and they became amenable only to the king or their guardian-general, the Comte d'Etampes. Their testimony was accepted as evidence in court; they were exempted from the gabel, or tax on salt, and from fines and servitude, and were subjected only to a special tax for entry and residence in the city.

This lenience toward the Jews soon excited the anger of both the clergy and the people. With the sanction of Charles VI. (1380–1422) the people assembled in the town hall and demanded that "the Jews and usurers should be driven out of the city." Without waiting further action, the mob rushed through the city, crying "Aux Juifs!" attacked and pillaged about forty houses, and maltreated several Jews. For four days they plundered, burned, and murdered at will. Some of the victims, barely escaping with their lives, took refuge in the prison of the Châtelet, and little children were torn from the arms of their mothers and baptized (1380).

Uprising Against the Jews 1380.

Hugues Aubriot, the provost of Paris, in spite of his disposition to protect the Jews, was unable to check the uprising; but he obtained from the king the restoration of children to their parents and the restitution of some of the plunder. This intervention in their favor drew down upon Aubriot the wrath of the Church. He was accused of being secretly a convert to Judaism, and all sorts of abominable crimes were imputed to him. He was compelled to do public penance, and was then thrown into a dungeon. Shortly after, the insurrection of the Maillotins (1381) broke out, and the Jews again suffered severely. They were seized in broad daylight in the open streets, half-strangled, beaten, and stabbed. In 1394 a wealthy baptized Jew, Denis Machault, disappeared from Paris. Seven of the principal members of the Jewish community were at once arrested on the charge of having murdered him. They were at first condemned to be burned alive; but the Parliament of Paris modified this sentence by condemning them to remain in prison until Denis Machault had been returned; in the meantime they were to be beaten "for three successive Saturdays in three different places"—in the market-place, in the Place de Grève, and in the Place Maubert. They were compelled also to pay a fine of 10,000 livres. At length Charles VI., wearied by the incessant clamor of their enemies, expelled the Jews from France in 1394. Escorted by the provost, they left Paris (Nov. 3), and what property they could not take with them was confiscated.

Rabbinical Learning.

From the eleventh century Paris was an important center of religious and Talmudic education. A manuscript relating to the ancient religious customs of Worms mentions a certain Elijah the Elder, who must have lived about the middle of the eleventh century ("Shem ha-Gedolim," *s.v.*). This manuscript seems to confuse Elijah the Elder of Mons with Elijah ben Judah, who lived more than a century later. In a manuscript containing responsa of Geonim (formerly in the possession of Halberstam) is one addressed by the "sages" of Rome to the "sages" of Paris (Luzzatto, "Bet ha-Oẓer," i. 57). None of the latter is mentioned by name, but their colleagues of Rome commend their piety and learning. The responsum containing this is dated at the beginning of the twelfth century.

Twenty years later the rabbis of Paris took part in a synod convoked by RaSHBaM and R. Tam. RaSHBaM remained some time in Paris, and was in friendly intercourse with the learned men of that city. In a responsum ("Or Zarua'," i. 138b) he speaks of Mattithiah Gaon, who is identical with Mattithiah b. Moses, the disciple of Rashi and head of the Talmudic school of Paris; of Judah b. Abraham, who, in collaboration with his colleague Shemaiah, revised some of the works of his master Rashi, and edited a Passover Haggadah; of Jehiel, the son of Mattithiah Gaon; of Judah ben Yom-Ṭob (the tosafist), probably the son of the celebrated tosafist Judah ben Nathan (RIBaN), son-in-law of Rashi. Samuel of Paris consulted R. Tam on the question of a bill of divorce; Moses of Paris, who was at the head of the community of Paris about the middle of the twelfth century, wrote a commentary on the Bible, after the manner of RaSHBaM. Jacob ben Samson, who lived in the first part of the twelfth century, wrote a work on the Hebrew calendar, a commentary on the Seder 'Olam Rabba, and another on Abot, and notes on the prayer-book.

Elijah ben Judah is noted for the controversy which he sustained against R. Tam on the question of phylacteries; Talmudic authors of that age often quote his opinions. Ḥayyim b. Hananeel ha-Kohen was one of the chief disciples of R. Tam; his tosafot are frequently quoted, and Eliezer of Metz was among his disciples.

Judah ben Isaac, called Sir Leon of Paris, was one of the most illustrious French rabbis of the Middle

Sir Leon of Paris.

Ages. He was born in 1166 and died in 1224. He was probably the grandson of Judah ben Yom-Ṭob of Paris, and a descendant of Rashi. About 1198 he was appointed head of the Talmudic school of Paris, then attended by a great number of students, among whom were Moses de Coucy, Isaac ben Moses of Vienne, Samuel Sir Morel de Falaise, and Jehiel ben Joseph. Many of his responsa and decisions have been preserved. Judah Sir Leon compiled most of the tosafot found in the Talmud editions, and is mentioned as a commentator on the Bible and as a writer of various liturgical works. Among the most illustrious pupils of Judah Sir Leon, Jehiel ben Joseph, called Sir Vives, undoubtedly ranks first. He succeeded his master as head of the Talmudic school of Paris about 1224. He had about 300 scholars, including Isaac de Corbeil (his son-in-law), Perez ben Elijah of Corbeil, and probably also the German tosafist Judah ha-Kohen, the teacher of Meïr of Rothenburg. Jehiel bore a high reputation, even among non-Jews, as well as with the great St. Louis. He refuted the argument of the Chancellor of Paris, who attempted to prove from Num. xxiii. 24 that the Jews made use of Christian blood in their religious rites (comp. Zadoc Kahn in "R. E. J." i. 232).

Jehiel was also the principal champion of the Jewish cause in the disputation of 1240. Owing to the state of affairs ensuing upon the great controversy of 1240, Jehiel was obliged to send a delegate to Palestine to obtain funds for the support of the school of Paris. In 1260 he departed with his son for the Holy Land, where he died in 1268. Numerous ritual decisions and tosafot by Jehiel still exist; he is quoted also as a commentator on the Bible. After his departure the school of Paris lost all its former prestige, and for a long period there is no record of any Jewish scholars of Paris. Nevertheless, in the tax-book of Paris for the years 1296–1297 ("R. E. J." i. 61 *et seq.*) there occur the names of "Abraham le Mestre" and "Baru le Mestre," or "Mestrè" (= "rabbi").

Mattithiah ben Joseph.

On the return of the Jews to France, Mattithiah ben Joseph held the office of chief rabbi of Paris and of all France (1360–85). He was the son of Joseph ben Johanan Treves, who had been rabbi of Marseilles in 1343. Charles V. officially appointed Mattithiah the religious head of all the communities of France, and exempted him and Manecier de Vesoul, with their families, from wearing the badge. When Mattithiah was raised to the dignity of chief rabbi there were only four or five Talmudic scholars in the whole of France. He accordingly established a new school at Paris and gathered around him a great number of disciples. Many of his opinions and his treatise on the methodology of the Talmud are quoted by other writers.

About 1385 Johanan succeeded his father Mattithiah as chief rabbi of France and head of the Talmudic school of Paris. Johanan came into conflict with a former pupil of his father's, Isaiah ben Abba Mari (Astruc de Savoie). Isaiah, himself a rabbi of distinction, arrogated to himself the sole right to ordain the French rabbis. He considered himself the only rightful chief rabbi in France and employed the most unscrupulous methods to undermine the authority of Johanan; the latter requested the intervention of the "great ones of Catalonia," Ḥasdai Crescas and Isaac ben Sheshet, who decided in his favor. The final expulsion of the Jews from France in 1394 put an end to these unfortunate disputes; Johanan went to Italy, where he died in 1429. His reputation as a rabbi was very high, and many of his opinions and decisions have been quoted.

The Jews of Paris were noted not only for their religious learning but also for their secular knowledge, particularly in medicine. The names of Copin le Mire (= "physician"), Lyon Dacre Maire, or Mire, Moïse de Mire, and a woman, Sara la Miresse, who also practised medicine, are especially noteworthy. At the request of the physicians of Paris, and particularly of the "Grand Master" Jean de Passaraut, the famous physician Lanfranc (Leon Franco) of Milan wrote a very important work, "Practica sive Ars Completa Totius Chirurgiæ" (Paris, 1296). This book was translated into Hebrew under the title "Ḥokmah Nishlemet bi-Meleket ha-Yad."

Residence Through License.

After the expulsion of 1394 only occasionally were there any Jews resident in Paris, and these had no legal status. At last some few Jews obtained permission from Louis XI. (1461–83) to reside there, on condition of providing themselves with a license from the police, which it was necessary to renew every two or three months. It was not until about 1500 that the presence of Jews in Paris is again noticed. At that time the family of Jovea, originally from Beja in Portugal, is mentioned as residing there. It is not spoken of as Jewish, but as "Neo-Christian." Jacques Jovea (the elder) was the principal of the college of Ste.-Barbe. He brought with him four of his nephews on a mission from the King of Portugal, John III. Francis I. (1515–47) sent to Constantinople for a Jewish physician, who introduced into France the use of ass's milk. It was Francis I. also who founded a chair in Hebrew at the Collège de France (1538), and it was during his reign that Hebrew typography produced its most remarkable works.

According to some sources, which, however, are evidently inspired by malignity, Concini (Maréchal d'Ancre, prime minister of Louis XIII.) and his wife, Leonora Galagai, were of Jewish descent. They had brought some Jews from Holland to Paris, and were accused of professing Judaism themselves, of "offering the sacrifice of the cock as a Jewish oblation" on the occasion of the "Feast of the Reconciliation," and of making use of the Cabala and other Jewish works. A copy of the Maḥzor was found in their house, as well as a work entitled "Cheimuc" (Ḥinnuk); and an amulet, phylacteries, etc. ("Recueil des Charges du Procès Fait à la Mémoire de Concini," 1617).

In 1611 Marie de Medicis summoned the physician Elijah Montalto, who consented to come only on condition that he should be guaranteed perfect liberty to practise his religion; and he obtained the same privilege for his family. He bore a very high reputation at court.

(From a photograph.)

Elijah Montalto.

Owing to Montalto and Concini, the Jews enjoyed some years of peace in Paris. But matters were greatly altered in the reign of Louis XIII. (1610–43); in 1615 the Jews were surprised during the celebration of the Passover, and banished on April 23. It does not appear, however, that the prohibition against their residence in Paris was strictly enforced. A certain Jean Fontanier, by turns Calvinist, monk, advocate, royal secretary, and (finally) Jew, headed the efforts to recall the Jews to France: he was burned in the Place de la Grève. About 1670 twenty-six young persons disappeared within the space of four months, and the Jews were accused of having crucified them; but the accusation was proved false, and the real criminals were discovered.

A mazarinade, under the title of "The Murder of the Pin Merchant," recounts the supposed murder of a citizen in 1652 by the gild of junk-dealers, who are supposed to have been Jews ("Les Juifs à Paris Depuis le VIe Siècle," p. 48). They are said to have murdered a pin-seller, Jean Bourgeois, for having complained of being ill-treated in revenge for his jeering at them. The whole report may be a burlesque; it indicates, however, that there were Jews in Paris at that period. François Lopez was the physician of the Faculty of Paris in 1667. Joseph Athias, the celebrated printer, was a resident of Paris at that time. Among the litterateurs of the reign of Louis XIV. was a certain Cohen, known as "the learned stranger" (1662). There was also Samuel Bernard, the noted financier, whose Jewish origin, however, is not beyond doubt.

In the Eighteenth Century.

At the beginning of the eighteenth century certain Jews were high in the favor of important personages of the court. Silva, the son of a Jewish physician of Bordeaux, was appointed consulting physician to the king in 1724; in 1738 he received a patent of nobility. Another physician, Fonseca, was on terms of intimacy with Voltaire, the Comtesse de Caylus, and other noted persons. Among the physicians of this time was also Azevedo, who lived in the Rue St.-Germaine l'Auxerrois. Little by little, the number of Jews in Paris increased; they came from Bordeaux, Avignon, Holland, Alsace, and Lorraine. Those from Bordeaux had on different occasions since the time of Henry II. secured letters patent authorizing them to reside in France; they were legally established in Paris in 1776 as a result of the efforts of Jacob Rodrigues Péreire. The last-named, celebrated as an instructor of the deaf and dumb, had lived in Paris since 1747. He was acquainted with Necker, Buffon, Rousseau, La Condamine, D'Alembert, Diderot, and others, and was appointed interpreter to the king in 1765. In 1743 Astruc was made consulting physician to the king, a position which he occupied for over twenty years. Revel was made sheriff's appraiser in 1740, and Raynal became royal secretary in 1747. Isaac Pinto, author of an "Apologie pour la Nation Juive," written in reply to Voltaire, and of a pamphlet entitled "Le Luxe," occupied a high rank in the world of letters. Israel Bernard de Valabrègue, who was employed in the royal library and as interpreter to the king in 1754, gave the support of his influence to Moïse Perpignan, Salomon Petit, Israel Salom, and Abraham and Moïse Dalpuget.

From 1767 to 1777 the Jewish merchants pressed their claims against the trade corporations, which refused to admit them into their ranks. A letter of Valabrègue to the king on the subject turned the scale in favor of his coreligionists ("Lettre ou Réflexions d'un Milord à Son Correspondant à Paris au Sujet de la Requête des Marchands des Six Corps Contre l'Admission des Juifs aux Brevets," London, 1767). In 1767 Salomon Perpignan founded the Royal Free School to further the development of the arts at Paris; he was granted papers of naturalization.

At this period German, Avignonese, and Polish Jews began to settle in Paris. There are indications of their presence in the first half of the eighteenth century, and they soon surpassed in numbers the small Portuguese community established at Paris in 1750. They entered all branches of trade; among them were bankers, merchants, innkeepers, porters, cabinet-makers, and music-teachers. Some had commercial dealings with the court, such as the jeweler Michel Oulif. The most singular instance was that of Liefmann Calmer, who came to Paris in 1769 and became Baron of Perpignan and Vidame of Amiens in 1774, after he had purchased the estates of the Duc de Chaulnes, in the Somme; he received naturalization papers in 1769. He exerted considerable influence in public affairs and became the head of the German portion of the community.

Organization of the Community.

The Jews were divided at this period into three communities, governed by recognized syndics. The Portuguese were under Jacob Rodrigues Pereire; the Germans, under Liefmann Calmer; the Avignonese, under Israel Salom. Each of these communities had its own services and prayer-meetings, and its own mutual-aid society. All newcomers were obliged by a decree of Nov. 15, 1777, to present themselves before Pereire, in the first week of their arrival, provided with a duly authenticated certificate from the syndic of their community and signed by six other leading members. They were obliged to state the reason for their stay in Paris, indicate their place of residence while in the city, and give three days' notice of their departure. Péreire kept an exact register of all these notifications. Only those who visited Paris on affairs of state and were generally well known were exempt from this formality.

From time to time voices were raised in defense of the Jews; for instance, by "L'Advocat," in 1763; by "Le Mercure de France" of Feb. 11, 1786; by Mirabeau and the abbé Grégoire. Malesherbes, in 1787, appointed a committee of prominent Jews to consider what steps could be taken toward the amelioration of the condition of their coreligionists. Lopez Dubec, Furtado, and Cerf Berr laid a report before the minister in 1788, in which they outlined the most necessary reforms. Several noted Jews received papers of naturalization, but for the mass of the people there was no real change.

Shortly after this the National Assembly met, and the cry for liberty and equality echoed throughout the country. Nevertheless the Jews remained under

Efforts for Emancipation.

the special surveillance of the police. Regularly every week the commissaries of police invaded their dwellings, armed with search-warrants, and dragged to prison all whose papers were not properly executed; and this continued until June 30, 1789. On Aug. 26, 1789, the Jews of Paris addressed a petition to the States General "for the conferring upon them of those civic rights and privileges to which they had a claim in common with all other citizens and members of the commonwealth of France." While awaiting the reply of the Assembly to the petition, the Jews displayed an active and zealous civism. Out of 500 Jews residing in Paris one-fourth were enrolled in the National Guard; some served even on the district committees. On Dec. 24, 1789, the Assembly postponed the decision regarding the Jews, who immediately redoubled their efforts and interested in their behalf the leaders of the city districts and the aldermen of the city. The municipal authorities of Paris treated them as French citizens from the commencement of the Revolution, and a committee of the city council addressed the National Assembly in their behalf, through the abbé Mulot.

Participation in Public Life.

On May 9, 1791, the Jews of Paris addressed another petition to the Assembly, requesting a definite answer in their favor. At length, after some further delay, a decree was passed by the session of Sept. 27, 1791, granting naturalization and the rights of citizenship to all Jews born and domiciled in France. This was to be their final and definite emancipation. They immediately became noted for their talents and their activity in public affairs. Ravel de Ternay commanded the fourth division of the National Guard; Ravel de Tacin was one of the four electors appointed by the section of the Temple, and Berthe, père, was among the thirty-three electors of the division of Quatre-Nations. In 1792 two others, also named Berthe, were captains in the National Guard. In 1797 the name of Calmer occurs in the list of 200 citizens appointed syndics by the Procureur Général. Pereyre was assessor and justice of the peace in the division of Bon-Conseil, and one Jacob in the division of the Faubourg du Nord. The number of Jewish electors and justices of the peace continued to increase. In 1794 Frey and Saum were judges of the court martial; Fribourg was a lieutenant of the gendarmerie.

The Jews were among the foremost in the improvement of the financial condition of France. Zalkind Horwitz, Cerf-Berr, Trénel, and many others gave large sums. The generosity of the Jews increased at the outbreak of the war. They stripped their synagogues to contribute to the national defense, and joined the army in large numbers; they raised free companies; they were members of the militia corps, the municipal bodies, and the assemblies of peace, but there was not one on the Committee of Public Safety or the Revolutionary Tribunal. Many, however, suffered during the Reign of Terror. Forty-six were arrested as "suspects," and nine were condemned to death and executed: the two sons of Liefmann Calmer, of whom mention has been made, perished on the scaffold. Their sister Sara was also condemned, but had the good fortune to be overlooked in prison, and was rescued from the guillotine on the 9th Thermidor.

At the close of the Revolution there were about 3,000 Jews in Paris, among them being many men of prominence, as Furtado, who was nominated for the Corps Législatif; Worms de Romilly, deputy mayor of the third arrondissement of Paris; Terquem, the mathematician; Michel Berr, barrister, and a member of the learned societies; Venture, a professor in the school of modern Oriental languages and the secretary and interpreter of Bonaparte; Vivant Denon, designer and etcher; Henry Simon, engraver on precious stones; Enisheim, the mathematician; and Elie Halévy, the poet.

Under Napoleon.

Napoleon decided to summon a "general assembly of the Jews," which convened at the Hôtel de Ville July 26, 1806. When its task was finished the emperor convoked a new assembly, the Grand Sanhedrin, Aug. 12, 1806, to convert the resolutions of the former convention into rules which would be regarded as legal by every Jewish conscience. Ten "deputies of the Jewish nation of the Seine" took part in the deliberations, and on the completion of their labors requested an audience with the emperor; but he refused to receive them. Shortly after, he promulgated a series of decrees which left no room for doubt as to his sentiments. The harshest of these decrees was that of March 12, 1808, which for more than ten years imposed the utmost restraint on the commercial liberty of the Jews. Those of the Landes and the Gironde alone were exempted from these measures. Emboldened by these exceptions, Cretet, minister of the interior, wrote to the emperor to request that the Jews of Paris might be included, stating that "of the 2,543 Jews living in the capital, there are not four who are known to be addicted to usury," and that "more than 150 Jews of Paris are at this moment serving in the army."

The Paris Consistory.

In deference to this request of the minister of the interior, the Jews of Paris were exempted from the provisions of the decrees of March 12 and April 26, 1808. On Dec. 11, 1808, a decree was passed regulating the organization of consistorial synagogues; thirteen were established throughout the empire. That of the Seine contained 2,733 members; the Consistory of Paris was appointed on April 13, 1809, and was installed on May 2, following. The "circumscription" comprised thirty-three departments. The Consistory of Paris, composed of M. de Oliveira, B. Rodrigues, and Worms de Romilly, and presided over by the chief rabbi Seligman Michel, at once set about organizing the community. Of the 2,733 Jews composing it, 1,324 were natives of Paris; the remainder were from Alsace, Lorraine, Germany, Austria, and Holland. Nearly all of these lived in the third and fourth arrondissements, where were situated the three Jewish markets (slaughter-houses), the temples, the societies (ḥebrot), the Central Consistory, and the Consistory of Paris.

There were at that time a number of prayer-houses in the city. One, in the Rue Brisemiche, was founded in 1778; another, about 1789, in the Rue

Renard St.-Merry; and some years later a third was established in an old Carmelite convent in the Rue Montmorency, and was called the "Carmelite-Shuhl." Almost at the same time one was opened in the Petits-Champs-St.-Martin; it was known as the "Hutmacher-Shuhl," from a manufactory of hats which occupied a portion of the same building. Still another occupied an apartment at 29 Rue des Blancs Manteaux. All these were the property of the Ashkenazic Jews. The Portuguese had their synagogue in the cemetery of St.-André-des-Arts. Two of these chapels were still in existence in 1809—that of the Portuguese and that in the Rue des Petits-Champs-St.-Martin. At that date the community possessed four other synagogues of the German rite: at 47 Rue St.-Avoye, 21 Rue du Chaume, 6 Rue des Vieilles-Etuves, and 7 Rue Geoffroy-l'Angevin. That of the Rue St.-Avoye was the most important. It soon became the synagogue of the Consistory, and all the principal solemnities and ceremonies were held there until 1822.

The financial question was a source of the utmost embarrassment to the Paris Consistory. Some complained that their taxes were beyond their means, and others refused to contribute anything at all. The assistance of the prefecture was then invoked, and legal proceedings against the recalcitrants were ordered. One Jew made a complaint in the Chamber of Deputies, accusing the consistorial administration of tyranny and oppression in the discharge of a rôle "essentially injurious to the maintenance of religion."

When the Restoration succeeded the Empire in 1815, the government regarded with favor the efforts of the Jews to disseminate knowledge and promote industry among the needy classes. An ordinance of June 29, 1819, increased the duties of the Assembly of Notables by imposing upon it the examination of the annual budget of the departmental consistories. Paris then contained nearly 7,000 Jews, and the Notables numbered 237.

Under Louis XVIII. and Charles X.

In 1819 the Paris Consistory founded a school for the purpose of instructing the mass of the Jewish population in "the knowledge of their religious, moral, and civic duties." It labored for the observance of decorum in places dedicated to religious worship, and endeavored to cultivate among the people habits of dignified deportment. On learning that the owner of the synagogue in the Rue St.-Avoye had sold his property, and that the new proprietors refused to renew the lease, the Consistory, in 1819, purchased a plot of ground and a house in the Rue Neuve St.-Laurent (No. 14), with a second entrance on the Rue de Notre-Dame-de-Nazareth. On June 29, 1819, Louis XVIII. issued a decree authorizing the Consistory to buy the property in question in the name of the Jews of Paris. The new synagogue was opened on March 5, 1822, in the presence of a great concourse of people and a number of high dignitaries of state.

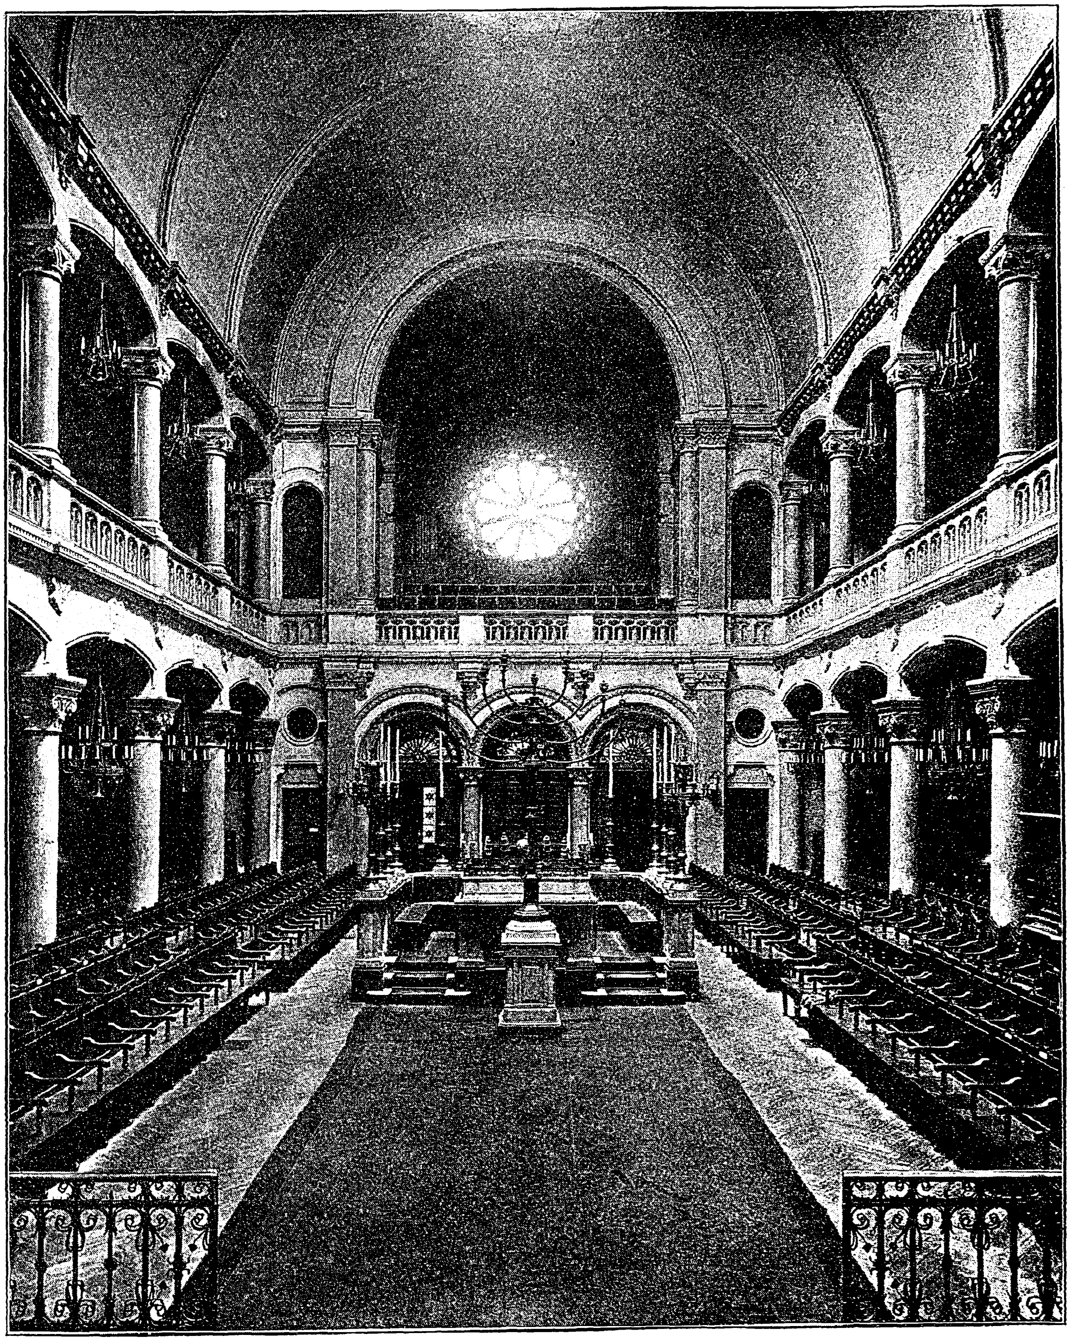
When Charles X. succeeded Louis XVIII. in 1824 he accorded the Consistory a favorable reception. The members of this body were then occupied in checking the interference of the rabbis in administrative affairs. When the decree of 1823 was passed for the purpose of introducing certain advisable changes in religious matters, the Consistory opposed the "absolute authority in religious questions" which the rabbis sought to arrogate to themselves. When Seligman Michel, the chief rabbi of Paris, died in 1829, it demanded the suppression of the chief rabbinate of Paris, and the assignment of its duties to M. Deutz of the Central Consistory, who should be assisted by a "vicar." But the Assembly of Notables ignored this proposition, and appointed M. Marchand Ennery chief rabbi of Paris on Dec. 7, 1829.

At that period there was no official school for the education of rabbis, and the Notables were unanimous in urging the establishment in the capital of a Central School of Theology. The departmental consistories, on being consulted, enthusiastically indorsed this project, and the school was founded in 1829, but at Metz instead of Paris.

Oratorically, the Jewish pulpit at the opening of the nineteenth century was by no means brilliant. Seligman Michel and Sintzheim preferred to speak in Hebrew; Deutz preached in German; De Cologna, although of Italian origin, spoke in French. No rabbi was allowed to preach without the authorization of the Consistory, to which he was required to submit his sermon. It was expected that M. Marchand Ennery would confer new luster on the Jewish pulpit; but such expectations were doomed to disappointment. It was generally demanded that in future only French should be spoken in the pulpit, and by a decree of Dec. 17, 1831, the Consistory forbade the delivery in the synagogue of any discourse in any other language than French.

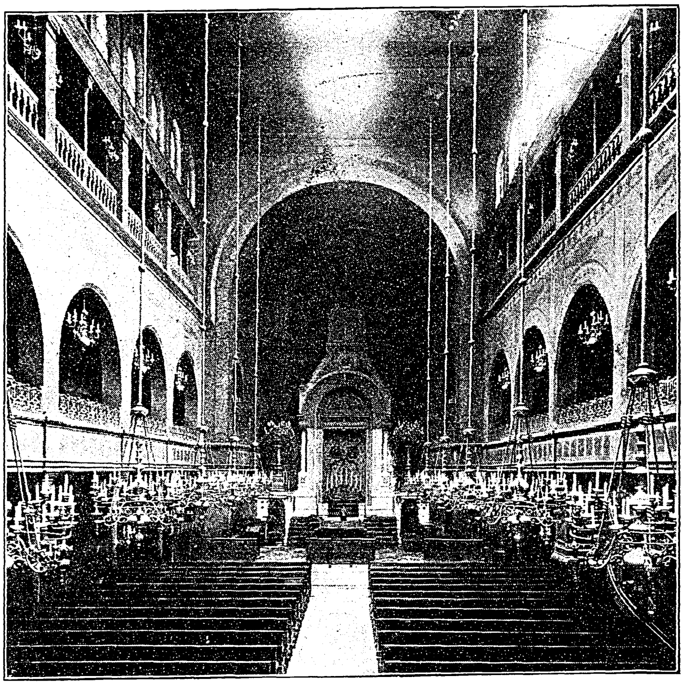
State Support.

One difficulty remained to be overcome. The Catholic priests were paid by the state, but for the Jewish rabbis no provision was made. This injustice was abolished by the law of Feb. 8, 1831, which decreed that the ministers of the Hebrew faith should be paid by the state. In addition to this a new law regulating Jewish communal affairs was promulgated May 25, 1844, Louis Philippe giving this measure his entire support. The community of Paris well deserved the royal favor. Fifteen of its members had distinguished themselves by their talent and activity. Anspach, Crémieux, Alfred Dalmbert, Hemerdinger, and others were noted members of the magistracy and the bar; Cohen, Samuel Heller, Joseph Henry, Moyse Samuel, and Michel Lévy (a professor at Val-de-Grace) were eminent in medicine; Edouard Cerfberr, subcommissary, Max Cerfberr, lieutenant-colonel, Mayer Worms, physician to the military school of St.-Cyr, Gabriel Salvador, captain of artillery, and others were honored in the army. Adolphe Franck and Fromenthal Halévy were members of the Institute; Olry Terquem, Salomon Munk, and Joseph Salvador were prominent in science and literature; Gustave Halphen was consul-general to Turkey; Max Cerfberr, Crémieux, and Fould were deputies; and Emile and Isaac Pereire were directors of the Versailles-Saint-Germain Railroad; Rothschild, Dupont, and Michel Goudchaux were to confer additional luster on the Jewish world.



INTERIOR OF THE PORTUGUESE SYNAGOGUE IN THE RUE BUFFAULT, PARIS.
(From a photograph.)

This prosperity could not fail to excite the old hatred. A number of pamphlets were published in which the most upright Jews were made the subjects of base accusations. The Catholic press and the clergy eagerly joined the accusing forces, and the priests even made their way into the synagogues to secure young children for baptism. The Consistory did all in its power to put a stop to these attempts. It founded a house of refuge to accommodate patients taken from the hospitals where they were subject to persecution, improved religious instruction, and maintained a close watch over the young girls of the poorer classes. It was called upon to combat another difficulty. The law of Feb. 8, 1831, by abolishing the assessment for the expenses of religion, had thrown financial matters into confusion. Finding it impossible to meet the amount of the debt on the temple, the Consistory made an appeal to some of the principal members of the congregation; but with little result. Then the Consistory solicited the aid of the minister of public worship, and of the prefect of the department of the Seine. This was granted, but on condition that the temple and the house adjoining should be made over to the city. This the community indignantly refused. Finally, in 1842, the city government contributed unconditionally half the amount of the debt. But the troubles of the Consistory were not yet over. The temple was in urgent need of repairs, which in time became necessary to its safety, and an order of the prefect of police, dated Oct. 29, 1850, commanded that the building should be closed immediately.



Interior of the Synagogue de la Rue Notre-Dame-de-Nazareth, Paris.

(From a photograph.)

At this time it became necessary to elect another chief rabbi for Paris. Deutz, the latest of the three chief rabbis of the Central Consistory, died on Feb. 2, 1842. The office remained vacant until 1846, when Marchand Ennery was called upon to fill the vacant place. There was a desperate contest for the office of chief rabbi of Paris. The Consistory having provisionally installed Charleville, rabbi of Dijon, a storm of opposition was at once aroused. Marchand Ennery protested publicly in the temple against this proceeding. The struggle was soon confined to two candidates, Charleville and Isidor. The latter went to Paris as a protégé of Crémieux, and preceded by the reputation won by his energetic protest against the oath "More Judaico" at Saverne in 1839. After numerous discussions, some of which were in writing, the Consistorial Commission unanimously decided in favor of Charleville. On Oct. 26, 1847, it laid a report of the proceedings before a convocation of the Consistory, and the most prominent Jews, in the Salle Saint Jean. More than fifty persons were assembled. Adolphe Crémieux, at the head of the opposition, demanded that the decision of the commission should be annulled. The discussion became so violent that the Consistory resigned. Crémieux was then elected president, and a committee was appointed to examine the two candidates as to the duties and powers of the chief rabbi. Charleville refused to appear before this committee, and Isidor was immediately nominated. The Notables were divided into two factions. The election took place on Nov. 9, and definitely settled the vexed question. Of the 225 registered electors, about two-thirds cast their votes. At the second ballot Isidor was elected chief rabbi of Paris by a majority of about 20 votes.

The community had hardly recovered from the effects of this disturbance when the February Revolution broke out (1848). The provisional government contained two Jews—Adolphe Crémieux, minister of justice, and Michel Goudchaux, minister of finance; the latter was succeeded in 1849 by Achille Fould. While Louis Napoleon was president of the republic five Jews were members of the Constituent Assembly—Raynal, Michel Alcan, Crémieux, Michel Goudchaux, and Achille Fould; the last two were the representatives of Paris. As a rule, the Jews took part in any struggle on the side of liberty; they served as members of the National Guard and as directors of the humble Maison de Secours for the care of the wounded in the Rue des Trois-Bornes.

It had become absolutely necessary to rebuild the synagogue in the Rue de Notre-Dame-de-Nazareth. Religious services had been temporarily transferred to the premises at No. 20 Rue de Montmorency. The new synagogue was dedicated on March 20, 1852. But soon after it was opened it was discovered to be wholly inadequate to the increased requirements of the congregation, the Jewish population having increased to at least 20,000; and it was resolved to build another synagogue.

It was thought that the opening of a new synagogue would be attended by a union of the Jews of the Portuguese and German rites. In 1826 the Portuguese Jews had abandoned the synagogue in which they had worshiped since 1770. Being unable to defray the cost of a new synagogue, they had rented a house on the Faubourg St.-Germain. They had gradually removed their homes to a distance from its vicinity, and the synagogue was abandoned. The rooms hitherto occupied by the boys' school in the consistorial building were just then vacant, and the Consistory made them over to the Portuguese, who transformed them into a prayer-house (1830). The demolition of the German synagogue obliged the Portuguese Jews once more to search for a new habitation. At that moment the project of fusing the two rites was suggested. While the Consistory was endeavoring to accomplish this object, the Portuguese administration established their synagogue in the Rue Lamartine. The Consistory opposed this step, but the Portuguese protested against their subjection, and the synagogue was opened for religious services on June 4, 1851.

The Question of Fusion.

The question of fusion was still agitated, however. A committee was appointed in 1855, which devoted several years to the careful elaboration of a plan of ritual, in which many of the Portuguese rites were included. Nevertheless, the Portuguese community regarded the concessions made to them as inadequate, and without further investigation, before the adjournment of the session, pronounced in favor of the preservation of their autonomy. Amid the discussion of these various questions the Consistory had not lost sight of its plans for the erection of two new synagogues. The city of Paris offered to bear half the expense of their construction provided the synagogues became its property on completion. Notwithstanding this offer, there were many obstacles to be encountered from the side of the authorities, especially when the question arose of supplying the synagogue of the Rue de la Victoire with an entrance on the Rue de Chateaudun, about five hundred paces from the Church of Our Lady of Loretto. But the zeal of the Parisian Jews was not to be checked by these difficulties. To the unpretentious house of refuge in the Rue des Trois-Bornes succeeded Rothschild's great hospital (1852). The Talmud Torah was founded in 1853, and the Rothschild Orphan Asylum in 1857. The Theological Seminary was removed from Metz to Paris in 1859, and the fund for a lying-in women's hospital was started in 1860. The House of Refuge for children (or Foundling Asylum) and the Technical School followed in 1865. The community of Paris then numbered about 30,000. Isidor having been appointed chief rabbi of France, the chief rabbinate of Paris passed to Ulmann in 1866; Zadoc Kahn, appointed coadjutor in 1867, was elected chief rabbi of Paris in 1868.

When the war broke out in 1870, the Jews hastened to enlist in the National Guard and the Garde Mobile. Among the more distinguished officers were colonels Salvador, Brisac, and Abraham Lévy; commandants Bernard, Crémieux, Alfred Cerf, and T. Cahen; captains Lévy, Brandon, Joseph Weill, Cahen-Mervith, Charles Abraham, Hippolyte Gall, and Moyse Moyse; lieutenants Gustave May, Albert Brunswick, Alphonse Lévy, Louis Dreyfus, Jules Bernheim, Fernand Ratisbonne, Myrtil Blum, and Paul Sée; all these received decorations for distinguished bravery before the walls of Paris.

During the Franco-Prussian War.

The Jews of Paris devoted themselves also to works of charity and succor. The Benevolent Society despoiled its own coffers to forward the cause of the war. The Rothschild Hospital placed 100 beds at the disposal of the wounded. Rothschild, Cahen d'Anvers, Halphen, Strauss, and others rivaled one another in the number and extent of their deeds of charity. Patriotic contributions poured in. The rabbis and theological students volunteered as hospital chaplains. A student of the rabbinical seminary, Raphael Lévy, entered the 111th Regiment. Three pupils of the Polytechnic School—Edmond Bechmann, Alphonse Fould, and Edmond Mayer—demanded to be sent to the front. Commandant Fanchetti raised a battalion. The company of the Paris francs-tireurs was commanded by Jules Aronssohn. Commandant Bernard, Sergeant Bloch, Leser (a law student), and several others fell during the siege of Paris.

Many Jews served their country with talent and energy in the councils of the government. Crémieux was again appointed minister of justice; Narcisse Leven became his secretary-general and was succeeded by Léonce Lehmann; Hendlé was private secretary to Jules Favre, minister of foreign affairs; Eugène Manuel was appointed secretary-general to the minister of public instruction, Jules Simon; and Camille Sée became secretary-general to the minister of the interior.

During the terrible events of 1870–71 the Jewish community of Paris was totally disorganized; its services were discontinued, and many of its works of benevolence were abandoned. On the conclusion of the war the Jews set to work to repair the ravages made by the struggle. The immigration of the Jews from Alsace and Lorraine, and the years of tranquillity which ensued, enabled the Jews of Paris to cope successfully with the appalling situation created by the war, the siege, and the commune. The Jewish population increased considerably, and the educational and benevolent institutions multiplied in proportion. Three new synagogues were opened, one in the Rue de la Victoire, in 1874, one in the Rue des Tournelles, in 1876, and one in the Rue Buffault in 1877. In 1890 Zadoc Kahn was elected chief rabbi of France, and J. H. Dreyfus, formerly chief rabbi of Belgium, became chief rabbi of Paris.

After the close of the war Judaism made rapid progress in the capital, and the community had dis-

tinguished representatives in every branch of the useful arts and humane sciences. This had the effect of arousing the hostility of the reactionary and clerical party, whose efforts culminated in the machinations revealed in the DREYFUS CASE. But France soon came to her senses under the energetic rule of Waldeck-Rousseau, who overpowered the anti-Semitic clique, and avenged the humiliations to which the Jews had been subjected.

The following is a brief account of the religious leaders and the charitable institutions of the Paris community:

Chief Rabbis: Seligman Michel (1809-29); Marchand Ennery (1829-42); Charleville, provisional chief rabbi (1842-47); Isidor (1847-66); Zadoc Kahn (appointed coadjutor in 1867; elected chief rabbi in 1868; succeeded in 1890 by J. H. Dreyfus).

Prior to 1851 the chief rabbi of Paris had sole charge of the spiritual affairs of the community. At this date the office of coadjutor was created and bestowed upon Trénel. He was appointed principal of the rabbinical school in 1856, and his vacant place was filled by Michel Mayer, and then by Félix Lazard (1860). A. Astruc had been appointed to the same office in 1858, but on his election as chief rabbi of Belgium he was replaced by Zadoc Kahn, who had filled the post of third coadjutor rabbi since 1867. A fourth office was created in 1869 and conferred upon Joseph Lehmann, and a fifth, established in 1872, was given to Bigart. Emanuel Weill was summoned from Versailles to Paris in 1876, and Haguenau in 1882. At that period the Consistory created two new offices, which were filled by Israel Lévi and Raphael Lévy.

Worship; Synagogues and Oratories: The Consistory of Paris comprises seven members; its president is Gustave de Rothschild, and its secretary-general is Engelmann. The synagogues are distributed as follows: 44 Rue de la Victoire; 15 Rue de Notre-Dame-de-Nazareth; 21 Rue des Tournelles; 30 Rue Buffault; 9 Rue Vauquelin. The oratories are as follows: the oratory of the Seminary; the Polish oratory, 6 Rue St.-Paul; the Batignolles oratory, 116 Rue Legendre: the oratory at 13 Rue St.-Paul; the oratory of Gros-Caillou, 27 Avenue de la Motte-Piquet; the oratory at 147 Avenue Malakoff; and the Orthodox oratory, 10 Rue Cadet. The consistorial synagogues of the Ashkenazic rite are under the control of a board of administration composed of twenty-seven members. The synagogue of the Portuguese rite is governed by a committee of eight members.

Educational Institutions: Seminary and Talmud Torah, 9 Rue Vauquelin (director, Chief Rabbi Joseph Lehmann); Société des Etudes Juives; Université Populaire Juive. The primary schools are under the direction of the School Committee and of the Dames Inspectrices des Ecoles. The Gustave de Rothschild school is situated in the Rue Claude Bernard; another school is at 27 Avenue de Ségur; the Lucien de Hirsch school at 68-70 Rue Sécretan replaced, in 1900, the earlier school in the Rue Lafayette; the Jewish Industrial School for Artisans and Apprentices, 4 Rue des Rosiers; the Bischoffsheim Establishment, an industrial school for young girls, 13 Boulevard Bourdon; the Oriental Jewish Normal School, 59 Rue d'Auteuil; the Refuge of Plessis-Piquet, an establishment for horticultural instruction.

Charitable Institutions: These include the Alliance Israélite Universelle; Benevolent Committee; Rothschild Hospital; Jewish Orphan Asylum; House of Refuge; Popular Kitchens; Institution for Lying-in Women; Committee of Protection for the Beneficiaries of the Benevolent Society; Moïse Léon Institute; Home for Aged Women; Rousseau Fund (fresh-air endowment and country home); Union for the Protection of Young Jewish Girls; Union of Jewish Sick-Nurses; Yishoub Eretz Israel; Committee of the School of Jerusalem; Esrath Chitounim; Geemilouth Hessed; Mebasséreth Sion.

Mutual-Aid Societies (Male): Friends of Humanity and of the Union; Fraternal Alliance; Hebrew Benevolent Society; Twelve Tables; Sons of Cracovia, of Alsace, of Israel, of Jacob, of Japhet, of King Solomon, of Shem, of Zion, of Isaac; The Fraternity; Polish Israelites; Children of Israel; Holy Law; Mission of Israel; Mount Sinai; Mutual Foresight; Patriarch Abraham; Lemberg; Zedaka Tatzil Mimowes; Gemilath Hesed Ohel Emes; Ḥebra Ḳaddisha; Sons of David; Iron Chain; Olei Regel; Israelitish Union; Academic Union; Society of the Promised Land; Mutual Aid Society of Holland; Society of Eternal Rest; Sons of Elijah; Talmud Torah; Truth of Israel.

Mutual-Aid Societies (Female): Hebrew Women of Paris; Dames Kapronoth (women's burial society); Deborah; Women of Israel; Daughters of Jacob; Daughters of Jerusalem; Hebrew Women's Union.

The most important representatives of Jewish journalism are the "Archives Israélites," "L'Univers Israélite," and the "Revue des Etudes Juives." The chief Jewish libraries are those of the Seminary and the Alliance Israélite Universelle.

The Jewish population of Paris is estimated (1904) at about 60,000, the total population being 2,536,834. The majority of the community come from Alsace and Lorraine. See FRANCE.

——**Typography:** The activity of the Hebrew press of Paris, which began in 1508, was confined almost exclusively to the Biblical field. But the first book printed, by Aegidius Gourmont, was Tissard's Hebrew grammar; this was followed, in 1516, by a Hebrew alphabet; in 1520 there appeared Moses Ḳimḥi's "Mahalak"; in 1534, "Tr. de Modo Legendi Ebraice," by P. Paradisius. Gourmont continued to print parts of the Bible until 1531; his corrector was Pierre Soubzlefour, and his typesetter, Guidacerius; the latter in 1532 worked on some Psalms in the printing establishment of Franz Gryphius. A new edition of Guidacerius' "Grammatica Hebræa" appeared in "Collegio Italorum" (1539). The Bible, complete as well as in parts, was printed by Cephallon (1533), Wecheli (1534-38), Robert Stephanus (1539-56), and Juvenius (1559). In 1559 Morellus issued Hai Gaon's "Musar Haskel."

After a long interval the printing of Hebrew books recommenced—in 1620, edited by Philipp d'Aquina—and continued until 1629. In 1628 an anonymous work, entitled "Keter Torah," containing Hebrew paradigms and a sermon, was printed by Anton Vitre. The latter printed also a polyglot Bible by Le Jay (1630-45), by means of Hebrew matrices cut by Le Bé (Aug. Bernard, "Hist. de l'Imprimerie Royale du Louvre," p. 55). At the same time Louis XIII. established (1640) a printing establishment which had Hebrew type. This was little used at the time, but in 1802 the Hebrew hymn for peace, by Elie Halévy, father of Fromenthal Halévy, was printed therefrom. Under Napoleon I., the printer Setier published the first Jewish ritual at Paris, and, in 1822, the Hebrew ode of Chief Rabbi Abraham de Cologna. His printer successors were Dondey-Duprey; the Jouausts, father and son (printed the ritual of Créhange and the Solomon Munk edition of Maimonides' "Moreh"); E. Durlacher (printed a Maḥzor in ten volumes, 1850-65).

PARISH-ALVARS, ELIAS: English harpist and composer; born at Teignmouth, England, Feb. 28, 1810; died at Vienna Jan. 25, 1849; a pupil of Dizi, Labarre, and Bochsa. In 1831 he visited Germany and played at Bremen, Hamburg, and other cities with great success. He undertook an Italian tour in 1834, and two years later went to Vienna, where he remained until 1838. Between 1838 and 1842 he made a journey to the Orient, where he collected many Eastern melodies. On his return he gave a series of concerts at Leipsic, Berlin, Frankfort, Dresden, and Prague. After an enthusiastic reception at Naples, he visited Mendelssohn at Leipsic (1846), and the influence of the latter is said to be evident in Elias' subsequent compositions. In 1847 he settled at Vienna, where some time afterward he received the title of chamber harpist to the emperor. One of the greatest harpists of his day, Parish-Alvars was also an excellent composer. Among his most popular works are the following: "Voyage d'un Harpiste en Orient," op. 62 (Turkish, Greek, and other melodies for solo harp); march for harp, op. 67; concerto for harp and orchestra, in G minor, op. 81; concerto in E♭, op. 98; concertino for two harps with orchestra; besides fantasias, romances, and characteristic pieces for harp with orchestra or pianoforte.

PARMA: Italian city, formerly capital of the duchy of the same name; the seat of an ancient Jewish community. When the plague devastated Italy in 1348 many of the Jews of Parma fell victims to the fury of the populace, which regarded them as the cause of the pestilence. In the fifteenth century several Jewish physicians of note resided in Parma; among these were Elijah (1440), the physician to the Duke of Parma and formerly a lecturer in the schools of Pavia; Giacobbe (1453), perhaps the Giacobbe who in 1467 cured Ercole I. of Este; Abramo (or Abraham) di Mosè of Prato (1480). When the general council of the people agreed upon the surrender of the city to Francesco Sforza (Feb. 14, 1449), one of the conditions of surrender was that the duke should maintain intact the existing rights and privileges of the Jews of Parma and should extend the same to the persons and property of all Jews taking up their residence there. In the second half of the fifteenth century the Jews of Parma, then very numerous, obtained permission from the city council to establish pawnbrokers' offices for the loan of money on pledges; in this instance, as in many others, they received the support and protection of the city of Parma and of the duchy itself, their wealth and industry rendering them a useful if not an indispensable element of the population.

The favor which the Jews enjoyed, however, soon drew down upon them the ill-will of the people, which the clergy constantly excited afresh. Pope Martin V., having received complaints from the Jews of every part of Italy of the ill treatment to which they were subjected, appointed Bernardo of Spoleto to investigate matters, and authorized him to publish a decree of excommunication against any one guilty of further molestation of the Jews. This decree was presented by a Jew, Isacco Galli, to the bishop-coadjutor of Parma, who was authorized to promulgate and enforce it in his diocese (March 7, 1464). Shortly after, on July 12, 1466, Galeazzo Maria Sforza gave orders to his commissary and lieutenant, Guido Visconti, to favor the Jews as far as was compatible with justice and to secure the preservation of the privileges of religious worship already granted them. Galeazzo also released the Jews from the obligation of wearing the yellow badge, in the form of a wheel, imposed upon them by the "maestro del' entrate" in 1473. In a letter dated Pavia, June 19, 1475, Galeazzo commands Visconti to forbid the clergy in their sermons to excite the populace against the Jews, and to protect them against any one who attempted to injure them. In Parma there was preaching at that time Fra Bernardinus of Feltre, a bitter enemy of the Jews, who had caused the expulsion from the city of some Jewish women who gave lessons in dancing to the noble ladies of Parma.

Under Galeazzo Sforza.

In 1476 Galeazzo Sforza, at the urgent petition of the Jews, conceded to the latter the right of jurisdiction over their own people in their disputes with the Christians and entrusted them to his referendary. When Gian Galeazzo Sforza forbade them, in 1481, to make loans for shorter periods than terms of nine years each, the elders of the city secured the annulment of his decree, and the general council of the city gave the Jews permission to lend for short periods at the interest rate of 6 denarii per lira. When the monte di pietà was established in Parma in 1488 through the efforts of Fra Bernardinus, the condition of the Jews became very much worse. Misfortune so pressed upon them that by degrees they withdrew from the city and established themselves in the neighboring villages. Their principal settlement was at Piacenza. There in 1570 they were ordered to wear the yellow badge, and after a few months, through the exertions of Bishop Paul of Arezzo, they were finally expelled. Jewish communities were then organized at Borgo San Domenico, Busseto, Colorno, Cortemaggiore, Firenzuola, and Monticelli. But few Jews remained in Parma. Those who were left were not allowed to acquire real estate, but were permitted to enter any profession on the payment of an annual tax of 15,000 lira.

In 1749, by order of Filippo Farnese l'Anelli, governor of Parma, the towns of Borgo San Domenico and Busseto forbade the Jews of the neighboring villages who went to Parma for purposes of traffic to remain longer than twenty-four hours. For a stay of eight days a special license from the governor was required; for a longer time a permit had to be obtained from the general auditor. The law relating to the Parmesan merchants, confirmed by Filippo Farnese on May 19, 1751, forbade the Jews to enter into contracts or agreements. On three occasions, in 1714, 1753, and 1762, ordinances were passed to the effect that the Jews should not be mocked or derided during the carnival, or molested while holding their funeral services.

During the French occupation Moreau de Saint

Emancipation.

Méry gave the Parmesan Jews equal rights with other citizens, and placed the Jewish community in the status of a separate corporation as far as regarded religion (July 12, 1803). After the restoration, in 1815, Maria Louisa, wife of Napoleon I. and sovereign duchess of Parma, maintained the existing conditions and allowed the Jews of the surrounding villages to settle again in Parma. On March 27, 1823, an enactment was passed granting the Jews five years in which to pay to the government the special tax which had been imposed upon them at the time of oppression. By a decree of Aug. 14, 1816, the rabbi was directed to keep the municipal registers. On Nov. 18, 1819, it was decreed that the funerals of Jews should take place privately and without any outward pomp or ceremony. On May 23, 1835, the question of admitting foreign Jews to commercial privileges in the duchy was submitted to the chamber of commerce. The dukes of Bourbon, who succeeded Maria Louisa, took no further proceedings against the Jews, who in 1859 were finally emancipated and made citizens of the kingdom of Italy. The population of Parma is 49,370, and includes 212 Jews (1901).

PARNAS (colloquially pronounced **parnes**): Neo-Hebraic word designating the president or the trustee of a congregation. It is found in the Targum as the equivalent of words which are interpreted as "steward" (see Isa. xxii. 15; Zech. xi. 3), and it is frequently met with in Talmudic literature. Mussafia (in "Musaf he-'Aruk," *s.v.*) derives it from the Greek, thinking evidently of either *πρόνηγος*, which may be a synonym of *ἄρχων τῆς συναγωγῆς* = "ruler of the synagogue" (Luke viii. 41), or of *πρόνοιος* = "one who provides." Kohut ("Aruch Completum," *s.v.*) suggests *πύρνος*. In some modern languages it is accepted as a legal term; *e.g.*, it occurs as "barnos" in the Bavarian edict of June 10, 1813 (§ 30; see Heimberger, "Staatskirchenrecht, Stellung der Juden in Bayern," Freiburg-in-Breisgau and Leipsic, 1893; Grünbaum, "Das Erbtheil der Väter," Ansbach, 1842; Kaufmann, "Aus Heinrich Heine's Ahnensaal," p. 42, Breslau, 1896). In Dutch legislation, at least since Napoleonic times, it is found as "parnassijns" ("Allg. Zeit. des Jud." 1867, pp. 896, 933).

In Medieval Times.

In medieval times the title does not seem to have been usual. The Judenschreinsbuch of Cologne, which contains many Hebrew documents of the thirteenth and fourteenth centuries signed by the trustees of the congregation in their official capacity, does not show this title at all. It is very rare in the old memor-books, only one mention being found in the memor-book of Worms, 1349 (Salfeld, "Martyrologium," p. 75), while the title of "rabbi" occurs there very frequently. The word occurs, however, as a surname in England (Jacobs, "Jews of Angevin England," p. 371). On the tombstones of Prague "parnas" is rarely found, and then always in addition to such synonyms as "manhig," "gabbay," "primus," "alluf," "ḳaẓin" (see Hock-Kaufmann, "Die Familien Prags," Presburg, 1892, *passim*). On the tombstones of Frankfort-on-the-Main the first mention occurs in 1539, which is hardly accidental, although of old tombstones comparatively few have been preserved, and these have very brief inscriptions.

In Talmudic Times.

In Talmudic sources the parnas is evidently both the religious leader and the administrator of the community. The clearest statement is the following: "Who is a scholar, worthy of being appointed as parnas of the congregation? He who is asked about a law from any source—even if it were from the tractate of Kallah—and who answers" (Shab. 114a). Similarly the Talmud speaks of privileges conceded to the sons of scholars who were appointed as parnasim of the congregation (Hor. 13b; Shulḥan 'Aruk, Yoreh De'ah, 244, 17). In the same sense are to be understood passages like Ta'an. 9a, where Moses, Aaron, and Miriam are mentioned as ideal parnasim, and Yoma 86b, where Moses and David are similarly cited. The report that R. Akiba had been appointed parnas of the congregation (Yer. Peah 21a), even if legendary, shows that at the time when this story was recorded it was customary to elect a prominent scholar as leader of the congregation. This must have been the rule down to the fifteenth century; for the signatories to the charter given to the Jews of Speyer in 1090, Judah ben Kalonymus, David ben Meshullam, and Moses ben Jekuthiel ("Zeitschrift für Geschichte der Juden in Deutschland," i. 128), are in all likelihood identical with the authors of piyyuṭim. The signatures of the rabbis to the documents in the "Judenschreinsbuch" attesting congregational transactions, the designation of the recognized congregational representative as "bishop of the Jews," "rabbino mor," etc., as well as the Oriental custom of combining the leadership in religious with that in secular matters, would prove that the parnas was a rabbinical scholar placed in charge of the congregational affairs.

The meagerness of the sources on the constitution of congregations renders it very difficult to accurately specify the rights and the duties of the parnas. He was most likely appointed as such in olden times by the nasi (Yer. Yeb. 12a; Grätz, "Gesch." 3d ed., iv. 197; Weiss, "Dor," iii. 95 *et seq.*), receiving a diploma, "iggeret reshut" (Ḥag. iii. 3; see Tos. Yom-Ṭob; Ḥag. 18b; and Rashi and R. Nissim *ad loc.*); this seems to be proved by the expression מנה (Ḳid. 70a). At the same time this appointment was in some way ratified by the people (Ber. 55a). Larger congregations as early as Talmudic times were administered by a board of parnasim; this appears not only from the comparison with Moses, Aaron, and Miriam, already quoted (Ta'an. 9a), but more clearly from the law that two brothers might not hold the office of parnas (Yer. Peah 21a), which presupposes that they would have to officiate at the same time. Among the privileges accorded to the parnas it is mentioned that he is called to the Torah after the Kohen and Levi, which means the first after those of priestly rank (Giṭ. 60a; Shulḥan 'Aruk, Oraḥ Ḥayyim, 136). It would also appear that a parnas received a salary; for in the name of Samuel it is stated as a law that as soon as one has been appointed parnas he must not perform any labor in the presence of three people (*i.e.*, publicly; Ḳid. 70a; Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 8, 5), and further: "A man appointed parnas will soon become rich" (Yoma 22b). The names of the parnasim were mentioned in the prayers (Ket. 8a).

Intrigues for the appointment of parnasim were far from rare; and often an unworthy man used his office to gratify his vanity and to acquire material advantages. So the Talmud says: "A parnas who leads his congregation gently [on earth] will be privileged to lead it in the future world" (Sanh. 92a), while another passage says that God weeps over a parnas who rules haughtily (Ḥag. 5b), and that such a man is unbearable (Pes. 113b). As a type of this character R. Gamaliel is presented, to whom R. Joshua says: "Wo unto the generation whose parnas thou art!" (Ber. 28a). In this sense has the Talmud to be understood when it says: "No one is appointed parnas of the congregation unless a box full of creeping things hangs on his back" (Yoma 22b). The meaning of this metaphor seems to be that only an unscrupulous man can succeed in congregational politics—a thought paralleled by the saying: "The kingdom of Saul could not last, because it had no faults." The statement, "A generation is the reflex of its leader [parnas]; the leader, the reflex of his generation" ('Ar. 17a), is evidently also an expression of disgust at the success of unworthy leaders.

In Modern Times.

With the sixteenth century a change in the condition of congregational offices seems to have taken place. The rabbi confined his activity to teaching and to the rendering of decisions on religious questions, while the administration of the congregation was in the hands of a board of parnasim, whose president especially was called the parnas. The first to mention this change is Solomon Luria (d. 1573), who says that the law, referred to above, prohibiting the parnas from performing any labor publicly does not refer to the parnasim of modern times, who are only administrative officers, but to rabbinical scholars ("Yam shel Shelomoh"; Ḳid. iv. 4), while in Tos. Ḳid. 70a this distinction is not yet made. About the same time the expression "parnase ha-medinah" (= "trustees of the province") is met with (Moses Isserles, Responsa, Nos. 63, 64, 73; Jew. Encyc. iv. 305a, *s.v.* Council of Four Lands). It is from the same time onward that this expression, often in the pleonastic form "parnas u-manhig," is encountered in the cemetery of Frankfort. In such cities it was a title to nobility if one counted a parnas among his ancestors. Thus David Grünhut speaks of his parnasim ancestors on the title-page of his "Ṭob Ro'i" (Frankfort-on-the-Main, 1712; Maggid, "Zur Gesch. der Günzburge," p. 166, St. Petersburg, 1899).

The arrogance of the parnasim is often a subject of complaint. Moses Ḥagiz fiercely denounces those who think that they owe the respect due to Talmudic scholars only to the local rabbi, as if the appointment of the rabbi due to the whim of parnasim, who are elected merely because of their wealth, could add anything to the worth of a scholar (Ḥagiz, "Leḳeṭ ha-Ḳemaḥ," section on Yoreh De'ah, 103a; "Paḥad Yiẓḥaḳ," *s.v.* "Talmid Ḥakam," p. 44a). Of internal strife in the congregation of Hamburg occasioned by elections to the office of parnas, Glückel von Hameln gives a vivid description (Kaufmann, "Die Memoiren der Glückel von Hameln," p. 32, Frankfort-on-the-Main, 1896). Serious trouble in Amsterdam is reported as arising from dissensions among the parnasim in the first half of the eighteenth century ("Allg. Zeit. des Jud." 1867, pp. 896, 933; Jew. Encyc. i. 541, *s.v.* Amsterdam). Very often in such cases the aid of the secular authorities was invoked, although such an appeal had often been severely condemned since medieval times (Grätz, *l.c.* vi. 181; Buber, "Anshe Shem," p. 66, Cracow, 1895). The mode of electing the parnas, his rights, and his duties were not regulated by law, but by local custom, which was only in rare instances written down in Taḳḳanot. Isaac ben Sheshet (Responsa, No. 476) declines to give a decision on such a question, because it should be decided by local tradition. Still it may be considered as a general rule (see Samuel of Modena, Responsa on Yoreh De'ah, 118) that the parnasim have the right to interpret the "ascamot" (see Ascama), but may not alter them.

From the end of the eighteenth century, and more especially from the beginning of the nineteenth, the various governments gave constitutions to their Jewish congregations, or the latter adopted such constitutions of their own accord. Through these constitutions, which were drafted in the language of the country, the Hebrew names for congregational offices began to disappear, and with them the title of parnas, although it is still used colloquially, and in some congregations officially.

A. D.

PARODY: A composition either in verse or in prose, modeled more or less closely on an original work, or class of original works, but by its method of treatment turning the serious sense of such original or originals into ridicule. Closely allied to parody are the forms known as travesty, burlesque, and mock-heroic.

The technique of the parodist has some interesting features well worth description and illustration. One may parody a well-known passage or verse by merely using it in a playful sense, without making in it any change whatever. Abraham ibn Ezra thus parodied the benediction "Praised be Thou who formest light and createst darkness" by applying it to the white neck and dark hair of a pretty brunette (על צוארך ושער ראשך יש לברך יוצר אור ובורא חושך). A wrong pause or accent will sometimes make a passage parody itself. Thus it is said of an inexperienced ḥazzan that he ran the first and second sentences of the seventh chapter of Genesis together, making God say unto Noah: "Come thou and all thy house into the ark; for thee I have seen righteous before me in this generation of every clean beast." Perverted proverbs form still another class of parody.

In its incipient stage parody was not far removed from pure imitation. This may be gathered from

Origin.

the fact that some parodies have been admitted into the ritual, which would have been impossible if they had not been regarded as mere imitations. As an example of this kind may be mentioned Menahem ben Aaron's "Hymn for the First Night of Purim," a drinking-song far removed from the spirit of the liturgy, nevertheless embodied in the Maḥzor Vitry. Hebrew parody may therefore be said to have been slowly evolved out of imitation, passing first from the serious to the playful, and then from the playful to the humorous and satiric. Unlike parody in general literature, it did not spring from a desire to disparage, but from a desire to emulate.

In the Twelfth and Thirteenth Centuries.

It was not until the twelfth century that parody was met with in Jewish literature. Early in that century Abraham ibn Ezra penned his famous epigrams, some of which have an element of parody in them. He was perhaps also the first to write in the mock-heroic style. His poem on "Flies" is of this kind. It was probably in the same century that Menahem ben Aaron wrote the "Hymn for the First Night of Purim," mentioned above, and Joseph Zabara composed his satires on women, which contain a number of parodies.

In the thirteenth century Judah al-Ḥarizi is the first to attract attention as a parodist. He was the first to transform parody from a mere literary toy into an instrument of satire. His satire is best exemplified in the tenth and twenty-fourth chapters of the "Taḥkemoni." Contemporary with Al-Ḥarizi was Judah ben Isaac ben Shabbethai, who wrote a few unimportant parodies.

In Provence and Italy.

For the next seven decades after Isaac ben Shabbethai, parody was at a standstill; and it was not in Spain, but in Provence and Italy, that it began once more to show signs of life. The more important attempts at parody in France and Italy date from the last decade of the thirteenth century. One of these is Abraham Bedersi's eulogy on Abulafia, couched in the language of the Passover Haggadah. It was also about this time that Immanuel of Rome began to write his satires. As a parodist, Immanuel's position is unique in Hebrew literature. Although there is little in all his writings that is true parody, there is a parodic thread running through the web of his satires, which, if drawn out, might be woven into a cloth of its own—a Biblical parody.

It was not, however, until the middle of the fourteenth century that parody showed signs of becoming a separate branch of literature. Somewhere between 1319 and 1332 three parodies were written which raised this form of satire into a distinct art. These are the "Masseket Purim," the "Sefer Ḥabaḳbuḳ ha-Nabi," and the "Megillat Setarim." The first is definitely known to be the work of Kalonymus ben Kalonymus, the third has been almost as definitely proved (by Neubauer) to be the work of Levi ben Gershon, and the second seems to be the work of the same French scholar and philosopher.

Kalonymus and Gersonides.

In these three works parody attained an individuality of its own. For the first time two men of renown ventured to use Talmudic passages playfully. The numerous anecdotes and various customs associated with the riotous season of Purim are related in the solemn style of the Mishnah and Gemara. The satire of the "Masseket Purim" is of a mild kind. It ridicules the drunkard and the glutton, laughs at the miser, and reproaches the idler and the professional mendicant; but in it society as a whole is nowhere attacked so fiercely as in the "Eben Boḥan" of the same author. As a parody of the Talmud, "Masseket Purim" copies the original not only in style and diction, but also in the manner of discussing dissimilar subjects at one and the same time.

No less clever are the parodies of Levi ben Gershon. But while the humor of Kalonymus approaches more the grotesque, and his satire is directed against the scum of society, the humor of Gersonides is a species of wit. His satire is directed against no one in particular; occasionally he laughs at himself and at his own jokes, and he delights in puns and anachronisms.

Anti-Christian Parodies.

These parodies, which deal exclusively with Jewish life, are succeeded by a few parodies of anti-Christian tendencies. The Haggadah of Jonah Ropa, identical with "Pilpul Zeman Zemannim Zemannehem," was written about 1380 by a resident of Vercelli, and is still in manuscript. It is a vehement denunciation of the licentiousness indulged in by Gentiles during the carnival. Another anti-Christian parody was written by Elijah Ḥayyim ben Benjamin of Genazzano between 1490 and 1500. It is in the style and metrical form of the hymn "Yigdal," and breathes a harshness born of persecution.

With the anti-Christian polemics, parody closed its first period of growth, after which followed a period of decay that lasted almost three centuries. In the sixteenth century the names of only Modena and Najara are associated with parody. Modena parodied the well-known verses against gamblers ("Ḥaruz Neged ha-Ẓaḥḳanim") ascribed to Ibn Ezra, turning them into a panegyric on the gambler ("Ḥaruz be-Shebaḥ ha-Ẓaḥḳanim"), and Najara parodied the formula of the Jewish marriage contract ("ketubah"), in which he speaks of God as the groom, Israel as the bride, the Torah as the dowry, and the laws deduced from the Torah as the additional endowment ("tosefet ketubah").

Seventeenth and Eighteenth Centuries.

The seventeenth century was even more unproductive of parodies than the sixteenth. An insignificant Talmudic travesty by Joshua Calimani and a few anonymous parodies called "Haman Edicts" are all that have come down from the former period. The only exception is the "Masseket Purim" of 1695, which in its revised form has even surpassed the parody of Kalonymus in popularity, and is to-day by far the most widely known composition of that name. Although it was not published in its revised form until 1814, it must have been extensively copied and spread abroad. It has the true ring of Talmudic argumentation, and is also supplied with parodies of the three best-known Talmudic commentaries: Rashi, the Tosafot, and the novellæ of R. Samuel Edels. The distinctive feature of this parody is the relation which it establishes, by Talmudic methods, between well-known historic events and the day of Purim, the effect of which is very droll. To cite one example, the day on which Miriam, the sister of Moses, died was Purim, for it is written "and there was no water for the congregation," which can only happen on Purim.

The greater part of the eighteenth century has no single parody which may be pointed to with pride; for, though the "Burlesque Testaments" and parodies of the requiem first came into vogue in the early part of the century, and although there are parodies by David Raphael Polido, Samuel Mendes de Sola, Isaac Luzzatto, Wolf Buchner, and several others, none of them has any great literary merit. It was only in the closing years of the century that parody showed signs of revival, in the works of Judah Löb Bensew and Tobias Feder. Bensew's "Seder Seliḥot le-Purim" is a hymnal for the worshipers of Bacchus, a book of devotion for lovers of wine and music. Tobias Feder was the first to introduce the Zohar parody. His "Zohar Ḥadash le-Purim" may be regarded as a forerunner of the satiric parody and the link between the parodies of the eighteenth century and those of the nineteenth.

Recent Parodies.

The chief characteristic of the parodies of the nineteenth century is that they have a direct bearing on life and reflect the spirit of the times; for almost all social, religious, and even political questions of the day engaged the attention of the modern parodist, and called forth either his ardent support or his vigorous protest. The earliest parodies of the century are directed against the Ḥasidic sect and the cult of those who figured as "Ẓaddiḳim," or pious men. The first of this kind is the "Megalleh Ṭemirin" of Joseph Perl of Tarnopol, published in 1819. It is a biting satire, revealing all the hypocrisy and corruption of the Ẓaddiḳim, and is modeled after the well-known "Epistolæ Obscurorum Virorum," the corrupt Hebrew taking the place of the dog-Latin. The next parody belonging to the group of epistolary satires is "Dibre Ẓaddiḳim" by Isaac Bär Levinsohn, published in 1830. This is more of a satire on the perverted homiletics of the Ẓaddiḳim. Mention must also be made of the following: "Ḥasidut we-Ḥokmah" by I. Erter (in "Ha-Ẓofeh," ch. vi.); "Hitgallut ha-Yenuḳa bi-Setolin" (in "Ha-Shaḥar," vi. 25–44), which was probably written by M. Shatzkes and J. L. Levin conjointly; "Zwei Chasidim" (parodying Heine's "Zwei Grenadiere"), written by Goldberg, though included in Gordon's collection of Yiddish poetry; and J. Kalbe's "Haggadah shel Pesaḥ" (in "Ha-'Ibri," iii., No. 14).

The Reform movement likewise elicited a number of parodies, the most important of which are the "Tiḳḳun Shabbat Ḥadash" of Moses Mendelssohn (in his "Pene Tebel," pp. 173–174, Amsterdam, 1872) and the "Zohar Ḥadash" of J. L. Nathan (Sachs, "Kanfe Yonah," pp. 21–25). Parodies of socialistic and revolutionary tendencies are quite numerous. The chief contributors are A. Cahn, B. Feigenbaum, I. Kaminer, and M. Winchewski. But there are also a large number of anonymous parodies of great satiric power, the most important of which are "Mishnat Elisha ben Abuyah" (in "Asefat Ḥakamim," Nos. v.–viii.) and "Tefillah Zakah Ḥadashah," No. 7, 1900.

On Jewish Life in Russia.

The parodies on the manners, morals, customs, and conditions of the Jews in Russia form a literature in themselves. Only the names of the more important authors can be mentioned here, viz.: J. Brill, I. Kaminer, A. S. Melamed, J. S. Olschwang, A. Rakowsky, and L. R. Simlin. Equally numerous are the parodies dealing with Jewish life in America. The greatest of them all is the "Masseket Amerika" by Gerson Rosenzweig. It presents the life of the Jewish immigrant in a humorous light, and is unquestionably the cleverest of all Talmudic parodies. Mention must also be made of A. Kotlyar's "Masseket Derek Ereẓ ha-Ḥadashah" (Pittsburg, 1893), E. Deinard's "Sefer ha-Kundes" (Newark, 1890), and the parodies of D. Apotheker scattered in various periodicals.

Of the parodies dealing with literary topics the following deserve special mention: J. Brill's "Mishnat Mebakkerim" (in "Ha-Shaḥar," viii. 317–324) and "Midrash Soferim" (*ib.* x. 81 *et seq.*), both dealing with the principles of literary criticism, and the parodies of Bader, Kaminer, and Linetzky.

Non-satiric parodies of considerable merit are H. Sommerhausen's "Haggadah le-Lel Shikkurim" (Brussels, 1842), A. M. Mohr's "Kol Bo le-Purim" (Lemberg, 1855), and the anonymous parody "Ha-Yareaḥ" (Berdychev, 1895), which has the form of a periodical.

There are also large numbers of perverted proverbs and modified maxims which must be classed with parodies. The largest collection is the "Ben Mishle" of H. Scherschewsky, published in several periodicals.

PARONOMASIA. See Alliteration.

PARSA. See Weights and Measures.

PARSHANDATHA: The first-born son of Haman (Esth. ix. 7). In the twelfth century the name obtained a literary meaning. It was then separated into the words "parshan" (= "interpreter") and "data" (= "law"), and was used with reference to Rashi, who has since been quoted under that name.

D. S. O.

PARSI, JOSEPH: Mathematician; flourished toward the end of the fifteenth century. All that is known of him is that he was the author of a work (unpublished) entitled "Keli Faz," a manual showing how to construct mathematical instruments. Steinschneider thinks that Parsi may be identical with Joseph the physician, cosmographer, and astronomer of Lisbon, who advised (1480) King John of Portugal to employ the astrolabe at sea, and who was a member of the commission to which the project of Columbus was submitted for examination (Zunz, "G. S." i. 177). But the name "Parsi" shows that the author of the "Keli Faz" was a Persian.

PARTIES TO ACTION. See Procedure.

PARTITION. See Joint Owners.

PARTNERSHIP: The word "shotefin" is used in the Mishnah almost always to denote joint owners, especially of land. In the language of later ages, when the Jews had become a people of traders, the word with the corresponding forms of the verb and of the abstract noun came more often to denote partners, partnership, the relation of partners. At first the commercial principles of joint trading were but sparingly applied; as time progressed they were applied more thoroughly.

Formation of Partnership.

A trading partnership can not be founded by words, whether spoken or written, but the property of several persons can, by such means of "ḳinyan" or acquisition as are set forth under Alienation, be turned into partnership property, so that its increase or diminution will fall thereafter on the partners in shares. According to the strict rule laid down by Maimonides, and later by Joseph Caro, both of whom only follow the responsa of the Geonim, money must be put in a common bag and lifted by both partners to make it common. In the case of other movables, where one article becomes the exchange for another—*e.g.*, where it is agreed that one shall bring into the joint business a barrel of wine; the other, a jar of honey—when both are brought to the appointed place, or when each of the parties has mixed his grain or fruits with those of the other, or when they have hired a common place to which each brings his goods, the partnership as to such goods is formed. The same authorities hold also that two mechanics, say two weavers or two tailors, can not by agreement divide their future earnings; for there can be no acquisition by contract of things that as yet do not exist.

But RABaD, Asheri, and the Ṭur, and following them ReMA in his gloss on Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 176, 3, all of them living in Christian countries, dissent from these technical views. The last-named author, with his usual phrase "Some say," mentions the view of Mordecai and of Nissim Gerondi (RaN), who hold not only that future gains may be subjected to ḳinyan, but that even without formal ḳinyan a common stock in trade may be formed by oral or by written contract. Isaac ben Sheshet (RIBaSH) in his responsa (No. 476) holds the same view; he admits, however, that while the partners may not "go back" as to the division of profits already made, they can not, in the absence of ḳinyan, be compelled to continue with the business.

Even the older authorities admit that if mechanics or manufacturers buy material with common funds and work it up, they are partners in the profit or loss in manufacturing and selling.

Division of Profit.

The essence of partnership is the equal division among the two or more partners of the profit and loss arising in business; not a division thereof in proportion to the amount invested by each (Ket. 93). But this is only where the contract is silent (סתם). When there is a special contract the profit is shared according to it. But where coins are put together by two or more owners, and a profit is made by the exchange thereof, arising from change in the currency laws or customs of the country, each owner shares in proportion to what he has put in. So, also, where several persons buy with common funds an ox for slaughter, and sell the meat, the proceeds are divided among them according to the respective amounts of money invested (Ḥoshen Mishpaṭ, 176, 5–6).

The partner in custody of the common property is liable to his companion for loss or theft like a bailee for hire (B. B. 42b, 43b). He is also responsible for loss arising through his deviation from the custom of the country or of the trade; or if he without consent goes to another place or to sea; or if he associates others with him, engages in a branch of merchandise foreign to the business, or sells on credit such goods as are not generally sold on credit; or if he entrusts others with the business. But if he makes a profit through such unauthorized acts, he makes it for the common fund. Thus it is when one partner without the other's consent deals in ritually forbidden food. In all these matters the acquiescence of the other partner or partners who have knowledge of irregular acts by one member of the firm is deemed of like force with express assent.

Powers of Partners.

Generally speaking, every partner has toward outside persons the power to bind the firm by his contracts. Maimonides therefore puts the law of agency and the law of partners into the same division of his code. But there is no trace either in that or in the later codes of a firm name by which the partners acting jointly are known and by the use of which they may be bound. But a curious word was contrived, אמצע (lit. "middle"), as early as the Talmudic period to denote the common property or common interest of the partners. It is found in the Baraita, with regard to the caravan (B. Ḳ. 116b), which resembles both a corporation and a partnership.

The question how far one partner can bind the others by incurring debts in the firm name either after a dissolution not properly published to the world or for an object not strictly within the purposes of the partnership—a question most vigorously litigated in modern times—is hardly touched upon in the rabbinical authorities, evidently because the wholesale purchase of goods upon credit was almost unknown, and because there was no firm name in which to contract.

Not only a partner but any part-owner of a demand may sue in the name of all the joint creditors without power of attorney ("harsha'ah"); nor can his companions, if he loses the suit, hold him responsible by showing that they would have brought forward better grounds for the action.

A man may not take common assets to another country or city out of his partner's sight without the consent of the latter. If such action is threatened, a court may restrain it.

"In Commendam."

A kind of partnership in which one man furnishes all the capital and the other all the work, either manual or commercial, is treated separately under the name of "'esek" (= "business"). As a man who does all the work gives a share of the resulting gain to the capitalist, scruples arose about that share being in the nature of interest, and hence unlawful; and such a partnership is therefore only allowed when the capitalist pays to the business man daily wages for his work besides the share of the profit belonging to the latter (B. M. v. 4, 5; see Usury).

Maimonides has a theory according to which half of the capital furnished should be treated as a loan to the business man, and works out accordingly the result in the case of the capital or part of it being lost. Instead of the regular daily wages which, according to the Mishnah, ought to be paid to the business man, to avoid the usury law, Maimonides is satisfied with the payment of a nominal lump sum. He also suggests that the business man should, for the same purpose, have the advantage of a smaller share in the loss than he has in the profit.

An Israelite is not to take an idolater for a partner, inasmuch as in case of dispute the latter, when called on for a judicial oath, would swear by the object of his veneration (Sanh. 63b).

If the king of the country from favor to a deceased father gives a profitable charge to one of the sons (though he be the wisest and ablest among them), the emoluments go to all of the sons as partners; but the case is otherwise if one of the sons has received the office through his own merit. If one partner is a favored Jew so that the tax-gatherers voluntarily relieve him from a government burden, the profit belongs to him alone; but when he obtains the exemption by request, it is a business profit, which goes to the firm.

Where robbers attack a caravan, and the members together are unable to defend their property, but one alone thereupon saves it, he saves it for himself; but if they are able to defend it, one who takes the lead, though he says, "I save this for myself," can only save it for the community. The same holds good where only two partners are concerned. The possession of one partner is never adverse to the other; hence there can not be between them a presumption by lapse of time.

Where the contract of partnership names no limit, any partner may ask for a dissolution at any date (B. M. 105a); but where the period of duration has been agreed upon, it seems that all parties must abide by it. The death of a partner dissolves the partnership; neither the survivors nor the heirs of the decedent can be held to carry on the common business. The regular way to divide outstanding demands is to wait till something is paid on them, and to divide the money as it comes in; but according to ReMA, a court may appraise the outstanding notes and bonds, or cause a division by authorizing a proposition to "buy or sell."

When a partner desirous of ending the joint business has the assets in his hands, he may divide the money (if all is of one kind) by simply keeping his share and leaving the other share with the local court. As to goods, he must call upon three men, not necessarily scholars, but men of integrity and of skill in appraising, and, after a division by them, must leave his partner's share with the court. It should be noted that these last positions are stated by the codes without direct Talmudic authority.

PARTRIDGE ("ḳore"): This bird is mentioned only in I Sam. xxvi. 20 (LXX., *νυκτικόραξ* = "kos" = "owl") and Jer. xvii. 11.

The most common partridge in Palestine is the *Caccabis chukar*; around the Dead Sea and in the Jordan valley the *Ammoperdix heyi* is abundant; while in the lowland and plains the *Francolinus vulgaris* is met with.

In Ḥul. 138b, 140b "ḳore" is explained by Rashi (probably mistaking it for the cuckoo) as denoting a bird which is in the habit of sitting upon the eggs of others. In Yoma 75b "pisyon" is enumerated among the kinds of quail. Crossing it with either the cock or peacock is forbidden (B. Ḳ. 55a).

PASCHAL SACRIFICE. See Passover Sacrifice.

PASCHELES, WOLF: Austrian publisher; born at Prague May 11, 1814; died there Nov. 22, 1857. The son of needy parents, he gained a livelihood by tutoring in Prague and its vicinity. Then by an accident he was led to the career which made him famous, that of a seller and publisher of Jewish books. In 1828 he wrote a small book of German prayers for women. When, in 1831, the cholera appeared in Prague for the first time, it was ordered by the rabbinate that in this period of greatest suffering the prayers of the seliḥot of R. Eliezer Ashkenazi should be used. These, however, were hard to obtain; so Pascheles had printed his own little book of prayers and the seliḥot in question. As these met with good sales he had some brochures, pictures of rabbis, and things of a similar nature published at his own expense, and carried his entire stock of Hebrew printed matter about with him in a chest. In 1837 he obtained the right to open a book-shop. In 1846 he began to bring out Jewish folk-sayings, together with biographies of famous Jews, novels, and the like, under the title "Sippurim." The first seven volumes met with high appreciation and sold extensively until the disturbances of the year 1848 interfered with the work; and not until 1852 could Pascheles continue it. The work has remained a popular one down to the present day. Among the contributors to the "Sippurim" were L. Weisel, Salomon Kohn, I. M. Jost, R. Fürstenthal, and S. I. Kaempf.

Beginning with the year 1852 Pascheles published the "Illustrirter Israelitischer Volks-Kalender." The publication of this calendar was later continued in two separate editions respectively by Jacob (afterward by Samuel) Pascheles and Jacob B. Brandeis, Wolf's son-in-law.

In 1853 Pascheles published a small edition of the Pentateuch, with a German translation by H. Arnheim of Glogau. Its popularity to the present day is proved by the fact that it has passed through innumerable editions. Among the other books brought out by him, two of which are widely circulated, are Fanny Neuda's "Stunden der Andacht" and Guttmann Klemperer's life of Jonathan Eybeschütz.

PASCHKIS, HEINRICH: Austrian pharmacologist; born at Nikolsburg, Moravia, March 21, 1849; educated at Vienna University (M.D. 1872). He was appointed assistant at the university hospital, and in 1883 became privat-docent in pharmacology.

Paschkis is a prolific writer, and has contributed numerous essays to the professional journals. He is a collaborator on Villaret's "Handwörterb. der Medizin," Möller-Geissler's "Real Encyklopädie der Gesammten Pharmacie," etc., and is editor of Scheff's "Handbuch der Zahnheilkunde." He is also the author of: "Ueber den Einfluss des Quecksilbers auf den Syphilisprocess" (with Von Vajda), Vienna, 1880; "Kosmetik für Aerzte," *ib.* 1890 (2d ed. 1893); "Materia Medica," *ib.* 1891; "Arzneiverordnungslehre," *ib.* 1893.

PASHUR: **1.** Son of Immer the priest. He attacked Jeremiah on account of his prophecies of calamity and put him in the stocks, for which Jeremiah predicted Pashur's captivity and death in Babylon (Jer. xx. 1-3).

2. Son of Melchiah. He was sent by King Zedekiah to Jeremiah to inquire regarding the result of the siege of Jerusalem by Nebuchadnezzar (Jer. xxi. 1). He was also chief governor of the Temple, and caused the imprisonment of Jeremiah in punishment for a prophecy advising the people to submit to the Chaldeans (Jer. xxxviii. 1-13). His grandson Adaiah is mentioned as one of those priests who, after their return, took strange wives (I Chron. ix. 12), and as one who was active at the construction of the Second Temple (Neh. xi. 12).

E. G. H. S. O.

PASS, AARON DE: South-African pioneer; together with his brother **Elias de Pass,** he was connected with Cape Colony from the year 1846. His firm, De Pass, Spence & Co., performed conspicuous services in the development of the whaling, sealing, guano, and fishing industries of the colony. It was among the first to call the attention of the government to the necessity of providing Table Bay with suitable docks. While the government deliberated, De Pass, Spence & Co. imported a patent slip, which was laid down in Simon's Bay; and at a later date one was constructed in Table Bay also. The firm was the largest shipowner in the port and the principal leaseholder of guano islands from the government from 1849. In this year it started the fisheries at Sandwich Harbor, which were continued till 1886; it introduced machinery for the manufacture of ice; opened up the trade from Hondekiip Bay, Port Nolloth, Angra Pequeña, and Walwich Bay to the interior; fitted out an expensive expedition of seven vessels for the whaling island known as Herd Island; and from time to time worked Croyette Island for fur-seals.

De Pass in his earlier days traded in Namaqualand and shipped in his own vessels cured and dried fish to Mauritius, bringing back sugar in exchange. He was the owner of Réunion, a large sugar-estate in Natal.

PASSAU: Town of eastern Bavaria. Jews were settled here toward the end of the twelfth century. when they were under the authority of the bishop. Bishop Mangold, in 1210, to indemnify them for serious losses they had suffered through pillage by the Christians, arranged that they were to be freed from all demands made upon them by the town, which should pay them 400 marks. Walther Isnar, Ulrich Pröbstlein, and Herbard the tailor, citizens of Passau, therefore paid to the Jews 200 pounds of Passauer coin, the bishop pledging the tolls to them in return. It is remarkable that under these circumstances Christians, even to their own disadvantage, took the part of the Jews.

The Jewish inhabitants dwelt not only in the so-called "Jews' Lane," but also in that section of the town situated on the Inn river, where they had a synagogue. A treaty ("Landfrieden") was concluded in 1244, one of the conditions of which was that no Christian should charge interest, except to Jews, without incurring a penalty. In 1260 Bishop Otto, on the advice of his chapter, promised the Jews of Passau, as they had assisted him when he was financially embarrassed, not to ask either additional taxes or loans of them for a period of two years. Martyrs of Passau, the victims of persecutions, are mentioned in 1337 and 1349. Emperor Rudolf, on April 1, 1577, issued an edict to the Bishop of Passau directing that the Jews of the town should not be tortured.

At present (1904) the Jews of Passau number 34 in a total population of about 18,000. They are under the supervision of the district rabbi of Ratisbon.

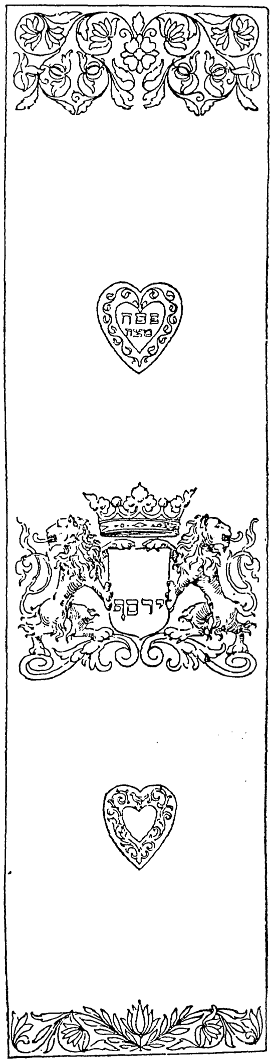
PASSOVER (פסח ; Aramaic, פסחא ; hence the Greek Πάσχα).—**Biblical Data:** The Biblical account connects the term with the root פסח (= "to pass by," "to spare"; Ex. xii. 13, 23, 27; comp. Isa. xxxi. 5). As a derivative פסח designates (1) a festival and (2) the sacrificial lamb and meal introductory to the festival.

The festival commemorates the deliverance of Israel's first-born from the judgment wrought on those of the Egyptians (Ex. xii. 12–13; comp. Ex. xiii. 2, 12 *et seq.*), and the wondrous liberation of the Hebrews from Egyptian bondage (Ex. xii. 14–17). As such, it is identical with the Maẓẓot (המצות, Ex. xii. 17; חג המצות, Lev. xxiii. 5–6) festival, and was instituted for an everlasting statute (Ex. xii. 14). Lev. xxiii., however, seems to distinguish between Passover, which is set for the fourteenth day of the month, and חג המצות (the Festival of Unleavened Bread; ἑορτὴ τῶν ἀζύμων, Luke xxii. 1; Josephus, "B. J." ii. 1, § 3), appointed for the fifteenth day. The festival occurred in Abib (Ex. xiii. 4; Deut. xvi. 1 *et seq.*, where the New Moon is given as the memorial day of the Exodus), later named Nisan, and lasted seven days, from sunset on the fourteenth day to sunset on the twenty-first day; the first and the seventh days were set aside for holy convocation, no work being permitted on those days except such as was necessary in preparing food (Num. xxviii. 16–25). During the seven days of the festival leaven was not to be found in the habitations of the Hebrews (Ex. xii. 19, xiii. 7). Leaven was not to be eaten under penalty of "excision" ("karet"; Ex. xii. 15, 19–20; xiii. 3; Deut. xvi. 3), and the eating of unleavened bread was commanded (Ex. xii. 15, 18; xiii. 6, 7; xxiii. 15; xxxiv. 18; Lev. xxiii. 6; Num. xxviii. 17). On the second day the omer of new barley was brought to the Temple (Lev. xxiii. 10–16; comp. First-Fruits).

Paschal Lamb.

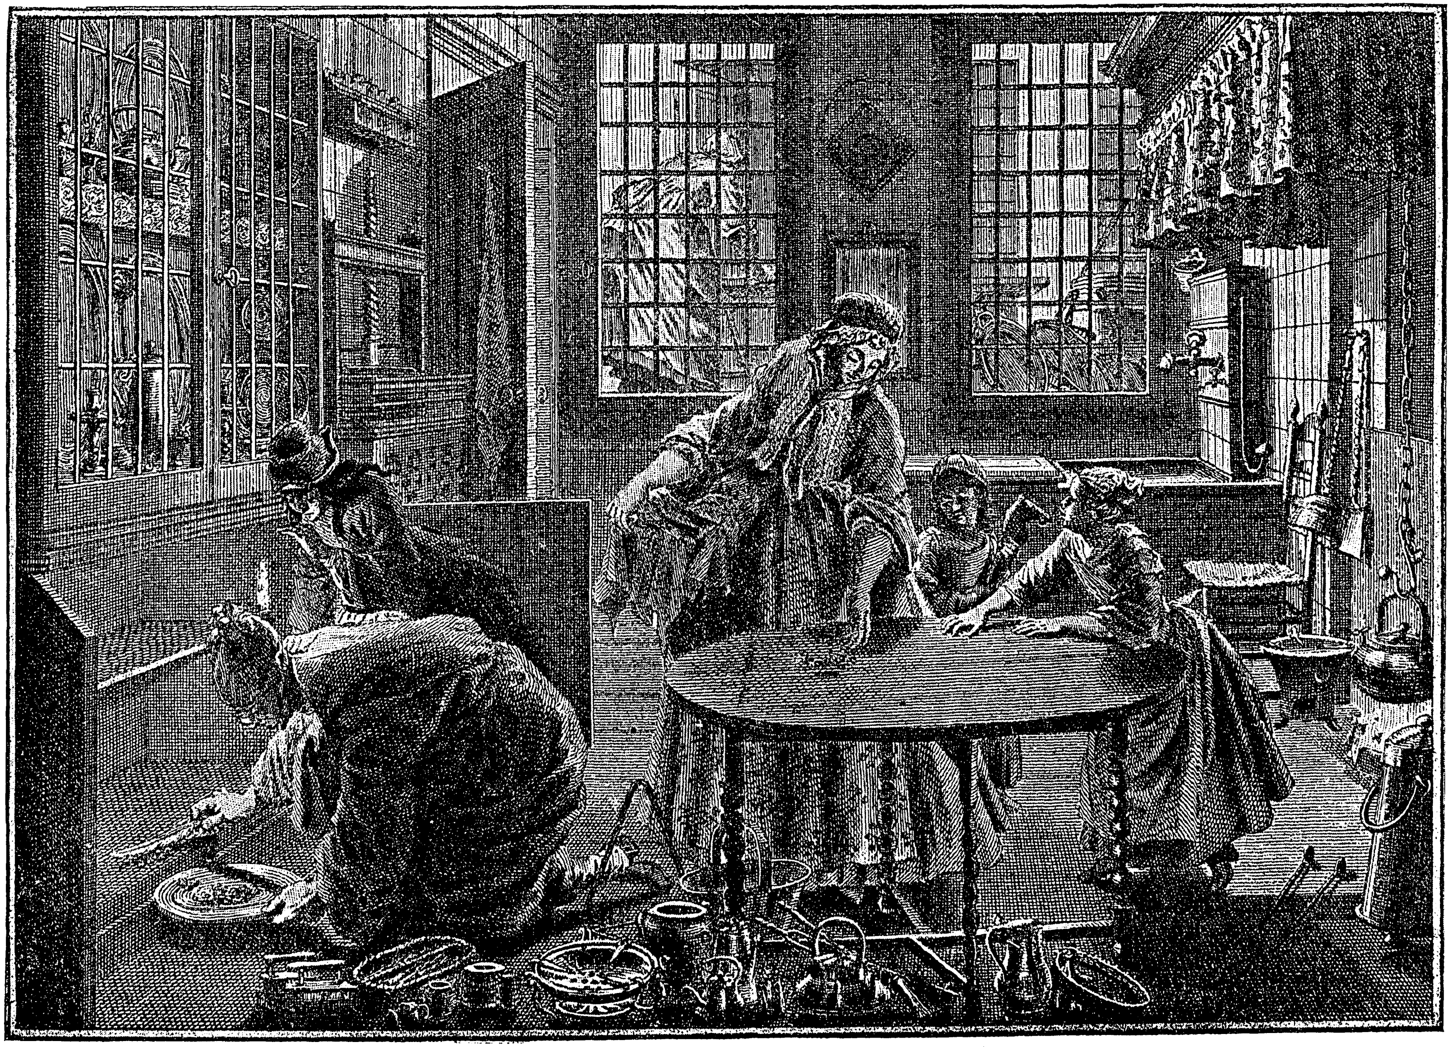
The setting aside, slaughtering, and eating of the paschal lamb was introductory to the celebration of the festival. According to Ex. xii. this rite was instituted by Moses in Egypt, in anticipation of the judgment about to be visited on Pharaoh and his people. On the tenth of the month—ever thereafter to be the first month of the year—the Hebrews were to take a lamb for each household, "without blemish, a male of the first year," "from the sheep or from the goats." Kept until the fourteenth day, this lamb was killed "at eve" ("at the going down of the sun"; Deut. xvi. 6), the blood being sprinkled by means of a "bunch of hyssop" (Ex. xii. 22) on the two door-posts and on the lintels of the houses wherein the Hebrews assembled to eat the lamb during this night, denominated the ליל שמורים ("night of the vigils unto Yhwh"; Ex. xii. 42, Hebr.; see, however, R. V. and margin). Prepared for the impending journey, with loins girded, shoes on their feet, and staves in their hands, they were to eat "in haste." The lamb was to be roasted at the fire, not boiled in water, or left raw; its head, legs, and inwards were not to be removed, and it was to be eaten with bitter herbs and unleavened bread. Nothing was to be left until the morning; anything that remained was to be burned (Ex. xii.).

The details of this rite as observed in Egypt are summarized in "the ordinance of the Passover" (Ex. xii. 43 *et seq.*). No bone was to be broken; the meal was to be eaten in one house; no alien could participate; circumcision was a prerequisite in the case of servants bought for money and of the stranger desiring to participate (Ex. xii. 44–48). According to Num. ix. 6, Levitical purity was another prerequisite. To enable such as happened to be in an unclean state through contact with the dead, or were away from home at the appointed season, to "offer the oblation of Yhwh," a second Passover was instituted on the fourteenth day of the second month (Num. ix. 9 *et seq.*). In Deut. xvi. 2, 5 the slaughtering and eating of the lamb appear to be restricted to the central sanctuary.



Cover for Maẓẓot.
(From a drawing by Viefers.)

Glosses concerning the observance of Passover are not infrequent in the historical narratives. The keeping of the rite is first mentioned as having occurred at Sinai (Num. ix. 1 *et seq.*); under Joshua, at Gilgal (Josh. v. 10), another celebration of it is noticed. Hezekiah figures prominently in an account of the revival of the festival after a long period

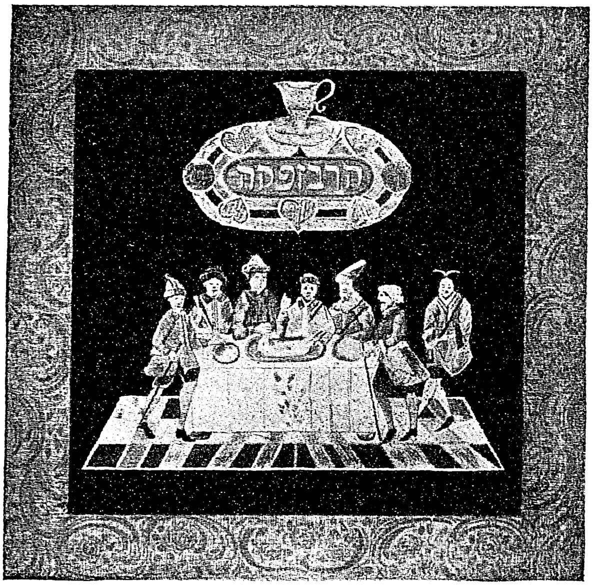


SEARCH FOR LEAVEN.
(From a drawing by Picart, 1725.)

in which it was not observed (II Chron. xxx.). The reforms of Josiah brought about a new zeal in behalf of this institution, the Passover celebrated at his bidding in the eighteenth year of his reign being described as singular and memorable (II Kings xxiii. 21 *et seq.*). After the return from the Captivity (Ezra vi. 19 *et seq.*) another Passover observance is reported to have taken place in due conformity with the required laws of purity and in a most joyful spirit.

The sacrifices ordained for Passover are as follows: "an offering made by fire, a burnt offering; two young bullocks, and one ram, and seven he-lambs of the first year, without blemish, and their meal-offering, fine flour mingled with oil; . . . and one he-goat for a sin-offering, beside the burnt offering of the morning." These were to be offered daily for seven days (Num. xxviii. 16–25, Hebr.).

E. G. H.



Cloth Used for Covering Passover Dish.

(In the possession of Von Wilmersdörffer, Munich.)

——**In Rabbinical Literature:** For reasons well known (see CALENDAR; FESTIVALS; HOLY DAYS) Passover was extended to eight days, including the 22d of Nisan, and the 23d of Nisan came to be regarded as a semiholy day, an "issur la-ḥag," according to the interpretation of Ps. cxviii. 27 (Suk. 45b; Rashi, *ad loc.*). The Biblical injunctions concerning the eating of leaven and the like (see BIBLICAL DATA) were applied in conformity with the methods of rabbinical exegesis. The quantity of leaven which, if eaten deliberately ("be-zadon"), entailed the penalty of excision was fixed at "ke-zayit," an amount equal to that of an olive (Maimonides, "Yad," Ḥamez, i. 1; Ker. i.). For inadvertent violation of the prohibition the penalty was the regular sin-offering.

Penalties for Infringement.

The phrase "to eat" in the prohibition was construed to include any use of leaven as nourishment (by drinking, for instance). In fact, neither advantage nor enjoyment ("hana'ah") might be drawn from leaven during the festival ("Yad," *l.c.* i. 2). Hence, neglect to remove the leaven from one's "reshut" (domain or house) entailed punishment for the violation of two prohibitions (comp. Ex. xiii. 7). The penalty of stripes "min ha-Torah" was not enforced except where, during the festival week, one had purchased leaven or caused the process of fermentation for some definite purpose. Still, neglect to remove leaven rendered one liable to "makkat mardut" (see CORPORAL PUNISHMENT; also "Yad," *l.c.* i. 3). Leaven not removed could never after be utilized—this prohibition being deduced from the construction of the Biblical text by the Soferim ("mi-dibre soferim"), and it mattered not that the neglect was unintentional or even unavoidable (*l.c.* i. 4). Leaven mixed with anything else during Passover rendered the article unfit for use. In this case, however, an exception was made where the leaven belonged to an Israelite; though itself barred from use, it was not forbidden, after the festival, when combined with other things.

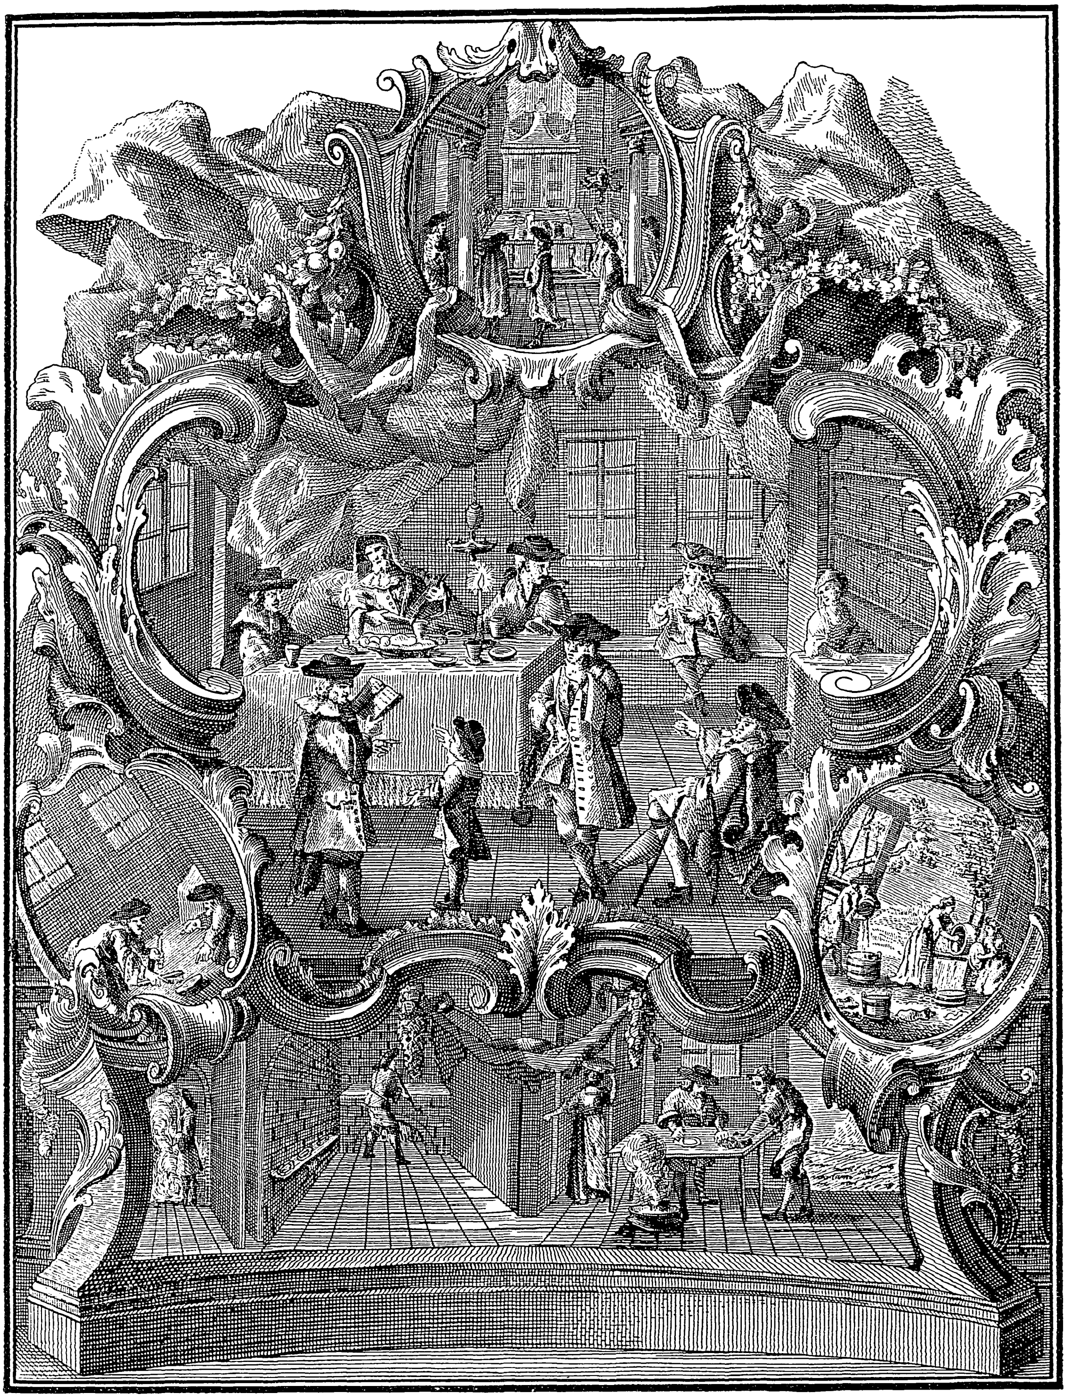
"Karet" was imposed for eating pure "ḥamez," but the eating of mixed "ḥamez" ("'erub ḥamez"), of which the Mishnah (Pes. iii. 1) gives instances (see "Yad," *l.c.* i. 6), entails flagellation, though this depended upon the quantity consumed and the proportion of the ḥamez (*l.c.*). The interdiction against eating or using ḥamez becomes operative at noon of the 14th of Nisan, but as a precaution the Rabbis set the limit an hour earlier (*l.c.* i. 9) and even advise refraining from eating leavened food after ten in the morning (*l.c.* i. 10).

The proper removal of ḥamez ("bi'ur ḥamez") constitutes one of the chief concerns of rabbinical law and practise. Great care is enjoined in the inspection and cleaning of all possible nooks and corners, lest ḥamez be overlooked.

Removal of Leaven.

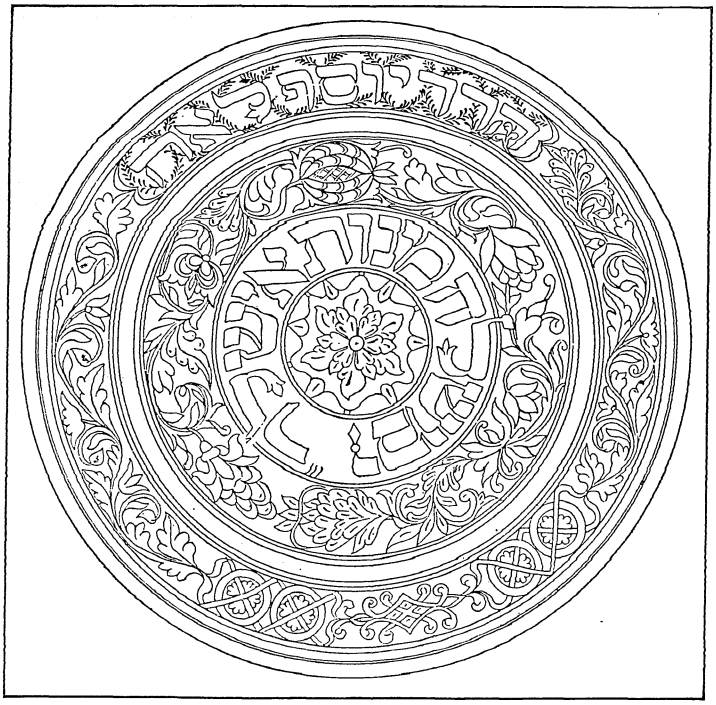
The night preceding the 14th of Nisan was especially set apart for this inspection by candle-light or lamplight, not by moonlight, though it was not necessary to examine by candle-light places that were open to the sunlight. Study was suspended in favor of this duty of inspecting holes and corners. Minute regulations were devised for the inspection of holes midway between houses, but precautions were taken not to arouse suspicions of witchcraft in the minds of non-Jewish neighbors. Certain places, where the likelihood of finding ḥamez was infinitesimal, were exempt (see "Yad," *l.c.* ii.).

In practise this "bediḳat ḥamez" was effected as follows: As soon as night (on the 13th) had completely set in, the father of the household ("ba'al ha-bayit") lighted a plain wax taper, took a spoon and a brush, or three or four entire feathers, and, after having deposited a piece of bread in some noticeable place, as on a window-sill, to mark the



SEDER FEAST AND ACCOMPANYING PASSOVER PREPARATIONS.
(From Bodenschatz, "Kirchliche Verfassung," 1748.)

beginning of the search, made the complete round of the house and gathered up all the leavened bread that was in it. Coming to the window-sill where the piece of bread was deposited, he carefully put it into the spoon, leaving no crums on the sill, and pronounced this benediction: "Blessed be Thou . . . who hast commanded us to remove the leaven." Then he added an Aramaic formula: "All leaven which perchance remains in my domain and which has escaped my observation shall be destroyed and be like unto the dust of the earth." Then the spoon and brush were tied into a bundle and suspended over the lamp in the room, or elsewhere, but so that mice could not get at it. Next morning, if the bundle was found untouched, it was not necessary to go through the same process; otherwise the inspection was repeated. The bundle and its contents were either sold or burned before six o'clock in the evening; only so much leaven was retained as would be needed up to ten in the morning (Shulḥan 'Aruk, Oraḥ Ḥayyim, 431; Pes. i.). This "investigation" was transferred to the eve of Sabbath when the 14th of Nisan coincided with the Sabbath.



Passover Plate of the Seventeenth Century.
(In the Kunstgewerbe-Museum, Düsseldorf.)

Certain precautions were taken in the disposal by burning of the "terumah" (priestly portion). Neglect to inspect one's house at the proper time could be remedied by inspection later, even during the festival itself, or after its close, provided no benefit were derived from the ḥameẓ (for further details see "Yad," *l.c.* iii., iv.).

While regarding only five kinds of produce (two of wheat and three of barley) as ḥameẓ, rabbinical law is very careful to establish precautionary provisions lest the interdiction of ḥameẓ be violated, and with this in view culinary freedom is much restricted. Even the dishes and cooking-utensils are objects of special attention for this reason, and among the preparations made for the proper observance of the festival the "cleansing of the dishes" (= "hag'alat kelim") two or three days in advance is not the least important; a complete set of tableware and kitchen utensils is, as a rule, kept in readiness to take the place of those in use during the rest of the year.

The eating of maẓẓot is considered as a positive command for the first night of the festival ("Yad," *l.c.* vi. 1). A quantity equal to that of an olive is deemed sufficient to discharge this mandatory obligation. Intention ("kawwanah") is not essential; the fact that maẓẓah was eaten is sufficient. Still, certain limitations developed concerning the manner of preparing food containing maẓẓah when it was intended to be eaten in fulfilment of the obligation.

Recital of the Haggadah.

The Rabbis also regarded it as a positive duty on the first night to relate the miracles incidental to Israel's deliverance from Egypt; hence the Haggadah and the Seder. Each Israelite was obliged to drink on this night four cups of wine ("arba'ah kosot"); red wine was excluded later owing to the Blood Accusation. While eating the maẓẓah and drinking the wine, the position of free men (*i.e.*, reclining on the left side against cushions) was obligatory on all male participants ("hasibah"). The benedictions over the several cups were specified. "Ḥarosat" also was compulsory, "mi-dibre soferim," for this meal. Maimonides ("Yad," *l.c.* vii. 11) gives the recipe for its preparation; but the bitter herbs were not regarded as obligatory by themselves; they formed a part of the Passover meal. The practise of eating bitter herbs now, though the paschal lamb is no longer prepared, is characterized as an institution of the scribes. "Afiḳomen," usually a dessert of sweet ingredients, was excluded from this meal (Pes. x. 8), its place being taken by a piece of the maẓẓah, which, as such, is familiar in Jewish folk-lore and proverbs.

The Fast of the First-Born, in commemoration of the escape of the Hebrew first-born in Egypt, occurs on the 14th of Nisan. The chief of the household may take the place of the minor son, or fast voluntarily in case there be none in the family subject to the obligation.

The Passover lamb was killed, in the time of the Second Temple, in the court where all other "ḳodashim" were slaughtered, in keeping with the Deuteronomic prescription, and it was incumbent upon every man and woman to fulfil this obligation.

Paschal Lamb.

The time "between the two evenings" ("ben ha-'arbayim") was construed to mean "after noon and until nightfall," the killing of the lamb following immediately upon that of the "tamid," the burning of the incense, and the setting in order of the lamps, according to daily routine. The killing was done with great caution, to avoid contact with ḥameẓ. After the carcass had been properly prepared, and the blood properly disposed of, it was taken home by its owner and roasted and eaten at eventide. The owners of the lambs were divided into three sets ("kittot") of at least thirty each, and during the slaughtering never less than thirty could be present in the courtyard. When the first group had entered the courtyard the doors were closed, and while the Levites sang the "Hallel" the lambs were killed, the psalms being sung, if necessary, three times.

The Ḥaburah.

In prescribed order the trumpets were blown, while the priests stood ready with gold and silver utensils to sprinkle the blood. The vessel was passed from one to the other that many might have a part in the meritorious act, until it reached the priest nearest the altar. The empty pan was returned. Then the carcasses were suspended on iron hooks along the walls and columns, or even on poles, shouldered between two men; the excrement was removed and the proper parts salted and incensed on the altar. The doors were then reopened, and, the first group departing, the second was admitted, and next the third, after which the court was cleansed. This order was observed even when the 14th fell on a Sabbath; but in that case the several groups would wait at certain stations in the Temple until the Sabbath was over before proceeding homeward. The lamb represented a "ḥaburah" (company); for single individuals it was not to be killed except in extraordinary cases. All members of the ḥaburah were to be in a state to eat at least "ke-zayit" (the equivalent of an olive). In the composition of the ḥaburah care was taken to avoid provoking levity; for instance, the sexes were kept apart. The members of the ḥaburah complied with the conditions, regarding purity, circumcision, etc., prescribed for partaking of the paschal lamb. Not only must the personal status of the owner be conformable to the law, but his ownership also must be beyond doubt; the lamb must be slaughtered on his account, and in accordance with the Biblical prescriptions and the Temple ordinances (see "Yad," Ḳorban Pesaḥ, iii. and iv.).

Passover and Sabbath.

Precautions were taken against defilement by contact with the dead. For this purpose, before Passover, the graves were whited. In fact, the whole of the preceding month was devoted to setting things in order with a view to facilitating the coming of the pilgrims to Jerusalem and to deciding judicial questions (Yer. Sheḳ. iii.). The usual sacrifices and the additional offerings were performed during this holy day. As stated above, later rabbinical practise was based on the principle that the Passover suspended the Sabbath law. But this question has an important bearing on the problem of reconciling the data in the Synoptics with those in John, and both with rabbinical law, with reference to the day of Jesus' death. Chwolson ("Das Letzte Passamahl Christi und der Tag Seines Todes," p. 31, St. Petersburg, 1892) contends that in the time of Jesus this was not yet a universally recognized canon, and that this would account for the discrepancy due to Jesus' slaughter of the paschal lamb on the eve of the 13th of Nisan. Chwolson's theory has not been generally accepted. The Samaritans and the Karaites slaughter the Passover lamb not earlier than about one hour and a half before dark.

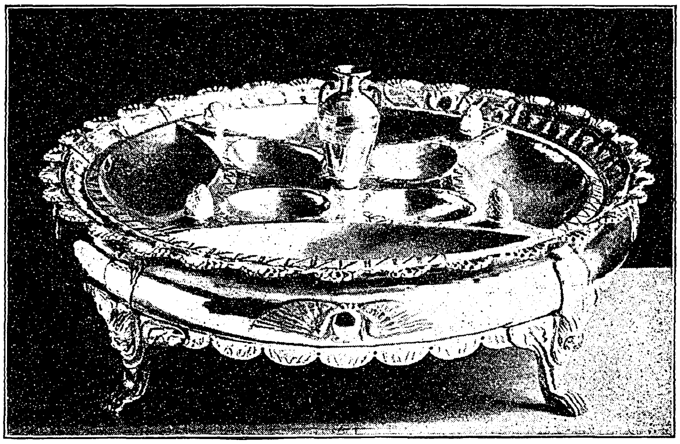
According to the Samaritans, the offering can take place only on Mount Gerizim (see Aaron ben Elijah, "Gan 'Eden," Eupatoria, 1866, *s.v.* "Inyan Pesaḥ"; Geiger, in "Z. D. M. G." xx. 532–545; Ibrahim ibn Jacob, "Das Festgesetz der Samaritaner," ed. Dr. Hanover, Berlin, 1904). The Samaritans consider the Feast of Passover and the Feast of Unleavened Bread as two distinct festivals. The Sabbath is not suspended by the Pesaḥ offering (*ib.* p. 24). The custom among the Karaites corresponds to that of the Samaritans (see Judah Hadassi, "Eshkol ha-Kofer," § 202). On the 15th of Nisan, which is the "ḥag ha-maẓẓot" ("ḥaj al-faṭir"), no manner of work is permitted by the Samaritans, even cooking being prohibited; in this they are stricter than the Karaites, who permit the preparation of food (Aaron ben Elijah, *ib.* s.v. "Inyan Ḥag ha-Maẓẓot"). Processions are arranged on Mount Gerizim on this holy day (Petermann, "Reisen im Orient," i. 287; see also "Jour. Bib. Lit.," 1903). The 'Omer day does not fall on the second day (16th of Nisan), but on the Sunday after the Sabbath in the festival week.

E. C. E. G. H.

——**Critical View:** Comparison of the successive strata of the Pentateuchal laws bearing on the festival makes it plain that the institution, as developed, is really of a composite character. Two festivals, originally distinct, have become merged, their underlying ideas reappearing both in the legend associated with the holy day as its assumed historical setting and occasion, and in the ritual. The name פסח must be taken to be derived from that meaning of the root which designates the "skipping," "dancing" motions of a young lamb (Toy, in "Jour. Bib. Lit." 1897), only secondarily connoting "passing over" in the sense of "sparing." Pesaḥ, thus explained, is connected with pastoral life; it is the festival celebrated in early spring by the shepherds before setting out for the new pastures. In the ordinance of Ex. xii. the primitive manner of preparing the lamb for the family feast is still apparent. Such a family feast, naturally, was in the nature of a sacrifice, the gods of the clan being supposed to partake of it as well as the human members. There is a strong presumption that the skipping motions of the lamb were imitated by the participants, who in this wise "danced" around the sacrificial offering, and that this explains the designation of both the feast and the lamb.

Feast of First-Born.

There is good ground for the theory of Dozy ("Die Israeliten zu Mekka," Leyden, 1869) that the rites of the Arabian haj recall those of this old Israelitish "ḥag," though the inference drawn from this resemblance, that the Meccan celebration had been imported from Israel by the tribe of Simeon, must be rejected. The lamb served, however, the purpose of propitiating the gods and securing the prosperity of the flock about to depart for the pasture. Wellhausen's surmise that the lamb was a firstling, though not borne out by the Biblical data, seems to throw light on the connection, apparently very primitive, between the festival and the escape of the first-born and their subsequent devotion to Yhwh (Ex. xii., xiii.). The first-born of the flock (and even of men) was offered that the lives of those born later might be safe.



Passover Dish.
(In the possession of E. A. Franklin, London.)

Hence the ceremony came naturally to be associated with the intention of "saving," and then with the fact of having "spared," from which secondary meaning of the root פסח came the tradition that the Hebrews' first-born had been "spared" in Egypt, God "passing over" their houses. The sprinkling of the blood points in the same direction. This was a feature accompanying every propitiatory slaughtering (see Samuel Ives Curtis, "Ursemitische Religion," p. 259, Leipsic, 1903). It is suggested that when later the tendency became dominant to give old festivals historical associations—a tendency clearly traceable in the evolution of the Biblical holy days—this very primitive practise was explained by a reference to the occurrence in Egypt during the "night of watching"—another expression which plainly refers to the night preceding the day of the flock's departure, and which, as such, was marked by a proper ritual. It has been urged that the term "night of watching" points to a custom similar to that which prevails in Germany, where the night before Easter is set apart for seeing the sun "jump" or "dance," as it is called; it is more likely, however, that the phrase has reference to the moon's phases.

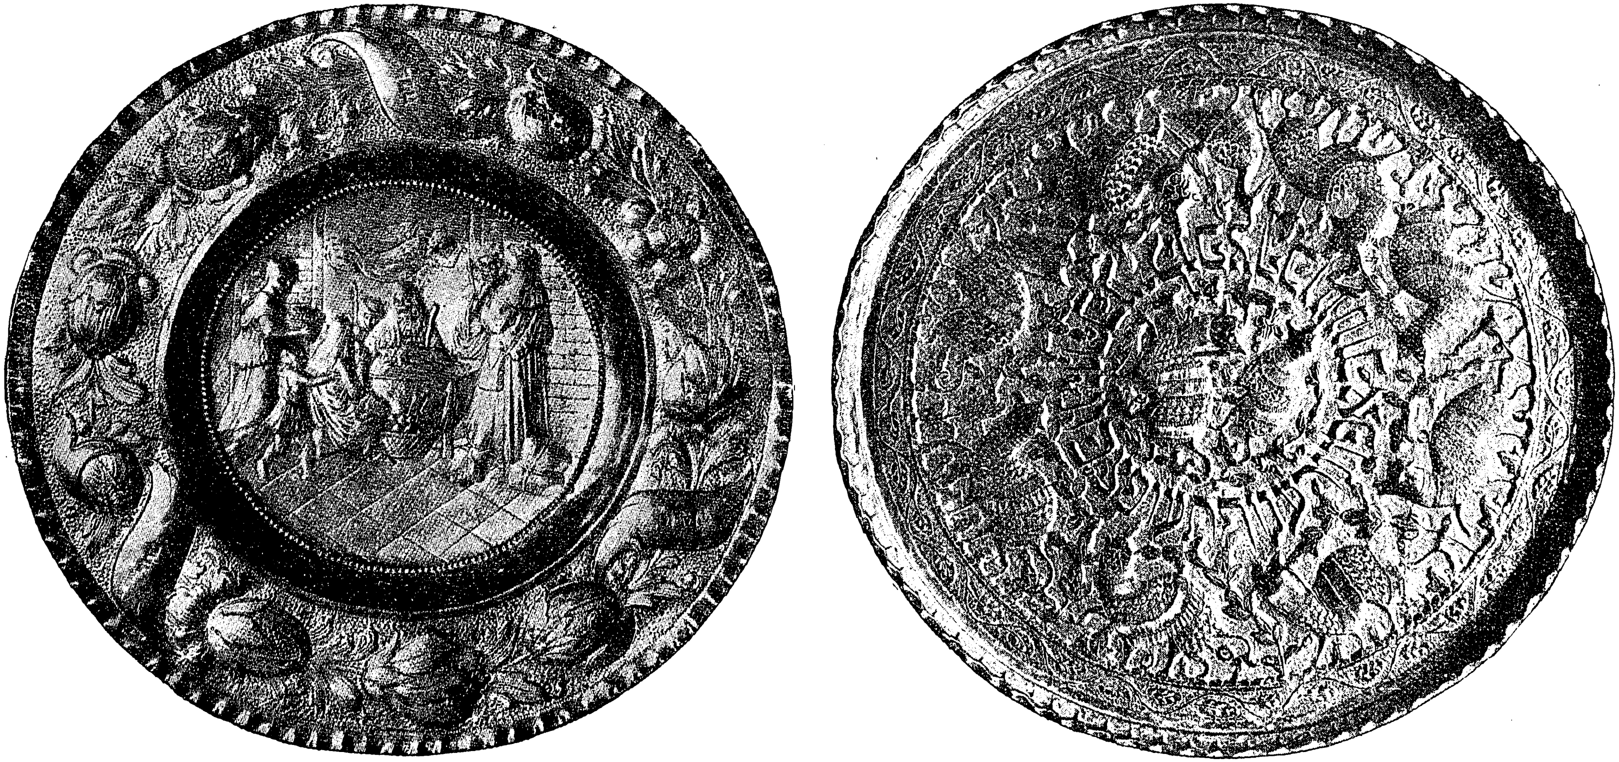
Connected with Maẓẓot.

This pastoral Pesaḥ was originally distinct from the Maẓẓot festival, but it merged all the more readily with it because both occurred in the spring, about the time of the vernal equinox. The Maẓẓot feast is distinctly agricultural, the maẓẓot cakes being both the natural offering from the newly gathered barley to the gods that had allowed the crop to ripen, and then the staple food of the harvesters. Offering and food are nearly always identical in the concepts and practises of primitive races. The difficulty of finding an adequate historical explanation for the maẓẓot is apparent even in the account of Ex. xii., which would make them emblematic of the hurry of the deliverance from Egypt, though it was the supposition that the maẓẓot had been used at the Passover meal before the Exodus.

The agricultural character of the Passover (or Maẓẓot) festival is evidenced by the fact that it is one of the three pilgrim, or season, festivals. Of course, when the pastoral Pesaḥ and the agricultural Maẓẓot came to be merged can not be determined definitely, but one is safe in saying that it must have been shortly after the occupation of Palestine, the tradition about the Pesaḥ observed by Joshua at Gilgal (see Biblical Data) suggesting and confirming this assumption.

The relation of circumcision to Pesaḥ is explained when the original pastoral and propitiatory character of the latter is remembered. The pastoral clan would naturally exclude all that were not of the clan from the meal at which it trysted with its protecting god (that being the original significance of every solemn meal) and disarmed his jealousy. Circumcision itself was a rite of propitiation, like the lamb at Pesaḥ, possibly a substitute for human sacrifice. (See the legend of Cain and Abel for the bearing of the lamb, and that of Zipporah's sons for the bearing of circumcision, on human sacrifice.) A good case may be made out in favor of the theory that, for this reason, Pesaḥ was at one time the festival of the circumcision, all that had attained the proper age during the year being circumcised on one and the same day, namely, at Pesaḥ; the puzzling question why the lamb had to be set aside on the tenth finds in this its explanation. Three to four days were required to heal the wound of circumcision (see Josh. v. 8; Gen. xxxiv. 25), and the designation of maẓẓot as the "bread of affliction" (Deut. xvi. 3) may possibly carry some allusion to this custom.

The law of the second Pesaḥ (Num. ix. 6) reflects the unsettled relations which the pastoral Pesaḥ originally bore to the agricultural harvest festival, the two, apparently, not being at first simultaneous.



PASSOVER PLATES.

(In the Johns Hopkins University, Baltimore, Md.)

(In the United States National Museum, Washington, D. C.)

The legal as well as the historical sources agree in assigning to this Pesaḥ = Maẓẓot festival a Mosaic (or a very remote) origin. In the Book of the Covenant "Pesaḥ" does not occur, "Maẓẓot" being used as it is in Ex. xxxiv. (verse 18), where "Pesaḥ" is named only in verse 25. Both the J-E (Jahvist-Elohist) and the P (Priestly) narratives emphasize the historical prominence of the day. It is J-E that explains maẓẓot as due to the haste of the departure (Ex. xii. 34, 39), while P presupposes their use at the meal in Egypt (Ex. xii. 8, 15–20). The Deuteronomist (D) seems to follow J-E in calling maẓẓot "the bread of affliction." According to the Book of the Covenant (Ex. xxiii. 15, xxxiv. 20), Pesaḥ is one of the three pilgrim festivals. The sacrifices to be offered by the community are mentioned only in H (the Holiness code; Lev. xxiii. 8) and P (Num. xxviii. 19). D insists that the Pesaḥ must be slaughtered at the central sanctuary (Deut. xvi.). D (Deut. xvi. 8) and the Book of the Covenant (Ex. xiii. 6) mention only the seventh day of Maẓẓot as a holy day. H (Lev. xxiii. 7) and P (Ex. xii. 16; Num. xxviii. 18, 25) make the first and the seventh day holy days. Ezekiel's scheme (Ezek. xlv. 21 *et seq.*) provides sacrifices different from those prescribed in P.

PASSOVER SACRIFICE (Hebrew, "zebaḥ Pesaḥ"; lit. "sacrifice of exemption"): The sacrifice which the Israelites offered at the command of God during the night before the Exodus from Egypt, and which they ate with special ceremonies according to divine direction. The blood of this sacrifice sprinkled on the door-posts of the Israelites was to be a sign to the angel of death, when passing through the land to slay the first-born of the Egyptians that night, that he should pass by the houses of the Israelites (Ex. xii. 1–23). This is called in the Mishnah the "Egyptian Passover sacrifice" ("Pesaḥ Miẓrayim"; Pes. ix. 5). It was ordained, furthermore (Ex. xii. 24–27), that this observance should be repeated annually for all time. This so-called "Pesaḥ Dorot," the Passover of succeeding generations (Pes. *l.c.*), differs in many respects from the Pesaḥ Miẓrayim. In the pre-exilic period, however, Pesaḥ was rarely sacrificed in accordance with the legal prescriptions (comp. II Chron. xxxv. 18); but it was regularly offered during the time of the Second Temple, and there was a definite ritual for it, in addition to the regulations prescribed by the Law. The following is a brief summary of the principal ordinances and of the ritual accompanying the sacrifice:

The Sacrifice.

The sacrificial animal, which was either a lamb or kid, was necessarily a male, one year old, and without blemish. Each family or society offered one victim together, which did not require the "semikah" (laying on of hands), although it was obligatory to determine who were to take part in the sacrifice that the killing might take place with the proper intentions. Only those who were circumcised and clean before the Law might participate; and they were forbidden to have leavened food in their possession during the act of killing the paschal lamb. The animal was slain on the eve of the Passover, on the afternoon of the 14th of Nisan, after the Tamid sacrifice had been killed, *i.e.*, at three o'clock, or, in case the eve of the Passover fell on Friday, at two. The killing took place in the court of the Temple, and might be performed by a layman, although the blood had to be caught by a priest, and rows of priests with gold or silver cups in their hands stood in line from the Temple court to the altar, where the blood was sprinkled. These cups were rounded on the bottom, so that they could not be set down; for in that case the blood might coagulate. The priest who caught the blood as it dropped from the victim then handed the cup to the priest next to him, receiving from him an empty one, and the full cup was passed along the line until it reached the last priest, who sprinkled its contents on the altar. The lamb was then hung upon special hooks or sticks and skinned; but if the eve of the Passover fell on a Sabbath, the skin was removed down to the breast only. The abdomen was then cut open, and the fatty portions intended for the altar were taken out, placed in a vessel, salted, and offered by the priest on the altar, while the remaining entrails likewise were taken out and cleansed. Even if the eve of the Passover fell on a Sabbath, the paschal lamb was killed in the manner described above, the blood was sprinkled on the altar, the entrails removed and cleansed, and the fat offered on the altar; for these four ceremonies in the case of the paschal lamb, and these alone, were exempt from the prohibition against working on the Sabbath. This regulation, that the Sabbath yielded the precedence to the Passover, was not definitely determined until the time of Hillel, who established it as a law and was in return elevated to the dignity of nasi by the Bene Bathyra (Pes. 68a).

On Sabbath Eve.

The Three Groups of Laity.

The people taking part in the sacrifice were divided into three groups. The first of these filled the court of the Temple, so that the gates had to be closed, and while they were killing and offering their paschal lambs the Levites on the platform ("dukan") recited the "Hallel" (Ps. cxiii.–cxviii.), accompanied by instruments of brass. If the Levites finished their recitation before the priests had completed the sacrifice, they repeated the "Hallel," although it never happened that they had to repeat it twice. As soon as the first group had offered their sacrifice, the gates were opened to let them out, and their places were taken by the second and third groups successively. All three groups offered their sacrifice in the manner described, while the "Hallel" was recited; but the third group was so small that it had always finished before the Levites reached Ps. cxvi. It was called the "group of the lazy" because it came last. Even if the majority of the people were ritually unclean on the eve of the Passover, the sacrifice was offered on the 14th of Nisan. Other sacrifices, on the contrary, called "ḥagigah," which were offered together with the paschal lamb, were omitted if the eve of the Passover fell on a Sabbath, or if the sacrifice was offered in a state of uncleanness, or if the number of participants was so small that they could not consume all the meat. When the sacrifice was completed and the victim was ready for roasting, each one present carried his lamb home, except when the eve of the Passover fell on a Sabbath, in which case it might not be taken away. The first group stationed itself on the mount of the Temple, the second group in the "ḥel," the space between the Temple wall and the Temple hall, while the third group remained in the Temple court, thus awaiting the evening, when they took their lambs home and roasted them on a spit of pomegranate-wood. No bones might be broken either during the cooking or during the eating. The lamb was set on the table at the evening banquet (see Seder), and was eaten by the assembled company after all had satisfied their appetites with the ḥagigah or other food. The sacrifice had to be consumed entirely that same evening, nothing being allowed to remain overnight. While eating it, the entire company of those who partook was obliged to remain together, and every participant had to take a piece of the lamb at least as large as an olive. Women and girls also might take part in the banquet and eat of the sacrifice. The following benediction was pronounced before eating the lamb: "Blessed be Thou, the Eternal, our God, the King of the world, who hast sanctified us by Thy commands, and hast ordained that we should eat the Passover." The "Hallel" was recited during the meal, and when the lamb had been eaten the meaning of the custom was explained, and the story of the Exodus was told (see Seder).

The Home Ceremony.

The paschal sacrifice belongs to the "shelamim," thus forming one of the sacrifices in which the meal is the principal part and indicates the community between God and man. It is really a house or family sacrifice, and each household is regarded as constituting a small community in itself, not only because the lamb is eaten at home, but also because every member of the family is obliged to partake of the meal, on pain of excommunication ("karet"), although each man must be circumcised and all must be ritually clean. The fact that the paschal lamb might be killed only at the central sanctuary of Jerusalem, on the other hand, implies that each household was but a member of the larger community; and this is indicated also by the national character of the sacrifice, which kept alive in the memory of the nation the preservation and liberation of the entire people.

E. C. J. Z. L.

PASTERNAK, LEONID OSIPOVICH: Russian painter; born at Odessa, 1862, of well-to-do parents. According to a family tradition, he is descended on his father's side from a family of Spanish refugees at Padua, which removed in the eighteenth century to Galicia, assuming the name Pasternak, and later moved to Odessa. His early years were spent in the busy atmosphere of a South-Russian inn. Pasternak entered the classical gymnasium at Odessa and attended the school of drawing there; in the latter he gave great promise and attracted considerable attention. On graduating from the gymnasium he went to Moscow, where he entered the university and endeavored to gain admittance to the Moscow school of painting. There was no vacancy at the school, but Pasternak had aroused the interest of Professor Sorokin and was admitted to the latter's private studio. From Moscow Pasternak went to Munich, where he studied for three years under the direction of Herterick, Löfftz, and Liezen Mayer. Returning to Moscow, Pasternak completed his studies at the university and received the degree of attorney at law, which entitled him to live in any part of Russia. Soon after, he married the pianist Rosa Kaufmann and settled in Moscow.

Pasternak's first great picture, "A Letter from Home," was exhibited at the Paris Exposition of 1889. It received favorable comment and was purchased by Tretyakov for his private gallery. This painting was followed by "Prayer"; "In the School for the Blind"; "Homeward"; "The Débutante"; "Hour of Creation" (1893); and "Students Before the Examination" (1895). The last-mentioned gained for him a gold medal, and was purchased by the Luxembourg Museum. Among the more recent productions of Pasternak should be mentioned a series of carbon sketches for Tolstoi's novel "Resurrection," which aroused much interest in Paris, London, and Munich, and were widely copied even in America. He produced also "By Lamp-Light" and "Tolstoi in the Family Circle" (the latter was purchased for the Alexander Museum at St. Petersburg), in addition to a number of smaller oil-paintings and many drawings, sketches, studies, and illustrations. Since 1894 Pasternak has filled a professorship at the Moscow school of painting. He is well known not only in Russia, but also in western Europe.

PASTOUREAUX: French religious fanatics of the thirteenth and fourteenth centuries. In the year 1251 an unknown man, called "Le Maître de Hongrie," began to preach the Crusade in the plains of Picardy. In a short time he gained numerous adherents, who, under the name of "Pastoureaux," or "Shepherds," committed many excesses at Paris, Rouen, Orleans, Tours, and Bourges. In the last-named city and its environs the Jews were maltreated, their books destroyed, and their goods stolen.

In the spring of 1320 another band of shepherds and peasants, strengthened by numbers of vagabonds and vagrants, overran Poitou and attacked the Jews. Assembling near Agen, on the banks of the Garonne, the Pastoureaux proceeded to Toulouse, killing all the Jews whom they met on their way. The governor of that city, indignant at these excesses, caused the arrest and imprisonment of some of the leaders; but the monks set them free during the night, making the mob believe that the release was caused by a miracle. All the Jews of Toulouse who had taken refuge in the stronghold of Château-Narbonnais were massacred, with the exception of those who received baptism. The Jews living in the cities on the banks of the Garonne sought an asylum in the Château of Verdun, where, to escape maltreatment at the hands of these madmen, one slew the other, except the last two, who cast themselves from the battlements to the ground. The Pastoureaux thus destroyed 110 Jewish communities in the south of France, among them those of Castel-Sarrasin, Agen, Albi, Gaillac, Condom, Bigorre, and Mont-de-Marsan. In vain did Pope John XXII. utter anathemas against this horde of fanatics; their ravages in the south continued, and ceased only with the death of their chief, who was mortally wounded before Montpellier.

The massacres subsequently spread to Spain. At Tudela and in Navarre all the Jews were put to the sword, while at Lerida, in Catalonia, seventy of them were murdered. Fortunately the King of Aragon soon checked the fury of the Pastoureaux, 2,000 of whom perished, while the remainder were put to flight.

D. S. K.

PASUḲ: Passive participle of the Aramaic word "pesaḳ" (to cut off), meaning a section or division. It is, however, used almost exclusively to denote a Bible verse, as, for example, in Giṭ. 56a: "Tell me thy Bible verse [pasuḳ]." The Aramaic form "pesuḳa" (plural, "pesuḳe") is more usual (see Meg. 22a, Ḳid. 30a, and often elsewhere).

A division into verses was probably employed at an early period, since it is found in the Septuagint, in which, however, the division is not always the same as that in the present Hebrew text. This latter appears to have come from the Masorites. The later Judæo-German usage designates as pasuḳ all books of the Bible, with the exception of the Pentateuch, which is called "Ḥumesh." See Sof Pasuḳ.

PATER SYNAGOGÆ (Greek, *πατὴρ συναγωγῆς*): Title occurring frequently in the inscriptions of the Jewish catacombs at Rome. According to Berliner ("Gesch. der Juden in Rom," i. 69), it is the equivalent of Parnas, while Schürer ("Gesch." 3d ed., iii. 50), whom most authors follow on this point, considers it merely a title of honor bestowed on congregational workers and corresponding to the title "mater synagogæ," which is given to women.

Bibliography: Vogelstein and Rieger, *Gesch. der Juden in Rom*, i. 43.

D. S. O.

PATERNITY: Fatherhood. Doubtful paternity involves not only the right of inheritance, but also, if the father be a kohen, the claim of priesthood with all its privileges and restrictions, including those regarding incest and prohibited marriages. Biblical chronology ignores the mother in the lineal descent of generations. The father was considered the stem of the family tree. The census was conducted "after their families, by the house of their fathers" (Num. i. 2). The father's priesthood descended to his issue only by legal (with ḳedushin) and lawful (not incestuous) marriage.

Paternity can not be claimed for a child begotten out of wedlock when the alleged father disclaims it, even though the mother was his mistress and the child be born after he has married her (Ḳid. 69a; Shulḥan 'Aruk, Eben ha-'Ezer, 26, 4). The mother's own claim, when denied by the man, is not accepted. But a man may establish his paternity of a son born out of wedlock, to entitle the son to the right of inheritance and of priesthood (Asheri, Responsa, Rule 32, § 16). A man may also disclaim the paternity of a child born to his legal wife; but he may not do so after that child has had a child (Shulḥan 'Aruk, Eben ha-'Ezer, 4, 29). The apparent absence of the husband does not prove his impotence, as it is presumed he concealed his access to his wife, unless he himself admits his absence for the necessary length of time or it is otherwise absolutely proved. Acts of adultery by a wife living with her husband do not affect his paternity of her children, as the maxim is "The issue follows the majority of cohabitations by the husband" (Soṭah 27a).

In order to facilitate the establishment of paternity, a divorced woman or a widow must wait at least three months before she marries again. If she remarries within three months of her first husband's death and bears a child seven months thereafter, it makes it doubtful whether the offspring is a nine-month child by the first husband or a seven-month one by the second (Yeb. xi., end). While the ordinary period of gestation is conceded to be nine months, the husband may not disclaim the paternity of a child born to his wife within twelve lunar months, as it is possible that the embryo might "tarry" during the extra time (Yeb. 80b). On the other hand, the period of gestation may end as early as a little over five months, for example, from the last days of Siwan to the first days of Kislew, as the fractional parts of the respective months are figured full months and with the five intervening months make seven months or rather seven moons, constituting the period of ripe pregnancy. R. Judah Mintz of Padua decided favorably in a case where the period of gestation was six months from the date of marriage and the child was fully developed. In this case the virginity of the mother at the time of her marriage was proved by evidence (Responsa, ed. Fürth, 1766, No. 6, pp. 10a-12b).

One that can not claim his father is called "shetuḳi" = "silent," and belongs to those having a low grade of pedigree ("yuḥasin"). Such a one is prohibited from intermarrying with the daughters of priests, Levites, and pure Israelitic families (Ḳid. iv. 1-2). For the reason of these restrictions see Ḳid. 73a. Jewish law does not in any way attach to an adopted child the paternity of the adopter.

PATERSON: Manufacturing city in the state of New Jersey; center of the silk industry in the United States. It has attracted an extensive Jewish population, which possesses three incorporated synagogues: one conservative, chiefly composed of German and German-American Israelites, and organized about 1849, and two Russian Orthodox, of more recent date. In addition there are several temporary congregations for the holy days. The communal societies are: a Talmud Torah school of 400 pupils, two ladies' benevolent societies, a Jewish club (The Progress) of 100 members, a loan society, a literary society of 45 members, and various lodges of the leading Jewish orders.

The community has its representatives in the banks and trade organizations and among the commercial leaders. Paterson elected as mayor for two terms Nathan Barnert, president of the B'nai Jeshurun Synagogue, who has been a generous donor to the Barnert Memorial Temple and who erected a new edifice for the Talmud Torah school in memory of his wife. In 1900 Nathan Fleischer was appointed a park commissioner.

Within the past two decades the Russian element has largely increased in numbers. Many of the Russian Jews are employed in the mills; others engage in various trades and callings.

Several noteworthy incidents of more than local importance have occurred in Paterson of late years. On April 20, 1900, President McKinley, together with Governor Voorhis of New Jersey, Mayor Hinchliffe of Paterson, and some representative citizens, attended the Friday evening services at the Barnert Temple. After the memorable fire of 1902, that synagogue was opened to the Second Presbyterian congregation, whose church had been destroyed and which for two years has utilized the edifice, the ministers of the church and the synagogue frequently exchanging pulpits on national holidays. The entire city participated, without distinction of creed, in the relief movement for the fire-sufferers; and the same spirit of brotherhood was displayed when the city was overwhelmed by flood in 1902 and 1903. In the latter catastrophe fully 400 Russian Jewish families were among the sufferers; and Catholic, Protestant, and Jew cooperated in their behalf, raising about $25,000, without any outside appeal.

The new Talmud Torah building, which was occupied in the autumn of the year 1904, forms a center of educational effort.

At present (1904) the Jews of Paterson number about 1,250 families in a total population of 105,171.

PATHOLOGY. See Medicine.

PATIENCE: The Hebrew Scriptures have many words for "patience," corresponding to the varied meanings of this complex virtue; *e.g.*, "erek af" (long-suffering), the patience exhibited in the restraining of justifiable anger (Prov. xiv. 29, xv. 18, xxv. 15); and "erek ruah" ("patient in spirit"; Eccl. vii. 8). The high estimate placed by the Rabbis upon the repression of wrath is illustrated in Ab. iv. 2, where Ben Zoma makes it the indication of power on the basis of Prov. xvi. 32. Further, in Ab. v. 17, in the fourfold classifications, he who is "hard to provoke and easy to pacify" takes first rank. The Scriptures place the highest mark of their approval on this restraint of anger by including it among the attributes of God (Ex. xxxiv. 6; Num. xiv. 18; Ps. lxxxvi. 15).

But most emphasized in the Bible is the patience born of faith, hence exercised toward God, and inferentially toward man. It is the enduring of suffering and privation uncomplainingly and in silence with the assurance that God's salvation will be ultimately manifest to the faithful. This concept pervades the Psalms and many of the Prophets, the terms varying to convey the shades of differentiation of the thought. By waiting for the Lord (Ps. xxv. 5, 21; xxvii. 14; xxxvii. 9, 34; lii. 9; lxix. 6; cxxx. 5; Prov. xx. 22; Isa. xxxiii. 2, xl. 31, xlix. 23; Hos. xii. 7) or by patiently hoping (Mic. vii. 7; Ps. xxxvii. 7; Job xiv. 14, xxix. 21) is learned the patience of silence ("dam"). "It is good that a man should both hope and quietly wait for the salvation of the Lord" (Lam. iii. 26; comp. Ps. lxii. 1, 5).

As types of patience are presented in the Bible Aaron (Lev. x. 3), Job (Job ii. 10), and the servants of the Lord (Isa. li. 6, liii. 7). The patient man, says Ben Sira, will suffer for a time to see joy in the end (Ecclus. [Sirach] i. 23).

The Talmud (Ber. 20a) illustrates the lesson of patience with the following story: "R. Adda b. Ahabah saw a woman wearing a head-dress unbecoming a Jewess and, mistaking her for a Jewess, tore it from her in his zeal. He was fined 400 denarii; whereupon he quoted the popular adage: 'Matun matun arba‘ me'ah zuze shawe'" ("Patience is worth 400 denarii"; this is a play on the word "matun," which denotes "patience," while "matan," plural of "me'ah," means "two hundred"). Here patience is the same as considerateness. Another Talmudic term for "patience" in the sense of forbearance is "‘ober ‘al middotaw" (to yield when offended). "R. Akiba was forbearing; therefore his prayer was heard" (Ta‘an. 25b).

Even more than in Israel's literature the quality of patience is exhibited in Israel's life. The Wisdom of Solomon (iii. 1, 7) urges the persistence of patience under tribulation and chastening even to the hour of death, with the assurance of blissful immortality beyond. In Ecclus. (Sirach) ii. 1, 15 the further thought is developed that patience is not an expression of faith only, but of fortitude also. In preaching the patience of submission in the Beatitudes, Jesus only reflects rabbinic ethics.

The patience shown by the Israelites in the brief era of their exile is as nothing to its manifestation in the long period of their dispersion. Akiba gives it beautiful expression in smiling at the ruins of Jerusalem, seeing in this fulfilment of the sad predictions assurance of the realization of the joyful.

The patient fidelity of Israel is expressed in the twelfth article of Maimonides' creed: "I believe with a perfect faith in the coming of the Messiah, and though it be delayed, none the less will I patiently hope every day until he does come."

The modern Jew classes patience among the passive virtues that were the ideals of antiquity rather than those of to-day. Many consider that the moment in civilization has arrived when the continued patience of the Jew ceases to be a virtue, and they plead for the bold assertion of the rights of man.

PATRIARCHAL FAMILY AND AUTHORITY. See Family and Family Life.

PATRIARCHS, THE.—Biblical Data: As early as the Biblical period Abraham, Isaac, and Jacob are nearly always invoked together. God remembers the covenant which He has made with the three Patriarchs, and will therefore liberate their descendants from the bonds of Egypt (Ex. ii. 24). God appears to Moses for the first time as the God of the three fathers (Ex. iii. 6); Moses shall free his brethren from oppression in the name of El Shaddai, their God (Ex. iii. 15, 16 [iv. 5, Hebr.]). When Israel sins and is driven out of the country, God will remember His covenant with Abraham, Isaac, and Jacob (Lev. xxvi. 42). Elijah prays to the God of Abraham, Isaac, and Jacob to work through him the miracle that shall turn Israel again to God (I Kings xviii. 36). On account of the Patriarchs God does not allow the Arameans to gain complete victory over Israel in the time of King Jehoash (II Kings xiii. 23). When the Exile is ended, says Jeremiah, then a descendant of the three Patriarchs shall again rule over Israel (xxxiii. 26). King David calls upon the God of Abraham, Isaac, and Jacob (I Chron. xxix. 18). King Hezekiah exhorts the people in the name of the God of the three Patriarchs to celebrate the Passover according to ancient custom (II Chron. xxx. 6). Only rarely are the Patriarchs named separately, as in Micah vii. 20; Isa. xxix. 22, xli. 8, li. 2, lxiii. 16; Ezek. xxxiii. 24; Ps. xlvii. 9.

Wissenschaft*, 1860, x. 1.

E. C. S. O.

——**In Rabbinical Literature:** "Abot," the Hebrew equivalent of the term "Patriarchs," is applied to the heads or fathers of the Jewish nation, namely, Abraham, Isaac, and Jacob. The Talmud distinctly says that the title "Abot" belongs only to the "Three," and the title "Amahot" (= "matriarchs") only to the "Four," namely, Sarah, Rebekah, Rachel, and Leah (Sem. i. 14; Ber. 16b). This definition is made to bar the sons of Jacob from being reckoned as patriarchs (Rashi, *ad loc.*). Accordingly all Jews are born equal and can not claim any distinction of birth.

The origin of divine devotion is traced to the Patriarchs (Ber. 26b). Hence the "'Amidah" prayer begins with the patriarchal benediction "Birkat abot" ("the God of our fathers, Abraham, Isaac, and Jacob"); but it concludes with "Praised be the Lord, the shield of Abraham," as a special reference to God's promise to make for Abraham a "great name" (Gen. xii. 2; Pes. 117b). Abraham was the head of the Patriarchs; and Jews were identified as "the people of the God of Abraham" (Ps. xlvii. 9) because he was the first to recognize the true God (Suk. 49b). Jacob, however, was the most important among the Patriarchs. It required three generations to purge the impurity of the patriarch's ancestry. Thus Abraham begat Ishmael, Isaac begat Esau, but Jacob's seed were all immaculate (Shab. 146a). The development of the knowledge of God among the Patriarchs is shown by the fact that Abraham called God's sanctuary "the mount of the Lord" (Gen. xii. 14), Isaac referred to it as the "field" (*ib.* xxiv. 63), but Jacob named it "the house of God" (*ib.* xxviii. 17). Therefore the Temple of the future will be known as "the house of the God of Jacob" (Isa. ii. 3; Pes. 88a).

Zekut Abot.

As "the children of Abraham, Isaac, and Jacob," the Jews may demand special privileges (B. M. vii. 1) and have a claim to nobility. This patriarchal prestige is known as "zekut abot," relying on which Moses successfully pleaded for Israel when his personal appeal had proved unavailing (Ex. xxxii. 13; Shab. 30a). Zekut abot became a criterion whereby to distinguish the honorable pedigrees of Jews (Ber. 27b), who often traced their ancestry to some celebrated God-fearing and learned man as their "patriarch." But the Rabbis, fearing perhaps the moral consequence of reliance on the merit of the Patriarchs at the risk of neglecting personal merit and worthiness, boldly declared that zekut abot was no longer valid. Rab said that zekut abot ceased at the time of the prophet Hosea, when the latter exclaimed, "None shall deliver her out of my hand!" (Hos. ii. 10). Samuel said it ceased with Hazael, King of Syria, as the words "as yet" (= "'ad 'attah"; II Kings xiii. 23) indicated the end of the covenant with the Patriarchs. R. Joshua was of the opinion that it ended with Elijah, when he prayed to the God of Abraham, Isaac, and Israel, saying, "Let it be known this day that thou art God in Israel" (I Kings xviii. 36). R. Johanan dated its cessation from Hezekiah, quoting: "The zeal of the Lord of hosts will perform this" (Isa. ix. 7; Shab. 55a). Thus the future of Israel would be independent of zekut abot for its salvation, relying solely on the will of God. "Though Abraham be ignorant of us. and Israel acknowledge us not, thou, O Lord, art our father, our redeemer" (Isa. lxiii. 16; Shab. 89b). In Ezekiel's description of the just man who does only what is lawful and right "and hath not eaten upon the mountains" (Ezek. xviii. 6), the latter phrase is interpreted by R. Abba b. Ḥanina to mean "who is independent of zekut abot" (Sanh. 81a). The Talmudists went so far as to express the opinion that there are living counterparts of the Patriarchs, and pointed to R. Ḥiyya and his sons (B. M. 85b). R. Ishmael and R. Akiba were called "the patriarchs of the world" (= "abot ha-'olam"; Yer. Sheḳ. iii. 2). Nevertheless, nearly all the prayers contain more or less references to the patriarchal influence. The devotional prayers for women plead in the name of the Matriarchs, especially the "Teḥinot Amahot." But in many prayers there is a noticeable addition of the words "Our God," preceding the phrase "God of our fathers," to indicate that sole dependence is not upon the Patriarchs.

Buried in the Cave of Machpelah.

The Patriarchs were all born in the month of Tishri, according to R. Eliezer, or in Nisan according to R. Joshua (R. H. 11a). They are buried in the cave of Machpelah. The Mohammedans had built three minarets on this cave above the supposed locations of the respective graves of Abraham, Isaac, and Jacob; but the center minaret, that of Isaac, soon collapsed, and after it had been rebuilt it fell again. Since then, tradition says, the Mohammedans have abandoned the idea of replacing Isaac's minaret, as the Jews claim that Isaac, being the holiest of the Patriarchs, objects to a heathen tower over his grave.

R. Johanan claimed that the "Sefer ha-Yashar" was the record of the Patriarchs; and that when Balaam exclaimed, "Let me die the death of the righteous" (= "yesharim"; Num. xviii. 10), he referred to the Patriarchs ('Ab. Zarah 25a).

The Patriarchs are among the seven with whom God made His covenant: (1) Abraham (Gen. xv. 18), (2) Isaac (*ib.* xvii. 19), (3) Jacob (Lev. xxvi. 42), (4) Moses (Gen. xxxiv. 27), (5) Aaron (Num. xviii. 19), (6) Phinehas (*ib.* xxv. 12), and (7) David (Ps. lxxxix. 3). The Patriarchs are also among seven who, in their sepulchers, were not touched by worms or rot (Derek Ereẓ Zuṭa i. 7). Among others, the Patriarchs were not dominated by the evil spirit or by the angel of death. The Patriarchs were given a taste of paradise by being supplied with all the world's good. Abraham was blessed "in all things" ("ba-kol"; Gen. xxiv. 1); Isaac had eaten "of all" ("mi-kol"; *ib.* xxvii. 33); and Jacob said "I have enough" ("kol"; *ib.* xxxiii. 11; B. B. 17a). These words "kol," "mi-kol," "ba-kol" were inserted as a blessing in the grace after meals.

See Abraham; Isaac; Jacob; Machpelah.

W. B. J. D. E.

PATRICIUS: 1. Leader of the Jews against the Romans in the fourth century. When the Jews in Palestine were severely oppressed by the Roman general Ursicinus (351) they made a desperate attempt at revolt, which soon ended in their destruction. At their head stood a man who is called in Greek sources "Patricius" and in Jewish "Natrona." The latter name has a Messianic meaning and is not individual. The Jews gained possession of the town of Sepphoris (Diocæsarea) and of a few neighboring places; but they were soon subdued by Ursicinus (Pesiḳ. R. iii., end, ed. Friedmann; Socrates, "Historia Ecclesiæ," ii. 33; Sozomen, ii. 33; Aurelius Victor, in the "Life of Constantius"), Sepphoris, Tiberias, Lydda, and many other cities being destroyed by the Romans (Jerome, "Chronicon," 283d Olympiad).

From a passage in the Midrash referring to these events, where it is said that Nehemiah b. Ḥushiel (again a Messianic name) died before the gates of Jerusalem in the war against Constantinople (= Byzantine empire), it may be concluded that Patricius was killed in the battle; but the whole matter has not yet been cleared up.

2. The father of Patricius (אבוה דר' אפטוריקא; B. M. 5a; Ḥul. 64b). **3.** Rabbi Patricius, brother of R. Drusus. He transmitted a statement of Abba b. Abina concerning the composition of the metal called in the Bible "gold of Ophir" (Yer. Yoma 41d; Ex. R. xxxv. 1; Cant. R. iii. 17; Num. R. xii. 4; Bacher, "Ag. Pal. Amor." iii. 527). Still later the name "Patrick" occurs in the responsa of the Geonim (Harkavy, "Studien und Mittheilungen," iv. 263, Berlin, 1885).

Bibliography: Grätz, *Gesch.* 3d ed., iv. 315, 456; Vogelstein and Rieger, *Gesch. der Juden in Rom*, i. 155; Jost (*Gesch. der Israeliten*, iv. 200) contends that "Patricius" is not a proper name.

G. S. Kr.

PATRIMONY. See Inheritance.

PATRIOTISM (Hebrew, קנאת ארץ מולדתו, from אהב ארץ מולדתו = "patriot"): Love for and devotion to one's country. The word is not used in the Hebrew Scriptures; but the virtue of patriotism is extolled alike in ancient, medieval, and modern Jewish lore. References to one's native land are found in Ps. cxxii. 6, cxxiv. 1–2, cxxvi. 1, cxxxvii. 5, and in another connection in Gen. xxxi. 3; Ex. iv. 18–19; I Kings xi. 21–22; Neh. ii. 5.

Particular stress is laid upon love of an adopted country in Jer. xxix. 7 (Hebr.): "Seek the welfare of the city whither I have banished you, and pray in its behalf unto the Lord; for in its welfare shall ye fare well"; also *ib.* xl. 9: "Have no fear to serve the Chaldeans; remain in the land and serve the King of Babylon, and it shall be well with you." Admonition to serve the king and the government is implied in I Sam. xii. 14–15. Respect for the authority of rulers is enjoined in Ex. xxii. 27; Eccl. viii. 2, x. 20; and Prov. xxiv. 21; and rulers themselves are cautioned to act righteously in Prov. xvi. 10, 12, 13, 14; xx. 28; xxix. 14; xxxi. 4; II Chron. xix. 5–7. Cursing God and cursing the king are both made punishable by death (I Kings xxi. 13).

In the Talmud.

In the Diaspora patriotism was enjoined as an essential virtue. R. Samuel laid down the principle "Dina di-malkuta dina" = "The law of the country is the law" (Giṭ. 10b; B. Ḳ. 113a). So R. Jose also states: "The laws of the country, even if wrong, must be obeyed" (Ket. 111a; comp. Yalḳ., Eccl. ii. 7). "He who rebels against his sovereign deserves death" (Sanh. 49a). The rule of kings is likened to that of Heaven (Ber. 58a). "Pray for the welfare of the kingdom; for, were it not for that, men would swallow each other alive" (Ab. iii. 2). The right to impose taxes is conceded (Sanh. 20b); and the payment of taxes is compulsory (B. Ḳ. 113a). Honor to rulers is commended (Zeb. 102a), as rebellion against government is decried (Ber. Rabba, § 94), and all acts for the public welfare are lauded (Lev. R. on vii. 7). Furthermore, a benediction was to be uttered on seeing a king (Ber. 58a). Tanḥuma (Noaḥ) relates a legend representing the Almighty as making the Israelites swear that they would not be disloyal to the governments under which they lived (comp. Ket. 111a; Cant. R. on iii. 5). One is allowed to break the Sabbath to defend one's country (I Macc. ii. 39–41; comp. 'Er. 45a). The whole trend of Talmudic thought on this subject is indicated in such passages as: "Let the interests of the place in which you dwell be your own" (Zeb. 102a);

and, "Pray for the happiness of the king, to the end that anarchy be not established" (Ab. iii. 2).

In Medieval and Modern Times.

Biblical and Talmudic precepts would have done their work well even if the Jew had not been a patriot de facto. Israel's wars, from Joshua's conquest till the sixth century of the present era, engendered the most devoted patriotism, and were responsible for thousands of martyrs—men and women. Scattered abroad, with no country of his own, Israel became a patriot in whatever land he dwelt, giving his life and substance for the good of the state; and this in countries that persecuted him equally with those that granted him rights and liberties. Given civil and military employment in the early centuries in Rome, often selected as ambassador to Europe by the emperors of the East, placed in positions of financial and political trust by the Italian republics, by the kings of Spain and Portugal, and by the popes, serving France and many other countries in all honorable capacities, the Jew has proved that patriotism is ingrained in his nature (G. Ben Levi, "Les Matinées du Samedi," trans. A. Abrahams, p. 171, London, 1846). On the military patriotism of the Jew see Army.

Good citizenship has been emphasized as a part of the Israelite's duty by many Jewish synods and assemblies, notably Napoleon's Sanhedrin (1806) and the synod of Leipsic (1869). The standpoint of Judaism in this regard is succinctly put in Moritz Lazarus' "Ethics of Judaism," p. 304: "Judaism commands the conscientious observance of the laws of the state, respect for and obedience to the government. It therefore forbids rebellion against governmental ordinances and evasion of the law. Judaism commands the promotion of the welfare of one's fellow men, the service of individuals and communities in accordance with one's ability."

S. H. C.

PATTO (PATO), BENJAMIN DIAS: Spanish ḥakam and preacher; killed April, 1664; son of Jacob Dias Pato, and a pupil of Saul Levi Morteira, whose collection of sermons "Gibe'at Sha'ul" Patto and his fellow pupil Moses Jacob Belmonte edited in 1645. Patto was the first teacher at the educational and charitable institution known as "Abi Yetomim," called also the "Academia de los Huerfanos," founded at Amsterdam in 1648. The epitaph written by his colleague Solomon de Oliveyra confirms the statement made by D. L. de Barrios regarding the murder of Patto. Patto was the author of a Spanish poem (printed in "Elogios Que Zelosos Dedicaron," etc., p. 112) on the death of the martyr Bernal.

PATTO, SAMSON GOMEZ: Member of the college of rabbis in Jerusalem in the eighteenth century. In 1705 he approved the work "Peri Ḥadash" of Hezekiah de Silva, which was published in 1706.

S. M. K.

PAUL DE BURGOS or **PAUL DE SANTA MARIA** (Jewish name, **Solomon ha-Levi**): Spanish archbishop; born at Burgos about 1351; died Aug. 29, 1435. His father, Isaac ha-Levi, had come from Aragon or Navarre to Burgos in the middle of the fourteenth century. Solomon ha-Levi was the wealthiest and most prominent Jew of the city, and was thoroughly conversant with the Talmud and rabbinical literature, officiating as rabbi of Burgos, and apparently filling the office of tax-farmer at the same time. His scholarship and intelligence, no less than his piety, won the praise of Isaac b. Sheshet, with whom he carried on a learned correspondence (Isaac b. Sheshet, Responsa, Nos. 183-192). On July 21, 1390, or, according to others, 1391, he was baptized at Burgos, taking the name Paul de Santa Maria. The motives of his conversion seem to have been ambition and vanity, although he himself alleged that he had been convinced by the works of Thomas Aquinas. At the same time his brothers Pedro Suarez and Alvar Garcia, and his children, one daughter and four sons, aged from three to twelve years, were baptized. His wife, Joanna, whom he had married in his twenty-sixth year, remained faithful to Judaism, dying in that faith in 1420; she was afterward buried in the Church of S. Pablo, built by her husband.

His Baptism.

Paul went to Paris to study, receiving the degree of doctor of theology after several years, and then visited London, where he probably remained only a short time, sending a Hebrew satire on Purim to Don Meïr Alguades from that city (Israel Abrahams, "Paul de Burgos in London," in "J. Q. R." xii. 255 *et seq.*; Steinschneider, "Cat. Leyden," No. 64, 7). He was appointed archdeacon of Treviño, and in 1402 became Bishop of Cartagena. His intelligence and scholarship, as well as his gift of oratory, gained for him the confidence of King Henry of Castile, who in 1406 appointed him keeper of the royal seal, in succession to Pero Lopez de Ayala, and designated him in his will tutor of his son D. Juan. Paul subsequently became a member of the regency of Castile and Archbishop of Burgos, being succeeded in the latter dignity during his lifetime by his son Alonso.

His Bitterness Toward Judaism.

Paul, who even after he had been baptized continued to correspond with several Jews, including Joseph Orabuena, chief rabbi of Navarre, and Joshua ibn Vives, became a bitter enemy of Judaism, and tried his best, frequently with success, to convert his former coreligionists. In the same spirit the chief object of the edict which he drafted as chancellor of the kingdom, and which was promulgated in the name of the regent D. Catherine at Valladolid on Jan. 2 (not 12), 1412, was the conversion of the Jews. This law, which consisted of twenty-four articles, was designed to separate the Jews entirely from the Christians, to paralyze their commerce, to humiliate them, and to expose them to contempt, requiring them either to live within the close quarters of their ghetto or to accept baptism. See Spain.

Impelled by his hatred of the Jews and Judaism, Paul in the year preceding his death composed the

"Dialogus Pauli et Sauli Contra Judæos, sive Scrutinium Scripturarum" (Mantua, 1475; Mayence, 1478; Paris, 1507, 1535; Burgos, 1591), which subsequently served as a source for Alfonso de Spina, Geronimo de Santa Fé, and other Spanish writers hostile to the Jews. A few years after his baptism he wrote "Additiones" (which consist of addenda to Nicolas de Lyra's postils on the Bible, and have been frequently printed), and in his old age a "Historia Universal" in Spanish verse.

PAUL DE SANTA MARIA. See Paul de Burgos.

PAUL OF TARSUS. See Saul of Tarsus.

PAULLI, HOLGER (OLIGER): Danish religious fanatic; born in Copenhagen 1644; died there Aug., 1714. Of his early life little is known except that he had studied theology. In 1680 he was a slave-merchant, trading in the West Indies and on the coast of Guinea, in which business he amassed a considerable fortune.

In 1694 Paulli suddenly became religious. He proclaimed himself the new Messiah and king of the Jews, announced that he had been chosen by God to convert His people to the Christian faith, and, leaving his wife and six children, set out to propagate his views. He went to France, and thence to Amsterdam, where he began (1697) to publish numerous religious tracts calculated to "rouse Israel from its spiritual lethargy" and to bring about a union between the Jewish and Christian faiths. He maintained that God had especially appointed him for this task because his grandfather had been a Jew and a descendant of the royal house of David.

Paulli proclaimed that it was his intention to establish a new Jewish kingdom in Palestine, and he addressed letters to several European rulers apprising them of this resolve and assuring them that Jerusalem would be rebuilt in 1720, in which year the Messiah would descend from heaven to officiate as high priest of the Holy City. He advised the King of France to leave his throne, and to join the British sovereign in assisting him (Paulli) to baptize by force those Jews who would not voluntarily embrace Christianity.

Travels in Holland and Germany.

On account of these wild and fanatical doings Paulli was imprisoned at Amsterdam in 1701; but in the following year his relatives secured his release on the condition that they would keep him away from Holland. From 1702 to 1706 he traveled in Germany, making propaganda for his cause and continuing the publication of religious pamphlets. His German audiences were, however, less enthusiastic and appreciative than his Dutch ones had been; and in 1706 he returned to Copenhagen.

Here a number of Jews assembled in his house and encouraged him to continue his efforts toward the establishment of a new kingdom of Israel. Several meetings were held at which Paulli spoke at great length on his holy mission. But the king, Frederick IV., soon put an end to these demonstrations. He ordered the chief of the Copenhagen police to prevent further meetings, and to admonish Paulli to remain quiet: and thus the anger of the Christian populace, which had been roused to such a pitch that an outbreak against the Jews was feared, was soon allayed. Paulli published a few more tracts and pamphlets; but he soon discontinued his missionary work altogether (see also Denmark).

Of Paulli's writings, some of which are extant in the Store Kongelige Bibliothek, Copenhagen, the following may be mentioned: "Triomph, Triomph יהי Triomph in den Afgehouwen Steen Zonder Handen. D. i. האלהים in des Zelfs H. H. H. Drievuldigh Eenigheit tot Bekeeringe van de Joden Ontdekt in de Person hares Messiæ," Amsterdam, 1697–98; "Den seer Groten Dagh Jizreels, Rabbi Mosche bar Maimon en den Apostel St. Paulus, der Joden en Heidenen Leeraers, Vereenight," *ib.* 1698; "Moses Neemt de Decke af, waer door de Joden tot Triomph sien Israels Messias, Jehovah den Godt der Hebreen," *ib.* 1700; "Kurtzer Bericht an Alle Puysancen von Europa, in deren Gebiet Juden Sind, Wo Jetzt von Oliger Paulli Geredet Wird, Betreffend Seinen Beruff zur Vereinigung der Juden und Christen," Hamburg (?), 1704; "Es Ist Jedennoch Wahr, Dass die Fast Todte Braut Christi Sich zum Leben Erregen Wird zur Aufmunterung der Juden um Sie zu Vereinigen in Jesu Messia, David's Sohn," 1704.

Paulli's pamphlets called forth several answers, both friendly and antagonistic. Of these the following may be cited: H. B. Coster, "'T Groote Hosiana, Selfs van Joden Uytgeroepen, om dar Meede te Verwelkommen den Messias, David's Soon," Amsterdam, 1701; Gilbert Leiding, "Gegen-Antwort auf die Vermeinte Kurtze Entblössung des Unglückseeligen Oliger Paulli," Hamburg, 1704; Adler Croon, "Der Göttliche Ruff an die Zerstreuete Juden zur Wiederkehr zu dem Verlassenen Gott, aus der Heil. Schrifft Herrn Oliger Paulli Geoffenbahret," *ib.* (?), 1704.

S. F. C.

PAULUS OF PRAGUE (Elhanan ben Menahem): Convert to Christianity; born apparently at Kholm (Chelm), Poland, about 1540; died at Prague about the end of the sixteenth century. He was first baptized at Nuremberg in 1556, was rebaptized at Chelm in 1568, and is said to have died after he had for the second time forsworn the Christian religion.

Paulus wrote several works in German with Latin titles in defense of Christianity, among them "Solida et Perspicua Demonstratio de SS. Trinitate," Leipsic, 1574. To the second edition (*ib.* 1576) was prefixed a pamphlet entitled "Confessio Fidei et Testimonia Scripturæ Sacræ de Resurrectione Mortuorum." He is, however, particularly known for his "Mysterium Novum" (Helmstädt, 1580), in which he endeavors to prove by means of gemaṭria and noṭariḳon that the names of Jesus and his mother, Mary, occur in the Scriptures and in cabalistic works, and that Jesus is indicated in the Bible as the true Messiah. He prefaced this work with a Hebrew poem consisting of 139 verses arranged in alphabetical order and giving an acrostic of his own name. A Latin translation was published in the same year. Paulus wrote also: "Symbolum Apostolicum" (Wittenberg, 1580) and "Jona Quadrilinguis" (Helmstädt, 1580), the Book of Jonah in four languages, Hebrew, Greek, Latin, and German.

PAUPERS. See CHARITY.

PAVIA (the ancient **Ticinum**): Italian city, situated on the River Ticino; the chief city of the province of Pavia. The first indication of the presence of Jews in this city belongs to the eighth century, when occurred the religious disputation between Julius of Pavia and Pietro of Pisa. The Jews of Pavia, as of other cities of the Milan duchy, were chiefly engaged in banking, commerce, and agriculture. At the close of the fifteenth century there appeared in Pavia the famous Bernardinus of Feltre, whose preaching strongly incensed the populace against the Jews; but Duke Gian Galeazzo Sforza, seeing the effect of his sermons, forbade him to continue preaching (1480). In order to strike indirectly at the Jews, Bernardinus then occasioned the establishment of a "monte di pietà" (pawn-shop) in the city. In a document dated April 2, 1495, Duke Gian Galeazzo promised to sanction this institution as soon as it should be fairly established. Nevertheless, under the rule of the dukes the condition of the Jews was tolerable, and remained so until Pavia came under Spanish domination. Pope Julius III. commanded the burning of all the Talmudic writings, even in those provinces which were not under his dominion; but Don Ferdinand Gonzaga, the governor of the duchy of Milan, yielded to the entreaties of the Jews and refused to obey the pope's order.

In 1559 the preaching of two monks against the Jews in Pavia again aroused the dormant hatred of the populace. Many of the Jews were abused and maltreated, until the heads of their community had recourse to the senate of Milan, which intervened, threatened with heavy penalties all who molested the Jews, and thus restored quiet and order. In 1566 King Philip II. of Spain decreed the banishment of all Jews from the Milanese provinces, but at the urgent petition of the heads of the communities to the governor and the senate this decree was not enforced. Notwithstanding, in September of the same year the king obliged the Jews to wear the yellow cap and forbade them to lend money at interest.

On Aug. 29, 1582, a Jew of Cremona was killed by a Christian, who was put to death for the crime. This sentence so enraged the Christians of Cremona and Pavia that they besought Philip II. to banish all Jews from their territories. The king commanded the governor of Milan to take a census of the Jews immediately, but the expulsion did not take place because the Jews had been useful at a time of famine. In 1592, however, Philip again decreed their banishment. At the entreaty of the Jews the governor allowed them a respite and issued a safe-conduct to Samuel Cohen of Alessandria, who went to plead the cause of his coreligionists with the king; the result was that the king commanded the governor to suspend the execution of the edict. But owing to the further insistence of the people of Cremona and Pavia and the constant urging of his confessor, Philip again ordered the general expulsion of the Jews from the Milanese territory (March, 1596). The governor then gave them permission to remain in Lombardy until the beginning of 1597. The Christians of Cremona and Pavia accordingly wrote again to the king, who commanded the governor to permit no delay.

The governor then gave the Jews two months in which to depart. He obliged the poor to leave first, giving them an escort of soldiers and 5,000 florins in gold for the expenses of the journey. The majority left the province of Milan after Easter, and the remainder after Pentecost. But two Jewish families were left in Cremona, Lodi, and Alessandria; in Pavia not one Jew remained.

The following were among the rabbis of Pavia: Moses da Pavia (11th cent.); Joseph ben Solomon Colon of Mantua (*c.* 1480); Liwa (Judah) Landau and his son Jacob (emigrants from Germany); and Uzziel ben Joseph. See ALESSANDRIA; CREMONA.

PAVIA, JULIUS (LULLUS) DA: Italian scholar of the eighth century; one of the first European Jews known by name. According to Alcuin, he sustained in Pavia about 760 a religious controversy with the grammarian Maestro Pietro da Pisa. In a letter to Charlemagne, Alcuin writes as follows: "On my way to Rome in my youth [Alcuin was forty years old in 781] I remained for some days at Pavia, in which city a religious disputation was being maintained by Julius Guideo and Maestro Pietro da Pisa. It is commonly reported that this discussion is to be written down in a book and is to be preserved. Maestro Pietro is the most erudite of the distinguished grammarians at the imperial palace."

In Jaffe's "Monumenta Alcuiniana," p. 458, the name is written "Lullus" instead of "Julius."

PAVIA-GENTILOMO-FORTIS, EUGENIA: Italian poetess; born at Milan Jan. 4, 1822; died at Asolo, near Treviso, Dec. 30, 1893. She was a pupil of Luigi Carrer, and her house in Venice was for many years the rendezvous of patriots and litterateurs. She was twice married, first to S. Gentilomo, a noted Hebraist, and then to Dr. Fortis. Her works include: "La Regina di Saba" (poem); "Odi" (1842); "Nuove Poesie" (1851), dedicated to Carrer; verses on Hebrew subjects in the "Annuario" of Flaminino Servi for 5634 (Corfu, 1873), in addition to various translations of medieval Hebrew poems and original Italian verses in Jewish and other literary magazines.

PAWNBROKERS. See PLEDGES.

PAZ, DUARTE DE: Portuguese Marano; representative of and attorney for his Portuguese coreligionists; died about 1541. He was a skilful diplomat but a weak character, and undertook a dubious rôle. He filled various military posts, and so distinguished himself by bravery in the African war, in which he lost an eye, that he gained the confidence of King John III., who employed him in state business. He was entrusted with a diplomatic mission, and just before his departure was decorated with the Order of Christ. Instead of going to the post to which he had been accredited, however, Duarte went to Rome, where he displayed extraordinary activity in the interests of the Neo-Christians. His fiery eloquence and the lavish gifts with which he was plentifully supplied, won the support of most of the cardinals. On Oct. 17, 1532, Clement VII. annulled the bull of Dec. 17, 1531, relating to the introduction of the Inquisition, and he abrogated it entirely by the bull of pardon April 7, 1533.

While Duarte was in secret correspondence with John III., whose interests he was ostensibly guarding, he was really acting in behalf of the Neo-Christians, who placed large sums at his disposal. He incurred the displeasure of the king to such an extent, however, that John ordered his ambassador at Rome to deprive Duarte of his decoration. When, at Duarte's instance, Pope Paul III. issued the bull of Oct. 12, 1535, which interdicted any examination of the faith of the Neo-Christians and the confiscation of their property, and in general forbade all inquisitorial proceedings against them, John, finding his plans thwarted by Duarte, tried to have him put out of the way. One evening toward the end of January, 1536, Duarte was attacked by masked men on the street, and was left for dead with fourteen wounds. The armor which he wore under his clothing, however, saved his life. He was carried to the house of Philip Estrozi, and later, by order of the pope, was taken to the convent of S. Angelo, where he was carefully nursed back to health. It was said by well-informed persons that the assassins had been hired by the king; and Duarte himself wished to prove this in court. John naturally denied all knowledge of the attack, saying that a priest with whom Duarte had quarreled had wounded him.

Duarte's rôle as friend of the Neo-Christians was at an end; and he disappeared from the scene. His coreligionists now charged that he had embezzled 4,000 ducats which had been intended for the pope, and had used the money to defray the expenses of his own luxurious life; in revenge Duarte became their bitter enemy. From Venice he denounced them to King John, and addressed to the pope a memorial, in which he slandered them vilely and advised the pontiff to confiscate their property and to use a third of it for ecclesiastical purposes. In his fury he libeled Diego Antonio also, the new representative of the Neo-Christians, and he bitterly attacked even the Curia itself. From Venice Duarte went to Ferrara, where, at the request of the Duke of Ferrara, he was imprisoned. After his liberation he again turned to Judaism. He finally emigrated to Turkey, where he died a Mohammedan. See INQUISITION.

PAZ, ENRIQUE ENRIQUEZ DE. See GOMEZ, ANTONIO ENRIQUEZ.

PE (פ): Seventeenth letter of the Hebrew alphabet. Its name appears to be connected with "peh" = "mouth" (see ALPHABET). "Pe" has a double pronunciation: (1) as a surd mute (which sound is indicated by the dagesh lene) it is identical with the English "p," and (2) as a spirant with the English "f." It sometimes interchanges with the other labials ב, מ, and ו. "Pe" has also two forms: one for the beginning or the middle of a word (פ), and another for the end (ף). It occurs only as a radical, never as a formative element. As a numeral, "pe" (in the later period) has the value 80.

T. I. BR.

PEACE (שלום).—Biblical Data: The primary meaning of the word is "prosperity," "health" (Jer. xxix. 7; Job xv. 21 [A. V. "prosperity"]; Isa. xlviii. 18; Ps. cxxii. 6; Abot iii. 2). It is used in salutations, as when Jacob asked the shepherds concerning Laban (Gen. xxix. 6), or when Joseph inquired of his brethren regarding his father (Gen. xliii. 27, Hebr.; comp. II Kings iv. 26). Later, in Hebrew, as in Aramaic and Arabic, "Peace unto you" became a regular form of salutation.

The term is used also to denote friendship: "Even good friends, in whom I have trusted [lit. "men of my peace"], who have eaten my bread, lift up the heel against me" (Ps. xli. 9; comp. Isa. liv. 10; Jer. xvi. 5, xx. 10).

The second distinct meaning of the term is "peace" as opposed to "war" (Eccl. iii. 8; *et al.*). It signifies also peace of mind and heart as opposed to the unrest and dissatisfaction caused by evil (Isa. xxxii. 17, xlviii. 22). The love of peace is inculcated as a virtue. The covenant of peace is, therefore, most highly esteemed. "Love the truth and peace" (Zech. viii. 19; comp. *ib.* 16; Ps. cxxxiii. 1; Abot i. 12). Peace is one of those blessings which God bestows upon man, for He is the creator of peace: "I make peace, and create evil" (Isa. xlv.

7; comp. *ib.* lvii. 19; Gen. xv. 15; Ps. xxix. 11, cxlvii. 14).

In Messianic Conception.

Among the blessings that Israel looks forward to in Messianic times the blessing of peace stands forth most prominently. Israel has so often felt the strong arm of the conqueror that peace and security seemed most desirable. The Prophets went still further; they longed for universal peace, for that peace which should unite all men and pervade the whole universe. Thus Isaiah pictures the Messianic time as a period in which all men will walk in the path of God; when He will judge between the nations and peoples, and war will be no longer known (ii. 2-4). Micah goes still further: every one shall enjoy peace and prosperity without any interference whatever (iv. 4). In Isaiah (xi. 6-9) the universal peace is to include also all beasts of the field. "Prince of Peace" is a designation for the anointed (Isa. ix. 6, comp. lx. 17, lxvi. 12; Zech. ix. 10). In the Apocrypha the blessing of peace finds repeated expression, especially in Ecclesiasticus (see xxviii. 13, l. 23). In Ecclus. (Sirach) xxv., among the things that are beautiful are enumerated the unity of brethren, and the "woman and her husband that walk together in agreement."

——**In Rabbinical Literature:** Peace is glorified as one of the greatest boons and blessings that man may possess. "For the sake of peace" becomes the guiding principle in the relation between Jew and Gentile. The claim of the non-Jew upon the charity of the Jew is as imperative as is that of the latter's coreligionist (comp. Giṭ. 59b, 61a). "For the sake of peace, truth may be sacrificed" (Yeb. 65b). "No vessel but peace can hold blessing" ('Uḳ. 83b). It is even said, "The whole Torah exists only for the sake of peace" (Giṭ. 59b). "By three things is the world preserved: by truth, judgment, and peace" (Abot i. 18). Hillel said, "Love peace and pursue peace" (Abot i. 12).

Among other sayings relating to peace may be cited the following: "Peacemaking, like charity, profits in both worlds" (Peah i. 1). "The name of God is 'Peace'" ("Pereḳ ha-Shalom"; Shab. 10b). "Great is peace, for the priestly benediction closeth with peace" (Sifre, Num. vi. 26). "Be beforehand in the salutation of peace to all men" (Ber. 17a). "Who makes peace in his own house to him is as much merit as if he had made peace in Israel" (Ab. R. N. xxviii. 43a). "If the Israelites were to practise idolatry, and peace prevailed among them at the same time, God would say, 'I can not exercise authority against them in anger, because peace is among them'" (Gen. R. xxxviii. 6).

E. C. A. G.

PEACE, KISS OF: Sacramental rite in the Christian Church, preceding the mass or communion service. It appears to be referred to in Rom. xvi. 16, I Cor. xvi. 20, II Cor. xiii. 12, and elsewhere, and is referred to by Justin Martyr ("Apologia," i. 65) and by Tertullian ("De Oratione," 18). F. C. Conybeare (in "The Expositor," 1894, ix. 46) suggests that this practise of the early Christian Church was derived from Jewish ritual, referring for evidence to Philo's "Quæst. in Exod." ii. 78, which speaks of a kiss of harmony like that between the elements, while in another passage (*ib.* ii. 118) the Word of God is referred to as bringing hostile things together in concord, communion, and the kiss of love. Jellinek ("B. H." vi. p. li.) finds the kiss of peace given to proselytes in Cant. R. i. 2 and the kiss of peace given by God to the departing soul in B. B. 17a.

E. C. J.

PEACE-OFFERING: There are three kinds of peace-offering: (1) the thank-offering (זבח תודה): (2) the votive-offering (זבח נדר); and (3) the free-will offering (זבח נדבה). The thank-offering is a response to acts of divine beneficence; the votive and the free-will sacrifices are connected with the expectation of benefit; but the significance of the thank-offering is wider than that of the other two. The votive offering is prompted by a feeling of gratefulness at the fulfilment of a petition; while the free-will sacrifice, which has the character of complete voluntariness, has its origin not so much in the gratitude elicited by a happy experience as in the spontaneous motive of piety.

Usually Private Sacrifices.

Peace-offerings were usually private sacrifices, their characteristic feature being the fact that the worshipers entered into a common feast; but they were probably offered on high occasions also. Ezekiel suggests that the kings furnish animals for the assembled people (Ezek. xlv. 17), and regards the common meal as the center of the entire cult; for he speaks of "eating upon the bamoth" (*ib.* xviii. 6, xxii. 9; Deut. xii. 18, xiv. 26). P does not know of this. Other instances of the public peace-sacrifice are the offering of the ram at the installation of the priests (Ex. ix.), and the annual offering of two lambs along with two loaves of new wheat bread at Pentecost (Lev. xxii. 19). These last were originally local offerings; in later times they were presented in the Temple for the whole people. Sometimes guests were invited, and the poor, the stranger, and the Levite, as well as the male and female servants, could join the domestic circle (Deut. xii. 17-18, xvi. 11; comp. Ps. xxii. 27); but only Levitically clean persons could participate in the meal (Lev. vii. 19-21). The meals were in general of a joyful character, wine being freely indulged in. Meat that was unconsumed might not be profaned. That which was left over from the "praise-offering" had to be consumed on the same day (*ib.* verse 15); the residue of the other communal sacrifices had to be disposed of on the second day; and all that then remained had to be disposed of outside the camp on the third day (Lev. vii. 16 *et seq.*, xix. 6).

It is difficult to determine whether Yhwh was regarded as the guest at these sacrificial meals, or the sacrificers were considered guests of God, to whom the sacrifice was being devoted. Inasmuch as community was expressed at these sacrifices by reciprocal giving and accepting, God must have been considered as more than a mere guest. He awards in the meal His divine gifts as a recompense for the honor received from the community in the offering of its best. Dillmann ("Die Bücher Exodus und Leviticus," pp. 483-489, 491, Leipsic, 1897) thinks that the sacrifice mentioned in Lev. vii. 11, 20, 21, 29 was not a sacrifice destined "for the Lord," but a "peace and amity offering" (see also Wellhausen, "Prolegomena zur Geschichte Israels," p. 7, note).

Through the common-meal sacrifice the members of the family or gens (I Sam. xx. 6), as likewise an army at the beginning of a campaign, were brought into communion with God. R. Smend ("Alttestamentliche Religionsgeschichte," p. 124) refers to the fact that among the Arabs the assembly, after the completed slaughter of the sacrifice, stands silently about the altar; it is the moment when the deity approaches the altar to take its part of the sacrifice (see Wellhausen, "Skizzen," part iii., p. 122, Berlin, 1887). Again, God may be supposed to be the host at the sacrificial meal, since the gifts of which the meal has been prepared are His property, and the house in which the assembly is held belongs to Him (I Sam. ix. 22; Jer. xxxv. 2). The participants in the meal are actually invited by God according to Zeph. i. 7 and Ezek. xxxix. 17 *et seq.*

Cleansing of Participants.

The meal being holy, the guests were, of course, required to make themselves holy by cleansing themselves; for impurity excluded them from participation (Lev. vii. 16-18, xix. 5-8; I Sam. xx. 26). The people washed and changed their garments. Sometimes they borrowed festive vestments from the priests, not so much that they might appear well before God, but because something of the sanctity of the sacrifice attached to the garments, and to wear them in daily life would be not only a profanation, but, under certain circumstances, a menace to the life of the wearer. Therefore, in olden times festive garments were identical with vestments for ritual use. Those who could not change their garments at least washed themselves—probably after the meal also. Rings, which had frequently the significance of amulets, were worn in honor of the deity (Gen. xxxv. 4; Hos. ii. 14, 15). It is probable that along with meat there was also bread, both leavened and unleavened (I Sam. x. 3; Amos iv. 5; Judges vi. 19). With meat salt was, of course, used, just as oil was used with meal, and bread and wine with the meal in general. Since the meal was a communion between human participants and also with God, it is obvious that God received cooked meat as did also the sacrificial guests (see Wellhausen, "Prolegomena," p. 68). Gideon, in fact, pours the broth over the stone (Judges vi. 20). The concept that God enjoyed the sacrifice was deeply rooted in the minds of the people, as is shown by the fact that, even after the naïve notions regarding sacrificial rites had disappeared, the sacrifice was still designated as "bread of God" and "bread of the fire-offering unto God" (Lev. iii. 11, xxi. 22). What difference there was between "zebaḥ" and "shelem" is not clear. In Josh. xxii. 29 shelamim are differentiated from the zebaḥim. In Ex. xxiv. 5 and I Sam. ii. 15 the two kinds of sacrifice are treated alike. Their use evidently varies. Wellhausen (*l.c.* p. 70, note 2) surmises that the shelamim were more solemn sacrifices than the zebaḥim. It may be that the share God had in them was also different.

Various Sacrifices.

Orelli holds ("Opfer," in Herzog-Hauck, "Real-Encyc." 1904, xiv. 392) that the shelamim are a covenant of friendship (Gen. xxxiv. 21), and express community between God and His own and of God's own among themselves. Hamburger ("R. B. T." 1884, p. 802, *s.v.* "Opfer") considers that the peace-offering signifies kindness, as of a friend or confidant (Ps. vii. 5; comp. Prov. vii. 14). Guthe ("Kurzes Bibelwörterbuch," p. 486, Tübingen, 1903) says that according to P, which classifies the sacrifices, the shelamim are a form of compensation to Yhwh for the favors of the harvest. As early as Ezekiel, however, the peace-offering had acquired the character of atonement (Ezek. xlv. *et seq.*), although P does not mention it (Benzinger, "Arch." 1894, pp. 445-446).

Karl C. W. F. Bähr (in "Symbolik des Mosaischen Cultus," ii. 368-386, Heidelberg, 1839) derives "shelem" from שלם = "to pay to God the praises due to Him" (comp. Ps. lvi. 13, lxi. 9, lxv. 2, lxvi. 13; Job xxii. 27; Prov. vii. 14; Nah. ii. 1). This sacrifice, therefore, would imply payment of what either has been vowed or is due to God (Ps. l. 14, 23; cxvi. 14, 17; Jonah ii. 10; Hos. xiv. 3). Bähr also considered "tamim" a form analogous to "shelamim" (pp. 135, 370; comp. Job xxi. 23). The relation between man and God is made complete; the disparity is removed: this is "shalom" = "peace." Every grace of God makes man a debtor. The offering of the first-fruits is counted among shelamim, as is also the offering of the vow, which was made not at its assumption, but at its fulfilment (Num. vi.; see also Dillmann, "Die Bücher Exodus und Leviticus," p. 491).

Different Views on the Sacrifice.

Kurtz ("Das Mosaische Opfer," pp. 129-154, Mitau, 1842; *idem*, "Der Alttestamentliche Opfercultus," *ib.* 1862) maintains that שלם means "to be perfect," "to make perfect." The sacrifice, therefore, has for its purpose a "restitutio integra," a rehabilitation of the person. Besides, divine benefits cause one to feel that the grace received is undeserved. God shows by His gracious deeds that He maintains His part of the covenant. The thank-offering is to restore the right relation under the consciousness that man on his part has been derelict. The free-will offering and the vow-offering are always mentioned together: their rituals, too, are identical in essential points as differing from the thank-offering. "Peace-offering" is a term covering the different kinds of sacrifices, but it is a thank-offering.

Kalisch ("A Historical and Critical Commentary on the Old Testament, Book of Leviticus," part i., pp. 241-249, London, 1867) says that the shelamim were "safety-offerings." They were connected with what was deemed essential to happiness and a secure existence. The rendering "peace-offering" is vague, and is admissible only on condition that peace is understood to be equivalent to safety, and also that the frame of mind in which the sacrifice is offered is considered. The explanation as "praise-offering," he says, is not plausible, viz., that God, the priest, and the offerer, on receiving a portion of it, conclude a mutual alliance. The social element connected with the shelamim intimates that it is of later origin than the rest; for it presupposes a degree of legal and political organization considerably in advance of primitive times. Fatness seems to be the leading characteristic of the offering; and fatness is typical of abundance and prosperity. During long periods, also, peace-offerings were employed for the ratification of solemn covenants, treaties, and alliances; and the common meal which followed on such occasions, according to Eastern notions and customs, was peculiarly appropriate.

Victims and Ritual.

The victims of the sacrifice were oxen, sheep, and goats, but not pigeons (Lev. vii. 12; ix. 4, 18; Num. vii. 17). The principle that the animal must be unblemished was not rigidly insisted upon; and the female animal was allowed equally with the more valuable male (Lev. iii. 6, xxii. 23). The "'olah," the "ḥaṭṭat," and the "'asham" (sin-offering) had to be killed on the north side of the altar, but the shelamim might be slain in any part of the court. The reason evidently lay in the fact that these were brought at certain seasons in such large numbers that the space on the north side of the altar was not large enough.

The ritual comprised the imposition of hands, the killing of the victim, and the sprinkling of the blood upon the altar. Of the sacrifices, the fat pieces were dedicated to God (Lev. iii. 3); to the priests were given the breast and the right shoulder (*ib.* vii. 30, 32; I Sam. ix. 24); to the worshiper, the remainder. The parts assigned to the priest constituted the wave-offering ("terumah"; Ex. xxix. 24, 26), and were waved backward and forward in a line with the altar. According to Orelli, this movement was a symbolical expression of the reciprocity of the giving and receiving on the part of God and the sacrificer (Herzog-Hauck, "Real-Enyc." 1904, xiv. 392). They were waved toward the four sides of the world (see Rashi on Ex. ii. 9; Baḥya on Lev. viii.; and Levi ben Gershon on Lev. iii.). The wave-offering symbolized that the person dedicated himself to God, who dwells as much above as among His people (Hoff, "Die Mosaischen Opfer," p. 23, Frankfort-on-the-Main, 1857). Kurtz suggests that the offering was waved vertically as well as toward the four quarters of the world.

A Distinctly Sacrificial Meal.

Onḳelos calls the "tenufah," or heave-offering, אפרשותא, *i.e.*, "separation," "that which is separated for God," the parts being lifted up as if presented to God. The heave-offering consisted of the right shoulder of the animal, and belonged to the officiating priest (Lev. vii. 34). This, together with the breast, might be eaten by the priest and his family in any clean place (Lev. x. 14). While the other sacrifices are devoted entirely to God, or to God and His ministers, the peace-offering is distinctly a sacrificial meal. In respect to ritual, the peace-offering has certain acts in common with the rest, viz., the imposition of hands, the sprinkling of blood on the altar, and the burning of the fat portions; but the person offering it is considered to be in good standing, and not laden with sin as in the case of the other kinds of offering.

For the atoning effect of the peace-offering see Bähr, *l.c.* ii. 379; for Philo's spiritual explanation of the eucharist or thank-offering see J. Drummond, "Philo Judæus," ii. 319, London, 1888; and for a rationalized account of the sacrifice see Maimonides, "Moreh," iii. 26, 32, 46; *idem*, "Yad," Ma'ase ha-Ḳorbanot, i. 11.

PEACH (פרסק; *Prunus Persica*): This fruit and the plum (דרמסקינא; *Prunus domestica*) are mentioned only in late times: the former in the Mishnah (Kil. i. 4; Ma'as. i. 2); the latter not until the Gemara (Löw, "Aramäische Pflanzennamen," No. 105).

E. G. H. I. Be.

PEACOCK: Traditional rendering of "tukkiyyim," mentioned among the creatures brought by Solomon's ships from Tarshish (I Kings x. 22). The peacock is an Indian bird (comp. the Malabar "togai" and the Tamil "tokei" for the "tail" of the peacock; A. V. renders "renanim," Job xxxix. 13, by "peacock"; but see Ostrich). The Talmud uses the term טווס (comp. the Greek ταώς), and forbids the crossing of the peacock with the hen (B. Ḳ 55a). From Shab. 130a and parallels, it would appear that, contrary to present conceptions, the peacock was in Talmudic times considered a clean bird.

PE'AH ("Corner," or "Corner of the Field"): Name of a treatise of the Mishnah, the Tosefta, and the Palestinian Talmud, defining the laws set forth in Lev. xix. 9, 10, xxiii. 22, and Deut. xxiv. 19–22 which relate to the portion of the harvest to be given to the poor, and deal with the rights of the poor in general. In the Mishnah this treatise stands second in the order Zera'im, and is divided into eight chapters containing sixty-nine paragraphs in all.

Contents.

Ch. i.: Enumeration of things which, like the pe'ah, are not strictly defined in the written law. In this connection a list is given of the good deeds for which one is rewarded in this life, though this recompense is only an earnest of the real requital in the future world; *e.g.*, making peace among men is one of such good deeds (§ 1); the amount of the pe'ah determined by the Rabbis (§ 2); the places where the pe'ah may be given (§ 3); field produce of which the pe'ah must be given (§§ 4–5); limit of time within which the pe'ah may be given (§ 6).

Ch. ii.: Means of separating fields or orchards from one another, so that they may not be considered as one field or one orchard in reference to the pe'ah (§§ 1–3); exceptions and special regulations, such as those concerning St.-John's-bread-trees, two thrashing-floors, and two kinds of grain (§§ 4-6); cases in which the grain in the field has been cut by thieves, or uprooted and destroyed by the wind (§§ 7-8).

Ch. iii.: Special cases; fields of small area, partial harvesting at different times, common holdings (§§ 1-5); the size of a field which renders it liable both to pe'ah and, in many other respects, to the laws governing real estate (§ 6); how the validity of numerous regulations is dependent on the circumstance that a portion of a field has been retained (§§ 7-8).

Ch. iv.: Manner and time of day of giving the pe'ah (§§ 1-5); case of a non-Jew who adopts Judaism after his field is harvested (§ 6); cases in which the harvest is dedicated to the sanctuary and then redeemed (§§ 7-8); whether the pe'ah may be claimed for an individual (§ 9); concerning the gleaning ("leḳeṭ"; § 10); regarding grain in ant-hills (§ 11).

Ch. v.: Further details concerning the gleaning (§§ 1-3); whether a wealthy traveler who is forced to take pe'ah, etc., is obliged to return it when he reaches home (§ 4); the owner of a field may not prefer one poor person to another, nor help any one in gleaning, since this would be to the detriment of the rest (§ 6); things which are forgotten ("shikḥah"; §§ 7-8).

Ch. vi.: Further regulations concerning things forgotten; things which come under this category, and cases in which they do so.

Ch. vii.: Rights of the poor in regard to fruit-trees and vineyards.

Ch. viii.: Time after which gleaning is permitted to all, even to those who are not poor (§ 1); credentials of the poor regarding their rights (§§ 2-4); the tithes for the poor and their minimum amount (§§ 5-6); the minimum which must be given to a poor traveler (§ 7); those who may claim the privileges of the poor-laws (§ 8); whoever accepts aid without needing it will become so reduced in circumstances that in time he will be obliged to accept relief; and in like manner he who, for the purpose of receiving aid, shams some physical defect or ailment will be afflicted in time with such defect or ailment; but he who tries to subsist without aid, even though he needs it, will in time become so prosperous that he will be able to aid others (§ 9).

The Tosefta to this treatise, which is divided into only four chapters, contains many details which supplement and explain the mishnaic treatise, and it also includes several stories and a number of ethical sentences, some of which may be quoted here.

Tosefta and Gemara.

A good intention, even if it has not been carried out, is credited to a person as though it had resulted in a good deed, while an evil intention is not charged to him so long as it is not carried out (i. 4). Lev. iv. 2 furnishes a basis for the remark that if he who sins unwittingly is considered a sinner, how much more evil is he who commits sin intentionally (iii. 8). Beneficence and kindness are worth as much as the fulfilment of all the other commandments of the Torah put together; but he who does not give to the poor is no better than an idolater (iv. 19-20).

The Gemara of the Palestinian Talmud discusses and explains the several sentences of the Mishnah, and contains in addition a number of stories, sentences, and haggadic interpretations, of which the following may serve as examples: Hos. viii. 12 is interpreted to mean: "Though I had written for him the greater part of the Law, he would still be counted as a stranger." Israel is preferred above the other peoples since it has the ORAL LAW, which they may not easily obtain (ii. 4). Although all the people were very pious at the time of David, yet they suffered defeat in war because there was treason among them; but in the time of Ahab, although all the people were idolaters, they were victorious in their battles because there was unity among them and there were no traitors in the midst of them (i. 1).

W. B. J. Z. L.

PEAR (אגם; *Pirus communis*): The pear is mentioned in the Talmud (see Löw, "Aramäische Pflanzennamen," p. 152). It does not seem to have been extensively cultivated. The Septuagint erroneously rendered *ἀπίων* (= "pear") for "baka"-trees (I Chron. xiv. 14).

E. G. H. I. BE.

PEARL.—Biblical Data: Since ancient times the precious product of the pearl-oyster (*Mytilus margaritifer* Linn.) has been known and has been an article of commerce (comp. Pliny, ix. 35, 54 *et seq.*; Ælian, x. 13, xv. 18). The ancients, however, knew only of pearls from the Indian Ocean, the Persian Gulf, and the Red Sea. In the last-named waters is found a kind of oyster, red on the outside, a lustrous red mother-of-pearl on the inside, and producing red pearls. It is possible that Semitic peoples valued the red pearls very highly, since the Arabic form—"marjan"—of the Sanskrit word for pearl, "mangara" (from which latter the Greek *μαργαρίτης* is derived), designates both little pearls and red coral.

The Israelites, also, were probably acquainted with pearls; but it is doubtful if pearls are mentioned in the Bible. Usually, one of the two words "peninim" and "ra'mot" is taken to mean pearls. Both are objects of great costliness (comp. Job xxviii. 18). In Lam. iv. 7 "peninim" is supposed by some authorities to indicate objects whose color is red—probably red pearls. Others, however, take these two words to mean corals. A decisive conclusion is not possible. In any case the "netifot" mentioned in Judges viii. 26 and Isa. iii. 19 have nothing to do with pearls; and still less has the word used in Esth. i. 6, which is so translated in some versions because the corresponding Arabic is a word denoting pearls.

E. G. H. W. N.

——**In Rabbinical Literature:** Among the different Aramaic terms for pearl, מרגניתא alone seems to be restricted to the pearl, while מרגלא, מרגלית, and the Hebrew מרגליות are sometimes used to designate precious stones in general. Thus פטדה (Ex. xxviii. 17) is rendered מרגלא by the Jerusalem Targum; and צהר (Gen. vi. 16), which denotes something to illuminate Noah's ark, is explained in Gen. R. xxxi. 11 as being a מרגלית, by which term a brilliant gem is to be understood. The Rabbis had the notion that pearls are found in the interior of fish; hence the story of the tailor who observed the Sabbath and was rewarded by finding a pearl in a fish which he had bought (*ib.* xi. 5). The Persians were considered to be the best pearl-fishers (R. H. 23a).

The pearl was regarded as very costly; *e.g.*, "a pearl that is worth thousands of zuzim" (B. B. 146a); "a pearl that has no price" (Yer. Ber. ix. 12d). Its beauty is proverbial. The coats which God had made for Adam and Eve were as beautiful as pearls (Gen. R. xx. 12); the manna was as white as a pearl (Yoma 75a). The pearl is one of the things the purchase of which is not subject to the laws of Ona'ah, for the reason that the buyer of a pearl looks for a second one to match it (B. M. iv. 8; *ib.* Gemara, 58b). One reference, however, 'Ab. Zarah 8b, declares the pearl to be inferior to a precious stone, unless מרגלית denotes in that passage a diamond of inferior quality (see above). Pearls are designated also as drops: oil remained on Aaron's beard like two pearl-drops (Hor. 12a; comp. Ear-ring).

The pearl and its shell are used parabolically; *e.g.*, "If I had not taken off the shell [lit. "the potsherd"], thou wouldest not have found the pearl" (Yeb. 72b). The term "pearl" is used metaphorically to denote any valuable thing; *e.g.*, a good slave (Ḳid. 18a), or a halakah, or any reasonable interpretation (Ḥag. 3a and elsewhere). Sometimes it designates a prayer: "Rab and Samuel instituted a pearl in Babylon" (Ber. 32b), referring to the prayer beginning "Wa-todi'enu." The soul is in several passages termed "margalit" (Yer. Kil. ix. 32c; Yer. 'Ab. Zarah ii. 41a), which word may denote "pearl" as well as "precious stone." As a betrothal ring should be devoid of gems, there is a discussion concerning one containing a pearl, the opinion of most of the rabbis being that the betrothal in the case of which such a ring is used is binding (see Shulḥan 'Aruk, Eben ha-'Ezer, 31, 2).

PECHERSKI, FEODOSI: Russian saint of the eleventh century (1057–74). According to the so-called Nestorian chronicles, while superior of the Kiev monastery he was in the habit of visiting at night some learned Jews, with whom he indulged in argument, and whom he upbraided for their faith. As the biographer expresses it, Feodosi longed to attain martyrdom by being killed by the Jews in these heated disputes. Feodosi's acquaintance with the Jews and with their religious teaching is also proved by his letters to the grand duke Izyaslav. Thus, to the duke's query whether it was permissible to kill an ox, a sheep, or poultry on Sunday, and to eat the meat, Feodosi replied: "The Jews, when God led them from Egypt, were commanded to observe the Sabbath by abstaining from work, by building no fire, and cooking their food on Friday; and the Judeans observe the command to this day. But since Jesus came down to the earth everything of Judean origin has been disregarded. We are not Abraham's children, we are of the children of Jesus." It should be remembered, however, says Harkavy, that notwithstanding his heated arguments with the Jews on matters of religion, Feodosi preached that they should not be denied Christian charity. The importance of the letter quoted above lies in the fact that it contains further proof of the existence of a considerable Jewish community in Kiev at the time of its author.

PECS (FÜNFKIRCHEN): Royal free city in the county of Baranya, Hungary. The few Jewish families which had settled there toward the end of the eighteenth century, not having the means to build a synagogue, held services in a rented room. By about 1835 there were about twenty families in the city; and these formed a congregation and acquired a house of worship in a remote part of the city. In 1865, when the congregation had increased to 200 families, the foundation of a large synagogue was laid; and the building was dedicated July 22, 1869.

Perfect harmony has always reigned in this Reform congregation, which introduced at an early period the use of an organ and sermons in Hungarian. The rabbinate has been successively held by S. Hirschfeld, Edward Ehrlich, Alexander Kohut, and Armin Perls. Of the members of the congregation the best known are: Adolf Schulhof, physician; Ignatz Grünhut, lawyer; and Joachim von Schapringer, banker.

The Jewish community of Pecs has also been assiduous in its care for the educational welfare of its youth. As early as 1840 a congregational school was founded by Fr. Mannheimer, which has continued to flourish. Among the names of pedagogues that have been active at Pecs are found those of Rosenfeld, Hoffmann, Gutmann, Götzel, Porges, Kohn, Seligmann, Goldschmied, and Kulke.

The Jews of Pecs number about 2,000 in a total population of 50,000.

PECULIAR PEOPLE. See Chosen People.

PEDAGOGICS: The science of education. The fundamental law of Biblical pedagogy is that the child should be instructed in the doctrines of religion and should know them so clearly that he will realize that he ought to live in accordance with them (Deut. iv. 9, vi. 7, xxxi. 12–13). Kennedy says (in Hastings, "Dict. Bible," *s.v.* "Education") that the pedagogical principles of Israel are without parallel in ancient literature. Every home was a school, and every parent a teacher. Only the aristocracy employed instructors, and these because, as is the case with all enervated aristocracies, it had become lax in its sense of responsibility (II Kings x. 1–5). Nevertheless, the prophet Nathan seems to have acted as the tutor of Solomon (II Sam. xii. 25).

The ability to read and write was general with the ancient Hebrews. The husband issued the bill of

In Bible Times.

divorce. Witnesses signed documents and contracts, and spies submitted their report in the form of a plan (Josh. xviii. 9). A boy wrote out the names of the princes and elders of Succoth (Judges viii. 14). Certain ritual objects called for the employment of the art of writing, *e.g.*, the tefillin and the mezuzah. Writing-implements are frequently mentioned (Judges v. 14; Isa. viii. 1; Jer. vii. 8, xvii. 1; Job xix. 24), and calligraphy was cultivated by several gilds (I Chron. ii. 55). Seven state secretaries are mentioned in the period of the Kings.

A second principle of Jewish education, equally appreciated and applied, insisted on the recognition of the nature of the child. "Train up a child in the way he should go: and when he is old, he will not depart from it" (Prov. xxii. 6). The considerateness with which the Bible regards childhood has its ground not so much in pity for its helplessness as in an appreciation of its possibilities. The Bible does not make a thoroughgoing distinction between methods of education and means of discipline. "Correct thy son," says the Book of Proverbs, "and he shall give thee rest: yea, he shall give delight unto thy soul" (*ib.* xxix. 17). "He that spareth his rod hateth his son: but he that loveth him chasteneth him betimes" (*ib.* xiii. 24). "Withhold not correction from the child: for if thou beatest him with the rod, he shall not die. Thou shalt beat him with the rod, and shalt deliver his soul from hell" (*ib.* xxiii. 13–14). Good training, and by that is meant discipline as well, furthers the happiness of children (*ib.* x. 1, xvii. 25, xix. 26, xxiii. 24). It brings tranquillity to parents, and attends the child through life (*ib.* xix. 8; xxii. 18).

In view of the educational wisdom preserved in it, the Book of Proverbs constitutes the oldest text-book on pedagogy in existence. All life, according to it, is disciplinary, and so is education. Though the rod of correction is necessary (*ib.* xii. 24; xxix. 15), still a rebuke is better than a hundred stripes (*ib.* xvii. 10). The words of teachers, which are as goads (Eccl. xii. 11), are spoken "in quiet" (*ib.* x. 17). The soferim who thus speak are perhaps the first gild of teachers of which there is any record. They were the "melammedim," "morim" (*ib.*), and "ḥakamim" (Prov. xxii. 17).

The reorganization by Ezra was as epoch-making in educational as it was in civil interests. "Ezra had prepared his heart to seek the law of the Lord, and to do it, and to teach in Israel statutes and judgments" (Ezra vii. 10). The Torah, he ordained, should be read and studied. Though Ezra can hardly be called the founder of the synagogue system under which the community grouped about the local house of worship, it is still true that he laid the foundation of it by making the synagogue central for instruction. Philo calls the synagogue "the place of instruction" ("De Vita Mosis," iii. 27). Greek culture, which became potent in Palestine, affected Jewish educational methods to an appreciable degree. Even Jerusalem is said to have had schools and gymnasia modeled on the Greek type. At any rate it may be accepted that the level of culture at this period was high.

Simon ben Shetaḥ.

The founder of the system of elementary education was Simon ben Shetaḥ (Yer. Ket. viii. 11, 32b). The school was not in immediate connection with the synagogue; but sessions were held either in a room of the synagogue or in the house of the teacher. The teachers ranked in the following order, namely, sage, scribe, ḥazzan (Soṭah ix. 15). Between 63 and 65 C.E. JOSHUA BEN GAMLA reformed the system by constraining every community, no matter how small, to provide instruction for its children (B. B. 21a). In accordance with Oriental custom, the pupils sat on the ground in a semicircle about the teacher, who sat on a raised platform (Meg. 21a). The compensation of the teacher was not stipulated, but consisted of a restitution for loss of time. In fact, some teachers combined working at a trade with the teaching of the Law. "Do not use learning as a crown to shine by, nor as a spade to dig with!" said Rabbi Zadok (Ab. iv. 7). Girls, equally with boys, were taught to fear God and keep His commandments (Susanna 3).

After the destruction of Jerusalem the center of Jewish culture was transferred to Jabneh (70). Here, with the consent of the Romans, Rabbi Johanan b. Zakkai established an academy. His example was imitated at Cæsarea and elsewhere. Thus the Law was rescued, though the Temple could not be saved. Pupils crowded these educational rallying-points. Instruction was altogether oral. A verse of the Bible was learned every day, and the text was then explained with reference to daily living.

The greatest event, since the days of Ezra, in the history of Jewish education has been the compilation of the Mishnah by Rabbi Judah ha-Nasi (198). It not only saved the laws from oblivion, but it also furnished a text-book for teaching them. Judah II. declared that the Temple had been destroyed because the instruction of the young had been inadequate; and he dealt severely with such communities as supported no teachers. Soon the beneficent effects were visible. A vigorous intellectual activity resulted in the existing schools, and the academies of Sura and Pumbedita became notable. There was also a kind of university extension, called the KALLAH, when students assembled twice a year, in the fall and in the spring. Lectures were delivered daily at the academies, and once a week to the people at large, and also on the holidays. At Pumbedita during one session there were as many as 1,200 students; at the time of Rabbah bar Naḥmani, about 500.

The following are some of the Talmudic maxims with regard to the character of teachers:

Talmudic Maxims.

They must be of reputable character. "Only to the pure may the pure be entrusted." "An intemperate person may not teach." "Before thou correctest others, clear thyself of thine own faults." "The Ark was overlaid with gold within and without; so ought the teacher be morally clean both inwardly and outwardly." "The rash man is subject to vicious passion." "The teacher must be humble." "Rabbah came to a town where there was lack of rain. He ordered a fast, but without result. A precentor took his stand at the prayer-desk, and as he pronounced the words of the prayer, 'He lets the wind blow,' a wind actually arose. Further, when he spoke the closing words of the prayer, 'He sendeth rain,' rain forthwith descended. Rabbah turned to the man and asked, 'What art thou?' The man replied, 'I am a teacher of children; and I instruct both rich and poor, taking compensation from neither.

> I treat my pupils with consideration, and train them to be industrious and virtuous.'" "The teacher should be fluent in speech and decisive in tone."
>
> In anticipation of modern methods, Rabbi Dimi says: "He who learns from one teacher alone does not gather much blessing"; and Rabbah says: "It is better to have several teachers, so as to go deeper into the meaning of the Law. The elements of a science, however, should be learned from one teacher only, to avoid confusion. Neither a youth nor an unmarried person could be a teacher." "The respect due to teachers is greater than that due to parents." "Hospitality toward a teacher is like giving to God." "The heathen who teacheth thee wisdom thou shalt call teacher." "A pupil may not sit in the presence of the teacher until the latter has given permission; nor may the pupil rise without such permission." "The pupil should be toward his teacher as a servant toward his master." "Whosoever prevents his pupil from serving him denies the pupil the opportunity of showing affection and gratitude."
>
> Teachers were cautioned against familiarity with the common people. "At first a teacher is, in the eyes of the vulgar, a vessel of gold; after he has conversed with them, they esteem him as a vessel of silver; and if he accepts a gift from them, he is merely a vessel of clay, which, once broken, can not be put together again."

The teacher enjoyed immunity from taxes (Ket. 62a). He was free to establish himself wherever he pleased, without objection from another teacher already settled there. "The more teachers the more teaching zeal" (B. B. 21b). He could withdraw from his place, but had to furnish a substitute. A woman could not become a teacher. A family teacher, however, is mentioned in Ḥag. 4b.

Details of School Life.

School life began at the age of five (Ab. v. 24) or six. Rab advised Samuel ben Silat, who was a teacher of much experience, not to admit a child before his sixth year (Ket. 50b). "Whoso learns in youth is like writing on new paper. Whoso learns in old age is like writing on blotted paper." Rabbi Gamaliel said, "No pupil may be admitted to the lecture-hall if his character is not in keeping with his allegations." He did not demand testimonials as to adequate preparation, but as to character and morality. The student must be sincere (Yoma 67a; Giṭ. 67; comp. Ab. v. 18). For every twenty-five pupils there was one teacher; for twenty-five to forty, a teacher and an assistant; for fifty, two teachers. The assistant reviewed the lesson with the pupils, as a sort of tutor ("resh dukna"). The pupils were arranged in rows. Sessions were held during the day and part of the evening. On Fridays the work done during the week was reviewed. Nothing new was presented on Sabbaths. Promptness in opening and closing the sessions was recommended. Vacations occurred on days preceding the Sabbaths, feasts, and holy days, and on fast-days; on the last in order that, in keeping with the fast, the teacher might deprive himself of the pleasure he had in teaching. There was also a cessation of instruction on the three days preceding Pentecost, on the half-days of Ḥanukkah, on New Moon, and on the Fifteenth of Ab and of Shebaṭ. The courses were as follows: at five (or at six) Bible; at ten Mishnah; at fifteen Talmud (Ab. v. 24; see, however, Taylor's "Sayings of the Fathers," p. 43). The main aim was to attain morality: "Good is the teaching of the Torah when it is attended by morality." Talmudic subjects were the warp on which were woven all other subjects, as, for instance, arithmetic, astronomy, anatomy, and history. Samuel Arika could boast, "I know the paths of the stars, as I know the streets of Nehardea" (Ber. 58b). "The knowledge of the Law is a medicament for the soul" (Men. 99a). Even the teaching of the alphabet proceeded on lines of moralization, thus: "Alef, bet, learning follows wisdom"; "gimel, dalet, be kind to the poor" ("alef" means "learning"; "bet" is akin to "bin" = "discernment"; so also "gimel" = "recompense," and "dalet" = "poor"; etc.). Josephus and Philo declare that in their time every Jewish child could read. Reading is a primary condition of mental soundness (Shab. 103a). Text-books must be without error (Pes. 112a). Pupils were provided with large and small tablets.

Since parents took a personal interest in the education of their children, discipline was rendered easy. "Rabbi Eleazar was sick. His pupils came to visit him. They said to him, 'Master, show us the path of life, by which we may attain to everlasting life.' He replied, 'Do not offend your fellow pupils. See Him to whom you address yourselves in prayer. Let no child think frivolously. Let him grow in the lap of the wise. If you do this, you will see felicity.'" Rab was in the habit of beginning his instruction with a pleasant story. The teacher should study the temperament of the children ('Er. 54b). Only in case of persistent inattention might the teacher inflict punishment by means of an "'arḳeta di-mesana," a strap of reeds.

Discipline.

Discipline is most effective in the age of puberty. Therefore forbearance is recommended with pupils until the age of twelve, but strictness after that, because youths from that age onward begin to show mental capacity and acumen (Ket. 50a). A boy was regarded as incorrigible if he failed to attend a school in three (some say five) years. Absence for three days was considered reprehensible. Rewards consisted in presents which were given by the teacher. Rabbi Judah ha-Nasi distributed honey (Ta'an. 24a). There were also certain marks of distinction for merit. In the award of merit the teacher should be impartial (Shab. 10). Before a wise child people should rise (Ber. 48a). The teacher should maintain control of his pupils by adhering to the most scrupulous bearing in their presence. So also the pupils must observe the rules of propriety toward him. They must not address him by name, nor turn their back to him, nor sit in his presence except by his permission (Ḥul. 18a). The maxim, "The school is more sacred than the house of worship," expresses the spirit which lay behind all discipline (Sanh. 71a).

The rabbinical method of instruction was disputational. But the intellectual capacity of the pupils had to be considered. God Himself adjusted His revelation on Mt. Sinai to adults and children according to their respective powers of apperception (Ex. R. xx.). The first step was appropriation by the memory. "Learn first, and thou wilt perceive later" (Shab. 63a; Ab. iii. 10; Yoma 71a). Excessive rationalization was discouraged. "Withhold thy child from higgayon [insistent intellectualism]" (Ber. 28b). A usual means for aiding the memory was cantillation. Often the text was constructed rhythmically for this purpose (Meg. 32a). The memory was also aided by repeated reviews ('Er. 54b);

and concentration of mind and interest was urged. "If thou takest many subjects at the same time, thou graspest none" (Meg. 6b). Reading aloud was encouraged. The initial letters of the text learned were committed to tablets ('Er. 97b). The lesson was reviewed at home with the assistance of the parents ('Ab. Zarah 120a).

The Talmud was the text-book of the Jews of the Middle Ages. It kept their minds fresh and supple. Indeed, they needed acumen under the stress of the desperate conditions under which they lived; and it was due only to the all-pervading love of learning and the well-organized system of education which the Jews possessed that the nation was preserved. While prelates and priests of the Church could neither read nor write, and showed a brutal disdain of even elementary education (at the Council of Reims the papal legate Leo boasted that the successors of Peter could afford to be ignorant of Plato, Terence, Vergil, and the other philosophers, inasmuch as Peter himself did not know them and still became doorkeeper of Heaven [!]), the Jews of that time had schools in every part of the world in which they resided.

Hai Gaon on Teaching.

The literature of education becomes abundant with the progress of the centuries of European history. The "Musar Haskel," written by Hai Gaon, was read extensively in Europe. Among many apt sentences as to the worth and need of instruction, it declares: "Pay the teacher generously. What thou givest him, thou givest to thy children. Buy books for thy children, and keep a teacher for them from their childhood. Train thy children at all times, and always with mildness," etc. ("Musar Haskel," ed. Steinschneider, §§ 26-28 *et passim*; see also "J. Q. R." viii. 534-540).

An event of prime importance in the history of Jewish education in northern Europe was the removal of the Kalonymus family from Lucca to Mayence. This removal, reputed to have been ordered by Charlemagne, hints at the fact that even the internal interests of the Jews have been affected by the civil authority and by the whims of governments, though it must be confessed that this action of Charlemagne was at the same time statesmanlike and beneficent.

Medieval Pedagogics.

Instruction at this period, too, was grounded on tradition. "A father should say to his child," says the "Sefer Ḥasidim" (Book of the Pious), "'Thus do I; thus did my fathers; thus also must you accustom yourself to do.'" The subjects and the methods of instruction in the Middle Ages were about the same as those in the Talmudic period. Some customs had crept in which even the watchfulness of the Rabbis had not noticed or prevented (for customs on the first day of the child's schooling see Education). The order of studies was about the same as that laid down in the codes. A melammed was entrusted with the elementary part of the child's education. He was compensated by the parents directly, and by Talmud Torah societies in case of the parents' inability. The schools were attended by the children of the rich and poor alike. The higher branches of study were in charge of a rabbi or savant. There was a bet ha-midrash for pupils above fourteen. The sessions for elementary instruction were held in a room ("ḥeder") in the house of the melammed; but the bet ha-midrash was a public building usually adjoining and sometimes a part of the synagogue. The aim was to impart versatility together with keenness in disputation. The discourses of the teachers were compiled and circulated. The tosafot are such a compilation. There were stated public lectures at which adults, especially men of learning, attended ("shi'urim"). Various rules for teachers and pupils were laid down; *e.g.*: Each teacher should be as considerate of the pupils of a colleague as he is of his own. He should lend his tosafot and not withhold them in order to attract those pupils to himself. He should allow his pupils to attend the lectures of another teacher. The teacher should strive to awaken piety in his pupils. Pupils who advance rapidly should be removed into another class, so that they may not place the less advanced pupils at a disadvantage, and that they themselves may not be retarded. Pupils should be allowed to share in a discussion out of scholarly interest, but not in a spirit of domination. Books must be treated with care, and it is meritorious to copy them extensively. School utensils are sacred —pens, the penknife, and such—and may not be misused.

Some of the pedagogic maxims in the "Sefer Ḥasidim" read as follows:

> "Boys and girls shall not play together. If you raise orphans and observe they do improper things, do not hesitate (because of their being orphans) to rebuke them; otherwise you will sacrifice for the evil the good you intend. Punish them as you punish your own children, but not in anger. Children usually become what their parents are. If parents are dishonest as regards measures, weights, and money, the children, too, will be similarly dishonest. Assign to your children no tasks that are too difficult for them. Do not give your children too much money, not even for good purposes. The parent is obliged to teach the maintenance of the faith to his daughters also."

Decline in Jewish Education.

The period of the revival of learning in Christendom had no synchronous parallel among the Jews. On the contrary, there was a decadence in Jewish culture, as an inevitable consequence of long-continued isolation and oppression. The Jewish communities had coherence only through a common pathos and a subtle communion of sympathy and hope. The piety which had formerly been the spring of educational ideals had given way to a deteriorated form of fanaticism which held Jewish matters sacred without consciousness of their import. The teachers were dependent to a deplorable extent on the whims of the parents, and were chosen and dismissed according to caprice. This naturally wreaked its vengeance in the demoralization of the pupils. The Rabbis, too, were incapable and derelict in the performance of their duties. The prevalent form of intellectual exercise was a debased kind of disputation, the Pilpul, inane in content and rabid in form, which, it must in justice be said, was patterned, however unconsciously, upon the scholastic sophistry of the Church. The incisive questions and learned replies of these disputations were collected in "liḳḳuṭim" (collectanea). These were much sought after for reference and study. One of the best known of these is the

"Yosif Omeẓ" by Rabbi Joseph Yuspa Hahn (Frankfort-on-the-Main, 1723).

The child was brought to school on the completion of its third year, and was encouraged to attend by gifts of honey, nuts, pretty garments, etc. A higher form of encouragement, for a boy, was the suggestion that some day he might be called "baḥur" ("baccalaureus") and "Rabbi." Children joined with the congregation in the responses to the prayers; they kissed the hand of the parent, teacher, and of pious men. The father himself instructed the child in the earlier years; later on, the pupil was taught the weekly portion of Scriptures, and along with it the commentary of Rashi; and finally he learned the portions of the Shulḥan 'Aruk referring to the benedictions.

Views of Maimonides.

Curricula.

There are evidences that some Jews transcended the limits of the ghetto not merely in attracting an audience for themselves, but also in achieving a culture independent of the prescribed limits of Jewish custom and law. Süsskind of Trimberg (12th cent.) was one of the Minnesingers. Samson Pine assisted two Germans in the translation of the "Parcifal" of Wolfram of Eschenbach into the vernacular, according to the manuscript of Ruediger von Manesse. Immanuel ben Solomon of Rome was a member of the literary circle of Dante; and David Gans held scientific relations with Keppler and Tycho Brahe. Maimonides codified the educational laws, and his correctness of judgment and deep insight into the needs of the day are as obvious here as in his profounder philosophical works. In his "Yad ha-Ḥazaḳah" (section "Talmud Torah") he gives a digest of Jewish pedagogy. Apart from the Talmudic laws, the congregations of Spain, Italy, and Germany formulated regulations and so contributed toward the organization of Jewish educational work. Some of these regulations contained the following provisions: A congregation of fifteen families was required to maintain a teacher. Besides board and clothing, this teacher was to be paid a stipulated salary; and if the income from the contributions was inadequate, the congregation had to appropriate from its funds an amount sufficient to maintain him in a manner appropriate to his station. A community of forty families was required to maintain a teacher of Talmud, who lectured also on Halakah and Haggadah. The testament of Judah ibn Tibbon ("Derek Ṭobim," ed. H. Edelmann, pp. 3-15, London, 1852) contains some interesting references to the love of books and shows a fine appreciation of literature. The same may be said of the "Menorat ha-Ma'or" (Venice, 1594, Ner. iv. pp. 82b-84a). The "Mussare ha-Pilosofim" of Ḥunain ibn Isḥaḳ, Hebrew by Judah ben Solomon Al-Ḥarizi (ed. A. Löwenthal, Frankfort-on-the-Main, 1893), contains a well-elaborated scheme of teaching, as does likewise Joseph ben Judah ibn 'Aḳnin's "Marpe ha-Nefashot" (ed. H. Edelmann, in "Dibre Ḥefeẓ," pp. 23 *et seq.*, London, 1853). The latter says: "A teacher must evidence by his conduct the worth of his instruction. He must treat his pupils as his children." Ibn 'Aḳnin mentions the following curriculum: reading, writing, Torah, grammar (text-books of Ḥayyuj and Ibn Janaḥ), religious poetry, Talmud, philosophy of religion, metaphysics, logic, mathematics (7th, 8th, and 9th books of Euclid), geometry (Theodosius on spherical figures, Apodorius on conic sections), optics, astronomy, music, physics, and medicine. The same author gives ten rules of conduct which each of his pupils had to observe: (1) he must keep himself pure; (2) he should consult his teacher in all matters of doubt; (3) he should not strive after wealth which alienates from study; (4) he should be sure of the elementaries before venturing on extended studies; (5) he should have interest in as many subjects as possible; (6) he should avoid indolence; (7) he should have no selfish motive; (8) he should utilize every occasion for instruction; (9) he should respect his teacher, and (10) be grateful to him. Rabbi Judah ben 'Aṭṭar gives an order of subjects ("Ya'ir Natib," ch. xv.; see also Joseph Ezobi, "Shir ha-Ḳe'arah," ed. Steinschneider, pp. 25-43, Berlin, 1860; Bar Ḥasdai's translation of Al-Ghazali's "Mozene Ẓedeḳ," Leipsic, 1839; Joseph Caspi, "Ṭa'am Zeḳenim," pp. 49b-54b, Frankfort-on-the-Main, 1854; the medieval school-code "Ḥuḳḳe ha-Torah," given by Güdemann in his "Gesch." i. 264-272; and the abundant material on this subject in the last-mentioned writer's "Quellenschriften zur Geschichte des Unterrichts und der Erziehung bei den Deutschen Juden," Berlin, 1891).

In Italy, on the other hand, there was a lamentable confusion of thought and practise in the matter of education; and the writers caution against the injury to Jewish culture and morals due to these disordered conditions. Jacob ben Abba Mari Anatoli speaks of ill-considered teaching and digressions from legitimate subjects. Immanuel of Rome alludes to lack of method and to the inveterate habit of teachers to play at sophistry ("Malmad ha-Talmidim," ed. Meḳiẓe Nirdamim, p. 99a, Lyck, 1866; "Maḥberot ha-Tofet weha-'Eden," pp. 229 *et seq.*, Lemberg, 1870). The invention of printing, and the sack of Constantinople by the Turks, brought great improvement. Copies of books were multiplied and the liberalizing movement grew in effectiveness. Joseph Caro deals with the mutual relations of teacher and community (Shulḥan 'Aruk, Yoreh De'ah, 245-247). "A teacher," he declares, "must conduct himself with absolute virtuousness. He should also be expert in the art of teaching. He should be chosen for his didactic tact as well as for his learning. He may not be bound by contract to serve longer than three years [*ib.* Ḥoshen Mishpaṭ, 71, 72]. A contract with a teacher is irrevocable. The teacher is bound by it as much as the community; for otherwise injury might accrue to the school."

First Modern Schools.

Saul Morteira and Isaac Aboab erected the first school in Amsterdam in 1640. It comprised six classes, and its curriculum embraced elementary as well as higher studies, such as Hebrew philology, rhetoric, and Neo-Hebrew poetry. Baruch Spinoza was a pupil of this school. In 1817 religious instruction was entrusted to a commission, and in 1836 a teachers' seminary was established. In Poland the first school was established by Rabbi Joel Sirkes at Cracow. In this school instruction was given in the vernacular, though in Hebrew characters, "in order to enable the pupils to read books which teach right conduct." It was customary in Poland for the pupils of all the independent academies of the local rabbis to meet, with their teachers, at the market seasons at Zaslav, Yaroslav, Lemberg, and Lublin, when discussions took place on rabbinical subjects, and much subtlety was displayed.

The position of French Judaism in the history of education is assured through the prince of commentators, Rabbi Solomon ben Isaac (Rashi; 1079–1105), whose influence, making for a rational treatment of the Bible as well as of the Talmud, can not be overestimated. In the "Ḥuḳḳe ha-Torah," cited above, which describes the French system of Jewish teaching, the following provisions are given: There should always be a school next to the synagogue; the latter should be designated the Great Schoolhouse. The school-course should cover seven years. Some students should be awarded special scholarships. Each class should consist of not more than ten pupils. Text-books should be used; and the Bible should be translated into the vernacular. Pupils should examine one another in regular reviews. The recapitulation of the weekly lessons should be held on Fridays; that of the monthly work, at new moons, and a general review of the work of the semester ("seman") in Tishri and Nisan. A teacher should be employed at no other vocation. There should be a supervisor who should be responsible for the management of the school. The curriculum should be graduated in amount and in character to comport with the age of the pupil (see Güdemann, "Gesch." i. 264 *et seq.*).

Despite many shortcomings, the yeshibot of Germany must be mentioned with respect. The rabbis who presided over them were earnest and fervent, and had great capacity for martyr-like endurance. They imbued the youths with a genuine love of scholarship and with idealism. The German students, though poor to the verge of beggary, suffered hardships with equanimity, encouraged if not adequately maintained by the hospitality of the community. The first attempt to organize the yeshibot was made at the Conference of Jewish Notables which met in Moravia at the death of Rabbi Bernhard Eskeles (1753). It provided that the same tractate should be studied in all the yeshibot at the same time, so that the students might be free to pass to other schools without retarding their progress. A superintendent ("rosh yeshibah") was to be at the head of each yeshibah, before whom the pupils were to present themselves daily. Talmud and the casuists were studied. Examinations took place on Thursdays. A promising pupil was ranked as "baḳi" (versatile) or as "ḥarif" (ingenious). Even the schools were similarly characterized, *e.g.*, those of Frankfort-on-the-Main and those of Fürth and Mayence. Distinguished as yeshibot are those of Nikolsburg (Mordecai Benet, 1829), Lissa (Jacob Lissa, 1832), Posen (Akiba Eger, 1838), Presburg (Moses Sofer, 1840, and Moses Rosenbaum, 1883).

The bet ha-midrash was opened to all kinds of students and visitors. The local rabbi was the teacher, or rather lecturer, for there was no graded course of instruction in it. The last bet ha-midrash in Germany was that of Hechingen, which closed its doors in 1853. It had been established by the Kaulla family, and Berthold Auerbach had been one of its pupils.

Need for Reform.

The Jews paid dearly for the delay of school reform. The untoward conditions of the times were in themselves lamentable enough. The exclusion of the Jews from the general culture of the eighteenth century was bound to bring about their intellectual and moral deterioration, unless something was done in time to rescue them. Never before in all the history of the Jews had the teacher been treated with so little respect. Teaching had become a degraded profession, filled with incapables and ignoramuses. The teacher was at the mercy of the whims of every parent. He became rather a cantor than a teacher, and was chosen for his talent as a singer rather than for the possession of scholarly ability. Ḥadarim (single-room schools) became numerous; and in these the discipline was the worst possible and the methods of teaching lamentably amateurish (see Jost in "Sippurim," ed. Pascheles, part iii., pp. 143 *et seq.*, Prague).

Influence of Mendelssohn.

This was the age of young men with ambition to transcend the limits which fanaticism had set. Some of them upon whom the old order of things had lost its hold and for whom the new had the attraction of real life, faced the ignominy that Jewish public opinion set on the study of German literature; and among these arose Moses Mendelssohn. He was the greatest reformer in modern Judaism; and his influence was epoch-making for the improvement of education also. He gave the support of his example, in the first place, by the study of the vernacular, and in the second place by the character of his philosophy. The Israelitische Freischule in Berlin owes its foundation to him (1778; see M. Spanier-Magdeburg, "Moses Mendelssohn als Pädagoge," Eisenach, 1898). Mendelssohn's pupils Hartwig Wessely ("Dibre Shalom we-Emet," Vienna, 1826), Herz Homberg ("Ben Yaḳḳir," *ib.* 1820), and Isaac Euchel (see "Meassef," iii. 205; "Bikkure ha-'Ittim," vi. 45) continued the educational emancipation of the Jews; and it is to the credit of the Hebrews of that period of storm and stress that the reconstruction was not, after all, attended with confusion.

The Edict of Toleration issued by Emperor Joseph II. of Austria (Oct. 29, 1781) added to the upward movement. Schools were to be established under the protection and with the encouragement of the government, "so that Jewish children may be trained for the trades and may be enabled to speak the language of the country." Peter Beer was one of the first school principals (see Moritz Hartmann, "Lebensgeschichte des Peter Beer," Prague, 1839). New interests and new avenues of work as well as of study were opened to young Jews, and they entered into the economic and professional labors of the country. In order to encourage teaching as a profession and to raise its standard the emperor offered bonuses; and in order that Jewish parents might be freed from distrust the prayers for opening and closing the school sessions were modified so as to be in no way offensive to their consciences. Herz Homberg was made imperial school commissioner in 1818, and his text-books "Bene Ẓiyyon" and "Imre Shefer" were introduced into the schools. At Dessau a school was established on the educational principles of Basedow, its principal being David Fränkel, and its teachers including Moses Philippson, Joseph Wolf, and Gotthold Salomon (see P. Philippson, "Biographische Skizzen," Leipsic, 1864–66). Israel Jacobsohn founded a school in Seesen in 1801, laying stress on the necessity of an adequate preparation of teachers. He introduced also a system of periodical examinations. The school at Wolfenbüttel, established in 1807 by Jacobsohn's brother-in-law, Isaac Herz Samson, contributed to the emancipation of the Jewish youth. The history of the Philanthropin (founded 1804) has recently been published (H. Bärwald, "Geschichte der Realschule der Israelitischen Gemeinde zu Frankfurt-am-Main, 1804–1904"). Among its teachers were Michael Hess, Sigismund Stern, I. M. Jost, Michael Creizenach, Joseph Johlson, and Jacob Auerbach. Another school, more limited in its scope, was the Realschule der Israelitischen Religionsgesellschaft in Frankfort-on-the-Main, established by Samson Raphael Hirsch (see "Festschrift, Jubiläums-Feier des 50jährigen Bestehens der Unterrichtsanstalten der Israelitischen Religionsgesellschaft zu Frankfurt-am-Main, 1903"). Among its teachers were: Mendel Hirsch, J. M. Japhet, and A. Sulzbach. In 1840 M. Veit established a teachers' seminary, which was superintended by L. Zunz till 1852. Other institutions of a similar character were those of Cassel (1809), Münster (1827), Hanover, Düsseldorf, Cologne, Würzburg, and Breslau.

Congregational Schools.

The first congregational religious school was established in Magdeburg in 1833 by Ludwig Philippson. Its aim was to supply such religious training as the secular schools failed to provide. In 1884 Samuel Kristeller and H. Steinthal elaborated a "course of study for instruction in the Jewish faith."

Religious Text-Books.

The first text-book on Judaism was "Leḳaḥ Ṭob" by Abraham Jagel, Venice, 1595. It followed the "Catechismus" and the "Summa Doctrinæ" of Peter Canisius, which themselves were called forth by the appearance of the two catechisms of Luther. It was designed for the school, but was never introduced (see S. Maybaum in the Tenth Report of the Lehranstalt für die Wiss. des Judenthums, Berlin, 1892, pp. 4 *et seq.*). Both its form and its definitions were alien to Jewish thought and education. Dessau's "Grundsätze der Jüdischen Religion," which appeared in Dessau in 1782, was the first of this kind of school literature, which has since become abundant. The Biblical histories for school use owe their origin to the decline of the knowledge of Hebrew. Formerly pupils could be expected to become familiar with the Biblical stories through the reading of the actual text; but the need for specific instruction became soon apparent. Baer Frank ("Or Emunah, Licht des Glaubens, das Geschichtliche der Fünf Bücher Moses, für das Weibliche Geschlecht," Vienna, 1820) was the first to make an attempt in this direction; and his work is interesting in that it was meant for women and girls.

Instruction in Hebrew reading and in translation, as a matter of separate training, is first mentioned by Abraham Model of Öttingen, who applied a method of his own in 1658 (see Güdemann, "Quellenschriften," etc., p. 304). The first Hebrew reader for the use of Jewish schools ("Moreh Derek," by Samuel Detmold) appeared in Vienna in 1815.

The Karaites.

Among the Karaites, education was not neglected. Elijah Bashyaẓi gives the following pedagogic laws of the Karaites ("Adderet Eliyahu," part ii., ch. v., vi., pp. 57 *et seq.*, Koslow [Eupatoria]): "It is the duty of every Israelite to learn the Torah in the original, philologically and exegetically. Education should begin at the sixth year; at the fifth only with children of exceptional health, since teaching should not endanger the health of the child. The teacher should be thorough in his subject, and he should not be rash. He may use the rod only to exact obedience, and must cause no permanent injury. He should assist the memory of the child by formulas. The use of one book is recommended; for change of books weakens the memory. Text-books should be written legibly. Schoolrooms should be light and clean; these the rich should provide. Poor children should be supplied with text-books. Children should be encouraged to practise reading, which should be slow and thoughtful. Reviews should be frequent. The scrolls of the Law should be provided with vowel-points, so as to avoid errors in reading and understanding. There should be translation into the vernacular. A proper exegesis requires a knowledge of logic, grammar, arithmetic, geometry (including spherical), and music."

Special journals for Jewish pedagogy have been founded, among which may be mentioned the following:

Ludwig Philippson, "Israelitische Predigt- und Schulmagazin," Magdeburg, 1834 (2d ed. *ib.* 1854); Moritz Bock, "Israelitische Schulzeitung," Coblenz, 1840; Leopold Stein, "Der Israelitische Volkslehrer," Frankfort-on-the-Main, 1851–60; Jakob Goldenthal, "Das Morgenland, Ein Central Organ für Synagoge und Haus," Vienna, 1855; M. Ehrentheil, "Jüdische Volksschule, Zeitschrift für Israelitische Lehrer," Arad, 1862; S. Dessau, "Der Pädagogische Hausfreund, Zeitschrift für Erziehungslehre," Stuttgart, 1871; J. Klingenstein, "Israelitische Lehrer," Mayence, 1862–69; Emanuel Hecht, J. Klingenstein, and A. Treu, "Israelitischer Haus- und Schulfreund," Münster; "Der Jüdische Kantor und Lehrer," Supplement to "Jüdische Presse," Berlin; "Israelitische Schulzeitung," Supplement to "Israelitische Wochenschrift," Magdeburg; "Pädagogische Beilage" to "Der Israelit," Mayence; "Der Lehrerbote," Prague.

J. L. Gr.

PEDAT B. ELEAZAR: Palestinian amora of the fourth generation (first half of the fourth century). He was his father's pupil (Ber. 77b; M. Ḳ. 20a) and the assistant lecturer ("amora") of R. Assi. If the latter asked him to repeat any of his father's sentences, if he himself had heard them from the lips of his father, he introduced them with the words: "So says my teacher in the name of my father"; but in other cases he said: "So says my teacher in the name of R. Eleazar." He transmitted also sentences in the name of his father (Yer. Yoma 39d) and of R. Hoshaiah (Oshaya) (Yer. Suk. 54d).

Pedat was an intimate friend of Zera and Jeremiah ben Eleazar, who transmitted halakic sentences of his (Yer. Ned. 38a). Several of his haggadic interpretations have been preserved, including the following: "Deut. i. 17 does not indicate presumption on the part of Moses. On the contrary, he means to say: 'Bring difficult questions to me: I will decide them, if I can; if I can not, I will hear them and lay them before God for his decision'" (Midr. Shemuel, xiv.). He remarks, in connection with Gen. i. 2: "It is a law of nature that the air moves on the surface of the water, even when the sun is shining with its greatest heat" (Gen. R. ii.).

Bibliography: Bacher, *Ag. Pal. Amor.* iii. 617; Frankel, *Mebo*, p. 121, Breslau, 1870; Heilprin, *Seder ha-Dorot*, p. 312, Warsaw, 1882.

W. B. J. Z. L.

PEDIGREE: Table of descent and relationship; sometimes given in narrative form. Jews have always carefully recorded their genealogies (see article), but owing to their wide and frequent dispersions very few can trace their descent further back than a couple of hundred years. All persons of the name of Cohen claim descent from Aaron the high priest, but no attempt has ever been made by any Cohen actually to trace his descent through well-authenticated documentary sources (see Cohen). After the return from the Exile the need of pedigrees became urgent owing to the rules of Precedence and the determination to avoid mixed marriages, as seen in the books of Ezra and Nehemiah. This especially applied to those of priestly descent, who were not able to marry legally any woman who could not prove the purity of her descent as far back as her great-grandfather. There appears to have been a court at Jerusalem especially devoted to the investigation of cases of this kind (Ḳid. 76b).

With the spread of Jews throughout Europe the difficulty of preserving pedigrees increased a hundredfold. The frequent expulsions and persecutions would prevent any written record being retained for any length of time, and traditional knowledge of a pedigree rarely extends beyond four or five generations. The Seder 'Olam Zuṭa professes to give eighty-nine generations, tracing back the exilarchs to Adam. With the rise of historical literature attention was paid rather to the spiritual and intellectual pedigree of teacher and pupil than to physical descent. Descent had little part in determining distinction, which went for the most part with learning in the Law; hence, in references to ancestry, more is made of the fact that a person is the author of a book than that he was the son of such and such a one.

Modern Pedigrees.

In the Middle Ages, besides, there was no registration of population in the ghettos, as a rule, and, consequently, no hereditary rights there which would require municipal records of Jewish descent. In Spain, however, after the rise of the Maranos, an attempt was made to trace their descent so as to avoid contamination by intermarriage with the Old Christians. One of the main objects in recording and preserving pedigrees was the claim, frequently put forward, to descent from David, which would permit of Messianic aspirations. For instance, the Abravanels made this claim, and Manasseh ben Israel appears to have been influenced in his Messianic aspirations by the consciousness that he had married into that family.

Owing to these and other causes it is extremely rare to find a Jewish family that even claims to trace its ancestry further back than the sixteenth century. The only one which has some pretensions to a pedigree reaching back to Talmudic times is the Luria family, which follows its descent back to Rabbi Johanan the sandal-maker (A. Epstein, "Die Familie Lurie," Vienna, 1901). Lucien Wolf attempted to connect the Treves family with that of Rashi in connection with the pedigree of the Marquis of Bute, but two of the links were hypothetical.

Sources.

Of the families whose pedigrees can be checked by tombstone inscriptions those of Frankfort-on-the-Main seem to be traceable the furthest; among these the Schiff family appears to be the earliest, going back to about 1375 (see Schiff Pedigree). It is, indeed, mainly from the tombstone inscriptions that material exists for any lengthy pedigrees among modern Jews. The most voluminous list of names thus found is that contained in Hock's "Die Familien Prags," and Horowitz's "Inschriften," relating to Frankfort-on-the-Main.

Only a beginning has been made with the important tombstones of Amsterdam; those of Rome relate to the earliest period, and are, therefore, of little use for the compilation of pedigrees; and the London ones have been almost entirely neglected. Berliner's collection of the Venice inscriptions is, perhaps, the next in value to Hock's.

Besides inscriptions, lists of authors often afford clues of family pedigrees. During the Middle Ages a family rarely persisted without producing one or other of the works recorded in the bibliographies. Those who did not write works often printed them, and the list of printers and their assistants, again, is of value. The local records of congregations often contain information of importance in the list of benefactors recited during divine service at least once a year. The earlier list of martyrs in the memor-books is rarely of use, owing to the gap between the records of the fourteenth and those of the sixteenth century. Other sources are the books of the "mohelim," recording the circumcisions in various localities, though very few of these books have been preserved or printed. Local tax-lists of the period when Jews were separately taxed have been utilized, and a remarkable series of names was compiled by M. Freudenthal of the Jewish visitors to the Leipsic fair in the last quarter of the seventeenth century (Frankfort-on-the-Main, 1902). This list, with the tombstone inscriptions of Frankfort-on-the-Main, Lemberg, and Prague, gives a very fair account of the most important Ashkenazic Jewish families of the seventeenth century.

A hitherto unexplored source for Sephardic families is the Inquisition records, mainly in Spain and Portugal, but found also in Mexico and South America. These contain a whole series of investigations into the family histories of persons accused of "Judaism," and it also frequently happens that, for one reason or another, Spanish families claim to have had their purity of blood ("limpieza de sangre")—that is, their freedom from Jewish blood—determined by the officers of the Inquisition. In both cases elaborate pedigrees were drawn up, which are of Jewish interest. One of these has been published by R. Gottheil in the "Jewish Quarterly Review" (1904), and further instances are referred to by Joseph Jacobs in his "Sources of Spanish-Jewish History" (Nos. 2, 14, 16). It is almost invariably a requirement for the establishment of the right to bear arms granted at the various heralds' colleges of Europe that a pedigree of the family making the claim shall be deposited in the herald's office. Many of these grants are of modern date, and the pedigrees supplied are often very scanty, but they are a hitherto unworked source of Jewish genealogies, and the list given under Coat of Arms must also be regarded as offering to those having access to the heralds' colleges material for the pedigrees of Jewish families.

From these and other sources a certain number of pedigrees of Jewish families have been compiled and printed separately, of which the following is a tentative list:

Baer, B.—Stammtafeln der Familie Speyer. Frankfort-on-the-Main, 1896.
Carmoly.—Sefer Dibre ha-Yamim. Frankfort-on-the-Main, 1850 (Ibn Yaḥya).
Eisenstadt.—Da'at Ḳedoshim. St. Petersburg, 1898. (Families Eisenstadt, Bacharach, Ginzburg, Heilprin, Horowitz, Minz, Friedland, Katzenellenbogen, Rapoport.)
Epstein, D.—Die Familie Lurie. Vienna, 1901.
Freudenthal, S.—Aus der Heimat Mendelssohn's (containing Wolff pedigree), Berlin, 1900.
Friedberg, B.—Gesch. der Familie Schorr. Frankfort-on-the-Main, 1901.
Harkavy, A.—Stammbuch der Familie Harkavy. New York, 1903.
Kahana, Samuel.—Familienstammbaum der Bekannten Jüdischen Familien Horowitz, Heilpern, Rappoport, Margulies, Schorr, Katzenellenbogen, etc. Cracow, 1903.
Kaufmann and Brann.—Die Familie Zunz. Breslau, 1895.
Krochmal, A. B.—Ma'alot Yuḥasin. Lemberg, 1900. (Margoliouth family.)
Neustadt, L.—Stammtafeln der von Liebmann-Schwarzschild (1555-94) Abstammenden Familien. Frankfort-on-the-Main, 1886.
Ullmann, E.—History of the Worms Family. Frankfort-on-the-Main, 1887.
Wolf, L.—The Families of Yates and Samuel of Liverpool. London, 1901.

Apart from these, a certain number of pedigrees have been privately printed.

The largest collection of Jewish pedigrees ever made is that contained in the volumes of The Jewish Encyclopedia; they are indicated in the following list, which is intended as a guide to those investigating Jewish pedigrees. Besides the pedigrees therein contained (see names below in capitals) it gives also a number of articles on important families (names italicized), and these frequently contain sufficient material for pedigrees. The names of families bearing coats of arms are also given (marked with asterisks). In addition to these, there are the names of families contained in the great tombstone inscriptions of Frankfort-on-the-Main (marked F), Prague (P), and Rome (R); and for Italy the list contained in Mortara's "Indice" (M) often gives valuable information. The list of visitors to the Leipsic fair (L) at the end of the seventeenth century, made by Freudenthal, includes family lists that are practically equivalent to pedigrees. The pedigrees contained in Steinschneider's "Bodleian Catalogue" are given (St). It sometimes happens that information about certain Jewish families is contained in all or in a number of these sources.

It is, of course, obvious that such pedigrees deal in the main with male descendants, and the intermarriages of the families can only be ascertained by the investigation of the communal lists of "ketubot," which rarely exist except among the Sephardim of London and Amsterdam. Consanguineous intermarriages are so frequent among Jews that any well-worked-out pedigree which includes the marriages tends to connect almost all important families. Thus, the Speyer pedigree gives references in its indexes to no less than 194 families with which that family has intermarried during the last three centuries. It would not, indeed, be difficult to connect all the Sephardic families of the United States by one sketch pedigree showing their intermarriages with the Seixas family. Indeed, as the study of Jewish pedigrees proceeds, the proverb that "All Israel are brethren" is seen to be literally true. It is, indeed, extremely rare that, as in the case of the Samuel and Yates families, the ancestry can be traced back to a mixed marriage (see also Purity of Race).

The study of Jewish pedigrees is still in its infancy, and, considering the materials at hand, but little has hitherto been done toward the compilation of such pedigrees of Jewish families. The scattering of Jews all over the world renders such compilations extremely difficult; but, on the other hand, the great number of names that have been brought together of recent years gives material sufficient, in most cases, to indicate the directions in which search should be made. J.

PEDLERS. See Hawkers and Pedlers.

PEDRO I.: King of Portugal (1357-67). This monarch, whose motto was "What the soul is to the body, justice is to the state and to society," was a model of justice, at least in his attitude toward the Jews. Two youths of noble blood who had been in his service a long time had robbed a Jewish pedler out of hate and had then treacherously murdered him. Brought before the king, the murderers acknowledged the deed. The king reflected with sorrow on the many years of service which they had rendered him; but, in spite of the intercession of certain nobles who held that such men should not be executed for the sake of a peddling Jew, the king pronounced sentence of death, and the youths were beheaded. The king defended the Jews of Coimbra who, when certain of the clergy had invaded their Juderia to beg for eggs and had broken into the house of a Jew, drove the ecclesiastics out of the Juderia.

Pedro, whose body-physician was the Portuguese chief rabbi D. Moses Navarro, ordained that if a Jew sold, leased, or rented real estate or the like to a Christian, the writ of sale or of lease must be exchanged before the district judge or two notaries or two or three Christian witnesses, and that as soon as the Jew had sworn that the affair had been transacted with no fraud or deceit on his part, the Christian might raise no further objection.

S. M. K.

PEDRO II.: King of Aragon (1196–1213). Inspired with a desire to receive his kingly crown from the pontiff himself, he journeyed in 1204 to Rome, where Pope Innocent III. crowned him with his own hand and received his oath that he would be faithful and obedient to the Roman Church, and that he would protect the Catholic faith and persecute the heretics. The knights and barons were much displeased at what the king had done, and the Jews of his land were filled with anxiety and terror, being afraid that they would be driven out of the country. Upon his return (Dec. 24, 1204), which fell on a Saturday, as the Jewish chronicle rightly states, the Jews, probably those of Gerona or Barcelona, advanced to meet him with the Torah roll, as was customary on state occasions, and ordered a general fast-day. But their fears on this occasion were groundless. Pedro, with his love of display and his extravagance, was often embarrassed for money, and, being indebted to the Jews, could not afford to lose them.

Bibliography: Ibn Verga, *Shebet Yehudah*, p. 113; Grätz. *Gesch.* vii. 10.

S. M. K.

PEDRO II. (PEDRO D'ALCANTARA): Emperor of Brazil; born Dec. 2, 1825; died at Paris Dec. 5, 1891. He succeeded his father, Pedro I., and assumed personal control of the government in July, 1840. The last years of his life were spent in exile after his deposition (1889).

Pedro was a humane and enlightened prince as well as an excellent scholar, who devoted a large portion of his leisure time to the study of Hebrew. For the centenary of the union of the county of Venaissin with the French republic he published, shortly before his death, three liturgical poems under the title "Poésies Hébraïco-Provençales du Rituel Israélite Comtadin, Traduites et Transcrites" (Avignon, 1891), together with a Provençal translation of the "Ḥad Gadya" under the title "Un Cabri." The three poems are a mixture of Hebrew and Provençal verses, which he translated into French, adding philological notes on the Provençal.

Bibliography: *R. E. J.* xxiii. 154; *Die Neuzeit*, xxxi. 396 *et seq.*, 481.

D. M. K.

PEDRO III.: King of Aragon (1276–85). Although Pedro III. protected the Jews from the hatred of the clergy, who destroyed their vineyards and disturbed their graves, and though he took especially severe measures against the Bishop of Castellnou, who favored these outrages (see Jew. Encyc. v. 636a, *s.v.* Gerona), yet he did this more in his own interest than from any humanitarian motive. He was one of the kings of Aragon who placed the Jews under contribution and exacted enormous taxes from them. They supported him in his wars against Africa, Sicily, and France with voluntary subsidies. When, in 1283, he was threatened with invasion by France, he made the Jews of Faca and Gerona and their districts bear half the expense of improving the towers and fortifications; and a year later the Jews of his state had to raise 130,000 sueldos in taxes at the shortest notice. When he wished to marry his daughter to King Diniz of Portugal, he found that the sum of 185,000 sueldos of the promised dowry was lacking; thereupon he imposed a tax for that amount on the Jews.

As soon as he did not require money from the Jews he ceased to be gracious to them. In 1278 he threatened them with the loss of all their privileges if these were not submitted to him for confirmation within a month. When, in 1283, the Jews of Catalonia asked the Cortes of Barcelona for recognition as vassals of the barons in whose cities or territories they lived or had acquired property, Pedro opposed this request. He even declared that in the future no Jew might come to court or act as "bayle" or tax-collector or hold any office whatsoever entailing any jurisdiction over Christians. An oath was to be taken by them in a specially prescribed form; and they were not to be permitted to slaughter in the public slaughter-houses or within the cities they inhabited.

PEDRO IV.: King of Aragon (1336–87). During the whole of his long reign he showed himself just toward the Jews in his state, and more gracious than any of his predecessors. He had a Jewish body-physician, Rabbi Menahem, whose pupil in astrology he professed to be. He is probably identical with the Pedro who is called "Pedro the Old" in Jewish chronicles and who had a conversation with the learned Jew-baiter Nicolas de Valencia. When Nicolas declared that all he said of the Jews he had heard from a Jew converted to Christianity, the king characteristically answered: "One can not believe such a person, because it is easy for any one who changes his religion to change his words also." And when Nicolas advised him to subject the Jews to his religion by force the king said: "I have never seen good results from anything that happened through compulsion."

Acting on the complaint of the Aragonian Jews, Pedro abolished the abuses practised by officials of the royal court in connection with the beds to be furnished by the Jews during the presence of the court. After he had annexed the Balearic Isles to his kingdom, he showed especial favor to the Jews of Majorca; he released them from all fines imposed by his predecessor, James III., and confirmed all the privileges granted by earlier kings, strictly charging the royal officials, under penalty of 1,000 maravedis in case of neglect, to see that they were carried out. He protected Jewish creditors, and ordered that Jews be tortured only at the express command of the king. He permitted Jews to own Turkish and Tatar slaves on the condition that if such slaves accepted Judaism they became the property of the king. He further ordained that any Jew or Jewess who should in any way slander the officially appointed secretary and representative of the Jewish community should be liable to banishment from the island at the king's command, and, in case he returned, should be severely punished.

PEDRO DE TOLEDO: Viceroy of Naples; friend and protector of the Jews; he employed (*c.* 1530) Don Samuel Abravanel, the youngest son of Don Isaac Abravanel, as minister of finance, and allowed his daughter Leonora, afterward the wife of the grand duke Cosmo de Medici, to associate intimately with and take lessons from Samuel's wife, Benvenida, who was highly educated and a model of virtue and of womanly grace.

PEG. See TENT.

PEḤAH (פחה, from the Assyrian "bel paḥâti" = "master of the district"): An office, based upon a Babylonian model, and which existed in Palestine as early as the Biblical period, being mentioned, for instance, during the reign of Solomon (*c.* 900 B.C.), although no details are given concerning it (I Kings x. 15). In the Authorized Version the word is rendered "governor." According to Neh. v. 15, where, however, the text is corrupt, Persian governors received a fixed income, although it is uncertain for what period the payment of forty shekels there mentioned was made. As Judæo-Persian governors are mentioned Zerubbabel or Sheshbazzar (Ezra v. 14, vi. 7) and Nehemiah (Neh. v. 14); and the latter prides himself (*ib.*) on having voluntarily remitted taxes due him. There are no other passages in the Bible which refer to the Jewish peḥah.

PEINE: German town in the province of Hanover. It belonged formerly to the bishopric of Hildesheim. Jews lived there as early as the fourteenth century. On July 27, 1428, Magnus, Bishop of Hildesheim, pawned the Jews of the city and bishopric, including those of Peine, to the municipal council of Hildesheim for 600 Rhenish gulden. Samson Pine, who, by his translations from the French, aided Claus Wysse and Philipp Kolin of Strasburg to continue and complete the poem of "Parzival," was perhaps a native of Peine, as Güdemann assumes ("Gesch." iii. 159, note 4). In the seventeenth century, from 1621, the Jews there were required to furnish the episcopal bailiffs six "malters" (about 108 bushels) of rye annually for the maintenance of two greyhounds. The bishops of Hildesheim, as independent sovereigns, granted letters of protection to the Jews of Peine (as in the case of Bishop Maximilian Heinrich, on Oct. 24, 1662). In the eighteenth century more than forty Jewish families were living in the city, "on the dam," and supported their own rabbi; he was subject to the rabbi of Hildesheim, whose district included the entire principality of Hildesheim.

Among the rabbis of Peine were the following: Samuel b. Judah (Sanwel Ashkenazi; subsequently went to Bonn; d. 1766); Jacob Schwanfeld (went to Halberstadt; d. 1775); Möschel Elkan (called to Hildesheim in 1808; d. April 11, 1822); Meïr Preuss (lived at Peine in the middle of the nineteenth century). At the time of the Westphalian rule the community of Peine, with its forty families, was under the syndicate of Wolfenbüttel. Peine has (1904) a total population of 10,105, of whom 105 are Jews. See HANOVER.

PEIRINS. See DAUPHINÉ.

PEISER, RAPHAEL B. JACOB: Rabbi of Peisern in the eighteenth century. He was the author of the "Or la-Yesharim" or "'En Ya'akob," containing novellæ on the treatises Pesaḥim, Shabbat, Beẓah, Ketubot, Rosh ha-Shanah, and Ḥullin, while he commented also under the same title on parts of the Pesaḥ Haggadah, both works being published together, for the first time, at Dyhernfurth in 1778. His "Gullat Taḥtiyyot," a collection of novellæ on the treatises Giṭṭin and Ḳiddushin, appeared *ib.* 1805.

D. S. O.

PEISER, SIMON B. JUDAH LÖB: Rabbi in Lissa; born at Peisern, Poland, about 1690. He was the author of "Naḥalat Shim'oni," an important work of reference consisting of four sections: (1) onomasticon of the Bible, quoting all haggadot which are found in the Babylonian Talmud, the Midrash Rabbah, and the five Megillot, and which concern Biblical persons; with marginal notes, "'En Rogel," which give all parallel passages; (2) onomasticon of all the teachers of the Mishnah in the Babylonian Talmud; (3, 4) onomasticon of the teachers of the baraitot and the Amoraim. The first two sections were published at Wandsbeck in 1728; sections 3 and 4, as well as his Talmudic methodology, are as yet unpublished.

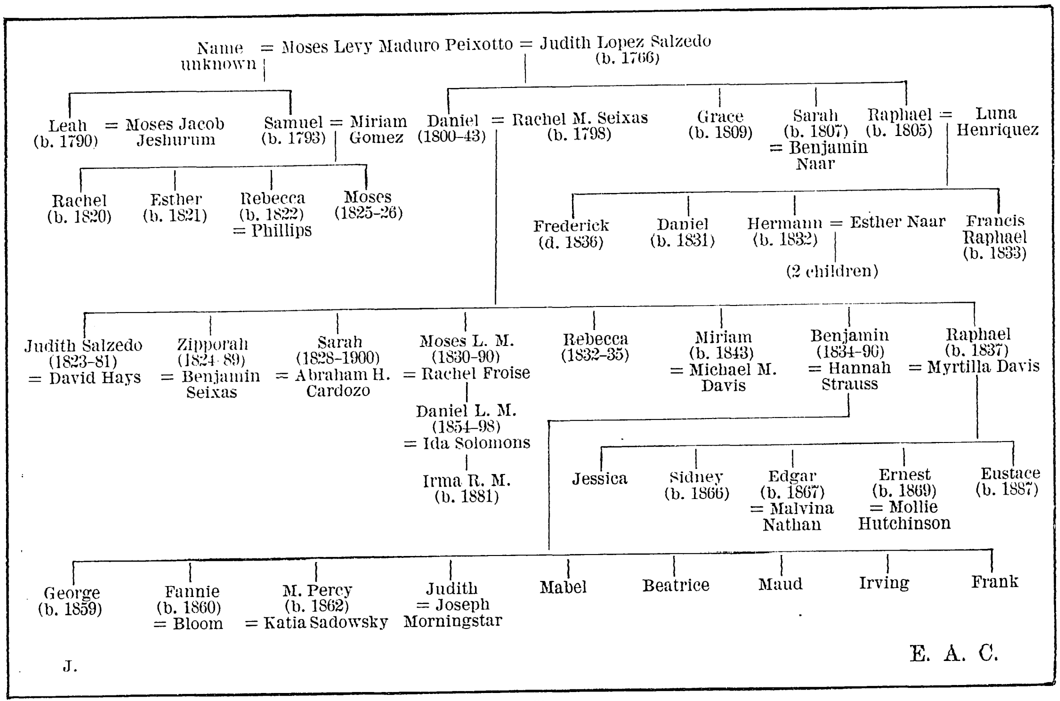
PEIXOTTO: American Jewish family, originally from Spain, whence members thereof migrated by way of Holland to Curaçao, in the West Indies. The original name of this family was **Maduro,** but while still in Spain a Maduro married a Peixotto and adopted the name of his wife. There are records of the burial in Holland of a child of Joshua Cohen Peixotto (d. April 10, 1625), and of Dona Ester (d. Sept. 21, 1618), wife of Moses Peixotto.

About 1807 the Peixottos settled in New York. This family is connected with the Pipsoto family of Jamaica and with the Picciottos of England. By intermarriage the Peixottos have become united with other prominent and even older American Jewish families—the Cardozo, Hays, Seixas, Gomez, Davis, Nathan, Naar, and Phillips families. Among the more prominent members of the family are the following:



Name unknown = Moses Levy Maduro Peixotto = Judith Lopez Salzedo (b. 1766)
Leah (b. 1790) = Moses Jacob Jeshurum
Samuel (b. 1793) = Miriam Gomez
Daniel (1800–43) = Rachel M. Seixas (b. 1798)
Grace (b. 1809)
Sarah (b. 1807) = Benjamin Naar
Raphael (b. 1805) = Luna Henriquez
Rachel (b. 1820)
Esther (b. 1821)
Rebecca (b. 1822) = Phillips
Moses (1825–26)
Frederick (d. 1836)
Daniel (b. 1831)
Hermann (b. 1832) = Esther Naar
(2 children)
Francis Raphael (b. 1833)
Judith Salzedo (1823–81) = David Hays
Zipporah (1824–89) = Benjamin Seixas
Sarah (1828–1900) = Abraham H. Cardozo
Moses L. M. (1830–90) = Rachel Froise
Daniel L. M. (1854–98) = Ida Solomons
Irma R. M. (b. 1881)
Rebecca (1832–35)
Miriam (b. 1843) = Michael M. Davis
Benjamin (1834–90) = Hannah Strauss
Raphael (b. 1837) = Myrtilla Davis
Jessica
Sidney (b. 1866)
Edgar (b. 1867) = Malvina Nathan
Ernest (b. 1869) = Mollie Hutchinson
Eustace (b. 1887)
George (b. 1859)
Fannie (b. 1860) = Bloom
M. Percy (b. 1862) = Katia Sadowsky
Judith = Joseph Morningstar

Peixotto Pedigree.

Benjamin Franklin Peixotto: Son of Daniel Levy Maduro Peixotto (1800–43); American consul, lawyer, and journalist; born in New York Nov. 13, 1834; died there 1890. After his father's death he went to Cleveland, Ohio. As a youth he was intimate with Stephen A. Douglas, became active in politics, and warmly supported Douglas' candidacy for the presidency. At this time he was one of the editors of the "Cleveland Plain Dealer." Joining the order of B'nai B'rith, he was elected, when only twenty-nine years of age, grand master of the order (1863). In Cleveland he was influential in the establishment of an orphan asylum and was one of the founders of the Case Library. In 1866 he returned to New York, but in 1867 left for California, where he settled in San Francisco and established a lucrative law practise.

In 1870, at the time of the Rumanian Jewish persecutions, Peixotto was appointed by President Grant as consul-general to Rumania. The intimacy and friendship which soon arose between Prince Charles of Rumania and himself assisted him greatly. During the six years he remained at Bucharest only the riots of Ismail and Bessarabia disturbed the peace. His reports to the United States government resulted in that government addressing letters to its ministers at the various European courts inviting cooperation in the humane endeavor to stop Jewish persecution in Rumania. Peixotto's reports were also the cause of a great meeting at the Mansion House in London which called forth Lord Shaftesbury's message of sympathy. Peixotto was instrumental, too, in founding the Society of Zion in Rumania, an organization with similar aims to the B'nai B'rith; and it was his influence as a United States official, his intimacy with the European philanthropists, and the force of his own personal magnetism that finally caused the calling of the conference of Brussels to which he was a delegate, and which culminated in the action taken by the Berlin Congress of 1878, when Rumania acquired the status of a sovereign kingdom only upon the express condition that the civil and political rights of the Jews should be recognized.

Upon his return to America in 1876, Peixotto was received with honor and invited to deliver many addresses in various sections of the country. At this time he aided in forming the Union of American Hebrew Congregations. He used his influence toward the election in 1876 of President Hayes, who appointed him United States consul at Lyons, France. In 1885 he returned to the United States and resumed the practise of law in New York city. In July, 1886, he founded the "Menorah" (monthly; New York). He served as one of the trustees of the Hebrew Technical Institute, of the Sanitary Aid Society, and of Temple Israel (New York), and was one of the founders of the Ohio Society. In 1858 he married Hannah Strauss of Louisville, Ky.

Daniel Levy Maduro Peixotto: Eldest son of Moses Levy Maduro Peixotto (1767-1828); physician, scholar, author, and philanthropist; born in Amsterdam July 18, 1800; died in New York 1843. He was educated in Curaçao under the direction of Professor Strebeck. He accompanied his father to New York and graduated from Columbia College at the age of sixteen, receiving the degree of Doctor of Medicine in 1819. He was a member of the old Philolexian Society of the college, the membership of which society still includes the names of his descendants. Prior to taking his degree he had entered the office of Dr. David Hosack, at one time physician to George Washington. Peixotto was one of the editors of the "New York Medical and Physical Journal" and of "Gregory's Practice" (1825-26) and was a frequent contributor to the periodicals and newspapers of the day. Later on he edited "The True American," advocating the election of Gen. Andrew Jackson, and he was also connected with the "New York Mirror."

Among the many offices held by him were the following: secretary of the Academy of Medicine (1825); physician to the City Dispensary (1827); and president of the New York Medical Society (1830-32); he was also one of the organizers of the Society for Assisting the Widows and Orphans of Medical Men.

The title of Professor of the Theory and Practise of Medicine and Obstetrics was given him in 1836, and in the same year he was elected to honorary membership in the Medical Society of Lower Canada. Having accepted the appointment of president of the Willoughby Medical College, he removed to Cleveland, Ohio, where he was dean of the faculty for a number of years. Returning to New York, he resumed his practise there, and continued it until his death. He married Rachel M. Seixas, the daughter of Benjamin Seixas, March 19, 1823.

Daniel Levy Maduro Peixotto: Son of Moses Levy Maduro Peixotto (1830-90): captain of the Third Regiment United States Volunteer Infantry; born in New York March 17, 1854; died at Guantanamo, Cuba, Oct. 24, 1898, from the effects of fever contracted during the Spanish-American war. For many years he was connected with the Seventh Regiment, State of New York, as corporal of Company B, and received the faithful service medal in that regiment. After his removal to Washington he served on General Ordway's staff as captain and aide-de-camp (1888). At the outbreak of the Spanish-American war he volunteered, and served with the Third United States Volunteer Infantry, first as first lieutenant and acting quartermaster, and then as captain of Company D. At the time of his death he was military governor and provost marshal of Guantanamo. He married Ida Solomons, daughter of Adolphus S. Solomons, in 1880. His only child, **Irma R. M. Peixotto,** was born in New York Jan. 10, 1881. She is a frequent contributor to the periodicals of the day and to children's magazines, both as writer and illustrator.

Edgar D. Peixotto: Son of Raphael Peixotto; born in New York Nov. 23, 1867. He is a prominent lawyer in San Francisco, and was at one time assistant district attorney of that city.

Ernest Peixotto: Son of Raphael Peixotto; American painter; born in New York Oct. 15, 1869. He studied at the Académie Julien in Paris for five years under Benjamin Constant and Jules Lefèbvre. His work has been exhibited in the Paris Salon. He exhibited also at the Columbian Exposition held in 1893.

George D. M. Peixotto: Eldest son of Benjamin Franklin Peixotto; American artist; born in Cleveland, Ohio, 1859. His early youth was passed in the United States, but upon the appointment of his father as consul to Rumania (1870) he entered the Royal Academy of Fine Arts in Dresden. In 1877, on graduation, he was awarded the silver medal of the academy for his "St. Mary the Egyptian." This was the beginning of an artistic career, which was interrupted by his appointment as United States vice-consul at Lyons by President Garfield.

Peixotto has painted the portraits of President McKinley, Cardinal Manning, John Hay, William Windom, Chief Justice Morrison R. Waite, Victorien Sardou, Sir Moses Montefiore, and Bishop Gilmour of Cleveland. Peixotto is known also in the field of mural decoration; he executed notable work of this character for the New Amsterdam Theater and the Criterion Club (New York).

Jessica Blanche Peixotto: American educationist; only daughter of Raphael Peixotto; born in New York. She graduated from the University of California in the year 1894, to which she returned after a year's study in the Sorbonne, Paris. In April, 1900, she took the degree of Doctor of Philosophy, being the second woman to receive the Ph.D. degree from that university. Her doctor's dissertation was published under the title of "The French Revolution and Modern French Socialism." Soon afterward she received the appointment of lecturer in socialism in the University of California, which position she now (1904) holds.

M. Percy Peixotto: Brother of George D. M. Peixotto; one of the governors of the American Chamber of Commerce at Paris; born in Cleveland, Ohio, Oct. 4, 1862. He studied at the Lycée et l'Ecole de Commerce de Lyon, France. For many years he has been associated with the Equitable Life Insurance Company of New York as general supervisor of its Continental business, residing in Paris, where he is one of the leading members of the American "colony." He rendered active and valuable service to the Paris Exposition of 1900, serving as American representative on several committees. He was one of the committee appointed in connection with the presentation of the Lafayette monument. Peixotto is a Chevalier of the Legion of Honor.

Moses Levy Maduro Peixotto: Rabbi and merchant; born in Curaçao 1767; died in New York 1828. After the death of his first wife he traveled for some time, and during his visit to Amsterdam married (July 19, 1797) Judith Lopez Salzedo. Returning to Curaçao he engaged in an extensive mercantile business. On June 11, 1807, he landed in America from one of his own vessels. Owing to the Embargo Acts Peixotto was not able to return with American goods; he became therefore an American citizen. He continued his mercantile career in Front street. When the Congregation Shearith Israel lost its rabbi, Gershom Mendes Seixas, he volunteered his services to the congregation, which he served for many years, at first gratuitously as acting rabbi, and then as rabbi; he held this position at the time of his death.

Moses Levy Maduro Peixotto: Eldest son of Daniel Levy Maduro Peixotto (1800–43); soldier and pharmacist; born in New York 1830; died there 1890. He was a member of the Seventh Regiment of the State of New York, and served with it during the Civil war. He later held the rank of captain. As a pharmacist he was connected with the New York Free Medical Dispensary and was a trustee of the College of Pharmacy of the City of New York.

Raphael Peixotto: Son of Daniel Levy Maduro Peixotto (1800–43); president of Congregation Emanu-El, San Francisco; born in New York 1837. He removed to San Francisco in 1870 and engaged in a mercantile career. He is identified with a number of Jewish institutions in San Francisco.

Sidney Peixotto: Son of Raphael Peixotto; born in New York May 28, 1866. Almost his entire life has been passed in San Francisco, where he has displayed the most ardent and practical interest in the best forms of charitable endeavor. The Columbia Park Boys' Club, of which he is the founder and leader, is one of the finest institutions of its kind in existence. He is also a major in the California National Guard.

A. E. A. C.

PEKAH (פקח): Son of Remaliah and a king of Israel in the period of anarchy between the fall of the dynasty of Jehu (750 B.C.) and the overthrow of Samaria (722 B.C.). The Biblical records of his activity are found in II Kings xv. 25–31, II Chron. xxviii. 5–15, and Isa. vii. 1–9. He first appears as captain (Hebr. "hind man") of Pekahiah, his predecessor on the throne; that is, he was a close adviser, or the chief of the body-guard, of the king. Taking advantage of this position, he assassinated the king in his own palace, and, supported by fifty Gileadites, from whose home territory he probably originally came, he usurped the throne of Israel. This was about 736 B.C. From the records of Isaiah and Chronicles it is known that he formed an alliance with Rezin, King of Damascus. The prime reason for such a league was probably to protect their respective countries from another incursion of Tiglath-pileser III., who had compelled Menahem, in 738 B.C., to pay a large tribute. The two kings united their armies and attempted to coerce Ahaz of Judah into joining them.

According to II Chron. xxviii. 5–15, Pekah raided Judah and carried to Samaria an enormous number of captives; but, rebuked by the prophet Oded and by some of the prominent men, he released them and sent them back. The united forces of Israel and Syria appeared before the walls of Jerusalem to demand its surrender. At this juncture Isaiah the prophet came to the moral support of Judah and her king. The allies had proposed to set upon the throne of Judah a son of Tabeel, probably one favorable to the alliance. Ahaz, however, knowing that Tiglath-pileser was within call, appealed to him for help. At about the same time, possibly a little later, Tiglath-pileser III. began a raid into the territory of Pekah, who had not followed the policy of Menahem (738) and yielded submission to Assyria. This raid is described in II Kings xv. 29: "In the days of Pekah king of Israel came Tiglath-pileser king of Assyria, and took Ijon, and Abel-beth-maachah, and Janoah, and Kedesh, and Hazor, and Gilead, and Galilee, all the land of Naphtali, and carried them captive to Assyria." The record of this invasion is followed by the statement that Hoshea, the son of Elah, conspired against Pekah and slew him and reigned in his stead. One of Tiglath-pileser's inscriptions says: "Pekah, their king, they slew; Hoshea [Ausi] I appointed ruler over them." The inference here is that the people, seeing the inevitable outcome of the contest with Assyria, put out of the way their fighting king, and then yielded submission to the conqueror, Tiglath-pileser III.

The length of Pekah's reign is stated (II Kings xv. 27) to have been twenty years. This extent is impossible if reckoned from the usurpation of Pekahiah's throne (736) to the succession of Hoshea (733–31). There is, however, an explanation that has some plausibility. When Zechariah, the son of Jeroboam II., was slain by Shallum, it was the beginning of general anarchy in Israel. Shallum reigned a short time in Samaria; but east of the Jordan Pekah and his Gileadite followers assumed independence, with Pekah as king. That was about 750 or 751. At the accession of Pekahiah. Pekah and his valiant followers may have offered their services to the king at Samaria. Pekahiah may have innocently accepted the offer and have thus given Pekah the long-wished-for opportunity to become king of all Israel. Such an explanation would account for the round number of twenty years of kingship (750–731).

E. G. H. I. M. P.

PEKAHIAH: King of Israel in succession to his father (736–735 B.C.), according to P. Rost in Schrader, "K. A. T." 3d ed., i. 320 (but see Chronology), Menahem (II Kings xv. 23–26). He ascended the throne at a time when the kingdom of Israel was already in a state of dissolution. Soon after his accession Pekahiah was murdered in his palace in Samaria by his chief officer Pekah, who usurped his throne.

E. G. H. S. O.

PELETHITES. See Cherethites.

PELICAN ("ḳa'at"): Unclean bird mentioned in Lev. xi. 18 and Deut. xiv. 17. Reference to its habit of living in ruins and desolate places is made in Isa. xxxiv. 11 and Zeph. ii. 14 (A. V. "cormorant") and in Ps. cii. 7 (A. V. 6). From its habit of storing quantities of food in the large pouch attached to its lower mandible, for the purpose of feeding its young, which it does by pressing its pouch against its breast, arose the belief that the pelican opened its breast with its bill to feed its young with its own blood—a belief which seemed to derive support from the red at the end of the bill.

Two species of pelican are found on the coast of Syria: the white pelican (*Peleçanus onocrotalus*) and, less frequently, the Dalmatian (*P. crispus*). In the Talmud the pelican is assumed to be referred to in Ḥul 63a (לקני) and Yer. Kil. viii. 6 (אווז הים), and in other passages. See Goose.

E. G. H. I. M. C.

PELTIN, SAMUEL HIRSH: Polish author; born at Mariampol, government of Suwalki, May, 1831; died at Warsaw Sept. 30, 1896. In his youth he studied Bible, Talmud, sciences, and languages, and in 1855 settled in Warsaw, where in 1865 he established the "Izraelita," a Polish weekly devoted to Jewish interests, remaining its editor throughout his life. In this journal he wrote, besides feuilletons, articles on religion, ethics, and Jewish history, always defending the Jewish cause against anti-Semitic attacks. He wrote also a number of tales of Jewish life, and made translations of the stories of Compert and others.

While very young he composed a Polish text-book specially designed for Jewish children; and among other writings he left in manuscript a book on Jewish history in Polish, entitled "Historya Zydow."

H. R. A. S. W.

PEN: An instrument for writing. The older expressions for "writing," which later occur as archaisms in lofty speech, mean "to cut in," "to scratch" ("ḥaḳaḳ," "ḥaraṭ," "ḥarat," "ḥarash"). There is no mention, therefore, of pens, but of iron styles ("'eṭ barzel"—Jer. xvii. 1; Job xix. 24; "ḥereṭ"—Ex. xxxii. 4; Jer. xvii. 1). For writing material stone was used, as for the tables of the Decalogue; Ezekiel, in Babylonia, speaks of tiles (iv. 1), Jeremiah of writing in the earth (xvii. 13). Often tablets covered with wax were used; sometimes also metal strips (comp. Ex. xxviii. 36, xxxix. 30). The characters were always cut into this material by means of the style. It is difficult to determine the antiquity of writing with colored matter, and, therefore, with a pen. Ink is mentioned only once, in Jer. xxxvi. 18, but that method of writing is certainly much older. If it is true that the word "katab" originally meant writing with colored matter (comp. "katam" = "to cover something"), then the custom of writing with a pen would be as old as the word "katab." This is very probable, since the art of writing with colors was known in Egypt long before Israel settled in Palestine. That writing, however, was not customary in Palestine in the fifteenth pre-Christian century, but that there, as in Babylon, clay tablets were used, even in every-day life, is shown by the discoveries in Tell el-Amarna and at Seilun in Palestine. See Jew. Encyc. viii. 306, *s.v.* Manuscripts.

E. G. H. W. N.

PEÑAFORTE, RAYMUND DE: Chaplain to Pope Alexander IV.; grand master of the Dominican order until 1240; confessor of James I. of Aragon; lived in Barcelona. His principal aim was to convert Jews and Mohammedans to Christianity, and for the furtherance of this aim he caused both Arabic and Hebrew to be taught in the higher schools conducted by Dominicans. He exercised great influence over King James as his confessor and succeeded in persuading him to order a public debate, concerning Judaism and Christianity, between Moses ben Naḥman, called "El Rab de España," Astruc de Porta, a rabbi in Gerona, and Fra Pablo, or Pablo Christiani, a baptized Jew of Montpellier who belonged to the Dominican order. In this debate, which took place in the royal palace at Barcelona (July 20–24, 1263), in the presence of the king and of many of the higher clergy, Raymund de Peñaforte took an important part. He was at the head of the theologians present, and in agreement with the king gave the rabbi perfect freedom of speech. When Raymund observed to Moses ben Naḥman that he must not allow himself to blaspheme Christianity, Moses answered that he knew what the laws of propriety demanded. On the Sabbath following the close of the debate the king, together with many preaching friars and other clergy, visited the synagogue, where Raymund de Peñaforte delivered an address on the Trinity, which Moses ben Naḥman successfully refuted.

The debate was not without injurious effects. Raymund de Peñaforte obtained from the king not only permission for his protégé Pablo Christiani to continue his missionary journeys, but also the command that the Jews in all parts of his land, including children, old men, and women, should be compelled to listen to the sermons of Pablo and of all other Dominicans, and, within three months, to strike out from their books all that was contained in them against the Christian religion. The censory commission appointed therefor consisted of Arnoldo de Guerbo (Bishop of Barcelona), Raymund de Peñaforte, and the Dominicans Arnoldo de Legarra, Raymund Martin (author of "Pugio Fidei"), and Pedro de Janua (Genoa).

PENALTIES. See Fines and Forfeiture.

PENIEL or **PENUEL** (פנואל, lit. "the face of God"): **1.** Place mentioned three times in the Old Testament. It was situated on the western bank of the Jordan, near the ford of Jabbok, in the mountains of Ephraim. It is identified with the present Tulul al-Dhahab, which lies 250 feet above the sea, and contains beautiful ruins. According to the Bible, Jacob called the place "Peniel," after he had wrestled with the angel, because he had seen God face to face (Gen. xxxi. 30; comp. LXX. *Θεοῦ πρόσωπον*). Gideon destroyed the tower of Penuel because its inhabitants would not assist him with provisions during his pursuit of the kings of Midian (Judges viii. 8–17); the town was rebuilt by Jeroboam I. (I Kings xii. 25).

2. A descendant of Judah (I Chron. iv. 4).

3. A Benjamite (*ib.* viii. 25).

PENITENCE. See Repentance.

PENITENTIAL DAYS, or **TEN DAYS OF REPENTANCE** ("'Aseret Yeme Teshubah"): The first ten days of Tishri, beginning with the Day of Memorial (New-Year) and ending with the Day of Atonement. According to the Mishnah (R. H. i. 2) the 1st of Tishri is the great yearly day of judgment, on which all creatures pass before God's throne, as sheep pass for examination before the shepherd; but as the tenth of the same month is the day on which forgiveness is sought, the opinion naturally grew up that the judgment on the first day was not final, but that prayer and works of repentance from the first to the tenth day might avert an unfavorable decision. Hence the Talmud in various passages recognizes the Ten Days of Repentance.

The 3d of Tishri (or if this be on the Sabbath, the 4th) is observed as the Fast of Gedaliah; and the 9th is a day of good cheer. On the intermediate days abstention from food and drink, to a greater or lesser degree, is deemed meritorious; but the time is not one for sadness or mourning. Hence a wedding within the Ten Days, though not usual, is not forbidden.

Liturgical Changes.

In the liturgy certain changes and additions occur on these days: (1) The Talmud (Ber. 12b) mentions that on these days the close of the third benediction in the "'Amidah" reads "the Holy King" instead of "the Holy God"; and that on work-days the close of the eighth benediction reads "the King of Judgment" (lit. "the King, the Judgment") instead of "King loving righteousness and judgment." While there is a dissentient opinion, to the effect that the ordinary forms are sufficient on the Ten Days of Repentance, the later Halakah has made these changes obligatory to the extent of bidding a man in reciting the prayer to recommence when he has forgotten to make them (Shulḥan 'Aruk, Oraḥ Ḥayyim, 582).

(2) The treatise Soferim, dating from the seventh or eighth century, mentions (xix. 8) some insertions which were made in the first and second benedictions and in the last two, and which are now found in all prayer-books: in the first (after "for the sake of His Name in love"): "Remember us for life, King who delighteth in life; and inscribe us in the book of life, for Thy sake, living God"; in the second (after "maketh salvation to grow"): "Who is like Thee, merciful Father, remembering His creatures in mercy for life"; in the last but one, near the end: "And inscribe for life all the sons of Thy covenant"; in the last benediction immediately before the close: "May we be remembered and inscribed before Thee in the book of life, of blessing, of peace, and of good sustenance." In the last service of Atonement Day "seal" is used in the place of "inscribe" throughout. In the German ritual, at the close of the last benediction, the words "who blesseth his people Israel with peace" are shortened into "the Maker of Peace."

Divergent Views as to These Changes.

The author of Soferim, mindful of the Talmudic saying that "a man should not ask for his needs in the first three or in the last three benedictions," remarks that these customary insertions can hardly be justified even on New-Year's Day or on the Day of Atonement. Maimonides includes them in his "Order of Prayer." Abudarham, in a book of later date, while giving these requests, nevertheless protests against their use. Joseph Caro in his code (Oraḥ Ḥayyim, 112) meets the difficulty by adding to the Talmudic rule the significant words, "but he may pray for the needs of the community"; and in section 582 he treats these requests as parts of the service for the Ten Days. The French and the German Jews have never had any scruples on this score; witness their admission of many ponderous piyyuṭim into the first, second, and third benedictions in the reader's repetition of the "'Amidah."

(3) The invocations beginning "Abinu Malkenu" (Our Father, our King) are read in the morning and afternoon services of the Ten Days, except on the Sabbath, Friday afternoons, and the 9th of Tishri, the eve of Atonement, which is a sort of semiholy day, and on which the penitential psalm with all its incidents is also omitted (see Abinu Malkenu).

(4) In the early morning of work-days, before the regular morning service, Seliḥot are read in a form or order very much like that observed on the night of Atonement Day. The poetical pieces, at least in the German ritual, differ for each of the days, those for the 9th of Tishri being the fewest and shortest. Separate prayer-books containing these seliḥot along with those for certain days preceding New-Year and for the morning, the additional, and the afternoon services of the Day of Atonement are published, and are indispensable to those attending the early morning services.

PENNSYLVANIA: One of the original thirteen states of the American Union; named after William Penn, who received a grant of the territory from King Charles II. in 1681. When Peter Stuyvesant, in 1655, conquered the Swedish colonies on

First Mention.

the Delaware River, three Jews, Abraham de Lucena, Salvator Dandrade, and Jacob Coen, requested permission to trade along the Delaware River (Nov. 29, 1655), claiming that under the act of Feb. 15, 1655, they had received the consent of the directors of the West India Company to travel, reside, trade, and enjoy the same privileges as other inhabitants. This petition was refused "for weighty reasons," but they were permitted to send two persons to the South River (subsequently named the Delaware) in order to terminate a trading expedition already entered upon.

These were the first Jews of whom there is any record in Pennsylvania. On June 14, 1656, the directors of the West India Company wrote to Stuyvesant asking that the Jews be permitted to trade along the South River and "carry on their business as beforesaid." From this time on it is evident that the Jews took advantage of the privilege granted to them and traded with the Indians and Swedes in that territory. In 1657 Isaiah Mesa (spelled also "Masa" and "Mara"), "a Jew," is mentioned in the annals of Jacquet's administration as a participant in several lawsuits. In 1662 a community of Mennonites or Anabaptists proposed to settle at Horckill, in Delaware county, and in their articles of association they determined to exclude all "usurious Jews." When Sir Robert Carr, in 1664, assumed command of the Delaware in the name of the English crown, he received instructions from his government that "all people should enjoy the liberty of their conscience."

In Philadelphia.

In 1681, when William Penn gained possession of the land that bears his name, there must have been several Jewish settlers in the southeastern portion. The earliest Jewish resident of Philadelphia of whom there is any record was Jonas Aaron, who was living there in 1703. The most prominent member of the Jewish belief in the early history of the colony was Isaac Miranda. The date of his birth is not known; he died in Lancaster, Pa., in 1733. He took up his residence in the colony very early in the eighteenth century, and was one of the earliest Jewish settlers in Philadelphia and the first in Lancaster. In 1723 James Logan, secretary of the province, refers to him as an "apostate Jew or fashionable Christian proselyte," who had gone into the interior of the colony to transact some official business. In 1727 Miranda was appointed "agent to receive and collect the perquisites and rights of Admiralty," and on June 19, 1727, he was appointed "deputy judge of the Court of Vice-Admiralty"—the first judicial office held by a Jew in the provinces. He was a large holder of land, and his name is frequently mentioned in the archives of the colony. In 1730 (or 1720) the Indians of Lancaster made a complaint that he had acted unfairly toward them, but no action is recorded in the matter.

Jews came from the other colonies, some from New York, some even from Georgia, and took up their abode in the province. After Philadelphia, the next city in which they settled was **Lancaster.** The first Jewish resident was Isaac Miranda (see above), who owned property there before the town and county were organized in 1730. Ten years later there were several Jewish families in the town; on Feb. 3, 1747, there was recorded a deed to Isaac Nunus Ricus (Henriques) and Joseph Simon, conveying half an acre of land "in trust for the society of Jews settled in and about Lancaster," to be used as a place of burial. Henriques had come from Georgia in 1741. Joseph Simon was perhaps the best-known Jewish merchant in the county, while Dr. Isaac Cohen, one of the first residents of Lancaster, was the earliest Jewish physician in Pennsylvania.

Easton, in Northampton county, was another town that contained pre-Revolutionary Jewish inhabitants. The first merchant in the town was Myer Hart de Shira (Texeira? see HART), who is mentioned among the founders of Easton in 1750. He took the oath of allegiance to the colonial government in 1764, and became one of Easton's most wealthy citizens. Michael HART (not related to Myer Hart) was an early resident. He was born in 1738 and became very rich, owning much property in the surrounding country. Michael Hart deeded to his son Jacob, on March 25, 1800, ground for a burial-place for the Jews. Although there were several families residing in Easton, a synagogue was not founded until 1839, when the Congregation Brit Sholom was established. It was chartered on Nov. 25, 1842, and the Rev. Morris Kohn was its first rabbi.

Schaefferstown, now in Lebanon county, but originally in Lancaster county, is supposed to have contained Jewish inhabitants. According to tradition a synagogue existed there early in the eighteenth century, and a cemetery was established about 1732. The early German Pietists assumed many of the old Hebrew customs, and consequently were confounded with the Jews.

Estate Agents.

Many Jews were connected with the sale and exploitation of land in Pennsylvania. In 1763, owing to the depredations of the Shawnee and Delaware Indians in Bedford county, twelve traders suffered a loss of £80,000, among whom were David Franks, Levy Andrew Levy, and Joseph Simon. On July 5, 1773, the sale of southern Illinois took place. The Indian nations of the Illinois country conveyed their property to twenty-two residents of Pennsylvania, among whom were Moses Franks, Jacob Franks, Barnard Gratz, Michael Gratz, David Franks, Moses Franks, Jr., Joseph Simon, and Levy Andrew Levy. This territory never became the property of those interested in its sale. The greatest speculator in land in the province was Aaron Levy, who in 1779 purchased land in Haines township, Center county, upon which he laid out the town of AARONSBURG (recorded Oct. 4, 1786), the first town in the United States laid out and named after a Jew. Levy was interested with Robert Morris in the well-known speculation in lands in the western portion of the state which resulted so disastrously to the "financier of the Revolution" (see LEVY, AARON).

It is estimated that there were not more than 800 Jews in Pennsylvania at the close of the War of Independence. The greater portion had taken up their residence after 1765, and many had arrived eleven years later, after New York had been occupied by the British. The Jews enjoyed all the rights of the other inhabitants, except that none could become a member of the General Assembly. There was nothing in the Constitution as established by the General Convention in 1776 that prevented a Jew from becoming a judicial, executive, or military officer of the commonwealth. On Dec. 23, 1783, the Rev. Gershom Mendez Seixas, Simon Nathan ("parnas"), Asher Myers, Barnard Gratz, and Haym Solomon, the "Mahamad" of the Congregation Mickvé Israel, Philadelphia, petitioned the Council of Censors that there be removed from the Constitution the declaration requiring each member of the Assembly to affirm his belief in the divine inspiration of the New Testament. The law was subsequently changed, and all civil disabilities of the Jews were removed.

Successive Settlers.

The history of the Jews in Pennsylvania after 1825 is the history of their activities in the various cities in which they settled, and which are treated in the respective articles. Although Jews had taken an active interest in the development of the western portion of the state from a time preceding the Revolution, it was more in the way of speculation and investment; it was not until the first quarter of the nineteenth century that the Jews settled in Pittsburg and the other western cities. Wilkesbarre and Harrisburg had few Jewish inhabitants, and Aaronsburg, although founded by a Jew, had only a few Jewish residents. It was not until after the Spanish and Portuguese Jews had ceased to migrate in numbers to America that the western portion of the state was settled, and this was owing to the arrival of many Jews of German and Polish origin. Yet the early Jewish pioneers, those that had settled in Philadelphia, Lancaster, and Easton long before the Revolution, had come from Germany and Holland, while the first settlers of New York, Newport, R. I., and Savannah, Ga., had been mostly of Spanish descent. About 1825 there was a fresh exodus from Germany, and many Jews settled in Philadelphia and became important factors in the community, while others traveled westward and helped in the development of many towns.

Although Jews had been living in **Pittsburg** ever since it was incorporated in 1804, it was not until 1830 that there was an actual Jewish community there, and this consisted of Jews of German origin. In 1846 the first congregation was organized and named "Etz-Chayim." It met in a small room in Third street, over an engine-house; its first presiding officer was William Frank. The Congregation Rodef Sholem, one of the most important congregations in the state, was established in 1858. At present Pittsburg (with Allegheny) contains the second largest Jewish community in Pennsylvania.

The first Jewish settlers in **Harrisburg** arrived from Germany in the early forties. The oldest congregation is Ohev Sholom, established in 1851 (present rabbi, Samuel Friedman); Chisuk Emmunah and Beth-El were established after 1884. The city possesses also a benevolent society and two other societies. The present (1904) Jewish population of the city is 1,200 in a total of about 70,000 inhabitants. Other important towns containing many Jewish residents are: **Wilkesbarre,** whose first synagogue, B'nai B'rith, was incorporated in 1848; **Scranton,** which has three synagogues, the earliest, the Anshe Chesed, having been incorporated Jan. 7, 1862; **Reading,** which has two congregations, one of which, the Oheb Sholom, was founded May 1, 1864. In addition, the following towns contain enough Jewish families to support at least one synagogue: Allentown, Altoona, Beaver Falls, Braddock, Bradford, Butler, Carbondale, Chambersburg, Chester, Connellsville, Danville, Dunmore, Duquesne, Erie, Greensburg, Hazleton, Homestead, Honesdale, Johnstown, McKeesport, Newcastle, Oil City, Phœnixville, Pottsville, Shamokin, Sharon, Shenandoah, South Bethlehem, South Sharon, Titusville, Uniontown, Washington, Williamsport, and York. Jews are settled with some sort of organization in at least fifty towns in the state.

The expulsion of the Jews from Russia was the occasion of many settling in this state. They began to arrive in 1882, and at the present time they constitute the majority of the Jewish population.

Summary.

In the state of Pennsylvania there are thirty-four cities and towns with one or more Jewish institutions. Of these 31 have 92 regularly organized congregations, 2 hold holy-day services, and in 1 no communal religious life exists. There are 59 congregations with a membership of about 7,000 and an income of over $120,000; 8 congregations are affiliated with the Union of American Hebrew Congregations; 38 have together 33 cemeteries, and there are 2 cemeteries independent of organized congregations; 29 congregations report schools with 2,433 pupils; 7 schools are affiliated with the Hebrew Sabbath-School Union of America. Free religious schools are conducted by 2 societies, 1 reporting an income of $3,187, with 2,721 pupils; there are 2 Hebrew Free Schools with an income of $5,660, and instructing 430 pupils.

Exclusive of the schools and classes for religious instruction, there are, chiefly in Philadelphia, Pittsburg, and Wilkesbarre, the following educational agencies: 1 manual-training school; 4 societies conducting industrial classes; 2 societies conducting evening classes; 2 kindergartens; 1 day-nursery; 2 alumni associations, furthering religious instruction; and 1 college for Hebrew studies. Three of these report an income of $21,316, and 3 others report 499 pupils. There are 41 charitable societies, 23 of which report an income of $219,324, of which $193,396 must be set to the credit of Philadelphia.

The charitable societies include 3 orphan asylums, 1 hospital, 1 home for incurables, 1 maternity hospital, 1 "friendly inn" and home for the aged—all except 1 orphan asylum being in Philadelphia. There are 11 social clubs (5 with an income of $25,620), 4 associations for young men (2 with an income of $4,718), 1 loan-association, 14 mutual-benefit societies—all in Philadelphia. There are also 12 literary clubs (11 in Philadelphia) and 2 musical associations.

In two cities there are branches of the Alliance Israélite Universelle; in four, sections of the Council of Jewish Women; in five, 9 Zionist societies; and in seventeen, 60 lodges. The last-mentioned are distributed among the orders as follows: 25, Independent Order B'nai B'rith; 6, Independent Order

Free Sons of Israel; 17, Independent Order Sons of Benjamin; and 12, Order B'rith Abraham. The present population of Pennsylvania is 6,302,115, including more than 100,000 Jews. See Aaronsburg, Lancaster, Philadelphia, Pittsburg, Reading, Scranton, Wilkesbarre.

D. M. Fr.

PENSO, JOSEPH (known also as **Penso Vega or de la Vega**): Merchant, poet, and philanthropist; born at Espejo, Spain, about 1650; died at Amsterdam Nov. 13, 1692. He was the son of Isaac Penso Felix and of Esther de la Vega, whose family name he assumed, and who was a relative of the Vegas that founded a Talmudic school in Leghorn. His father was a Marano, who had made a solemn vow in the dungeon of the Inquisition that within a year after regaining his liberty he would openly profess Judaism. This oath he fulfilled in Middelburg after his escape to Antwerp. Isaac, from the time of his marriage until his death, which occurred in Feb., 1683, distributed 80,000 gulden as tithes from his profits.

Joseph went while still young to Amsterdam, where he was taught by Isaac Aboab and Moses Raphael de Aguilar. When in his eighteenth year he completed his first Hebrew drama, "Asire ha-Tiḳwah" ("Pardes Shoshannim"), in three acts, which appeared in Amsterdam in 1673 (2d ed., Leghorn, 1770), and in which he allegorically depicted the victory of the will over the passions. He became a respected merchant and an elegant Spanish poet, and filled the honorary offices of president of the Academia de los Sitibundos and secretary of the Academia de los Floridos, founded by Manuel de Belmonte. Penso wrote over 200 letters to different princes and statesmen, and was a prolific author, "the marvel of the academies, who made his work proof against criticism by presenting his subject in ordered form; delicate in his sentiments and of true refinement," as De Barrios ("Arbol de las Vidas," p. 90) characterizes him.

Of Penso's works may be mentioned: "Discurso Academico Moral . . . Hécho en la Insigne Academia de los Sitibundos" (Amsterdam, 1683; dedicated to Isaac Senior Texeira in Hamburg); "Triumphos del Aguyla y Eclypses de la Luna" (*ib.* 1683); "La Rosa, Panegyrico Sacro, Hécho en la Insigne Academia de los Sitibundos" (*ib.* 1683); "Rumbos Peligrosos por Donde Navega con Titulo de Novelas la Cosobrante Nave de la Temeridad" (Antwerp, 1684); "Discursos Academicos, Morales, Retoricos, y Sagrados Que Recitó en la Florida Academia de los Floridos" (*ib.* 1685); "Retrato de la Prudencia, y Simulacro del Valor, al Augusto Monarca Guilielmo Tercero, Rey de la Gran Bretaña" (*ib.* 1690); "Confusion de Confusiones; Dialogos Curiosos," Amsterdam, 1688.

Penso had four brothers: **Abraham,** the eldest, who was charitable like his father; **Joseph, David,** and **Raphael,** who lived in London.

PENTAPOLIS (= Πεντάπολις, *i.e.*, a group of five cities; comp. Decapolis).

1. The five Sodomite cities Adamah, Gomorrah, Sodom, Zeboim, and Zoar, expressly called "Pentapolis" in Wisdom x. 6.

2. The five Philistine cities Askelon, Azotus, Ekron, Gath, and Gaza (comp. I Sam. vi. 17, 18) in connection with which Josephus ("Ant." vi. 1, § 1) uses the term "five."

3. Five cities in the district of Cyrenaica in northern Africa: Apollonia, Arsinoe, Berenice, Cyrene, and Ptolemais. Josephus ("B. J." vii. 11, § 1) mentions them in connection with the Jewish war of the year 70 which the Jews had carried thither. The district is called by Pliny ("Historia Naturalis," v. 5, § 5) "Pentapolitana regio." The Pentapolitans are mentioned in Targ. Jonathan and Targ. Yer. to Gen. x. 13, 14, and in Targ. to I Chron. i. 12.

G. S. Kr.

PENTATEUCH: The five books of Moses. The word is a Greek adaptation of the Hebrew expression "ḥamishshah ḥumshe ha-Torah" (five-fifths of the Law) applied to the books Genesis, Exodus, Leviticus, Numbers, and Deuteronomy, and indicating that these five books were to be taken as a whole, as they are in the first distinct reference to a division of the Biblical books by the Greek Sirach (see Jew. Encyc. iii. 145b, *s.v.* Bible Canon). As a consequence the various books are named in Hebrew by the first significant word of the section: Bereshit (Genesis), Shemot (Exodus), Wayiḳra (Leviticus), Bemidbar (Numbers), and Debarim (Deuteronomy); but in the Septuagint, where the different sections had already obtained a separate individuality, they are known by names roughly indicating their contents as dealing with "the beginnings of things," the "exodus" from captivity, the "Levitical" laws, the "numbers" of the Israelites, and the "repetition of the Law." For a detailed account of the contents of each separate book see the articles devoted thereto.

Ancient Jewish tradition attributed the authorship of the Pentateuch (with the exception of the last eight verses describing Moses' death) to Moses himself. But the many inconsistencies and seeming contradictions contained in it attracted the attention of the Rabbis, who exercised their ingenuity in reconciling them. A catena of such reconciliations was given by Manasseh ben Israel in his "Conciliador" (1651). Abraham ibn Ezra was, however, the only Jewish exegete in the Middle Ages to cast any doubt upon the Mosaic authorship, and then only obscurely and with regard to a few detached passages, as in the instances of the reference to the Canaanite (Gen. xii. 6), that to Og's bedstead (Deut. iii. 11), and that to Moses (*ib.* xxxix. 9; see his commentary on Deut. i. 1). Spinoza, in his "Tractatus Theologico-Politicus" (1671, viii., ix.), goes so far as to attribute the composition of the Pentateuch not to Moses, but to Ezra, which view appears to have existed even in the time of the Apocrypha (comp. II Esd. xiv. 21–22). This and other denials of Mosaic authorship led to a new line of defense by Richard Simon, who regarded the Pentateuch as being made up by Moses from earlier documents. This was followed by the hypothesis of Astruc, that the book of Genesis was made up by Moses from two sources, one of which used the word "Elohim" for God, and the other "Yhwh." This method, applied to the other books of the Pentateuch chiefly by De Wette, Ewald, and Hupfeld, led finally to the definitive attribution of the contents of the Pentateuch to five different sources:

(1) The Jahvist, whose work is distinguished by the use of the name "Jahveh" (Wellhausen and Kuenen, J; Dillmann, B).

(2) The Elohist, using the name "Elohim" (Wellhausen, E; Dillmann, C).

(3) The Deuteronomist, who compiled Deuteronomy and "redacted" the Jahvist and Elohist narratives (Wellhausen, D; Dillmann, D).

(4) The Priestly Narrative, beginning with Gen. i.–ii. 3 (Wellhausen, Q; Kuenen, P^2; Dillmann, A).

(5) The Priestly Code, containing the legislative sections of the middle books (Wellhausen, PC; Kuenen, P^1; Dillmann, S).

Allowing, however, for editorial redaction, no less than twenty-eight different sources are distinguished by the latest analysis of Carpenter and Battersby ("The Hexateuch," p. xii., London, 1900). There is nowadays remarkable unanimity among the higher critics with regard to the attribution of the various sections of the Pentateuch to one or other of these five sources, though at times the text is by this means infinitesimally split up by merely formal criteria, as in Gen. xxvii., xxxi., xxxv.; Ex. iv., ix., xx.; Num. xiii.–xvi., xx. In the accompanying tables is given a summary account of the latest analysis as contained in Carpenter and Battersby (*l.c.* i. 272–278).

ANALYSIS OF SOURCES TO PENTATEUCH.

(From Carpenter and Battersby, "The Hexateuch.")

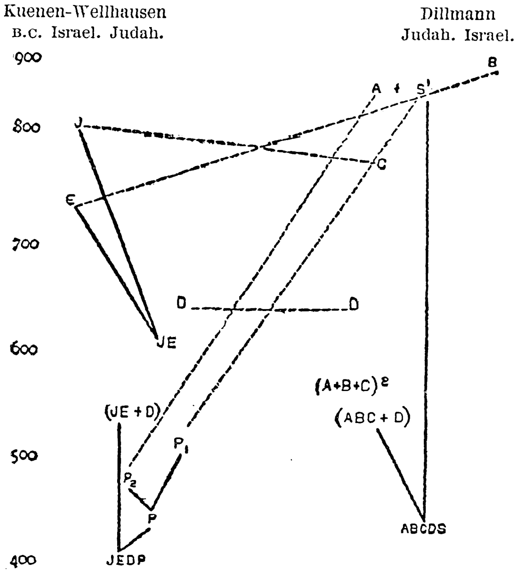
As regards the age of these various sources there is considerable discrepancy of opinion, especially with regard to the Priestly Code and its accompanying narrative. While the older school, represented mainly by Dillmann, who is followed by Renan and Kittel in their histories of Israel, regarded this as the earliest source, to be placed in the ninth century B.C., Kuenen and Wellhausen place it later than any other and connect it with the recovery of the Law by Ezra. Both schools agree in regarding the legal portions of Deuteronomy as identical with the book of the Law discovered by Hilkiah 622 B.C. The differences in the views of the two schools as regards date and provenience are indicated in the table on following page.

The arguments by which Wellhausen has almost entirely captured the whole body of contemporary Biblical critics are based on two assumptions: first, that ritual becomes more elaborate in the development of religion; secondly, that older sources necessarily deal with the earlier stages of ritual development. The former assumption is against the evidence of primitive cultures, and the latter finds no support in the evidence of ritual codes like those of India.

Composition of the Pentateuch.



Wellhausen's views are based almost exclusively on literal analysis, and will need to be supplemented by an examination from the point of view of institutional archeology. See also Bible Exegesis; Hexateuch.

Bibliography: Kuenen, *Hexateuch*, London, 1886; Wellhausen, *Die Composition des Hexateuchs*, Berlin, 1889; Holzinger, *Einleitung in den Hexateuch*, Freiburg, 1893; Carpenter and Battersby, *The Hexateuch*, London, 1900 (the chief recent works). On the relation of institutional archeology to Pentateuch criticism see Jacobs, *Studies in Biblical Archæology*, pp. 12–21. The chief Jewish opponent of the Wellhausen school is D. Hoffmann, *Die Wichtigsten Instanzen Gegen die Graf-Wellhausensche Hypothese*, Berlin, 1904.

E. G. H. J.

PENTECOST ("fiftieth"): Name given by the Greek-speaking Jews to the festival which occurred fifty days (*ἡ πεντηκόστη*, sc. *ἡμέρα* = "Ḥag Ḥamishshim Yom"; comp. Lev. xxiii. 16) after the offering of the barley sheaf during the Passover feast (Tobit ii. 1; II Macc. xii. 32; Josephus, "Ant." iii. 10, § 6; I Cor. xvi. 8; Philo, "De Septenario," § 21). The Feast of the Fiftieth Day has been a many-sided one (comp. Book of Jubilees, vi. 21: "This feast is twofold and of a double nature"), and as a consequence has been called by many names. In the Old Testament it is called the "Feast of Harvest" ("Ḥag ha-Ḳaẓir"; Ex. xxiii. 16) and the "Feast of Weeks" ("Ḥag Shabu'ot"; *ib.* xxxiv. 22; Deut. xvi. 10; II Chron. viii. 13; Aramaic, "Ḥagga di-Shebu'aya," Men. 65a; Greek, *ἑορτὴ ἑβδομάδων*), also the "Day of the First-Fruits" ("Yom ha-Bikkurim"; Num. xxviii. 26; *ἡμέρα τῶν νεῶν*, LXX.). In the later literature it was called also the "closing festival" ("'aẓeret"; Ḥag. ii. 4; Aramaic, "'aẓarta"; Pes. 42b; Greek, *ἀσαρθά* Josephus, *l.c.*). It is called, too, the "closing season of the Passover" ("'aẓeret shel Pesaḥ"; Pesiḳ. xxx. 193) to distinguish it from the seventh day of Passover and from the closing day of the Feast of Tabernacles, *i.e.*, the end of the fruit harvest (Lev. xxiii. 36; Num. xxix. 35; Deut. xvi. 8).

In Palestine the grain harvest lasted seven weeks and was a season of gladness (Jer. v. 24; Deut. xvi. 9; Isa. ix. 2). It began with the harvesting of the barley (Men. 65–66) during the Passover and ended with the harvesting of the wheat at Pentecost, the wheat being the last cereal to ripen. Pentecost was thus the concluding festival of the grain harvest, just as the eighth day of Tabernacles was the concluding festival of the fruit harvest (comp. Pesiḳ. xxx. 193).

Connection with Harvest.

According to Ex. xxxiv. 18–26 (comp. *ib.* xxiii. 10–17), the Feast of Weeks is the second of the three festivals to be celebrated by the altar dance of all males at the sanctuary. They are to bring to the sanctuary "the first-fruits of wheat harvest," "the first-fruits of thy labors which thou hast sown in the field." These are not offerings definitely prescribed for the community; "but with a tribute of a free-will offering of thine hand . . . shalt thou [the individual] rejoice before the Lord thy God, thou and thy son and thy daughter, . . . the Levite that is within thy gates, and the stranger, and the fatherless, and the widow" (Deut. xvi. 9–12). In Lev. xxiii. 15–22, however, there is a regularly appointed first-fruit offering which the whole community must bring. It consists of two first-fruit loaves ("leḥem ha-bikkurim") of new meal, of two-tenths of an ephah, baked with leaven. The loaves were to be waved; hence the name "wave-loaves" ("leḥem tenufah"). Furthermore, various animal sacrifices were enjoined, and no work was permitted. In Num. xxviii. 26–31 the main pentecostal offering is one of new meal ("minḥah ḥadashah"). There is also a list of grain and animal offerings differing somewhat from that in Lev. xxiii. 15–22. These offerings are to be made in addition to the fixed daily offering. In Men. iv. 5, x. 4 the list of Leviticus is referred to the sacrifices directly connected with the loaves, and the Numbers list is referred to the sacrifices for Pentecost considered as a special festival; the one was designated for the journeyings in the desert; the other was added after the Israelites had entered the promised land. The concluding festival of the harvest weeks was largely attended (Josephus, *l.c.* xvii. 10, § 2; *idem*, "B. J." ii., iii. 1; Acts ii. 5).

K. J. L. M.

——**In Rabbinical Literature:** The festival is known in Mishnah and Talmud as "'Aẓeret" (עצרת or עצרתא), excepting in Megillah Ta'anit i., where חגא דשבועיא (= "the Feast of Weeks") occurs, which is explained as meaning "'Aẓeret." "'Aẓeret" is usually translated a "solemn assembly," meaning the congregation at the pilgrimage festivals. The name is applied also to Passover (Deut. xvi. 8) and to Sukkot (Lev. xxiii. 36). Ibn Ezra thinks "'Aẓeret" denotes a holy day, a day of rest and cessation from work (comp. נעצר = "detained," I Sam. xxi. 7). In post-Talmudic and geonic literature the Biblical name "Shabu'ot" was resumed. Pentecost falls on the 6th of Siwan and never occurs on Tuesday, Thursday, or Saturday. Outside of Palestine the Orthodox Jews have since the exilic period celebrated the following day also, as "the second day of Shabu'ot." Pentecost is the fiftieth day of 'Omer, beginning from the second day of Passover. During the existence of the Temple the first-fruits were offered as well as a sacrifice of two loaves of bread from the new harvest, etc. (Lev. xxiii. 15–21).

"The Morrow After Sabbath."

Regarding the Biblical commandment to offer the 'omer "on the morrow after the Sabbath" = ממחרת השבת (*ib.* verse 11), the Rabbis maintained that "Sabbath" here means simply a day of rest and refers to Passover. The Sadducees (Boethusians) disputed this interpretation, contending that "Sabbath" meant "Saturday." Accordingly they would transfer the count of "seven weeks" from the morrow of the first Saturday in Passover, so that Pentecost would always fall on Sunday. The Boethusians advanced the argument "because Moses, as a friend of the Israelites, wished to give them an extended holy day by annexing Pentecost to the Sabbath." Johanan then turned to his disciples and pointed out that the Law purposely fixed the interval of fifty days in order to explain that the seven weeks, nominally, do not necessarily begin from Sunday (Men. 65a, b). See also Pharisees.

Some claim that this controversy was the reason for the substitution by the Talmudists of "'Aẓeret" for "Shabu'ot" or "Weeks," on which the Sadducees, and later the Karaites in the geonic period, based their adverse contention. Another reason might be to avoid confusion with "shebu'ot" = "oaths." The Septuagint translation *τῇ ἐπαύριον τῆς πρώτης* ("on the morrow of the first day") confirms the rabbinical interpretation. Onḳelos paraphrases "mi-batar yoma ṭaba" (= "from after the holy day"). The Karaites accepted the Sadducees' view. They claim to have advanced "lion" (powerful) arguments at the time of Anan (840). In this discussion, they say, Anan sacrificed his life ("Apiryon 'Asah Lo," ed. Neubauer, § 6, p. 11, Leipsic, 1866). Ibn Ezra (*ad loc.*) argues against the contention of the Karaites and claims that as all other holy days have fixed days in the month, it would be unreasonable to suppose that Pentecost depended on a certain day of the week. The original contention of the Sadducees was one of the reasons for fixing the Christian Passover on Sunday, in the year 325 (Pineles, "Darkeh shel Torah," p. 212, Vienna, 1861).

The Cabalists and Pentecost.

Tiḳḳun Lel Shabu'ot.

The traditional festival of Pentecost as the birthday of the Torah (זמן מתן תורתנו = "the time our Law was given"), when Israel became a constitutional body and "a distinguished people," remained the sole celebration after the Exile. The Shabu'ot prayers and Maḥzor have references to this and particularly to the precepts deduced from the Pentateuch. The cabalists arranged a special "tiḳḳun" for Pentecost eve, consisting of excerpts from the beginning and end of every book of the Bible and Mishnah, which abridgment they considered tantamount to the reading of the complete works, and accepted as the approval of the Law. Apparently the custom of studying the Law all night of Pentecost is old (Zohar, Emor, 98a); but there is no record of the practise prior to the Safed cabalists headed by Isaac Luria in the sixteenth century. The custom has since been observed in the eastern states of Europe, and particularly in the Orient. The reading occupies the pious till morning; others finish it at midnight. The collection is called "Tiḳḳun Lel Shabu'ot" (= "Preparation for Pentecost Eve"; comp. the "Tiḳḳun Lel Hosha'na Rabbah" for Tabernacles). The Pentateuch reading contains three to seven verses from the beginning and the end of every "parashah" ("sidra"). Some of the important sections are read in full, as follows: the days of Creation (Gen. i. 1–ii. 3); the Exodus and the song at the Red Sea (Ex. xiv. 1–xv. 27); the giving of the Decalogue on Mount Sinai (*ib.* xviii. 1–xx. 26, xxiv. 1–18, xxxiv. 27–35; Deut. v. 1–vi. 9); the historical review and part of "Shema'" (*ib.* x. 12–xi. 25). The same method is used with the excerpts from the Prophets: the important ch. i. of Ezekiel (the "Merkabah") is read in full. The Minor Prophets are considered as one book: the excerpts are from Hos. i.1–3, Hab. ii. 20–iii. 19, and Mal. iii. 22–24 (A.V. iv. 4–6). Ruth is read in full; and of the Psalms, Ps. i., xix., lxviii., cxix., cl. The order of the twenty-four books of the Scriptures is different from the accepted one: probably it is an ancient order, as follows: (Torah) Five Books of Moses; (Prophets) Joshua, Judges, Samuel, Kings, Isaiah, Jeremiah, Ezekiel; (Minor Prophets) [Hagiographa] Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Solomon, Lamentations, Daniel, Esther, Chronicles, Ezra = 24 books. Next, the excerpts from mishnayyot are read, the beginning and end of every treatise, in all sixty-three, with some important chapters in extenso; next, the "Sefer Yeẓirah"; the 613 precepts as enumerated by Maimonides (see Commandments, The 613). Later, excerpts from the Zohar bearing on the subject were added, with opening and concluding prayers. The whole reading is divided into thirteen parts, after each of which a "Ḳaddish di-Rabbanan" is recited.

The Zohar calls the time between Passover and Pentecost the "courting days of the bridegroom Israel with the bride Torah." Those who participate in the tiḳḳun celebration are the Temple-men = "בני היכלא of the King [God]." The Zohar has two epigrams on Pentecost: (1) "In the twin month [zodiac sign of Gemini] the twin Law [written and oral] was given to the children of twin Israel [Jacob and Esau]." (2) "In the third month [Siwan] the treble Law [Pentateuch, Prophets, and Hagiographa] was given to the third [best] people" (Zohar, Yitro, 78b).

Because the Law was given on Pentecost, the Rabbis wished to make that day the most enjoyable holy day. R. Joseph ordered a third (best) calf for the festival, saying: "Were it not for this day how many Josephs would there be in the street!" ("without the Law there would be no distinction of scholarship," Pes. 68b). A popular custom on Pentecost is to eat dairy foods and cheese-cakes in honor of the Law, which is likened to "honey and milk" (Cant.

iv. 11). The meat meal follows the milk meal. These two meals represent the two loaves of bread, formerly offered in the "bikkurim" offering at the Temple service.

In the synagogue the scroll of Ruth is read because the story of Ruth embracing Judaism and the description of the scene of harvesting are appropriate to the festival of the Law and of the harvest. Another reason given is that King David, a descendant of Ruth, died on Pentecost ("Sha'are Teshubah" to Oraḥ Ḥayyim, 494).

The custom widely prevails of displaying greens on the floors and of otherwise decorating the home and the synagogue with plants, flowers, and even with trees. The greens serve to remind one of the green mountain of Sinai; the trees, of the judgment day for fruit-trees on Pentecost (R. H. i. 2); they also commemorate the harvest festival of former times.

Floral Decorations and Confirmation.

The rite of confirmation for Jewish girls in the synagogue on Pentecost was introduced by the Reform party. This festival was selected because it was the birthday of Judaism. The story of Ruth's recognition of the Jewish religion gives color to the exercise (see CONFIRMATION).

The exact day on which the Law was given is, however, in dispute. The Rabbis say it was the 6th of Siwan; according to R. Jose it was the 7th of that month. All agree that the Israelites arrived at the wilderness of Sinai on the new moon (Ex. xix. 1), and that the Decalogue was given on the following Saturday. But the question whether the new-moon day fell on Sunday or Monday is undecided (Shab. 86b).

The three days preceding Pentecost are called "the three days of the bounds" (שלשה ימי הגבלה) to commemorate the incident of the three days' preparation before Mount Sinai (Ex. xix. 11, 12). These days are distinguished by the permission of marriage celebrations, which are prohibited on the other days of Sefirah save Lag be-'Omer and Rosh-Ḥodesh. See AḲDAMUT; FIRST-FRUITS; FLOWERS IN THE HOME AND THE SYNAGOGUE; LAW. READING FROM THE; PILGRIMAGES TO THE HOLY LAND; PRAYER.

E. C. J. D. E.

——**Critical View:** In the Old Testament the exact day of the celebration of Pentecost is not given. It is seen from Ex. xxiii. 10-17, xxxiv. 18 that it was celebrated some time in the late spring or the early summer. In Deut. xvi. 9 (R. V.) the date is given "seven weeks from the time thou beginnest to put the sickle to the standing corn." In Lev. xxiii. 15, 16 the date is more definitely given: "And ye shall count unto you from the morrow after the Sabbath, from the day that ye brought the sheaf of the wave-offering; seven Sabbaths shall be complete. Even unto the morrow after the seventh Sabbath shall ye number fifty days." The meaning of the word "Sabbath" in the phrase "after the Sabbath" ("mi-moḥorat ha-Shabbat") and, consequently, the question as to the day upon which the Pentecost was to fall have constituted a chief point of difference between Jewish sects (comp. Charles, "The Book of Jubilees," vi. 22, 32; xvi. 3). Sabbath may mean either a "festival" (Lev. xxv. 2, 46) or the weekly Sabbath. In the general sense of "festival" the day of bringing the sheaf of the wave-offering ("yom ḥanef"), *i.e.*, "the day after the Sabbath," would mean the day after either the first or the last day of Passover. (*a*) That the "Sabbath" in this case means the first day of Passover is the view of the Septuagint, Targ. pseudo-Jonathan, Targ. Onkelos, Josephus ("Ant." iii. 10, § 5), Philo ("De Septenario," § 20; comp. Ḥag. ii. 4, Men. vi. 1-3), and of the later rabbinic literature. Since, according to this view, the sheaf-offering was waved on the 16th of Nisan, Pentecost, fifty days later, was celebrated on the 6th of Siwan without regard to the day of the week on which that fell. (*b*) That the "Sabbath," according to the general meaning "festival," signifies the seventh day of Passover, *i.e.*, 21st of Nisan, without regard to the day of the week, is the view of the Falashas of Abyssinia, the Syriac version of Lev. xxiii. 11, 15, and the Book of Jubilees (*c*. 135 B.C.). The "day after the Sabbath" is, accordingly, the 22d of Nisan. The Falashas reckon fifty days according to a system of months alternating thirty and twenty-nine days, the Feast of Weeks thus falling on Siwan 12. In Jubilees the Feast of Weeks and Feast of First-Fruits of the Harvest are celebrated on Siwan 15 (Jubilees, xvi. 1, xliv. 4). Reckoning fifty days backward, with an ecclesiastical month of twenty-eight days, one arrives at Nisan 22 as the date when the wave-sheaf was offered. (*c*) The term "Sabbath," as is shown above, was taken to mean also the weekly Sabbath.

According to the Sects.

Association with the Giving of the Law.

It is difficult to determine whether the controversy as to the date of the celebration of Pentecost was merely a question of calendation or whether it had its origin in the attempt to assign to the festival a historical motive such as was lacking in the Old Testament. Just as Passover and Tabernacles were associated with historical events, so Pentecost was brought together with the day on which the Torah was given on Sinai (Ex. R. xxxi.; Shab. 88a; Pes. 68b; Maimonides, "Moreh," iii. 41; comp. Ex. xix. 1). That this association had something to do with the calendar controversy would seem to follow from the fact that both Philo and Josephus make no mention of either the giving of the Law on that day or of the calendar dispute. Some insight into the origin of this association of Pentecost with the giving of the Law is afforded by Jubilees where the covenant with Noah as regards the eating of blood is made on the Feast of Weeks. This covenant is renewed with Abraham and with Moses on the same day. It needed but a step for later times to place the covenant on Sinai also on the same day.

According to Jubilees, Isaac was born (xvi. 13), Abraham died (xxii. 1), Judah was born (xxviii. 15), and Jacob and Laban bound themselves by mutual vows (xxix. 7) on the Feast of Weeks. See Jew. Encyc. v. 374b, *s.v.* Festivals (Shabu'ot). The relation of the Jewish to the Christian Pentecost with its pouring out of the spirit as an analogy to the giving the Law in seventy languages is obvious.

K. J. L. M.

PEOR: Mountain in the plains of Zophim, overlooking Jeshimon, where Balak took Balaam to induce him to curse Israel. According to the "Onomasticon" of Jerome, it was situated opposite Jericho, near a city named "Danaba." Although the mountain has not yet been identified with certainty, the latest researches seem to indicate El-Mushakkar.

E. G. H. S. O.

PE'OT (plural form of "pe'ah" = "segment," "side," "border"): Side-locks worn by Jewish men, especially those of Poland and Russia. Strictly conforming themselves to the Biblical precept in Lev. xix. 27, they allowed the hair to grow on both sides of the head and to hang down in curls or ringlets. The cutting of the side-locks was considered a heathen custom; therefore this law, as interpreted by some authorities, forbids the removal of the side-locks with a razor or the clipping of them with scissors (see RABaD to Sifra, Ḳedoshim, vi. [ed. Weiss, 90c]; Bertinoro and Lipschitz to Mak. iii. 9; *ib.* Gemara, 20b; Jew. Encyc. ii. 614, *s.v.* Beard). According to Maimonides, "Yad," 'Akkum. xii. 6, one is allowed to cut off hair of the side-locks with scissors.

For many centuries most of the Eastern European Jews observed this Biblical law; but in 1845 Czar Nicholas I. of Russia decreed that his Jewish subjects should no longer wear either the Polish-Jewish costume or side-locks. Forcible means were used to enforce this ukase; nevertheless the side-locks are still extensively worn by Jews of eastern Europe, as also of the Orient. To-day some of the Ḥasidim also obey the Biblical law.

A. S. Man.

PERÆA: Division of Palestine, extending, according to Josephus ("B. J." iii. 3, § 3), from Macherus in the south to Pella in the north, and from the Jordan in the west to Philadelphia (Rabbat Ammon) in the east. But in fact it covered a much larger area, stretching from the Yarmuk in the north to the Arnon in the south, thus including the territories of Bashan, Gaulanitis, and the Hauran, from the present Jabal 'Ajlun to Al-Balḳa. It is a rough plateau, sloping abruptly toward the Jordan in the west, with a more gradual descent in the east toward the Arabian desert. Although the vegetation of Peræa is far less rich than that of Palestine and Galilee, the country contains good pasturage and the soil may be easily cultivated. The following rivers, mentioned in the Bible, belong to Peræa: the Jabbok (Gen. xxxii. 22); the Arnon (Num. xxi. 13; Deut. iii. 8); the Zered (Num. xxi. 12; Deut. ii. 13); the Abana, and the Pharpar (II Kings v. 12). The Talmud gives the Yarmuk (ירמוך; Parah viii. 10; B. B. 74b).

The principal cities of Peræa, mentioned in the Bible, are: Ashteroth Karnaim (Gen. xiv. 5); Mahanaim (Josh. xiii. 26, 30); Ramoth in Gilead (Josh. xxi. 38; Deut. iv. 43); Beth-peor and Medeba (Josh. xiii. 9, 16, 20); and Bezer (Deut. iv. 43). The literature of the Talmudic period mentions the following cities as belonging to Peræa, or the territory designated as Peræa: Gadara ('Ar. ix. 6); Ragab (Men. viii. 3); Tarela (Yer. Ḥag. i. 1); Amathus (Eusebius, "Onomasticon"); Gerasa (Midr. Shemu'el xiii.); Callirrhoe (קלרהי; Gen. R. xxxvii.); and Makar (מכוור; Ta'an. 33a).

Peræa did not become of importance in the political history of Judea until the time of the Maccabees. The first Jewish prince to subjugate Peræa was Judas Maccabeus. John Hyrcanus subdued Medeba, while Alexander Jannæus took the fortresses of Gadara and Amathus and levied tribute upon the Moabites and Gileadites (see Josephus, "Ant." xiii. 13, §§ 3-5). The greater part of Peræa remained Jewish until the time of Herod; Gabinius assigned a sanhedrin to it in 63 C.E., when he divided Judea into five districts. Fifty years later Herod's brother Pheroras was appointed tetrarch of Peræa ("Ant." xv. 10, § 3). It was subjugated by Vespasian in 67, before the fall of Jerusalem. In the Talmudic time Peræa did not have as favorable a reputation as Judea and Galilee; for, according to the Abot de-Rabbi Natan, Judea represented the grain, Galilee the straw, and 'Eber ha-Yarden (= Peræa) the chaff.

PERAḤYAH, AARON B. ḤAYYIM (ABRAHAM) HA-KOHEN: Rabbi and author; flourished at Salonica in the seventeenth century; a pupil of Ḥasdai Peraḥyah ha-Kohen. He was the author of the following four works: (1) "Paraḥ Maṭṭeh Aharon" (Amsterdam, 1703), responsa written between the years 1647 and 1695. (2) "Pirḥe Kehunnah" (*ib.* 1709), novellæ on certain Talmudic treatises. Both works were edited by his son Azriel, who wrote the introductions. The Amsterdam rabbis, among whom was the well-known Solomon Ayllon (comp. Grätz, "Gesch." x., note 6), gave their approbation to these works. (3) "Zikron Debarim" (Salonica, 1747), a collection of "dinim" and shorter responsa, with an introduction by Samuel Florentin the Younger. (4) "Bigde Kehunnah" (*ib.* 1753), homilies and funeral orations. The last two works were carried through the press by Samuel Mishan, a grandson of the author, in collaboration with Elijah Ḥakim (Zunz, "G. V." ii. 445; Grätz, *l.c.*).

E. C. L. Grü.

PERAḤYAH B. NISSIM: Tosafist of the second half of the thirteenth century; the author of novellæ on certain Talmudic treatises, some of which were reprinted by Mas'ud Ḥai Roḳeaḥ in his "Ma'aseh Roḳeaḥ" (Venice, 1752). Peraḥyah's commentary on the treatise Shabbat exists only in manuscript. In this work he uses Arabic words, and quotes Abraham b. Moses Maimonides, adding the phrase "zakur li-berakah" (= "of blessed memory").

Bibliography: Neubauer, *Cat. Bodl. Hebr. MSS.* No. 438; Fürst, *Bibl. Jud.* iii. 76; Benjacob, *Oẓar ha-Sefarim*, p. 182, No. 440.

E. C. J. Z. L.

PEREDA: Palestinian amora of the second generation; probably a pupil of R. Ammi, to whom he addressed a halakic question (Men. 53a). Once, when his pupils announced the visit of R. Ezra b. Abtolemus (Eu[p]tolemus), adding that he was a descendant of Eleazar b. Azariah, Pereda answered: "What avails his noble descent? It is enough if he is a scholar, though his lineage is no detriment; but if he is of noble descent and yet no scholar, may the fire consume him" (Men. *l.c.*).

Pereda was extremely industrious, and exercised infinite patience with his pupils ('Er. 54b). He attained a great age, and when his disciples asked him how he had deserved it, he answered that it was because he had always been the first to appear in the bet ha-midrash, and had never refused due respect to a priest (Meg. 27b-28b). His patience as a teacher was legendary.

None of Pereda's halakic teachings is extant, but the following haggadic interpretation by him of Ps. xvi. 2-3 has been preserved: "Israel said unto God, 'Count it to mine honor that I have made the world to know Thee'; but God answered: 'Not to thine honor is it, but to the glory of thy forefathers, through whom the world first knew Me'" (Men. 53a).

W. B. J. Z. L.

PEREFERKOVICH, NAHUM ABRAMOVICH: Russian author and translator; born at Stavropol, Caucasia, in 1871, receiving there his early education. In 1894 he was graduated by the faculty of Oriental languages of the University of St. Petersburg, with a gold medal for his dissertation "Svod Talmudicheskikh Svyedyeni o Gnosticheskikh Sektakh." Thence dates the beginning of his literary and scientific activity, his writings appearing in Jewish periodicals and as separate works. The more important of his works include: "Talmud, Yevo Istoriya i Soderzhaniye," part i., "Mishnah," St. Petersburg, 1897; "Chto Takoye Shulkhan-Arukh?" *ib.* 1899; "Talmud, Mishna i Tosefta," *ib.* 1899-1904, the first Russian translation of the whole Mishnah, and the first complete translation of the entire Tosefta into a European language. At present (1904) Pereferkovich is engaged in the translation of the Mekilta, Sifra, and Sifre.

The critical translation of the Talmud, the most important of his works, was favorably received not only by the critics, but also by the general public, as is shown by the sale of more than 4,000 copies in a short time. The main portion of its readers consists of Russian clergymen, who find in the work not only a literal, carefully explained translation of the Mishnah in connection with amplifications from the Tosefta, but also a wealth of supplementary information on various phases of Jewish religious life, formerly altogether unknown to Christians, but assumed in the Talmud as known to the reader. The translation was published, with diagrams and archeological sketches, by the St. Petersburg firm (Christian) of Soikin.

Pereferkovich is instructor in the Jewish religion in the so-called German gymnasiums of St. Petersburg.

H. R. *

PEREIRA, DIEGO (MOSES) LOPEZ. See Aguilar, Diego d'.

PEREIRA, JONATHAN: English physician and medical writer; born in London May 22, 1804; died there Jan. 20, 1853. He was educated at the Aldersgate General Dispensary and at St. Bartholomew's Hospital, graduating as apothecary in 1823, and receiving the degree of M.D. "honoris causa" from Erlangen University in 1840. For two years he was private tutor for pharmacological examinations. In 1826 he became lecturer on chemistry at the Royal College of Surgeons. In 1832 he established himself as a physician in London, and was appointed professor of materia medica and lecturer in chemistry at the Aldersgate Medical School. In 1839 he became professor and lecturer at the London Hospital, where he received the position of assistant physician in 1841. In 1843 he was elected professor of materia medica at the school of the Pharmaceutical Society. In 1851 he became consulting physician at the London Hospital. In his memory a marble bust was erected in that hospital; and the Pharmaceutical Society founded the Pereira Medal.

Among his numerous works may be mentioned: "A General Table of Atomic Numbers, with an Introduction to the Atomic Theory," London, 1824; "Selecta e Præscriptis," *ib.* 1824 (11th ed. 1851); "Manual for Medical Students," *ib.* 1826; "Elements of Materia Medica and Therapeutics," *ib.* 1839-40 (transl. into German by Buchheim); "A Treatise on Food and Diet," *ib.* 1843 (German transl. Bonn, 1845).

Bibliography: Hirsch, *Biog. Lex.* iv. 532, 533; *Pharmaceutical Journal* (London), March, 1853; *Illustrated London News* (ib.), vol. xxii.; *Times* (ib.), Jan. 24, 1853.

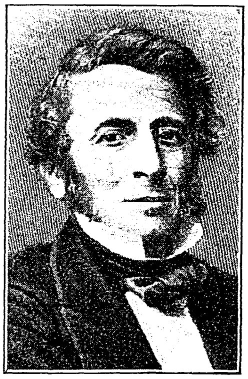
J. F. T. H.

PEREIRE: French family of which the following are the most distinguished members:

(Jacob) Emile Pereire: French banker; grandson of Jacob Rodrigues Pereire; born at Bordeaux 1800; died at Paris Jan. 5, 1875. At the age of twenty-two he went to Paris and entered a bank. Four years later he became associated with the economic interests of the adherents of St.-Simonism through Olinde-Rodrigues. In 1830 he was the promoter of a "comptoir d'escompte," designed to benefit commerce and industry, being aided in this by his brother Isaac. In 1852 he founded both the Crédit Foncier de France, which replaced the Banque Foncière, and the Société Générale du Crédit Mobilier, later extending this last institution, with the help of his brother Isaac, into Spain.

Pereire's activity in the promotion and organization of railroads was extraordinary. In 1835 he promoted the line from Paris to Saint-Germain-en-

Laye; two years later, the Paris-St.-Cloud-Versailles system; in 1845, the Compagnie du Chemin de Fer du Nord; in 1851, the Argenteuil railroad, and in the following year, the Auteuil line and the Compagnie des Chemins de Fer du Midi.



Emile Pereire.

Pereire was interested also in some of the railroad systems of Austria, Russia, and Spain, the lighting and heating systems of Paris and the omnibus lines of the same city, the Compagnie Générale Transatlantique, the Madrid Gas Company, the Imperial Ottoman Bank, and many other financial institutions. He was likewise a member of the General Council of the Gironde from 1853 to 1875, and of the Corps Législatif from 1857 to 1870.

Pereire began literary work as editor of "Le Globe" (1831-32), an organ of the Saint-Simonists, acting at the same time as collaborator on "Le Commerce," the organ of the liberal economic school, and on the "Connaissances Utiles," in which he advocated the establishment of savings-banks throughout France. In 1832 and 1833 he edited "La Revue Encyclopédique," and from 1832 to 1835 was editor of "Le National," the organ of the Republican party. In 1860 he published a pamphlet which attracted much attention and was attributed to Napoleon III.; it was entitled "L'Empereur François-Joseph et l'Europe," and attempted to solve the Austro-Italian problem.

Eugène Pereire: French financier; born at Paris Oct. 1, 1831; son of Isaac Pereire. Graduating in 1852 from the Ecole Centrale as civil engineer, he acted as an administrator of the Chemin de Fer du Midi, and was one of the organizers of the Crédit Mobilier Espagnol. He also took an active part in the organization of a railroad in northern Spain, of which he was for some time one of the directors, besides being a director of the omnibus and the gas companies of Paris, and of the Marseilles Dock Company. He furthermore was president of the Compagnie Générale Transatlantique, the Union and Phœnix insurance societies of Spain, the docks and workshops of Saint-Nazaire, the Banque Transatlantique, and the Bank of Tunis.

Pereire was elected deputy for Castres in the department of Tarn, and has also served as consul-general to Persia, being created a commander of the Legion of Honor and an officer of public instruction. Following the example of his great-grandfather, Pereire has devoted himself to the study of the education of deaf-mutes, and was for many years a member of the Board of Instruction of the National Institute for Deaf-Mutes.

He is the author of two works: "Tables Numériques de l'Intérêt Composé des Annuités et des Rentes Viagères" (1860) and "Tables Graphiques de l'Intérêt Composé" (1865). Pereire is a member of the Central Jewish Consistory of France.

J. Ka.

Isaac Pereire: French financier; born Nov. 25, 1806, at Bordeaux; died July 12, 1880, at Armanvilliers; grandson of Jacob Rodrigues Pereire. While still young he lost his father, and in 1823 went to Paris as employee in a bank. From this time he and his brother Emile were inseparable. Through Olinde-Rodrigues, a relative and the foremost pupil of St. Simon, the two brothers were introduced to Rodrigues' followers and became at once enthusiastic supporters of St.-Simonism, making active propaganda, together with Enfantin, Michel Chevalier, Eugène Rodrigues, Duveyrier, and others. The brothers then took up journalism, Isaac becoming collaborator on the "Globe," "Temps," "Journal des Débats," etc.

In 1835, amid great financial difficulties, Pereire and his brother Emile built the first railway in France, that from Paris to St.-Germain; in 1836 they constructed the Paris-Versailles line, and in 1845 the Chemin de Fer du Nord. In 1852 the two brothers founded, not without reference to St.-Simonistic ideas, the Société Générale du Crédit Mobilier, which had for its object the carrying out of great undertakings by means of the union of small capitalists, thereby allowing the latter to share in the profits. This institution undertook the building of several large railways in France, Switzerland, Russia, and Spain, and founded several gas and omnibus companies. Although the Crédit Mobilier, which caused radical changes in the entire financial market, was obliged to liquidate in 1867, Isaac and Emile Pereire remained prominent financiers. Both, together with Isaac's son Eugène, were returned to the Corps Législatif in 1863.

Isaac, who was made a knight of the Legion of Honor, was distinguished for his philanthropy. In 1880 he founded a prize of 100,000 francs, divided into four series, for the best works on social economics. Although he remained true to the religion of his fathers, he used his influence in favor of the Roman Catholic Church, and voted in the Chamber for the maintenance of the temporal power of the pope.

From 1876 to 1880 Pereire was the owner of the Paris daily "La Liberté," in which he developed his political and industrial program. Several of his studies have been collected in pamphlet form under the titles "Politique Industrielle," "Politique Financière," "Conversion et Amortissement," and "Questions des Chemins de Fer." He was, besides, the author of the following works: "Leçons sur l'Industrie et les Finances, Prononcées à la Salle de l'Athenée," Paris, 1832; "Le Rôle de la Banque de France et l'Organisation du Crédit en France," *ib.* 1864; "Principes de la Constitution des Banques," *ib.* 1865; "La Question Religieuse," *ib.* (German transl. by H. Deutsch, Vienna, 1879).

Bibliography: H. Deutsch, *Die Religiöse Frage von I. Pereire*, Preface; *Men of the Time*, 8th ed., p. 761; *Allg. Zeit. des Jud.* xliv. 471.

M. K.

Jacob Rodrigues Pereire: First teacher of deaf-mutes in France; born at Berlanga, Spain, April 11, 1715; died at Paris Sept. 15, 1780. His father, Abraham Rodrigues Pereira, and his mother had been obliged to profess Christianity, and Jacob himself was baptized with the name of **Francisco Antonio Rodrigues,** which he later signed to certain pamphlets in Spain. After his father's death his mother fled with her son from Portugal to escape the charge that she had relapsed into heresy, and about 1741 she settled at Bordeaux. After ten years of study of anatomy and physiology and numerous experiments on congenital deaf-mutes, Pereire received on Jan. 19, 1747, the first testimonial for his labors from the Royal Academy of Belles-Lettres of Caen. In 1749 he set forth his system in a memoir before the Royal Academy of Sciences at Paris. In the following year Louis XV. granted him 800 pounds as a mark of esteem. A memoir read before the Academy on an arithmetical machine which he had invented brought him a pension of 800 pounds annually from the king (Oct. 26, 1751), while in 1753 he received honorable mention at a conference held by the Academy to determine the most advantageous methods of supplementing the action of the wind on large sailing vessels. In 1760 the Royal Society of London made Pereire a member, and in 1765 he was appointed royal interpreter for Spanish and Portuguese. On Nov. 5 of the following year he married his kinswoman Miryan Lopes Dias.

His foreign birth, his Jewish faith, and a certain timidity of character, however, all conspired against Pereire, and the sharp competition to which he was exposed compelled him to yield to his rival, Abbé Charles Michel de l'Epée, in whose favor the council passed a decree (Nov. 21, 1778) which placed the school of deaf-mutes, founded by the abbé, under the protection of Louis XVI.

Throughout his life Pereire was devoted to the welfare of the Jews of southern France, Portugal, and Spain. From the year 1749 he voluntarily acted as agent for the Portuguese Jews at Paris, although this title was not officially bestowed upon him until 1761. It was through him that Jews from Portugal first received the right to settle in France (1777). In 1876 Pereire's remains were transferred from the Cimetière de la Villette (where he had been buried the very year in which that cemetery was opened) to that of Montmartre.

S. J. Ka.

PERETZ, ABRAHAM: Russian financier; friend and contemporary of Nathan Notkin and Nevakhovich. He was a son of the rabbi of Levertov, Galicia, and son-in-law of Joshua Zeitlin of Shklov. In the reign of Paul I., Peretz, in partnership with the Khersonese merchant Stiglitz, contracted with the government for the purchase of Crimean salt. This contract was discussed in the Senate and received the imperial sanction. About this time Peretz probably became acquainted with Derzhavin, and later, on the advice of Potemkin, he removed to St. Petersburg. Being a Jew, he could not legally remain in the metropolis; nevertheless he stayed there most of the time, only returning home for the holy days. As his commercial operations became more extensive, many prominent people enjoyed his hospitality. He became intimate with Speranski, and undoubtedly gave him much information. Among the friends of Peretz was the statesman Kankrin, who later became minister of finance. Speranski spent many hours in Peretz's house, and was on this account made the object of bitter attacks, even being accused of accepting bribes from Peretz.

When, in 1802, a commission was appointed by the emperor to investigate the Jewish question, Peretz, Notkin, and Nevakhovich took an active interest in its work. The commission, consisting of Kochubei, Zubov, Chartoryski, Severin-Pototzki, and Derzhavin, gave information to the governors of the governments in which Jews resided, and advised them to acquaint the Jewish communities with the purpose of the commission. In 1803 delegates from the Jewish communities were invited to visit St. Petersburg in order that the commission might become better acquainted with the conditions of Jewish life in Russia. At this time Peretz was in a position to render valuable service to his coreligionists. His immense commercial undertakings and the high standing of his acquaintances enabled him to exert a decided influence for good on contemporary legislation; and through his friend Speranski he was enabled to further the Jewish cause.

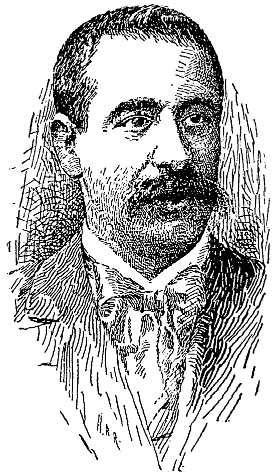
On the death of his wife, Peretz was baptized and married a German who became the mother of his younger children. His son **Hirsch,** by his first wife, was a boy of great promise; but, becoming involved in the Dekabrist outbreak in 1825, was sent to Siberia, and later was transferred to Odessa, where he died in banishment. Peretz's daughter by his first wife married Senator Baron Grebnitz. Another son of his held (1856–58) the position of inspector of the Technological Institute. With the fall of Speranski, Abraham Peretz's good fortune forsook him, and he became a poor man.

Bibliography: *Voskhod*, 1881, ii. 30; Hessen, *Sto Lyet Nazad*, St. Petersburg, 1900.

H. R. J. G. L.

PERETZ, ISAAC LÖB: Writer in Yiddish and Hebrew; born at Samoscz, government of Lublin, May 25, 1851. In the Hebrew school in which he received his early education he so distinguished himself in his Hebrew studies that he was denominated an "iluy." On completing his education in Hebrew Peretz turned his attention to secular studies; with them he entered upon a period of "enlightenment." He criticized Jewish customs, occasionally wrote poems in Yiddish or Hebrew, and was reputed a "maskil." To this period belong his poems "Ḥalukat ha-Ḥokmot" (published in "Ha-Shaḥar," 1876, p. 192, a journal that supported the Haskalah movement) and "Sippurim be-Shir we-Shirim Shonim" (in conjunction with G. J. Lichtenfeld, Warsaw, 1877). After this Peretz produced nothing further until 1886, when his poems "Manginot ha-Zeman" and "Ha-'Ir ha-Ḳeṭannah" appeared in "Ha-Asif." In the latter poems an advance over his previous productions was apparent. At this time Peretz was living in his native town, practising as an attorney at law. Probably as the result of government restrictions, he was soon compelled to abandon the practise of law and seek a livelihood elsewhere. In Warsaw he secured a position as clerk in the offices of the Jewish congregation, and since then has devoted himself to literature.

Peretz tells the story of the common people in their own dialect, and with simplicity and force. He is chiefly distinguished, however, for his keen insight into the psychological constitution of his heroes. He is not a realist in the full sense of the term; he does not merely depict life as it is; he takes up the cause of his heroes and pleads it for them. This characteristic gives to the writings of Peretz a note of "Tendenz." Yet, though fighting in this manner against both the constitution of the ghetto and the social order (for this Peretz has already been imprisoned once by the government), he sees not only the dark side of the things against which he fights, but their bright side also. This trait he displays particularly in his Ḥasidic sketches, in which, with an inclination to the fantastic and with his powerful imagination, he masterfully reveals the whole inner world of Ḥasidic life. There is also an element of symbolism in the writings of Peretz, particularly in his poems. These, however, are not the best of his productions.



Isaac Löb Peretz.

The collected writings of Peretz have been published, in Hebrew ("Kol Kitbe Pereẓ," Warsaw, 1899), in Yiddish, on the fiftieth anniversary of his birth ("Schriften," *ib.* 1901), and in Russian (St. Petersburg, 1902–3); they have appeared also in several other European languages. "Ha-'Ugab," poems, was published in 1896.

H. R. A. S. W.

PEREYRA, ABRAHAM ISRAEL (Marano name, **Thomas Rodrigues Pereyra**): Spanish writer and philanthropist; born at Madrid; died 1699 at Amsterdam. He went to Venice to escape the persecution of the Inquisition, and thence to Amsterdam.

Pereyra was highly esteemed on account of his wealth and culture, and for several years was president of the Spanish-Portuguese community in Amsterdam. He was a warm admirer of Shabbethai Ẓebi, to visit whom he, in company with Isaac Naar, made a journey to Italy. He also wished to go to Gaza to pay homage to the pseudo-Messiah. He donated 46,000 gulden to the Talmud Torah at Amsterdam, and founded the Talmudic seminary at Hebron, in which the physician Meïr (like Pereyra, an adherent of Ẓebi) lived for some time.

Of Pereyra's works the following have been published: (1) "La Certeza del Camino," dedicated to Señor Dios de Israel (Amsterdam, 1666). This work, consisting of twelve sections, the fruit of twelve years' labor, contains reflections on Providence, the vanity and emptiness of the world, human misery, love and reverence for God, on virtues and vices, rewards and punishments, etc. (2) "Espejo de la Vanidad del Mundo" (*ib.* 1671), with sonnets of Isaac Orobio de Castro and Daniel Levi de Barrios. (3) "Discursos Legales Sobre la Verdad de la Ley" and "Livro Que Contem o Termo é Codicoẽs con Que vos Srs. do Mahamad do K. K. de Talmud Tora Admitirão o Legado Que nelle Constituiõ Abr. Pereyra," the statutes concerning his gift to the Talmud Torah. The last two are still preserved in manuscript.

Pereyra left five sons, **Isaac, Jacob, Moses, Aaron,** and **David,** and two daughters, **Ribca,** wife of Jacob de Pinto, and **Rachel,** wife of Abraham Cuitiño (Quitiño).

S. M. K.

PEREZ: Marano family of Cordova or Seville, several members of which were victims of the Inquisition in Spain and South America, while several others settled in Turkish territory.

Aaron b. Abraham Perez: Chief rabbi at Jerba, where he died after 1761; pupil of Nissim Ḥayyat. He wrote a somewhat mystical commentary (written in 1738) on the Pentateuch, which appeared, together with interpretations of certain passages of the Prophets and the Hagiographa and some sermons, including two funeral orations, under the title "Bigde Aharon." This likewise appeared in a volume which included also the "Mishḥat Aharon," a commentary on the Talmud, and the "Miktab le-Ḥizḳiyahu," a Biblical commentary by his son Hezekiah Perez, and which was published at the expense of his grandson Maimon Perez (Leghorn, 1806). Aaron composed also liturgical poems; and some of his piyyuṭim were printed at the end of the "Miktab le-Ḥizḳiyahu."

S. M. K.

Abraham Perez: Rabbinical author; lived at Constantinople in the beginning of the nineteenth century. He was the author of a volume of novellæ on the Talmud, as well as on Maimonides and other medieval rabbinical authors, to which is added a work on the laws of ṭerefah by Raphael David Mizraḥi. The whole was published under the title "Abne Shoham" at Salonica in 1848 by David's son Raphael Ḥayyim Benjamin Perez.

S. M. Fr.

Antonio Perez: Wealthy merchant of Saragossa. Being persecuted by the Inquisition, he escaped by flight in 1487. Less fortunate were his sister **Beatriz Perez,** wife of the physician Alfonso de Rivera; **Juan Perez,** born at Seville and prominent at Saragossa; and **Leonor Perez,** wife of Garcia Lopez. All of these were publicly burned at Saragossa as "Jewish heretics," the first-named on March 14, the second on Nov. 7, 1487, and the last-named on March 21, 1488.

Judah Aryeh Leon Perez: Preacher of the eighteenth century. His ancestors lived in Castile; but on the expulsion of the Jews from Spain the family, which was very wealthy, settled in Morocco. His grandfather **Solomon Perez,** a contemporary of Moses Zacuto and author of a commentary, as yet unpublished, on the Zohar, lived first at Tlemçen and then at Tunis, while his father, **Joseph Perez,** went to Italy, where he married a daughter of Solomon Shemaiah of Lucena. Perez himself married a granddaughter of the scholarly Michael Cohen of Salonica. He describes a shipwreck which he suffered, and how he was held captive at Naples for forty days. He then went to Leghorn and to Venice, where he was chosen preacher of the Ashkenazic community, succeeding his relative Isaac Cavallero, who had died at an early age.

Judah lived for an entire winter at Prague as the beneficiary of the primate of the community, Samuel Tausk, and at Kolin, where the rabbi, Baruch Austerlitz, befriended him. For a time he resided also at Amsterdam.

Of his works the following have been published: "Peraḥ Lebanon" (Berlin, 1712), extracts from sermons delivered at Venice, based upon the weekly lessons, and each of which is preceded by extracts from the sermons of Isaac Cavallero, under the title "Naḥal Etan"; "Fundamento Solido, Baza y Thypo de la Sacra Sancta y Divina Ley . . . por un Methodo Facil y Distincto, en Forma de Dialogo" (Amsterdam, 1729), dealing in twelve chapters with the fundamental principles of the Jewish religion, legislation, and the Ten Commandments, the thirteen articles of faith, repentance, penance, and similar topics.

BIBLIOGRAPHY: *Peraḥ Lebanon*, Preface; De Rossi-Hamberger, *Hist. Wörterb.* pp. 259 *et seq.*; Steinschneider, *Cat. Bodl.* col. 1366; Kayserling, *Bibl. Esp.-Port.-Jud.* p. 88.

Luis Nuñez Perez: Lived in Mexico. He became involved as Judaizer in the proceedings which the tribunal of Mexico conducted against Gabriel de Granada in 1642.

On Oct. 28, 1680, the tribunal of Madrid sentenced to imprisonment as "backsliding Judaizers" **Isabel Perez,** twenty-six years of age, and the merchant **Antonio Perez,** aged thirty-three; and on Oct. 21, 1725, the tribunal of Murcia similarly sentenced **Maria Lopez Perez,** seventy years old.

It is not certain whether **Isaac Perez,** of Spanish descent, who practised medicine at Amsterdam in 1742, and Judah Aryeh Leon Perez of Venice (see above) belong to the same family.

Manuel Bautista Perez: Settled at Lima, Peru, where he was brought before the Inquisition on a charge of Judaizing. He was the owner of the royal palace at Lima, which is still called "the house of Pilate," and possessed besides a fortune which would be to-day the equivalent of $1,000,000. He, together with his wealthy partners and coreligionists, was burned at the stake in Lima on Jan. 23, 1639.

D. M. K.

Raphael Ḥayyim Benjamin Perez: Turkish rabbinical author; son of Abraham Perez. He lived at Salonica about the middle of the nineteenth century, and was the author of "Zokrenu la-Ḥayyim" (Salonica, 1847), an index to the Shulḥan 'Aruk. He published, besides, his father's "Abne Shoham."

S. M. Fr.

PEREZ BEN ELIJAH OF CORBEIL: French tosafist; lived at Corbeil in the second half of the thirteenth century; died before 1298, probably in 1295; son of the Talmudist Elijah of Tours. In Talmudical literature he is designated by the abbreviations "RaP" (= Rabbi Perez), "RaPaSh" (= Rabbi Perez, may he live), and "MaHaRPaSh" (= our master Rabbi Perez, may he live). He had for masters R. Jehiel of Paris and Samuel of Evreux.

Perez traveled throughout Brabant, and sojourned for a time in Germany, where he made the acquaintance of Meïr of Rothenburg. On his return home he delivered lectures on Talmudical subjects. These lectures were attended by the most celebrated rabbis of the fourteenth century; and his fame as a Talmudical authority became universal, his commentaries being studied in France, Germany, and Spain.

Perez was the author of the following works: (1) Glosses on the "'Ammude ha-Golah" of Isaac of Corbeil, published together with the text, Cremona, 1556. (2) Commentaries on the greater part of the Talmud. These commentaries, variously entitled "Tosafot," "Shiṭṭah," "Nimuḳim," "Ḥiddushim," "Perishah," underwent many changes introduced by Perez's numerous disciples; only the commentary on the treatise Baba Meẓi'a has been preserved in its original redaction. Two of the commentaries, on Baba Ḳamma and Sanhedrin, were published by Abraham Venano at Leghorn in 1819; that on the tenth chapter of Pesaḥim was reproduced by Mordecai ben Hillel in his "Mordekai"; and many others were given by Bezaleel Ashkenazi in his "Shiṭṭah Meḳubbeẓet." (3) Glosses on the collection of the ritual laws entitled "Tashbaẓ" of Samson ben Zadok, published together with the text, Cremona, 1556–61. (4) "Sefer Pereẓ," a Masoretic work which is no longer in existence.

E. C. I. Br.

PEREZ B. ISAAC COHEN GERONDI: Cabalist. The surname "Gerondi" is due to an unwarranted deduction by Jellinek ("Beiträge zur Gesch. der Kabbalah," ii. 64), and is used for the purpose of describing more in detail the author of "Ma'areket ha-Elahut." A certain Perez, who lived toward the end of the thirteenth century, is mentioned as the author of this cabalistic work.

K. P. B.

PEREZ B. MENAHEM: Rabbi at Dreux; took part in his old age in the great synod held before 1160 under the presidency of Jacob b. Meïr (R. Tam). He was the father of Menahem Vardimas, author of an "'aḳedah" in forty-five verses. Perez was probably the author of a manuscript which is entitled "Sefer Pereẓ," and which contains notes on the Masorah.

PERFUME: Both fragrant ointments and perfumes ("roḳaḥ" or "riḳḳuḥim") in general (comp. INCENSE) were known to the Israelites. There is nothing to indicate that they understood how to obtain them from animal matter, mention being made only of their preparation from vegetables. The principal substance of which perfumes were made was gum resin or balsam, which either oozed naturally from certain trees or was obtained by slitting them. Sometimes the wood, bark, and leaves were employed; rarely the flowers and seeds. The following plants were especially used: aloes ("ahalim"), balsam ("bosem"), calamus ("ḳaneh"), cassia ("ḳeẓi'ah"), cinnamon ("ḳinnamon"), galbanum ("ḥelbenah"), ladanum ("loṭ"), myrrh ("mor"), saffron ("karkom"), and styrax ("naṭaf" or "libneh").

The Israelites were not familiar with distillation or with any of the other methods of obtaining perfumes popular in later times; but by pouring boiling oil or fat on various substances they obtained fragrant oils or ointments for their customary needs. In Job xli. 31 this method of preparation is referred to. The raging sea is compared to a pot of boiling ointment ("merkaḥah"). According to Cant. iii. 6 and Prov. vii. 17, the bed was perfumed "with myrrh and frankincense, with all powders of the merchant"; according to Ps. xlv. 9, the garments of the queen smelled of myrrh, aloes, and cassia. Hebrew women carried smelling-bottles ("batte nefesh") attached to a long chain around the neck or at the girdle (Isa. iii. 20).

E. G. H. W. N.

PERGAMENTER, SOLOMON B. SHALOM, OF BRÜNN: Austrian Hebraist and poet of the earlier part of the nineteenth century. He was the author of "Yesode ha-Lashon," in Judæo-German, for self-instruction in Hebrew (Vienna, 1813; 2d, improved, ed. *ib.* 1832), and of several Hebrew poems. Delitzsch describes him as one of the most excellent poets of the German school who contributed to the "Bikkure ha-'Ittim."

BIBLIOGRAPHY: Delitzsch, *Zur Geschichte der Jüdischen Poesie*, p. 109, Leipsic, 1836; *Bikkure ha-'Ittim*, iii. 130, 132; vi. 3.

S. P. WI.

PERGAMUS (BERGAMA): City of Asia Minor a few hours distant from Smyrna. Although there are no documents to show that Jews lived there in ancient times, it is probable, in view of its flourishing condition in past ages, that it, like other cities, was influenced by Jewish trade. The earliest Jewish settlement there of which anything is definitely known was made about the middle of the eighteenth century, its members coming principally from Constantinople, Salonica, Tunis, Algiers, Smyrna, and the neighboring country. The commerce of Pergamus was formerly in the hands of the Jews, and they were universally respected; but to-day (1904) their financial condition, except in a very few cases, is deplorable, on account of their passion for gambling and owing also to the development of trade by other classes in the town. Most of the Jews make their living by selling merchandise at the large weekly fair held at Pergamus, although there are among them a few artisans (chiefly shoemakers and tinsmiths) and pedlers. Certain Jewish family names in Pergamus are found but rarely elsewhere in Turkey, *e.g.*, Hova and Misriel. According to local tradition, during a battle in the war for Greek independence fought at Pergamus in 1820 the Jews were ordered by the Turks to throw the Greek dead into the brook Boklu Chai, which flows through the town. At that time the chief rabbi was Mordecai Varon. His successors were Mordecai Sardas, Abraham Kurkidi (1860-80; author of "Wayiḳra Abraham," Smyrna, 1887), Isaac Mizraḥi, Joseph Aboab, Isaac Franco, and the present (1904) incumbent, Solomon Ḥabib.

There are three Jewish cemeteries at Pergamus, the oldest gravestone dating from 5594 (= 1834), and the latest cemetery having been opened in 1869. The community possesses a synagogue and a small school, subventioned by the Alliance Israélite Universelle, and there are two benevolent societies. The Jews speak Judæo-Spanish, Turkish, and Greek, and live in entire harmony with the adherents of other creeds.

The Jewish inhabitants number about 500 in a total population of 18,000, showing an increase of about 200 in twenty years.

S. A. GA.—M. FR.

PERINGER, GUSTAV, VON LILIENBLAD: Christian Orientalist; born 1651; died at Stockholm Jan. 5, 1710; studied under Wagenseil at Altdorf. He was professor of Oriental languages at Upsala from 1681 to 1695, and then librarian at Stockholm. About 1690 King Charles XI. of Sweden sent him to Poland on a mission to the Karaites, for the purpose of gathering information concerning their customs and manner of life, of buying their works, and probably also of converting them to Christianity. Provided with a letter of recommendation to the King of Poland, Peringer went first to Lithuania, where there existed several Karaite communities; but nothing is known as to the result of his mission. Most probably it was without success (see JEW. ENCYC. vii. 444, *s.v.* KARAITES).

Peringer translated into Latin the following treatises and works: the tractates 'Abodah Zarah (inserted by Surenhusius in his Latin translation of the Mishnah) and Tamid (Altdorf, 1680); Zacuto's "Sefer Yuḥasin" (see Wolf, "Bibl. Hebr." p. 66, No. 163); various parts of Maimonides' "Mishneh Torah" (*ib.* i. 847; iii. 775, 777-778); a fragment of the "Massa'ot" of Samuel ben David the Karaite, travels in Palestine in 1641 (Upsala, n.d.; published in Hebrew and Latin in Wolf, *l.c.* iii. 1080-1094; Hebrew and Latin in Ugolino's "Thesaurus," vii.; French transl. by Carmoly in his "Itinéraires,"

p. 497, Brussels, 1847). Peringer wrote also "Dissertatio de Tephillin sive Phylacteriis," Upsala, 1690.

Classification.

PERIODICALS: In the broadest meaning of the term Jewish periodicals include all magazines as well as all newspapers which, either because of the language in which they are published or because of the special nature of their contents, appeal particularly to Jewish readers. Of the newspapers most of the dailies form a class by themselves in that they report the general news of the world and do not confine themselves to Jewish matters. The specifically Jewish newspapers (principally weeklies) may be characterized as political, social, religious, or communal, ranging from such as report current matters of moment in all parts of the world and of interest to the whole of Judaism to such as are devoted solely to local community and social gossip. Of the magazines, or periodicals in the narrower sense of the term, some are literary and belletristic, others scientific. The former contain essays, stories, and poems generally, but not always, of a specifically Jewish nature: with such magazines may be classed as special subdivisions some juvenile and a few humoristic publications. The scientific magazines include some which deal, most often in a semipopular fashion, with the general sciences—physics, astronomy, geography, etc. (these are principally found among the Judæo-Spanish journals of Turkey); economics and agriculture (chiefly those devoted to the subject of colonization); and the household sciences (mostly papers for women's interests). The larger part of the scientific periodicals, however, deals with the so-called "Jewish sciences": Jewish history, Bible exegesis, Hebrew philology, bibliography, pedagogics, theology, philosophy, and religion. In addition to all these there are publications for special classes of readers—*e.g.*, cantors, students, members of athletic associations—while various charitable and other societies issue regular reports of their activities. Many periodicals do not belong to one or other of these various classes exclusively; some, indeed, can be classified only as general, so diversified are their contents. Most of the weekly newspapers, for instance, make a specialty of presenting, sometimes in feuilletons or even in separate supplements, stories, essays, and poems, as well as scientific articles, while the technical magazines often devote special columns to news items. Some of the magazines, too, are illustrated; indeed, one or two have been established especially in the interests of art. Calendars and annuals, in so far as they contain literary, scientific, and belletristic matter, may likewise be included under the term "periodicals."

History—Beginnings.

In the latter part of the century that saw the beginnings of non-Jewish periodical literature two attempts were made to found Jewish newspapers, both of them at Amsterdam, the center of Hebrew typography until the nineteenth century. The first was the Judæo-Spanish "Gazeta de Amsterdam" (Jan. 24-Nov. 14, 1678); the second, the Judæo-German semiweekly ("Dienstagische" and "Freitagische") "Kurant" (Aug., 1686-Dec., 1687). Although it is of interest to note that the word "Zeitung" (in Hebrew characters) was used in 1688 in the title ("Zeitung aus Indien") of the Judæo-German translation of Moses Pereyra's "Notisias dos Judeos de Cochim," almost an entire century passed after the two Amsterdam publications ceased before another Jewish newspaper made its appearance.

But in the meantime the beginnings of magazine-journalism had likewise been made. Perhaps the "Peri 'Eẓ Ḥayyim" (1728-61)—also of Amsterdam—a monthly Hebrew bulletin containing the rabbinical decisions of the members of the Sephardic bet ha-midrash (Arbol de las Vidas), may be regarded as the first Jewish magazine. That honor is generally claimed, however, for the "Ḳohelet Musar," which Moses Mendelssohn, assisted by Tobias Back, started to issue in 1750 as a Hebrew weekly devoted to ethico-philosophical questions; only two numbers appeared. About this time Benjamin ben Zalman Croneburg of Neuwied planned to publish a general Jewish newspaper under the title "Der Grosse Schauplatz"; but only a fragment of one issue of the paper, in German with Hebrew characters, has been preserved. In 1771 was made another of these early attempts to establish Jewish newspapers—Jewish, however, only because of their readers, not because of their contents—this time in Germany. It was called the "Dyhernfurther Privilegirte Zeitung," and was a German weekly in Hebrew characters printed from Dec., 1771, until some time in the following year. It contained news from foreign parts, such as Warsaw and Constantinople, as well as market reports, etc. Above the title was pictured the coat of arms of the city of Dyhernfurth. The last of this class of periodicals for some time was one which appeared for half a year in Alsace, a political weekly entitled simply "Zeitung" (Metz, 1789-90).

Of an entirely different nature from these newspapers was "Ha-Meassef," which was founded in 1784 by Mendelssohn's disciples. As the successful monthly organ of the Maskilim, it really inaugurated the Hebrew press. It appeared in seven volumes, and then was forced to suspend by the successful issue of the very purposes for which it had been established; for the wider participation on the part of the Jews in the culture of their neighbors was attended by a growing disinclination to use Hebrew.

Nineteenth Century.

1801-30: The nineteenth century opened without the existence of any Jewish periodical; and when efforts were resumed to utilize this class of publications in furthering reforms in the internal and external status of Judaism, the necessity for the use of the vernacular was realized. Of the seventeen or eighteen attempts at founding periodicals in the first quarter of the new century, fourteen were in languages other than Hebrew, by far the larger proportion in German. In Bohemia the first Jewish magazine, the "Jüdische Monatsschrift," German in Hebrew characters, was published by a literary society for a few months in 1802; and in 1811 appeared the "Jahrbücher für Israeliten und Israelitinnen," which was modeled on the annual "Taschenbücher" appearing in the non-Jewish world and contained literary and belletristic matter. In Holland a Dutch newspaper, "Sulamith," appeared from 1806 until 1808, and a "Jaarboek" was published in the latter year. In Germany the following periodicals in German were established: a successful Reform monthly with general contents, which was likewise called "Sulamith" and appeared fairly regularly for about nineteen years from 1806; "Jedidja" (1817-23), a religious, moral, and pedagogic semiannual; the "Zeitschrift für die Reifere Jugend" ("Ḳeren Tushiyyah," Fürth, 1817); the "Taschenbücher zur Belehrung der Jugend" (1818-1820; an annual), noteworthy as the first periodicals for the young; "Der Bibel'sche Orient" (1821), an unsuccessful attempt at establishing a cabalistic periodical; the "Zeitschrift für die Wissenschaft des Judenthums" (1822), the first German literary-scientific paper, one which, despite its merits, failed to find a reading public; and "Geist der Pharisäischen Lehre" (1823-24), the first rabbinical magazine. In 1823, also, were published the first Jewish papers in England and America, both in English: the "Hebrew Intelligencer," an anonymous monthly in London, and "The Jew," a monthly in New York (the latter was continued for two years). In Poland there appeared "Der Beobachter an der Weichsel," in Judæo-German, printed at Warsaw in 1823-24.

Of the various Hebrew periodicals that were published in the course of this period one was a German attempt to continue "Ha-Meassef" under the title "Ha-Meassef he-Ḥadash" (1809-11); the second was the similar publication of the Dutch To'elet Society and called "Bikkure To'elet" (1820); the third, the Austrian "Bikkure ha-'Ittim" (1820-31), was one of the two periodicals thus far mentioned that outlived the first quarter of the century, although sporadic attempts were made within the following ten years to revive the two most successful of the German periodicals. The "Bikkure ha-'Ittim" marks the commencement of a new phase, locally, of Jewish history. What "Ha-Meassef" had been for Germany, the "Bikkure ha-'Ittim" became for Austria, where the Haskalah movement now first became active. Its general excellence attained for it a wide circulation; and though it was destined to live hardly more than ten years, it was nevertheless after a short interval followed by a line of worthy successors. Between 1825 and 1831 it was apparently the only regularly published periodical in the whole of the Jewish world.

1831-40: Nevertheless in Germany the decade 1831-40 was to be one of great journalistic activity, both politically and literary-scientifically; no less than fifteen periodicals printed in German were established during this time, among them several which at least from the standpoint of longevity were eminently successful; one of them, indeed, is still being published. The first periodical of the decade was "Der Jude," almost exclusively political; despite a promising beginning in an important field it endured only four years (1832-35). In 1833 another volume of "Jedidja" was published, and "Zion," a religious paper, began a two years' career. In 1834 Philippson's "Israelitisches Predigt- und Schul-Magazin" appeared. In the following year "Das Füllhorn" (1835-36), with the object of furnishing instructive, useful, and entertaining reading matter and of discussing Jewish events of interest, furnished a new type of paper, being followed by "Die Synagoge" (1837-39). Of greater importance was the founding in 1835 of Geiger's "Wissenschaftliche Zeitschrift für Jüdische Theologie," in which the foremost scholars of the time united to popularize the "Jewish sciences." Its success was marked; it appeared, though with interruptions, until 1844, and then for a short time in 1847.

The "Allgemeine Zeitung des Judenthums."

But these scientific, instructive, and edificative journals, apart from the irregularity of their appearance, left a want to be supplied, which Philippson, discontinuing his theological paper, in 1837 set about to fill. In the "Allgemeine Zeitung des Judenthums" was furnished the first successful paper to take part in the every-day life of the Jew, and in the course of its history it was instrumental in introducing many reforms and establishing several important societies and institutions. As it appeared at first three times and then regularly once a week, it was enabled to fulfil in part the duties of a newspaper also. The "Allgemeines Archiv des Judenthums" (1839-43) was a revival of "Jedidja"; Jost's "Israelitische Annalen" (1839-41) sought to be both a newspaper and a scientific and literary magazine; "Der Israelit des Neunzehnten Jahrhunderts" (1839-1848), another Reform paper, was particularly religious, but had also a literary tendency at times. Even more active and more enduring was Fürst's "Der Orient" (1840-51), founded in the last year of this decade, with general contents, and with a separate "Litteraturblatt" which to-day still offers a veritable mine for the student of Jewish literature, history, and archeology. "Ẓiyyon" (1841-42), another scientific and religious (Reform) paper, and "Sinai" (1846), for "Jewish learning and ethics," may also be mentioned.

Outside of Germany the only periodical founded that survived the decade was the Austrian "Kerem Ḥemed" (1833-42), which was established as the successor of the Haskalic "Bikkure ha-'Ittim" and appeared as somewhat of an innovation in style, its articles on exegetical, archeological, and literary-historical questions being in the form of letters. In Switzerland appeared "Altes und Neues Morgenland" (1834-40), an exegetical monthly; in France, the "Archives Israélites de France"—the first successful French publication and the second oldest Jewish paper now in existence—and an earlier attempt, "Die Wiedergeburt" ("La Régénération," 1836-37) of Strasburg, probably the first bilingual Jewish paper; in England, the "Hebrew Review and Magazine for Rabbinical Literature" (1834-35); and in Holland, the "Jaarboeken voor de Israelieten in Nederland" (1835-40).

1841-50: The religious activity of the fifth decade of the century was attended by correspondingly increasing journalistic productiveness, the number of new periodicals being no less than seventy. Germany continued to lead in this respect; there was also a decided revival of interest in Hebrew, while both English and French journalism were likewise established on a permanent basis. As many as twenty-five new German periodicals appeared, five of them in Austria, and one each in England and America; about fifteen Hebrew, of which five appeared in Germany, an equal number in Austria, two or three each in Galicia and Holland, and one in England; and at least thirteen English, of which one in America and one in England were destined to endure a long time. Only the most noteworthy of these periodicals, such as introduced or established some phase of journalism, will receive particular mention.

“Jewish Chronicle.”

The “Revue Orientale” (1841–46) was the first periodical in Belgium. The “Voice of Jacob” (1841–1848), with Reform tendencies, was the first English newspaper deserving of the term; but far more successful was the “Jewish Chronicle,” with the opposite religious tendency at first, and which, established in the same year, is the oldest existing publication in English. “Pirḥe Ẓafon” (Wilna, 1841–44), for literary criticism, Biblical and Talmudical researches, and news, was apparently Russia's first periodical. In 1842 Isidor Busch of Vienna with his “Kalender und Jahrbuch für Israeliten” (1842–47; and 1854–67), containing a summary of the news of the year, as well as historical, scientific, belletristic, and other entertaining matter, made this class of publications a valuable addition to periodical literature. A Judæo-Spanish journal, the “Chronica Israelitica”—the first since the “Gazeta de Amsterdam”—was published in Gibraltar in 1842, and another, “Esperanza Israelitica,” in 1843. “The Occident,” a monthly of Conservative tendencies, was the first really successful periodical in the United States (Philadelphia, 1843–69). An important German publication of this period was Frankel's “Zeitschrift für die Religiösen Interessen des Judenthums” (1844–46, but continued later under a different title). Hungary as yet did not offer a promising field for journalistic enterprise; in 1844 Leopold Löw attempted to publish his “Ben Chananja” for the Jews of that country, but at Leipsic; fourteen years passed before he renewed his attempt. “Yerushalayim” (Zolkiev, 1844; Lemberg, then Prague, 1845), in Hebrew, was the first Galician publication. “First Fruits of the West” is of interest because it was published in Kingston, Jamaica (1844).

The successful German papers until this time all had had Reform tendencies; as religious agitation increased, party lines were drawn more closely, and journals were established to serve as official organs of Orthodoxy and moderate Reform, as well as of Radicalism. The first successful Orthodox paper was “Der Treue Zionswächter” (1845–55), with a Hebrew supplement, “Shomer Ẓiyyon ha-Ne'eman”; “Ha-Yareaḥ” (1845) in Hebrew, and with the same tendency, lived but a short time. Another attempt at founding a periodical for mysticism—“Der Kabbalistische Biblische Occident”—ended with the first number. In France “L'Univers Israélite,” Conservative, founded in 1844, takes its place beside the “Archives Israélites” among the oldest of existing periodicals; other, but short-lived, journals appeared there in the next two years. For the Austrian Haskalah, the “Kerem Ḥemed” having ceased publication in 1843, the “Kokebe Yiẓḥaḳ” (1845–73) was established, and proved to be the longest-lived of the “Bikkure ha-‘Ittim's” successors. In England the first literary magazine, entitled “Sabbath Leaves” (1845), and a religious paper, “The Cup of Salvation” (1846), were established, the latter with the patronage of Sir Moses Montefiore; but, like various other English papers of the next few years, they existed but a short time. The “Magyar Zsinagóga” (1846–47) and the “Evkönyo Zsido” (1848) seem to have been the first periodicals in Hungarian; the scientific “Rivista Israelitica” (published for a few years from 1845), the first in Italian, and the Judæo-Spanish “Puerta del Oriente,” or “Sha‘are Mizraḥ” (1846), the first in Turkey.

In 1847 the “Jewish Chronicle” of England from a fortnightly became a weekly, and Geiger's “Wissenschaftliche Zeitschrift” resumed publication for a short time. In 1848 are to be noted “Die Zeitung”—this and “Die Jüdische Post” (1849) were the first Galician Judæo-German papers; “Die Zeitschwingen,” “Die Zeitung für's Judenthum,” and the “Centralorgan für Glaubensfreiheit”—the first German papers in Vienna, all edited by Busch and all unsuccessful; Einhorn's “Ungarische Israelit,” the first German paper published in Hungary, and one which gave the first impulse to Reform in that country; and the “Liturgische Zeitschrift” (1848–62) in Germany, the first periodical devoted to synagogal music and to the interests of cantors. In Holland the weekly “Nieuws en Advertentieblaad,” and the literary “Tijdschrift,” were founded in 1849; the former, with various changes of title, continued to appear until 1893. In 1849, also, appeared in America “The Asmonean” (until 1858), the first weekly there; “Israel's Herold,” short-lived, but noteworthy as the first German-American paper (both of these appeared in New York); and the “Jewish Advocate” (of Philadelphia); “The Hebrew Leader,” a Conservative paper established in 1850, is noteworthy at least in that it continued to appear until 1882.

1851-60: The decade 1851–60 was characterized by a steadily increasing attention on the part of German periodicals to the scientific aspect of Judaism, perhaps at the expense of purely religious interests, the comparative silence of the so-called official organs being noteworthy (in 1860 the “Allgemeine Zeitung des Judenthums” was practically the only paper making propaganda for Reform); there were also renewed attention to the Hebrew press, especially in Galicia, and marked journalistic activity in America. To the four or five German periodicals already established on a permanent basis were added in Germany and Austria eleven or twelve which were to have a life of ten years or more—three of them are still in existence. It is worthy of note, furthermore, that of the total thirty new German periodicals established in this period one-third were literary “Jahrbücher.” Fourteen new Hebrew publications likewise were founded.

In 1851 Frankel, in reviving the “Zeitschrift für die Religiösen Interessen des Judenthums” and

The "Monatsschrift."

changing it to the more scientific "Monatsschrift für die Geschichte und Wissenschaft des Judenthums," took a step characteristic of the period, though for a time, it is true, the "Monatsschrift" was the only scientific journal in Germany. In the same year "Der Israelitische Volkslehrer," a family weekly of a superior belletristic character, was founded by L. Stern and continued to appear for about twelve years (from 1859 with Stern's "Der Freitagabend"). The "Deutscher Volkskalender und Jahrbuch," also established in 1851, proved to be one of the most enduring of its class, and is still being published as the "Jüdischer Volks- und Haus-Kalender" (Brieg, from 1853); it was joined in the following year by Pascheles' "Illustrirter Israelitischer Volks-Kalender" (Prague, 1852–94), apparently the earliest illustrated periodical. In 1852 "He-Ḥaluẓ," a scientific Hebrew year-book, was established in Galicia and was published successively in various places until 1889. In England a rival to the "Jewish Chronicle" appeared, in 1853, in the "Hebrew Observer"; but in the following year it united with the "Chronicle," which remained the only organ of the community for some years. In Italy was established the first successful Italian periodical, "Educatore Israelita," taking the place of the "Rivista Israelitica"; since 1874 it has been known as "Il Vessillo Israelitico." In Constantinople the establishment of the Judæo-Spanish "La Luz de Israel" (1853) especially to report the Crimean war is significant.

In 1854 were established Philippson's "Jüdisches Volksblatt" (until 1866); Samson R. Hirsch's "Jeschurun," a valiant defender of Orthodoxy (the other Orthodox organ, the "Treue Zionswächter," ceased publication in the following year), which was of importance in the development of Judaism until 1870; and M. Letteris' "Wiener Mittheilungen" (1854–66), the first successful one of his several attempts. In the same year Busch's highly prized "Kalender und Jahrbuch für Israeliten" was continued by Wertheim as the "Jahrbuch." In 1851 the "Annuaire du Culte Israélite" (until 1870), in 1853 another Dutch weekly, "De Israeliet" (short-lived), and in 1855 another French journal, "Le Lien d'Israël" (until 1862), were founded.

"American Israelite."

In the United States the "American Israelite," supporting Reform, the oldest existing journal in that country, was established in 1854; and in the following year "Deborah," with the same objects, but to appeal to the large number of German Jews for whom English was not as yet the literary language, became one of a series of German and German-English papers. Thus in the eastern part of the country "Sinai" was published at Baltimore from 1856 to 1862; in the West "The Hebrew Observer," in English and German, was established, the oldest existing Jewish paper on the Pacific coast, and two years later a second journal was established there, "The Gleaner," which was succeeded by "The Pacific Messenger" (1860–61), likewise in German and English. In 1857 the "Jewish Messenger" of New York appeared, and until 1902 it occupied in the Conservative rank a position corresponding to that of the "American Israelite" among the Reform papers. "The Asmonean," however, ceased publication in 1858. In 1859 "The Corner-Stone" of New Orleans gave evidence that another section of the country had awakened to a realization of journalistic influence.

By the middle of this decade Galicia had become recognized as the center of a Haskalic influence which extended over Poland and Lithuania; among the Jews of this region, whose literary language was still Hebrew, the Crimean war had awakened interest in the world at large; and therefore when the weekly "Ha-Maggid" was established it met with instantaneous and lasting success. This was really the beginning of the Hebrew newspaper. Most of the Hebrew journals thenceforth established in Turkey and in Slavic countries contained political and mercantile news of the Gentile as well as of the Jewish world, while special literary and scientific supplements supplied the other demands of their readers. In Lemberg, too, "Jeschurun," a Hebrew journal for science and literature, was founded (1856–58; from 1859 it was published in Germany, partly in German and partly in Hebrew); likewise "Meged Yeraḥim," and later "Oẓar Ḥokmah," neither of which lived many years, however. "Ha-Mebasser" (1860–70) was eminently more successful. "Oẓar Neḥmad" (1856–64), another Hebrew periodical of the same class as those of Galicia, was published in Vienna.

Kobak's "Jeschurun."

The only other important journalistic event of 1857 was the appearance of the Rumanian "Israelitulu Romanulu" of Bucharest, the first journal in Wallachia. The Jews of Hungary were provided with a journal in the following year, when Löw revived his "Ben Chananja," but with a more scientific trend; it continued publication till 1867. Steinschneider's "Hebräische Bibliographie" was the first purely bibliographical periodical established; its importance is indicated by the length of its life (1858–82). "La Famille de Jacob" was one of the few Jewish journals of France published outside of Paris; "La Vérité Israélite" (1860–62) was an attempt to provide a French juvenile paper. The last year of the sixth decade was somewhat active, especially in Russia, where two important Hebrew weeklies, "Ha-Karmel" (until 1881) and "Ha-Meliẓ" (until 1904), and also "Razsvyet" (continued as "Zion" in 1861, then again as "Razsvyet" in 1879), a weekly and the first journal in Russian, met with success.

1861-70: During the decade 1861–70 the comparative journalistic inactivity of Germany continued, though a temporary change was noted about the middle of the period in the establishment of a number of papers of brief existence. Of about a hundred new periodicals established—of which nine or ten were added to the list of permanent ones, and ten others enjoyed a life of ten years' duration or more—Germany supplied only about fifteen, one of which is still being published; and four others, with ten of those previously existing, outlived the decade. In America, too, the increased activity hardly kept the pace which the growth of the Jewish population and the journalistic conditions of the preceding decade would seem to have predicted;

perhaps a dozen new periodicals were founded there, of which only three were to outlive the decade together with about five previously existent papers. England's activity was even less marked. On the other hand, the growth of the periodical press in Austria, including Galicia and Hungary, was steady, and resulted in a number of permanent additions to the list of Hebrew papers, of which between twenty and twenty-five new ones were founded in various parts of the Jewish world. A remarkable feature, too, was the number of Judæo-Spanish periodicals —at least ten—which made their appearance, although perhaps only one survived long. Furthermore, permanent papers were established in a number of the countries less prominent in the history of Jewish journalism.

Geiger's "Zeitschrift."

In Germany Geiger, fifteen years after the cessation of his "Wissenschaftliche Zeitschrift," resumed its publication under the title "Jüdische Zeitschrift für Wissenschaft und Leben" (1862–1873); in 1868 Kobak's "Jeschurun" was removed to Bamberg (until 1878), Grätz became editor of the "Monatsschrift für die Geschichte und Wissenschaft des Judenthums," and the "Israelitische Wochenschrift" (until 1894) made its appearance; and the following year "Die Jüdische Presse" was founded as a Conservative journal, one which is still being published.

Judæo-German Press.

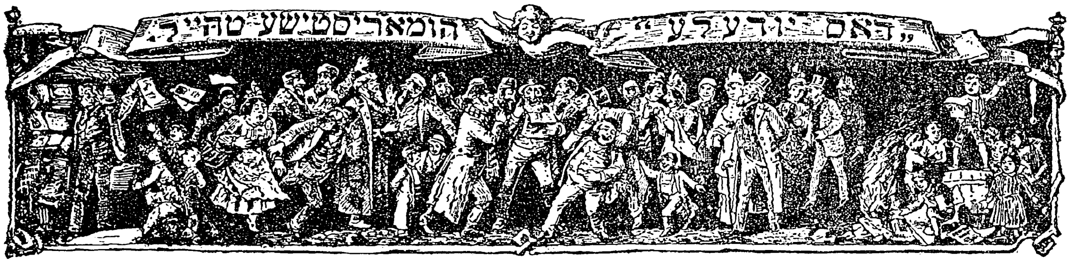
In Austria and Hungary the cause of Reform received added and energetic journalistic representation in "Die Neuzeit" of Vienna (1861–1904), which at the same time became a rich source of material for the history of the Jews in Austria-Hungary. "Ben Chananja" increased its influence in Hungary by becoming a weekly in 1861; and its efforts were supplemented in the same year by those of the Hungarian "Magyar Izraelita." The "Izraelita Magyar Néptanitó" (1865–68) was pedagogic in character, as was the "Zsidó Iskolai és Hitköztégi Lapok" (1869–71); and the Orthodox interests were represented by the "Magyar Zsidó." In Austria, toward the end of this period, Smolenskin founded "Ha-Shaḥar" (1869–1884), an eminently successful periodical and one which inaugurated the epoch of original literature in modern Hebrew. In Galicia, however, a Hebrew weekly for political and general news, "Ha-'Ibri," had been founded in 1865, and it continued publication until 1890; in 1869 a still-existent German paper was established there as "Der Israelit," for moderate Reform; while the "Lemberger Jüdische Zeitung" represented the Judæo-German press for a number of years during this decade. The history of Judæo-German journalism had really begun in Russia in 1863. Until that time the better-educated classes of Russian Jews, for all of whom Hebrew was the literary language, had formed the bulk of the reading public; but now, as was the case in other countries, a vernacular press was demanded, and "Ha-Meliẓ" issued as a Judæo-German supplement "Ḳol Mebasser," for literature and belles-lettres. A Russian periodical, "Posrednik," also appeared for a short time from 1869. In Poland "Jutzrenka," the first Jewish paper in Polish, appeared from 1861 to 1863; its place was taken in 1866 by the still-existent "Izraelitá." This country played its part, too, in the history of the Hebrew press; "Ha-Ẓefirah" (1862–63, then 1874 until the present time), a weekly, ranking with the similar journals of Galicia and Russia. With these countries must be grouped in this respect Palestine, where "Ha-Lebanon" appeared from 1863 to 1864, but where "Ha-Ḥabaẓẓelet," a strongly Orthodox newspaper, was of greater importance and, though its publication has at times been interrupted, is still active.

Ladino Periodicals.

The "Jornal Israelith" (1860–71), whose editor Ezekiel Gabbai was the real founder of journalism in Turkey, owed its success to the fact that, being printed in Judæo-Spanish, it supplied a long-felt want of the Jews of Turkey, who were for the greater part uninstructed and without any knowledge of languages other than the vernacular. The Judæo-Spanish papers of Turkey which followed the "Jornal" were mostly of one character: they supplied information as to foreign and domestic affairs in general and Jewish communal affairs in particular; and, to such an extent as to be forced to suspend publication, fearlessly fought for reforms and protested against abuses even when connected with the grand rabbinate. The activity of the Judæo-Spanish press about 1864 was notable not only in Turkey, but also in other parts, particularly in Vienna, where the Judæo-Spanish colony published, in rabbinical characters, various journals intended for the Balkan Peninsula, especially Bulgaria. They include, peculiarly enough, what appears to have been the first Jewish comic paper, "Risi Bisi" (1867); "El Verdadero Progreso Israelito" (1863) appeared in Paris; and "Sema Israel" (1864) in Curaçao. In 1869 the first of five unsuccessful attempts to publish Jewish papers in Turkish was made with "Al-Sharḳiyyah." "Salonik" (1869) was printed not only in Judæo-Spanish and Turkish, but also in Greek and Bulgarian. In Rumania the "Israelitulu Romanulu" resumed publication in Rumanian and French, in 1867. In Corfu the "Chronica Israelitica," in Italian and Greek, was founded in 1861, and "La Famiglia Israelitica," in Italian, was published from 1869 to 1877; while in Italy the "Corriere Israelitico" (from 1863) appeared beside and eventually outlived the "Educatore Israelitico." In France Isidore Cahen became editor of the "Archives Israélites" in 1862; that this journal and the "Univers Israélite" were sufficient to supply the journalistic wants of Paris is shown by the end of "Le Lien" and "La Vérité" about this time, though the "Revue Israélite," a weekly, was founded in 1870, and appeared for several years. In Holland renewed activity was indicated by the appearance of the annual "Achawa" (1865–68) and of three new weeklies which are still in existence: the "Nieuw Israelietische Weekblad" (from 1866), the "Onafhankelijk Israelietisch Orgaan voor Nederland" (from 1867), and the "Weekblaad voor Israelietische Huizgesinnen" (from 1870); in addition "Ibri," a literary weekly, existed for a short time in 1869. The "Israelitisk Tidende" (1865), published at Copenhagen for a short time, seems to have been the only Danish Jewish periodical published, unless the "Jödisk Almanak" (1861) be reckoned as such.

In the United States the "Zeichen der Zeit," a German monthly with a Reform tendency, soon paid the penalty for the caustic tone it adopted; on the other hand, "The Hebrew" (1863 to the present), in German and English, was another successful publication of the Pacific coast. "The Jewish Times" of New York (1869–79) was for a time the foremost representative of the Reform element; and in 1870 "Ha-Ẓofeh ba-Areẓ ha-Ḥadashah" was founded as one of the most successful Hebrew periodicals ever published in America. In England the "Londoner Jüdisch-Deutsche Zeitung" was the first Judæo-German publication to appear in English-speaking countries; while the "Jewish Record" (1868–71) was the first penny Jewish paper. "The Guide" is to be noted as another journal of Kingston, Jamaica, and "The Australian Israelite" (1870–1882) as one of the longest-lived Jewish newspapers of Australia.

1871-80: During the decade 1871–80 the increase in the number of Hebrew publications was maintained, principally in Galicia, but also in Palestine and Russia and, to a smaller extent, in Germany, Austria, Hungary, and the United States, though many of these publications suspended before the end of the decade; in the last-mentioned country both English and Judæo-German journalism likewise displayed a decidedly greater activity (about twenty-five new foundations in each language were made); furthermore, six or seven new journals in Russian appeared, and an equal number in Judæo-Spanish.



Title-Heading of the Humorous Section of the "New-Yorker Illustrirte Jüdische Zeitung."

German Scientific Journals.

In Germany it is perhaps noteworthy that Geiger's "Jüdische Zeitschrift," which had been at least in part religious, came to an end in 1872, and that the "Jüdisches Literaturblatt" (Magdeburg, 1873–97; Cracow, 1897 to the present) was almost entirely scientific and literary. So, too, were Berliner's "Magazin für die Wissenschaft des Judenthums" (1874–93) and Brüll's "Jahrbücher für Jüdische Geschichte und Literatur." The "Predigt-Magazin" was a homiletical quarterly; while "Der Israelitische Bote" and "Die Reform" (each several years from 1875) were two new religious and literary papers, the former Orthodox, the latter progressive. "Joseph," edited for a number of years from 1879, was a special publication for the young, and "Der Jüdische Kantor" (1879–98), one of the most successful of the liturgical papers. "Die Neue Israelitische Zeitung" (1880) was a second attempt at Jewish journalism in Switzerland. Of Judæo-German papers in Germany the "Ḳol la-'Am," edited for several years from 1876 by Rodkinsohn, requires mention. In Alsace "L'Israélite Alsace-Lorraine" (1878–80) appeared partly in French and partly in German.

The principal new publications in Austria during this decade were Judæo-German and Hebrew; *e.g.*, of the former, "Der Wiener Israelit," a newspaper published three times a week from 1873 for many years. Nor was the proverbial light-heartedness of the Austrian capital without its expression in Jewish journalism; as formerly the first Judæo-Spanish humoristic paper had been published there, so now the first Judæo-German, Wilhelm Weiss's "Jüdischer Kikeriki" (1877), which was, in addition, illustrated. In contrast "Ha-Emet" (1877), though only a few numbers appeared, is noteworthy as the first Hebrew socialistic paper. In Hungary the "Ungarisch-Jüdische Wochenschrift" (1871–72), especially "Der Ungarische Israelit" (1874 to the present—a general paper), and "Die Zeit" (1878–81; for theology and history), were important German publications; "Das Jüdische Weltblatt" (from 1878) was a successful semiweekly Judæo-German organ; "Ha-Yehudi" (1875–80), a Hebrew literary magazine; while "A Magyar Izraelita Orzágos Tanitó-Egylet Ertesitöje" (from 1875) was to prove itself the longest-enduring of the periodicals published in Hungarian. Bohemia, too, established a successful German periodical in this decade—the "Israelitischer Lehrerbote," continued as "Die Israelitische Gemeindezeitung" (1873), the oldest Jewish paper in Bohemia; "Der Fortschritt im Judenthume" (1880–85) likewise was published in Bohemia.

Galician Hebrew Press.

In Galicia the Judæo-German periodicals which reenforced the "Israelit" and the "Lemberger Jüdische Zeitung" were "Die Neue Jüdische Presse" (1872) and "Yisrulik" (1875–76). Except "Svjit," a Polish weekly, and "Ojczyzma," which appeared for five years in both Polish and Hebrew, all the other important new Galician papers were in the latter language; most of them appeared in the ranks beside the long-established "He-Ḥaluẓ," "Ha-Maggid," and "Ha-'Ibri," to combat which, however, the "Maḥaziḳe ha-Dat" was founded in 1879 as the organ of Ḥasidism. In Rumania—where the demand for journals in the vernacular was met by "Fraternitatéa" (1879) and the annual "Anuar Penetrul Israeliti" (1878) in Rumanian, and by "Ha-Yo'eẓ" (1876) in Judæo-German—Hebrew journalism was represented by "Ha-Ḥolek" (1878) and by "Yizra'el" (1877), which had as its object,

Title-Headings of Jewish Illustrated Humorous Periodicals.

as did "Ha-Yo'eẓ," the rousing of interest in the Holy Land. The Hebrew press in Russia was likewise active for a time, although "Ha-Karmel" in 1871, more in keeping with its literary character, became a monthly; among the new journals were: "Yagdil Torah" (1871–81), "Bet Wa'ad la-Ḥakamim" (1875), "Ha-Boḳer Or" (1876–86), and "Dabar be-'Itto" (1878). On the other hand, the Judæo-German "Ḳol Mebasser" ceased publication in 1871, and there seemed to be a growing fondness for languages other than Hebrew and Judæo-German; several Russian periodicals were established, including the highly successful "Voskhod," which, founded as a weekly in 1879 and changed to a monthly in 1881, has continued to appear with weekly and annual supplements until the present time, though not uninterruptedly. When the renewed activity of the Hebrew periodical press was most noted, "Ha-Ẓebi" (1876–1900) was founded as the most successful opponent of the very Conservative "Ha-Ḥabaẓẓelet" (which became a monthly in 1877), and fought twice a week for the introduction of modern civilization into the Holy Land and for the renascence of Hebrew as a spoken language. About the same time were established "Yehudah wi-Yerushalayim" (1877–78) and "Sha'are Ẓiyyon" (1876–80), and in 1880 "'Ammud ha-Yir'ah," as an organ of the rabbis; and Frumkin edited for a short time the first Judæo-German periodical of Palestine.

The Judæo-Spanish press of this decade was very active in its attempts to educate the Jews of the Orient. "El Tiempo" (from 1871) was one of the most widely circulated papers of the East. "El Nacional," which in 1871 became the successor of the "Jornal Israelith," and "El Telegrafo" (from 1872) were of a similar nature. Of the other Judæo-Spanish periodicals—principally "La Epoca" (for many years from 1874), "El Sol" (1879), and "La Buena Espéranza" (1874; originally called "La Espéranza")—some were of a more general popular-scientific nature, treating in part the natural sciences and containing also translations of stories from the French and Hebrew. "La Politica" (1878) was published by the Judæo-Spanish colony in Vienna. "Zeman" (1872) and "Jeridiyyah Terjumah" were two more of the attempts to educate the Jews of Turkey to the use of Turkish as a written language.

In Italy the "Educatore Israelita," with a change in title to "Il Vessillo Israelitico," received a new lease of life in 1874. "Mosè," an Italian monthly of Corfu, the third Jewish paper of that island, was established in 1878. In France one of the most valuable of the scientific periodicals in the whole of Jewish journalism—the "Revue des Etudes Juives"—began to appear in 1880; while in Holland, of five or six new publications, the scientific and literary "Israelietische Letterbode," with a news supplement, the "Israelietische Nieuwsbode," was published for fourteen years alongside its older contemporaries; and the "Echo de l'Orient" (1875), a French fortnightly and interesting on this account, appeared for a short time.

Of several papers established during this decade in England, one, "The Jewish World," founded in 1873, was destined to be of great importance in the development of English Jewry. "Der Londoner Israelit" (1878) was a successful Judæo-German socialist paper, and "Ha-Kerem," a Hebrew weekly. In Australia, of four English papers established between 1871 and 1875 one was edited by the Jewish schoolboys of Adelaide; in India the first Jewish journals appeared during this period: "The Jewish Gazette" (1874) of Calcutta and the "Light of Truth" (1877–1882) of Bombay, both in Mahrati (Hebrew characters) and English.

In English-Speaking Lands.

In the United States several English papers appeared whose continued publication during a term of years allows the inference that the number of new journals published there was proportionate to a growing need, even if the literary and utilitarian character of many of the new productions was not such as to give them a high place in Jewish history. One of the most enduring of American juvenile

Title-Heading of the First Number of "Ha-Maggid."

papers was "Young Israel" (later "Israel's Home Journal"), founded in 1871; another, which had a succession of distinguished scholars as editors, was "The Sabbath Visitor" (from 1874), edited at first with a German section. "The New Era" (1871–75) was the first of a number of monthly literary magazines established in succession in various cities under the same name. "The Occident" (Chicago, 1874), "The Jewish Record" (Philadelphia, 1874–87), "The Jewish Progress" (San Francisco, 1876), and "The Jewish Tribune" (St. Louis, 1879) were typical weeklies; "The American Hebrew," founded in New York in 1879, became with "The American Israelite" a representative of this class of journals. "The Jewish Advance" (Chicago, 1878–82) and "The Jewish Chronicle" (Baltimore, from 1876) were comparatively successful German-English papers; "Die Wahrheit" was published at St. Louis (1871), and "Der Zeitgeist," a German family paper, at Chicago (1880-83). "The Hebrew Review" (Cincinnati, (1880–90) was one of the few purely literary magazines published in America. Of the various Judæo-German papers—including one which had English, German, and Hebrew departments also, and another which was devoted to anarchism—only the "Jüdische Gazetten" in New York (from 1874) and the "Israelitische Presse" of Chicago (from 1876; with a Hebrew supplement, "Hekal ha-'Ibriyyah") were of much importance. The latter was strongly Orthodox; the former, which was Conservative but inclined toward liberalism, and which contained popular literary articles as well as news-items, was perhaps the most successful paper of its class published. "Ha-Ḳol" (New York, 1889–90), founded originally in 1876 in Königsberg by Rodkinsohn as a literary and news journal, deserves notice as one of the most radical Hebrew periodicals ever published.

Of Recent Years.

1881-1900: During the last twenty years of the nineteenth century a marked change was noticeable in the condition of the Jewish periodical press. Before the opening of this epoch all the various types of Jewish journalistic activity had been established; but from now on one type in particular, that of the newspaper, became predominant. At the same time there was a shifting in the preponderance of influence, which previously rested with the German press. Even here a change had gradually been taking place, in that the weekly half-news, half-literary paper had increased in numbers at the expense of the more strictly scholarly magazine. But it was especially in America and the Slavonic countries that the change was most noticeable. The new period was ushered in by the sudden increase in the mmigration into the former from the latter, attended n the United States by a corresponding advance n the number of local English weeklies as well as he more-to-be-expected Judæo-German dailies and weeklies; the Judæo-German press becoming of wide significance in connection not only with Jewish questions, but also with the economic questions of he world at large. Exactly how great was the reflex influence of the new settlers in America upon ffairs in their old homes can not be determined; at ny rate, Russia and Galicia shared in the new movement, though not so much in the Judæo-German as in the Hebrew press. Zionism likewise contributed toward the increase in journalistic activity during this period.

Germany and Austria-Hungary: Of the older periodicals in Germany the "Wissenschaftliche Zeitschrift des Judenthums" ceased publication in 1881, the "Jahrbücher für Jüdische Geschichte und Litteratur" in 1890, the "Magazin für die Wissenschaft des Judenthums" in 1893, the "Israelitische Wochenschrift" in 1894, and "Der Jüdische Kantor" in 1897, in which year, too, the "Jüdisches Literaturblatt" removed to Cracow; there were thus left of the old foundations only the "Monatsschrift für Geschichte und Wissenschaft des Judenthums" (which, moreover, also suspended from 1887 to 1892), the "Allgemeine Zeitung des Judenthums," "Der Israelit," and "Die Jüdische Presse," and of the annuals only the "Jüdischer Volks- und Haus-Kalender."

However, at least thirty new German periodicals appeared in Germany during the twenty years. Of these "Die Laubhütte" (from 1883), the "Israelitisches Gemeindeblatt" (from 1888), the "Allgemeine Israelitische Wochenschrift" (from 1892), and the "Jüdisches Familienblatt" (from 1898) belong in the category of religious and social newspapers; the "Populär-Wissenschaftliche Monatsblätter" (from 1881), "Israelitische Monatsschrift" (1884–95; supplement of "Die Jüdische Presse"), and "Zeitschrift für die Geschichte der Juden in Deutschland" (1887–1892) were scientific—the fact that only one of them outlived the century is significant. The "Zeitschrift für Hebräische Bibliographie" was founded in 1896 to replace Steinschneider's "Hebräische Bibliographie," which ceased publication in 1882. "Lehrerheim" (1895) was established as a special organ for teachers, and the "Israelitischer Jugendfreund" (1895) one for the young; the "Jüdische Turnzeitung" (1900) became the organ of the Jewish athletic societies; the "Berliner Vereinsbote" (1895), "Zion" (1895), and "Jeschurun" (1900) supported Zionism; "Palästina" devoted itself to the study of economic conditions in the Holy Land; the "Jüdische Moderne" (1897) is especially belletristic, and "Ost und West" (1900), an illustrated monthly for general interests.

Among the Hebrew periodicals in Germany "Ha-Medabber le-Yisrael" (1881–82) and "Ha-Ḥozeh" were short-lived; later, however, two scientific magazines, "Mi-Mizraḥ umi-Ma'arab" (published at first in Vienna) and "Ha-Shiloaḥ" (1896), were more successful; the latter was Zionistic.

In Austria the only long-established papers published during this period were "Die Neuzeit" (until 1902) and the "Mittheilungen der Oesterreichisch-Israelitischen Union" (1888, still appearing in 1904). Of the dozen or more new papers the most important perhaps was "Dr. Bloch's Oesterreichische Wochenschrift," founded in 1884 especially to combat anti-Semitism. The "Jüdisches Volksblatt" and the "Monatsschrift der Oesterreichisch-Israelitischen Union" (both in 1889) are likewise important. Two papers were founded to represent labor interests: "Die Welt" (1897) and "Der Jüdische Arbeiter" (1898), the former of which became the organ of Zionism, together with the "Zionistische Rundschau." A special periodical for cantors, as a supplement to "Die Wahrheit," was founded in 1881 under the title "Oesterreichisch-Ungarische Kantoren Zeitung." The "Monatsschrift für Literatur und Wissenschaft des Judenthums," like many similar scientific magazines in Germany, had but a short existence (1889–90). The few attempts at the publication of Hebrew periodicals in Vienna during this period met with little success. "Ha-Shaḥar" itself, despite its popularity, had to cease publication in 1884 for lack of subscribers; the most successful of the new Hebrew papers was "Bet Talmud" (1880–1886), a scientific monthly.

During the period under discussion there were added to the "Magyar Izraelita" as permanent publications in Hungarian "Egyenlöség" (from 1882), "Magyar Zsidó Szemle" (from 1884), "Pályázat" (from 1891), and "A Jövö" (only 1897). Of German papers in Hungary the "Mitteilungen der Freien Vereinigung für die Interessen des Orthodoxen Judenthums" (1887) and the "Ungarische Wochenschrift" (1895) were the only two of five or six to rival for any length of time "Der Ungarische Israelit." In Bohemia beside the older "Israelitische Gemeindezeitung" there appeared the "Jüdische Chronik" (1895), a literary monthly, and "Jüdisches Gefühl" (1900), a periodical for the young.

America—English Papers: The number of new English papers which appeared for a longer or shorter duration of time during the period 1881–1900 was over seventy-five; as many as ten were established in the year 1895 alone. A few, such as "The Reform Advocate" of Chicago (1891) for example, took a place of influence beside the "American Israelite," "The Jewish Messenger," "The American Hebrew," and "The Hebrew" of San Francisco. By far the greater part of them, however, are of local interest only. Among the longest enduring and most important in the various centers of Jewish settlement the following may be mentioned: "The Chicago Israelite" (1884); the "Hebrew Standard" (1883) and "Hebrew Journal" (1885) of New York; "The Jewish Spectator" (1885) of Memphis; "The Jewish Exponent" (1887) of Philadelphia; "The Jewish Tidings" (1887) of Rochester; "The Jewish Voice" (1888) of St. Louis; "The Jewish Chronicle" (1890–93) of Boston; "The American Hebrew News" (1892–1901) of Portland, Ore.; "The Jewish South" (1893) of Richmond; "The Jewish Sentiment" (1895) of Atlanta; "The Jewish Comment" (1895) of Baltimore; "The Jewish Ledger" (1895) of New Orleans; and "The Jewish Review and Observer" (1899) of Cleveland.

Of magazines "The American Jewess" (1895–1899) was especially devoted to women's interests; "The Rabbinical Review" (1881–82) and the "Menorah" (founded 1886) were among the last of the scientific-literary magazines in the United States (the latter became one of the foremost periodicals in the country), the "Publications of the American Jewish Historical Society" (since 1893) being entirely historical. "The American Jews' Annual" (1884–97) was one of the few of its class ever established in America. A single number of a magazine devoted to cabalistic science appeared in Boston in 1895. Of German papers in America "Sulamit" was a literary monthly; and "Freitag zu Nacht" (from 1888), a weekly. There were likewise several Zionist papers of brief existence, and two or three organs of the B'ne B'rith or other lodges.

Judæo-German: The Jews who came to America from Slavonic countries during the great immigrations were not long in appreciating the usefulness of the newspaper. Ninety or a hundred Judæo-German journals were founded between 1885 and 1900, the period of greatest activity in this regard being around 1890, when many papers appeared in the interests of the working classes. The greater part of the journals enjoyed but a brief existence; the most important of all remained the first-established, the "Jüdische Gazetten," which, in full accord with the spirit of its adopted country, purchased and consolidated about twenty of the new papers, some of which, however, continued to appear as its daily (*e.g.*, the "Jüdisches Tageblatt") or other special editions. Among the most important or interesting papers of this class which have appeared are: The "New Yorker Jüdische Zeitung" (1885–89), in the special Judæo-Hungarian dialect; Goldfaden's "New-Yorker Illustrirte Jüdische Zeitung" (1887), the first of its kind in America, in the Judæo-Polish dialect; "Der Volksadvokat" (from 1887); "Der Jüdischer Courier" (1887–1902); "Der Volksfreund" (1889); "Die Arbeiter Zeitung" (1890–1902), most important of the labor journals; "Sulamit" (from 1890), a Zionist publication; "Der Telegraf" (1890–1899); "Der Täglicher Herold" (from 1891); and "Vorwärts" (from 1897), a socialist organ. Of the Judæo-German magazines the principal ones have been: "Yom-Ṭob Blätter" (1897–99), issued only for Jewish and American holidays; "Die Freie Gesellschaft" (1895–1902), an anarchist monthly; "Die Zukunft" (from 1892; still published), a socialist monthly; "Der Neue Geist," a monthly edited by Harkavy, which, like "Natur und Leben," had but a brief existence (in 1897); and, finally, "Der Land Ḥakam" (from 1893) and "Der Jüdischer Puck" (1894–96), two humoristic periodicals. In South America "Der Jüdische Phonograph" was founded at Buenos Ayres in 1897.

Hebrew: An attempt was made also to force the American Hebrew press to share the revival which took place in the native countries of the newcomers. No fewer than fifteen or twenty Hebrew periodicals were established between 1888 and 1900 in the United States, devoted in part to literature and science, in part to political and social topics. Only a few, however, had so long a life as "Ha-Pisgah" (founded in 1890 and continued as "Ha-Teḥiyyah" until 1900) and "Ha-'Ibri" (1892–98), or even as "Ner ha-Ma'arabi" (1895–97) and "Ha-Modia' le-Ḥodashim" (1900–2).

England: Conditions in England reflected, but only to a small degree, those in America. "The Jewish Chronicle" and "The Jewish World" met with no serious rivalry in their field of activity. Of half a dozen new journals in English founded between 1882 and 1890, only "The Jewish Standard" (1888–90), an Orthodox weekly, had any measure of success. "Palestine," the quarterly of the Chovevei Zion Association, and "Young Israel," a magazine for the young, were established in 1897. In the domain of science the "Jewish Quarterly Review"

TITLE-HEADINGS OF THE FIRST NUMBERS OF CURRENT JEWISH PERIODICALS.

(from 1888) took a leading place among the few magazines of its class existing in the Jewish world during the period under discussion. The new Judæo-German publications were chiefly of the socialist and labor class; the most successful after the early immigration movement was "Der Arbeiterfreund" (1886–91); later "The Jewish Observer" (from 1894) and "Der Jüdischer Express" (from 1896) became the representatives of this class of papers; "Germinal" (1900) was anarchistic. The comic press was represented by "Pipifox." Of Hebrew periodicals "Ha-Degel" (founded in 1897) became a successful newspaper; "Ha-Yehudi" (1898) was founded in the interests of Zionism and Orthodoxy. In English-speaking places outside of the United States and England Gibraltar established the "Voice of Jacob" in 1882; Sydney and Melbourne (Australia), "The Jewish Herald" in 1883, and the former "The Australian Hebrew" in 1895 and the latter the "Australasian Hebrew" in 1897; and Montreal, "The Jewish Times" (the first Jewish paper in Canada) in 1898. In India Bombay has had at least three Mahrati-English papers, and Calcutta two Arabic in Hebrew characters.

Russia: As was noticed above, toward the beginning of the period under discussion there had been on the part of Jewish readers in Russia a marked inclination toward non-Hebrew literature; indeed, it seemed to some that Hebrew as the language of periodicals was doomed; "Ha-Karmel" ceased publication in 1881, three years before "Ha-Shaḥar" in Vienna did the same. With the renewed persecution of the Jews, however, a decided change to earlier ideals took place; the Maskilim redoubled their efforts, and met a willing response. "Ha-Asif," a literary annual established in 1884, found 7,000 subscribers—a considerable number when compared with the 800 which "Ha-Shaḥar" had had in its most successful days. Other annuals and monthlies followed before 1886. A daily press of any kind had never been able to exist in Russia; and even the weeklies issued from time to time had been so restricted as to be without importance. The measure of the change in conditions in the new era, therefore, can be estimated from the fact that in 1886 a Hebrew daily, with paid contributors—the first in the history of Jewish journalism—was established as "Ha-Yom," and that in the same year "Ha-Meliẓ" and "Ha-Ẓefirah" likewise became dailies, with thousands of subscribers (see also RUSSIA, PERIODICALS IN). Of the Judæo-German publications in Russia, Zederbaum's "Jüdisches Volksblatt," a weekly, was published from 1881 to 1889; and "Der Jüdischer Arbeiter" (from 1897) represented the interests of the Russian Social Democrats. Of periodicals in Russian several were attempted before the revival of Hebrew, but the "Voskhod," which became a monthly in 1881, found no important rival until "Budushchnost" appeared at the end of the century (1900–2).

Galicia shared in the revival of Hebrew to a greater extent even than Russia. Between twenty and twenty-five periodical publications of various classes, principally literary weeklies and monthlies, were published there. Among the most noteworthy are the weekly "Ha-Maggid le-Yisrael" (since 1893); the monthly "Ahabat Ẓiyyon" (since 1894); the quarterly "Ha-Eshkol" (since 1898); "Gan Sha'shu'im" (from 1899), a weekly for children. "Oẓar ha-Sifrut" (1887–96) was an annual for literature, belles-lettres, and science. Of the half-dozen Judæo-German periodicals founded in Galicia toward the close of the century, "Der Jude" (since 1899) is a general news weekly. Of German papers, "Jerusalem" (founded in 1899) for literature, and the "Krakauer Jüdische Zeitung" (1898) for science and Zionism, may be mentioned. In the South-Slavonic provinces of the Austrian empire there was never an active Jewish press, although Moritz Grünwald's "Das Jüdische Centralblatt" (1882) appeared for seven years. In Moravia the "Jüdische Volksstimme," a labor journal, was founded in 1900. In Rumania seven or eight Rumanian journals—principally Zionist—and half as many Judæo-German were established, most of them near the beginning of the new century. The first journal in Bulgarian was "El Tresoro" (1894–96), although within the following few years several others appeared.

Palestine: The new period brought several Hebrew papers to the aid of Ha-Ḥabaẓẓelat" and "Ha-Ẓebi" in Palestine, the latter of which ceased publication in 1900 and was continued as "Hashḳafah." Luncz's annual "Yerushalayim," scientific, and "Torah mi-Ẓiyyon" (1886–87, 1896–99), rabbinical, are examples of the most important of the new foundations.

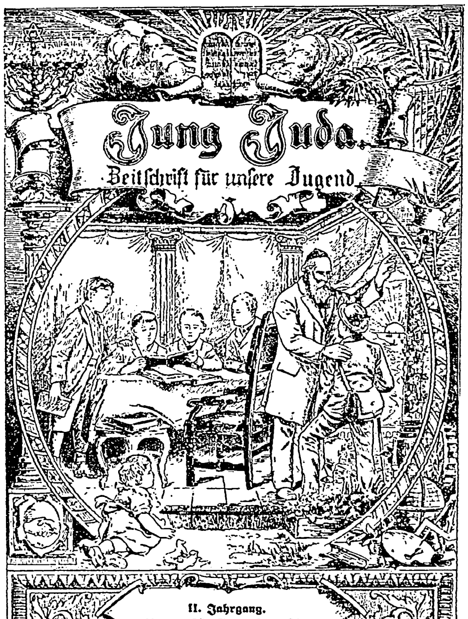
Ladino Press.

The activity of the Judæo-Spanish press noted during the preceding decade continued during 1881–1900 (Bulgaria having a share therein from 1894), though toward the close of the period all Turkish journals were compelled to suspend publication for a time. Of the older papers, "El Tiempo," "El Lunar," "El Telegraf," and "La Esperanza" continued publication into the new century, together with several out of fifteen or twenty new ones that were established; viz., "La Verdad" of Smyrna, "El Novelista," "Carmi," "El Avenir," "El Messerrit," and "La Verdad" of Sofia. "El Luzero de la Paciencia" (Turn-Severin, 1886–87) was the first Judæo-Spanish journal of the East printed in Latin characters; "El Progresso" (1899) was founded in Vienna, "El Sabado Segreto" in Mexico (1889), and "El Colono Israelita" in Buenos Ayres. "O Israelitis Chronographos" of Corfu is the only Jewish periodical recorded which has a Greek title, though some of the Judæo-Spanish papers have been issued with Greek departments. In Italy "Or ha-Lebanon" (1886), an Arabic monthly, was edited by a native of Algiers.

In North Africa several Arabic journals were founded: "Al-Mubashshir" (1884) and "Al-Bustan" (1889) in Tunis (the former of which was forced by the government to suspend issue), and "Al-Faraḥ" (1900) in Egypt. The "Vigio Israélite" (1885–93), in Arabic and French, and "La Jeunesse Israélite" (1890), "Ha-Shofeṭ" (1894), and "L'Israélite Algérien" (1900) in French were established in Oran. Aside from annuals and bulletins, the few new periodicals which appeared in France during this period were: in French, "La Vraie Parole" (1893), "Kadimah" or "En Avant" (1896; by the students of the

Nationalist party), and two Zionist papers, "Le Flambeau" (1899) and "L'Echo Sioniste" (1900); in Judæo-German, "Die Pariser Allgemeine Jüdische Volkszeitung" (1892) and "Ha-Tiḳwah" (1897); and in Hebrew, "Ha-Ḥoḳer" (1891). In Holland the principal new papers were "Achawa" (1888), pedagogic, and the "Centraal Blad voor Israelieten in Nederland" (1885), a successful weekly.

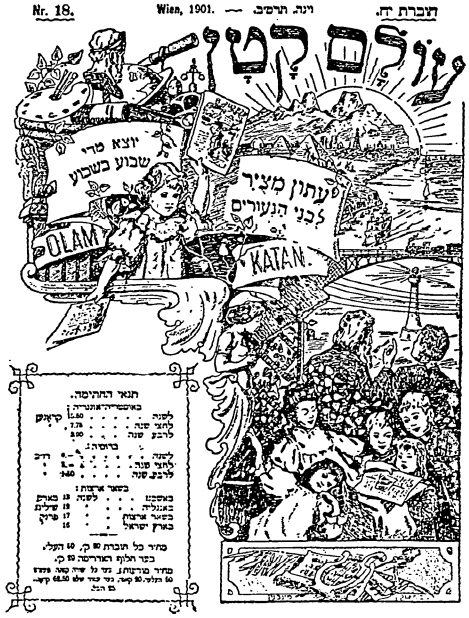
Since 1900: The Jewish press in the new century has continued to develop along the lines laid down in the closing decades of the nineteenth. The increase in the number of English and Judæo-German periodicals in America is steady, though of Hebrew magazines "Ha-Le'om" seems to stand alone. Russia's daily press has been increased by at least one Hebrew and one Judæo-German paper, and another Hebrew journal appears several times a week. In Germany the short-lived "Ha-Ḳeshet," a Hebrew illustrated journal devoted especially to art, was especially noteworthy. New Hungarian, Rumanian, Bulgarian, and Judæo-Spanish journals have likewise been founded. The Italian "Rivista Israelitica" has been established as a companion journal to the "Revue des Etudes Juives" of France and the "Jewish Quarterly Review" of England. In Switzerland several Zionist organs are now being published in various languages. In more distant countries the "Message Zioniste" (French) of Alexandria and "Al Miẓrayim" (Arabic and Judæo-Spanish) of Cairo; "Shoshannah" (Arabic) and "The Voice of Sinai" of Calcutta; the "South African Jewish Chronicle" (English) and the "Jewish Advocate" (Judæo-German) of Cape Town, and, finally, "Israel's Messenger" of Shanghai are the latest established.



Jung Juda.
Zeitſchrift für unſere Jugend.
II. Jahrgang.
Prag, 27. September 1901.
(14. Tiſchri 5662.)
Nr. 1.

Title-Page of "Jung Juda."

Detailed accounts of the more important Jewish periodicals are given in THE JEWISH ENCYCLOPEDIA under the respective captions. The list of periodicals herewith annexed includes the available data concerning every periodical publication of which any notice could be found; it has been revised and augmented by Dr. Meyer Kayserling of Budapest, Dr. N. Porges of Leipsic, Dr. Samuel Posnanski of Warsaw, Moïse Schwab of Paris, M. Franco of Rumelia, Dr. Aaron Freimann of Frankfort-on-the-Main, S. Seeligman of Amsterdam, Dr. Samuel Krauss of Budapest, and Rabbi Ehrenpreis of Sofia. The supplementary table on page 640 recapitulates the number of journals (including newspapers, but excluding year-books, calendars, and other annuals), in each language, founded in the various countries, the figures in parentheses indicating the number now being published (so far as can be ascertained; the actual numbers are in excess of those given). See also ALMANACS.



Title-Page of "'Olam Ḳaṭan."

NOTE.—The figures immediately following each abbreviation indicate the number of periodicals (including newspapers, but excluding almanacs, year-books, and other annuals) that have been established in the language and in the country in question. The figures in parentheses indicate the number of these periodicals still (1904) being published, as far as has been ascertained: the actual numbers are larger than those given.

G.—W. P.

PERIZZITES (פריזי): Canaanitish tribe settled in the south of Palestine between Har and Negeb, although it is not mentioned in the genealogy in Gen. x. According to the Biblical references, Abraham, when he entered Palestine, found the Perizzites dwelling near the Canaanites (*ib.* xiii. 7), and God promised to destroy both these peoples (*ib.* xv. 20). Jacob reproved his sons because of the crime of Shechem, inasmuch as he feared the Perizzites and the Canaanites (*ib.* xxxiv. 30). Moses promised the Israelites to bring them unto the place of the Perizzites and the Amorites (Ex. xxx. 8); and at a later time the tribes of Simeon and Judah conquered the Canaanites and the Perizzites (Judges i. 4). The Perizzites were among the tribes that were not subjected to tribute by Solomon (I Kings ix. 20–22), while the complaint was brought to Ezra that the priests and the Levites would not separate themselves from the Perizzites and the other peoples of the land (Ezra ix. 1).

The view was formerly held that the Perizzites were a prehistoric tribe which became assimilated to the Canaanites when the latter invaded Palestine; but this is in contradiction to the fact that the Perizzites are not mentioned in the genealogy. More recent commentators are of the opinion that the names "Perizi" and "Perazi" are identical, and that the Bible has included under the name "Perizzites" all stocks dwelling in unwalled towns.

PERJURY: The violation of an oath or solemn promise; solemn assertion of a falsity. While perjury was regarded as one of the greatest sins (Zech. v. 4), and the perjurer was not considered worthy to enter the holy places (Ps. xv. 1–4), no human penalty was prescribed for it in the Bible, the punishment of the perjured being left to God. Most of the Jewish commentators take the commandment in Ex. xx. 7; Deut. v. 11 (comp. Onkelos, למגנא, and LXX., ἐπὶ ματαίῳ) to refer to a vain, useless oath (see OATH). There is another prohibition against swearing falsely (Lev. xix. 11, 12), which prescribes no special punishment; from the context it may be taken to refer to perjury committed in a civil transaction or at a judicial proceeding. The witness who refuses to give testimony when adjured to do so, or he who makes foolish promises "to do evil or to do good," and does not fulfil them, is required to bring an offering to atone for his sin (Lev. v. 1, 4–13). These few scattered laws about perjury were discussed by the Rabbis in much detail, and the various kinds of perjury were formulated by them under four heads, according to the kind of punishment inflicted.

Individual Acts.

I. The violation of oaths which have no civil bearing, and which affect only the individual who pronounces them (שבועת ביטוי). One who swears that he did, or that he did not, or that he would, or would not, do a certain thing, the matter in itself being of no concern to any one else, and then violated his oath when he could have performed it, or if his assertion is found to be false, is guilty of perjury. If the perjury was committed wittingly he is liable to the punishment of flagellation; if unwittingly, he is required to bring a guilt-offering, varying in kind with his wealth (עולה ויורד). If he is wealthy, the offering must consist of a female sheep or goat; if he can not afford that, he must bring an offering of two pigeons; and if he can not afford even those, he must bring a meal-offering (Shebu. iii. 1-7, based on Lev. v. 4-13; Maimonides, "Yad," Shebu'ot, i. 1-3, ii.-v. 11). If after taking the oath he discovers that he can not conveniently abide by it, he may have his oath dissolved by a learned man or by three ordinary men (*l.c.* vi.; see OATH; VOWS).

Vain Oaths.

II. An oath taken in vain (שבועת שוא). Four kinds of oaths are included by the Rabbis under this head; in each case, if taken wittingly, the punishment is flagellation, but there is no punishment at all where the oath was taken unwittingly. These oaths are: (1) A false affirmation, in the form of an oath, in regard to a well-known fact, or facts, as when one swears that a man is a woman or that gold is silver. (2) An affirmation, in the form of an oath, to patent facts, as when one swears that the sky is the sky or that a stone is a stone. (3) Swearing to transgress a religious commandment. (4) An undertaking, under oath, to do things impossible of execution, as when one swears not to sleep for three consecutive days, or not to eat for seven consecutive days (Shebu. iii. 89, 11, based on Ex. xx. 7; Deut. v. 11; "Yad," *l.c.* i. 4-7, v. 12-22).

In Civil Actions.

III. A false assertion, or denial, under oath, in regard to a claim made for the return of a deposit or a loan (שבועת הפקדון). One who swears falsely in repudiation of a demand made upon him by another when his admission would have made him liable to payment is obliged to pay the whole claim plus one-fifth of its amount; besides this, he is required to bring a guilt-offering to atone for his sin. This punishment is administered only when the claim consists of money or movable property; but if the claim concerns real estate, or slaves, or documents, or if the claim is of such a nature that an admission on the part of the defendant would not make him liable to payment, as in the case of fines (see ADMISSIONS IN EVIDENCE), there is no punishment attached, although the perjured is regarded as guilty of the kind of perjury included in definition No. I. (Shebu. v.-vi., based on Lev. v. 21-26; see Shebu. 36b, 37b; Ker. 9a; "Yad," *l.c.* i. 8-11, vii.-viii.). Perjury in an oath taken in the courtroom (שבועת הדיינין) is included under this head and is treated accordingly ("Yad," *l.c.* xi. 20).

Refusal to Testify.

IV. The refusal of witnesses to testify to a fact when adjured to do so (שבועת העדות). If witnesses to a case involving a monetary transaction, whose testimony would be sufficient to decide the case against the defendant, swear that they had not witnessed the transaction, or if they reply in the affirmative to the adjuration of the plaintiff after they have denied all knowledge of the transaction, they are required to bring a guilt-offering, varying in kind with their wealth, as explained in definition No. I. (Shebu. iv., based on Lev. v. 1; "Yad," *l.c.* i. 12, 13; ix., x.).

In all these cases, if the perjurer took his oath under duress, or if he was compelled to violate his oath, he is free from all punishment (Shebu. 26a; Ned. 27a; "Yad," *l.c.* iii. 1). The perjurer, even though he submits to the punishment imposed upon him, is still regarded as answerable before God, for perjury involves, besides the civil wrong, the desecration of God's name ("ḥillul ha-Shem"), for which divine punishment will be meted out (Shebu. 39a; "Yad," *l.c.* xii. 1, 2; *ib.* Teshubah, i. 2).

No oath can be administered by a court to one who has once perjured himself in any of the cases mentioned above, even though the litigant against whom he had been called is willing to believe him on his oath; nor is his testimony admitted in evidence (Shebu. vii. 4; "Yad," To'en, ii. 12; Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 34, 5; 92, 1, 2). If, however, he undergoes the punishment of scourging, or manifests such signs of contrition that the court is satisfied that he sincerely regrets his transgression, he is restored to his former position in the community ("Yad," 'Edut, xii. 9; *ib.* To'en, ii. 9, 10; see "Kesef Mishneh" and "Leḥem Mishneh" *ad loc.*; Ḥoshen Mishpaṭ, 34, 33; 92, 14).

E. C. J. H. G.

PERL, JOSEPH: Austrian Mæcenas and man of letters; born at Tarnopol, Galicia, 1774; died there Oct. 1, 1839. The son of a wealthy family, and growing to manhood at the time of the regenerative movement of the German ME'ASSEFIM, he devoted himself from his youth to the emancipation and education of the Jews, gaining the approval of the Czar of Russia and the Emperor of Austria, who honored him with various decorations, while the latter permitted Perl's son Michael to open a pharmacy—the first one conducted by a Jew in Austria. Perl interceded in behalf of his coreligionists, who were persecuted and humiliated by the Christians and plunged in Ḥasidic mysticism. Convinced that only intellectual enlightenment could change these deplorable conditions, he was tirelessly active in religious and social reforms. He became the friend of Krochmal and Rapoport; and it was due to his influence that the latter was appointed "Kreisrabbiner" of Tarnopol. Perl was the first to found a modern Jewish school in Poland; and in 1815 he built near it at his own expense a Reform synagogue with a choir. He tried to counteract the influence of Ḥasidism by collecting around him a circle of talented men of letters.

Perl published under the pseudonym "Obadiah ben Pethahiah" a satire against Ḥasidism, entitled "Megalleh Ṭemirin" (Vienna, 1819; often reprinted), which was for a long time ascribed to Rapoport. It was a clever parody in the language of the Zohar, the tenor of which deceived for a long time even the Ḥasidim themselves. He published also two other pamphlets in the same vein, entitled respectively "Dibre Ẓaddiḳim" and "Boḥen Ẓaddiḳ" (Prague, 1838), and wrote the chapter on the Ḥasidim in Jost's "Geschichte des Judenthums und Seiner Sekten," iii. 185 *et seq.*, Leipsic, 1859. After his death the school founded by him was transformed into the Deutsch-Israelitische Hauptschule.

PERLBACH, MAX: German historian; born at Danzig, Prussia, Nov. 4, 1848. He attended the Friedrichs-Gymnasium at Breslau, and studied history at the universities of Breslau, Heidelberg, and Göttingen (Ph.D. 1871). He was employed in the university libraries at Königsberg, Prussia (1872-1876), Greifswald (1876-83), and Halle (1883-1903), and in the Royal Library, Berlin, officiating in the last as director. His scientific work deals chiefly with the history of the provinces of East Prussia and West Prussia during the Middle Ages.

Aside from numerous articles contributed to various German periodicals, Perlbach has written or edited the following works: "Die Aeltere Chronik von Oliva," Göttingen, 1871; "Preussische Regesten bis zum Ausgang des 13. Jahrhunderts," Königsberg, 1876; "Simon Grunau's Preussische Chronik," part A, Leipsic, 1876; "Quellenbeiträge zur Gesch. der Stadt Königsberg im Mittelalter," Göttingen, 1878; "Pommerellisches Urkundenbuch," Danzig, 1882; "Preussisch-Polnische Studien zur Geschichte des Mittelalters," Halle, 1886; "Die Statuten des Deutschen Ordens," *ib.* 1890; "Prussia Scholastica: die Ost- und Westpreussen auf den Mittelalterlichen Universitäten," Leipsic, 1896. He has edited also some Polish medieval historical sources for the "Monumenta Germaniæ Historica," 1888, 1893.

S.

PERLES: A family probably originating in Prague many members of which have been rabbis and scholars.

Aaron b. Moses Meïr Perles: Rabbinical author; died at Prague June 4, 1739; son of Moses Meïr Perles. He edited that part of Isaac ben Abba Mari's "Sefer ha-'Iṭṭur" which deals with the porging of meat (see Porging), adding references from later literature, notes, and rules in Judæo-German. His edition was published at Offenbach in 1722 and at Prague in 1731. A manuscript without the Judæo-German part is in the Bodleian Library.

Bibliography: Fürst, *Bibl. Jud.* iii. 76; Steinschneider, *Cat. Bodl.* col. 725; Benjacob, *Oẓar ha-Sefarim*, p. 204; Neubauer, *Cat. Bodl. Hebr. MSS.* No. 792; Hock-Kaufmann, *Die Familien Prags*, p. 281, Presburg, 1892.

D.

Baruch Asher Perles: Hungarian Talmudist; born in 1789; died Nov. 25, 1857. He was a descendant of the rabbinical family of Perles or Perls, which migrated from Bohemia to Hungary, and numbered among its ancestors on one side Rabbi Judah Löw ben Bezaleel and on the other R. Asher b. Jehiel. The favorite pupil of R. Götz Kohn Schwerin of Baja, Perles was won over to the simple interpretation of the Bible ("peshaṭ"), becoming antagonistic to the pilpul, which he had learned at the yeshibah of R. Moses Sofer at Presburg. He was assistant rabbi ("dayyan") at Baja, and officiated as rabbi from Kohn Schwerin's death until Nascher assumed the office. Uniting Talmudic scholarship with deep piety and a blameless life, Perles was one of the first Hungarian rabbis to comprehend the modern spirit. He read German books and periodicals, and sent his youngest son, Joseph, whom he was educating for the rabbinate, to the gymnasium at Baja. When the rabbinical seminary at Breslau was founded, he was the first to enroll his son, a fact of which Frankel was especially proud. Among the pupils of Perles was Samuel Kohn, now (1904) chief rabbi of Budapest.

Bibliography: Hock-Kaufmann, *Die Familien Prags*, pp. 279 *et seq.*; Kaufmann, in *Monatsschrift*, xxxvii. 383-384, 388-389.

Felix Perles: German rabbi; born at Munich March 18, 1874; son of Joseph Perles. He received his early training at the Wilhelm-Gymnasium in his native city, and at the same time began his Jewish studies under his father. He then studied successively at the University of Munich (Orientalia and classical philology); the university as well as the rabbinical seminary of Breslau; again, after his father's death, at Munich (receiving his degree of Ph.D. in 1895); at the Jewish Theological Seminary, Vienna, where he became an adherent of the national-Jewish movement; and at the seminary at Paris, receiving his rabbinical diploma in 1898. He was then called as vice-rabbi to Königsberg, where he still (1904) resides.

Perles' works, dealing with Biblical science, and more especially with textual criticism, rabbinical philology, and the science of religion, include the following: "Analekten zur Textkritik des Alten Testaments," Munich, 1895; "Zur Althebräischen Strophik," Vienna, 1896; "Notes Critiques sur le Texte de l'Ecclésiastique," Paris, 1897; "Was Lehrt Uns Harnack?" Frankfort-on-the-Main, 1902 (Eng. version in "J. Q. R." xiv. 517-543); "Zur Erklärung der Psalmen Salomos," Berlin, 1902; "Bousset's Religion des Judentums im Neutestamentlichen Zeitalter Kritisch Untersucht," *ib.* 1903. He also edited "Gesammelte Aufsätze zur Sprach- und Sagenkunde von Max Grünbaum" (*ib.* 1901), and has contributed a number of essays and reviews to the "Orientalistische Literaturzeitung," "Die Welt," "Ost und West," and other periodicals.

Joseph Perles: German rabbi; born at Baja, Hungary, Nov. 26, 1835; died at Munich March 4, 1894. Having received his early instruction in the Talmud from his father, Baruch Asher Perles, he was educated successively at the gymnasium of his native city, the rabbinical seminary at Breslau, and the university of that city (Oriental philology and philosophy; Ph.D. 1859, presenting as his dissertation "Meletemata Peschitthoniana").

Perles was awarded his rabbinical diploma in 1862. He had already received a call, in the autumn of the previous year, as preacher to the community of Posen; and in that city he founded a religious school. In 1863 he married Rosalie, the eldest daughter of Simon Baruch Scheфftel. In the same year he declined a call to Budapest; but in 1871 he accepted the rabbinate of Munich, being the first rabbi of modern training to fill that office. As the registration law which had restricted the expansion of the communities had not been abrogated until 1861, Perles found an undeveloped community; but under his management it soon began to flourish, and in 1887 he dedicated the new synagogue. He declined not only a call to succeed Geiger as rabbi in Berlin, but also a chair at the newly founded seminary in Budapest.

Of Perles' works the following (given in order of publication) deserve special notice:

Ueber den Geist des Commentars des R. Moses b. Nachman zum Pentateuch und über Sein Verhältniss zum Pentateuch-Commentar Raschi's, in "Monatsschrift," 1858 (with supplementary notes, *ib.* 1860).

Die Jüdische Hochzeit in Nachbiblischer Zeit, Leipsic, 1860.

Die Leichenfeierlichkeiten im Nachbiblischen Judentum, Breslau, 1861 (both of the foregoing in English in "Hebrew Characteristics," New York, 1875).

R. Salomo b. Abraham b. Adereth: Sein Leben und Seine Schriften, Breslau, 1863.

Gesch. der Juden in Posen, Breslau, 1865.

David Cohen de Lara's Rabbinisches Lexicon Keter Kehunnah, Breslau, 1868.

Etymologische Studien zur Kunde der Rabbinischen Sprach- und Alterthumskunde, Breslau, 1871.

Zur Rabbinischen Sprach- und Sagenkunde, Breslau, 1873 (contains material on the Hebrew sources of the "Arabian Nights," in addition to many new definitions of words).

Thron und Circus des Königs Salomo, Breslau, 1873.

Die in einer Münchener Handschrift Aufgefundene Erste Lateinische Uebersetzung des Maimonidischen Führers, Breslau, 1875.

Das Buch Arugat Habosem des Abraham b. Asriel, Krotoschin, 1877.

Eine Neuerschlossene Quelle über Uriel Acosta, Krotoschin, 1877.

Kalonymos b. Kalonymos' Sendschreiben an Joseph Kaspi, Munich, 1879.

Beiträge zur Geschichte der Hebräischen und Aramäischen Studien, 1884.

Die Berner Handschrift des Kleinen Aruch, in "Grätz Jubelschrift," Breslau, 1887.

Beiträge zur Rabbinischen Sprach- und Altertumskunde, Breslau, 1893.

Further, he contributed to the "Revue des Etudes Juives" and other periodicals, and edited the "Bi'ure Onḳelos" of S. B. Schefftel (1888). A selection of his sermons was edited by his wife in 1896.

Perles left two sons, Max and Felix. His congregation has honored his memory by establishing the Perles Stiftung, a philanthropic and educational institution.

Bibliography: D. Kaufmann, in *Münchener Allgemeine Zeitung*, March 17, 1894, Supplement; B. Rippner, in *Israelitische Wochenschrift*, March 30, 1894; L. Blau, in *Magyar Zsidó Szemle*, xi. 146–151; W. Bacher, in *J. Q. R.* vii. 1–23; Israel Lévi, in *R. E. J.* xxix. 156–157.

Max Perles: German oculist; born at Posen April 8, 1867; died at Munich Oct. 20, 1894; son of Joseph Perles. He studied medicine at the University of Munich (M.D. 1889), and in 1890 went to Berlin, where he studied bacteriology for six months with Robert Koch, and was then appointed assistant at the largest eye infirmary in that city. In 1894 he was recalled to Munich by his father's fatal illness, and established himself there as an oculist, at the same time continuing his bacteriological studies and perfecting the electrical ophthalmoscope which he had invented. He was about to receive permission to lecture at the University of Munich when he died of blood-poisoning contracted during his experiments.

Perles published the following essays: "Ueber Solanin und Solanidin" (prize dissertation, Munich, 1889); "Embolia Partialis Retinæ" (in "Centralblatt für Augenheilkunde," 1891); "Ueber Pigmentstaar bei Diabetes Mellitus" (*ib.* 1892); "Ueber Allgemeininfection vom Auge aus" (*ib.*); "Ueber Heilung von Stauungspapillen" (*ib.* 1893); "Beobachtungen über Perniciöse Anämie" (in "Berliner Klinische Wochenschrift," 1893); "Ueber die Durch den Friedländer'schen Pneumobacillus Hervorgerufene Augenentzündung" (in "Vorträge der Wiener Naturforscherversammlung," 1894); "Ueber einen Einfachen Elektrischen Augenspiegel" (*ib.*); "Experimentelles zur Lehre von den Infectionskrankheiten des Auges" (in Virchow's "Archiv," cxl., part 2, p. 209).

Bibliography: I. Munk, biographical sketch in Virchow's *Archiv*, l.c.

S.

Moses Meïr Perles: Rabbinical author; born at Prague 1666; died there March 30, 1739. In the beginning of the eighteenth century he lived at Vienna in the house of Samson Wertheimer, for whom he acted as private secretary and almoner and by whom he was supported even after he had returned to Prague. He wrote "Megillat Sefer" (Prague, 1710), a commentary on the Book of Esther based especially on Rashi's commentary on the same book. In the introduction to this commentary he mentions the following works written by him: "Pene Ḥammah," homilies on the Talmudic haggadot; "Or 'Olam," sermons for the holy days; and "Ḳiryat Arba'," sermons for the four special Sabbaths (see Parashiyyot, The Four). The inscription on his tombstone mentions another book of his, entitled "Me'ir Netibot," which may be identical with "Or 'Olam," the latter title not being mentioned there.

Perles was related to many prominent rabbinical families, about which he gives very valuable (though not always correct) information in the preface to his "Megillat Sefer." Similar information is found also on the fly-leaf of the manuscript of "Naḥalat Abot," a commentary on Pirḳe Abot, now in the Bodleian Library. This work was written either by Perles' great-grandfather Eleazar or by the latter's father-in-law, Isaac ben Jekuthiel ha-Kohen, who was a rival of Löw ben Bezaleel.

D.

Rosalie Perles: German writer and philanthropist; born at Breslau Dec. 2, 1839; daughter of S. B. Schefftel; married Joseph Perles June 2, 1863. While in Munich she engaged in philanthropic work, as leader of the women's societies there. Having lost both her husband and her elder son in 1894, she went in 1899 to live with her younger son at Königsberg, where she has taken up literary work. She is a regular contributor to "Jewish Comment" (articles on Germany), and has also written for The Jewish Encyclopedia, "Allgemeine Zeitung des Judenthums," "Im Deutschen Reich," and "Ost und West." She is the author of "Ein Moderner Erlöser des Judentums" (Königsberg, 1901), and has edited a volume of her husband's sermons, with a preface.

S.

PERLHEFTER (EYBESCHÜTZ), ISSACHAR BÄR B. JUDAH LÖB B. MOSES: Bohemian rabbi and author; died after Sept. 9, 1701. He was a native of Prague and a scion of the Eibenschütz or Eybeschütz family; but in accordance with a custom common in those days he adopted the family name of his wife, Bella, daughter of Jacob Perlhefter, also of Prague. Perlhefter and his wife, who were both highly cultured, lived in Vienna until the expulsion of the Jews from that city in 1670. He then went to Altorf, where he was befriended by Wagenseil, the well-known anti-Jewish author, to whom he taught Hebrew. Bella Perlhefter later joined her husband in Altorf, whither she was called to instruct Wagenseil's daughter in dancing and music.

Perlhefter was called from Altorf to become rabbi of Mantua, Italy, where his father had occupied a similar position. He remained there for six years, but was forced to leave the city on account of a quarrel concerning the pseudo-Messiah Mordecai of Eisenstadt, one of the scattered followers of Shabbethai Ẓebi. It seems that Perlhefter at first believed in Mordecai and helped to bring him to Mantua; but later, when he discovered and attempted to expose the deceptions practised by the impostor, the latter had already gained so many friends and adherents that Perlhefter was compelled to abandon his position in Mantua. After living for some time in Ottensoos, the Perlhefters returned to Prague, where Issachar Bär ultimately succeeded to the position of dayyan and scribe, which his grandfather Moses had held in the same community.

Perlhefter was the author of: "Ohel Yissakar," on the laws of "sheḥiṭah," with a Judæo-German translation (Wilhemsdorf, 1670); "Ma'aseh Ḥoshen u-Ḳeṭoret" (Prague, 1686; 2d ed. Frankfort-on-the-Oder, 1703), on Jewish archeology, extracted from Portaleone's "Shilṭe ha-Gibborim"; "Ba'er Heṭeb" (Prague, 1699), on Targum Sheni to the Book of Esther. An ethical work by him in Judæo-German, "Be'er Sheba'," dedicated to his wife, is preserved in manuscript.

PERLMAN, ELIEZER. See Ben Judah, Eliezer.

PERNAMBUCO. See Brazil.

PERPIGNAN (Hebrew, פירפיניאן): Ancient capital of the county of Roussillon, now the chief town of the department of Pyrénées-Orientales, France. Jews probably lived in Perpignan in the latter half of the twelfth century; for in 1228 James I. forbade them to exercise public functions or to keep Christian servants. In the same year an ecclesiastical convocation prohibited them from paraphrasing the Bible in "Romans" (*i.e.*, Catalan), or from exacting a higher rate of interest than 20 per cent. The kings of Aragon were, however, on the whole favorably disposed toward them. In 1269 and 1270 King James, "in reward for the many and gracious services which his faithful Jews of Perpignan have rendered and continue to render to him," relieved them of the payment of all tolls imposed by the "leudes" or chief vassals on them and their riding-animals. In 1275 he declared all ground acquired by the Jews to be free and clear then and for the future, and exempted them from all claims for quit-rent, dues on sales of inheritance, and the like. In 1279, however, all Jews were forbidden to keep Christian nurses, chambermaids, or other servants; and Christians were prohibited from carrying water or from washing for the Jews and from taking their bread to the bakeries. In 1295 the Jews were forbidden to go into the street without cloaks, and in 1314 they were compelled to wear a badge in the shape of a quoit. King Peter IV. forbade them in 1358 to buy poultry, game, or any kind of food in the market-place "before the third part of the day had elapsed"; but in 1372 he authorized them to travel in France on business, and gave letters of "guiatge" or safe-conduct to foreign Jews wishing to enter the counties of Roussillon and Cerdagne. When King Martin ascended the throne of Aragon in 1396, the Jews offered him a present of 4,000 florins; they were assured by him of his protection; and he authorized the prosecution of those Christians who ill-treated them. King Ferdinand I., however, dealt very differently with the Jews, issuing a decree in 1415, with the view of converting them to Christianity, to the effect that three times a year the Jews should attend a sermon to be delivered by a priest or a master in theology.

Disabilities and Restrictions.

In 1419 Alphonse IV. permitted the Jews to cease wearing the badge; and in 1427 he intervened in their favor against the bailiff of Perpignan and against the inquisitors, whom he forbade to harass the Jews "except in case of hatred or in transgression of the moral law." The inquisitors, however, paid no heed to the royal commands; and a large number of Jews, alarmed by the threats of the Inquisition, either accepted baptism or left Perpignan. The French occupation under Louis XI. and Charles VIII. was fatal to the Jewish community of Perpignan, which had already been reduced to the last extremity by Alphonse IV. When the Jews were expelled from Spain, in July, 1492, a number of refugees from Catalonia and Aragon placed themselves under the protection of Charles VIII.; but on Sept. 15 of the same year they were obliged to seek another home. A royal edict of Sept. 21, 1493, compelled the thirty-nine Jews still living in Perpignan to leave the city within thirty days, and not to return "on pain of death and confiscation of their property." They then sought refuge at Naples, and thence some of them went shortly afterward to Constantinople.

Under French Kings.

Aside from Perpignan, the Jews had founded communities in the following places: Ille, Thuir, Céret, Pingcerda, Collioure, Millas, Elne, Toreilles, Clayra, Salses, Le Boulou, and Villefranche-de-Conflent, where the theologian Levi b. Abraham was born (*c.* 1250).

The old community or aljama of Perpignan had its own statutes. It was governed by a council consisting of a certain number of members, four secretaries, and a commissioner in charge of the public ways and of the minor police. All the Jews contributed to the taxes in proportion to the value of their property. In 1413 the aljama was obliged to levy a special tax to pay a sum of money which the community owed in consequence of an agreement made with a citizen of Perpignan, Jean de Rivesaltes, councilor to the king.

The Ghetto and Synagogue.

In 1251 Queen Yolande, wife of James I. of Aragon, compelled all the Jews of Perpignan to live in a special quarter, "Le Call," situated on the Ping or the Lepers' Hill. Some Jews settled within the city limits in 1366, but the syndics of the "Université" complained to King Peter IV., who ordered them immediately to expel all Jews from streets inhabited by Christians. In 1370 and 1392 the Jews were attacked in the Call and obliged to seek refuge in the royal castle. In 1493 the Call was set apart as the courtezans' quarter, but the Preaching Friars, whose monastery was in the vicinity, objected, and the houses of the Jews were put up at public auction instead and sold to various private individuals, priests and merchants, of Perpignan.

A "scola" or synagogue at Perpignan is mentioned as early as 1303. It is supposed that the monastery of the Franciscans (now the army bake-house) was built on its ruins in 1575. In 1415 Ferdinand I. of Aragon forbade the Jews to build new synagogues, or to enlarge or repair old ones; and in case any place possessed several, only one was to be open for worship.

The Jews possessed several cemeteries or "fossar." The site of the one which existed in 1279 can not now be ascertained. That of 1310 was situated on the right bank of the river Tet, opposite the present gate of Canet. In 1400 the cemetery was beside the Pont de la Pierre, near the Maison de St.-Lazare.

Scholars.

The following scholars of Perpignan are known: Joseph b. Hanan b. Nathan Ezobi, Abraham Bedersi, Phinehas b. Joseph ha-Levi (Don Vidal Prophet), Menahem b. Solomon Me'iri (Don Vidal Solomon), Simon b. Joseph, Meshullam b. Machir, Isaac b. Judah de Lattes, Don Crescas Vidal, Moses b. Samuel b. Asher, Moses Narboni, Benjamin Lapapa, Nissim b. Reuben, Azariah b. Joseph ibn Abba Mari (Bonfos Bonfil Astruc), and the following physicians and astronomers: Maître Solomon, Bonafos, Isaac Bonet, Moses Alfaquin, Maître Abram Vas, Baron Diyot, Jacob Bonjubes, Baro Dayos Cohen, Abrah Isaac, Mager Macip, Mosse Leho, Mahirius Boneti, Bonet Maymo, Abram Veger, David Bongoron, Jacob Poel, David Bonet Bongoron, and Maestro Profiat Duran.

At the present time (1904) there are only a few Jewish families in the city.

J. S. K.

PERREAU, PIETRO: Christian librarian and Oriental scholar; born at Piacenza Oct. 27, 1827; studied in the Alberoni College of his native town from 1844 to 1849. In 1860 he was placed at the head of the Oriental collection in the National Library of Parma, of which he was made chief librarian in 1876.

Prior to 1860 Perreau had written on various subjects, but from that year he devoted himself entirely to rabbinical literature. Of his works the following deserve special mention: polygraphic edition of the commentary of Immanuel ben Solomon of Rome on the Psalms (Parma, 1879-82), on Esther (1880), and on Lamentations (1881); "Ma'amar Gan 'Eden" of Rabbi Ḥayyim Israel, in the "Zunz Jubelschrift"; "Zeh ha-Yam Gadol u-Reḥab Yadayim," or "Oceano dello Abbreviature e Sigle Ebraiche, Caldaiche, Rabbiniche, Talmudiche, Cabalistiche, Geographiche," etc. (Parma, 1883; polygraphic edition), with a supplement entitled "Aḥarit Yam."

PERSIA (פרס; Περσίς, from Old Persian "Pārsa," Persian "Pārs"): One of the great kingdoms of the ancient world and a country connected in various ways with the history of the Jews since the time of the Babylonian captivity. As a designation the name "Persia" is employed in two ways: commonly, it denotes the vast Persian empire extending from the Caspian Sea on the north to the Persian Gulf on the south, and from the River Tigris on the west to the Indus on the southeast; more rarely, the name connotes the province of Persis or Persia proper, the region lying between Susiana, or Elam, and Carmania—in other words, the territory corresponding to the modern Fars. In the Hebrew Scriptures this second connotation is exceptional, being confined to the somewhat doubtful reference in Ezek. xxvii. 10, xxxviii. 5, whereas the former or broader application of the term is found in a score of Biblical passages and in the Apocryphal books of the Old Testament (II Chron. xxxvi. 20; Esth. i. 3, 14, 18; Dan. viii. 20; x. 13, 20; xi. 2; I Esd. iii. 9 *et al.*), not to mention a dozen references to the Medes and Persians as a united kingdom (see Media).

Language and Literature.

The Persian language, or the Iranian group of languages, belongs to the Aryan or Indo-European group of tongues. Three stages of linguistic development may be recognized: (1) Old Iranian, comprising the language of the Zoroastrian scriptures (see Avesta) and of the Old Persian cuneiform inscriptions of the Achæmenian kings; (2) Middle Iranian, the Pahlavi language and literature of the Sassanian dynasty; (3) New Iranian, comprising Modern Persian, dating from the tenth century of the Christian era, and other spoken Iranian dialects, as the Afghan, Baluchi, Kurdish, and Ossetic. An acquaintance with the Avestan and Old Persian languages and literatures is of value to the critical student of the Jewish scriptures and of Israelitish history because of Persian allusions which occur in the Bible from the time of the Exile to that of the Talmud (see Avesta; Daniel; Esther; Ezra; Talmud) and because Persian was to a great extent the language of every-day life among the Jews of Babylonia (see also Judæo-Persian), but more especially because of the Zoroastrian influences which, it is generally claimed, affected Judaism during the long period in which the Israelites were largely under the Persian rule (see Zoroastrianism). In Pahlavi, or Middle Persian, literature there are likewise numerous allusions to the Jews (see Pahlavi Literature, Jews in). A knowledge of Modern Persian, moreover, contributes considerably to the understanding of Jewish literary history because of the documents written in Judæo-Persian.

History to the Rise of Media.

The historical development of Persia may roughly be divided into four periods: (1) earliest Iranian period, prior to the rise of the kingdom of Media (before 700 B.C.); (2) the Median period; (3) the period of the great Persian empire, down to the Arab conquest (550 B.C. to 650 C.E.); (4) the period of Mohammedan Persia (650 to the present day). The history of Iran before the rise of Median power is largely a matter of conjecture, but is of interest because of its bearing upon the question of the religious influence of Israel upon Iran, or of Iran upon Israel, in antiquity. The names of such rulers as Hoshang, Jemshid, Feridun, and others, whose reigns would date back as far as 4000 B.C., belong to the common Iranian period, as shown by the Avesta, the Pahlavi literature, and Firdausi's "Shah Namah" (Book of Kings), but the statements regarding their kingdoms are mostly legends, behind which one must search for the historical facts. Jemshid's reign, for example, is placed by fable at about 3000 B.C., and is said to have been the Golden Age of the world. According to the Avesta it was during this period that a terrible winter destroyed everything on the earth, and against it the god Ormuzd commanded Jemshid to build a "vara" (enclosure), in order to preserve the best of mankind (Avesta, "Vend." ii. 1-43). With reference to Iran and her neighbors it is known from the evidence of Assyrian inscriptions that Assyria made her claims to sovereignty over Media from the time of Shalmaneser II. (935 B.C.) to the days of Sennacherib (705 B.C.). Familiar to all historians, moreover, is the statement in the Bible (II Kings xvii. 6) that in the ninth year of Hosea (722 B.C.) the King of Assyria took Israel captive and "placed" some of the Jews whom he deported "in the cities of the Medes"—an event which may have a possible bearing in connection with certain likenesses between the Zoroastrian religion and Judaism (see Zoroastrianism). The Assyrian domination of Media was overthrown by the Median prince Deioces, who cast off the Assyrian yoke and established the Median sovereignty about 700 B.C. (comp. Herodotus, "Hist." i. 97 *et seq.*). For the history of the Median rule down to the rise of the Persian power, and for the allusions to the law of the Medes and Persians in the Scriptures, see the article Media.

With the overthrow of the Median sway by Cyrus (550 B.C.) and the union of the crowns of Media and Persia, the real history of the great Persian empire, of especial interest to the Jews, begins (see Cyrus). The conquest of Lydia took place in 546, and the major part of Asia Minor and Egypt fell subsequently under Persian rule. The taking of Babylon in 539 by Cyrus inaugurated a new era in Jewish history. As to the religious toleration of this great king there is little room for doubt, judging from his own inscriptions preserved in the Babylonian tongue and from his attitude, as recorded in the Bible, toward the Jews. There is no convincing reason for questioning as a historic fact the Biblical statement that Cyrus permitted the Jews to return from their captivity in Babylon to Jerusalem, and that he showed them certain signs of favor. These statements are found in II Chron. xxxvi. 22-23; Ezra i. 1-11, iii. 1-13, iv. 3, and elsewhere, and are in keeping with the enthusiasm of Isaiah, who saw in the Persian king the "shepherd" and "anointed" of the Lord, "the eagle from the east" bearing victory and ransom for the Jewish people (Isa. xli. 2; xliv. 28; xlv. 1-3, 13). Current ideas like these may account for the Apocryphal statement made later by Ṭabari (900 C.E.), that the mother of Cyrus was a Jewess—an assertion which he makes equally regarding the Zoroastrian king Bahman, who is identified with Artaxerxes I. (see Ṭabari, Zotenberg transl., i. 502, 507). The expansion of the kingdom of Cyrus westward had unquestionably its ultimate influence on the history of the Jews, just as its development eastward wrought important changes in the Oriental world. Judea was a Persian province till the end of the Achæmenian rule and remained in more or less close connection with Persia in subsequent times.

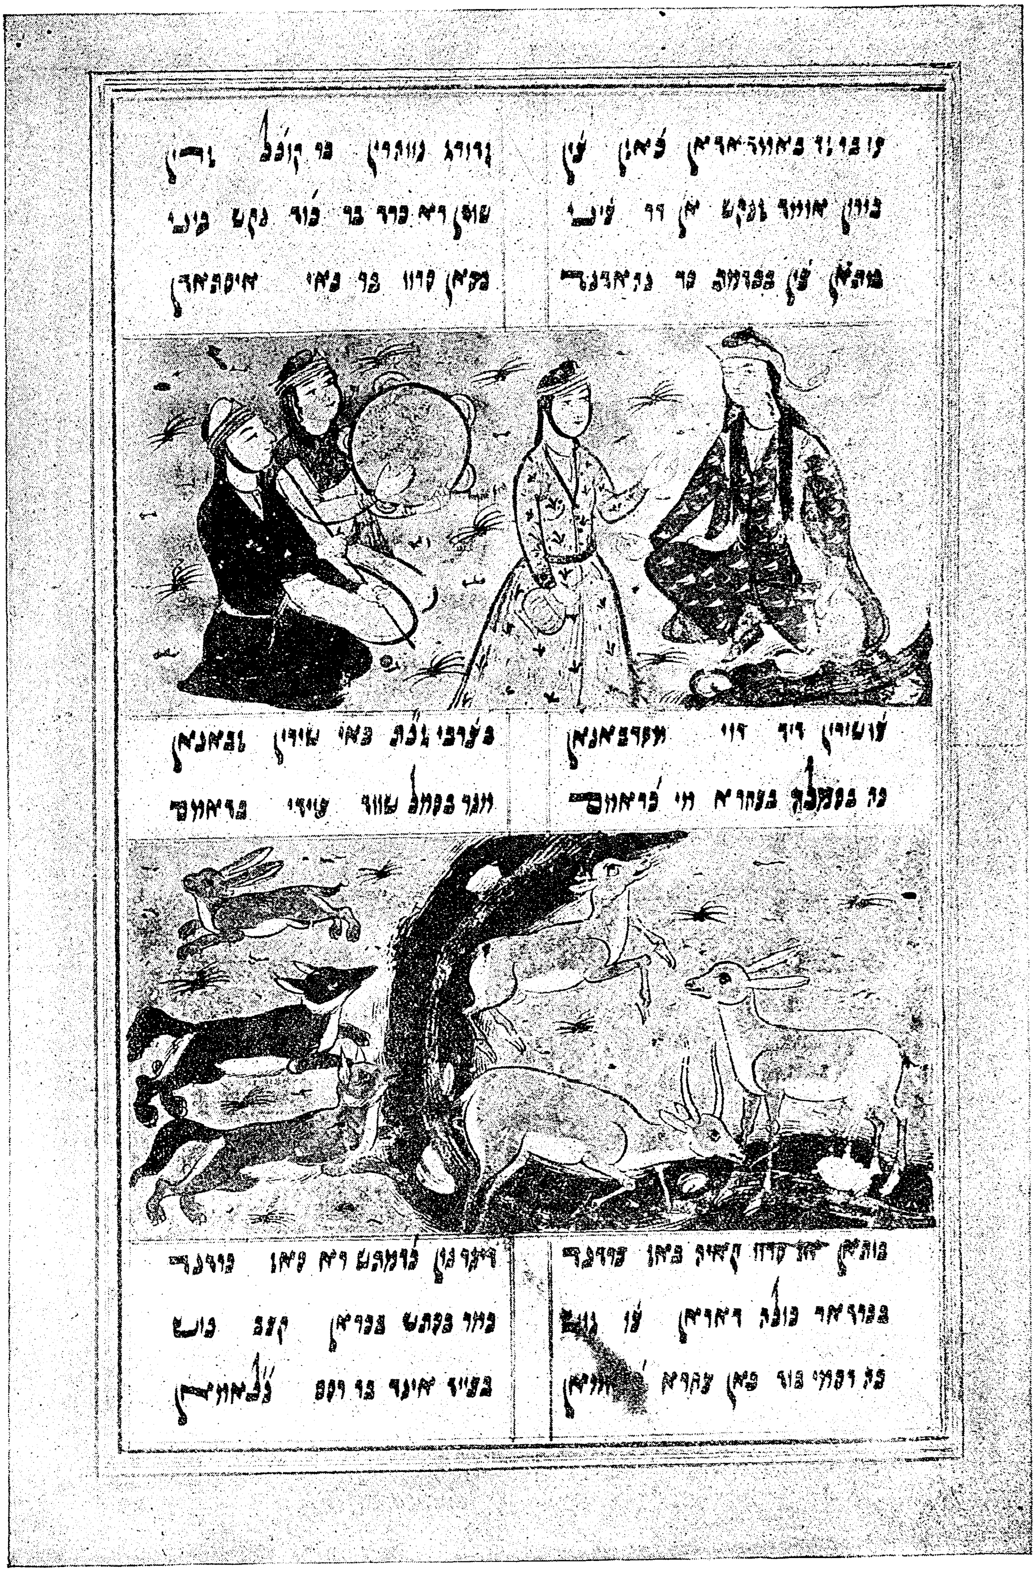
Cambyses.

On the death of Cyrus, his son Cambyses succeeded to the throne (530 B.C.), but died a violent death (522 B.C.) after an unsuccessful campaign in Egypt and Africa and a discreditable reign. A Magian priest, Bardiya, "the False Smerdis," usurped the crown and reigned for seven months, until Darius, a member of a side branch of the Persian royal family, discovered the imposture, slew the pretender, and swayed the Achæmenian scepter with conspicuous ability for nearly half a century.

Darius (522-486 B.C.) continued the liberal policy of Cyrus toward the Jews and favored the rebuilding of the Temple at Jerusalem (Ezra v. 13-17, vi. 1-15), a policy which is in keeping with what is known from other sources of the views of this ruler (see Darius I.). His successor was his son Xerxes (486-465), prominent in the Bible as Ahasuerus and of importance in Jewish history because of his acceptance of Esther to succeed his divorced queen Vashti. See Ahasuerus; Esther; Haman; Mordecai. Xerxes was in turn followed by his son Artaxerxes I. (Longimanus; 465-424), in whose reign occurred the important events for Jewish political history that are recorded by Ezra and Nehemiah (see Artaxerxes I.). His successors on the throne were Darius II. (424-404), Artaxerxes II. (404-358), Artaxerxes III. (358-337; the Jews came several times into conflict with him on disputed points), Arses (337-335), and Darius III. (Codomannus, 335-330), the last of the Achæmenian line.

Alexander; the Parthian Rule.

The invasion and subjugation of Persia by Alexander the Great (330-323 B.C.) put an end to the Achæmenian kingdom (see Alexander). The rule of the Seleucids succeeded the Macedonian dominion and lasted for more than seventy years, when the Parthian sway of the Arsacids, who are regarded as being of Scythian extraction, gained the supremacy. In matters of religion the Parthians seem to have acted tolerantly toward other



Illustrated Persian Manuscript in Hebrew Characters.

(In the possession of E. N. Adler, London.)

faiths, which was advantageous to the Jews, judging from the statements of Josephus ("Ant." xviii. 9, §§ 1 *et seq.*; "B. J." Preface, §§ 1 and 2; comp. Rawlinson, "Sixth Monarchy," pp. 225, 238). The rulers of the Parthian line governed Iran for nearly five centuries (250 B.C-226 C.E.). Most prominent among them were the several monarchs who bore the name of Arsaces, after the founder of the line, and also the different sovereigns who adopted the names of Artaban, Phraates, Mithridates, Gotarzes, and Volageses. The last of the Parthian kings, ARTABAN V., was defeated and slain in battle by Ardashir I. (Papakan; 226 C.E.), of the house of Sasan, and a new dynasty thus came to the throne and swayed the fortunes of Iran for over four hundred years (226-651).

Sassanid Dynasty.

The Sassanids were of pure Persian blood with no alien admixture, as were, originally, the Parthians, and they were ardent supporters of the ancient Zoroastrian faith. More than this, they were enthusiastic upholders of the old Iranian national feeling; and they succeeded, in part at least, in reviving the fading ideal of a great Persian empire. The characteristic names of this period—a period marked by conflicts with the Eastern Empire of Byzantium, as the Parthian had been with Rome and the Achæmenian with Greece—are Ardashir, Shahpuhr (Sapor), Yezdegerd, Bahram, and CHOSROES. Important for Jewish history is the fact that Yezdegerd I. (399-420 C.E.) had a Jewish wife for queen, who became the mother of Bahram V. (420-438).

The opening of the reign of Bahram V., who is generally known as "Bahram Gor," from his fondness for hunting the wild ass ("gor"), was signalized by a victory over the White Huns (Haital or Hephthalites), but was later darkened by the defeat he sustained in war with the Byzantine empire, which compelled Persia to accept terms of peace with her traditional foe (421 C.E.). For references to Jewish history in Zoroastrian literature of Sassanid times and for allusions to Yezdegerd's Jewish wife see PAHLAVI LITERATURE. In their religious attitude toward other beliefs, however, the Sassanids were often very intolerant, as is shown by their persecution, at different times, of the Jews, Christians, and the followers of the sects of Mani and Mazdak. The Jews suffered especially under Ormazd IV. (578-590), although relief was had under the unfortunately short reign of BAHRAM TSHUBIN. They joined forces with his renowned successor Chosroes Parwiz (591-628), whose reign is best known to the West because of the wars waged at this time by Persia against the Christian emperor Heraclius. The Sassanid power was now manifestly on the decline, and its end came in sight with the appearance of the Mohammedan régime.

The Arab Conquest of Persia.

The Arab conquest of Persia and the defeat and death of Yezdegerd III. (651 C.E.) mark the close of the Sassanid rule and the fall of the national power of Iran. It signalized also the overthrow of Zoroastrianism as the national faith of Persia. Thenceforth Persia's creed became Mohammedan, and her history became marked more and more by periods of invasion, conquest, and foreign rule or misrule. A series of dynasties, of shorter or longer duration, as the Ommiads, Abbassids (750), Ghaznavids (961-1186), Seljuks, and Tatars, some of them distinguished by rulers of rare ability—the Mongol conqueror Timur Lang (or Tamerlane; 1336-1405), for example—fill the pages of Persia's history for nearly a thousand years. With the rise of Shah Abbas the Great (1585-1628) the last influential Persian rule is reached.

Jews in Persia.

It has been sufficiently shown that there have been Jews in Persia since the earliest times, and that the history of the Jews has been associated with Persia in various ways. The Biblical allusions to Rages (Avestan, "Ragha"; Old Persian, "Raga"), Ecbatana (Old Persian, "Hagmatana"; Modern Persian, "Hamadan"), and Susa might be added to others that prove the fact. The presence of Israelites in Iran may have been due originally to deportation from other countries or to colonization, to relations arising from conquest or from political connections; but trade and commerce also must have contributed since the earliest times; and Jewish communities have maintained themselves in the leading Persian cities down to the present time, especially in such business centers as HAMADAN, ISPAHAN, KERMANSHAH, Shiraz, TEHERAN, and Meshed (where they have been much persecuted).

Some idea as to the number and condition of the Jews in Persia may be gathered from the articles on these several cities and from the following quotation from Curzon's "Persia" (ii. 510-511):

> "Usually compelled to live apart in a ghetto, or separate quarter of the towns, they have from time immemorial suffered from disabilities of occupation, dress, and habits which have marked them out as social pariahs from their fellow creatures. The majority of Jews in Persia are engaged in trade, in jewellery, in wine and opium manufacture, as musicians, dancers, scavengers, pedlars, and in other professions to which is attached no great respect. They rarely attain to a leading mercantile position. In Isfahan, where there are said to be 3,700, and where they occupy a relatively better status than elsewhere in Persia, they are not permitted to wear the *kolah* or Persian head-dress, to have shops in the bazaar, to build the walls of their houses as high as a Moslem neighbour's, or to ride in the streets. In Teheran and Kashan they are also to be found in large numbers and enjoying a fair position. In Shiraz they are very badly off. At Bushire they are prosperous and free from persecution. As soon, however, as any outburst of bigotry takes place in Persia and elsewhere the Jews are apt to be the first victims."

PERSONAL PROPERTY. See PROPERTY.

PERTUIS (פירטוש or פרטוש): Cantonal chief town of the department of Vaucluse, France. Jews were settled there as early as the thirteenth century. According to a document dated 1283, they, like their coreligionists of the towns of Aix, Saint-Maximin, Lambesc, Istres, Cadenet, Trets, and Lanson, were authorized by the Archbishop of Aix to possess a synagogue and cemetery, on payment of two pounds of pepper annually. In 1436 the Jews of Pertuis and some other places in Provence were persecuted on the pretext that a Jew of Aix, Astruc de Leon, had blasphemed the Virgin, for which he was condemned to be flayed alive. His fellow Jews, in their efforts to save his life, offered the sum of 20,000 florins to King René. By a clever stroke of diplomacy, the king took the offensive, and demanded of the Jews, as a penalty for their alleged attempt at corruption, besides the original sum of 20,000 florins, 4,000 or 5,000 florins more for his favorites. Nevertheless the unhappy Jew, against whom the charge of blasphemy had been made, and who had been sentenced to death, suffered the penalty.

In 1446 a Jew of Pertuis, Bonjulies Passapeyre, was a member of the commission assembled at Arles to determine the assessment of the contributions which the Hebrew communities of Provence were obliged to pay annually to the king and to the "conservators" (see Arles). In 1451 or 1452 a Jew of Pertuis, named Bendig, settled at Arles; and in 1583 two others, Davin and David ben Baruch, went to Avignon. The signatures of the latter two appear at the end of two documents relating to an accusation brought before the cardinal against the community of Carpentras, which had threatened a woman named Bonastorga with excommunication.

PERU. See South and Central America.

PERUGIA (פירושא, פירווייה): Town in Umbria, Italy. It had a Jewish congregation as early as the fourteenth century. Several Jewish scholars lived there; *e.g.*, Daniel b. Samuel Rofe b. Daniel (dayyan about 1400); the poet and physician Moses b. Isaac Rieti (1436); the physician and cabalist Laudadius (Ishmael) de Blanis (1553); the liturgical poet Meshullam Sofer; and the poet Joseph Ganso, who emigrated to Palestine (17th cent.). Some Hebrew manuscripts were written there.

It is probable that when the Jews were expelled from the Papal States many of them removed from Perugia to Rome, where the Da Perugia family was widely disseminated and exists to this day. Several persons of the name Perugia were active in upper Italy (Mantua, Venice) as rabbis.

D. S. O.

PESAḤ SHENI: The second Pesaḥ sacrifice. It was called also "Pesaḥ Ḳaṭon" (Aramaic, "Pisḥa Ze'ira") = "the lesser Pesaḥ" (R. H. i. 3), and was offered on the 14th of Iyyar by those who had been unable, because of absence from the Holy City or of levitical uncleanness, to sacrifice on the 14th of Nisan (comp. Num. ix. 1-15). All the regulations for the first Pesaḥ sacrifice applied to the second one, except that the participants were not divided into three groups—probably because there were never so many as to render such division necessary—and that no ḥagigah sacrifice was connected with it. The lesser Pesaḥ sacrifice was eaten in the same manner as the first one, although the "Hallel" was omitted, and it was permitted to eat leavened food.

W. B. J. Z. L.

PESAḤIM ("Passover Festival"): Name of a treatise of the Mishnah and the Tosefta in Babli and Yerushalmi, treating chiefly of the regulations in Ex. xii., xiii. 3-7, xxiii. 15, xxxiv. 18; Lev. xxiii. 5 *et seq.*; Num. ix. 2-15, xxviii. 16-25; Deut. xvi. 1-8. In all the editions of the Mishnah it is the third treatise of the order Mo'ed. It is divided into ten chapters containing eighty-seven paragraphs in all.

Ch. i.: At what time and in what places leavened food must be sought in order to be removed (§§ 1-3); limit of time for eating leavened food on the eve of the Passover, and the hour in which the leavened food must be burned; in connection with this, reference is made to the peculiar signal raised on the Temple mount at Jerusalem in order to notify successively to the people the hour until which they might eat leavened food, and that at which they were required to destroy it (§§ 4-5); likewise certain regulations regarding the burning of defiled sacrificial meat or unclean "terumah" (§§ 6-7).

Ch. ii.: The hour from which any other use of leavened food than eating it is forbidden; the leavened food of a pagan, or leavened food given in pawn by a Jew to a pagan, which may be used immediately at the close of the Passover (§§ 1-3); the punishment of a layman who eats leavened terumah on the Passover (§ 4); material to be used in baking the mazzot (§ 5); herbs which come under the category "maror," and the circumstances under which they may be eaten (§ 6); means of preventing anything from becoming leavened during the Passover (§§ 7-8).

Leavened Food.

Ch. iii.: Food regarded as leavened, and which renders the person failing to destroy it guilty of transgressing the regulations of Ex. xii. 19 and xiii. 7 (§§ 1-5); time for destroying leavened food if the eve of the Passover falls on a Sabbath (§ 6); cases in which a traveler, having set out on his journey and remembering that he has not destroyed leavened food at home, must return to do so; and cases in which a pilgrim returning home from Jerusalem, and discovering that he is carrying sacrificial meat with him, must go back in order to burn it at Jerusalem (§§ 7–8).

Ch. iv.: In the performance of or abstention from work during the forenoon of the eve of the Passover every one should follow local custom in order to avoid difficulties (§ 1); enumeration, in connection therewith, of some other customs, *e.g.*, the lighting of candles during the night of the Day of Atonement, and the performance of work on the Ninth of Ab, in reference to which local custom prevails (§§ 2–5); work which may be performed on the eve of the Passover (§§ 6–7); six acts of the inhabitants of Jericho, and six of King Hezekiah, one of which was his concealment of a book on remedies (§§ 8-9; comp. the commentaries *ad loc.*).

Ch. v.: Time for killing the "tamid" sacrifice on the eve of Passover, and time for killing the paschal lamb (§ 1); circumstances which render the paschal lamb unfit for use (§§ 2–4); ceremonies accompanying the slaughtering of the paschal lamb: the rows of priests, the accompanying music, and the three groups of the people who recite the "Hallel" (§§ 5–7); mode of slaughtering when the eve falls on a Sabbath, and further preparation of the paschal lamb (§§ 8–10).

Ch. vi.: The paschal lamb and the Sabbath (§§ 1–2); cases in which another animal is to be sacrificed together with the paschal lamb: animals used for this sacrifice (§§ 3–4); cases in which the slaughtering of the paschal lamb on the Sabbath desecrates that day (§§ 5–6).

Ch. vii.: Roasting of the paschal lamb (§§ 1–3); five sacrifices which one in a state of uncleanness may offer but not eat (§ 4); course to be pursued when the paschal lamb, the people, or the priests have become unclean (§§ 5–9); time at which the bones and other remnants must be burned (§10); parts of the paschal lamb to be eaten, and the mode of eating it in company (§§ 11–13).

The Paschal Lamb.

Ch. viii.: Persons who may eat of the paschal lamb and who may therefore be counted among the company for which the paschal lamb is prepared (§§ 1–7); eating of the paschal lamb by a person in mourning and by a proselyte who has circumcised himself on the eve of the Passover (§ 8).

Ch. ix.: Persons who must celebrate the Passover in the second month (comp. Num. ix. 10 *et seq.*) (§§ 1–2): difference between the first and the second Passover (§ 3); difference between the Passover which was celebrated in Egypt during the Exodus and all subsequent Passovers (§ 5); exchange ("temurah") of the paschal lamb (§ 6); offering of a female animal, and mixing of the Passover sacrifice with other sacrifices (§§ 7–8); cases in which paschal lambs have been lost or exchanged (§§ 9–11).

Ch. x.: The meal eaten on the evening of the Passover; the four cups of wine, and the benedictions pronounced over them; the questions of the son and the father's answers and instructions; other benedictions and the "Hallel."

The Tosefta.

The Tosefta to this treatise, which likewise is divided into ten chapters, contains much that serves to explain and supplement the Mishnah. For instance, Tosef. i. 1 explains why the leavened food must be sought by candle-light, as ordained in Mishnah i. 1; Tosef. viii. 7-8 supplements and completes Mishnah ix. 3; and Tosef. viii. 11–22, Mishnah ix. 5. Noteworthy is the account of King Agrippa's procedure in taking a census of the people assembled at Jerusalem for the Passover (Tosef. iv. 3).

The Gemaras.

The two Gemaras discuss and explain the several mishnayot; and both, especially the Babylonian, contain a large number of sentences, proverbs, stories, and legends, as well as various interesting haggadic interpretations and notes. Some passages from the Babylonian Gemara may be quoted here: "One should never use an indecent expression" (3a). "The teacher should select brief and accurate expressions in his lessons" (3b). "On the evening closing the Sabbath God inspired the first man to take two stones and rub them together, and the man thereby discovered fire" (54a). "Through anger the sage loses his wisdom and the prophet his gift of prophecy" (66b). "God conferred a benefit upon Israel by scattering it among the different peoples; for if the Jews had remained under the dominion of one people, they would long ago have been destroyed by its hatred and persecution. Now instead the Jews save themselves from persecution by seeking refuge with their brethren living under the dominion of another people" (87b). "What, however, is the ever-continuing cause of the Exile and of the dispersion of the Jews among the peoples? The desire of the Jews to approach the peoples, to assimilate themselves and be related to them" (118b). Several sentences follow describing the bitter hatred existing between the scholars and the country people or "'am ha-areẓ" (49a, b). Especially noteworthy is the discussion of the question of the pronoun "I" in the Psalms, as also the notes on the division of many chapters, *e.g.*, whether the "Halleluiah" belongs to the end of the preceding psalm or to the beginning of the following one (117a). Incidentally it is seen that the division of the Psalms as it existed at that time differed in various points from the present division (comp. Tos. *ad loc. s.v.* "She-'Omedim."

PESAḲ (lit. "decision," "severance," "interruption"): Aramaic word used metaphorically of a discussion cut short, and employed in rabbinical literature chiefly to denote a decision or decree made without reference to any discussion, and delivered either orally or in writing (B. B. 130b). The heading of a section in the Jerusalem Talmud and in the Pesiḳta is also called "pesaḳ" or "pisḳa." Generally, however, the word is used as meaning an absolute, unqualified opinion or statement (Ket. 76b). It is frequently combined with the word "din" or "halakah" (judgment, law) to denote a judicial decree; but it also expresses the same idea when used by itself. The phrase "shales pasḳenen" in colloquial speech refers to the decision of a rabbi, especially in ritual matters.

From the frequent use made of this word in rabbinical literature, the codifier, who states bare laws without giving reasons for them, is called "poseḳ." By an extension of the term, all authors of responsa and of books dealing with Jewish law are referred to as "Poseḳim," a distinction always being made between the earlier ("Rishonim") and the later ("Aḥaronim") writers. The decisions scattered throughout the Tosafot have been collected by an unknown writer (perhaps Asher b. Jehiel or his son Jacob) under the title "Pisḳe Tosafot," and are now published together with almost all the editions of the Talmud that contain the Tosafot. The same was done with regard to Asheri's abstract of Talmudic laws, by his son Jacob, author of the "Ṭurim," under the title "Pisḳe ha-Rosh." There are in the halakic literature many books known by the name of "Pisḳe Halakot," or simply "Pesaḳim," because they contain collections of laws and decisions (see Benjacob, "Oẓar ha-Sefarim," Nos. 973-1035, Wilna, 1880; Heilprin, "Seder ha-Dorot," ed. Maskileison, iii. 84, Warsaw, 1882).

PESANTE (PIZANTE), MOSES B. ḤAYYIM B. SHEM-ṬOB: Turkish commentator of the second half of the sixteenth century. He was the author of "Yesha' Elohim," a commentary on the "Hosha'not" and on some Biblical texts and sayings (Constantinople, 1567; 2d ed. Salonica, 1569). A part of this work was incorporated in the "Batte Abot" of Joseph b. David of Salonica (Salonica, 1825). Pesante wrote also "Ner Miẓwah," a commentary on Solomon ibn Gabirol's "Azharot" (Constantinople, 1567; 2d ed. Salonica, 1569); and "Ḥuḳḳot ha-Pesaḥ," a commentary on the Haggadah (Salonica, 1569).

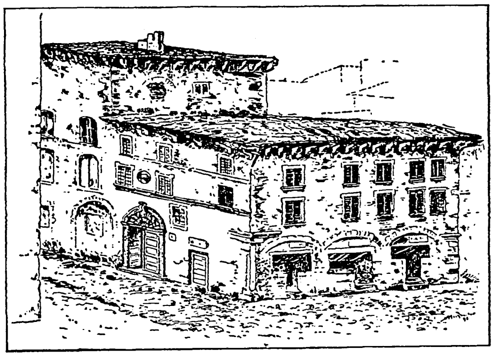
PESARO (פיזארו): Town in the Marches, Italy, formerly belonging to the duchy of Urbino. It has numbered some Jews among its inhabitants since the fifteenth century. One of the first Hebrew printers, Abraham b. Ḥayyim dei Tintori, was born there. But the Jewish community became important only when Duke Guido Ubaldo of Urbino opened the town to the Maranos who were persecuted by the Inquisition in the papal domains (1555). They settled in Pesaro in great numbers, and planned a commercial war on a large scale against the domains of the popes. After Paul IV. had caused the Maranos to be burned in Ancona (1556) and new fugitives arrived in Pesaro, it was resolved to boycott the port of Ancona, and to direct the entire commerce of the Jews to Pesaro (see Ancona). It soon became evident that the trade of Ancona had decreased, and that the town had become visibly poorer. The Jews of that town were near-sighted enough to prefer their own advantage to that of the race. They sent messengers to the Jews in Turkey asking the latter not to injure them; and they depicted in the most terrible manner the dangers which threatened them on the part of the pope.

Rivalry with Ancona.

A struggle ensued between the two communities, each of which endeavored to influence the merchants of Turkey in its favor. Donna Gracia Mendesia, Don Joseph Nasi, and, on their representations, Rabbi Joseph ibn Leb of Constantinople, warmly advocated the cause of the Pesarians; but an opposition was formed under the leadership of Rabbi Joshua Soncin. Furthermore, as the harbor of Pesaro did not offer sufficient security for vessels, the merchants refused to entertain the boycott of Paul IV. Thus the magnificently conceived plan of vengeance failed of execution. Duke Guido Ubaldo, who had received the Maranos merely on account of the profit he expected to gain through them, exiled them from his dominions. Seven hundred Maranos were obliged to flee in all haste on shipboard, and they required large amounts of money. The community of Pesaro then sent envoys, under the leadership of Solomon Maẓliaḥ b. Raphael Elijah Finzi da Recanati, to solicit the necessary funds, and the means were soon procured. But only with great difficulty did the majority of the Maranos elude the naval police of the pope; some, indeed, were taken prisoners and treated as slaves.



Old Synagogue at Pesaro.
(From a drawing by Albert Hochreiter.)

The community was obliged on another occasion to intercede in favor of the Maranos. The cruel persecutor of heretics Pius V. in 1569 banished the Jews from the territory of the Papal States. Ships and means were again held in readiness in Pesaro for the benefit of the emigrants; the majority of them went eastward, to Palestine, where at that time Don Joseph Nasi intended to found colonies. However, 102 persons were seized by pirates during the voyage, and the Jews of the community of Pesaro implored Don Joseph to render assistance to the unfortunate.

Under Papal Rule.

Pesaro did not regain its former prosperity so far as the Jews were concerned. When the duchy of Urbino came under the rule of the popes (1632), Jews were prohibited from dwelling in a great number of towns, and moved to Pesaro; but even here they were subject to all the terrors and prohibitions common under the papal rule. They were especially restricted in regard to their earnings; consequently the community remained poor. According to a report of the papal legate in 1789 it numbered 500 persons, including fifty who were dependent upon alms. Of an income of 1843 scudi, 272 scudi went to native poor and 280 to foreign; 250 were spent for the school, and 288 for religious purposes. The receipts of the community included taxes which foreign Jewish merchants were obliged to pay on their goods. From the beginning of the French Revolution the community had to share the vicissitudes of the Italian Jews generally, until in 1861 it was emancipated on the formation of the new kingdom of Italy. The Jews, who could not in large numbers earn a livelihood in Pesaro, emigrated, and the community rapidly decreased until in 1901 it counted only ninety-three members.

Rabbis.

The rabbis of Pesaro include: **Jehiel b. Azriel Trabotti** (1519) and his grandson of the same name (1571); **Meshullam b. Isaac da Ariccia; Benjamin b. Mattathiah; Moses Jehiel b. Solomon da Casio; Isaac b. Joseph Forti; Jehiel Mondolfo** (1569); **Moses Hezekiah b. Isaac ha-Levi** and **Mahalaleel Jedidiah b. Baruch Ascoli** (1574), who signed the ban placed upon Azariah dei Rossi's "Me'or 'Enayim"; **Menahem b. Jacob da Perugia; Moses Nissim; Elijah Recanati** and **Isaac Raphael Ventura** (1569); **Raphael Hai Mondolfo** (1620); **Shabbethai Beer da Fossombrone** (1650); **Isaac b. Moses Ventura** (1630); **Isaac Hananiah Ventura** (1650); **Isaiah Romini** (see "J. Q. R." xiv. 171); **Jacob Israel Bemporat** (1725); **Isaac b. Jedidiah da Urbino** (1726); **Jacob b. Moses da Fano** (1750); **Jedidiah Zechariah da Urbino** (1750); **Daniel b. Moses David Terni** (1789). Amatus Lusitanus and Gedaliah ibn Yaḥya also lived temporarily in Pesaro about 1555.

The Talmud was burned in Pesaro in 1553.

G. I. E.

——**Typography:** The celebrated printer Gershon b. Moses of the Soncino family removed his press to the Papal Marches in 1505, and two years later began to publish in Pesaro a number of important Hebrew books, all of which were printed with the elegance and accuracy that characterized the productions of this family. Among the works printed by the Soncinos at Pesaro (of which a list may be found under SONCINO) the following may be mentioned here: three editions of Beḥai (Baḥya) on the Pentateuch, 1507, 1514, 1517; "Petaḥ Debarai," with notes by Elijah Levita, 1507; Former Prophets, with Ḳimḥi and Abravanel, 1511; Bible, 1511, 1517; RaMBaN and RaLBaG on the Pentateuch, 1514; complete Bible and "'Aruk," 1517; Midrash Rabbah, 1519; and Later Prophets, with Abravanel, 1520. A considerable number of Talmudic treatises, twenty-one in all, were printed; of these E. N. Adler of London and others possess copies of 'Erubin, Sukkah, Yebamot Baba Batra, Shebu'ot, 'Abodah Zarah, and Ḥullin (title-page).

At the same time works by Greek, Latin, and Italian authors were published at Pesaro by Girolamo (Hieronymus) Soncino. For a long time Girolamo and Gershon were taken to be two different persons, until in 1866 Luigi Tossini asserted for the first time that they were identical, explaining the Latin name on the hypothesis that Gershon Soncino had been converted to Christianity. This, however, is not correct; for, as Soave has shown, he merely Latinized his name. He went from Pesaro to Rimini and Ortona, and finally to Constantinople, where he lived as a Jew until his death.

PESARO, AARON: Author of the work "Toledot Aharon," in which beside every Biblical verse is noted the place where the verse is explained in the Talmud and Midrash. It is not known where or when the author lived; but it is probable that he lived in Germany after 1400. His work was first printed by Froben at Basel in 1580, together with the concordance "Meïr Natib." It was then printed separately at Freiburg-im-Breisgau in 1583, at Venice in 1591 and 1592, and often later together with the Bible text.

PESEL ("graven image"; so rendered, with a few exceptions, in A. V. and R. V.): Usually carved in wood, or hewn in stone, and called "massekah"; the ephod belonged to it as covering, as in the case of Gideon ("pesel of Gideon") and Micah (Judges xviii. 18 [xvii. 4, 5, Hebr.]). The worship of it was expressly forbidden (Ex. xx. 4; Deut. vii. 5). It is stated that Josiah, on destroying the other idols, had the "pesilim" also ground into powder and strewed on the graves of those who had worshiped them (II Chron. xxxiv. 4). "Pesilim" occurs in Judges iii. 19, 26, but is rendered in the Authorized and Revised Versions by "quarries" (margin, "graven images"). The story is there told how Ehud came from the "pesilim" at Gilgal, assassinated Eglon, King of Moab, and then escaped beyond the "pesilim" to Seirath.

According to the more recent commentaries there are three possible explanations concerning the nature of these "pesilim": (1) they may be identical with the stones which Joshua set up on crossing the Jordan; (2) they may have served to mark the boundary between Moab and Israel; (3) "Pesilim" may have been the name of a ford of the Jordan in the vicinity of Gilgal.

J. S. O.

PESHAṬ: Term denoting simple Scriptural exegesis, and derived from the verb "pashaṭ." "Pashaṭ" in late Biblical Hebrew, as well as in the Mishnah, means "to spread," "to stretch out," and is figuratively used, therefore, in the sense of giving a full and detailed explanation, since through such elucidations the contents of a given Scriptural passage are extended and amplified. In the Mishnah and in the Tosefta "pashaṭ" is used but once in its figurative meaning (Mishnah Suk. iii. 11; Tosef., Pes. x. 9); and that this is the correct interpretation of "li-peshoṭ" and "posheṭ" in both these passages, and not, as Maimonides' commentary on the Mishnah declares, "to recite once," is shown by the parallel passages in Pes. 119b and Suk. 39a, where the passage in the Tosefta reads: "R. Eliezer mosif bah debarim" (he added words), implying that R. Eliezer added his explanations and interpretations to the text (Abaye's explanation of this passage can not be reconciled with the wording of the Tosefta, which has "posheṭ" and not "mosif").

"Pashaṭ" originally had, therefore, the same meaning as "darash." A distinction between "peshaṭ" as the literal sense of Scripture and "derash" as the interpretation and derivation from Scripture could not have been made in antiquity for the simple reason that the Tannaim believed that their Midrash was the true interpretation and that their "derash" was the actual sense of Scripture, and therefore "peshaṭ" (see Midrash Halakah). Only later, in the period of the Amoraim, when on account of the development of hermeneutic principles the interpretations of the Midrash often seemed forced and artificial, did scholars come to the conclusion that the natural and simple sense of Scripture was different from that given in the Midrash; and a distinction was, accordingly, made between the simple literal sense, called "peshaṭ," and the interpretation, called "derash."

It is frequently the case, therefore, that, after a passage of Scripture has been interpreted, the question arises as to its literal meaning "peshaṭeh di-ḳera" (Ḥul. 6a; 'Er. 23b). A rule, which was not, however, universally known (comp. Shab. 63a), was laid down that the literal sense must not be completely changed by the interpretation of the derash (Yeb. 24a; comp. Tos. Yom-Ṭob with Yeb. ii. 8), although it is noteworthy that this restriction of the meaning of "peshaṭ" as contrasted with "derash" is accurately observed only in the Babylonian Talmud. In the Palestinian Talmud "peshaṭ" has kept its original meaning, and is synonymous with "derash," so that in the Palestinian Talmud (Shab. xvi. 15c and B. M. ii. 8d) the verb "pashaṭ" occurs in the same sense as "darash." In like manner, in the midrashim (*e.g.*, Gen. R. xvii. 3; Ex. R. xlvii. 8), "peshaṭ" denotes the explanation of Scripture in general, and not merely its literal meaning. In cabalistic literature "peshaṭ," as the simple literal meaning, is distinguished from "remez" (mere inference), from "derush" (interpretation), and from "sod" (the esoteric force contained in the Scriptures). All four methods of hermeneutics are comprised under the name "pardes," formed by the initials of "peshaṭ," "remez," "derush," and "sod." In relation to the study of the Talmud, "peshaṭ" means a simple rational interpretation of that work in contrast to the subtle methods of Pilpul. The expression "pashuṭ gemara" is used also for the study of the Talmud with the commentary of Solomon Yiẓḥaḳi (Rashi) only, without the Tosafot or any later commentaries. The word "pesheṭel," which is derived from "peshaṭ," denotes the exact opposite of the latter, so that it is used like "ḥilluḳ," to signify the subtle treatment of a Talmudic-rabbinic theme.

PESHIṬTA or **PESHIṬTO**: The oldest Syriac translation of both the Old and New Testaments. The term "Peshiṭta" means "the simple one" in distinction from Origen's Hexapla. This term was first used by Moses bar Kepha (died 913), then by Gregory bar Hebræus (Preface to his "Auẓar Raze," and in his "Historia Dynastiarum," ed. Pocock, p. 100). But a Syriac version of the Bible was known to the Church Fathers much earlier; and even Melito of Sardis, who lived in the second century, speaks of a Syriac version of the Old Testament. The Peshiṭta is more frequently mentioned by the Church Fathers of the fourth century, as Augustine, Chrysostom, and others, and more particularly by Ephraem Syrus.

Traditional Ascription to Abgarus.

As to the epoch in which the translation of the Bible into Syriac was made, there are different traditions, more or less legendary, as well as different opinions of later scholars. Recent investigations have shown that the Syriac version, even of the Old Testament, has been made neither by one translator nor at one time, but that it was the product of several centuries. The time at which the Peshiṭta was begun, however, is the most important point. The tradition which connects the version with Abgar, King of Edessa, is the most probable one. Wichelhaus ("De Novi Testamenti Versione Syriaca Antiqua," pp. 97 *et seq.*) was the first to identify Abgarus with Izates, King of Adiabene; and he was followed in his argument by modern scholars. Wichelhaus' argument is based on the account of Abgarus given by Moses of Chorene, who states that Abgarus' father was called Monobaz, and his mother Helena. The tradition that Abgarus sent men to Palestine who translated the Bible into Syriac (Bar Hebræus, commentary to Ps. x.) agrees with the statement of Josephus ("Ant." xx. 3, § 4) that Izates sent his five sons to Jerusalem to study the language and learning of the Jews. Thus the Pentateuch that Izates read (Josephus, *l.c.* xx. 2, § 4; Gen. R. xlvi. 8) may have been the Syriac version otherwise known as the Peshiṭta (comp. Grätz, "Gesch." 3d ed., iii. 405). It may consequently be accepted that the Pentateuch was translated into Syriac in the first century, in the time of Izates.

Influence of the Septuagint.

The work of translation continued till the fourth century, in the time of Ephraem Syrus, when the whole Bible was rendered into Syriac. The Peshiṭta was translated directly from the Hebrew, in accordance with Jewish tradition current in Palestine. But as this translation is a collection of popular versions, it was inevitable that several parts of the Old Testament should be influenced by the Septuagint. In the Pentateuch the Book of Genesis is more strongly influenced by the Septuagint than the four other books; yet this does not prove that the whole Pentateuch was not translated by one man. While Ezekiel and Proverbs closely agree with the Jewish Aramaic version (Targum), the twelve Minor Prophets on the other hand follow the Septuagint. The translation of Chronicles is partly midrashic, and it seems to be of a much later epoch, as it differs greatly from that of the other books. It is apparent that the translation of the Pentateuch, which, most of all the books of the Old Testament, bears the Hebrew stamp, was known to the later translators of the other books.

Translated by Jews.

As to the most important question, "To which religion did the Peshiṭta translators belong?" Richard Simon ("Histoire Critique du Vieux Testament," p. 305, Paris, 1678) is the only Christian scholar to affirm that the translators belonged to the Jewish faith. The others, as Michaelis, Kirsch, Hirzel, and Nöldeke, ascribe the translation to born Christians; Dathe and others, to Judæo-Christians. It seems also that Samuel b. Ḥofni considered the Peshiṭta to have been made by Christians, for in his commentary on Gen. xlvii. 31 he says, "The Christian translators, reading 'ha-maṭṭeh' instead of 'ha-miṭṭah,' rendered this word by 'the rod.'" This rendering is found only in the Peshiṭta. The partizans of Christian translatorship base their theory on the assertion that the Peshiṭta is never quoted in the Talmud, and that the superscriptions of the Psalms and translations of certain verses in Isaiah clearly show a Christian spirit. Nöldeke, besides, contends that the language of the Peshiṭta of the Old Testament resembles that of the Peshiṭta of the New Testament, and he further dogmatically says that while this version has been accepted by all the sects of the Syrian Church, it has never been used in the synagogue ("Die Alttestamentliche Literatur," p. 263). Joseph Perles ("Meletemata Peschittoniana," Breslau, 1859), however, proves that the Syriac version of the Old Testament was the work of Jews; and it will be shown below that the Peshiṭta was used by the Jews in their synagogues. Moreover, the argument that it is not quoted in the Talmud is not conclusive; for the citations of the Targum which are met with in the Talmud (for instance, Shab. 10b; R. H. 33b; Meg. 10b; and elsewhere) may refer to the Peshiṭta as well, the two versions in the quoted passages being absolutely identical. As to the Christian superscriptions and interpretations which are found in the Old Testament, they were certainly added and changed later by Christian revisers.

Midrashic Interpretations.

It is known that Jacob of Edessa spent several years in correcting and revising the Syriac version; and it seems also from the citations made by Ephraem Syrus that in his time the text was in many places different from that which now exists. The emendations were particularly made in agreement with the Septuagint. On the other hand, the proofs which show the Peshiṭta to have been a Jewish work are numerous. The Judæo-Aramaisms with which this version abounds could not have been understood by non-Jews. Besides, it seems to have been originally written in Hebrew characters; for the remark of Al-Takriti (Hottinger, "Bibl. Orient." pp. 87 *et seq.*), that the Bible was read in the churches in Hebrew till Ephraem prohibited it, means that this version was written in Hebrew characters. It is true that these arguments may be refuted by the assumption that the work was made by Judæo-Christians, or, as Nöldeke says, by Christians assisted by Jews. But there are other incontestable proofs that the Peshiṭta was the work of Jews; namely, its halakic and haggadic interpretations and the indications that it was used in the synagogues for the weekly lessons. There are many instances where the verses are interpreted according to the Talmud and Midrashim; some of them may be given here. "Ye shall not eat any flesh that is torn by beasts in the field" (Ex. xxii. 30) is rendered in the Peshiṭta, "Ye shall not eat any flesh that is torn off from a living beast" (comp. Targumim and Ḥul. 102b). "And he set them before the Lord" (Lev. xvi. 7); Peshiṭta, "And he set them while they are still alive before the Lord" (Ḥul. 11a). "And thou shalt not give any of thy seed to make them pass to Molech" (Lev. xviii. 21, Hebr.); Peshiṭta, "And thou shalt not marry any of thy sons to a strange wife" (Meg. 25a). "Every Sabbath he shall set it in order" (Lev. xxiv. 8); Peshiṭta, "Every Friday he shall set it in order" (Men. 97a).

Jewish Superscriptions.

Even the Psalms, which most of all have undergone emendation, offer many evidences that the translation was made by Jews. Like the Hebrew Psalter, the Syriac version is divided into five books; and in several places (*e.g.*, Ps. lxviii. 15, 18; lxxxix. 24) the word "pasuḳa" (= "disjunction") is inserted, to indicate a pause in agreement with the rabbinical law. Even among the superscriptions of the chapters, many of which show a Christian hand, there are several that have been made in the rabbinical spirit; for instance, that to ch. xliv., "This chapter was sung by the people with Moses near Mount Horeb," is after Deut. R. iii. The superscription to ch. liii., referring it to Ahithophel, by whom Absalom is advised to slay his father, is in agreement with Midr. Teh. *ad loc.* As to the word סלה, which is rendered in the Septuagint *διάψαλμα*, there is great confusion in the Peshiṭta. This word is sometimes omitted entirely, sometimes it is rendered as in the Septuagint, and in seven instances it is translated "for ever" as in the Targum (comp. 'Er. 54a).

Used in the Synagogues.

That the Peshiṭta of the Pentateuch was in use in the synagogues is seen from the fact that it is divided into the weekly lessons for the Palestinian or triennial cycle. Even those parts which are read in the synagogue on various holy days are indicated; for instance, before Lev. xvi. 1, the indication is given that the following part is to be read on the Day of Atonement (comp. Meg. 30b). Other superscriptions show the rabbinical spirit of the translator, as Ex. xxi.: "'esra pitgamin" (= "'aseret ha-dibrot" = "decalogue"; Ber. 11b); Lev. xvii. 1: "namusa de-ḳurbane" (= "parashat ha-ḳorbanot" = "the chapter of sacrifices"; Meg. 30b). Later in the second century, when Biblical exegesis reached a higher plane in the flourishing schools of Tiberias and Sepphoris, the Peshiṭta, which is a somewhat literal translation, began to fall into disuse. It was finally superseded in Palestine in the second century by the translation of Aquila, which was made on the basis of Akiba's teaching, and in the third century in Babylonia by the Targum of Onḳelos, which was based on the Peshiṭta itself.

It has been already stated that the Peshiṭta, from its earliest appearance, was accepted in the Church. This rendered necessary the institution of the office of interpreter ("meturgeman") as in the synagogues; for, besides the fact that the Peshitta was written in Hebrew characters, the language itself and the mode of interpretation were not familiar to Christians. It is evident, however, that the Peshitta did not assume canonical authority till many centuries later, as Bar Hebræus gave the preference to the Septuagint (see above). It is worth while mentioning that Naḥmanides quotes, in the introduction to his commentary on the Pentateuch, the Syriac translation of the Wisdom of Solomon ("Ḥukmeta Rabbeta di-Shelomoh"), and in his commentary (on Deut. xxi. 14), the Book of Judith ("Megillat Shushan").

Editions.

The Peshitta was first printed in the Paris Polyglot of Le Jay (1645), in which edition the Apocrypha was omitted. In 1657 it was reprinted in Walton's Polyglot with the addition of the apocryphal books. From Walton's Polyglot, Kirsch, in 1787, published a separate edition of the Pentateuch. The Psalter alone was edited several times; it first appeared in 1610. Later the British and Foreign Bible Society issued the Syriac Old Testament in a separate volume (London, 1823). The text was revised by Lee from several Syriac manuscripts; and in 1826 the Syriac version of the New Testament was published by the same society. Recently Eisenstein made an attempt toward publishing the Peshitta in Hebrew characters; but only the first two chapters of Genesis, the first chapter vocalized, appeared, in "Ner ha-Ma'arabi," 1895, i., No. 1. The Peshitta (particularly parts of the Old Testament) was also the subject of several dissertations, *e.g.*, H. Weiss, "Die Peschitta zum Deuterojesaja," Halle, 1893; L. Warszawski, "Die Peschitta zu Jesaja" (ch. i.-xxxix.), Berlin, 1897; P. F. Frankl, "Jeremiah," in "Monatsschrift," xxi. 444, 497, 545.

PESIḲTA (DE-RAB KAHANA; RABBATI; ZUṬARTI). See Midrash Haggadah.

PESSELES, JOSEPH (ELIAS): One of the foremost representative Jews of Wilna during the middle and latter part of the eighteenth century. His father, well known as Rabbi Elias Pesseles, was the grandson of Moses ben Naphtali Ribkas (author of "Be'er ha-Golah"), and also a relative and stanch and lifelong patron of the gaon of Wilna. A noteworthy feature in all that is known of the career of Joseph Pesseles, and one of interest to the student, is his correspondence, dated 1773, with David Friedländer about Solomon Dubno during the stay of the last-named at Pesseles' house in Wilna. The subject in question is Dubno's engagement to supervise the issue of some of Mendelssohn's manuscripts and his failure to perform his duties satisfactorily, according to Friedländer, who was deeply provoked thereby. Pesseles defends Dubno with a zeal well worthy his deep-rooted love for peace at any price and his eager endeavor to conciliate conflicting elements.

The most prominent feature in the correspondence, however, is Pesseles' remarkable toleration of and apparent intimacy with the forerunners of the Berlin Haskalah as represented by Mendelssohn and his followers. The affectionate intimacy here displayed between a descendant of a long line of rabbinical ancestry on the one hand and the disciples of Mendelssohn's progressiveness on the other is profoundly suggestive of the influence exerted by the Berlin Haskalah even on some Russian Jews at this early period.

PESSIMISM. See Optimism and Pessimism.

PESTER JÜDISCHE ZEITUNG: Hungarian political journal in German, issued five times weekly, and printed in Hebrew type. It was founded in 1869 by I. Reiss, who had acquired his journalistic training while holding the position of secretary to Chief Rabbi W. A. Meysel of Pest. The paper was especially popular during the Franco-Prussian war (1870-71); and it is noteworthy that it issued at this time a Hebrew map of the seat of war. It took no part in religious discussions, and in consideration of its supporters was friendly to the Orthodox, although the editor's own tendency was liberal. In 1878, a year before his death, Reiss engaged the well-known writer M. Ehrentheil as coeditor. The latter subsequently associated himself with the printer Burian, publisher of the paper, and continued it under the title "Allgemeine Jüdische Zeitung."

H. R. L. V.

PESTILENCE (דבר): The dreaded infectious disease frequent in ancient Israel and proving fatal in the majority of cases was probably the bubonic plague, which in antiquity was especially prevalent in Egypt, and also occurred in other countries of the East (Pliny, "Historia Naturalis," iii. 4). Moses threatened the people with this pestilence (Lev. xxvi. 25; Deut. xxviii. 21), while Yhwh warned the spies that it would be the punishment for the evil report which they had brought of the Holy Land (Num. xiv. 12). The Psalmist besought protection from the plague (Ps. xci. 3, 6), and Solomon prayed for deliverance from it when Israel should come to the Temple (I Kings viii. 37); but Jeremiah (xiv. 12, xxi. 6, xxiv. 10) and Ezekiel (v. 12, vii. 15) threatened the people with this disease if they continued to despise the word of God. Pestilence was also one of the four judgments which God inflicted upon Jerusalem in order to turn it into a wilderness (Ezek. xiv. 21). In II Sam. xxiv. 13-15 and I Chron. xxi. 11-14 there is an account of a plague which caused a mortality of 70,000 in Israel within three days (years ?). Amos (iv. 10) says that the plague in the wilderness was not effective in reforming the people, the allusion probably being to one of the two "maggefot" which killed many persons within a short time, according to Num. xvii. 9 and xxv. 8. This pestilence is different from that which attacks animals and from which the cattle of the Egyptians died (Ex. ix. 6–8).

According to Ta'an. iii. 1, a city ravaged by the pestilence must institute fast-days and prayers. In answer to the question when may an infectious disease be called a pestilence, the Mishnah declares that if three persons die during three consecutive days in any city of 500 inhabitants, the pestilence is raging there. Further details are given in the baraita Ta'an. 21a, which decides that if nine persons die within three consecutive days in a city of 1,500 inhabitants, the pestilence is present; but that if nine persons die in one day and none in the following days, or if only nine persons die within four consecutive days, there is no pestilence. Ta'an. 21b states that in the first half of the third century C.E. the pestilence ravaged Syria, but did not come near the habitation of Abba Arika.

PETAḤYAH. See PETHAHIAH.

PETER: Tosafist of the twelfth century; pupil of Samuel ben Meïr and Jacob Tam. His name occurs in Tos. Giṭ. 8a and 'Ab. Zarah 74b, and in several other places. Peter fell a victim to the persecutions of the second Crusade. While accompanying the body of a parnas, he was assailed by the crusaders and slain. "This," says Ephraim of Bonn, "occurred at קרנטן," which place Gross identifies with Carinthia, in Austria. A confusing account of Peter's martyrdom is given by Joseph ha-Kohen, who asserts that it happened at Ramerupt (מירם) and that Jacob (Jacob Tam?) was killed together with Peter.

PETER THE GREAT. See RUSSIA.

PETHAHIAH B. JACOB HA-LABAN (called also **Pethahiah of Regensburg**): Traveler; born at Prague; flourished between 1175 and 1190. He journeyed from Ratisbon (Regensburg) to the East, traveling through Poland, southern Russia, Armenia, Persia, Babylon, and Palestine. His notes of the journey, part of which he had mislaid in Bohemia, were collected by his compatriot Judah b. Samuel he-Ḥasid, and were first published, under the abbreviated title "Sibbub," at Prague in 1595; then by Wagenseil, with a Latin version, in "Exercitationes Sex" (pp. 160–203, Strassburg, 1687); by Carmoly, in Hebrew and French under the title "Sibbub ha-'Olam," at Paris in 1831; and finally by A. Benish, in Hebrew and English, as "The Travels of Rabbi Petaḥyah," at London in 1856. The latest edition of Pethahiah's work appeared at Lemberg in 1859.

PETHOR (פתור): Native city of Balaam. In Num. xxii. 5 it is called the city "by the river," and in Deut. xxiii. 4 the city "in Aram Naharaim" (A. V. "Mesopotamia"). It was situated north-northeast of Palestine, and was most probably identical with the Hittite Pitru, which was captured by Shalmaneser II. (860–825 B.C.): "I crossed the Euphrates, and took the city Ana-ashurutir-aṣbat on the other side of the Euphrates on the Sagur, which the Hittites call Pitru" (Schrader, "K. B." i. 133, lines 37–40; 173, lines 85–86).

PETIT GUILLAUME HAGUINET. See REUCHLIN.

PETRA: Capital of Edom in northern Arabia, lying in a rocky valley surrounded by mountains, of which the highest is Mount Hor. The name is apparently a Greek translation of the original Hebrew designation of the place, "Sela" (= "rock"; II Kings xiv. 7; Isa. xvi. 1). Petra was captured by Amaziah, who changed its name to "Joktheel," although Isaiah (*l.c.*) still termed the city "Sela." In the third or second century B.C. it was conquered by the Nabatæans, whose chief city it became; and after the Roman conquest Trajan made it the capital of the province of Arabia Petræa, the town thus lending its name to the district. Petra declined after the fourth or fifth century C.E., and was finally destroyed during the Mohammedan conquest.

Early in the nineteenth century the site of Petra was explored by Seetzen and Burckhardt, who made known its interesting ruins, chiefly Greek in architecture and consisting of temples, tombs, and an amphitheater.

PETRONIUS, ARBITER: Latin satirist; generally assumed to be a contemporary of Nero. In a fragment he ridicules the Jews, declaring that, even though they worship the pig and revere heaven, this is of no significance unless they are circumcised, for only then, according to his opinion, can they celebrate the fast of the Sabbath. These three absurd assertions, that the Jews worship the pig and heaven and that they fast on the Sabbath, were disseminated throughout the Roman world.

Petronius' satire of the "Widow of Ephesus" is found in Jewish literature, although the source from which the latter derived it was not his novel.

G. S. KR.

PETRONIUS, PUBLIUS: Governor of Syria (39–42); died probably in the reign of Claudius. During his term of office Petronius had frequent opportunities to come in contact with the Jews of Judea and to confer benefits upon them. This was especially the case when the insane Emperor Caligula caused himself to be worshiped as a god throughout the Roman empire, so that the peril which had threatened the Jews of Alexandria became still greater in Palestine. Irritated by the news that the Jews had torn down the imperial altar built by the Greeks in Jabneh, Caligula commanded his statue to be placed in Jerusalem in the Temple itself; and, since it was to be expected that the Jews would resist stubbornly, he ordered Petronius to enter Judea with the half of his army, *i.e.*, with two legions.

The governor was shrewd enough not to irritate the Jews to the utmost, and he therefore practised a policy of delay. Although he had the statue made in Sidon, he did not advance toward Jerusalem, but remained in Ptolemais during the winter of 39, parleying with the leaders of the Jews, who naturally were unwilling to yield. Multitudes of Jews—old men, women, and children—threw themselves at his feet, declaring that they would die rather than submit to the desecration of their sanctuary; and he encountered the same spectacle when he sojourned at Tiberias during the autumn of the year 40. There the entreaties of the people were supported by Aristobulus, brother of King Agrippa, and their kinsman Helkias, so that Petronius, moved by the deep piety of the Jewish people, led his troops back to Antioch, and wrote the emperor, entreating him to countermand his order. Meanwhile matters had taken a favorable turn in Rome, owing to the intervention of Agrippa, and the emperor ordered a letter to be written to Petronius forbidding any alteration in the Temple at Jerusalem.

The emperor was not sincere in this matter, however, and possibly he surmised that Petronius was merely making an excuse when he said that the statue at Sidon was not ready. He therefore gave orders for another effigy to be made in Rome, and which he intended to convey personally to Jerusalem. When the letter of Petronius with the entreaty to countermand the order reached the emperor, the latter became so enraged at the disobedience of his governor that he caused a letter to be written demanding that Petronius take his own life in punishment. Fortunately for the Jews and for the entire world, Caligula was murdered soon afterward; and the news of his death reached Petronius twenty-seven days before the imperial letter ordering the governor's suicide (Philo, "Legatio ad Caium," §§ 30–34; Josephus, "Ant." xviii. 8, §§ 2–9; *idem*, "B. J." ii. 10, §§ 1–5).

On another occasion Petronius showed his friendship toward the Jews. When some young men at Dora had placed a statue of the emperor in the synagogue, he, on the request of Agrippa, ordered that those who had done this should be punished, and that such an outrage should not be repeated ("Ant." xix. 6, § 3).

PETRUS LEONIS. See PIERLEONI.

PEWS. See SYNAGOGUE.

PEYREHORADE (Hebrew, פירייא אוראדה or מצור נקוב [=Latin, "Petra Forata"]): Cantonal chief town of the department of Landes, France. A number of Jews who had been expelled from Spain and Portugal settled in this vicinity toward the close of the fifteenth century, and founded a small community which they called "Beth-El." Placed at first under the community of Bayonne, they later refused to submit to its authority, and were, therefore, threatened with excommunication. In 1680 a Jew of Peyrehorade, Juan Ibanès, called also Luiz Ordenez and Juan or Abraham de Paredès, who had returned from Spain, was seized by the Inquisition and condemned to the stake. A decree of the council of state, dated 1684, banished from the kingdom ninety-three Jewish families living at Peyrehorade, Bordeaux, Dax, Bayonne, and Bidache; and in 1749 the King of France, on the petition of certain of the Jews themselves, compelled seventy-eight of their poorer coreligionists to leave the cities of Bayonne, Bidache, and Peyrehorade within the space of one month.

The cemetery of Peyrehorade was one of the first in the department of Landes. It was situated in 1628 "on the road lying between the river which flows from Vignons, the vineyard of Messaultié and the Vergeras, and the foot of the hill of Aspremont." At the beginning of the eighteenth century it was replaced by a piece of land situated in the quarter of Lembarussant; and in the early part of the nineteenth century by another plot on the road to Lapuyade. Only two or three Jewish families now (1904) remain in Peyrehorade.

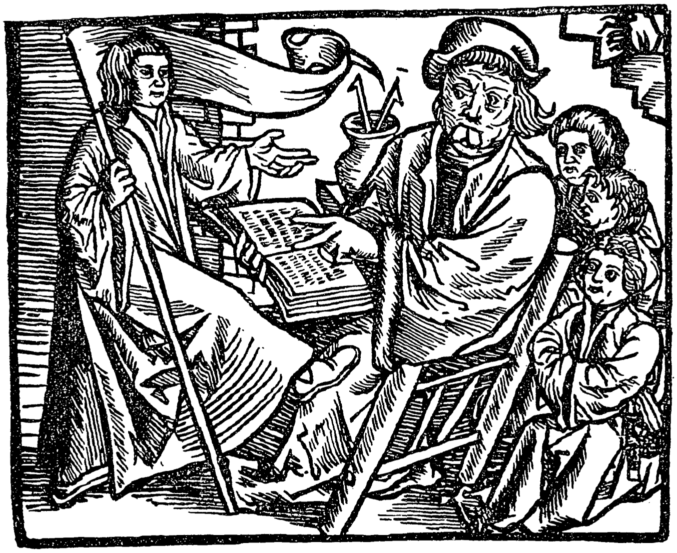
G. S. K.

PFALZBURG: German city in the consistorial district of Metz; formerly in the department of Meurthe-et-Moselle and in the consistorial district of Nancy. A Jewish community has existed there since the middle of the eighteenth century; in 1770 it comprised twelve families. A gravestone built into the present temple bears date of 1772, the year of the construction of the old synagogue, on the site of which a new synagogue was dedicated Sept. 11, 1857. Besides the synagogue there is a house containing an oratory and a miḳweh as well as the apartments of the ḥazzan. The community formerly had four benevolent societies; but only one has survived, the gemilut ḥasadim, which was founded in 1803 and is devoted to the care of the poor. Until 1901 Pfalzburg had a Jewish school; but on account of the decrease of the Jewish population it was closed, and the rabbi now gives religious instruction both to children and to the Jewish students at the city normal school. The cemetery was opened Jan. 26, 1796, and is used by the two communities of Pfalzburg and Mittelbronn.

The rabbinate of the city was founded in 1807, and includes the communities of Pfalzburg, Saarburg, Finstingen, Lixheim, Schalbach, Mittelbronn, Imling, Gosselming, and Langatte. The list of rabbis is as follows: Baruch Guggenheim (1807-14; later chief rabbi at Nancy); Seligman Godchaux (1814-27; later rabbi at Hagenau and chief rabbi at Strasburg and Colmar); Meyer Heymann (1827-37); Lazare Isidor (1837-47; later chief rabbi of Paris and of France; during his residence at Pfalzburg he, together with Adolphe Crémieux, secured the abolition of the oath "More Judaico"); Bär Lippman (1847-64; later chief rabbi of Metz and of Lille); Isaac Bigart (1864-75; later chief rabbi of Metz); Isaac Weil (1875-85; later chief rabbi of Metz and of Strasburg); Felix Blum (1886-99; now rabbi at Mühlhausen); and Elie Joseph Wiener (called to Antwerp in 1904), who was installed Nov. 1, 1899.

D. J. Wi.



Pfefferkorn and Reuchlin.
(From Pfefferkorn's "Streydtpeuchlin," 1516.)

PFEFFERKORN, JOHANN (JOSEPH): German convert to Christianity; born 1469; died after 1521. According to Grätz, he was a butcher by trade and illiterate, although his writings seem to disprove this, and he was thrown into prison by the Count von Guttenstein for committing a burglary. On his release he embraced Christianity and was baptized, together with his family, in Cologne (1505). He placed himself under the protection of the Dominican friars, who found in him a pliable tool which they used to the utmost. The prior of the order at Cologne was Jacob van Hoogstraaten, who wished to secure for his order the same influence in Germany which it had acquired in Spain through the Inquisition. He therefore devised a scheme for the persecution of the Jews, in which he had as advisers Victor of Carben (1442-1515) and Pfefferkorn.

His anti-Jewish Writings.

Pfefferkorn published under the auspices of the Dominicans the following pamphlets in which he tried to demonstrate that Jewish literature was hostile to Christianity: "Der Judenspiegel" ("Speculum Adhortationis Judaicæ ad Christum"), Nuremberg, 1507; "Die Judenbeicht" ("Libellus de Judaica Confessione sive Sabbate Afflictionis cum Figuris"), Cologne, 1508; "Das Osterbuch" ("Narratio de Ratione Pascha Celebrandi Inter Judæos Recepta"), Cologne and Augsburg, 1509; "Der Judenfeind" ("Hostis Judæorum"), *ib.* 1509; "In Lib und Ehren dem Kaiser Maximilian" ("In Laudem et Honorem Illustrissimi Imperatoris Maximiliani"), Cologne, 1510. The Latin translations seem to have been made by the Dominicans, who intended that the whole Catholic world should know of their attacks against the Jews; but the German originals were undoubtedly by Pfefferkorn.

Obtains Edicts Against Hebrew Books.

With a letter from Kunigunde, sister of the German emperor Maximilian, Pfefferkorn went to her imperial brother and succeeded in influencing the emperor, who already had expelled the Jews from his own domains of Styria, Carinthia, and Carniola, to promulgate an edict to the effect that all Jewish writings against Christianity should be destroyed. This edict (dated Aug. 19, 1509) was followed by a second (dated Nov. 10, 1509), ordering the destruction of all Hebrew books except the Old Testament. Pfefferkorn went to Frankfort-on-the-Main in 1509, and on April 10, 1510, the Jews were forced to surrender all the books in their possession.

Through the help of Uriel von Gemmingen, Archbishop of Cologne, the Jews induced the emperor to appoint a commission to investigate the accusation of Pfefferkorn. The archbishop himself was made a member of the commission, the others being representatives of the universities of Cologne, Erfurt, Heidelberg, and Mayence; they had the assistance of such scholars as Victor of Carben, Hoogstraaten, and Reuchlin. Reuchlin reported in favor of the Jews, and on May 23, 1510, the emperor suspended his edict of Nov. 10, 1509, the books being returned to the Jews on June 6. The spirit and the underhand work of the Dominicans are shown by the fact that Reuchlin's "Opinio" was known to them before it reached the emperor. The Dominicans, excited by their failure, attacked Reuchlin; Pfefferkorn wrote his "Handspiegel" (Mayence, 1511), and Reuchlin answered with his "Augenspiegel." Pfefferkorn wrote further "Der Brandspiegel" (Cologne, 1513) and "Die Sturmglocke" (*ib.* 1514). The fight between Pfefferkorn and Reuchlin now became a fight between the Dominicans, representing the clerical, and Humanists, representing the liberal, party of the Church. The Dominicans having accused Reuchlin of heretical opinions, which he was said to have expressed in his "Augenspiegel," the pope, upon the advice of Archbishop Gemmingen, appointed the Bishop of Speyer as special commissioner. The bishop decided (in 1514) in favor of the accused, and the case came before the Lateran Council, which in 1516 supported the decision reached at Speyer. In 1520 Pope Leo X. declared Reuchlin guilty, and condemned the "Augenspiegel." In order to secure this verdict, the Dominicans had been very active in trying to influence the judges and the pope. Pfefferkorn preached in public against the Jews and Reuchlin, and wrote in the same spirit "Streitbüchlein Wider Reuchlin und Seine Jünger" (also translated into Latin under the title "Defensio Contra Famosas et Criminales Obscurorum Virorum Epistolas" (Cologne, 1516), a reply to the "Epistolæ Obscurorum Virorum" (Hagenau, 1516; Basel, 1517), which had attacked the Dominicans very sharply. In 1521 appeared in Cologne Pfefferkorn's last pamphlet, "Eine Mitleidige Clag Gegen den Ungläubigen Reuchlin," a triumphal panegyric written after the decision by the pope. The Dominicans had won their fight against Reuchlin; but the emperor's edict against the Jews was not revived.

After this nothing more is heard of Pfefferkorn. The Dominicans had seemingly no further need of him.

D. F. T. H.

PFERSEE: Small locality near Augsburg, where Jews were living at an early date. About 1559 they were under the protection of Archduke Ferdinand of Austria, despite the request for their expulsion made by the municipal council of Augsburg, which body had driven the Jews from that city in 1440, and feared that they would return thither if allowed to settle in Pfersee. In 1617 an imperial mandate was sent to the lords of Neuburg, Krumbach, Thannhausen, Binswangen, and Pfersee not to curtail the Jews, wherever settled, in their privileges, nor to restrict in any way their right of residence. In 1789 there were in all 400 Jewish families at Pfersee, Hürben, Buttenwiesen, Fischach, and Ichenhausen, the principal community being at Pfersee, which was the seat of the district rabbi for the Swabian communities.

The "scholars of Pfersee," חכמי פערשא, are well known. In the middle of the sixteenth century Rabbi Libermann, contemporary and friend of Rabbi Josel of Rosheim, officiated at Pfersee. More famous was R. Enoch Sundel, who left Poland in 1648 or 1649, at the time of the persecution by Chmielnicki, and went to Prague, whence he was called as rabbi to Öttingen and later to Pfersee. He was the author of many rabbinical works. He was succeeded in 1680 by his son Judah Löb, who continued his father's "Reshit Bikkurim" and wrote other works. Judah Löb was followed in the beginning of the eighteenth century by R. Judah Löb b. Issachar Bär Oppenheim of Worms, a nephew of Chief Rabbi David Oppenheim of Prague, and the author of "Minḥat Yehudah." His successor was R. Isaac Seckel Ettenhausen, who wrote the collection of responsa entitled "Or Ne'elam," and was succeeded by R. Benjamin Wolf Spira of Prague, who died in 1792.

About the middle of the nineteenth century many Jews settled at Augsburg, including a number from Pfersee. This much decreased or entirely dissolved the community, and there are now (1904) no Jews in the town. The University of Munich has in its possession a valuable parchment manuscript of the Talmud, originally from Pfersee, on which Rabbinovicz based his "Diḳduḳe Soferim."

PFORZHEIM: City in the grand duchy of Baden. With this town is connected the earliest reference to Jews in the former margravate of Baden-Baden—an account of the persecution which took place there on Tammuz 20, 5027 (July 15, 1267), when R. Samuel ben Yaḳar ha-Levi, R. Isaac ben Eliezer, and R. Abraham ben Gershom committed suicide to escape the fury of the mob and the cruel tortures which they feared. Their corpses were, in fact, broken on the wheel, and the 20th of Tammuz is regarded as "Ta'anit Pforzheim" (the statement in "R. E. J." iv. 9 *et seq.* that there was a persecution at Pforzheim as early as 1244 is erroneous, and is based on a misunderstanding of the sources referring to the affair of 1267). This outbreak was caused by the slanderous statement of an old woman that the Jews had bought from her a Christian child and killed it.

The Jews seem to have fled from Pforzheim in consequence of this persecution; for the first reference to them after that event is the mention in 1463 of Leo of Pforzheim, whom the elector Friedrich von der Pfalz took for protection to Heidelberg for six years. In 1524 the Jews Seligmann and Hanna were admitted by the city, and were permitted to practise surgery in addition to carrying on business in the margravate. As the Jews of Pforzheim possessed considerable real estate at that time, a tax of 2½ gulden in 100 was levied Nov. 26, 1529; and in 1619 the rate for protection and convoy was doubled. The community of Pforzheim had no rabbi of its own, but, like all the other congregations of the margravate, was under the jurisdiction of the chief rabbi of the country, who was appointed by the margrave.

Pforzheim is the native city of Johann Reuchlin. It has now (1904) a very important community, numbering more than 1,200 Jews in a total population of 29,988.

D. M. L. B.

PHABI: High-priestly family which flourished about the period of the fall of the Second Temple.

The name, with which may be compared *Φαβέας* (variant, *Φαμέας*), that of a Carthaginian general (Suidas, *s.v.* *'Αμίλκας*), was borne by the high priests Jesus ben Phabi, Ishmael ben Phabi I., and Ishmael ben Phabi II. All three of these are mentioned in Josephus, while the name of Ishmael occurs also in the Mishnah (Parah iii. 5) and frequently in the Talmud. The orthography of the name, which is apparently Egyptian in origin, has in Josephus the forms *Φοαβι*, *Φαβι*, *Φαβη* (comp. also Zonaras, "Annales," v. 16), while in his "Hypomnesticon" (see "Byzantinische Zeitschrift," xi. 129) is found the form *Φαυβῆ* (*ὁ τοῦ*). In the rabbinical sources the name is spelled either פאבי, פיאבי, or פואבי, which present the same uncertainties as the Greek form.

PHANAGORIA. See Taman.

PHARAOH (פרעה; LXX. *Φαραώ*): The term applied in the Old Testament to the kings of Egypt. The word is derived from the Egyptian "pr-'o" (= "great house"), which originally denoted the royal palace with the buildings and grounds attached to it, although the metonymy which transferred its meaning from the palace to the king developed only gradually, as in "Sublime Porte." "Pr-'o" seems to occur first in the fourth dynasty, and until the twelfth it connotes only the building, although by the sixteenth it is occasionally applied to the king. In documents of the eighteenth dynasty it is the regular appellation of the monarch, so that by the twenty-fifth "Pr-'o Nk'w" is found as the precise equivalent of the Biblical "Pharaoh-Necho," "pr-'o" being used in the simple sense of "king," *i.e.*, "Pharaoh."

In the Old Testament eleven kings of Egypt are mentioned.

1. The Pharaoh of Abraham (Gen. xii. 14–20) According to the account given of this king, he took Sarai as a member of his harem, being led by Abram to suppose she was his sister instead of his wife. For this unwitting act Pharaoh suffered affliction from Yhwh, until he discovered his error, which he immediately rectified. In view of the fact that Abram's date is far anterior to the eighteenth dynasty, before which "pr-'o" was very seldom used in the sense of "king," the narrative in Genesis is not altogether free from difficulty, and the data afforded by it are so meager that it is impossible to attempt any identification with the sources thus far accessible.

2. The Pharaoh of Joseph (Gen. xxxix.–l.). The story of Joseph, or at least the redaction of it, can scarcely be of early date, both on account of the title of "Pharaoh" and of the use of יאר (Gen. xli. 1, etc.) as the name of the Nile, since the Egyptian original of the term was not used until the Middle Kingdom. The proper names occurring in the story (Gen. xli. 45), moreover—Potipherah ("P-ti-p-R'," gift of Ra), Asenath ("[N]es-Neith," she who is Neith's), and Zaphnath-paaneah ("Zt-p-ntr-e-f-'nkh," Saith the god: "He liveth")—represent forms which are common after the twenty-fifth dynasty and which do not occur before it. No certain record of a seven years' famine, like that recorded in the history of Joseph, exists, although a very late Egyptian inscription at the Cataracts states that there was such a famine in the reign of one of the earliest kings, possibly about 3000 B.C. The present knowledge of the economic administration of ancient Egypt is insufficient to determine the accuracy of the account that a fifth of the grain was stored up to provide against famine. It is likewise uncertain whether land and live stock could be sold to the king for this reserve supply, so that the Pharaoh could finally own one-fifth of the entire country (Gen. xli. 33-36, xlvii. 14–26). Here again, therefore, it is difficult if not impossible to identify the ruler of Egypt intended by the narrative of Joseph, although he was, perhaps, one of the Hyksos, or "foreign," dynasty. The old view that this Pharaoh was Apôphis II seems quite improbable, but the general historicity of the account is confirmed by the fact that according to two El-Amarna tablets a Semite occupied a position in Egypt quite similar to that held by Joseph (comp. Jew. Encyc. vii. 252a), while Merneptah states that Goshen had been given as a pasture land to "foreign" herdsmen from southern Canaan (comp. Jew. Encyc. viii. 676a).

3. The Pharaoh of the Exodus (Ex. i.–ii.). As in the case of the Pharaoh of Joseph, the use of "Ye'or" to denote the Nile apparently speaks for a comparatively late date of the Hebrew redaction of the story of the Exodus. The ruler intended by the narrative is usually regarded as Rameses II. of the nineteenth dynasty, who was preeminent as a builder and was active at Pithom, while he may well have been the founder of Raamses in Goshen (Ex. i. 11). According to another theory, he was Amenhotep III. or IV. of the eighteenth dynasty, but this hypothesis, which is based on El-Amarna letters which record the movements of the "Ḥabiri" (Hebrews ?) in Palestine, seems on the whole less probable than the generally accepted view.

4. The Pharaoh of the Oppession (Ex. v.–xiv.). This ruler is almost universally regarded as Merneptah II., one of whose inscriptions, dating from the fifth year of his short reign, contains the only Egyptian allusion to the Hebrews known thus far. This passage reads as follows: "Israel [Y-s-ir(a)-'a-ra] is annihilated without any growth; Palestine has become like a widow for Egypt." While this is frequently taken as a proof that the Israelites were already settled in Palestine in Merneptah's reign, such an assumption is by no means necessary. During both this and the following reigns, moreover, there is a significant lack of any record of Egyptian expeditions to the quarries of Sinai, near which the Israelites are said to have wandered for forty years; and, on the other hand, there is no Hebrew account of any Egyptian invasion of Palestine before the one made by Shishak in the twenty-fifth dynasty, unless the "hornet" of Ex. xxiii. 28, Deut. vii. 20, and Josh. xxiv. 12 refers to Rameses III. of the twentieth dynasty, who ravaged Philistia.

5. Bithiah, the wife of Mered. Mentioned in I Chron. iv. 18 as "the daughter of Pharaoh": but it is impossible to determine to what king of Egypt the passage refers, and in this case "Pharaoh" may even be a mere proper name, perhaps a loan-word assumed by a Hebrew.

6. The Edomite Hadad fled in his childhood from his home to the court of Egypt during the reign of David, and gained such favor with the Pharaoh that, on reaching maturity, he was allowed to marry Tahpenes (LXX. Θεκεμίνα), the sister of the queen. By her he had a son named Genubath, and he remained in Egypt until Solomon's accession to the throne (I Kings xi. 14–22). The name "Tahpenes" has not yet been found in Egyptian, however, and it is, therefore, uncertain what Pharaoh is intended by the Biblical passage, while the difficulty is increased by the fact that the country was then ruled by two kings, one at Thebes and the other at Tanis (Zoan) the latter being overlord of all Egypt.

7. The father-in-law of Solomon. Probably a ruler of Tanis in the twenty-first dynasty. He captured Gezer in Canaan and presented it to his daughter, who was one of the wives of Solomon (I Kings iii. 1, ix.16).

8. Shishak. The Shoshenḳ I. of the Egyptian texts, and the founder of the Bubastite dynasty. See SHISHAK.

9. "Pharaoh king of Egypt." This ruler is described by Rab-shakeh in his insulting speech to Hezekiah, in both II Kings xviii. 21 and Isa. xxxvi. 6, as a "bruised [or "broken"] reed, whereon if a man lean, it will go into his hand, and pierce it." He may perhaps be identical with TIRHAKAH, who declared war on Sennacherib with disastrous results for the Assyrians, and is regularly called "Pharaoh Tahraḳa" in Egyptian texts, although he is more accurately termed "king of Cush" in II Kings xiv. 9.

10. Pharaoh-Hophra. See HOPHRA.

11. Pharaoh-Necho. See NECHO.

E. G. H. L. H. G.

PHARISEES (Φαρισαῖοι; Aramaic, "Perishaya"; Hebr. "Perushim"): Party representing the religious views, practises, and hopes of the kernel of the Jewish people in the time of the Second Temple and in opposition to the priestly Sadducees. They were accordingly scrupulous observers of the Law as interpreted by the Soferim, or Scribes, in accordance with tradition. No true estimate of the character of the Pharisees can be obtained from the New Testament writings, which take a polemical attitude toward them (see NEW TESTAMENT), nor from Josephus, who, writing for Roman readers and in view of the Messianic expectations of the Pharisees, represents the latter as a philosophical sect. "Perisha" (the singular of "Perishaya") denotes "one who separates himself," or keeps away from persons or things impure, in order to attain the degree of holiness and righteousness required in those who would commune with God (comp., for "Perishut" and "Perisha," Tan., Wayeẓe, ed. Buber, p. 21; Abot iii. 13; Soṭah ix. 15; Midr. Teh. xv. 1; Num. R. x. 23; Targ. Gen. xlix. 26).

The Pharisees formed a league or brotherhood of their own ("ḥaburah"), admitting only those who, in the presence of three members, pledged themselves to the strict observance of Levitical purity, to the avoidance of closer association with the 'AM HA-AREẒ (the ignorant and careless boor), to the scrupulous payment of tithes and other imposts due to the priest, the Levite, and the poor, and to a conscientious regard for vows and for other people's property (Dem. ii. 3; Tosef., Dem. ii. 1). They called their members "ḥaberim" (brothers), while they passed under the name of "Perishaya," or "Perushim." Though originally identical with the ḤASIDIM, they reserved the title of "ḥasid" for former generations ("ḥasidim ha-rishonim"; see ESSENES), retaining, however, the name "Perishut" (='Αμιξία = "separation," in contradistinction to 'Επιμιξία = "intermingling") as their watchword from the time of the Maccabean contest (see II Macc. xiv. 37; comp. verse 3). Yet, while the more rigorous ones withdrew from political life after the death of Judas Maccabeus, refused to recognize the Hasmonean high priests and kings as legitimate rulers of the Temple and of the state, and, as Essenes, formed a brotherhood of their own, the majority took a less antagonistic attitude toward the Maccabean dynasty, who, like Phinehas, their "father," had obtained their title by zeal for God (I Macc. ii. 54); and they finally succeeded in infusing their own views and principles into the political and religious life of the people.

Principle of Democracy.

It was, however, only after a long and protracted struggle with the Sadducees that they won their lasting triumph in the interpretation and execution of the Law. The Sadducees, jealously guarding the privileges and prerogatives established since the days of Solomon, when Zadok, their ancestor, officiated as priest, insisted upon the literal observance of the Law; the Pharisees, on the other hand, claimed prophetic or Mosaic authority for their interpretation (Ber. 48b; Shab. 14b; Yoma 80a; Yeb. 16a; Nazir 53a; Ḥul. 137b; *et al.*), at the same time asserting the principles of religious democracy and progress. With reference to Ex. xix. 6, they maintained that "God gave all the people the heritage, the kingdom, the priesthood, and the holiness" (II Macc. ii. 17, Greek). As a matter of fact, the idea of the priestly sanctity of the whole people of Israel in many directions found its expression in the Mosaic law; as, for instance, when the precepts concerning unclean meat, intended originally for the priests only (Ezek. xliv. 31; comp. verse 14 and Judges xiii. 4), were extended to the whole people (Lev. xi.; Deut. xiv. 3–21); or when the prohibition of cutting the flesh in mourning for the dead was extended to all the people as "a holy nation" (Deut. xiv. 1–2; Lev. xix. 28; comp. Lev. xxi. 5); or when the Law itself was transferred from the sphere of the priesthood to every man in Israel (Ex. xix. 22–24; Deut. vi. 7, xi. 19; comp. xxxi. 9; Jer. ii. 8, xviii. 18).

The very institution of the synagogue for common worship and instruction was a Pharisaic declaration of the principle that the Torah is "the inheritance of the congregation of Jacob" (Deut. xxxiii. 3, Hebr.). In establishing schools and synagogues everywhere and enjoining each father to see that his son was instructed in the Law (Yer. Ket. viii. 32c; Ḳid. 29a; Sifre, Deut. 46), the Pharisees made the Torah a power for the education of the Jewish people all over the world, a power whose influence, in fact, was felt even outside of the Jewish race (see R.

Meïr in Sifra, Aḥare Mot, 13; Matt. xxiii. 15; comp. Gen. R. xxviii.; Jellinek, "B. H." vi., p. xlvi.). The same sanctity that the priests in the Temple claimed for their meals, at which they gathered with the recitation of benedictions (I Sam. ix. 13) and after ablutions (see Ablution), the Pharisees established for their meals, which were partaken of in holy assemblies after purifications and amidst benedictions (Geiger, "Urschrift," pp. 121–124). Especially were the Sabbath and holy days made the means of sanctification (see Ḳiddush), and, as at the sacrifices, wine was used in honor of the day. A true Pharisee observed the same degree of purity in his daily meals as did the priest in the Temple (Tosef., Dem. ii. 2; so did Abraham, according to B. M. 87a), wherefore it was necessary that he should avoid contact with the ‘am ha-areẓ (Ḥag. ii. 7).

From Temple practise were adopted the mode of slaughtering (Sifre, Deut. 75; Ḥul. 28a) and the rules concerning "ta‘arubot" (the mingling of different kinds of food; comp. Hag. ii. 12; Zeb. viii.; Ḥul. viii. 1) and the "shi‘urim" (the quantities constituting a prohibition of the Law; Yoma 80a). Though derived from Deut. vi. 7 (comp. Josephus, "Ant." iv. 8, § 3), the daily recital of the "Shema‘," as well as the other parts of the divine service, is a Pharisaic institution, the Pharisees having established their ḥaburah, or league, in each city to conduct the service (Ber. iv. 7; comp. "Ant." xviii. 2, § 3; Geiger, "Urschrift," p. 379). The tefillin, or Phylacteries, as a symbolical consecration of head and arm, appear to be a counterpart of the high priest's diadem and breastplate; so with the Mezuzah as a symbolical consecration of the home, though both were derived from Scripture (Deut. vi. 8–9, xi. 18–19; Sanh. x. [xi.] 3), the original talismanic character having been forgotten (comp. Ex. xii. 13; Isa. lvii. 8).

In the Temple Service.

In the Temple itself the Pharisees obtained a hold at an early date, when they introduced the regular daily prayers besides the sacrifice (Tamid v. 1) and the institution of the "Ma‘amadot" (the representatives of the people during the sacrifices). Moreover, they declared that the priests were but deputies of the people. On the great Day of Atonement the high priest was told by the elders that he was but a messenger of the Sanhedrin and must officiate, therefore, in conformity with their (the Pharisees') rulings (Yoma i. 5; comp. Josephus, "Ant." xviii. 1, § 4). While the Sadducean priesthood regarded the Temple as its domain and took it to be the privilege of the high priest to offer the daily burnt offering from his own treasury, the Pharisees demanded that it be furnished from the Temple treasury, which contained the contributions of the people (Sifra, Ẓaw, 17; Emor, 18). Similarly, the Pharisees insisted that the meal-offering which accompanied the meat-offering should be brought to the altar, while the Sadducees claimed it for themselves (Meg. Ta‘an. viii.). Trivial as these differences appear, they are survivals of great issues. Thus the high priests, who, as may be learned from the words of Simon the Just (Lev. R. xxi., close; comp. Ber. 7a; Yoma v. 1, 19b), claimed to see an apparition of the Shekinah when entering the Holy of Holies, kindled the incense in their censers outside and thus were enveloped in the cloud when entering, in order that God might appear in the cloud upon the mercy-seat (Lev. xvi. 2). The Pharisees, discountenancing such claims, insisted that the incense must be kindled by the high priest within the Holy of Holies (Sifra, Aḥare Mot, 3; Tosef., Yoma i. 8; Yoma 19b; Yer. Yoma i. 39a).

On the other hand, the Pharisees introduced rites in the Temple which originated in popular custom and were without foundation in the Law. Such was the water-procession of the people, on the night of Sukkot, from the Pool of Siloam, ending with the libation of water in the morning and the final beating of the willow-trees upon the altar at the close of the feast. The rite was a symbolic prayer for the year's rain (comp. Zach. xiv. 16–18; Isa. xiii. 3, xxx. 29; Tosef., Suk. iii. 18); and while the Ḥasidim took a prominent part in the outbursts of popular rejoicing to which it gave rise, the Sadducean priesthood was all the more averse to it (Suk. iv. 9–v. 4; 43b, 48b; Tosef., Suk. iii.). In all these practises the Pharisees obtained the ascendency over the Sadducees, claiming to be in possession of the tradition of the fathers ("Ant." xiii. 10, § 6; 16, § 2; xviii. 1, §§ 3–4; Yoma 19b).

A Party of Progress.

Yet the Pharisees represented also the principle of progress; they were less rigid in the execution of justice ("Ant." xiii. 10, § 6), and the day when the stern Sadducean code was abolished was made a festival (Meg. Ta‘an. iv.). While the Sadducees in adhering to the letter of the law required "an eye for an eye and a tooth for a tooth," the Pharisees, with the exception of Eliezer b. Hyrcanus, the Shammaite, interpreted this maxim to mean due compensation with money (Mek., Mishpaṭim, 8; B. Ḳ. 84b; comp. Matt. v. 38). The principle of retaliation, however, was applied consistently by the Sadducees in regard to false witnesses in cases involving capital punishment; but the Pharisees were less fair. The former referred the law "Thou shalt do unto him as he had intended unto his brother" (Deut. xix. 19, Hebr.) only to a case in which the one falsely accused had been actually executed; whereas the Pharisees desired the death penalty inflicted upon the false witness for the intention to secure the death of the accused by means of false testimony (Sifre, Deut. 190; Mark i. 6; Tosef., Sanh. vi. 6; against the absurd theory, in Mak. 5b, that in case the accused has been executed the false witness is exempt from the death penalty, see Geiger, *l.c.* p. 140). But in general the Pharisees surrounded the penal laws, especially the death penalty, with so many qualifications that they were rarely executed (see Sanh. iv. 1, vi. 1; Mak. i. 10; see Capital Punishment; Hatra‘ah).

The laws concerning virginity and the levirate (Deut. xxii. 17, xxv. 9) also were interpreted by the Pharisees in accordance with the dictates of decency and common sense, while the Sadducees adhered strictly to the letter (Sifre, Deut. 237, 291; Yeb. 106b; instead of "Eliezer b. Jacob" [as siding with the Sadducees] probably "Eliezer ben Hyrcanus" should be read). The difference concerning the right of inheritance by the daughter as against the son's daughter, which the Sadducees granted and the Pharisees denied (Yad. iv. 7; Meg. Ta'an. v.; Tosef., Yad. ii. 20; Yer. B. B. vii. 16a), seems to rest on differing practises among the various classes of people; the same is true with regard to the difference as to the master's responsibility for damage done by a slave or a beast (Yad. iv. 7; B. Ḳ. viii. 4; but see Geiger, *l.c.* pp. 143-144).

Sabbaths and Festivals.

Of decisive influence, however, were the great changes wrought by the Pharisees in the Sabbath and holy days, inasmuch as they succeeded in lending to these days a note of cheerfulness and domestic joy, while the Sadducees viewed them more or less as Temple festivals, and as imposing a tone of austerity upon the common people and the home. To begin with the Day of Atonement, the Pharisees wrested the power of atoning for the sins of the people from the high priest (see Lev. xvi. 30) and transferred it to the day itself, so that atonement was effected even without sacrifice and priest, provided there was genuine repentance (Yoma viii. 9; Sifra, Aḥare Mot, 8). So, too, the New Moon of the seventh month was transformed by them from a day of trumpet-blowing into a New-Year's Day devoted to the grand ideas of divine government and judgment (see New-Year). On the eve of Passover the lessons of the Exodus story, recited over the wine and the maẓẓah, are given greater prominence than the paschal lamb (Pes. x.; see Haggadah [Shel Pesaḥ]). The Biblical command enjoining a pilgrimage to the Temple in the festival season is fulfilled by going to greet the teacher and listen to his instruction on a festal day, as in former days people went to see the prophet (Suk. 27b, after II Kings iv. 23; Beẓah 15; Shab. 152a; Sifra to Lev. xxiii. 44).

But the most significant change was that which the Feast of Weeks underwent in its transformation from a Feast of Firstlings into a Feast of the Giving of the Law (Mek., Yitro, Baḥodesh, 3; Ex. R. xxxi.; see Jubilees, Book of). The Boethusians, as the heirs of the Sadducees, still retained a trace of the agricultural character of the feast in adhering to the letter of the law which places the offering of the 'omer (sheaf of the wave-offering) on the morrow after the Sabbath and the Shabu'ot feast on the morrow after the seventh Sabbath following (Lev. xxiii. 15-16); whereas the Pharisees, in order to connect the Shabu'ot feast with Passover and lend it an independent historical character, boldly interpreted the words "the morrow after Sabbath" as signifying "the day following the first Passover day," so that Shabu'ot always falls upon the close of the first week of Siwan (Meg. Ta'an. i.; Men. 65a, b; Shab. 88a).

Especially significant are the Pharisaic innovations in connection with the Sabbath. One of them is the special duty imposed upon the mistress of the home to have the light kindled before Sabbath (Shab. ii. 7), whereas the Samaritans and Karaites, who were in many ways followers of Sadducean teachings, saw in the prohibition against kindling fire on Sabbath (Ex. xxxv. 3) a prohibition also against light in the home on Sabbath eve. The Samaritans and Karaites likewise observed literally the prohibition against leaving one place on Sabbath (Ex. xvi. 29), while the Pharisees included the whole width of the Israelitish camp—that is, 2,000 ells, or a radius of one mile—in the term "place," and made allowance besides for carrying things (which is otherwise forbidden; see Jer. xvii. 21-24) and for extending the Sabbath limit by means of an artificial union of spheres of settlement (see 'Erub; Sabbath). Their object was to render the Sabbath "a delight" (Isa. lviii. 13), a day of social and spiritual joy and elevation rather than a day of gloom. The old Ḥasidim, who probably lived together in large settlements, could easily treat these as one large house (see Geiger, "Jüd. Zeit." ii. 24-27). Yet while they excluded the women from their festal gatherings, the Pharisees, their successors, transformed the Sabbath and festivals into seasons of domestic joy, bringing into increasing recognition the importance and dignity of woman as the builder and guardian of the home (comp. Niddah 38a, b; and Book of Jubilees, i. 8, with Ezra's injunction; B. Ḳ. 82a).

In regard to the laws of Levitical purity, which, in common with primitive custom, excluded woman periodically, and for weeks and months after childbirth, from the household (Lev. xii. 4-7, xv. 19-24), to which laws the ancient Ḥasidim adhered with austere rigor (Shab. 64b; Horowitz, "Uralte Toseftas," iv.-v.; "Pitḥe Niddah," pp. 54-56; Geiger, *l.c.* ii. 27-28), the Pharisees took the common-sense course of encouraging the wife, despite the letter of the Law, to take her usual place in the home and appear in her wonted dignity before her husband and children (Ket. 61a; Shab. 64b). So, too, it was with the Pharisaic leader Simeon b. Sheṭaḥ, who, in the reign of Queen Salome Alexandra, introduced the marriage document (Ketubah) in order to protect the wife against the caprice of the husband; and while the Shammaites would not allow the wife to be divorced unless she gave cause for suspicion of adultery (Sifre, 269; Giṭ. ix. 10, 90b; comp. Matt. v. 32), the Hillelites, and especially Akiba, in being more lenient in matters of divorce, had in view the welfare and peace of the home, which should be based upon affection (see Friedmann, "Pseudo-Seder Eliyahu Zuṭa," xv. 3). Many measures were taken by the Pharisees to prevent arbitrary acts on the part of the husband (Giṭ. iv. 2-3 *et al.*). Possibly in order to accentuate the legal character of the divorce they insisted, against Sadducean custom, on inserting in the document the words "according to the law of Moses and of Israel" (Yad. iv. 8; but comp. Meg. Ta'an. vii.).

It was on account of such consideration for the welfare of the home that they stood in high favor with the Jewish women ("Ant." xvii. 2, § 4). They discountenanced also the Sadducean custom of special purifications for the officiating priest (Parah iii. 7; Tosef., ii. 1), and laid more stress upon the purification of the Temple vessels and upon the holiness of the Scripture scrolls, which, according to them, transmitted their holiness to the hands which touched them so as to make them "defile" (*i.e.*, make "taboo") the things touched by them (Yad. iv. 6; Tosef., ii. 20; Tosef., Ḥag. iii. 35; see Geiger, "Urschrift," pp. 134-136).

Most of these controversies, recorded from the

Aristocracy of the Learned.

time previous to the destruction of the Temple, are but faint echoes of the greater issues between the Pharisaic and Sadducean parties, the latter representing the interests of the Temple, while the former were concerned that the spiritual life of the people should be centered in the Torah and the Synagogue. While the Sadducean priesthood prided itself upon its aristocracy of blood (Sanh. iv. 2; Mid. v. 4; Ket. 25a; Josephus, "Contra Ap." i., § 7), the Pharisees created an aristocracy of learning instead, declaring a bastard who is a student of the Law to be higher in rank than an ignorant high priest (Hor. 13a), and glorying in the fact that their most prominent leaders were descendants of proselytes (Yoma 71b; Sanh. 96b). For the decision of their Scribes, or "Soferim" (Josephus, *σοφισταί*; N. T., *γραμματεῖς*), consisting originally of Aaronites, Levites, and common Israelites, they claimed the same authority as for the Biblical law, even in case of error (Sifre, Deut. 153–154); they endowed them with the power to abrogate the Law at times (see Abrogation of Laws), and they went so far as to say that he who transgressed their words deserved death (Ber. 4a). By dint of this authority, claimed to be divine (R. H. 25a), they put the entire calendric system upon a new basis, independent of the priesthood. They took many burdens from the people by claiming for the sage, or scribe, the power of dissolving vows (Ḥag. i. 8; Tosef., i.).

On the whole, however, they added new restrictions to the Biblical law in order to keep the people at a safe distance from forbidden ground; as they termed it, "they made a fence around the Law" (Ab. i. 1; Ab. R. N. i.–xi.), interpreting the words "Ye shall watch my watch" (Lev. xviii. 30, Hebr.) to mean "Ye shall place a guard around my guard" (Yeb. 21a). Thus they forbade the people to drink wine or eat with the heathen, in order to prevent associations which might lead either to intermarriage or to idolatry (Shab. 17b). To the forbidden marriages of the Mosaic law relating to incest (Lev. xviii.–xx.) they added a number of others (Yeb. ii. 4). After they had determined the kinds of work prohibited on the Sabbath they forbade the use of many things on the Sabbath on the ground that their use might lead to some prohibited labor (see Sabbath). It was here that the foundation was laid of that system of rabbinic law which piled statute upon statute until often the real purpose of the Law was lost sight of (see Nomism). But such restrictions are not confined to ritual laws. Also in regard to moral laws there are such additional prohibitions, as, for instance, the prohibition against what is called "the dust of slanderous speech" (Yer. Peah i. 16a) or "the dust of usury" (B. M. 61b), or against unfair dealings, such as gambling, or keeping animals that feed on property of the neighbors (Tosef., B. Ḳ. vii. 8; Tosef., Sanh. v. 2, 5; Sanh. 25b, 26b).

Doctrines of the Pharisees.

The aim and object of the Law, according to Pharisaic principles, are the training of man to a full realization of his responsibility to God and to the consecration of life by the performance of its manifold duties: the one is called "'ol malkut shamayim" (the yoke of God's Kingship) and the other "'ol ha-miẓwot" (the yoke of His commandments). Every morning and evening the Jew takes both upon himself when reciting the "Shema'" (Ber. ii. 2). "The Torah preaches: Take upon yourselves the yoke of God's Kingdom; let the fear of God be your judge and arbiter, and deal with one another according to the dictates of love" (Sifre, Deut. 323). So says Josephus: "For the Jewish lawgiver all virtues are parts of religion" ("Contra Ap." ii., §§ 17, 19; comp. Philo, "De Opificio Mundi," §§ 52, 55). Cain and the generation of the Flood sinned in that they denied that there are a Judgment and a Judge and a future of retribution (Targ. Yer. to Gen. iv. 8; Gen. R. xxvi.). The acceptance of God's Kingship implies acceptance of His commandments also, both such as are dictated by reason and the human conscience and such as are special decrees of God as Ruler (Sifra, Aḥare Mot, 13). It means a perfect heart that fears the very thought of sin (Sifra, Ḳedoshim, 2); the avoidance of sin from love of God (*ib.* 11); the fulfilment of His commandments without expectation of reward ('Ab. Zarah 19a); the avoidance of any impure thought or any act that may lead to sin (*ib.* 20b, with reference to Deut. xxiii. 10). The acceptance of God's Kingship implies also recognition of His just dealing with man, and a thankful attitude, even in misfortune (Sifre, Deut. 32, 53; Sifra, Shemini, 1; Mek., Yitro, 10; Ber. ix. 5, 60b). God's Kingship, first proclaimed by Abraham (Sifre, Deut. 313) and accepted by Israel (Mek., Yitro, Baḥodesh, 2–3), shall be universally recognized in the future.

The Future Life.

This is the Messianic hope of the Pharisees, voiced in all parts of the synagogal liturgy; but it meant also the cessation of the kingdom of the worldly powers identified with idolatry and injustice (Mek., 'Amalek). In fact, for the ancient Ḥasidim, God's Kingship excluded that of any other ("Ant." xviii. 1, § 6). The Pharisees, who yielded to the temporary powers and enjoined the people to pray for the government (Abot iii. 2), waited nevertheless for the Kingdom of God, consoling themselves in the meantime with the spiritual freedom granted by the study of the Law (Abot vi. 2). "He who takes upon himself the yoke of the Torah, the yoke of the worldly kingdom and of worldly care, will be removed from him" (Abot iii. 5). Josephus ("B. J." ii. 8, § 14; "Ant." xiii. 5, § 9; xviii. 1, § 3) carefully avoids mentioning the most essential doctrine of the Pharisees, the Messianic hope, which the Sadducees did not share with them; while for the Essenes time and conditions were predicted in their apocalyptic writings. Instead, Josephus merely says that "they ascribe everything to fate without depriving man of his freedom of action." This idea is expressed by Akiba: "Everything is foreseen [that is, predestined]; but at the same time freedom is given" (Abot iii. 15). Akiba, however, declares, "The world is judged by grace [not by blind fate nor by the Pauline law], and everything is determined by man's actions [not by blind acceptance of certain creeds]." Similar to Josephus' remark is the rabbinical saying, "All is decreed by God except fear of God" (Ber. 33b). "Man may act either virtuously or viciously, and his rewards or punishments in the future shall be accordingly" ("Ant." xviii. 1, § 3). This corresponds with the "two ways of the Jewish teaching" (Ab. R. N. xxv.; see Didache). But it was not the immortality of the soul which the Pharisees believed in, as Josephus puts it, but the resurrection of the body as expressed in the liturgy (see Resurrection), and this formed part of their Messianic hope (see Eschatology).

In contradistinction to the Sadducees, who were satisfied with the political life committed to their own power as the ruling dynasty, the Pharisees represented the views and hopes of the people. The same was the case with regard to the belief in angels and demons. As Ecclesiastes and Ecclesiasticus indicate, the upper classes adhered for a long time to the Biblical view concerning the soul and the hereafter, caring little for the Angelology and Demonology of the Pharisees. These used them, with the help of the Ma'aseh Bereshit and Ma'aseh Merkabah, not only to amplify the Biblical account, but to remove from the Bible anthropomorphisms and similarly obnoxious verbiage concerning the Deity by referring them to angelic and intermediary powers (for instance, Gen. i. 26), and thereby to gradually sublimate and spiritualize the conception of God.

Ethics.

The Pharisees are furthermore described by Josephus as extremely virtuous and sober, and as despising luxuries; and Ab. R. N. v. affirms that they led a life of privation. The ethics of the Pharisees is based upon the principle "Be holy, as the Lord your God is holy" (Lev. xix. 2, Hebr.); that is, strive to imitate God (Sifra and Tan., Ḳedoshim, 1; Mek., Shirah, 3; Sifre, Deut. 49; comp. Matt. v. 48: "Be ye therefore perfect, even as your Father which is in heaven is perfect"). So "Love thy neighbor as thyself" is declared by them to be the principal law (Shab. 30a; Ab. R. N., text B, xxvi. [ed. Schechter, p. 53]; Sifra, Ḳedoshim, 4) and, in order to demonstrate its universality, to be based on the verse declaring man to be made in the image of God (Gen. v. 1). "As He makes the sun shine alike upon the good and the evil," so does He extend His fatherly love to all (Shir ha-Shirim Zuṭa, i.; Sifre, Num. 134, Deut. 31, 40). Heathenism is hated on account of the moral depravity to which it leads (Sifre, Num. 157), but the idolater who becomes an observer of the Law ranks with the high priest (Sifra, Aḥare Mot, 13). It is a slanderous misrepresentation of the Pharisees to state that they "divorced morality and religion," when everywhere virtue, probity, and benevolence are declared by them to be the essence of the Law (Mak. 23b-24a; Tosef., Peah, iv. 19; *et al.*; see Ethics).

Nothing could have been more loathsome to the genuine Pharisee than Hypocrisy. "Whatever good a man does he should do it for the glory of God" (Ab. ii. 13; Ber. 17a). Nicodemus is blamed for having given of his wealth to the poor in an ostentatious manner (Ket. 66b). An evil action may be justified where the motive is a good one (Ber. 63a). Still, the very air of sanctity surrounding the life of the Pharisees often led to abuses. Alexander Jannæus warned his wife not against the Pharisees, his declared enemies, but against "the chameleon- or hyena- ["ẓebo'im"-] like hypocrites who act like Zimri and claim the reward of Phinehas" (Soṭah 22b).

The Charge of Hypocrisy.

An ancient baraita enumerates seven classes of Pharisees, of which five consist of either eccentric fools or hypocrites: (1) "the shoulder Pharisee," who wears, as it were, his good actions ostentatiously upon his shoulder; (2) "the wait-a-little Pharisee," who ever says, "Wait a little, until I have performed the good act awaiting me"; (3) "the bruised Pharisee," who in order to avoid looking at a woman runs against the wall so as to bruise himself and bleed; (4) "the pestle Pharisee," who walks with head down like the pestle in the mortar; (5) "the ever-reckoning Pharisee," who says, "Let me know what good I may do to counteract my neglect"; (6) "the God-fearing Pharisee," after the manner of Job; (7) "the God-loving Pharisee," after the manner of Abraham (Yer. Ber. ix. 14b; Soṭah 22b; Ab. R. N., text A, xxxvii.; text B, xlv. [ed. Schechter, pp. 55, 62]; the explanations in both Talmuds vary greatly; see Chwolson, "Das Letzte Passahmahl," p. 116). R. Joshua b. Hananiah, at the beginning of the second century, calls eccentric Pharisees "destroyers of the world" (Soṭah iii. 4); and the term "Pharisaic plagues" is frequently used by the leaders of the time (Yer. Soṭah iii. 19a).

It is such types of Pharisees that Jesus had in view when hurling his scathing words of condemnation against the Pharisees, whom he denounced as "hypocrites," calling them "offspring of vipers" ("hyenas"; see Ẓebu'im); "whited sepulchers which outwardly appear beautiful, but inwardly are full of dead men's bones"; "blind guides," "which strain out the gnat and swallow the camel" (Matt. vi. 2-5, 16; xii. 34; xv. 14; xxiii. 24, 27, Greek). He himself tells his disciples to do as the Scribes and "Pharisees who sit on Moses' seat [see Almemar] bid them do"; but he blames them for not acting in the right spirit, for wearing large phylacteries and ẓiẓit, and for pretentiousness in many other things (*ib.* xxiii. 2-7). Exactly so are hypocrites censured in the Midrash (Pes. R. xxii. [ed. Friedmann, p. 111]); wearing tefillin and ẓiẓit, they harbor evil intentions in their breasts. Otherwise the Pharisees appear as friends of Jesus (Luke vii. 37, xiii. 31) and of the early Christians (Acts v. 38, xxiii. 9; "Ant." xx. 9, § 1).

Only in regard to intercourse with the unclean and "unwashed" multitude, with the 'am ha-areẓ, the publican, and the sinner, did Jesus differ widely from the Pharisees (Mark ii. 16; Luke v. 30, vii. 39, xi. 38, xv. 2, xix. 7). In regard to the main doctrine he fully agreed with them, as the old version (Mark xii. 28-34) still has it. Owing, however, to the hostile attitude taken toward the Pharisaic schools by Pauline Christianity, especially in the time of the emperor Hadrian, "Pharisees" was inserted in the Gospels wherever the high priests and Sadducees or Herodians were originally mentioned as the persecutors of Jesus (see New Testament), and a false impression, which still prevails in Christian circles and among all Christian writers, was created concerning the Pharisees.

It is difficult to state at what time the Pharisees, as a party, arose. Josephus first mentions them in

History of the Pharisees.

connection with Jonathan, the successor of Judas Maccabeus ("Ant." xiii. 5, § 9). Under John Hyrcanus (135–105) they appear as a powerful party opposing the Sadducean proclivities of the king, who had formerly been a disciple of theirs, though the story as told by Josephus is unhistorical ("Ant." xiii. 10, § 5; comp. JUBILEES, BOOK OF, and TESTAMENT OF THE TWELVE PATRIARCHS). The Hasmonean dynasty, with its worldly ambitions and aspirations, met with little support from the Pharisees, whose aim was the maintenance of a religious spirit in accordance with their interpretation of the Law (see PSALMS OF SOLOMON). Under Alexander Jannæus (104–78) the conflict between the people, siding with the Pharisees, and the king became bitter and ended in cruel carnage ("Ant." xiii. 13, § 5; xiv. 1, § 2). Under his widow, Salome Alexandra (78–69), the Pharisees, led by Simeon ben Sheṭaḥ, came to power; they obtained seats in the Sanhedrin, and that time was afterward regarded as the golden age, full of the blessing of heaven (Sifra, Beḥuḳḳotai, i.; Ta'an. 23a). But the bloody vengeance they took upon the Sadducees led to a terrible reaction, and under Aristobulus (69–63) the Sadducees regained their power ("Ant." xiii. 16, § 2–xiv. 1, § 2).

Amidst the bitter struggle which ensued, the Pharisees appeared before Pompey asking him to interfere and restore the old priesthood while abolishing the royalty of the Hasmoneans altogether ("Ant." xiv. 3, § 2). The defilement of the Temple by Pompey was regarded by the Pharisees as a divine punishment of Sadducean misrule (Psalms of Solomon, i., ii., viii. 12–19). After the national independence had been lost, the Pharisees gained in influence while the star of the Sadducees waned. Herod found his chief opponents among the latter, and so he put the leaders of the Sanhedrin to death while endeavoring by a milder treatment to win the favor of the leaders of the Pharisees, who, though they refused to take the oath of allegiance, were otherwise friendly to him ("Ant." xiv. 9, § 4; xv. 1, § 1; 10, § 4; 11, §§ 5–6). Only when he provoked their indignation by his heathen proclivities did the Pharisees become his enemies and fall victims (4 B.C.) to his bloodthirstiness ("Ant." xvii. 2, § 4; 6, §§ 2–4). But the family of Boethus, whom Herod had raised to the high-priesthood, revived the spirit of the Sadducees, and thenceforth the Pharisees again had them as antagonists; still, they no longer possessed their former power, as the people always sided with the Pharisees ("Ant." xviii. 1, § 4). In King Agrippa (41–44) the Pharisees had a supporter and friend, and with the destruction of the Temple the Sadducees disappeared altogether, leaving the regulation of all Jewish affairs in the hands of the Pharisees.

Henceforth Jewish life was regulated by the teachings of the Pharisees; the whole history of Judaism was reconstructed from the Pharisaic point of view, and a new aspect was given to the Sanhedrin of the past. A new chain of tradition supplanted the older, priestly tradition (Abot i. 1). Pharisaism shaped the character of Judaism and the life and thought of the Jew for all the future. True, it gave the Jewish religion a legalistic tendency and made "separatism" its chief characteristic; yet only thus were the pure monotheistic faith, the ethical ideal, and the intellectual and spiritual character of the Jew preserved in the midst of the downfall of the old world and the deluge of barbarism which swept over the medieval world.

K.

PHARPAR: River flowing from Hermon south of Damascus, where it turns to the southeast and flows into the Lakes of the Marj. Thomson identifies the stream with Al-A'waj; G. A. Smith and Socin (in Baedeker) with Al-Sabirani, which unites with the A'waj before it reaches the lakes. Being advised by the prophet Elisha to bathe in the Jordan, Naaman demurred, exclaiming: "Are not Abana and Pharpar, rivers of Damascus, better than all the waters of Israel?" (II Kings v. 12).

E. G. H. S. O.

PHASAEL: Elder brother of Herod the Great. Both Phasael and Herod began their careers under their father, ANTIPATER, who appointed the former to be governor of Jerusalem, and Herod governor of Galilee (Josephus, "Ant." xiv. 9, § 2; "B. J." i. 10, § 4). While Antony was in Bithynia about 41 B.C., accusations were brought before him against the two brothers, who were objects of hatred to the Jewish party, but the shrewd Herod succeeded in obtaining the dismissal of the charges ("Ant." xiv. 12, § 2; "B. J." i. 12, § 4). It was impossible, however, for the elders of the Jews to rest content with the administrations of Herod and Phasael; and charges were again brought against them before Antony at Antioch. Once more the accusations proved to be fruitless, for Antony was indebted to Antipater, while even the weak Hyrcanus II. pleaded for them; so that Antony appointed them tetrarchs ("Ant." xiv. 13, § 1; "B. J." i. 12, § 5). Meanwhile the Hasmonean ANTIGONUS endeavored to seize the Jewish throne; and in Jerusalem there were frequent conflicts between his retainers and those of the two brothers, which were especially perilous on the Jewish Feast of Pentecost. Phasael defended the walls, and Herod the palace, thus routing their antagonists, whereupon Antigonus invoked the aid of the Parthians. In spite of Herod's warning, Phasael allowed himself to be inveigled with Hyrcanus to the camp of the Parthian leader Barzapharnes, where both were imprisoned ("Ant." xiv. 13, §§ 5–6; "B. J." i. 13, §§ 4–5). They were then handed over to Antigonus, who caused Hyrcanus to be mutilated, a disgrace which Phasael escaped by dashing out his own brains, having the joy of knowing before he died that his brother Herod had escaped from Jerusalem and was safe ("Ant." xiv. 13, §§ 6–9; "B. J." i. 13, §§ 6–8).

Josephus speaks of Phasael as a brave and noble man. His son, who likewise bore the name Phasael, and seems to have been posthumous, married Herod's daughter Salampsio, by whom he had five children ("Ant." xviii. 5, § 4; according to "B. J." i. 28, § 6, the elder Phasael was the husband of this Salampsio). The son of Herod by Pallas was called Phasael by Herod, who likewise honored his brother's memory by naming a city northeast of Jericho "Phasaelis," and a tower of his palace at Jerusalem "Phasaelus."

G. S. Kr.

PHASAELIS, PHASAELUS: City in Palestine founded by Herod the Great in honor of his brother Phasael (Phasaelus). It was situated in the Jordan valley north of Jericho, in a barren region, which was, however, made fit for cultivation (Josephus, "Ant." xvi. 5, § 2; "B. J." i. 21, § 9). In his will Herod left the city to his sister Salome ("Ant." xvii. 8, § 1; "B. J." ii. 6, § 3), and she made it over to the empress Livia ("Ant." xviii. 2, § 2; "B. J." ii. 9, § 1). Like the whole region about Jericho, this city was celebrated for its excellent palms and dates (Pliny, "Hist. Nat." xiii. 4, § 44). The city was still mentioned by Ptolemy, by Stephanus Byzantinus, and by the geographer of Ravenna; in the Middle Ages it was the village Phasellum. Its name has been preserved in the present Khirbat Fasa'il ('Ain al-Fasa'il); and the brook which flows thence to the Jordan is called Wadi Fasa'il.

G. S. Kr.

PHENICIA: A district of somewhat indefinite limits stretching for about 200 miles along the east coast of the Mediterranean and extending inland from five to fifteen miles. The eastern boundary was the Lebanon range, while Ptolemy ("Geography," v. 15, §§ 4-5) defines the northern border as the Eleutherus (Nahr al-Kabir) and the southern as the Chorseus (Karaje), although these limits can be regarded as only approximate. In the Old Testament there is no specific reference to Phenicia, the inhabitants of the region being usually termed Sidonians (*e.g.*, Gen. x. 15; Judges iii. 3, x. 6, xviii. 7; I Kings v. 20, xvi. 31). The name under which the country is generally known is probably Greek in origin, for it seems to be a derivative from φοῖνος, "blood-red," "purple," in allusion to the rich dye of the murex which its inhabitants exported. The land is called Φοινίκη as early as the "Odyssey" (iv. 83, xiv. 291), although its people are termed almost indiscriminately Phenicians and Sidonians in the Homeric poems (*e.g.*, "Odyssey," xiii. 272, xiv. 288, xv. 415, as contrasted with "Iliad," vi. 690; "Odyssey," iv. 616, xv. 118). The chief cities of the district were Acco, Achzib, Ahlab, Kanah, Tyre, Zarephath, Sidon, Berytus, Gebal, Arka, Zemara, Arvad, and Sin. It never formed a coherent kingdom, but a general hegemony was exercised over the entire region by one or another of the leading cities, especially Gebal (the Byblus of the Greeks) in the north, and Tyre and Sidon in the south. The age of these towns is unknown, although some of them must have been of considerable antiquity, for the El-Amarna tablets of the fifteenth century represent Tyre as a powerful metropolis.

Ethnological Affinities.

The Phenicians were undoubtedly of Canaanite stock (comp. Gen. x. 15), and, according to a tradition preserved by Herodotus (i. 1, vii. 89), came from the Red Sea (here denoting the Persian Gulf) to the coast of Syria. They probably belonged to an early Semitic invasion of Palestine before the Israelitish conquest. Although lists of early kings are given by Tatian ("Adversus Græcos," xxxvii.) and by Porphyry (cited by Eusebius, "Præp. Evang." x. 9, § 12), the ultimate source for both authors being Sanchuniathon, these records are scarcely trustworthy, and may be in great part apocryphal. It is not until the latter part of the sixteenth century B.C. that Phenician history really begins. At that period Thothmes I. invaded Syria. His victories were only transient; his son, Thothmes III. (*c.* 1503-1449), had a more lasting success. Capturing Zemara and Arvad, which alone offered any serious resistance, he made the former city the chief Egyptian fortress of Syria, and kept a rigid control over the entire country. A rebellion against Amenophis II. (*c.* 1449-1430) was quickly suppressed, and Thothmes IV. also maintained his power there, but the slack reign of Amenophis IV., toward the end of the fifteenth century, resulted in the conquest of the most of Phenicia by the Hittites. About 1350 Sethos I. endeavored to regain the country, but he was unable to secure more than the southern half of it, while his son, Rameses II., was forced to conclude a treaty with the Hittites by which they retained the territory north of a boundary which seems to have been the Nahr al-Kalb, north of Beirut.

Independence of Phenicia.

The gradual disintegration of both the Egyptian and Hittite suzerainties gave the Phenician cities an opportunity to develop. The first to exercise hegemony was Tyre, which, under Hiram, in the first half of the ninth century, was a seat of wealth and power. The historical sources relating to this city are chiefly the Old Testament and Josephus, the latter giving ("Contra Ap." i. 18, 21; "Ant." viii. 5, § 3; 13, § 2) the following list of rulers down to the founding of Carthage: Abi-Ba'al, Hiram I. (*c.* 968-934), Ba'al-'azar I. (*c.* 934-918), Abd-'Ashtoret (*c.* 918-909), Metu-'Ashtoret (*c.* 909-897), Astherymus (*c.* 897-888), Phellas (*c.* 888), Ithobal (*c.* 887-876), Ba'al-'azar II. (*c.* 876-870), Metten (*c.* 870-841), and Pygmalion (*c.* 841-814). This list is based on Menander of Ephesus, who drew his information from the chronicles of Tyre. During the reign of Ahab, Ethbaal was king of Sidon, and married his daughter to the King of Israel (I Kings xvi. 31). Here again the Biblical record is supplemented by a fragment of Menander preserved by Josephus ("Contra Ap." i. 18), which gives the successors of Ethbaal as Ba'al II. (10 years), the judges Adoni-Ba'al (2 months), Kalba (10 months), Abbarus (3 months), and Metten and Ger-'Ashtoret (6 months), followed by the kings Balatorus (1 year), Mer-Ba'al (4 years), and Hiram III. (20 years).

The invasion by the Syrians under Asshur-nasir-pal in 876 marked the beginning of a new period of subjugation for Phenicia. He received tribute from a number of cities, including Tyre, Sidon, Gebal, and Arvad, but his son, Shalmaneser II., met with stout resistance in northern Phenicia, which joined the Syrian coalition that opposed the Assyrian king at Karkar in 854. The southern section of the country, on the other hand, submitted quietly, and paid tribute to both Shalmaneser and his grandson Hadad-Nirari III. It was not until the reign of Tiglath-pileser III. (734-728) that the Assyrian conquest of Phenicia was really complete. Thus far only three Phenician cities are mentioned as important, Arvad, Gebal, and Tyre; for the Eleutherus region now formed a part of the kingdom of Hamath. Even the great cities apparently submitted with little resistance, for in 738 Matan-Ba'al of Arvad, Shitti-Ba'al of Byblus, and Hiram II. of Tyre were paying tribute to Tiglath-pileser. The last-named city, which still controlled the greater part of the coast, became restless after a few years, although without avail; but during the reign of Sennacherib (705-681), Elulæus (Luli) of Tyre joined an anti-Assyrian coalition formed by southern Syria and headed by Hezekiah, the result being the defeat of the Phenician king, who fled to Cyprus, while a new ruler, Itu-Ba'al (Ithubal), was enthroned in Sidon by his conqueror. Sidon itself rebelled against Esarhaddon (680-668), but after a stubborn resistance it was reduced by the Assyrians, and its king, 'Abdi-Milkut, who had sought refuge in Cilicia, was taken and executed, the city itself was destroyed, and its inhabitants were deported. Meanwhile, though the power of Tyre was broken, the city itself resisted capture, and neither Sennacherib, Esarhaddon, nor Assurbanipal was able to reduce it until the last-named monarch finally captured Egypt. Then Ba'al of Tyre surrendered, but was treated with all honor and ranked as the chief of the Syrian and Cyprian vassals of Assurbanipal.

Under Assyrian Suzerainty.

With the downfall of Assyria the kingdoms of Tyre, Sidon, and Cyprus (comp. Jer. xxv. 22) revived, although the Egyptians tried, with some success for a time, to regain their lost sovereignty over them, and Pharaoh-Hophra warred successfully against Tyre and Sidon. He retired, however, before Nebuchadnezzar, and after the Babylonian ruler had taken Jerusalem in 586, Phenicia likewise submitted, excepting Tyre, which under its king, Itu-Ba'al II., withstood a seige of fifteen years (comp. Ezek. xxix. 18). By 555 a Babylonian prince, Mer-Ba'al, is found ruling over Tyre, but with his successor, Hiram II. (551-532), the suzerainty of Phenicia passed from the Babylonians to the Persians. A period of comparative prosperity then began, although the political supremacy of Tyre was never regained, her place as a world-power in commerce being taken by her own colony, Carthage. Under Persian control Sidon became the ruling city of Phenicia, but the general condition of the country seems to have altered but little, although Arvad reached its acme, while Gebal evidently became of minor importance. Phenicia took part in the expeditions against Greece (480-449), when 300 of her triremes were in the fleet of Xerxes, and against Sparta (396-387), when eighty Phenician ships were engaged in the battle of Cnidus.

Under Persian Control.

On the decline of the Persian power the Phenicians, headed by Tennes II., King of Sidon, joined Nectanebo II. of Egypt against Artaxerxes III. The Sidonian ruler turned traitor (or coward), however, and surrendered his city to the Persian king, who rewarded him with death, while the other princes hastily made what terms they could. Alexander the Great, in his turn, met little resistance in Phenicia, except at Tyre, which withstood a siege of seven months, until July, 332, when 30,000 of its inhabitants were sold as slaves.

The subsequent history of the country is of little interest. It formed a portion of the dominion of Antigonus, on whose death at the battle of Ipsus (301) it came, at least in part, under the control of Demetrius and later (296) of Seleucus. After the death of the latter in 281, Phenicia was absorbed by Ptolemy II., although Arvad remained faithful to the Seleucidæ despite the efforts of its subject cities, especially Marathus, to free themselves from its hegemony, Marathus after a long struggle being destroyed by Arvad as late as the reign of Tigranes. Sidon continued to be the leading city of the country during the Ptolemaic dynasty, and in the third century B.C. it had its own kings, three of whom bore the names of Eshmunazar I., Tabnit (= Tennes ?), and Eshmunazar II. Shortly after the death of the last-named, apparently, a republican form of government was adopted in the city. The same political change had already been wrought in Tyre (247), but Acco, Berytus, Tripolis, and other towns became independent. In 197 all Phenicia was once more reunited as part of the dominions of the Seleucidæ, but the death of Antiochus IV., Epiphanes (164) brought anarchy there as well as in the rest of his kingdom. For the next century the history of the country is but a record of petty internecine wars and maraudings, until in 64 Pompey made all Syria a Roman province, and the individuality of Phenicia permanently disappeared.

Phenician Commerce.

The national genius of the Phenicians lay in commerce. They were a seafaring people even in the time of Thothmes III., and went as traders to Greece as early as the Homeric period. In later times the description of Tyrian commerce by Ezekiel (ch. xxvii.) shows its spread throughout the ancient world. Yet they planted few colonies, and the settlements which they founded were, with rare exceptions, mere factories for traffic, which continued to be dependent on the mother country. For this very reason the Phenicians exercised little real political influence on the lands in which they built their towns, which indeed reached importance only in Cyprus, southern Spain, and northern Africa, the most famous of all being Carthage. All these colonies seem to have been Tyrian, nor is there any trace of foreign factories established by any other Phenician cities. The overland trade of the country was far less important than the maritime, and Phenicia seems in this respect to have been little more than a clearing-house for products from the Mediterranean and Syria.

Government and Religion.

Of the system of government in Phenicia few details are known. The country seems, however, to have been divided into a number of local monarchies with a hereditary succession, although the line of kings was broken for a time, at least in Tyre, by judges, which recalls in a measure the "suffetes" of the Phenician colony of Carthage and the "shofeṭim" of Israel. The king was assisted, furthermore, by a senate, which in Sidon appears to have contained a hundred members. The general type of government was evidently thoroughly aristocratic.

The religion of the Phenicians, like their government, can be sketched but vaguely, although it was plainly a characteristic Semitic cult. In its basis it was polytheistic and naturalistic, and it contained distinct traces of fetishism, later developed into idolatry. There are likewise clear vestiges of phallic worship in the Asherah, which finds its close analogues in Israel despite the efforts made to suppress it there. Each locality had its god ("el," "ba'al") or goddess ("'ashtart" ["'ashtoret"], rarely "ba'alat"), and individual deities presided over various spheres of activity. Although the gods are frequently mentioned in the inscriptions, their characteristics are seldom given, and this very colorlessness may have contributed to the gradual approach to a syncretistic quasi-monotheism which was occasionally shown in the later period of the religion if the statements of Philo may be believed. Beside the vague but powerful deities who had no real names, such as Ba'al-Ṣidon ("Lord of Sidon"), Ba'alat-Gebal ("Lady of Gebal"), Ba'al-Berit ("Lord of the Covenant"), Ba'al-Shamem ("Lord of Heaven"), 'Ashtart-Shamem ("Lady of Heaven"), Melḳart ("King of the City"; usual name of Ba'al-Ṣor, "Lord of Tyre"), and Adoni-Shemesh ("Lord of the Sun"), some fifty gods are found with names. The most important of these are as follows: Eshmun (אשמן), identified by the Greeks with Æsculapius; Gad (גד), apparently a god of good fortune; Sakkun (סכן), of uncertain functions; Ṣid (צד), probably a deity of hunting or fishing; and the goddesses 'Anat (ענת), a deity of war, and Tanit (תנת), who is almost always mentioned together with Ba'al and may have been an earth-goddess. The Phenicians were not free from foreign influences in their religion, for the Ba'alat of Gebal was directly modeled, both in concept and representation, on the Hathor or Isis of Egypt; Reshep (רשף), probably a storm-god, was borrowed from Syria; while Hadad (הדד) represents the Babylonian Ramman; and the Assyrian Nergal was incorporated directly into the Phenician pantheon.

The cult of the deities was conducted especially on high places, and, in close conformity with the nature-worship which was so important in Phenician religion, waters and trees had peculiar divine attributes. Temples were erected, although they were less important than in most Semitic cults, and even in them the old usage survived of setting up the divine images, votive pillars, and similar objects in the courtyard rather than in the shrine itself. Sacrifices of various animals and fruits were offered, and, in time of special need, human victims as well, while the trend toward the fertility-cult is strikingly shown in the custom of sacred prostitution so prevalent in Semitic religions. The same general kinship with Assyro-Babylonian and Hebrew religion was shown in the Phenician eschatology, which believed vaguely in a future life, although it must be passed in the joyless shadows of Sheol.

Art and Literature.

In art the Phenicians were essentially eclectic, borrowing especially from the Assyrians and Egyptians, although in Cyprus and southern Spain archaic Greek influence may be traced, and in architecture some Persian traces seem evident. It was in the minor arts, however, particularly working in metal, glass, terra-cotta, and textile objects, that the Phenician genius found its greatest degree of individuality, especially between 1000 and 500 B.C. The chief architectural remains are found at Arvad, Berytus, Sidon, and Eryx in Sicily, as well as in the remnants of the harbor constructions at Thapsus and the sarcophagi of Amathus, while the bronze votive shields from Mount Ida in Crete, the pateræ from Dali, Palestrina, and Curium, and the glass-work—which was the finest of antiquity—are the most striking relics of the minor arts of this people (see Glass). In jewelry and gems, as in decoration generally, the Phenicians were rather elaborators of borrowed types than inventors of new forms.

The Phenician language was purely Semitic, forming, with the Canaanite glosses of the El-Amarna letters, Hebrew, and Moabite, the Canaanite group of this linguistic family. It was written with an alphabet of twenty-two letters, which formed the basis of the Greek and other European scripts and very possibly of the Indian system as well. Its own origin is not yet definitely determined, although the Babylonian and Egyptian alphabets, and even the Hittite, may have influenced it. The inscriptions are very numerous, although comparatively few have been found in Phenicia itself, the greater number coming from Cyprus, Greece, Egypt, the islands of Melitus, Gaulos, Sicily, Cossura, Sardinia, and Corsica, and also from Africa, Italy, France, and Spain. The longest are those of Larnaka (29 lines), Sidon (22 lines), and Marseilles (21 lines). Few have any historical interest, however, and they date for the most part at the earliest only from the time of the Persian conquest, the oldest being assigned to the ninth century B.C. The only non-linguistic value of these texts lies almost entirely in the barren lists of names of kings and gods which they contain. There is, however, a valuable fragment of the language preserved in the "Pœnulus" of Plautus (930–949, 995, 998, 1010, 1013, 1016–17, 1023, 1027, ed. Goetz and Schoell). The literature seems to have been very scanty, and to have consisted chiefly of annals, although a work on agriculture by the Carthaginian Mago is known to have existed and to have been translated into Greek by Cassius Dionysius of Utica and into Latin at the command of the Senate, while a Greek translation of the voyages of the Carthaginian admiral is still extant under the title Ἄννωνος Περίπλους (edited and translated by Falconer, London, 1797). A few fragments of the Phenician historians have also been preserved in the classical writers; the most important historians are Menander of Ephesus (3d cent. B.C.), quoted by Josephus ("Contra Ap." i. 18, 21; "Ant." viii.

5, § 3; ix. 14, § 2); Dios (of whom nothing but the name is known), mentioned by Josephus as a historian ("Contra Ap." i. 17); Philo of Byblus (end of the 1st cent. C.E.), of whom considerable fragments have been preserved by Eusebius, which are professedly based on a Phenician named Sanchuniathon, who lived before the Trojan war (ed. Leipsic, 1826; translated by Classen, Lübeck, 1837, and by Cory, in his "Ancient Fragments," London, 1876); and Pompeius Trogus, a passage by whom is presumably taken from Timagenes (1st cent. B.C.) and cited in the epitome of Justin (xviii. 3 *et seq.*), who excerpted the history of Pompeius, which is now lost, before the fifth century C.E.

For the Biblical references see, more particularly, Sidon; Tyre.

PHERORAS: Son of Antipater and his wife Cypros; died in 5 B.C. (Josephus, "Ant." xvii. 3, § 3; "B. J." i. 29, § 4). He was the youngest brother of Herod, who entrusted to him the petty warfare with the partizans of Antigonus, and at whose order he rebuilt the fortress of Alexandrium ("Ant." xiv. 7, § 3; 15, § 4). When Herod was accused before Antony, he left his mother and other relatives at Masada in charge of Pheroras (*ib.* xv. 6, § 5), whose rule at court henceforth was confined to petty squabbles and intrigues. With his sister Salome and Herod's son Antipater, he plotted against Alexander and Aristobulus, the sons of Mariamne (*ib.* xvi. 7, § 2; "B. J." i. 24, § 1), while the Pharisees persuaded him that he was the Messiah ("Ant." xvii. 2, § 4). Despite this, Herod requested Augustus to appoint Pheroras tetrarch of Perea, in 20 B.C., with an allowance of 100 talents ("Ant." xv. 10, § 3; "B. J." i. 24, § 5). After the death of his first wife he refused the hand of the richly dowered eldest daughter of Herod because of his love for a slave girl. As he lay sick, however, Herod forgave him. He escaped by his early death the fate of many of the house of Herod. After his death two of his sons married two daughters of Herod, who were dowered by the emperor Augustus himself ("Ant." xvii. 11, § 5; "B. J." ii. 6, § 3).

PHILADELPHIA: Chief city of Pennsylvania, and the third, in point of population, in the United States. It is supposed that there were Jews in the neighborhood of Philadelphia at the time of the landing of William Penn, in 1682, since there were numerous Jewish traders in southeastern Pennsylvania long before Penn took possession (see Pennsylvania). The first Jew recorded as having taken up his abode in Philadelphia was Jonas Aaron, who is mentioned as a resident of the city in 1703 ("American Historical Register," April, 1895). Isaac Miranda, the first Jew in the English colonies to hold a judicial position, owned property in the town at an early date; he arrived in Philadelphia about 1710 and at once engaged in trade with the Indians. That there were several Jewish families in the city in 1734 is proved by the fact that the German traveler Von Beck enumerates them among the religious sects of the town. One of the earlier inhabitants was Nathan Levy (1704-53), who applied in 1738 for a plot of ground to be used as a place of burial for his family. He obtained this grant Sept. 25, 1740, and the plot was thenceforth known as the "Jews' burying-ground"; it was the first Jewish cemetery in the city, and was situated in Spruce street near Ninth street; it has been the property of the Congregation Mickvé Israel for more than a century. David Franks (1720-93) was another prominent Jewish resident. He went to Philadelphia early in life and engaged in business with Nathan Levy, under the firm name of Levy & Franks, this being the first Jewish business-house in the city. In 1748, when The City Dancing Assembly, the city's most famous social organization, was founded, among the names on the subscription list were those of David Franks, Joseph Marks, and Samson Levy.

Mickvé Israel Congregation.

The Kahal Kadosh Mickvé Israel, the first Jewish congregation in Philadelphia, had its beginnings about 1745 and is believed to have worshiped in a small house in Sterling alley. In 1761, owing to the influx of Jews from Spain and the West Indies, the question of building a synagogue was raised, but nothing was then accomplished in that direction. In 1773, when Barnard Gratz was parnas and Solomon Marache treasurer, a subscription was started "in order to support our holy worship and establish it on a more solid foundation." The number of Jewish residents in Philadelphia was suddenly increased at the outbreak of the American Revolution by the influx of Jewish patriots from New York, which had been captured by the British (Sept., 1776). The congregation had removed from the house in Sterling alley and then occupied quarters in Cherry alley, between Third and Fourth streets.

The building in Cherry alley, which had sufficed for the few families in the city, became inadequate, and steps were taken to secure a more commodious building. Gershom Mendez Seixas, who had fled from New York to Connecticut, was requested to act as the first rabbi of the reorganized congregation. The estimate for the new building was £600, and the subscription being inadequate, Haym Solomon, the banker and financial agent of Congress, agreed to pay one-fourth the cost. A lot was purchased in Cherry street, near Third street, and a suitable building erected. The governor of Pennsylvania and his official family were invited to attend the dedication ceremonies, which were held on Sept. 13, 1782. At this time the congregation had over 100 members (see list in Rosenbach's "Jews of Philadelphia," p. 22); its officers were Jonas Phillips (president), Michael Gratz, Solomon Marache, Solomon Myers Cohen, and Simon Nathan.

On Nov. 25, 1783, New York was evacuated by the British, and many of the members of the congregation returned to their former homes. The Congregation Shearith Israel recalled the Rev. Gershom Mendez Seixas to New York, and the Congregation Mickvé Israel elected the Rev. Jacob Raphael Cohen in his stead. The latter had officiated as hazzan of the Spanish and Portuguese synagogue in Montreal and had served in a like capacity in New York during the British occupation. He ministered to the Congregation Mickvé Israel until his death in Sept., 1811. As a result of the departure of its members, in 1788 the congregation encountered financial difficulties. A subscription list was started to meet the existing debts, and among those who contributed to it were Benjamin Franklin and David Rittenhouse. From this time on the congregation was ceaseless in its religious and charitable activities, and when Isaac Leeser's incumbency began, in 1829, it was, perhaps, the best-known synagogue in the United States. In 1815 Emanuel Nunes Carvalho was elected minister and continued in that capacity until his death in 1817; he was succeeded in 1824 by Abraham Israel Keys.

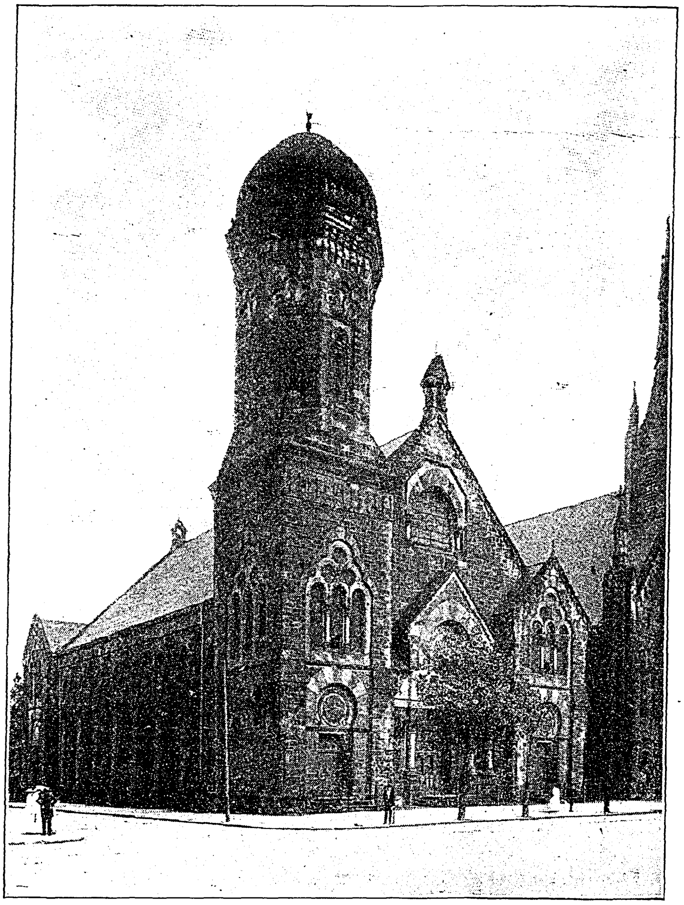
Signers of Non-Importation Resolutions.

In 1765 the famous Non-Importation Resolutions were drawn up, and the names of many Jewish citizens are appended to it; by these resolutions, adopted Oct. 25, 1765, the merchants and other citizens of Philadelphia agreed "not to have any goods shipped from Great Britain until after the repeal of the Stamp Act." The Jewish signers included Benjamin Levy, David Franks, Samson Levy, Hyman Levy, Jr., Mathias Bush, Moses Mordecai, Michael Gratz, and Barnard Gratz. The last two were brothers who had left Upper Silesia in Germany about 1755 and settled in Philadelphia. They and their children became well known in the annals of the city (see GRATZ). In 1777, just after the outbreak of the Revolutionary war, the following Jews agreed to accept the colonial paper money sanctioned by the king in lieu of gold and silver: Solomon AARON, Joseph Solomon Kohn, Solomon Marache, Moses Mordecai, Barnard Soliman, and David Franks. Of these Moses Mordecai and David Franks had signed the Non-Importation Resolutions. The Jews in Philadelphia took a prominent part in the War of Independence. David Franks was conspicuous for his loyalty to the British cause, being the English agent in charge of the prisoners; his daughter, Rebecca FRANKS, took part in the "Meschianza," the famous fête given in honor of General Howe during the British occupancy of Philadelphia.

In the War of Independence.

The majority of the Jews of the city, however, supported the American cause. Col. David S. FRANKS was aide-de-camp to General Arnold at Philadelphia in 1779; Solomon Bush was major of the Pennsylvania militia; Col. Isaac FRANKS served with distinction in the war, as did Philip Moses RUSSELL and Benjamin NONES. Haym Solomon made large loans to Congress, which were never repaid; his services as a financial agent during the war were invaluable. Another creditor of the Continental Congress was Aaron LEVY, and his loans, like nearly all the others, were never fully repaid. At the close of the war the Jewish population of Philadelphia amounted to almost 500. When Washington was elected president of the United States the Congregation Mickvé Israel, together with the congregations of New York, Charleston, and Richmond, sent a congratulatory address, to which Washington replied (1790).

Although the majority of the early residents were of Portuguese or Spanish descent, some among them had emigrated from Germany and Poland. About the beginning of the nineteenth century a number of Jews from the latter countries, finding the services of the Congregation Mickvé Israel unfamiliar to them, resolved to form a new congregation which would use the ritual to which they had been accustomed. On Nov. 23, 1801, Leon van Amringe, Isaiah Nathan, Isaac Marks, Aaron Levi, Jr., Abraham Gumpert, and Abraham Moses took title to a plot of ground to be used as a place of burial for members of the newly formed congregation. On Oct. 10, 1802, the "German Hebrews formed themselves into a society in the city and county of Philadelphia, which was denominated the 'Hebrew German Society Rodef Shalom' "; it was one of the earliest German Jewish congregations in America. The society was reorganized and chartered in 1812. Among the earlier rabbis were Wolf Benjamin, Jacob Lipman, Bernhard Illowy, Henry Vidaver, Moses Sulzbacher, and Moses Rau. In 1849 Jacob Frankel (1808–87) was elected ḥazzan, and about this time the congregation grew in numbers and importance. Frankel acted as chaplain of hospitals during the Civil war. On Sept. 8, 1847, when Naphtali Kahn was ḥazzan, the congregation removed to its new building in Julianna street, where it remained until Sept. 9, 1870, when the present (1904) structure at Broad and Mt. Vernon streets was dedicated. Marcus Jastrow, elected in 1866, served the congregation as rabbi until 1892, when he was elected rabbi emeritus (died 1903); during his ministry Rodef Shalom became one of the leading congregations in the United States. In 1892 Henry Berkowitz, the present incumbent, was elected rabbi.



Rodef Shalom Synagogue, Philadelphia.
(From a photograph.)

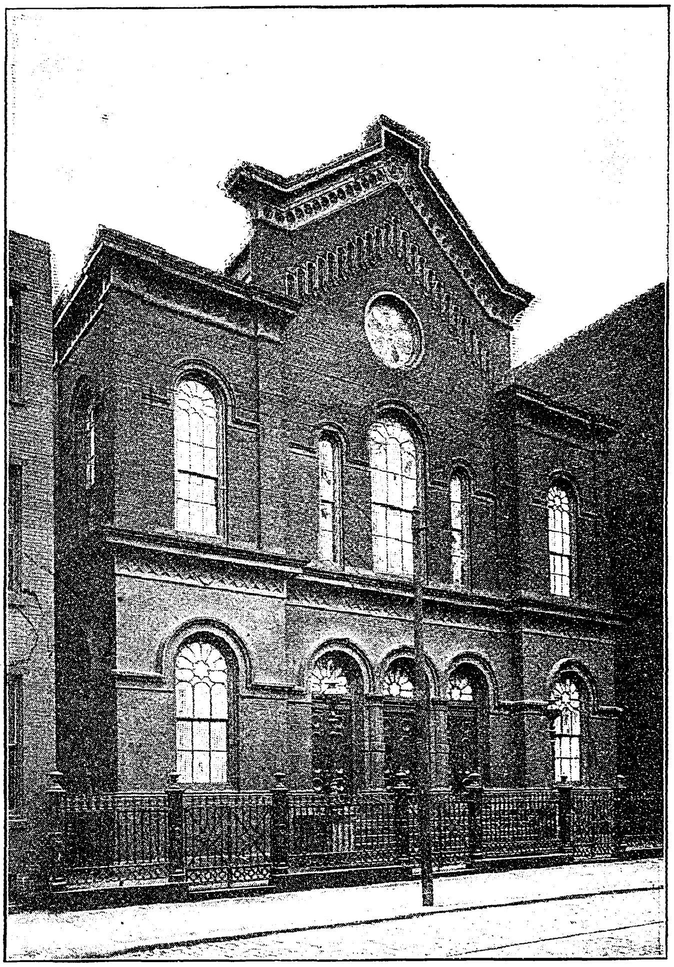
Data relating to the earlier Jewish charitable organizations are very meager. It is natural to suppose that the Congregation Mickvé Israel, in the absence of any other organization for that purpose, looked after the wants of the poorer Jewish residents. In 1784 there was a society for the relief of destitute strangers, but the records of this organization have disappeared. In Oct., 1813, a Society for the Visitation of the Sick and for Mutual Assistance was organized, with Jacob Cohen as its first president. It existed for over fifty years. In 1819 several ladies organized the still-existing Female Hebrew Benevolent Society, the first Jewish charitable organization in Philadelphia and the first one in the United States controlled exclusively by women. In 1820 it elected its first board of officers, consisting of Mrs. Rebecca J. Phillips (first directress), Mrs. Belle Cohen (second directress), Mrs. S. Bravo (treasurer), Miss Rebecca Gratz (secretary). Mrs. Abraham S. Wolf has acted as its president for the past thirty years. In 1822 the United Hebrew Benevolent Society was organized. The oldest Hebrew Sunday-school in America was formed in Philadelphia. On Feb. 4, 1838, a number of ladies met and resolved "that a Sunday-school be established under the direction of the board" of the Female Hebrew Benevolent Society; the school was formally opened on March 4, 1838; and it was about this time that the Ladies' Hebrew Sewing Society was founded.

These facts attest the early activity of the women of Philadelphia in the cause of religion and education. Rebecca Gratz (1781–1869) was, perhaps, the best-known American Jewess of her day. Not only was she one of the organizers of the Hebrew Sunday-School Society, but she was identified with nearly all the charitable organizations in the city. Another woman prominent in the life of the city at this time was Louisa B. Hart (see Michael Hart), who was untiring in her devotion to the religious education of the young. Others prominently identified with the Hebrew Sunday-School Society were Simha C. Peixotta, Ellen Phillips, and Isabella H. Rosenbach. The attendance at the various schools of the society, of which Mrs. Ephraim Lederer is president, now numbers over 3,000.

The most virile force in the community when these organizations were founded was Isaac Leeser. He had succeeded Abraham Israel Keys, in 1829, as rabbi of the Congregation Mickvé Israel. He was essentially an organizer, and his name is connected

Isaac Leeser.

with the inception of nearly every charitable and educational institution of his time. In 1843 he issued "The Occident and American Jewish Advocate," which he edited for twenty-five years. He provided text-books and catechisms for the use of the young; he made a masterly translation of the Bible; and he rendered into English the Hebrew prayers. In 1848 he was the moving spirit in the organization of the Hebrew Education Society of Philadelphia.



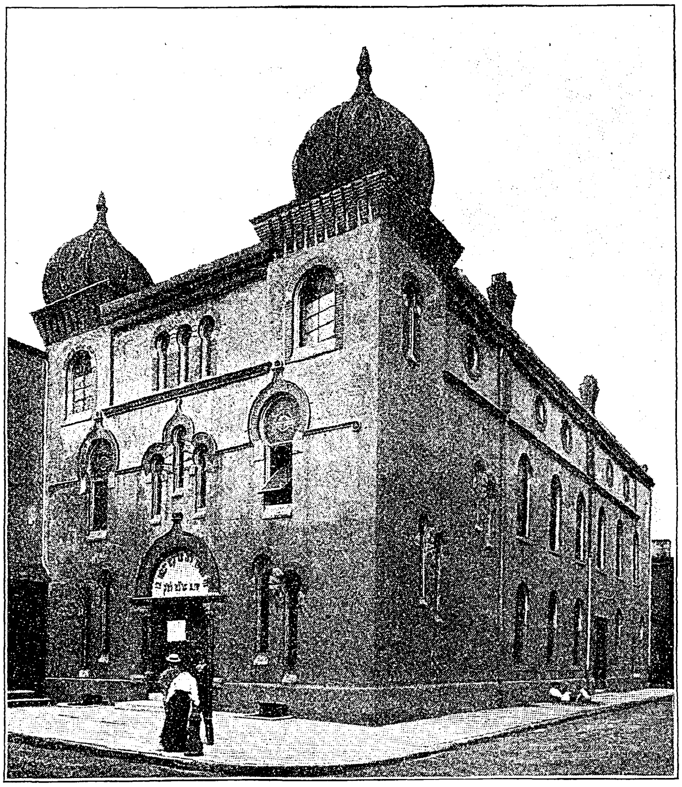
Mickvé Israel Synagogue, Philadelphia.
(From a photograph.)

The first suggestion toward the establishment of a school for the higher education of Jewish youth came from Mordecai M. Noah, the well-known journalist of New York. In 1843 he advocated in the "Occident" the formation of such an institution, the plan receiving the warm support of Leeser. In 1847 a ball was given for the purpose of raising funds for the "establishment of a Hebrew school in this city." Later a public call resulted in the meeting of twenty-five supporters of the plan, Zadoc A. Davis being elected chairman, and on July 16, 1848, the Hebrew Education Society was formally organized, with Solomon Solis as its first president. On April 7, 1851, the school was opened with twenty-two pupils, and since that time the attendance has steadily increased.

Maimonides College and Jews' Hospital.

On Dec. 4, 1864, a meeting was held which resulted in the establishment of the first Jewish theological seminary in America. The need of such an institution was strongly felt, as there were numerous synagogues in the country, but few persons capable of filling the rabbinical office. The seminary was established under the joint auspices of the Hebrew Education Society and the Board of Delegates of American Israelites, and was named "Maimonides College"; it was opened Oct. 28, 1867, with Isaac Leeser as its provost. Sabato Morais, Marcus Jastrow, Aaron S. Bettelheim, L. Buttenwieser, William H. Williams, and the provost comprised the faculty. At a later date Hyman Polano and George Jacobs were added to this number. Abraham Hart was president, and Mayer Sulzberger secretary, of the board of trustees. Moses A. Dropsie and Isidore Binswanger acted successively as president of the college. After an activity extending through six years the work of Maimonides College was discontinued owing to lack of support (Dec., 1873). The work of the Hebrew Education Society has met with great success during the last twenty years. In 1892 the society received $15,000 from the estate of Ellen Phillips. Louis Gerstley acted as its president for many years, and David Sulzberger has been its secretary since 1876. It is largely owing to the latter's activity that the society has greatly extended its work to meet the new conditions due to the growth of the population and the Russian immigration. Edward Wolf is now president of the society.

The first Jewish hospital in Philadelphia originated in a suggestion of Abraham Sulzberger, who insisted in 1864 that a hospital was an urgent necessity in the community and that steps should be taken at once to secure the funds necessary to establish one. The first officers were Alfred T. Jones (president), Isidore Binswanger (vice-president), Samuel Weil (treasurer), Mayer Sulzberger (secretary), Henry J. Hunt (corresponding secretary). The association was incorporated Sept. 23, 1865. The first site of the hospital was at Fifty-sixth street and Haverford road. Within a decade the needs of the first hospital had outgrown its accommodations, and in 1873, during the presidency of Abraham S. Wolf, it removed to Old York road. In 1901 Meyer Guggenheim presented to the association $80,000 for the purpose of erecting a private auxiliary hospital. Mrs. Sarah Eisner has recently built a Home for Nurses. Among other buildings on the hospital grounds are the Home for Aged and Infirm Israelites, the Loeb Operating Building, the M. A. Loeb Dispensary, and the Lucien Moss Home for Incurables. The Jewish Hospital is one of the best-equipped and best-managed institutions in the United States. William B. Hackenburg succeeded Abraham S. Wolf as president in 1878, and has served in that capacity ever since. To them is due, in a great measure, the success of the hospital. The Jewish Maternity Association was founded Nov. 3, 1873. In addition to the maternity hospital there is a training-school for nurses, of which Mrs. S. Belle Cohn is president.



B'nai Abraham Synagogue, Philadelphia.
(From a photograph.)

In 1855 the ladies of the various congregations of the city, "deeply impressed with the necessity of providing a home for destitute and unprotected children of Jewish parentage," organized the Jewish Foster Home. Its first building was in Eleventh street, near Jefferson street, and was dedicated in May, 1855. Mrs. Anna Allen was its first president. In 1874 the control of the home was transferred to a board of male directors, aided by a ladies' associate board. The home was removed in 1881 to Mill street, Germantown, its present quarters. Isidore Binswanger was president for fifteen years, and during his term of office the home became one of the best institutions of its kind in the country. Mason Hirsh was president for a number of years; Leo Loeb now fills that position, and S. M. Fleischman is superintendent. The Orphans' Guardians, or Familien Waisen Erziehungs Verein, an institution with a mission similar to the foregoing, was organized March 26, 1868, chiefly through the efforts of R. Samuel Hirsch of the Congregation Keneseth Israel. Instead of keeping the children together in one institution, this society endeavors to find homes for them among respectable Jewish families.

Temple Keneseth Israel.

The Reform Congregation Keneseth Israel, the largest congregation in Philadelphia, was organized March 21, 1847. Its first rabbi was B. H. Gotthelf, who held services in a hall at No. 528 N. Second street. The Reform movement, which had originated in Germany, soon extended itself to America, and L. Naumberg, Solomon Deutsch, and David Einhorn (1861–66) furthered its progress in this congregation. The first marked change in the character of the liturgy took place in 1856. Samuel Hirsch succeeded to the rabbinate in 1866; he introduced many changes in the service. In 1887 Joseph Krauskopf was elected rabbi; and he has contributed much to the success and standing of this congregation. It was during his incumbency that the Congregation Keneseth Israel became the largest in Philadelphia; it has about 700 members. Its synagogue is situated in Broad street, above Columbia avenue. In 1893 Joseph Leonard Levy was elected associate rabbi, but he resigned in 1902 to take up the position of rabbi at Pittsburg. The congregation supports a free public library and a reading-room.

Isaac Leeser retired from the Congregation Mickvê Israel in 1850, and was succeeded by Sabato Morais, who exerted a lasting influence upon the Jewish institutions of the city. He was greatly opposed to the Reform movement and was the champion of traditional Judaism. Perhaps the greatest monument of his life is the Jewish Theological Seminary of America, which he founded in 1886. He served the congregation until his death in 1897; Leon H. Elmaleh is now rabbi. The Gratz College, the most liberally endowed institution of Jewish learning in the city, is controlled by a board of

Gratz College.

trustees elected by the congregation. It was founded under a deed of trust executed by Hyman Gratz in 1856, which became operative in 1893; Moses A. Dropsie is president of the board of trustees. The college has a faculty of three, and has twenty-five students. The amount of the endowment is nearly $200,000.

Many synagogues were founded in the city after 1840, when the Congregation Beth Israel was founded (June 12), the first rabbi being Simon E. Cohen Noot. It now worships in Eighth street, above Master street, and Menahem M. Eichler is the officiating rabbi. The Congregation Beth El Emeth was founded in 1857, and Isaac Leeser, who had left the Congregation Mickvé Israel, became its rabbi, remaining so until his death (1868). This synagogue became influential in the affairs of the community; Joseph Newhouse, Morris Rosenbach, and Alfred T. Jones served at various times as presidents. George Jacobs was elected rabbi in 1869, and remained with the congregation until his death in 1884. The congregation, failing to secure a suitable successor after several attempts, disbanded a few years later. The Congregation Adath Jeshurun, Seventh street and Columbia avenue, was founded in Aug., 1859, S. B. Breidenbach being its first rabbi; Henry Iliowizi held the office from 1888 until 1901 (resigned), when B. C. Ehrenreich was appointed in his stead. Both the Jewish Foster Home and the Jewish Hospital Association have synagogues, that of the latter being the gift of Mrs. Rose Frank, as a memorial to her husband, Henry S. Frank.

GROUND PLAN OF THE BUILDINGS OF THE JEWISH HOSPITAL AND HOME FOR AGED AND INFIRM ISRAELITES OF PHILADELPHIA

The earliest publication relating to the Jews was issued in 1763 from the press of Andrew Stewart; it was a sermon by Moses Mendelssohn delivered by his preceptor David Hirchel Frankel, and translated from the German.

Literary Activity.

The first Hebrew Bible that appeared in the United States was published in Philadelphia in 1814 by Thomas Dobson, the printer being William Fry. The best-known printer of Hebrew books in the country was Charles Sherman, who imported matrices from Amsterdam; Abraham Hart was one of the best-known general publishers, Thackeray's first published book being issued with his imprint. The first dealer in the United States who dealt exclusively in rare books was Moses Polock (1817–1903); at his death he was the oldest bibliophile in the country. The original Jewish Publication Society was established in Philadelphia Nov. 9, 1845, Abraham Hart being its first president. The society owed its existence to Isaac Leeser. It published eleven works, including two by Grace Aguilar. The present Jewish Publication Society of America, a national organization, with headquarters at Philadelphia, was formed June 3, 1888; Morris Newburger was its first president. The society has published many works of value, including Israel Zangwill's "Children of the Ghetto"; a new translation of the Bible is now in progress, the Book of Psalms having already been issued. Mayer Sulzberger is chairman of the publication committee; Edwin Wolf is president.

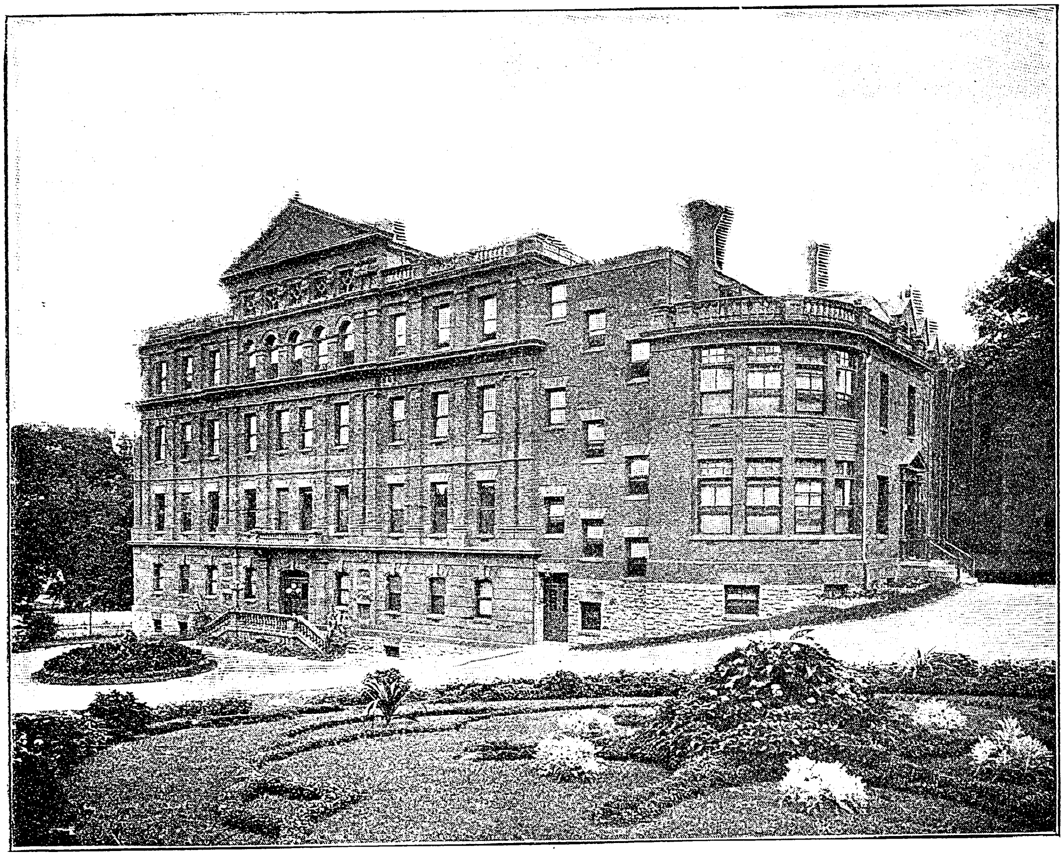
In 1904 the best collection of Hebrew books and manuscripts in the city, that of Mayer Sulzberger, was transferred to the Jewish Theological Seminary of America at New York.

There have been several Jewish newspapers in

Philadelphia, of which "The Occident" was the first; it was founded by Isaac Leeser in 1843, who edited it until his death in 1868; it was edited for one year thereafter by Mayer Sulzberger. The "Jewish Index" was issued in 1872, but it lasted only a year. **Newspapers.** In 1875 the "Jewish Record" appeared, under the editorship of Alfred T. Jones. The "Jewish Exponent" was first issued April 15, 1887; its present editors are R. Charles Hoffman, Ephraim Lederer, and Felix Gerson. There are several daily papers published in Yiddish, the most important being the "Jewish Evening Post."

The Young Men's Hebrew Association, an outgrowth of a former institution—the Hebrew Association—was organized May 12, 1875, with Mayer Sulzberger as president. The object of the association is "to promote a higher culture among young men"; its present membership numbers over 1,000, under the presidency of Adolph Eichholz. Its building is situated in North Broad street. The Young Women's Union was originally a branch of the Hebrew Education Society, and was organized through the efforts of Mrs. Fanny Binswanger Hoffman on Feb. 5, 1885; the object of the union is to educate the younger children of immigrant Jews. It maintains a kindergarten, day-nursery, sewing-school, etc. Mrs. Julia Friedberger Eschner is president.

There are several Jewish social organizations. The Mercantile Club was established Nov. 10, 1853, and incorporated April 17, 1869. Louis Bomeisler was its first president. The club occupies a building in North Broad street; Clarence Wolf is its present president. The Garrick, the Progress, and the Franklin are other Jewish clubs.



Guggenheim Building and Dispensary of the Jewish Hospital, Philadelphia.

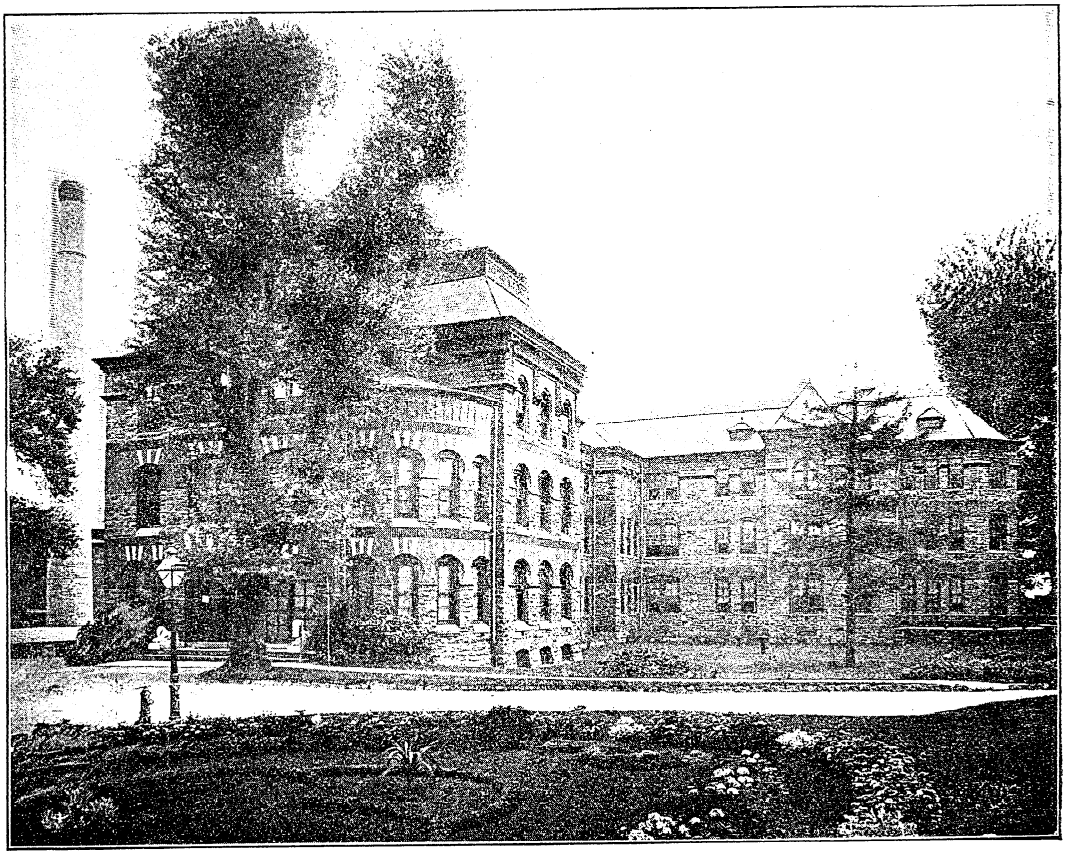
(From a photograph.)

In 1876, in commemoration of the centennial of American Independence, the Order B'nai B'rith and Israelites of America erected in Fairmount Park a statue representing Religious Liberty. It was designed by Moses Ezekiel, and was the first public monument erected by Jews in the United States.

From a period immediately after the Revolutionary war efforts have been made to collect money for the charitable organizations by appealing to the general public. Lotteries were held early in the nineteenth century; subscription lists were constantly being formed. A ball was given in 1843 in aid of three societies. In 1853 and in 1854 dinners were given in aid of the Hebrew Charitable Fund, at which many noted citizens were present. The year following, a ball was given instead of a dinner, and it proved such a success financially that it was thought ex-

Federation of Jewish Charities.

pedient to continue this form of entertainment; the Hebrew Charity-Ball Association was formed in consequence of this determination, and annual balls were given with great success until 1901, when they were discontinued owing to the establishment of the Federation of Jewish Charities. The United Hebrew Charities, a union of six institutions, was organized in 1869, with Simon W. Arnold as its first president. Max Herzberg is president. The combination of the principal charitable societies of Philadelphia was formed on March 17, 1901; Jacob Gimbel was its first president. The federation as originally formed embraced nine institutions—the Jewish Hospital Association, Jewish Foster Home, Society of United Hebrew Charities, Hebrew Education Society, Orphans' Guardians, Jewish Maternity Association, Jewish Immigration Society, Young Women's Union, and Hebrew Sunday-School Society. Later, the National Farm School, the National Jewish Hospital for Consumptives (at Denver), and the Alliance Israélite Universelle became beneficiaries. The income of the Federation (1903) was $123,039, with a membership of 1,916.



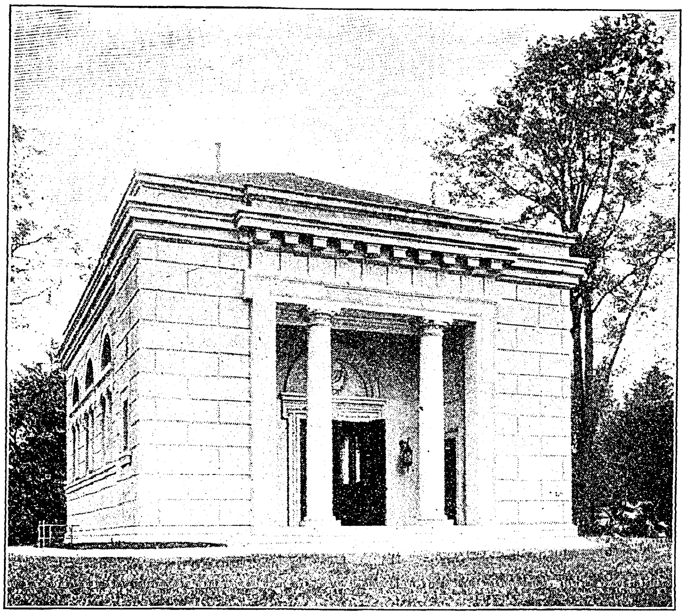
JEWISH HOSPITAL, PHILADELPHIA.

(From a photograph.)

In 1901 Lewis Elkin bequeathed $2,000,000 to the city of Philadelphia for the support of superannuated female school-teachers. This is the largest bequest for a charitable object yet made by a Jewish resident of the city. Simon Muhr among other benefactions left a bequest for general educational purposes.

In 1882 the great exodus from Russia took place; thousands of Jews forced to emigrate took up their residence in Philadelphia; at the present time they constitute a majority of the Jewish population. A society for the protection of immigrants arriving from the Slavonic provinces was organized Oct. 5, 1884, and called the "Association of Jewish Immigrants"; Louis E. LEVY is president. In 1903, 5,310 Jewish immigrants arrived at the port of Philadelphia. They are now generally prosperous; many have entered the learned professions, and they have built synagogues and hospitals in the southern portion of the city, where most of them now reside. They have many synagogues and ḥebras, the most important being the Congregation B'nai Abraham, founded in 1882; B. L. Levinthal is now rabbi of this and the associated congregations. The Society Hachnasath Orechim, or Wayfarers' Lodge, was organized Nov. 16, 1890, and chartered April 29, 1891; it is one of the most active charitable associations in Philadelphia. The Hebrew Literature Society, founded in 1885, has opened a new building at 310 Catherine street. The Home for Hebrew Orphans, The Jewish Sheltering Home for the Homeless and Aged, the Mount Sinai Hospital Association, the Pannonia Beneficial Association, and the Talmud Torah are all situated in the southern portion of the city. In addition, the newcomers have many social, political, and literary organizations.

In Philadelphia there were in 1904, not including lodges, over 160 Jewish organizations, of which over 50 are synagogues; the remainder consisting of hospitals, foster homes, Sunday-schools, benevolent associations, colleges, young men's Hebrew associations, social clubs, literary societies, etc. (A list of local organizations was published in the "American Jewish Year Book" for 5661 [1900-1].) The income of the synagogues is about $90,000; the income of the charitable organizations, about $160,000.



Chapel of the Jewish Hospital, Philadelphia.
(From a photograph.)

From the earliest times the Jews of Philadelphia have been prominent in the learned professions. As stated above, the first Jew to hold a judicial position was Isaac Miranda (1727). One of the earliest Jewish lawyers was Moses Levy, who was admitted to the bar in 1778. Isaac Franks was prothonotary of the Supreme Court of Pennsylvania. Among other distinguished Jewish lawyers were: Zalegman Phillips, Samson Levy, Joseph Simon Cohen, Jonas Altamont Phillips, Henry M. Phillips, Moses A. Dropsie, Simon Sterne, Stephen S. Remak, Joseph G. Rosengarten, Edward H. Weil, S. M. Hyneman, Jacob Singer (at one time registrar of wills), Ephraim Lederer, D. W. Amram. Mayer Sulzberger is president judge of the court of common pleas.

The most prominent of the early Jewish physicians of Philadelphia was Isaac Hays (1796-1879), who founded the "American Journal of the Medical Sciences"; among other physicians of distinction are: Jacob de Solis-Cohen, Lewis W. Steinbach, Solomon Solis-Cohen, A. A. Eschner, and David Riesman.

Many have achieved distinction in literature, science, and journalism: Michael Heilprin, his son Angelo Heilprin (geologist), Leon Hyneman, Simon A. Stern, Felix Gerson, Henry S. Morais, Milton Goldsmith, Leo S. Rowe, Morris Jastrow, Jr. (librarian of the University of Pennsylvania), Bunford Samuel (librarian of the Ridgway Library), Isaac J. Schwatt, Charles Henry Hart, J. G. Rosengarten.

The roll of Jewish officers, Philadelphians, who served with distinction during the Civil war includes the names of Morris J. Asch, Israel Moses, Alfred Mordecai, Jr., Frank Marx Etting, Justus Steinberger, Jonathan Manly Emanuel, Jacob Solis-Cohen, Max Einstein, Aaron Lazarus, Max Friedman, Joseph L. Moss, William Moss, Lyon Levy Emanuel, Isaac M. Abraham, Adolph G. Rosengarten, Joseph G. Rosengarten, and Benjamin J. Levy.

The Jews of Philadelphia have been influential in finance as well as in music and the fine arts, and have been identified in every way with the growth of the municipality.

Members of the Etting family have taken a prominent part in public life from the first. Lewis Charles Levin (1808-60) was thrice elected to the national House of Representatives; Leonard Myers and Henry M. Phillips also were members of the Lower House. In the domain of art the names of Katherine M. Cohen, Herman N. Hyneman, Max Rosenthal, and Albert Rosenthal may be mentioned; and in the field of music, those of Simon Hassler, Mark Hassler, Samuel L. Hermann, Henry Hahn, and Frederick E. Hahn.

The total population of Philadelphia is about 1,420,000, including about 75,000 Jews.

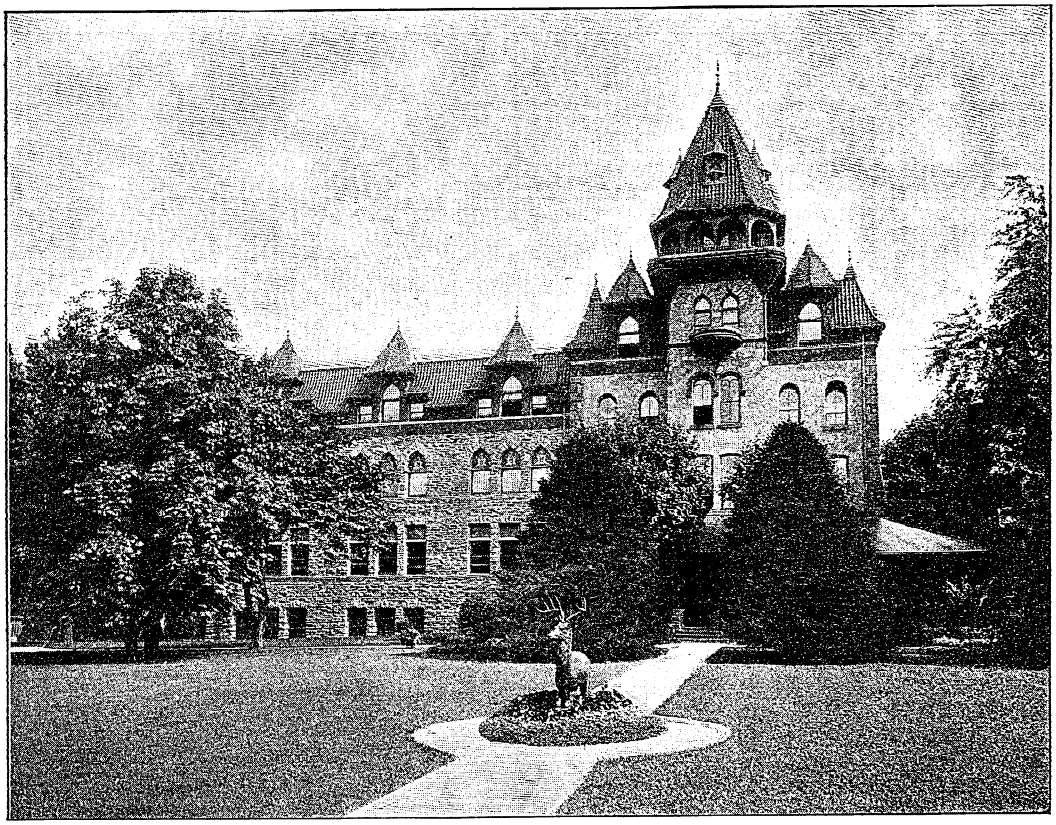
PHILANTHROPIN, THE: High school of the Hebrew community of Frankfort-on-the-Main. The institution, which has been in existence since Jan. 1, 1804, was founded by Siegmund Geisenheimer conjointly with a number of friends as a place of instruction and education for those in whom a desire for learning had been awakened by the movement inaugurated by Moses **Mendelssohn**. Before a special school was opened voluntary contributors had defrayed the cost of the education of a number of poor children who were sent to the newly founded model school in Frankfort. The Philanthropin became an independent school on Jan. 1, 1806, since which date pupils who have been able to pay for instruction have also been admitted, and the attendance has rapidly increased.

In the days of Primate (later Grand Duke) Carl Dalberg (1806–13) the young school was subventioned by the state, besides receiving the income from various legacies bequeathed to the Jewish community. A girls' school was added in 1810; in 1813 there were five classes for boys and four for girls, and the Philanthropin was included among the public schools of the grand duchy of Frankfort as "Bürger- und Realschule," attached to which was an elementary school. In 1854 the elementary school was abandoned; but the institution continued to be known until 1889 as "Real- und Volksschule der Israelitischen Gemeinde." In 1813 the Jewish community acquired the former electoral "Compostell" and presented it for a schoolhouse to the Philanthropin.

When the Vienna Congress restored Frankfort's independence the school got into financial difficulties because the subvention and the income from legacies were withdrawn from it. The latter were restored to the school by a resolution of the Senate on Feb. 13, 1819.

On Nov. 13, 1845, the school took possession of the imposing building which had been erected at the expense of the community, and which it still occupies. In 1860 a hall was built, containing a gymnasium. This was replaced in 1881–82 by a new one with two additional floors containing class-rooms and apartments for the director.

When Frankfort became a part of Prussia the school system of the city changed. By a ministerial rescript dated June 25, 1867, the Philanthropin was recognized as a "Realschule" of the second class, entitling its graduates to perform their military service in one year.



Jewish Foster Home and Orphan Asylum, Philadelphia.
(From a photograph.)

The boys' school comprises to-day (1904) three preparatory classes and six high-school classes. The girls' school consists of ten classes.

The principals of the school have been: Michael Hess (1806–55); Sigismund Stern (1855–67); Hermann Baerwald (1868–99); and Salo Adler, the present principal (since 1900). Of the prominent teachers who have labored at the Philanthropin may be mentioned: Joseph Johlson (1813–30), Michael Creizenach (1825–42), I. M. Jost (1835–60), Jacob Auerbach (1843–79), Lazarus Geiger (1861–70), and the three mathematicians Gustav Wertheim, Emil Strauss, and Hermann Dobriner.

When founded, the Philanthropin was independent of the Jewish community, but since March 18, 1843, it has been under communal supervision. According to an agreement between the institution and the board of education, the school is "an institution of the Jewish community, and is supported at the community's expense."

A number of bequests and gifts for the provision of scholarships, etc., have been made. The school celebrated its centenary on April 15, 1904, on which occasion former pupils presented it with an endowment of more than 100,000 marks.

D. I. Kra.

PHILIP (Latin, **Philippus**): **1.** Son of Herod and Cleopatra of Jerusalem; ruled from 4 B.C. to 34 C.E. When Herod changed his will in the year 4, shortly before his death, he appointed Philip tetrarch of Gaulanitis, Trachonitis, Batanæa, and Paneas. After Herod's death his elder son, King Archelaus, was obliged to go to Rome, and appointed Philip regent during his absence. Philip himself went to Rome shortly afterward to second his brother's requests, and on this occasion Augustus granted him Auranitis in addition to the provinces already mentioned. The territory over which he ruled was chiefly Greek, although it had been forcibly Judaized under the Maccabees. His reign was a just and peaceful one, and he was friendly to the Romans, as is shown both by the cities he founded and by the coins he struck. He enlarged the old Paneas, at the foot of Lebanon, calling it Cæsarea in honor of Augustus; subsequently it was called Cæsarea Philippi, to distinguish it from Cæsarea by the sea. He rebuilt also Bethsaida on the Lake of Gennesaret, naming it Julias in honor of the daughter of Augustus. He was married to Salome, the daughter of Herodias, but had no children by her. The coins which he struck were the first Jewish ones to bear representations of the emperors Augustus and Tiberius. Philip died during the reign of Tiberius and was buried in a tomb which he himself had built. After his death the territory over which he had ruled was incorporated with the province of Syria, but in 37 C.E. it was restored to Agrippa, a grandson of Herod and the first Mariamne.

2. Called also **Philip Herod**; son of Herod the Great and his wife Mariamne II., daughter of the high priest Simon, the son of Boethus of Alexandria. Herod's first will, probably made in the year 6 B.C., designated him as successor in case he should outlive Antipater, but when the intrigues at the court were discovered and Antipater was executed, Mariamne was banished from the court as one of the conspirators, the name of her son Herod was stricken from the will, and her father was deposed from his office of high priest. Herod married Herodias, a daughter of Aristobulus, who had been executed in 7 B.C. His daughter by this wife, Salome, who subsequently became the wife of the tetrarch Philip, is mentioned in the New Testament. Herod died in retirement, probably at Jerusalem.

J. S. O.

PHILIP IV.: King of Spain; called the "poet king" because he was devoted to poetry and art; born at Valladolid April 8, 1605; died Sept. 17, 1665. He delegated the regulation of affairs of state to his favorite, D. Gaspar Guzman, Count de Olivares, whom he made a duke and his prime minister. "El Conde-Duque," the count-duke de Olivares, wished to remedy the scarcity of men and money which had been brought about in Spain by the expulsion of the Jews and Moors and by continual wars. For this purpose he invited Jews from Salonica and other cities, who, being descendants of those exiled from Spain, could speak Spanish, to come to Madrid. In spite of the opposition of the tribunal of the Inquisition, the all-powerful De Olivares succeeded in winning over the majority of the city council, several important divines, and a not inconsiderable number of inquisitors, to favor his plan. Encouraged by this success, he promised the Jewish arrivals a synagogue and religious freedom, and he formed the plan of removing the tribunal from Spain. In order to prevent this the grand inquisitor, Cardinal de Santa Balbina, made earnest remonstrances to the king, telling him the Church was in danger and the state treasury was threatened with impoverishment. Intolerance won the day and Philip IV. showed himself a servant of the Church. He promised to drive the Jews who had come, not only out of Madrid, but out of the whole kingdom. The clergy stirred up the people against them; placards were posted on the principal streets of Madrid and other cities with the words "Viva la ley de Moises, y muera la de Cristo" (Long live the law of Moses! Down with the teaching of Christ!). The king had to dismiss his minister (1643).

PHILIP D'AQUINAS. See Aquin, Philippe d'.

PHILIP OF BATHYRA: Son of Jacimus and grandson of Zamaris, both of whom governed the city of Bathyra in Trachonitis. Agrippa II. honored Philip with his friendship and made him leader of his troops (Josephus, "Ant." xvii. 2, § 3), so that when riots broke out in Jerusalem in 66 C.E., he was sent to the capital with a force of 2,000 cavalry, headed by Darius, to keep the city friendly to the Romans (Josephus, "B. J." ii. 17, § 4). After the defeat of the governor, Cestius Gallus, the Romans were obliged to retreat to the Acra, where Philip, together with Costobarus and Saul, assisted them. When this fort was carried by the Jews, Philip fled to Jerusalem (*ib.* ii. 20, § 1), narrowly escaping death on the way at the hands of Menahem and his retainers. A severe fever which seized him in the vicinity of Gamala saved him from the plots of Varus, who was aiming at the throne; but the trickery of the latter compelled Philip's fellow countrymen to go to Gamala, which he earnestly endeavored to hold faithful to the Romans (Josephus, "Vita," § 11; comp. "B. J." ii. 18, § 6). Later, however, Gamala also revolted, whereupon Philip fled, and at Berytus complained to Agrippa, who restored to him his native town of Bathyra ("Vita," §§ 35–36). The Tyrians, who were hostile to Philip, accused him before Vespasian of having caused the defeat of Cestius in Jerusalem, whereupon he was sent to Rome to plead before Nero. He never saw the emperor (*ib.* § 74), however, and his subsequent history is unknown.

G. S. Kr.

PHILIPP, ISIDOR (EDMOND): Hungarian pianist; born at Budapest Sept. 2, 1863. He went to Paris at the age of sixteen and entered the Conservatoire as a pupil of Mathias. In 1883 he won the first pianoforte prize, and later took a supplementary course under Saint-Saëns, Stephen Heller, and Ritter. Philipp has played at the Conservatoire concerts, as well as at those of Lamoureux and Le Châtelet. He has also performed in Brussels, London, Geneva, and Barcelona. In conjunction with Loeb and Berthelier he established chamber-music concerts in the Salle Erard, where many of the finest modern chamber compositions have been performed. Philipp also reorganized the Société des Instruments à Vent and the Société d'Art, of which latter he is president. His compositions include: "Suite Fantastique"; "Rêverie Mélancolique"; "Sérénade Humoristique"—all for orchestra—besides exercises and études and editions of classic studies.

Bibliography: Baker, *Biog. Dict. of Musicians*, New York, 1900.

s. J. So.

PHILIPPE, ÉDOUARD SYLVAIN: French playwright; born at Paris April 18, 1840. Educated for a commercial career, he was engaged in business for more than twelve years, when, in 1869, he abandoned it for music. In the Franco-Prussian war he saw active service as a volunteer in the Breton legion formed in Rennes, becoming second lieutenant. From 1872 to 1888 he was editor of the "Revue et Gazette Musicale," and since then he has been engaged in journalistic work, writing for the "Voltaire," "L'Evènement," and "L'Illustration." He was made a member of the Legion of Honor in 1886.

Philippe has written seventy-five theatrical pieces, among which may be mentioned: "Boussigneul" (produced in nearly all European languages); "Casque en Fer," "Casse Museau," two dramas; "Kléber," a military drama; and "La Fée Cocotte," an operetta. He has also edited the unpublished dramatic works of George Sand.

PHILIPPE, FÉLIX: French army officer; born 1825; died in Paris July 23, 1848. A lieutenant and instructor in artillery in the National Guard, he was entrusted with the defense of the Hotel-de-Ville at Paris during the Revolution of 1848. He was fatally wounded in a conflict with the Revolutionists on June 24, 1848. A monument to his memory was raised by the Jews of France.

Bibliography: *Arch. Isr.* 1848, pp. 410-413.

PHILIPPE, LÉON GABRIEL: French engineer; born at Paris Oct. 6, 1838; educated at the Ecole Polytechnique as an engineer of roads and bridges. He was a major of auxiliary engineers in the Army of the North during the Franco-Prussian war (1870–71). In 1876 he was a leader in the agitation for the depression of railroad crossings of the belt-line of Paris, and from 1881 until 1903 was in charge of the Department of Irrigation and Drainage under the minister of agriculture, undertaking various missions for the purpose of studying systems of irrigation in southern Algeria and in California. Philippe is now (1904) inspector-general of roads and bridges of the first class, and is also a commander of the Legion of Honor.

s. J. Ka.

PHILIPPI, FRIEDRICH ADOLF: Lutheran theologian; born at Berlin Oct. 15, 1809; died at Rostock Aug. 29, 1882. He was the son of a wealthy Jewish banker, a friend of Mendelssohn. Converted to Christianity in 1829, he studied philosophy and theology at Berlin and Leipsic (Ph.D. 1831), and became successively a teacher at a private school in Dresden and at the Joachimsthal'sche Gymnasium at Berlin (1833). In 1837 he received his diploma as Lutheran minister, and in 1838 was admitted as privat-docent to the theological faculty of the University of Berlin. In 1841 he was elected professor of theology at the University of Dorpat; he received the degree of D.D. "honoris causa" from the University of Erlangen in 1843.

Of Philippi's works may be mentioned: "Die Lehre vom Thätigen Gehorsam Christi," Berlin, 1841; "Kirchliche Glaubenslehre," Güterslohe, 1854–1879 (3d ed. 1883–85), a standard work from the Orthodox Lutheran point of view; "Vorlesungen über Symbolik," *ib.* 1883.

PHILIPPOPOLIS (Turkish, "Felihe"; Bulgarian, "Plovdiv"): Capital of eastern Rumelia, or southern Bulgaria. Historical data of the early years of its Jewish community are very meager. The anonymous author of an appendix to the Judæo-Spanish "Yosippon" (Constantinople, 1743; see Zedner, "Cat. Hebr. Books Brit. Mus." p. 345) states that Jews were to be found in Philippopolis in 1360, the date at which the city was conquered by the Turks (761 a.h.). The reigning queen at that time, Theodora, was a Jewess of Tirnova, who had married the Bulgarian czar Ivan Alexander. Certain Jews who emigrated from Aragon in 1492 settled in Philippopolis and built a synagogue called "K. K. Aragon," which was standing in 1540, but is no longer in existence (see R. Samuel di Medina, Responsa Ḥoshen Mishpaṭ, No. 216). On two separate occasions two Jews were murdered in the environs of Philippopolis, reference to the crimes being found respectively in a legal question submitted to the above-mentioned Samuel di Medina and dated 1571 (5331), and in a similar question submitted to the chief rabbi of Constantinople, Joseph ben Moses di Trani, and dated 1640. In both instances the murders were committed by Turkish spahis. In the local cemetery are the tombstones of Israel Aobi (d. 1690), a learned chief rabbi of the community, and of Rabbi Solomon Safir (d. 1716).

Historical Data.

About the year 1779 the Jewish community of Philippopolis consisted of about 150 families (see "Anuar Penetru Israeliti," 1888, xi.). During the last days of Turkish rule in Philippopolis Hadji Moshon (Moses) Garté was "millet-bashi" (official representative of the community in temporal matters before the magistracy) and member of the criminal court, Samuel Annabi was a member of the court of appeal, and Isaac Caleb was municipal councilor. The Jewish population at that time comprised 250 families. At the approach of the Russians in 1876 most of the Jews fled to Adrianople and Constantinople. Those who remained sent a delegation to the conqueror, General Skobeleff, who promised and granted protection to them. They willingly gave shelter to the Russian soldiers. The Jews did not take part in the overthrowing of the Turkish government by Prince Alexander (Sept. 13, 1885), because it occurred on the Day of Atonement.

Philippopolis has had five Jewish journals: three in Judæo-Spanish, "La Voz del Pueblo," "El Dia," and "Ha-Shofar"; one in French, "Carmel"; and one in Bulgarian, "Tcheweschki-Prava."

The community possesses four synagogues: Je-

Synagogues and Schools.

shurun, built in 1710 according to the inscription on a marble slab in the synagogue; Ahabat-Shalom, built in 1880; Shebeṭ Aḥim or Mafṭirim, founded in 1882 by emigrants from Karlovo, whence the Jews fled during the Turko-Russian war (1877–1878); and Zion, built in 1892 on the site of a former synagogue. It has also two schools, controlled by the Alliance Israélite Universelle, the Anglo-Jewish Association and the communal council aiding in their support. The pupils comprise 473 boys and 475 girls. There are several charitable and educational associations besides a Zionist society, a lodge of the B'nai B'rith, and several women's clubs.

Three Philippopolis Jews are serving in the Bulgarian army, namely, Moschonoff Garté, who is an officer, and Drs. Alcalai and Tcherner, who are attached to the garrison.

To-day (1904) the Jews of Philippopolis number about 4,000 in a total population of 45,000. Most of them are traders; but there are also some tinsmiths, harness-makers, etc. The administration of the community is in the hands of two councils, the synagogal and the educational. The revenue is derived from a communal tax paid by each family, and from a tax on meat, the latter amounting to 1,400 francs; and these sources serve to support the schools, the chief rabbi, and the bet din.

Rabbis.

Since the end of the eighteenth century the following have been chief rabbis of the city: Abraham Sidi (according to Zedner, *l.c.* p. 397, "Sa‘id"; 1790–1810); Judah Sidi (1810–12), brother of the preceding, and author of "Ot Emet," on the laws relating to reading the Torah, Salonica, 1799; and of "Ner Miẓwah," on Maimonides' "Yad" and his "Sefer ha-Miẓwot," with indexes to the hermeneutic works of Solomon and Israel Jacob Algazi, *ib.* 1810–11; Abraham ibn Aroglio (1812–19); Abraham Ventura (1823–29); Moses ha-Levi (1830–32); Jacob Finzi (1832–33); Ḥayyim ibn Aroglio (1833–57), with Abraham ibn Aroglio joint author of "Mayim ha-Ḥayyim," responsa, Salonica, 1846; Moses Behmoiras (1857–76); Ḥayyim Meborah (1876–92); and Ezra Benaroyo, the present chief rabbi, who has held office since 1892. The private library of the last-named, which contains valuable books and manuscripts, deserves mention.

In the environs of Philippopolis are the Jewish communities of **Islenemaka** or **Slenemaka** (thirty families) and **Hissar** (three families). The community of Karlovo dated back at least 200 years; but since 1877 no Jews have lived in the place.

D. M. Fr.

PHILIPPSON: German family made distinguished by Ludwig Philippson, the founder of the "Allgemeine Zeitung des Judenthums"; it traces its descent back to Jacob Joshua, author of "Pene Yehoshua‘," 1754.

Alfred Philippson: German geologist; born at Bonn Jan. 1, 1864; son of Ludwig Philippson. He received his education at the gymnasium and university of his native town and at the University of Leipsic (Ph.D. 1886). In 1892 he became privatdocent at Bonn, was appointed assistant professor seven years later, and in 1904 he was called to Bern as professor of geography. Having made voyages through Greece, Turkey, and Asia Minor, he has published: "Studien über Wasserscheiden," Berlin, 1886; "Der Peloponnes," *ib.* 1892; "Europa" (with Neumann), Leipsic, 1894; "Thessalien und Epirus," Berlin, 1897; "Beiträge zur Kenntnis der Griechischen Inselwelt," Gotha, 1901; "Das Mittelmeergebiet," Leipsic, 1904. He has also published essays in the technical journals.

Since 1887 Philippson has undertaken, on a commission from the Berlin Akademie der Wissenschaften, an annual journey to Asia Minor for the purpose of geological investigation. His chief object in these excursions is to study, on a geological basis, the phenomena of the earth's surface both in their interrelationship and in their influence on the human race.

s. F. T. H.

Emil M. Philippson: German educationist; born at Magdeburg, Prussia, July 4, 1851; son of **Julius Philippson.** He attended the gymnasium of Magdeburg, and then studied modern languages and comparative philology at the universities of Bonn, Leipsic, and Berlin. From 1874 to 1886 he was an instructor at the Philanthropin of the community of Frankfort-on-the-Main, and in 1886 he was called as director to the Jacobson school at Seesen. He has published "Der Mönch von Montaudon, ein Provençalischer Troubadour" (Leipsic, 1873), and "Israel Jacob, ein Bild aus dem Jüdischen Leben des Achtzehnten Jahrhunderts" (Brunswick, 1903).

Franz M. Philippson: Banker and philanthropist; born at Magdeburg, March 12, 1851; son of Ludwig Philippson. He was educated in Brussels, where he founded a banking-house in 1871, which for a quarter of a century has taken part in most of the municipal loans, conversions, and commercial enterprises in Belgium, and in many in Italy, Brazil, and other countries. Philippson has likewise written frequently on financial topics. In 1884 he was elected president of the Jewish community of Brussels, and is also a member of the Consistoire Israélite de Belgique, and vice-president of the Jewish Colonization Association.

Gustav Philippson: Educator and writer; born Feb. 17, 1814, at Dessau in Anhalt; died Jan. 11, 1880, at Berlin; son of **Simon Philippson** and cousin of Ludwig Philippson. On completing his studies at the University of Berlin, he went to Prague as a tutor, but on account of views expressed in articles he had published was obliged to leave the city shortly afterward. In 1842 he was appointed teacher at the ducal Franzschule at Dessau, and in 1849 at his suggestion the school was transformed into a commercial academy. During the twenty years that followed he taught in this institution, and his connection with it ceased only with its dissolution in 1869. He then retired to Berlin. In 1849 Philippson was elected delegate to the first legislative diet of Anhalt.

He was the author of the following works: "Die

Judenfrage von Bruno Bauer Näher Beleuchtet" (Dessau, 1843); "Esther" (Prague, 1843), a translation of Racine's "Esther"; "Geschichte der Herzoglichen Franzschule in Dessau" (Dessau, 1869); various poems; and, anonymously, "Geschriebene Photographien aus der Ersten Israelitischen Synode in Leipzig" (Berlin, 1869).

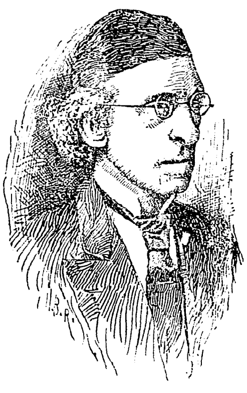
Bibliography: G. Philippson, *Geschichte der Herzoglichen Franzschule in Dessau*, Dessau, 1869.

s. M. K.

Ludwig Philippson: Rabbi and author; born Dec. 28, 1811, at Dessau; died Dec. 29, 1889, at Bonn; son of Moses Philippson. He was educated at the gymnasium of Halle and at the University of Berlin, and maintained himself by tutoring and by doing literary work. He published his first effort, a translation of the prophets Hosea, Joel, Obadiah, and Nahum, when but fifteen years old.

In 1830 he translated and annotated the works of two Judæo-Greek poets of Alexandria. A philological treatise on medical terms (Hyle Anthropine, 1831, etc.) which followed revealed his qualities as a scholar, and his versatility was emphasized by the publication in 1832 of a vindication of Spinoza.

When twenty-two years old he was called as preacher by the Jewish congregation of Magdeburg and remained in that city for twenty-eight years. In order to promote the interests of Judaism he founded the Allgemeine Zeitung des Judenthums in 1837 and edited that journal until his death. Two years later (1839) he began the annotated German translation of the Old Testament, which he completed in 1853. This translation, with a commentary in German, was issued in several editions, one being illustrated with designs by Gustave Doré. In 1847 he published "Die Entwickelung der Religiösen Idee im Judenthum, Christenthum und Islam," which was followed by "Die Religion der Gesellschaft," in 1848. Both of these works were translated into several languages.



Ludwig Philippson.

Philippson's restless energy led him to enter the political arena, and in the stirring events of 1848 he took an active part. His political views he expressed in the following works: "Stimmen und Stimmungen aus der Zeit" (1849); "Resultate in der Weltgeschichte" (1860); and "Weltbewegende Fragen" (1868-69). He advocated moderate liberalism and became one of the leaders of the Social Reform party in Saxony. In 1855 he founded the Institut zur Förderung der Israelitischen Literatur, which during the eighteen years it existed published many interesting contributions to Jewish literature.

Between the years 1861 and 1865 Philippson issued his religious compendiums "Israelitische Religionslehre" and "Israelitisches Gebetbuch" (2d ed. 1864). In 1862, suffering from an affliction that had rendered him almost blind, he resigned his charge at Magdeburg and retired to Bonn. In 1866 he published "Haben die Juden Wirklich Jesum Gekreuzigt?"

Philippson took part in municipal and educational affairs. He was elected to the city council of Magdeburg, and was president of the Saxon Teachers' Association. That he was a prolific and versatile writer is shown by the number and character of the works he published. Among those not already mentioned above are: "Saron," a collection of poems (1843); "Sepphoris und Rom" (1866); "Jacob Tirado" (1867); "Gedenkbuch an den Deutsch-Französiche Krieg" (1871); "An den Strömen" (1872-73); the confirmation-gift "Rath des Heils" (1882); and a number of dramatic productions such as "Esterka," "Jojachin," and "Die Entthronten."

Bibliography: Kayserling, *Ludwig Philippson*, Leipsic, 1898.

S.

Martin Philippson: Historian; born June 27, 1846, at Magdeburg; eldest son of Ludwig Philippson. In 1862 he went with his parents to Bonn, and studied history at the universities there and at Berlin from 1863 to 1866, devoting himself especially to work under Sybel and Ranke. He taught at the Jewish normal school of Berlin 1868-70, and then served in the Franco-Prussian war as a volunteer. In 1871 he established himself as a lecturer at the University of Bonn, and was appointed assistant professor in 1875. He was later chosen as full professor by various faculties, but the Emperor William I. was unwilling to see a Jew in the chair of modern history at the university, and refused to sanction the appointment. Philippson thereupon accepted the position of professor at the University of Brussels in the fall of 1878. As dean of this university he came into conflict with the anti-German and radical-socialistic party among the students, resigning his office in consequence in 1891. Since that time he has lived at Berlin, devoting a large part of his time to the promotion of the interests of German Judaism. He is executive chairman of the Deutsch-Israelitische Gemeindebund, as well as of the Verein zur Förderung der Wissenschaft des Judenthums, which was founded largely through his efforts in 1902, and of the Verband der Deutschen Juden. He held the office of vice-chairman of the board of trustees of the Lehranstalt für die Wissenschaft des Judenthums until 1904.

Philippson is author of "Geschichte Heinrichs des Löwen" (Leipsic, 1868); "Heinrich IV. und Philipp III.: Die Begründung des Französischen Uebergewichtes in Europa" (Berlin, 1871-76); "Das Zeitalter Ludwigs XIV." (2d ed. *ib.* 1888); "Geschichte des Preussischen Staatswesens vom Tode Friedrichs des Grossen bis zu den Freiheitskriegen" (Leipsic, 1880-82); "Westeuropa im Zeitalter von Philipp II., Elisabeth, und Heinrich IV." (*ib.* 1883; this and the preceding work in Oncken's "Allgem. Gesch. in Einzeldarstellungen"); "Histoire de la Contre-Réforme Religieuse" (Brussels, 1884); "Geschichte der Neueren Zeit" (Berlin, 1886-89); "Histoire du Règne de Marie Stuart" (Paris, 1891-92); "Friedrich III. als Kronprinz und Kaiser" (Berlin, 1894); "Ein Ministerium Unter Philipp II.: Kardinal Granvella am Spanischen Hofe" (*ib.* 1895); "Der Grosse Kurfürst Friedrich Wilhelm von Brandenburg" (*ib.* 1897-1903); "Max von Forckenbeck: Ein Lebensbild" (Dresden and Leipsic, 1898); "Kaiser Friedrich III." (Berlin, 1900).

Moritz Philippson: Son of Franz Philippson; born June 12, 1877; studied at the universities of Brussels and Berlin, and the marine laboratories at Naples and in Japan, and was then appointed lecturer on zoology at the University of Brussels. He has published several zoological works together with the results of his biological experiments.

Moses Philippson: German writer, educationist, and publisher; born at Sandersleben May 9, 1775; died at Dessau April 20, 1814; called also **Moses Arnswalde,** being the son of the Talmudist Philipp Moses of Arnswalde. Before attaining his twelfth year he attended the yeshibah of Halberstadt, and later continued his Talmudic studies at Brunswick and Frankfort-on-the-Oder. In the latter city he learned German, and studied Hebrew grammar, arithmetic, and geography. A few years later he went to Bayreuth as tutor and became acquainted with Emanuel Osmund and Jean Paul. His association with Osmund had a marked influence on his scholarly development. Four years later he went as tutor to Burgkunstadt, a neighboring town, where he remained for five years, returning then for a short time to Bayreuth. In 1799 he was called to the newly founded Freischule of Dessau as teacher of religion and Hebrew, and frequently delivered public lectures in that capacity. There he began his literary activity and founded a Hebrew printing establishment. Together with his colleagues J. Wolf, G. Salomon, and J. Neumann, he translated and annotated the twelve Minor Prophets, taking as his portion of the work the books of Joel, Hosea, and Habakkuk. The entire collection appeared under the title "Minḥah Ṭehorah" (Dessau, 1805; incorporated in the edition of the Bible published at Prague, 1835). Encouraged by the favorable reception of the work, he annotated the Book of Daniel, translated by J. Wolf (*ib.* 1808), and issued a manual and reader for the young entitled "Modah Libne Binah, oder Kinderfreund und Lehrer" (*ib.* 1808–11; in Dutch, Amsterdam, 1817; 2d ed. Leipsic, 1823). He edited also several volumes of the new "Sammler" (1811), which contained poems written by him over the initials מ־ב־א = Moses b. Uri.

Philippson, who printed the writings of his friends J. Wolf, G. Salomon, and others in addition to his own, now gave up teaching for the book-trade, and devoted his leisure moments to the preparation of a Hebrew-German and German-Hebrew dictionary, primarily for the use of schools, which he intended to have printed at Prague, but which remained unpublished.

He has been frequently, but erroneously, identified by Fürst and others with another **Moses Philippson,** a bookkeeper, and a friend of Moses Mendelssohn, and who had received a philosophical training, was the author of "Das Leben Benedict von Spinoza's" (Brunswick, 1790), and who published a "Gutachten über die Verbesserung des Judeneides" (Neustrelitz, 1797) at the request of the royal electoral chancellery of justice at Hanover.

S. M. K.

Phoebus Philippson: German author and physician; born at Dessau July 26, 1807; died at Klötze, in the Altmark, April 1, 1870; son of Moses Philippson, and elder brother of Ludwig Philippson.

Phoebus was compelled to aid in supporting the family, at an early age. This he did by giving private lessons, studying meanwhile mainly the best treatises on pedagogics. In 1825 he succeeded in entering the University of Halle to study medicine, completing the course in 1828. He started in Magdeburg but was unable to compete with the old practitioners, and therefore removed to Klötze, where he remained until his death.

Philippson's researches in connection with the cholera epidemic led to his first medical writings: "Anweisung zur Erkenntniss, Verhütung, und Thätigen Hilfsleistung in Betreff der Asiatischen Cholera," Magdeburg, 1831; "Beiträge zu den Untersuchungen über den Cholera Morbus," *ib.* 1832; and "Die Sommerkrankheiten im Jahre 1831," Berlin, 1832. In the last-named year he also produced "Podalirius Zwanglose Hefte als Beiträge zur Kritik der Aeltern und Neuern Arzneikunde" and "Propädeutik und Encyclopädie der Medicin," Magdeburg, 1832. In 1835 he published "Hygiea Blätter für Freunde der Gesundheit und des Familienglücks" (Magdeburg) and in 1864 his treatise "Ueber die Gesichtslagen des Kindes bei der Geburt und die Anwendung der Kopfzange bei Demselben."

As early as 1823 Philippson edited an enlarged and revised edition of his father's educational works (Leipsic). When his brother Ludwig founded (1834) the "Israelitische Predigt- und Schulmagazin," he contributed a historical study, "Die Vertreibung der Juden aus Spanien und Portugal," to its pages. Then when the "Allgemeine Zeitung des Judenthums" was established he wrote for it many important sketches, including a Jewish novel "Die Marannen," later published in book form (1855), and translated into Hebrew and other modern languages. Philippson also provided the translation of Joshua, Judges, Samuel, and Kings for the German Bible issued by his brother. In 1859 his novel "Der Unbekannte Rabbi" was published, and an English version of it appeared in New York.

LITERARY DIRECTORATE

EDITORIAL BOARD

CYRUS ADLER, Ph.D.

(Departments of Post-Biblical Antiquities and the Jews of America.)

President of the American Jewish Historical Society; Assistant Secretary, Smithsonian Institution, Washington, D. C.

WILHELM BACHER, Ph.D.

(Departments of the Talmud and Rabbinical Literature.)

Professor in the Jewish Theological Seminary, Budapest, Hungary.

GOTTHARD DEUTSCH, Ph.D.

(Department of History from 1492 to 1905.)

Professor of Jewish History, Hebrew Union College, Cincinnati, Ohio; Editor of "Deborah."

RICHARD GOTTHEIL, Ph.D.

(Departments of History from Ezra to 1492 and History of Post-Talmudic Literature.)

Professor of Semitic Languages, Columbia University, New York; Chief of the Oriental Department, New York Public Library.

EMIL G. HIRSCH, Ph.D., LL.D.

(Department of the Bible.)

Rabbi of Chicago Sinai Congregation, Chicago, Ill.; Professor of Rabbinical Literature and Philosophy, University of Chicago; Editor of "The Reform Advocate."

JOSEPH JACOBS, B.A.

(Departments of the Jews of England and Anthropology; Revising Editor.)

Formerly President of the Jewish Historical Society of England; Author of "Jews of Angevin England," etc.

KAUFMANN KOHLER, Ph.D.

(Departments of Theology and Philosophy.)

President of Hebrew Union College, Cincinnati, Ohio; Rabbi Emeritus of Temple Beth-El, New York.

HERMAN ROSENTHAL.

(Department of the Jews of Russia and Poland.)

Chief of the Slavonic Department, New York Public Library.

ISIDORE SINGER, Ph.D.

MANAGING EDITOR.

(Department of Modern Biography from 1750 to 1905.)

CRAWFORD HOWELL TOY, D.D., LL.D.

(Departments of Hebrew Philology and Hellenistic Literature.)

Professor of Hebrew in Harvard University, Cambridge, Mass.; Author of "The Religion of Israel," etc.

I. K. FUNK, D.D., LL.D.

(Chairman of the Board.)

Editor-in-Chief of the STANDARD DICTIONARY OF THE ENGLISH LANGUAGE, etc.

FRANK H. VIZETELLY, F.S.A.

(Secretary of the Board.)

Associate Editor of the STANDARD DICTIONARY, "The Columbian Cyclopedia," etc.

WILLIAM POPPER, M.A., Ph.D.

(Associate Revising Editor; Chief of the Bureau of Translation.)

Gustav Gottheil Lecturer in Semitic Languages, Columbia University, New York (1903-5); Author of "The Censorship of Hebrew Books."

AMERICAN BOARD OF CONSULTING EDITORS

BERNARD DRACHMAN, Ph.D.,

Rabbi of the Congregation Zichron Ephraim; Instructor in the Bible and in Hebrew Grammar, Jewish Theological Seminary of America, New York.

B. FELSENTHAL, Ph.D.,

Rabbi Emeritus of Zion Congregation, Chicago, Ill.; Author of "A Practical Grammar of the Hebrew Language."

GUSTAV GOTTHEIL, Ph.D.

(DECEASED),

Late Rabbi Emeritus of Temple Emanu-El, New York.

HENRY HYVERNAT, D.D.,

Head of the Department of Semitic and Egyptian Literatures, Catholic University of America, Washington, D. C.

MARCUS JASTROW, Ph.D.

(DECEASED),

Late Rabbi Emeritus of the Congregation Rodef Shalom, Philadelphia, Pa.; Author of "Dictionary of the Talmud."

MORRIS JASTROW, Jr., Ph.D.,

Professor of Semitic Languages and Librarian in the University of Pennsylvania, Philadelphia, Pa.; Author of "Religion of the Babylonians and Assyrians," etc.

J. FREDERIC McCURDY, Ph.D., LL.D.,

Professor of Oriental Languages, University College, Toronto, Canada; Author of "History, Prophecy, and the Monuments."

Rabbi of the Shearith Israel Congregation (Spanish and Portuguese), New York; President of the Board of Jewish Ministers, New York.

MOSES MIELZINER, Ph.D., D.D.

(DECEASED),

Late President of the Hebrew Union College, Cincinnati, Ohio; Author of "Introduction to the Talmud."

GEORGE F. MOORE, M.A., D.D.,

Professor of Biblical Literature and the History of Religions in Harvard University, Cambridge, Mass.; Author of "A Commentary on the Book of Judges," etc.

DAVID PHILIPSON, D.D.,

Rabbi of the Congregation B'ne Israel; Professor of Homiletics, Hebrew Union College, Cincinnati, Ohio; President of Hebrew Sabbath School Union of America.

IRA MAURICE PRICE, B.D., Ph.D.,

Professor of Semitic Languages and Literatures, University of Chicago, Ill.; Author of "The Monuments and the Old Testament," etc.

SOLOMON SCHECHTER, M.A., Litt.D.,

President of the Faculty of the Jewish Theological Seminary of America, New York; Author of "Studies in Judaism."

JOSEPH SILVERMAN, D.D.,

President of Central Conference of American Rabbis; Rabbi of Temple Emanu-El, New York.

JACOB VOORSANGER, D.D.,

Rabbi of the Congregation Emanu-El, San Francisco, Cal.; Professor of Semitic Languages and Literatures, University of California, Berkeley, Cal.

EDWARD J. WHEELER, M.A.,

Editor of "The Literary Digest," New York; Author of "Stories in Rhyme," etc.

FOREIGN BOARD OF CONSULTING EDITORS

ISRAEL ABRAHAMS, M.A.,

Coeditor of "The Jewish Quarterly Review"; Author of "Jewish Life in the Middle Ages," etc.; Reader in Talmudic, Cambridge University, England.

M. BRANN, Ph.D.,

Professor in the Jewish Theological Seminary, Breslau, Germany; Editor of "Monatsschrift für Geschichte und Wissenschaft des Judenthums."

H. BRODY, Ph.D.,

Rabbi, Nachod, Bohemia, Austria; Coeditor of "Zeitschrift für Hebräische Bibliographie."

ABRAHAM DANON,

Principal of the Jewish Theological Seminary, Constantinople, Turkey.

HARTWIG DERENBOURG, Ph.D.,

Professor of Literal Arabic at the Special School of Oriental Languages, Paris; Member of the Institut de France.

S. M. DUBNOW,

Author of "Istoriya Yevreyev," Wilna, Russia.

MICHAEL FRIEDLÄNDER, Ph.D.,

Principal of Jews' College, London, England; Author of "The Jewish Religion," etc.

IGNAZ GOLDZIHER, Ph.D.,

Professor of Semitic Philology, University of Budapest, Hungary.

M. GÜDEMANN, Ph.D.,

Chief Rabbi of Vienna, Austria.

BARON DAVID GÜNZBURG,

St. Petersburg, Russia.

A. DE HARKAVY, Ph.D.,

Chief of the Hebrew Department of the Imperial Public Library, St. Petersburg, Russia.

ZADOC KAHN,

Chief Rabbi of France; Honorary President of the Alliance Israélite Universelle; Officer of the Legion of Honor, Paris, France.

M. KAYSERLING, Ph.D.,

Rabbi, Budapest, Hungary; Corresponding Member of the Royal Academy of History, Madrid, Spain.

MORITZ LAZARUS, Ph.D.

(DECEASED),

Late Professor Emeritus of Psychology, University of Berlin; Meran, Austria.

ANATOLE LEROY-BEAULIEU,

Member of the Institut de France; Professor at the Free School of Political Science, Paris, France; Author of "Israël chez les Nations."

ISRAEL LÉVI,

Professor in the Jewish Theological Seminary; Editor of "Revue des Etudes Juives," Paris, France.

EUDE LOLLI, D.D.

(DECEASED),

Late Chief Rabbi of Padua; Late Professor of Hebrew at the University, Padua, Italy.

IMMANUEL LÖW, Ph.D.

Chief Rabbi of Szegedin, Hungary; Author of "Die Aramäischen Pflanzennamen."

S. H. MARGULIES, Ph.D.,

Principal of the Jewish Theological Seminary; Chief Rabbi of Florence, Italy.

H. OORT, D.D.,

Professor of Hebrew Language and Archeology at the State University, Leyden, Holland.

ABBÉ PIETRO PERREAU,

Formerly Librarian of the Reale Biblioteca Palatina, Parma, Italy.

MARTIN PHILIPPSON, Ph.D.,

Formerly Professor of History at the Universities of Bonn and Brussels; President of the Deutsch-Israelitischer Gemeindebund, Berlin, Germany.

SAMUEL POZNANSKI, Ph.D.,

Rabbi in Warsaw, Russia.

E. SCHWARZFELD, LL.D.,

Secretary-General of the Jewish Colonization Association, Paris, France.

LUDWIG STEIN, Ph.D.,

Professor of Philosophy, University of Bern, Switzerland; Editor of "Archiv für Geschichte der Philosophie," etc.

HERMANN L. STRACK, Ph.D.,

Professor of Old Testament Exegesis and Semitic Languages, University of Berlin, Germany.

CHARLES TAYLOR, D.D., LL.D.,

Master of St. John's College, Cambridge, England; Editor of "Sayings of the Jewish Fathers," etc.

SYSTEMS OF TRANSLITERATION AND OF CITATION OF PROPER NAMES*

A.—Rules for the Transliteration of Hebrew and Aramaic.

1. All important names which occur in the Bible are cited as found in the authorized King James version; *e.g.*, *Moses*, not Mosheh; *Isaac*, not Yiẓḥaḳ; *Saul*, not Sha'ul or Shaül; *Solomon*, not Shelomoh, etc.

2. The spellings of names that have gained currency in English books on Jewish subjects, or that have become familiar to English readers, are generally retained; cross-references are given when topics are treated under forms transliterated according to the system tabulated below.

3. Hebrew subject-headings are transcribed according to the scheme of transliteration; cross-references are made as in the case of personal names.

4. The following system of transliteration has been used for Hebrew and Aramaic:

א *Not noted at the beginning or the end of a word; otherwise ' or by dieresis; e.g., pe'er or Meïr.*

ב	*b*	ז	*z*	ל	*l*	פּ	(*with dagesh*), *p*	שׁ	*sh*
ג	*g*	ח	*ḥ*	מ	*m*	פ	(*without dagesh*), *f*	שׂ	*s*
ד	*d*	ט	*ṭ*	נ	*n*	צ	*ẓ*	ת	*t*
ה	*h*	י	*y*	ס	*s*	ק	*ḳ*		
ו	*w*	כ	*k*	ע	'	ר	*r*		

Note: The presence of dagesh lene is not noted except in the case of פּ. Dagesh forte is indicated by doubling the letter.

5. The vowels have been transcribed as follows:

◌ָ (ḳameẓ) *a*	◌ֻ *u*	◌ַ *a*	◌ֶ *e*	וֹ *o*
◌ָ (ḳameẓ ḥatuf) *o*				
◌ֵ *e*	◌ֱ *e*	◌ֳ *o*	◌ִי *i*	
◌ִ *i*	◌ְ *e*	◌ֲ *a*	וּ *u*	

The so-called "Continental" pronunciation of the English vowels is implied.

6. The Hebrew article is transcribed as *ha*, followed by a hyphen, without doubling the following letter. [Not *hak-Kohen* or *hak-Cohen*, nor *Rosh ha-shshanah.*]

B.—Rules for the Transliteration of Arabic.

1. All Arabic names and words, except such as have become familiar to English readers in other forms, as *Mohammed*, *Koran*, *mosque*, are transliterated according to the following system:

أ	*See* א *above*	خ	*kh*	ش	*sh*	غ	*gh*	ن	*n*
ب	*b*	د	*d*	ص	*ṣ*	ف	*f*	ه	*h*
ت	*t*	ذ	*dh*	ض	*ḍ*	ق	*ḳ*	و	*w*
ث	*th*	ر	*r*	ط	*ṭ*	ك	*k*	ي	*y*
ج	*j*	ز	*z*	ظ	*ẓ*	ل	*l*		
ح	*ḥ*	س	*s*	ع	'	م	*m*		

2. Only the three vowels—a, i, u—are represented:

◌َ *a* ◌ِ *i* ◌ُ *u*

No account has been taken of the *imalah; i* has not been written *e*, nor *u* written *o*.

---

[*] In all other matters of orthography the spelling preferred by the Standard Dictionary has usually been followed. Typographical exigencies have rendered occasional deviations from these systems necessary.

3. The Arabic article is invariably written *al*, no account being taken of the assimilation of the *l* to the following letter; *e.g.*, *Abu al-Salt*, not *Abu-l-Salt; Nafis al-Daulah*, not *Nafis ad-Daulah*. The article is joined by a hyphen to the following word.

4. At the end of words the feminine termination is written *ah;* but when followed by a genitive, *at; e.g.*, *Risalah dhat al-Kursiyy*, but *Hi'at al-Aflak*.

5. No account is taken of the overhanging vowels which distinguish the cases; *e.g.*, *'Amr*, not *'Amru* or *'Amrun; Ya'ḳub*, not *Ya'ḳubun;* or in a title, *Kitab al-Amanat wal-I'tiḳadat*.

C.—Rules for the Transliteration of Russian.

All Russian names and words, except such as have become familiar to English readers in other forms, as *Czar, Alexander, deciatine, Moscow*, are transliterated according to the following system:

А а	*a*	Н н	*n*	Щ щ	*shch*
Б б	*b*	О о	*o*	Ъ ъ	mute
В в	*v*	П п	*p*	Ы ы	*y*
Г г	*h, v,* or *g*	Р р	*r*	Ь ь	halfmute
Д д	*d*	С с	*s*	Ѣ ѣ	*ye*
Е е	*e* and *ye* at the beginning.	Т т	*t*	Э э	*e*
Ж ж	*zh*	У у	*u*	Ю ю	*yu*
З з	*z*	Ф ф	*f*	Я я	*ya*
И и І і	*i*	Х х	*kh*	Ѳ ѳ	*F*
К к	*k*	Ц ц	*tz*	Ѵ ѵ	*œ*
Л л	*l*	Ч ч	*ch*	Й й	*i*
М м	*m*	Ш ш	*sh*		

Rules for the Citation of Proper Names, Personal and Otherwise.

1. Whenever possible, an author is cited under his most specific name; *e.g.*, Moses Nigrin under *Nigrin;* Moses Zacuto under *Zacuto;* Moses Rieti under *Rieti;* all the Ḳimḥis (or Ḳamḥis) under *Ḳimḥi;* Israel ben Joseph Drohobiczer under *Drohobiczer*. Cross-references are freely made from any other form to the most specific one; *e.g.*, to Moses *Vidal* from Moses *Narboni;* to Solomon Nathan *Vidal* from Menahem *Meïri;* to Samuel *Kansi* from Samuel Astruc *Dascola;* to Jedaiah *Penini* from both *Bedersi* and *En Bonet;* to *John* of Avignon from Moses de *Roquemaure*.

2. When a person is not referred to as above, he is cited under his own personal name followed by his official or other title; or, where he has borne no such title, by "of" followed by the place of his birth or residence; *e.g.*, *Johanan* ha-Sandlar; *Samuel* ha-Nagid; *Judah* he-Ḥasid; *Gershom* of Metz; *Isaac* of Corbeil.

3. Names containing the words *d', de, da, di, van, von, y, of, ben, ha-, ibn** are arranged under the letter of the name following this word; *e.g.*, de Pomis under *Pomis*, de Barrios under *Barrios*, Jacob d'Illescas under *Illescas*. The order of topics is illustrated by the following examples:

Abraham of Augsburg
Abraham of Avila
Abraham ben Azriel
Abraham de Balmes
Abraham ben Baruch
Abraham of Beja
Abraham ben Benjamin Aaron
Abraham ben Benjamin Zeeb
Abraham Benveniste

---

* When Ibn has come to be a specific part of a name, as Ibn Ezra, such name is treated in its alphabetical place under "I."

Note to the Reader.

Subjects on which further information is afforded elsewhere in this work are indicated by the use of capitals and small capitals in the text; as, Abba Arika; Pumbedita; Vocalization.

LIST OF ABBREVIATIONS

[Self-evident abbreviations, particularly those used in the bibliographies, are not included here.]

CONTRIBUTORS TO VOLUME X

A.............**Cyrus Adler, Ph.D.,**
President of the American Jewish Historical Society; President of the Board of Directors of the Jewish Theological Seminary of America; Assistant Secretary of the Smithsonian Institution, Washington, D. C.

A. Bü........**Alexander Büchler, Ph.D.,**
Rabbi, Keszthely, Hungary.

A. Co........**A. Cowley, M.A.,**
Oriental Sublibrarian, Bodleian Library, Oxford University, Oxford, England.

A. E..........**A. Eckstein, Ph.D.,**
Rabbi, Bamberg, Bavaria, Germany.

A. F..........**A. Freimann, Ph.D.,**
Editor of the "Zeitschrift für Hebräische Bibliographie"; Librarian of the Hebrew Department, Stadtbibliothek, Frankfort-on-the-Main, Germany.

A. G.........**Adolf Guttmacher, Ph.D.,**
Rabbi, Baltimore Hebrew Congregation, Baltimore, Md.

A. Go........**A. Gornfeld,**
Counselor at Law, St. Petersburg, Russia.

A. Ki.........**Alexander Kisch, Ph.D.,**
Rabbi, Meysel Synagoge, Prague, Bohemia, Austria.

A. M. F.....**Albert M. Friedenberg, B.S., LL.B.,**
Counselor at Law, New York City.

A. P...........**A. Porter,**
Formerly Associate Editor of "The Forum," New York; Revising Editor "Standard Cyclopedia"; New York City.

A. Pe........**A. Peiginsky, Ph.D.,**
New York City.

A. S. I........**Abram S. Isaacs, Ph.D.,**
Professor of German Language and Literature, University Graduate Seminary, New York City; Rabbi, B'nai Jeshurun Congregation, Paterson, N. J.

A. S. W.......**A. S. Waldstein, B.A.,**
New York City.

A. Tä.........**Aaron Tänzer, Ph.D.,**
Rabbi, Hohenems, Tyrol, Austria.

A. W..........**Albert Wolf,**
Dresden, Saxony, Germany.

B. Ei.........**Benzion Eisenstadt,**
Teacher, New York City.

B. Fr.........**Bernhard Friedberg,**
Frankfort-on-the-Main, Germany.

B. Gr.........**Bernhard Greenfelder,**
St. Louis, Mo.

B. P...........**Bernhard Pick, Ph.D., D.D.,**
Pastor of St. John's Lutheran Church, Newark, N. J.

C. A. R.......**C. A. Rubenstein,**
Rabbi, Har Sinai Temple, Baltimore, Md.

C. I. de S....**Clarence I. de Sola,**
President of the Federation of Canadian Zionists; Belgian Consul, Montreal, Canada.

C. L...........**Caspar Levias, M.A.,**
Instructor in Exegesis and Talmudic Aramaic, Hebrew Union College, Cincinnati, Ohio.

C. S..........**Carl Siegfried, Ph.D., LL.D.** (deceased),
Late Professor of Theology at the University of Jena, Germany.

D..............**Gotthard Deutsch, Ph.D.,**
Professor of Jewish History, Hebrew Union College, Cincinnati, Ohio.

D. L..........**David Leimdörfer, Ph.D.,**
Rabbi, Hamburg, Germany.

D. M. H......**D. M. Hermalin,**
Editor of the "Daily Jewish Herald" and "Volksadvocat," New York City; Brooklyn, N. Y.

D. P...........**David Philipson, D.D.,**
Rabbi, B'ne Israel Congregation; Professor of Homiletics, Hebrew Union College, Cincinnati, Ohio.

D. Su........**David Sulzberger,**
Philadelphia, Pa.

E. C...........**Executive Committee of the Editorial Board.**

E. G. H......**Emil G. Hirsch, Ph.D., LL.D.,**
Rabbi, Sinai Congregation; Professor of Rabbinical Literature and Philosophy, University of Chicago; Chicago, Ill.

E. J...........**Emil Jelinek,**
Vienna, Austria.

E. K...........**Eduard König, Ph.D., LL.D.,**
Professor of Old Testament Exegesis, University of Bonn, Germany.

E. M. E.......**Ezekiel Moses Ezekiel,**
Bombay, India.

E. Ms...... .**Edgar Mels,**
New York City.

E. N...........**Eduard Neumann, Ph.D.,**
Chief Rabbi, Nagy-Kanisza, Hungary.

E. N. S.......**Elvira N. Solis,**
New York City.

E. Sc.........**Emil Schlesinger, Ph.D.,**
Rabbi, St. Gallen, Switzerland.

E. Schr..... **E. Schreiber, Ph.D.,**
Rabbi, Emanu-El Congregation, Chicago, Ill.

E. Sl..........**E. Slijper, Ph.D.,**
Leyden, Holland.

F. C...........**Frank Cramer, B.Sc.,**
New York City.

F. H. V.......**Frank H. Vizetelly, F.S.A.,**
Associate Editor of the "Columbian Cyclopedia" and of the STANDARD DICTIONARY; New York City.

F. J. B........**Frederick J. Bliss, Ph.D.,**
New York City.

F. L. C......**Francis L. Cohen,**
Chief Minister, Sydney, N. S. W., Australia.

F. S...........**Flaminio Servi** (deceased),
Late Chief Rabbi of Casale Monferrato, Italy; Editor of "Il Vessillo Israelitico."

THE
JEWISH ENCYCLOPEDIA

PHILIPSON, DAVID: American rabbi; born at Wabash, Ind., Aug. 9, 1862; educated at the public schools of Columbus, Ohio, the Hebrew Union College of Cincinnati (graduated 1883; D.D. 1886), the University of Cincinnati (B.A. 1883), and Johns Hopkins University, Baltimore, Md. On Jan. 1, 1884, he became rabbi of the Har Sinai congregation at Baltimore, Md., which position he held until Nov. 1, 1888, when he became rabbi of the B'ne Israel congregation of Cincinnati. He is also professor of homiletics at the Hebrew Union College.

Philipson has held many offices of a public nature in Cincinnati. He has been a trustee of the Associated Charities (since 1890); trustee of the Home for Incurables (1894–1902); director of the Ohio Humane Society (since 1889) and of the United Jewish Charities (since 1896); corresponding secretary of the Central Conference of American Rabbis (1889–1892; 1894–98), and director of the same society (since 1898); governor of the Hebrew Union College (since 1892); director of the American Jewish Historical Society (since 1897); member of the publication committee of the Jewish Publication Society (since 1895); and president of the Hebrew Sabbath School Union of America (since 1894).

He is the author of "Progress of the Jewish Reform Movement in the United States," in "J. Q. R." x. (1897) 52–99; and "The Beginnings of the Reform Movement in Judaism," *ib.* xv. (1903) 575–621; "The Jew in English Fiction," Cincinnati, 1889 (revised and enlarged, 1902); "Old European Jewries," Philadelphia, 1894; "The Oldest Jewish Congregation in the West," Cincinnati, 1894; "A Holiday Sheaf," *ib.* 1899; and, jointly with Louis Grossman, he has edited "Reminiscences of Isaac M. Wise," *ib.* 1901.

A. F. T. H.

PHILISTINES: A people that occupied territory on the coast of the Mediterranean Sea, southwest of Jerusalem, previously to and contemporaneously with the life of the kingdoms of Israel. Their northern boundary reached to the "borders of Ekron," and their southwestern limit was the Shihor, or brook of Egypt (Wadi al-'Arish), as described in Josh. xiii. 2, 3. Their territory extended on the east to about Beth-shemesh (I Sam. vi. 18), and on the west to the sea. It was a wide, fertile plain stretching up to the Judean hills, and adapted to a very productive agriculture.

Territory.

In Biblical times this territory was occupied by several peoples, the most prominent of all being the Philistines proper. There are found the giants or Anakim in Joshua's day and even down to David's time in Gaza, Gath, and Ashdod. It must be concluded, too, from Joshua's conquests that the Canaanites were to be met with here and there throughout this territory. It is also to be presumed from the records that other peoples, such as the Amalekites and the Geshurites, lived near this territory if they did not actually mingle with the Philistines.

Who were the Philistines proper? The Biblical record states that they came from Caphtor (Amos ix. 7; Deut. ii. 23), that they were Caphtorim (Deut. *l.c.*), and that they were "the remnant of the sea-coast of Caphtor" (Jer. xlvii. 4, Hebr.). The table of nations (Gen. x. 13, 14) names the Philistines and the Caphtorim as descendants of Mizraim. The gist of these references leads one to look for Caphtor as the native land of the Philistines. There is a variety of opinion as to the location of this place. The Egyptian inscriptions name the southern coast of Asia Minor as "Kefto." The latest and with some plausibility the best identification is the island of Crete. The Septuagint makes the Cherethites in David's body-guard Cretans. Others have identified Caphtor with Cappadocia, or Cyprus, or with some place near the Egyptian delta. The prevailing opinion among scholars is that the Philistines were roving pirates from some northern coast on the Mediterranean Sea. Finding a fertile plain south of Joppa, they landed and forced a foothold. Their settlement was made by such a gradual process that they adopted both the language and the religion of the conquered peoples.

Origin.

When did the Philistines migrate and seize their territory in this maritime plain? The inscriptions of Rameses III., about Joshua's day, describe sea-peoples whom he met in conflict. Among these foreigners are found the Zakkal from Cyprus, and the Purusati (Pulusata, Pulista, or Purosatha). Both have Greek features; and the second are identified with the Philistines. In the inscription of this Egyptian king, they are said to have conquered all of northern Syria west of the Euphrates. It is known, too, that the successors of Rameses III. lost their Syrian possessions. It is supposed that during this period the Purusati, accompanied by their families, were pushed or crowded out of their homes by the national migrations from the northeast in Asia Minor, and, coming both by land and by sea, secured a foothold in southwestern Palestine. The time of this supposed settlement was that of the twentieth dynasty of Egypt. Of course their first settlements were on a small scale, and probably under Egyptian suzerainty. Later, as Egypt lost her grip on Asia, the Purusati became independent and multiplied in numbers and strength until they could easily make good their claim to the region in which they had settled.

According to the Old Testament, the Philistines were in power in their new land at least as early as the Exodus (Ex. xiii. 17, xxiii. 31). Josh. xiii. 2, 3 lends color to the view that they had specific boundaries in the time of the conquest. During the period of the Judges they were a thorn in the side of Israel (Judges iii. 31, v. 6, x. 11, xiii.-xvi.). They were so well organized politically, with their five great capitals, Ashdod, Ashkelon, Ekron, Gath, and Gaza, and a lord over each with its surrounding district, that Israel in its earlier history was put to a decided disadvantage (I Sam. iv. 17, vii. 2-14). Their supremacy over Saul's realm (*ib.* xiii. 3 *et seq.*) and their restriction of Israel's arms made the Philistines easy rulers of their mountain neighbors. Saul's defeat of them at Michmash (*ib.* xiv.) was only temporary, as he finally fled to Gilboa before the invincible ranks of these warriors.

Conquered by David.

Not until David's assumption of supremacy over all Israel and after two hard battles were the Philistines compelled to recognize the rule of their former subjects. This broke their power so effectually that they never entirely recovered. After the disruption of the kingdom of Solomon the Philistines secured their independence, which they possessed at intervals down to the overthrow of the Israelitish kingdoms. During this entire period they are found exercising the same hostility toward the Israelites (Amos i. 6-8; Joel iii. 4-8) that characterized their earlier history. In this same period the Assyrian conquerors mention several Philistine cities as objects of their attacks. The crossing and recrossing of Philistines territory by the armies of Egypt and Asia finally destroyed the Philistines as a separate nation and people; so that when Cambyses the Persian crossed their former territory about 525, he described it as belonging to an Arabian ruler.

Language and Government.

The Philistines' language was apparently Semitic, the language of the peoples they conquered. Their religion, too, was most likely Semitic, as they are found worshiping the deities met with among other Semitic peoples. They were governed, in Israel's early history, by a confederation of five kings or rulers of their chief cities. Their army was well organized and brave, and consisted of infantry, cavalry, and chariotry. In fine, they were a civilized people as far back as they can be traced; and as such they became relatively strong and wealthy in their fertile plains. They engaged in commerce, and in their location became thoroughly acquainted with the great peoples of their times. Their disappearance as a nation from history occurred about the time of the conquest of Cyrus.

PHILLIPS: American family, especially prominent in New York and Philadelphia, and tracing its descent back to Jonas Phillips, who emigrated from Germany to England in 1751 and thence to America in 1756. The genealogical tree of the family is given on page 3.

Henry Phillips, Jr.: Archeologist and numismatist; born at Philadelphia Sept. 6, 1838; died June, 1895; son of Jonas Altamont Phillips. He was well known for his studies in folk-lore, philology, and numismatics, both in the United States and in Europe. Two gold medals were conferred upon him by Italian societies for his writings. He was treasurer (1862) and secretary (1868) of the Numismatic and Antiquarian Society of Philadelphia, and a secretary (from 1880) and the librarian (from 1885) of the American Philosophical Society, as well as member of many other learned societies at home and abroad.

Phillips' works on the paper currency of the American colonies and on American Continental money were the first on those subjects. His works have been cited by the United States Supreme Court in a decision on the "Legal Tender Cases." Among his writings may be mentioned: "History of American Colonial Paper Currency" (1865); "History of American Continental Paper Money" (1866); "Pleasures of Numismatic Science" (1867); "Poems from the Spanish and German" (1878); "Faust" (1881); and four volumes of translations from the Spanish, Hungarian, and German (1884-87; see Appleton's "Cyclopedia of American Biography," iv.; Henry S. Morais, "The Jews of Philadelphia," *s.v.*; Oscar Fay Adams, "A Dictionary of American Authors," p. 295, New York, 1897; "Proceedings of the American Philological Association," 1896).

A. L. Hü.

Henry Mayer Phillips: American lawyer, congressman, and financier; son of Zalegman and Arabella Phillips; born in Philadelphia June 30, 1811, where he attended a private school and the high school of the Franklin Institute; died Aug. 28, 1884. Phillips was admitted to the bar Jan. 5, 1832. Immediately after his admission he accepted the position of clerk of the Court of Common Pleas.

In Dec., 1841, he was elected solicitor of the district of Spring Garden. In the October election of 1856 he was chosen a member of the thirty-fifth Congress and served during 1857-59. He addressed the House of Representatives on the admission of Kansas into the Union under the Le Compton Constitution on March 9, 1858, and on June 12 he spoke on the expenditures and revenues of the country.

In Dec., 1858, he was elected grand master of the Grand Lodge of Free and Accepted Masons of the State of Pennsylvania, and was reelected in 1859 and 1860. On Dec. 4, 1862, he was chosen trustee of the Jefferson Medical College to fill a vacancy caused

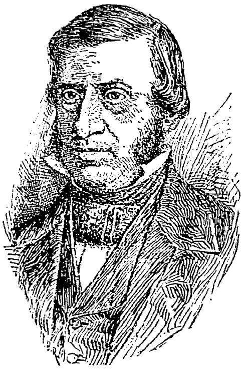
J. E. N. S.

Pedigree of the Phillips Family.

by the death of his brother J. Altamont Phillips, and subsequently became its treasurer.

The Court of Common Pleas appointed him a member of the board of park commissioners May 13, 1867, and March 12, 1881, he was elected president of the board. He was appointed a member of the board of city trusts Sept. 2, 1869, became its vice-president May 11, 1870, and on March 13, 1878, was chosen its president, which office he resigned in Dec., 1881.



Henry M. Phillips.

In 1870 Phillips was appointed a member of the commission for the construction of a bridge crossing the Schuylkill River. He was one of the original members of the Public Buildings Commission established in 1870, but resigned the next year. In 1870 he was chosen a director of the Academy of Music, became its president in 1872, and resigned in 1884. He was elected a member of the American Philosophical Society in Jan., 1871, and a director of the Pennsylvania Railroad, Northern Central Railroad, Philadelphia, Wilmington and Baltimore Railroad, and of the Western Union Telegraph Company in March, 1874. He became a director of the Pennsylvania Company for Insurance on Lives and Granting Annuities on Oct. 16, 1874.

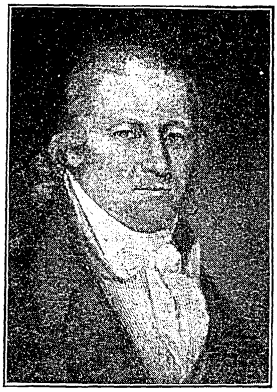
On Dec. 20, 1882, he presided at the "bar dinner" given to Chief Justice Sharswood on the retirement of the latter; this was the last public occasion in which he participated as a member of the Philadelphia bar, of which he had become a leader.

Phillips was a member of the Sephardic (Spanish and Portuguese) Congregation Mickvé Israel of Philadelphia. In former years, more especially in the period from 1836 to 1851, he took considerable interest in its affairs, taking an active part in the controversy between Isaac Leeser and the congregation; his efforts were largely instrumental in electing Sabato Morais as minister of the congregation on April 13, 1851.

A. D. Su.

Isaac Phillips: Lawyer; born in New York June 16, 1812; died there 1889; son of Naphtali Phillips. He was appointed by President Pierce appraiser of the port of New York, which position he occupied for many years, and he was well known politically. He took a deep interest in educational matters, being a commissioner of the New York board of education; he was likewise the editor of various newspapers in the city of New York, grand master of the freemasons of the state of New York, and an active member of the New York Chamber of Commerce. He married (1) Sophia Phillips and (2) Miriam Trimble.

Jonas Phillips: The first of the family to settle in America; born 1736, the place of his birth being variously given as Busick and Frankfort-on-the-Main; died at Philadelphia, Pa., Jan. 29, 1803; son of Aaron Phillips. He emigrated to America from London in Nov., 1756, and at first resided in Charleston, S. C., where he was employed by Moses Lindo. He soon removed to Albany, and thence, shortly afterward, to New York, where he engaged in mercantile pursuits. As early as 1760 he was identified with a lodge of freemasons in that city. In 1762 he married Rebecca Mendez Machado (see Machado). In 1769 he became a freeman of New York.



Jonas Phillips.

At the outbreak of the American Revolution Phillips favored the patriot cause; and he was an ardent supporter of the Non-Importation Agreement in 1770. In 1776 he used his influence in the New York congregation to close the doors of the synagogue and remove rather than continue under the British. The edifice was abandoned; and, with the majority of the congregation, Phillips removed to Philadelphia, where he continued in business until 1778. In that year he joined the Revolutionary army, serving in the Philadelphia Militia under Colonel Bradford.

When Congregation Mickvé Israel was established in Philadelphia, Phillips was one of its active founders, and was its president at the consecration of its synagogue in 1782. After the Revolution he removed to New York, but soon returned to Philadelphia, where he continued to reside until his death. His remains, however, were interred at New York in the cemetery, on New Bowery, of Congregation Shearith Israel. His widow survived until 1831. Of his twenty-one children, special mention should be made of the following six:

(1) **Rachel Phillips:** Born 1769; died 1839; married Michael Levy, and was the mother of Commodore Uriah P. Levy of the United States navy.

(2) **Naphtali Phillips:** Born 1773; died 1870; married (1797) Rachel Mendez Seixas (d. 1822) of Newport, R. I. One year after her death he married Esther (b. 1789; d. 1872), the daughter of Benjamin Mendez Seixas. Phillips was the proprietor of the "National Advocate," a New York newspaper, and was also president of Congregation Shearith Israel in that city.

(3) **Manuel Phillips:** Assistant surgeon in the United States navy from 1809 to 1824; died at Vera Cruz in 1826.

(4) **Joseph Phillips:** Died 1854. He served in the War of 1812.

(5) **Aaron J. Phillips:** Actor and playwright; born in Philadelphia; died at New York in 1826. He made his first appearance at the Park Theater, New York, in 1815, and was successful in Shakespeare's "Comedy of Errors." Later he became a theatrical manager (see Charles P. Daly, "Settle-

ment of the Jews in North America," pp. 102–103, 120, New York, 1893).

(6) **Zalegman Phillips:** Lawyer; born 1779; died Aug. 21, 1839. He was graduated from the University of Pennsylvania in 1795, and became one of the leading criminal lawyers of Philadelphia.

Jonas Altamont Phillips: Lawyer; born at Philadelphia 1806; died there 1862; brother of Henry M. Phillips. He became prominent as a lawyer, and in 1847–48 was the Democratic candidate for the mayoralty of Philadelphia. President Buchanan is said to have tendered him the position of judge of the United States District Court, which he declined. In 1837 he married Frances Cohen of Charleston, S. C.

Jonas B. Phillips: Dramatist; born Oct. 28, 1805, at Philadelphia; died 1869; son of Benjamin J. Phillips. He became known as a dramatist as early as 1833. Among the plays he produced were: "Cold Stricken" (1838), "Camillus," and "The Evil Eye." Subsequently he studied law and became assistant district attorney for the county of New York, holding that appointment under several successive administrations (see Daly, *l.c.* p. 145).

Jonas N. Phillips: Born 1817; died 1874; son of Naphtali Phillips. He was chief of the volunteer fire department in the city of New York for many years, and president of the board of councilmen and acting mayor in 1857.

Naphtali Taylor Phillips: Lawyer; born in New York Dec. 5, 1868; son of Isaac Phillips by his second wife. He has held various political offices, *e.g.*: he was member of the New York state legislature (1898–1901), serving on the judiciary and other committees and as a member of the Joint Statutory Revision Commission of that body (1900); and deputy comptroller of the city of New York (from 1902). He is also a trustee of the American Scenic and Historic Preservation Society, and a member of the Sons of the American Revolution and of the New York Historical Society. He is treasurer of the Jewish Historical Society and has contributed several papers to its publications. For fifteen years he has been clerk of Congregation Shearith Israel. In 1892 Phillips married Rosalie Solomons, daughter of Adolphus S. Solomons. Mrs. Phillips is an active member of the Daughters of the American Revolution.

A. L. Hü.

PHILLIPS, BARNET: American journalist; born in Philadelphia Nov. 9, 1828; educated at the University of Pennsylvania, Philadelphia, whence he was graduated in 1847. Shortly afterward he set out for Europe, where he continued his studies and engaged in journalism. On his return to the United States, Phillips joined the staff of the "New York Times" and published two books, "The Struggle" and "Burning Their Ships." Phillips' connection with the "New York Times" extends over thirty years.

A. F. H. V.

PHILLIPS, SIR BENJAMIN SAMUEL: Lord mayor of London; born in London in 1811; died there Oct. 9, 1889. He was a son of **Samuel Phillips,** tailor, and was educated at Neumegen's school at Highgate and Kew. In 1833 he married, and soon afterward entered into partnership with his brother-in-law Henry Faudel, thus laying the foundation of the firm of Faudel, Phillips & Sons. He then became an active worker in the community, being elected president of the Institution for the Relief of the Jewish Indigent Blind in 1850 and president of the Hebrew Literary Society. He rendered important services in the foundation of the United Synagogue, of which he was elected a life-member in June, 1880. For thirty years Phillips was a member of the Board of Deputies as representative of the Great and Central synagogues; he served as a member of the Rumanian Committee, and was a vice-president of the Anglo-Jewish Association.

Benjamin Phillips will be chiefly remembered for the prominent part he took in the struggle for the removal of Jewish disabilities. In 1846 he was elected a member of the common council as representative of the ward of Farringdon Within. After being returned at every subsequent election, he was elected alderman of the ward in 1857. In 1859 he held the office of sheriff, and on Sept. 29, 1865, was elected lord mayor. He performed the duties of mayor with marked distinction, and the King of the Belgians, whom he entertained, conferred upon him the Order of Leopold. During his mayoralty he rendered considerable help in personally raising £70,000 toward the great Cholera Fund. In recognition of these services he was knighted by Queen Victoria. In 1888, owing to advancing years, he retired from the court of aldermen, being succeeded in the office by his second son, Alderman Sir George Faudel-Phillips, who was unanimously elected.

Sir Benjamin Phillips was for many years a member of the Spectacle-Makers Company (of which he was master) and was on the commission for the Lieutenancy of the City of London.

J. G. L.

PHILLIPS, GEORGE LYON: Jamaican politician; born in 1811; died at Kingston, Jamaica, Dec. 29, 1886. One of the most prominent and influential residents of Jamaica, he held the chief magistrateship of the privy council and other important executive offices on the island. During the anxious period known as the "Saturnalia of Blood" Phillips especially conserved the interests of the colony by his gentle and calm demeanor at councils of state.

J. G. L.

PHILLIPS, MORRIS: American journalist and writer; born in London, England, May 9, 1834.

Phillips received his elementary education in Cleveland, Ohio, and later continued his studies under private tutors in New York. He studied for the legal profession, first in Buffalo and later in New York. But the opportunity being open to him of association with Nathaniel Parker Willis as joint editor of the "New York Home Journal," he embraced it at once, and from Sept., 1854, until the death of Willis in Jan., 1867, Phillips was associate editor of that periodical, of which he then became chief editor and sole proprietor. Phillips was a prolific writer and an extensive traveler; as such he held commissions as special correspondent for several daily newspapers, and published in many magazines the fruits of his observations.

A. F. H. V.

PHILLIPS, PHILIP: American jurist; born in Charleston, S. C., Dec. 17, 1807; died in Washington, D. C., Jan. 14, 1884. He was educated at the Norwich Military Academy in Vermont and at Middletown, Conn. He then studied law and was admitted to the bar in 1829, settling in Cheraw, S. C. He was a member of the Nullification Convention of 1832. Elected to the state legislature in 1834, he resigned in 1835 and moved to Mobile, Ala., where he practised law. He was president of the Alabama State Convention in 1837, and was elected to the state legislature in 1844, being reelected in 1852. In 1853-55 he was a member of Congress from Alabama. He then moved to Washington, where he continued his profession until the Civil war, when he migrated to New Orleans. After the war he returned to Washington and resided there until his death. In 1840 he prepared a "Digest of Decisions of the Supreme Court of Alabama," and he wrote "Practise of the Supreme Court of the United States." He married Eugenia Levy of Charleston, S. C., on Sept. 7, 1836.

Bibliography: Brewer, *Alabama*, pp. 406-407; Garrett, *Reminiscences of Public Men in Alabama*, 1872, pp. 405-407.

A. A. S. I.

PHILLIPS, PHINEAS: Polish merchant; flourished about 1775. He held the position of chief of the Jewish community at Krotoschin, at that time a fief of the princes of Thurn and Taxis. The reigning prince held Phillips in considerable esteem and entrusted him with personal commissions.

In the course of business Phillips attended the Leipsic fairs and those held in other important Continental cities. In 1775 he extended his travels to England. Once there, he settled for some time in London, where he carried on an extensive business in indigo and gum.

After his death, while on a visit to his native town his son **Samuel Phillips** established himself in London and became the father of Sir Benjamin Phillips and grandfather of Sir George Faudel-Phillips, Bart., both lord mayors of London.

Bibliography: *Jew. Chron.* Oct. 18, 1889.

J. G. L.

PHILLIPS, SAMUEL: English journalist; born at London 1815; died at Brighton Oct., 1854. He was the son of an English merchant, and at fifteen years of age made his début as an actor at Covent Garden. Influential friends then placed him at Cambridge, whence he passed to Göttingen University. Phillips then came to London, and in 1841 turned his attention to literature and journalism. His earliest work was a romance entitled "Caleb Stukeley," which appeared in "Blackwood's Magazine" and was reprinted in 1843. Its success led to further contributions to "Blackwood's," including "We Are All Low People There" and other tales.

Phillips continued to write for periodicals, and he was subsequently admitted as literary critic to the staff of the "Times." His articles were noted for their vigor of expression and their wealth of ideas. Dickens, Carlyle, Mrs. Stowe, and other popular writers were boldly assailed by the anonymous critic, whose articles became the talk of the town. In 1852 and 1854 two volumes of his literary essays were published anonymously. Phillips was also associated with the "Morning Herald" and "John Bull."

When the Society of the Crystal Palace was formed Phillips became secretary and afterward literary director. In connection with the Palace he wrote the "Guide" and the "Portrait Gallery."

J. G. L.

PHILO JUDÆUS: Alexandrian philosopher; born about 20 B.C. at Alexandria, Egypt; died after 40 C.E. The few biographical details concerning him that have been preserved are found in his own works (especially in "Legatio ad Caium," §§ 22, 28; ed. Mangey [hereafter cited in brackets], ii. 567, 572; "De Specialibus Legibus," ii. 1 [ii. 299]) and in Josephus ("Ant." xviii. 8, § 1; comp. *ib.* xix. 5, § 1; xx. 5, § 2). The only event that can be determined chronologically is his participation in the embassy which the Alexandrian Jews sent to the emperor Caligula at Rome for the purpose of asking protection against the attacks of the Alexandrian Greeks. This occurred in the year 40 C.E.

Philo included in his philosophy both Greek wisdom and Hebrew religion, which he sought to fuse and harmonize by means of the art of allegory that he had learned from the Stoics. His work was not accepted by contemporary Judaism. "The sophists of literalness," as he calls them ("De Somniis," i. 16-17), "opened their eyes superciliously" when he explained to them the marvels of his exegesis. Greek science, suppressed by the victorious Phariseeism (Men. 99), was soon forgotten. Philo was all the more enthusiastically received by the early Christians, some of whom saw in him a Christian.

His Works: The Church Fathers have preserved most of Philo's works that are now extant. These are chiefly commentaries on the Pentateuch. As Ewald has pointed out, three of Philo's chief works lie in this field (comp. Siegfried, "Abhandlung zur Kritik der Schriften Philo's," 1874, p. 565).

(*a*) He explains the Pentateuch catechetically, in the form of questions and answers ("*Ζητήματα καὶ Λύσεις*, Quæstiones et Solutiones"). It can not now be determined how far he carried out this method. Only the following fragments have been preserved: passages in Armenian in explanation of Genesis and

Exodus, an old Latin translation of a part of the "Genesis," and fragments from the Greek text in the "Sacra Parallela," in the "Catena," and also in Ambrosius. The explanation is confined chiefly to determining the literal sense, although Philo frequently refers to the allegorical sense as the higher.

His Allegorical Commentary.

(*b*) That he cared mainly for the latter he shows in his scientific chief work, the great allegorical commentary, Νόμων Ἱερῶν Ἀλληγορίαι, or "Legum Allegoriæ," which deals, so far as it has been preserved, with selected passages from Genesis. According to Philo's original idea, the history of primal man is here considered as a symbol of the religious and moral development of the human soul. This great commentary included the following treatises: (1) "De Allegoriis Legum," books i.–iii., on Gen. ii. 1–iii. 1a, 8b–19 (on the original extent and contents of these three books and the probably more correct combination of i. and ii., see Schürer, "Gesch." iii. 503); (2) "De Cherubim," on Gen. iii. 24, iv. 1; (3) "De Sacrificiis Abelis et Caini," on Gen. iv. 2–4 (comp. Schürer, *l.c.* p. 504); (4) "De Eo Quod Deterius Potiori Insidiatur"; (5) "De Posteritate Caini," on Gen. iv. 16–25 (see Cohn and Wendland, "Philonis Alexandrini," etc., ii., pp. xviii. *et seq.*, 1–41; "Philologus," lvii. 248–288); (6) "De Gigantibus," on Gen. vi. 1–4; (7) "Quod Deus Sit Immutabilis," on Gen. vi. 4–12 (Schürer [*l.c.* p. 506] correctly combines Nos. 6 and 7 into one book; Massebieau ["Bibliothèque de l'Ecole des Hautes Etudes," p. 23, note 2, Paris, 1889] adds after No. 7 the lost books Περὶ Διαθηκῶν); (8) "De Agricultura Noë," on Gen. ix. 20 (comp. Von Arnim, "Quellenstudien zu Philo von Alexandria," 1899, pp. 101–140); (9) "De Ebrietate," on Gen. ix. 21 (on the lost second book see Schürer, *l.c.* p. 507, and Von Arnim, *l.c.* pp. 53–100); (10) "Resipuit Noë, seu De Sobrietate," on Gen. ix. 24–27; (11) "De Confusione Linguarum," on Gen. xi. 1–9; (12) "De Migratione Abrahami," on Gen. xii. 1–6; (13) "Quis Rerum Divinarum Heres Sit," on Gen. xv. 2–18 (on the work Περὶ Μισθῶν cited in this treatise see Massebieau, *l.c.* pp. 27 *et seq.*, note 3); (14) "De Congressu Quærendæ Eruditionis Gratia," on Gen. xvi. 1–6; (15) "De Profugis," on Gen. xvi. 6–14; (16) "De Mutatione Nominum," on Gen. xvii. 1–22 (on the fragment "De Deo," which contains a commentary on Gen. xviii. 2, see Massebieau, *l.c.* p. 29); (17) "De Somniis," book i., on Gen. xxviii. 12 *et seq.*, xxxi. 11 *et seq.* (Jacob's dreams); "De Somniis," book ii., on Gen. xxxvii. 40 *et seq.* (the dreams of Joseph, of the cupbearer, the baker, and Pharaoh). Philo's three other books on dreams have been lost. The first of these (on the dreams of Abimelech and Laban) preceded the present book i., and discussed the dreams in which God Himself spoke with the dreamers, this fitting in very well with Gen. xx. 3. On a doxographic source used by Philo in book i., § 4 [i. 623], see Wendland in "Sitzungsbericht der Berliner Akademie," 1897, No. xlix. 1–6.

On the Patriarchs.

On the Law.

(*c*) Philo wrote a systematic work on Moses and his laws, which was prefaced by the treatise "De Opificio Mundi," which in the present editions precedes "De Allegoriis Legum," book i. (comp. "De Abrahamo," § 1 [ii. 1], with "De Præmiis et Pœnis," § 1 [ii. 408]). The Creation is, according to Philo, the basis for the Mosaic legislation, which is in complete harmony with nature ("De Opificio Mundi," § 1 [i. 1]). The exposition of the Law then follows in two sections. First come the biographies of the men who antedated the several written laws of the Torah, as Enos, Enoch, Noah, Abraham, Isaac, and Jacob. These were the Patriarchs, who were the living impersonations of the active law of virtue before there were any written laws. Then the laws are discussed in detail: first the chief ten commandments (the Decalogue), and then the precepts in amplification of each law. The work is divided into the following treatises: (1) "De Opificio Mundi" (comp. Siegfried in "Zeitschrift für Wissenschaftliche Theologie," 1874, pp. 562–565; L. Cohn's important separate edition of this treatise, Breslau, 1889, preceded the edition of the same in "Philonis Alexandrini," etc., 1896, i.). (2) "De Abrahamo," on Abraham, the representative of the virtue acquired by learning. The lives of Isaac and Jacob have been lost. The three patriarchs were intended as types of the ideal cosmopolitan condition of the world. (3) "De Josepho," the life of Joseph, intended to show how the wise man must act in the actually existing state. (4) "De Vita Mosis," books i.–iii.; Schürer, *l.c.* p. 523, combines the three books into two; but, as Massebieau shows (*l.c.* pp. 42 *et seq.*), a passage, though hardly an entire book, is missing at the end of the present second book (Wendland, in "Hermes," xxxi. 440). Schürer (*l.c.* pp. 515, 524) excludes this work here, although he admits that from a literary point of view it fits into this group; but he considers it foreign to the work in general, since Moses, unlike the Patriarchs, can not be conceived as a universally valid type of moral action, and can not be described as such. The latter point may be admitted; but the question still remains whether it is necessary to regard the matter in this light. It seems most natural to preface the discussion of the law with the biography of the legislator, while the transition from Joseph to the legislation, from the statesman who has nothing to do with the divine laws to the discussion of these laws themselves, is forced and abrupt. Moses, as the perfect man, unites in himself, in a way, all the faculties of the patriarchal types. His is the "most pure mind" ("De Mutatione Nominum," 37 [i. 610]), he is the "lover of virtue," who has been purified from all passions ("De Allegoriis Legum," iii. 45, 48 [i. 113, 115]). As the person awaiting the divine revelation, he is also specially fitted to announce it to others, after having received it in the form of the Commandments (*ib.* iii. 4 [i. 89 *et seq.*]). (5) "De Decalogo," the introductory treatise to the chief ten commandments of the Law. (6) "De Specialibus Legibus," in which treatise Philo attempts to systematize the several laws of the Torah, and to arrange them in conformity with the Ten Commandments. To the first and second commandments he adds the laws relating to priests and sacrifices; to the third (misuse of the name of God), the laws on oaths, vows, etc.; to the fourth (on the Sabbath), the laws on festivals; to the fifth (to honor father and mother), the laws on respect for parents, old age, etc.; to the sixth, the marriage laws; to the seventh, the civil and criminal laws; to the eighth, the laws on theft; to the ninth, the laws on truthful testifying; and to the tenth, the laws on lust (comp. Stade-Holtzmann, "Gesch. des Volkes Israel," 1888, ii. 535–545; on Philo as influenced by the Halakah, see B. Ritter, "Philo und die Halacha," Leipsic, 1879, and Siegfried's review of the same in the "Jenaer Literaturzeitung," 1879, No. 35). The first book includes the following treatises of the current editions: "De Circumcisione"; "De Monarchia," books i. and ii.; "De Sacerdotum Honoribus"; "De Victimis." On the division of the book into these sections, the titles of the latter, and newly found sections of the text, see Schürer, *l.c.* p. 517; Wendland, *l.c.* pp. 136 *et seq.* The second book includes in the editions a section also entitled "De Specialibus Legibus" (ii. 270–277), to which is added the treatise "De Septenario," which is, however, incomplete in Mangey. The greater part of the missing portion was supplied, under the title "De Cophini Festo et de Colendis Parentibus," by Mai (1818), and was printed in Richter's edition, v. 48–50, Leipsic, 1828. The complete text of the second book was published by Tischendorf in his "Philonea" (pp. 1–83). The third book is included under the title "De Specialibus Legibus" in ed. Mangey, ii. 299–334. The fourth book also is entitled "De Specialibus Legibus"; to it the last sections are added under the titles "De Judice" and "De Concupiscentia" in the usual editions; and they include, also, as appendix, the sections "De Justitia" and "De Creatione Principum." (7) The treatises "De Fortitudine," "De Caritate," and "De Pœnitentia" are a kind of appendix to "De Specialibus Legibus." Schürer (*l.c.* pp. 519 [note 82], 520–522) combines them into a special book, which, he thinks, was composed by Philo. (8) "De Præmiis et Pœnis" and "De Execratione." On the connection of both see Schürer, *l.c.* pp. 522 *et seq.* This is the conclusion of the exposition of the Mosaic law.

Independent Works: (1) "Quod Omnis Probus Liber," the second half of a work on the freedom of the just according to Stoic principles. The genuineness of this work has been disputed by Frankel (in "Monatsschrift," ii. 30 *et seq.*, 61 *et seq.*), by Grätz ("Gesch." iii. 464 *et seq.*), and more recently by Ansfeld (1887), Hilgenfeld (in "Zeitschrift für Wissenschaftliche Theologie," 1888, pp. 49–71), and others. Now Wendland, Ohle, Schürer, Massebieau, and Krell consider it genuine, with the exception of the partly interpolated passages on the Essenes. (2) "In Flaccum" and "De Legatione ad Caium," an account of the Alexandrian persecution of the Jews under Caligula. This account, consisting originally of five books, has been preserved in fragments only (see Schürer, *l.c.* pp. 525 *et seq.*). Philo intended to show the fearful punishment meted out by God to the persecutors of the Jews (on Philo's predilection for similar discussions see Siegfried, "Philo von Alexandria," p. 157). (3) "De Providentia," preserved only in Armenian, and printed from Aucher's Latin translation in the editions of Richter and others (on Greek fragments of the work see Schürer, *l.c.* pp. 531 *et seq.*). (4) "De Animalibus" (on the title see Schürer, *l.c.* p. 532; in Richter's ed. viii. 101–144). (5) *Ὑποθετικά* ("Counsels"), a work known only through fragments in Eusebius, "Præparatio Evangelica," viii. 6, 7. The meaning of the title is open to discussion; it may be identical with the following (No. 6). (6) *Περὶ Ἰουδαίων*, an apology for the Jews (Schürer, *l.c.* pp. 532 *et seq.*).

For a list of the lost works of Philo see Schürer, *l.c.* p. 534.

Other Works Ascribed to Philo: (1) "De Vita Contemplativa" (on the different titles comp. Schürer, *l.c.* p. 535). This work describes the mode of life and the religious festivals of a society of Jewish ascetics, who, according to the author, are widely scattered over the earth, and are found especially in every nome in Egypt. The writer, however, confines himself to describing a colony of hermits settled on the Lake Mareotis in Egypt, where each lives separately in his own dwelling. Six days of the week they spend in pious contemplation, chiefly in connection with Scripture. On the seventh day both men and women assemble together in a hall; and the leader delivers a discourse consisting of an allegorical interpretation of a Scriptural passage. The feast of the fiftieth day is especially celebrated. The ceremony begins with a frugal meal consisting of bread, salted vegetables, and water, during which a passage of Scripture is interpreted. After the meal the members of the society in turn sing religious songs of various kinds, to which the assembly answers with a refrain. The ceremony ends with a choral representation of the triumphal festival that Moses and Miriam arranged after the passage through the Red Sea, the voices of the men and the women uniting in a choral symphony until the sun rises. After a common morning prayer each goes home to resume his contemplation. Such is the contemplative life (*βίος θεωρητικός*) led by these *Θεραπευταί* ("servants of YHWH").

"De Vita Contemplativa."

The ancient Church looked upon these Therapeutæ as disguised Christian monks. This view has found advocates even in very recent times; Lucius' opinion particularly, that the Christian monkdom of the third century was here glorified in a Jewish disguise, was widely accepted ("Die Therapeuten," 1879). But the ritual of the society, which was entirely at variance with Christianity, disproves this view. The chief ceremony especially, the choral representation of the passage through the Red Sea, has no special significance for Christianity; nor have there ever been in the Christian Church nocturnal festivals celebrated by men and women together. But Massebieau ("Revue de l'Histoire des Religions," 1887, xvi. 170 *et seq.*, 284 *et seq.*), Conybeare ("Philo About the Contemplative Life," Oxford, 1895), and Wendland ("Die Therapeuten," etc., Leipsic, 1896) ascribe the entire work to Philo, basing their argument wholly on linguistic reasons, which seem sufficiently conclusive. But there are great dissimilarities between the fundamental conceptions of the author of the "De Vita Contemplativa" and those of Philo. The latter looks upon Greek culture and philosophy as allies, the former is hostile to Greek philosophy (see Siegfried in "Protestantische Kirchenzeitung," 1896, No.

42). He repudiates a science that numbered among its followers the sacred band of the Pythagoreans, inspired men like Parmenides, Empedocles, Zeno, Cleanthes, Heraclitus, and Plato, whom Philo prized ("Quod Omnis Probus," i., ii.; "Quis Rerum Divinarum Heres Sit," 43; "De Providentia," ii. 42, 48, etc.). He considers the symposium a detestable, common drinking-bout. This can not be explained as a Stoic diatribe; for in this case Philo would not have repeated it. And Philo would have been the last to interpret the Platonic Eros in the vulgar way in which it is explained in the "De Vita Contemplativa," 7 [ii. 480], as he repeatedly uses the myth of double man allegorically in his interpretation of Scripture ("De Opificio Mundi," 24; "De Allegoriis Legum," ii. 24). It must furthermore be remembered that Philo in none of his other works mentions these colonies of allegorizing ascetics, in which he would have been highly interested had he known of them. But pupils of Philo may subsequently have founded near Alexandria similar colonies that endeavored to realize his ideal of a pure life triumphing over the senses and passions; and they might also have been responsible for the one-sided development of certain of the master's principles. While Philo desired to renounce the lusts of this world, he held fast to the scientific culture of Hellenism, which the author of this book denounces. Although Philo liked to withdraw from the world in order to give himself up entirely to contemplation, and bitterly regretted the lack of such repose ("De Specialibus Legibus," 1 [ii. 299]), he did not abandon the work that was required of him by the welfare of his people.
